About NC State

Introduction

Founded March 7, 1887 by the North Carolina General Assembly under the provisions of the national Land-Grant Act, North Carolina State University is now one of the nation’s preeminent research institutions and the university of choice for accomplished, high-performing students from around the world.

NC State’s extensive public and private partnerships create a unique culture of collaboration to address the grand challenges facing society. The university’s solution-driven research, technology and scholarship lead to new ideas, products and services. It’s no wonder NC State is know for its forward-looking philosophy: Think and Do.

With more than 34,000 students and 8,000 faculty and staff, NC State is a comprehensive university known for its leadership in interdisciplinary innovation. As a leader in experiential education, NC State provides remarkable opportunities for students to put learning into practice and to develop career-ready skills.

The university is consistently ranked as a top-tier university by U.S. News & World Report and is regularly named by Princeton Review/USA Today and Kiplinger as a national top-20 best value in higher education, a ranking that combines academic quality and affordability. Because of this value, NC State students graduate with lower-than-average debt, according to U.S. News.

Beginning their freshman year, NC State students are able to explore their major right away — by conducting research alongside faculty or starting a challenging co-op or internship. NC State has a large and diverse student population with the feel of a tight-knit community.

NC State is located in the Research Triangle region, home to many of the country’s leading Fortune 500 technology, research and pharmaceutical companies. NC State’s Centennial Campus is home to more than 130 corporate and government research partners, incubator companies and NC State research units.

Mission

As a research-extensive land-grant university, North Carolina State University is dedicated to excellent teaching, the creation and application of knowledge, and engagement with public and private partners. By uniting our strengths in science and technology with a commitment to excellence in a comprehensive range of disciplines, NC State promotes an integrated approach to problem solving that transforms lives and provides leadership for social, economic and technological development across North Carolina and around the world.

Campus

NC State University is located west of downtown Raleigh on 2,099 acres. The campus acreage includes Centennial Campus on 1,105 acres and Centennial Biomedical Campus on 215 acres. West Campus includes the College of Veterinary Medicine and the stadium/arena complex. Nearby are research farms, biology and ecology sites, horticulture and floriculture nurseries and research forests that cover an additional 3,000 acres. Elsewhere across the state are research farms and 4-H camps.

Research Triangle Park

NC State is one of three nationally renowned research universities in the Triangle area, along with Duke University in Durham and the University of North Carolina at Chapel Hill. Within the 30 mile triangle formed by the three universities is Research Triangle Park, a 7,000-acre research park founded in 1959 by leaders in academia, business and government. Today, Research Triangle Park is home to some of the most innovative technology and research-based companies in the world.

Faculty

The university has 9,069 employees, including 2,336 faculty. Among the many honors and recognitions received by members of the faculty are 10 memberships in the National Academy of Sciences, 14 memberships in the National Academy of Engineering, one membership in the Institute of Medicine, and 632 members of NC State’s Academy of Outstanding Teachers.

Outreach and Extension Program

As North Carolina’s flagship research intensive, community engaged land-grant university, NC State has a unique mission to serve the citizens of this state through technical assistance, professional development, lifelong education, technology transfer, and other means of applying knowledge to real world issues and problems. Faculty, students, and staff from all ten academic colleges and other units engage in collaborative research, learning, and service partnerships with business, industry, government, and communities, in the Triangle region and across the state. Extension and engagement imperatives include economic development, environmental stewardship, K-12 education, leadership development, and entrepreneur support. NC State’s Office of Extension, Engagement, and Economic Development reaches over one million citizens annually through Cooperative Extension, Industrial Extension, McKimmon Center for Extension and Continuing Education, NC State’s Economic Development Partnership, the General Hugh Shelton Leadership Center, and the North Carolina Small Business and Technology Development Center.

Students

In the 2015 Fall Semester, the university’s head count enrollment totaled 34,015. Included in this number were 24,111 students in undergraduate degree programs, 9,904 in graduate degree programs, 462 First Professional and 2,083 non degree-seeking students. The total enrollments by college were:

- Agriculture and Life Sciences - 3,500
- Design - 788
- Education - 1,590
- Engineering - 9,516
- Natural Resources - 1,697
- Humanities and Social Sciences - 4,158
- Management - 3,377
- Sciences - 3,647
- Textiles - 1,204
- Veterinary Medicine - 462
- Division of Academic and Student Affairs - 1,472

The student population included 2,163 African American students, 4,280 other non-white students 15,246 female students. Students at the university come from 54 states (including DC and territories) and 120
foreign countries. The international enrollment is a distinctive feature of the institution as 4,168 international students give the campus a cosmopolitan atmosphere.

**Associations, Accreditation**

**Associations**

The university is a member of the Association of Public and Land-grant Universities, the American Council on Education, the Association of Governing Boards of Universities and Colleges, the Association of American Colleges and Universities, the Education Advisory Board, the Engagement Scholarship Consortium, the National Association of College and University Business Officers, the Oak Ridge Associated Universities, the Southern Association of Colleges and Schools Commission on Colleges, Campus Compact, the University Professional and Continuing Education Association, and the Cooperating Raleigh Colleges.

**Accreditation**

NC State University is accredited by the Southern Association of Colleges and Schools Commission on Colleges (SACSCOC) to award associate’s, baccalaureate, master’s and doctoral degrees. Contact SACSCOC at 1866 Southern Lane, Decatur, Georgia 30033-4097 or call (404) 679-4500 for questions about the accreditation of NC State University.

We are providing this contact information here to enable interested constituents (1) to learn about the accreditation status of NC State, (2) to file a third-party comment at the time of NC State’s decennial review, (3) to file a complaint against the institution for alleged non-compliance with a standard or requirement. Normal inquiries about NC State, such as admissions requirements, financial aid, educational programs, etc., should be addressed directly to the university and not the SACSCOC’s office.

In addition, many of the university’s professional programs and departments are accredited by national professional associations, including:

* Accredited through the College of Education

**Accreditation**

The university is a member of the Association of Public and Land-grant Universities, the American Council on Education, the Association of Governing Boards of Universities and Colleges, the Association of American Colleges and Universities, the Education Advisory Board, the Engagement Scholarship Consortium, the National Association of College and University Business Officers, the Oak Ridge Associated Universities, the Southern Association of Colleges and Schools Commission on Colleges, Campus Compact, the University Professional and Continuing Education Association, and the Cooperating Raleigh Colleges.

**Accreditation**

NC State University is accredited by the Southern Association of Colleges and Schools Commission on Colleges (SACSCOC) to award associate’s, baccalaureate, master’s and doctoral degrees. Contact SACSCOC at 1866 Southern Lane, Decatur, Georgia 30033-4097 or call (404) 679-4500 for questions about the accreditation of NC State University.

We are providing this contact information here to enable interested constituents (1) to learn about the accreditation status of NC State, (2) to file a third-party comment at the time of NC State’s decennial review, (3) to file a complaint against the institution for alleged non-compliance with a standard or requirement. Normal inquiries about NC State, such as admissions requirements, financial aid, educational programs, etc., should be addressed directly to the university and not the SACSCOC’s office.

In addition, many of the university’s professional programs and departments are accredited by national professional associations, including:

**Equal Opportunity and Non-Discrimination Policy**

It is the policy of the State of North Carolina to provide equality of opportunity in education and employment for all students and employees. Educational and employment decisions should be based on factors that are germane to academic abilities or job performance. Accordingly, North
Carolina State University ("NC State") does not practice or condone unlawful discrimination in any form, as defined by this policy.*

NC State hereby affirms its desire to maintain a work environment for all employees and an academic environment for all faculty and students that is free from all forms of prohibited discrimination. NC State strives to build and maintain an environment that supports and rewards individuals on the basis of such relevant factors as ability, merit and performance; the prohibited behaviors of discrimination, harassment and retaliation are incompatible with the values and goals of NC State.

Discrimination is unfavorable treatment with regard to a term or condition of employment, or participation in an academic program or activity based upon age (40 or older), color, disability, gender identity, genetic information, national origin, race, religion, sex (including pregnancy), sexual orientation, or veteran status. Discrimination includes the denial of a request for a reasonable accommodation based upon disability or religion. Harassment is any unwelcome conduct based upon age (40 or older), color, disability, gender identity, genetic information, national origin, race, religion, sex (including pregnancy), sexual orientation, or veteran status that either creates a quid pro quo situation or a hostile environment. Retaliation is an adverse action against a covered individual because that individual engaged in a protected activity.

NC State will respond promptly to all complaints of discrimination, harassment and retaliation. Violation of this policy can result in serious disciplinary action up to and including expulsion for students or discharge for employees.

Any individual with a concern, grievance or complaint of discrimination, harassment or retaliation should use the procedures outlined in the Resolution Procedures for Discrimination, Harassment and Retaliation Complaints.

For more information, please contact:

Office for Institutional Equity and Diversity

Box 7530, NC State University
Raleigh, NC 27695-7530
Phone: (919) 515-3148
Website: www.ncsu.edu/oied

* This policy reflects federal and state civil rights such as: Title VII of the Civil Rights Act, Title IX of the Education Amendments, the American with Disabilities Act, and the Age Discrimination in Employment Act, among others.
Admission and Campus Resources

To connect with NC State, students should create a wolfPAW account (https://wolfpaw.ncsu.edu/Default.asp). Through their wolfPAW account, students can register for campus tours and events and receive important reminders and announcements. After they apply, applicants should use their wolfPAW account to track their application status and receive their admission decision.

NC State is a member of the Common Application (http://www.commonapp.org) and the Coalition for Access, Affordability, and Success (http://www.coalitionforcollegeaccess.org). Students may choose to apply through either application system. Undergraduate Admissions implements a notification date system for both domestic freshman and transfer applicants and international applicants are notified as decisions are made. Freshmen are strongly encouraged to apply during the fall of their senior year in high school.

Application Dates and Deadlines (https://admissions.ncsu.edu/apply/dates-and-deadlines)

Applicants for the College of Design and Fashion and Textile Design program must submit a complete application by October 15 and list it as their first choice major. Freshman applications that are submitted and have all required materials received by October 15 will be automatically considered for campus merit-based scholarships.

All applications for the spring semester should be submitted prior to October 1. The College of Design, College of Engineering, and Elementary Education do not accept applications for the spring semester.

Students are notified of their decision on their wolfPAW account and admitted students (http://admissions.ncsu.edu/admitted-students) must confirm their enrollment by May 1.

The Undergraduate Admissions website (http://admissions.ncsu.edu) provides more information on the application review process and procedure.

New Student Programs

Michael Coombes, Director

New Student Programs provides newly admitted first-year and transfer undergraduate students introductory assistance and continuing services that will aid in their transition to NC State. Our programs expose students to broad educational opportunities, academic expectations and resources, as well as social and developmental opportunities. Most importantly, we begin the process of integrating students into the life of the institution.

Freshman Admission

Admission to the university is highly competitive. Applicants are asked to indicate their first and second choices for a curriculum, including undeclared majors within a college, or, if undecided, to indicate their choice of participating in First Year College. Applicants not admitted in their first curriculum choice will be reviewed for admission in their second curriculum choice. The admissions decision is based on a holistic review of a complete application. Of primary importance is the high school record, including the level and difficulty of the courses taken, the overall grade point average, rank in class, and scores on the SAT or the ACT. Extracurricular involvement, leadership, and many other factors are also considered.

In addition, the Board of Governors of the University of North Carolina System has determined that the Minimum Course Requirements (MCR) for all constituent institutions, including NC State, shall include a high school diploma or its equivalent and the following course units taken in high school:

1. Six course units in language, including
   • Four units in English
   • Two units in a language other than English
2. Four course units of mathematics in any of the following combinations:
   • Algebra I and II, Geometry, and one unit beyond Algebra II
   • Algebra I and II, and two units beyond Algebra II or
   • Integrated Math I, II, III and one unit beyond Integrated Math III
3. Three course units in science, including
   • At least one unit in a life or biological science, and
   • At least one unit in physical science, and
   • At least one laboratory course
4. Two course units in social studies, including
   • One unit in U.S. history
   • One other unit in social studies

These are minimum course requirements. Competitive applicants will typically exceed these minimum courses. It is recommended that every student take a foreign language course and a mathematics course in the senior year.

NC State does not conduct individual interviews with applicants, however, a prospective student is always welcome to visit the Office of Undergraduate Admissions. Freshman information sessions and student led campus tours are available Monday through Friday at the Joyner Visitor Center (http://admissions.ncsu.edu/visit/schedule-your-visit). Prospective students should register for the information session and tour via their wolfPAW (https://wolfpaw.ncsu.edu) account.

College of Design and Fashion and Textile Design

If you are interested in a College of Design major or Fashion and Textile Design, it should be listed as your first choice major and your application should be submitted by October 15. To complete your application you must submit a portfolio and additional essay by November 1. If you are a domestic freshman applying for the Design Studies major, the final deadline is January 15. Design applications are reviewed by the Office of Undergraduate Admissions and, if found to be academically competitive, are forwarded to the College of Design (http://design.ncsu.edu/admissions) or College of Textiles (https://textiles.ncsu.edu/tatm/fashion-and-textile-design) for review. To assess creative potential, candidates must present a portfolio of works created inside and/or outside school. High school art classes are not required for acceptance, but they are encouraged. Design applicants will be notified on January 15 whether their application is under review by the program for their first choice, or
whether it is being considered for second choice of major in a different college at NC State. Notification of admission decisions will be at the end of March.

**Professional Golf Management (PGM)**

Students are accepted into the PGM program by being competitive in the NC State University admissions process and by meeting golf handicap and recommendation requirements. Handicap verification and the letter of recommendation must be submitted directly to the PGM office when the application is submitted to Undergraduate Admissions. Documentation and questions should be directed to the PGM office; Tel. 919-515-8792, email: susan_colby@ncsu.edu. Visit the PGM website (https://cnr.ncsu.edu/prtm/current-undergraduates/ug-programs/pgm/pgm-future-students/admissions-and-entrance-requirements) for more information on the application process.

**Two-Year Agricultural Institute**

Requirements for admission to the Agricultural Institute (http://harvest.cals.ncsu.edu/agiinstitute), a two-year terminal program, include graduation from high school with a 2.0 minimum grade point average or successful completion of the high school equivalency examination administered by the State Department of Public Instruction, and one letter of recommendation. SAT scores are not required. Coursework is not transferable to the four-year degree programs. Completion of coursework in the Agricultural Institute leads to an Associate of Applied Science (A.A.S.) degree.

**Standardized Test Scores**

Freshman applicants must submit scores from the SAT or the ACT Assessment to complete their application. We do not require the writing section for either test. Applicants’ scores must be sent directly from the testing agency to NC State (SAT Code #5496, ACT code #3164). Prospective students may find more information and applications for the tests online: www.collegeboard.com (http://www.collegeboard.com) or www.act.org (http://www.act.org).

**Credit Opportunities**

Students can jump-start their college careers by acquiring pre-enrollment credits by one or more of the following means: (1) by passing a proficiency examination administered by a teaching department at NC State; (2) by meeting a specific minimum score on certain Advance Placement Program (AP) or International Baccalaureate (IB) examinations; and/or (3) by attaining a minimum score on certain College Level Examination Program (CLEP) subject tests. Learn about the recognized test curriculum, accepted test scores and credit awarded at admissions.ncsu.edu/credit-opportunities.

**Out-of-State Students**

Undergraduate applicants from outside North Carolina are reviewed using the same criteria as applicants from North Carolina. NC State is limited to enrolling not more than 18 percent of total new undergraduate students from outside the state as set forth by the University of North Carolina System.

**Transfer Students**

NC State welcomes transfer applicants, and in recent years, more than 20 percent of our graduates started their college programs at other institutions. A transfer student should present at least 30 semester hours (or 45 quarter hours) of “C” or better college level work, including an English class and a college level math class applicable to the requested degree program. Additional specific course work is required for most programs. Transfer admission is highly competitive, and the grade point average required for consideration varies depending on the requested program of study. Transfer students must be eligible to return to the last institution previously attended and must submit individual transcripts from each institution. View the recommendations for competitive applicants (https://admissions.ncsu.edu/apply/admission-review/transfer-admission-review-process/#AdmissionsConsiderations) on the transfer admissions website.

College transcripts are required from each institution attended and are evaluated for credit that is transferable to the university as part of the admission application review. A grade of “C-” or better is required before a course may be considered for credit. The college to which the application is made will determine the exact amount of credit applicable toward a degree at NC State. Applicants can search our transfer course equivalency database (https://admissions.ncsu.edu/apply/admission-review/transfer-admission-review-process/#transfercredits) to determine which course credits from other institutions transfer to NC State.

**Overview:**

International students must apply online using The Common Application at commonapp.org (http://commonapp.org). Undergraduate Admissions implements a notification date system for both domestic freshman and transfer applicants and international applicants are notified as decisions are made. Freshmen are strongly encouraged to apply during the fall of their senior year in high school. Learn more about the admissions process and what it takes to be a competitive applicant at admissions.ncsu.edu/international.”

**Freshman Application Deadlines**

- First Deadline: October 15
  Notification Date: January 30
- Final Deadline: January 15
  Notification Date: March 30

**Transfer Application Deadlines**

- First Deadline: January 15
  Notification Date: March 30
- Final Deadline: March 15
  Notification Date: May 15

**International Application Deadlines**

- First Deadline: October 15
- Final Deadline: January 15

Students are notified of their decision on their wolfPAW account and admitted students (http://admissions.ncsu.edu/admitted-students) must confirm their enrollment by May 1.

The Undergraduate Admissions website (http://admissions.ncsu.edu) provides more information on the application review process and procedure.

**International Students:**

NC State welcomes international student applications and has a long history of enrolling outstanding international students. International
students must apply online using The Common Application at commonapp.org (http://commonapp.org). International applicants must demonstrate competitive academic credential, evidence of English language proficiency, and adequate financial resources before a visa certificate can be issued.

**English Proficiency:**

English proficiency can be demonstrated by meeting these requirements:

Options for Meeting Requirements -

- TOEFL IBT (code: 5496)
  - Scores required for full undergraduate admission: 85 or higher (minimum of 18 in each sub score)
  - Scores required for conditional admission: 60 or higher
- TOEFL Paper Based (code: 5496)
  - Scores required for full undergraduate admission: 563 or higher
  - Scores required for conditional admission: 500 or higher
- IELTS Academic
  - Scores required for full undergraduate admission: 6.5 or higher (minimum of 6.5 in each sub score)
  - Scores required for conditional admission: 6.0
- Pearson Test of English (PTE) Academic
  - Scores required for full undergraduate admission: 62 or higher (minimum of 53 in each sub score)
  - Scores required for conditional admission: 45
- Intensive English Program (http://iep.oia.ncsu.edu)
  - Completion of Level 6 with a grade of B or higher and meet all other exit criteria
  - English Composition I and II from an accredited U.S. College or university
  - Grade of C or higher

**Financial and Immigration Information**

All international applicants seeking an F-1 or J-1 student visa must submit a Certificate of Financial Responsibility (CFR) as part of the admission process. The purpose of this form is to certify financial solvency for the student throughout his/her program of study - this is a federal requirement that must be met before the Office of Undergraduate Admissions can issue any visa certificates.

In addition, applicants deemed admissible who are already in the U.S. must also fill out a Visa Clearance Form (VCF). This includes international applicants who are in a nonimmigrant visa category other than F-1 or J-1 (ex: H-4, L-2, DACA, E-2, Pending Permanent resident etc.). They are not required to complete a CFR, unless they plan to change to F-1 or J-1 student status (if eligible).

CFR and VCF forms are reviewed by the Office of Undergraduate Admissions upon receipt. If the information provided by the applicant is incomplete or not acceptable (e.g. sponsor and bank official signatures, bank statements, etc.), the applicant will be notified that his/her documents were not approved and why. Notification is done via e-mail. The applicant will then have an opportunity to correct the problem(s) and resubmit the form(s). Applicants can check the status of their applications through their WolfPAW account.

Once the applicant is considered admitted (fully or conditionally) to the University, the Office of Undergraduate Admissions mails out the appropriate Certificate of Eligibility (Form I-20 for an F-1 visa or Form DS-2019 for a J-1 visa) along with the full admission letter and other important pre-arrival information. Newly fully admitted international students will also receive information and guidance from the Office of International Services (OIS) via email prior to their arrival to NC State.

Conditionally admitted international students will receive information from the Intensive English Program (IEP) prior to their arrival as well.

New F-1 and J-1 international students must check-in with Office of International Services upon arrival to campus and attend the New International Student Orientation, which is scheduled a few days before the semester begins.

New international students who are accepted to NC State have the opportunity to participate in a Summer Start program during the month of July before fall classes begin. More information can be found here. http://asap.dasa.ncsu.edu/summer-start.

Academic Programs and Services

University College

300 Park Shops
NC State Box 7105
Raleigh, NC 27695-7105
Website: https://dasa.ncsu.edu/academic-success/
Phone: 919-515-3037 Fax: 919-515-4416

Michael D. Mullen, Vice Chancellor and Dean

At NC State, student success is our priority. We challenge students to think bigger, to find innovative solutions for real-world problems. Our rigorous coursework and on-campus resources provide students with the tools they need to excel. The University College (http://universitycollege.dasa.ncsu.edu) was designed to bring all of the academic services in the Division of Academic and Student Affairs into one centralized entity.

Academic Advising Services (AAS)

2751 Cates Avenue
FYC Commons
NC State Box #7925
Raleigh, NC 27695-7925
Website: https://advising.dasa.ncsu.edu/
Phone: 919-515-8130 Fax: 919-515-8267

Carrie McLean, Assistant Dean

Academic Advising Services (AAS) offers face-to-face, telephone, virtual, and email academic advising to NC State University degree seeking students who are exploring a change of major or needing advising assistance as they transition to a new major. Cross-curricular academic advisors rotate through a daily walk-in schedule. AAS advisors provide current information on general education, declaring majors and/ or minors, and academic policies. Students who need long-term advising assistance may request to transfer into AAS (undesignated status) and be assigned to an AAS advisor. AAS offers a Career Exploration and Development course for students who need a structured major exploration experience. AAS also maintains an extensive and up-to-date advising FAQ database on the AAS webpage, a great resource for all students and advisors.

Academic Support Program for Student Athletes (https://aspsa.dasa.ncsu.edu)

200 Case Academic Center
240 Jeter Drive

Campus Box 7104
Raleigh, NC 27695-7104
Phone: 919-515-2464 Fax: 919-515-1619
Website: https://aspsa.dasa.ncsu.edu/about/

Katie Graham, Assistant Dean

The Office of Academic Support Program for Student Athletes (ASPSA) is a comprehensive support program that strives to meet the academic, personal and professional development needs of all student-athletes, promoting excellence and effectiveness in undergraduate and graduate education as well as leadership and civic engagement.

ASPSA is committed to extending the educational experience of its constituency with particular emphasis on empowering student-athletes to become strong self advocates, providing specialized initiatives to facilitate a smooth transition from high school to college and from college to professional life while successfully integrating student-athletes into the campus community; enhancing academic skills for student-athletes at all skill levels and providing academic support personalized to the needs of each student-athlete.

ASPSA will maintain a strong sense of integrity and will continue to strive to be one of the benchmark programs for academic support for all collegiate academic support programs in the nation. The mission of the Office of Academic Support Program for Student Athletes at NC State University is:

1. to support the recruitment, retention and graduation of NC State student-athletes;
2. to provide a comprehensive support system that affords NC State student-athletes equitable opportunity to pursue academic, personal, and professional development and
3. to strongly adhere to the principles of integrity, excellence, and lifelong learning.

Summer START (https://summerstart.dasa.ncsu.edu)

204 Park Shops
NC State Box 7105
Raleigh, NC 27695-7105
Website: http://summerstart.dasa.ncsu.edu
Phone: 919-513-1883

Ginny Shepherd, Summer START Coordinator

Summer START is designed to assist new incoming students with the transition to NC State University through five weeks of academic courses and campus involvement. This program provides a strong introduction to the culture of NC State and to the city of Raleigh. Summer START is a small but diverse living and learning experience with students represented from 8 different countries, 11 different states and all 10 undergraduate colleges at NC State. Summer START works closely with each college to ensure students will be enrolled in academic courses towards their specific curriculum to get them on the accelerated path to graduation. In addition to up to eight credit hours of university coursework, many optional academic, recreational, service, leadership and involvement opportunities are planned throughout the week and weekends to help students acclimate to NC State’s campus. Co-curricular, college based, leadership, and service programs are planned throughout the week and on the weekends.

College Advising Corps (CAC) (http://advisingcorps.dasa.ncsu.edu)
The EcoVillage, located in Bragaw Hall welcomes students from all majors, thereby creating an interdisciplinary education experience that prepares students for life-long sustainable living! Students go beyond the classroom to lead, serve, create, problem-solve and engage in complex issues facing the local and global energy and environmental challenges of society to advance sustainability.

The EcoVillage focuses on uniting students around the central goal of sustainable living and awareness. The EcoVillage broadly defines sustainability to include everything from agriculture and energy consumption, to transportation and recycling.

The EcoVillage provides unique experience allowing students to face the energy and environmental challenges of society. Beyond the classroom, members of the EcoVillage engage with faculty, facilities staff and sustainability staff to explore local, regional and global approaches to advance sustainability.

**Exploratory Studies**

2751 Cates Avenue  
University College Commons  
NC State Box 7925  
Raleigh, NC 27

Website: https://exploratorystudies.dasa.ncsu.edu  
Phone: 919-515-8130 Fax: 919-515-8267  

Kim Outing, Director  
Carrie McLean, Assistant Dean and Executive Director of Advising

Exploratory Studies provides a comprehensive first year experience for students who want to learn about NC State's many academic programs, choose the right major, and graduate on time. Established in 1995 as the First Year College, the program has developed a nationally-recognized model for successfully working with exploratory students. The key components of the program include personal, one-on-one academic and career advising, a two-semester orientation course and the Exploratory Studies Village.

Cross-curricula, developmental advising is the hallmark of Exploratory Studies and the reason why Exploratory Studies students can take a year to explore majors without extending their time to degree completion.

Exploratory Studies students meet with their advisor at least twice each semester for one-on-one advising, and they also see their advisor weekly in the required Exploratory Studies orientation course, which meets weekly in the fall and spring semesters. This class offers an introduction to University programs, resources, opportunities, and policies and provides a space for structured exploration of self, majors, and careers. The Exploratory Studies Village offers residents additional opportunities in support of the program goals, upper class Exploratory Studies Resident Mentors, and an active, vibrant community of first year students. Exploratory Studies students may also take advantage of free tutoring offered by the program, leadership opportunities, and special sections of general education courses that are linked with select sections of the Exploratory Studies course.

**Fellowship Advising Office**

204 Clark Hall  
NC State Box 8610  
Raleigh, NC 27695-8610  
Phone: 919-515-2237 Fax: 919-513-439  
Website: https://fellowships.dasa.ncsu.edu/
recognize students for their international studies and activities and lifelong friends. The goal of the Global Perspectives Certificate is to:

- Fulfilling, giving way to new perspectives, international contacts, and even language experience. Knowledge of global cultures is also personally international awareness and experience to be successful members in our society.

Students, regardless of academic and social background, need international awareness and experience to be successful members in our global society. Many businesses, graduate schools, and organizations give priority to applicants who have significant international and foreign language experience. Knowledge of global cultures is also personally fulfilling, giving way to new perspectives, international contacts, and even lifelong friends. The goal of the Global Perspectives Certificate is to:

- Encourage students to continue their global interests both overseas and within the United States.

All undergraduate degree-seeking students and all majors are welcome, including undergraduate international students. Upon completion, students will receive an official certificate and a notation on their transcript documenting their global experiences during their studies. Learn more about the GPC and get started today.

Health and Exercise Studies (HES)

2000 Carmichael Gymnasium
NC State Box 8111
Raleigh, NC 27695-8111
Phone: 919-513-3885 Fax: 919-
Website: https://hes.dasa.ncsu.edu/

Tommy Holden, Department Head and Teaching Professor

All North Carolina State University students are required to complete two credit hours of Health and Exercise Studies (HES) activity courses to meet the University General Education Program (GEP). Students must take at least one credit hour of a 100-level Health and Exercise Studies course. 100-level activity courses focus on fitness and wellness and can be found with the HESF prefix. The second credit hour required to fulfill the GEP can be an additional 100-level Health and Exercise Studies activity course or a 200-level activity course, which focuses on skill-acquisition. Students may choose a class that offers a familiar skill, or may opt to experience a new activity. Students with disabling conditions will be assisted by the department of Health and Exercise Studies, Student Health Service, and the Disability Services Office to help choose appropriate classes. Only "activity" courses, not elective "lecture" courses, may be used to satisfy the NC State GEP HES requirement. Students have the option of taking HES courses on an S/U basis. For more information, please visit Health and Exercise Studies website.

Music Department

Fax: 919-515-1089
Website: https://music.dasa.ncsu.edu/

Daniel Monek, Department Head

The Music Department provides educational and performance opportunities for student and community participants through a variety of musical experiences and academic courses. The department also serves as a cultural resource for the University and the greater community through performances and presentations offered by our students, our student/community groups, and by our faculty.
The Music Department provides a responsive and innovative music education to all NC State students as an essential expression of the human experience.

**New Student Programs (NSP)** (https://newstudents.dasa.ncsu.edu)

106 Peele Hall
NC State Box 7105
Raleigh, NC 27695-7105
Phone: 919-515-1234
Website: https://newstudents.dasa.ncsu.edu/

Michael Coombes, Director

Our Mission: New Student Programs addresses the holistic needs of each new NC State student to create a foundation of success.

Based on the core value that people matter, we achieve this through:

- Cultivating strategic partnerships across the University
- Promoting an environment of personal responsibility
- Fostering inclusivity through a shared campus identity
- Partnering with parents and families
- Preparing and empowering student leaders to serve the campus
- Striving to be innovative in meeting the needs of our community

Our Outcomes: By participating in our programs, students should achieve the outcomes identified below.

- **Objective 1: Academic Success**
  - Outcome 1a: Identify skills, university and college resources, and policies that promote academic success and engagement in co-curricular learning experiences

- **Objective 2: Connection to Campus**
  - Outcome 2a: Develop a sense of community with fellow students, faculty and staff by engaging in shared experiences
  - Outcome 2b: Recognize the value of the different experiences of individuals within the campus community

- **Objective 3: Community Expectations**
  - Outcome 3a: Examine the role of personal responsibility as it applies to the university’s academic and behavioral expectations and policies
  - Outcome 3b: Identify behaviors and resources that promote personal and community well-being and safety

- **Objective 4: Transition to the University Environment**
  - Outcome 4a: Demonstrate the ability to navigate the day-to-day functions of collegiate life by utilizing the available resources

- **Objective 5: Student Leader Development**
  - Outcome 5a: Apply effective leadership skills in interactions with students, families, New Student Programs staff, and campus partners
  - Outcome 5b: Utilize knowledge of campus to address the transitional needs of new students and families

**ROTC - Department of Aerospace Studies - Air Force** (https://airforce.dasa.ncsu.edu)

3223 Broughton Hall
NC State Box 7308
Raleigh, NC 27695-7308
Phone: 919-515-2417
Fax: 919-515-4456
Website: https://airforce.dasa.ncsu.edu/

Lieutenant Colonel Jeffrey Onan

Commander and Department Chair

Our faculty of professors are active duty officers from diverse professional backgrounds that enrich the learning environment.

The AFROTC program at NC State University is geared toward students who desire to earn a commission as a Second Lieutenant in the U.S. Air Force. However, any NC State student or one of our four crosstown colleges who wish to learn about the U.S. Air Force (USAF) can take any Air Force ROTC course with no obligation or commitment. All students who complete the Aerospace Studies academic program of study with a minimum of 15 hours in aerospace studies are eligible to receive a Aerospace Studies minor.

The four-year AFROTC program that leads to a commission as a U.S. Air Force Officer allows freshmen to enroll in Aerospace Studies courses in the same manner as other college courses for the first two years. It is during this time a student may join the program and become an Air Force ROTC cadet. All cadets must be attending college in “full time” status. Aerospace Studies courses are taken as free electives and cadets incur no military obligation unless they are receiving an AFROTC scholarship. The first two years in the AFROTC program are called the General Military Course (GMC) during which cadets learn the basics of military discipline, followership, and begin preparation for field training. The last two years of AFROTC comprise the Professional Officer Course (POC) where cadets lead each other through a time-tested leadership laboratory training environment that instills both character and leadership skills needed in preparation for life as an active duty officer. The pinnacle training event for AFROTC occurs in the summer between the sophomore (AS200) and junior (AS300) year when a cadet attends intense field training held at Maxwell AFB, Alabama and Camp Shelby, Mississippi.

For exceptionally qualified cadets, the four-year program can be compressed to as little as two and one half years for those who do not complete all four AS100 and AS 200-level courses (AS 121 The Foundation of the United States Air Force I and AS 221 The Evolution of USAF Air and Space Power I are offered in the fall semester, AS 122 The Foundations of the United States Air Force II and AS 222 The Evolution of USAF Air and Space Power II are offered in the spring semester) while enrolled in the Air Force ROTC program. Interested students must contact the Professor of Aerospace Studies to determine eligibility requirements.

Cadets at every level have numerous opportunities to further their knowledge of the Air Force and develop leadership. Throughout the school year, cadets have opportunities to examine all aspects of life in the Air Force and gain leadership experience through Air Force base visits, flying opportunities, and social activities. Additionally, a variety of summer programs allow cadets to visit bases and participate in programs such as the US Air Force Academy Free Fall program, manned glider training, and worldwide cultural immersion programs. POC cadets have similar opportunities, with focus on programs related to the cadet’s desired active duty career area, both in the U.S. and abroad.

Upon university graduation and satisfactory completion of the Air Force ROTC program, a cadet is commissioned a second lieutenant in the USAF and is obligated to serve a minimum of four years on active duty. View the NC State Air Force ROTC website (https://airforce.dasa.ncsu.edu).

**ROTC - Department of Military Science - Army** (https://army.dasa.ncsu.edu)

1216 Broughton Hall
The mission of the Army ROTC Program is to train college men and women to become commissioned officers in sufficient numbers to meet Active Army, Army Reserve, and National Guard requirements. The Army ROTC Program consists of a voluntary Basic Course (freshmen and sophomore level) and a two-year Advanced Course (junior and senior level) that includes a four-week Cadet Leaders Course in the summer prior to the senior year. One may enter the Advanced Course with participating in the Basic Course by any of the following methods: Simultaneous Membership Program (SMP): Members of the Reserve or National Guard units may take advantage of this program and, if accepted, enroll directly into the Advanced Course. SMP participants will be assigned to a unit near NC State or home for part-time monthly officer training and will receive the ROTC Advanced Course subsistence payment of $450 per month for juniors and $500 per month for seniors, plus approximately $200 per month for the one weekend of Reserve or Guard training. In addition, two weeks of Annual Training will be required for which the individual will receive full pay; Prior Service: Service veterans are eligible for placement into the Advanced Course; Leader's Training Course (LTC): Successful completion of the four-week basic summer camp, held at Ft. Knox, Kentucky is an alternative to the Basic Course. Students with strong academic credentials may receive a scholarship after completing this course; Transfer Credit: Students entering as transfer students from other institutions may receive credit for work completed at other Senior ROTC units; Junior ROTC: Students who participated in a Junior ROTC in high school may receive placement credit as determined by the Professor of Military Science.

All full-time freshmen and sophomores may enroll in any Military Science Basic Course offering without obligation to the Army. To be eligible for participation in the Advanced Course, applicants must be in good academic standing and demonstrate satisfactory performance in the Basic Course. Additionally, applicants for commissioning must be able to be commissioned by their 30th birthday. An age waiver may be obtained as long as the individual will be commissioned prior to his/her 32nd birthday. A student must have a minimum of two years remaining as a full-time student at either the undergraduate or graduate level.

ROTC - Department of Naval Sciences - Navy

The purpose of the department of Naval Science is to develop midshipmen and enlisted officer candidates mentally, morally, and physically and to imbue them with the highest ideals of duty, honor, and loyalty in order to commission college graduates as Navy and Marine officers who possess a basic professional background, are motivated toward careers in the naval services, and have a potential for future development in mind and character so as to assume the highest responsibilities of command, citizenship, and government.

There are two NROTC programs leading to a commission as a Navy or Marine Officer upon graduation: The Scholarship Program and the College Program.

The Scholarship Program leads to a commission in the Navy or Marine Corps. For students who receive a Navy/Marine Corps scholarship, the Navy will pay tuition and fees, provide a $375 book allowance each semester, supply uniforms, and pay a monthly tax-free subsistence allowance (currently $250 to $400 on a graduated scale; refer to the NROTC website (https://naval.dasa.ncsu.edu) for updates), to help defray the cost of normal board at the University. During the summers between school years, Navy scholarship students receive approximately 4 weeks of at-sea training conducted on ships, submarines, or aviation squadrons. For select students, training with mobile Explosive Ordinance Disposal (EOD)/SEAL teams is also possible during the summer prior to their senior year. Marine scholarship students participate in a Mountain Warfare Training course between sophomore and junior year and complete Marine Officer Candidate School between their junior and senior year. The minimum active duty obligation following graduation for scholarship students is five years but can vary greatly depending on the warfare community a student commissions into.

For those students who are interested in a commission and do not desire a scholarship, or for those who are seeking an opportunity to qualify for a scholarship after entering NC State, the College Program is available. Selection for the College Program is made from students already enrolled at NC State with applications being accepted and considered by the staff of the NROTC unit. Students enrolled in the College Program are provided uniforms and Naval Science textbooks. College Program students compete for selection to continue NROTC as “Advanced Standing” students at the end of their sophomore year. Selection is based on academic and demonstrated professional performance. Those selected for Advanced Standing receive a monthly subsistence allowance during the final two years of the program (refer to the NROTC website (https://naval.dasa.ncsu.edu) for amounts). College Program midshipmen participate in a single summer training cruise between the junior and senior year. Except for administrative differences, no distinction is made between Scholarship and College Program midshipmen. The minimum active duty commitment following graduation for College Program students is three years but can vary based on the warfare community a student commissions into.

Students in the College Program are eligible to compete for merit based scholarships annually. If selected for a merit based scholarship, the student would begin their next academic year on a full scholarship, identical to the Scholarship Program description above.

The Two-Year Scholarship Program offers an opportunity to participate in NROTC in the final two years of University study. This program is offered only intermittently by the Navy and may or may not be available during any given year.

Applications for this program must be completed by early Spring prior to the starting year. Upon selection, the candidate attends a six-week training course at Newport, Rhode Island, during the summer between the sophomore and junior years so that he or she may receive instruction in the Naval Science subjects normally covered in the first two years at NC State. Participants in this training course receive uniforms, room and board, and officer candidate pay during the summer period and, upon satisfactory completion of training, enter the NROTC program as third
year students. The application process can be time consuming. In order to meet the Spring deadline, students are encouraged to contact the Department of Naval Science before December 1 of their sophomore year.

Graduates of the Navy program are commissioned as Ensigns and are selected to serve in one of the Navy's front line warfare communities (Surface Warfare, Submarine/Nuclear Power, Pilot, Naval Flight Officer, Special Operations/EOD, or Special Warfare/SEAL). Graduates of the Marine program are commissioned as Second Lieutenants and attend the Marine Officer Basic School at Quantico, Virginia where they select their Military Occupational Specialty (MOS).

In addition to the courses taken for University credit, midshipmen attend leadership laboratory and physical training each week. At the completion of the four-year period students will have earned enough credit to apply for a minor in Naval Science.

Further information regarding application for and admission into the NC State Naval ROTC may be obtained on campus in Room 4165 Broughton Hall, by writing to the Professor of Naval Science, Campus Box 7310, NC State, Raleigh, North Carolina 27695-7310 or by contacting the unit recruiting officer, LT Anthony Scalabrino at 919-515-6218 or via E-mail at atscalab(at)ncsu.edu.

**TRIO Programs**

20 Enterprise Street, Suite 2  
NC State Box 7317  
Raleigh, NC 27695-7317  
Phone: 919-515-4577, Fax: 919-515-4581  
Website: http://trio.dasa.ncsu.edu

Marsha Pharr, Executive Director

The TRIO Programs are Federal outreach and student services programs designed to serve under resourced individuals, first-generation college students, and individuals with disabilities to progress through the academic pipeline from middle school to post baccalaureate programs.

The Talent Search and Upward Bound Programs serve pre-college level students. Talent Search serves grades 6-12 and Upward Bound serves 9-12 while the Student Support Services and the Student Support Services STEM Programs support enrolled undergraduate NC State University students. These programs utilize a holistic approach in providing academic tutoring, personal counseling, mentoring, financial guidance, and other support services necessary for educational access, persistence and degree completion.

**Student Support Programs (SSS & SSS-STEM)** (http://trio.dasa.ncsu.edu/student-support-services)

Raleigh, NC 27695-7105  
Website: http://trio.dasa.ncsu.edu/student-support-services  
Phone: 919-513-7774

Courtney Simpson, Director

NC State University TRIO Student Support Services (SSS) Program and Student Support Services STEM (SSS-STEM) strive to encourage and enhance educational opportunities for undergraduate students by providing academic and personal support to enhance academic skills, increase retention and graduation rates, and as appropriate, facilitate entrance into graduate and professional programs. TRIO SSS and SSS-STEM provide opportunities for academic and personal development by assisting students with college requirements, motivating students toward the successful completion of their post-secondary education and promoting graduate school enrollment through individualized coaching and tutoring at no cost to the student. The TRIO SSS and SSS-STEM Programs serve 260 students annually.

**Undergraduate Courses and Curricula and Academic Standards**

211A Park Shops  
NC State Box 7105  
Raleigh, NC 27695-7105

Chris Ashwell, Director

The office of Undergraduate Research supports and promotes excellent undergraduate opportunities in discovery-, inquiry- and creativity-based scholarship through mentored research experiences with NC State faculty and other national and international scholars and professionals. Undergraduate Research is scholarly study in any discipline in which independent scholarship culminates in advancements in science, technology, engineering, business, the arts, or humanities. Any student chosen by a mentor may participate in undergraduate research. Students from any discipline can engage in the excitement of scholarly research and present their work at quarterly symposia. Research and travel grants are available.

**University Tutorial Center** (http://www.ncsu.edu/tutorial_center) (UTC) (http://tutorial.ncsu.edu)

Phone: 919-515-3163 Fax: 919-515-4416

Barbara B. Windom, Director
The University Tutorial Center provides free academic assistance to NC State undergraduate students enrolled for credit in many challenging 100- and 200- level math, physics, and chemistry classes. Several types of assistance are available that are designed to best meet the students' needs, including tutoring by appointment, group tutoring, and Supplemental Instruction (SI). In addition, Writing and Speaking consultations are available to both undergraduate and graduate students. They provide assistance to all students who need help at any stage of the writing process in the English language.

Students are eligible to become a tutor for the UTC if they have an established GPA of 3.25 or better and least a B+ in the course(s) they wish to tutor. All new tutors are required to take USC 210, Introduction to College Tutoring, during the first semester of employment. All tutors are trained in techniques that are designed to help students become independent learners.

Sue Carson, Interim Executive Director

The University Honors Program (UHP) is a highly selective academic program that seeks to provide a transformative liberal learning experience which empowers students to critically engage meaningful problems in the world. Students in the program directly participate in knowledge-building and creative activities of the NC State faculty and are encouraged and enabled to craft for themselves a unique undergraduate education that draws on the full range of opportunities that exist at a major research, land-grant university such as NC State.

Application to the University Honors Program is by invitation only. Incoming freshmen are invited to apply after they have been accepted to the University. All invitations are issued on a rolling basis throughout the University’s admissions process (typically mid-December through February). If you do not receive an invitation, but believe you are a strong candidate for the University Honors Program, you can contact the UHP office and request an invitation to apply. Admission is competitive and based on evidence of motivation to pursue research and scholarship in the discipline, academic achievement, extracurricular activities, and our desire to maintain an Honors community that includes students from a diversity of academic disciplines. Current NC State students may also request an invitation to apply.

The curricular core of the UHP is the HON seminars, which are small, intensive, graduate-style, interdisciplinary courses designed to expose students to how multiple disciplines approach and try to solve problems. University Honors Program students are required to take a minimum of 12 credit hours of HON seminars (generally one per semester in their first two years). These seminars are taught by some of the most innovative professors at NC State. The UHP also offers experiential learning courses that enable them to earn credit for activities such as working with a faculty member on a project or with a local museum to create educational materials for a new exhibit. The other major curricular dimension of the UHP is the Capstone project, which is a 6-credit-hour, 2 semester long independent research project, conducted under the guidance of a faculty mentor. The Capstone is the culmination of a student’s NC State and University Honors Program experience, because it is the process through which students truly move from being knowledge consumers to knowledge producers. The Capstone requires that a student articulate a problem or issue of interest and then use the tools and methods of their discipline in order to make a new discovery.

The Honors Village is a collaborative partnership between the University Honors Program and University Housing. The mission of the Honors Village is to create a community of young scholars which is engaged in the societal issues, provide opportunities for growth, and is grounded in critical scholarship. The Honors Village advances the UHP’s mission of engaged learning and research in the discipline through creating opportunities for students to become curious, informed, and critically-minded. The community boasts representation from all colleges and all academic years (Freshman through Senior) and is home to NC State’s longest standing Scholar in Residence Program. The Honors Village is located in the historic renovated Quad residence halls on East Campus.

The Honors experience at NC State includes Honors Programs located in the colleges and departments. Students are invited to participate in these programs at various times, depending upon the specific program (generally the second semester of the sophomore year or first semester of the junior year). Many of the students in the University Honors Program are also participants in one or more of the college or departmental Honors Programs.

**University Scholars Program (USP)**

Sullivan Hall
Campus Box 7316

Phone: 919-515-2353

Sean Cassidy, Senior Associate Director

Throughout history, men and women have been empowered by imagination, faith, curiosity, a sense of adventure, and an awe of the world around them. They have been emboldened by a willingness to take personal risks in order to explore the secrets of the unknown. They have stretched the dimensions of our frontiers in ways that are extraordinary... and the exploration to uncover the truths of the universe, both great and small, continues.

The University Scholars Program invites talented, creative, curious students to join us at NC State for a fun and exciting adventure that will lead to a lifetime of knowledge in action.

"The great end of Life is not knowledge – but action." Thomas Huxley.  Huxley was right, and the University Scholars Program (USP) of North Carolina State University embraces this challenge: To introduce students to the visual and performing arts, to encourage them to consider issues drawn from the sciences and politics, to offer them opportunities to connect their academic and personal goals, and through these experiences empower them to be informed citizens, ethical leaders, and active contributors to our society. This mission provides the foundation for our program objectives:

- Promote the personal, intellectual, and cultural development of University Scholars.
- Foster community and promote student learning, reflection, and service.
Enrollment (Registration)

• Promote an inclusive environment by supporting a diversity of people, cultures, and perspectives.
• Encourage students to discuss and debate social and political issues to help them become informed citizens, ethical leaders, and active contributors to our society.
• Encourage students to develop a commitment to civil and thoughtful discourse which respects divergent views and diverse experiences, seeks multiple and competing sources of information when analyzing complex issues, and values the ability to articulate a viewpoint with evidence and clarity.
• Provide University Scholars with opportunities for leadership and professional development.
• Encourage academic excellence and a commitment to advanced and independent academic inquiry among University Scholars.

Environmental Sciences (http://www.ncsu.edu/envi)

2231 Jordan Hall
NC State Box 8008
Raleigh, NC 27695-8008
Phone: 515-5780

William E. Winner, Director - wewinner@ncsu.edu

Environmental sciences, in the broadest sense, is the study of the relationships between humans and nature. Using basic knowledge about the world's environmental systems produces the basis for innovation leading to sustainable socio-economic development. Environmental sciences use interdisciplinary approaches that link natural science and social science disciplines. Such interdisciplinary approaches are essential for understanding changes in a rapidly changing world, and for understanding our past, present, and future. Environmental scientists will help ensure human prospects by improving both socio-economic development and environmental quality through innovation in new technologies and policies.

Public interest about environmental issues is increasing. Protecting and improving the environment involves knowledge and systematic problem-solving skills that are essential for environmental sciences. North Carolina State University's environmental sciences degree program provides sound, individualized academic programs for students who can develop a wide range of careers. In addition, students can pursue post-graduate academic programs in areas such as environmental law, business, environmental education, and traditional masters and PhD graduate degrees. Successful completion of the B.S. degree in Environmental Sciences prepares students for careers and personal lives in a rapidly changing world.

Specific curriculum requirements are available on the Registration and Records website (http://www.ncsu.edu/registrar/curricula).

Enrollment (Registration)

Enrollment consists of three steps:

1. Students meet with advisors to determine course requirements and to have their Advising Hold released;
2. Students enroll in courses using the MyPack Portal system; and
3. Students pay tuition, fees, and all other debts to the university by the established deadlines. Advising and general enrollment start dates and deadlines are published on the web each semester. Students must check the specific date and time they will access Enrollment in the Enrollment Dates menu of MyPack Portal.

For more information, contact:
Department of Registration and Records (http://registrar.ncsu.edu)
1000 Harris Hall
Box 7313,
NC State University
Raleigh, NC 27695
phone: (919) 515-2572
fax: (919) 515-2376
For questions, please visit the Registration and Records FAQ (https://ncsu.service-now.com/studentservices).

Cooperative Registration Programs

Several enrollment programs exist for the purpose of fostering cooperative educational activities. Under these programs students have the opportunity to register for courses at other institutions and to participate in cooperative library arrangements and joint student activities.

Inter-Institutional Registration Program

The Inter-Institutional Registration Program is a voluntary organization comprised of NC State, Duke, North Carolina Central University, University of North Carolina at Chapel Hill, University of North Carolina at Charlotte, and University of North Carolina at Greensboro for the purpose of developing and conducting cooperative educational activities. The program provides the opportunity for students to enroll at another institution for a course accepted for their program of study and not offered on their home campus. Distance education courses are not eligible to be used for Inter-Institutional registration. Other activities include a cooperative library arrangement, joint student activities, and faculty cooperation and interchange. Interested students should contact the Inter-Institutional Coordinator at (919) 515-1496 or visit the Inter-Institutional website (http://registrar.ncsu.edu/exchange-programs/inter-institutional).

UNC Online

The University of North Carolina Online Academic Services supports members of the UNC multi-campus community. This portal provides access to information on University-wide cross-campus online course offerings to enrolled students. It also administers an exam proctoring system to accommodate students, faculty and qualified proctors for scheduled proctored exams. The program provides the opportunity for students to enroll at another institution for a course accepted for their program of study and not offered on their home campus through Distance Education courses only. Students should contact the Inter-Institutional Coordinator at (919) 515-1496 or visit the Inter-Institutional website (http://registrar.ncsu.edu/exchange-programs/unconline).
Cooperating Raleigh Colleges
The Cooperating Raleigh Colleges Program (CRC) is a voluntary organization comprised of NC State, Meredith College, St. Augustine’s College, Shaw University, and William Peace University for the purpose of developing and conducting cooperative educational activities within the Raleigh area. The course taken at the visited school must be a course that is required but not offered through NC State. Interested students should contact the Inter-Institutional Coordinator at (919) 515-1496 or visit the Cooperating Raleigh Colleges website (http://registrar.ncsu.edu/exchange-programs/cooperating-raleigh-colleges).

Veterans Affairs and Benefits
NC State University is approved to administer veterans benefits to eligible students. The Veterans Affairs and Benefits office is located in Registration and Records, 1000 Harris Hall. Students who are eligible to receive veterans benefits should contact the NC State Certifying Official at (919) 515-3048 or veterans-ed@ncsu.edu (veterans-ed@ncsu.edu). For more information see the NC State Veterans Education website (http://registrar.ncsu.edu/veterans).

Schedule Revision (drops and adds)
Note: NC State University policies, rules and regulations are updated and reviewed as the need arises. For the most current information regarding this section, please visit the Policies, Rules, and Regulations website (http://policies.ncsu.edu/regulation/reg-02-20-02).

Courses may be added during the first week of a regular semester without permission of the instructor and during the second week with the permission of the instructor. For specific deadlines, visit the calendar page on the Registration and Records website. (http://www.ncsu.edu/registrar/calendars)

Courses may be dropped without regard to course load during the first two weeks of a regular semester. During weeks three through six of a semester, full-time undergraduate students who wish to drop courses at any level and whose academic load would thereby fall below the twelve hour minimum course load may do so only for documented medical reasons or other verified, unforeseen grounds of personal or family hardship.

Exceptions to the drop policies require the recommendation of a student’s advisor, the departmental coordinator of advising or the departmental head, and approval by the student’s dean.

Students who wish to drop all courses for which they are enrolled, must withdraw from the university for the remainder of the semester or summer session in which they are enrolled. A degree student who finds it necessary to drop all courses will initiate withdrawal from the university at the Counseling Center, Student Health Center, 2815 Cates Avenue, second floor.

Honors and Scholars Programs
University Honors Program (https://honors.dasa.ncsu.edu)
The University Honors Program (UHP) is a highly selective academic program that seeks to provide a transformative liberal learning experience which empowers students to critically engage meaningful problems in the world. Students in the program directly participate in the knowledge-building and creative activities of the NC State faculty and are encouraged and enabled to craft for themselves a unique undergraduate education that draws on the full range of opportunities that exist at a major research, land-grant university such as NC State.

University Honors Program Admission

University Scholars Program (https://scholars.dasa.ncsu.edu)

“Twenty years from now you will be more disappointed by the things you didn’t do than by the ones you do. So throw off the bowlines, sail away from the safe harbor. Catch the trade winds in your sails. Explore. Dream. Discover.” --Mark Twain.

For thirty-five years, the USP has encouraged outstanding students to leave the safe harbor, to pursue their dreams, and to explore the beauty and the challenges of the world around them. How? Through opportunities to participate in the Scholars Forum, to enroll in special courses and to join the community of the Scholars Village.

SCHOLARS FORUM: University Scholars enroll in the Scholars Forum (https://scholars.dasa.ncsu.edu/forum) for three semesters. The Forum features musical and theatrical performances, addresses by major public figures, authors and scientists, and debates and discussions of significant public policy issues. Among our recent guests were:

• Grenoldo Frazier, an award-winning musician, actor and composer of the gospel musical Mama I Want to Sing.
• David Doubilet, the world’s leading underwater photographer who has published over 70 stories for National Geographic magazine.
• Shana Tucker, a “ChamberSoul” cellist, singer and songwriter whose music is a mix of pop, jazz and folk.
• Shane Harris, an award-winning journalist, national security expert and author of the critically-acclaimed book The Watchers.
• Lisa Jolley, a teacher of improv and Broadway performer who has starred in Hairspray.

The Scholars Forum also offers an extraordinary range of cultural, educational and outdoor opportunities, all provided free through the program. Take part in special tours of NC State’s Nuclear Reactor, the Duke Lemur Center, or Piedmont Biofuels; participate in canoeing and hiking trips; and attend local theatre, music and dance performances and museum exhibitions. Students choose what they wish to do, and the options are amazing!

SPECIAL COURSES: University Scholars have the opportunity to enroll in honors sections (https://scholars.dasa.ncsu.edu/current/approved-coursework) of academic courses that are taught by the very best faculty at NC State.

OUTDOOR & CULTURAL EXPLORATIONS: With day, weekend and weeklong trips, our Outdoor Explorations (https://scholars.dasa.ncsu.edu/engagement/oe) program offers University Scholars opportunities to explore the natural world, get to know their peers, and engage in personal reflection. Cultural Explorations (https://scholars.dasa.ncsu.edu/engagement/ce) include a Fall Break trip to New York City, Spring Break trips overseas, and summer study abroad programs in Florence, Italy and Oxford, England.

SCHOLARS VILLAGE: Special activities, outstanding students, and a close-knit community make the Scholars Village (https://scholars.dasa.ncsu.edu/scholarsvillage) a very special place to live. To learn more about the Scholars Village and how to apply, visit University Housing (http://www.ncsu.edu/housing).

For more information concerning the USP, contact:
University Scholars Program
Box 7316, NC State University
Raleigh, NC 27695-7316
phone: (919) 515-2353, fax: (919) 515-7168;
e-mail: university_scholars@ncsu.edu or visit University Scholars Program website (http://www.ncsu.edu/univ_scholars). (https://scholars.dasa.ncsu.edu)

International Programs and Activities

Study Abroad

Study abroad can be a transformative experience that fosters personal growth along with increased intellectual development. Employers value international experience and look for skills such as intercultural sensitivity, the ability to deal with ambiguity, and perspective to face the grand challenges of society – all developed through study abroad. Distinguish yourself from your peers by developing skills and engaging in a unique learning environment abroad. By being outside of one’s comfort zone, every new experience can be a challenge and an adventure!

Study Abroad Programs

NC State offers more than 150 study abroad programs worldwide that meet student academic, personal, and cultural interests. Students fulfill major, minor, general education program and elective courses through NC State’s study abroad programs. Plus, participation on any study abroad program fulfills the Global Knowledge co-requisite degree requirement for NC State students. Most programs do not have a foreign language requirement. Students should discuss a study abroad experience with their academic advisor to identify a time frame and outline a course plan. For all majors, with academic planning, study abroad does not delay graduation at NC State.

Funding Study Abroad

Study Abroad is affordable at NC State. Students are eligible to receive financial aid (including loans, grants, and scholarships) for the cost of any study abroad program. Semester exchange programs provide the most economical option for most students since standard tuition and fees keep the cost of a semester abroad comparable to a semester on campus at NC State. The Study Abroad Office also administers scholarships annually with about 1/3 of applicants receiving an award. In addition to the NC State Scholarships, there are many other financial resources available in support of study abroad.

Applying for Study Abroad

With hundreds of opportunities to choose from—each differing in curriculum, duration, language, degree of cultural immersion, cost, and location—early planning is key to a successful study abroad experience.
Well prepared students typically start planning a year in advance.
Visit http://studyabroad.ncsu.edu to learn more.

Global Perspectives Certificate
The goal of the Global Perspectives Certificate is to:
- recognize students for their international studies and activities and
- encourage students to continue their global interests both overseas
  and within the United States.

All undergraduate degree-seeking students and all majors are welcome,
including undergraduate international students. Upon completion,
students will receive an official certificate and a notation on their transcript
documenting their global experiences during their studies. Learn more
about the GPC and get started today at gpc.dasa.ncsu.edu.

Cultural Exchange Program (CENet)
The Cultural Exchange Network connects NC State students to
international students from the SKEMA Business School in France as
well as students from GTI partner schools all around the world. NC State
student volunteers play an important and fun role in helping new and
visiting international students integrate into the Wolfpack community.

Two types of CENet participation are available: Volunteer & Leadership
Council (paid student position)

CENet is facilitated by the Global Training Initiative and details can be
found on the website (go.ncsu.edu/CENet).

International Students
The Office of International Services (OIS) is charged with meeting
the immigration advising and cross-cultural programming needs for
the university's more than 4000 international students and 600 J-1
Exchange Visitor scholars who come from more than 120 different
countries. Services provided by OIS include advising students and
scholars on immigration regulations and university policies; authorizing
certain types of on or off-campus employment authorization for F-1
and J-1 visa holders; and providing cultural programs designed to
enrich the cultural and academic experience of the campus community.
OIS programs include: New International Student Orientation, Culture
Corps, I-SSERV service learning program, English Conversation
Club, Cultural Crossroads, cultural diversity workshops, and many
others. New international students are required to participate in New
International Student Orientation and to check-in with OIS upon arrival.
OIS also provides opportunities for U.S. students to get involved in the
international community at NC State by inviting participation in various
cross-cultural programs such as volunteering at orientation, English
Conversation Club, etc.

International applicants must apply to the Admissions Office by the stated
deadlines and must meet all the necessary requirements for admission.
In addition, international applicants must meet certain language and
financial criteria (see the TOEFL and Financial Information sections under
Freshman Admission).

The North Carolina Global Training Initiative (GTI) sponsors several
short-term certificate, internship, and research programs that international
students may be interested in. These full-time non-degree study
programs allow international students to study at NC State for one
semester in order to learn about U.S. culture and education, improve their
conversational English, take undergraduate courses in their field of study
back home or in preparation for admission to a degree program here in
the U.S., and experience life in the U.S. These programs have a later
application deadline and are great for students to take before enrolling in
an undergraduate or graduate degree program in the US or for siblings
and friends of current degree-seeking students who want to study in the
US together.

International students may be interested in joining the GTI’s Cultural
Exchange Network (CENet). CENet connects NC State’s domestic and
international students through joint participation in social, academic,
and service learning events and workshops. Visit the CENet website
(go.ncsu.edu/CENet) for more details about the program and how you
can apply.

Anyone interested in the GTI’s programs can visit us on the web at
www.ncsu.edu/gti for more information.

Outline of minimum immigration requirements for F-1 and J-1 students:
- Keep passport and I-20 or DS-2019 current
- Maintain full-time enrollment every semester (12 hours/semester for
  undergraduates)
- Make good academic progress toward your degree
- Do not work or intern off campus without prior written approval from
  OIS
- Do not work on campus more than 20 hours in any one week during
  the semester
- Update any address change in MyPack Portal within ten days of
  moving
- Update OIS immediately of any changes in name, funding, or visa
  status
- Consult with an OIS advisor BEFORE changing curriculum/majors,
  withdrawing, dropping below full-time, transferring to another school/
  program, etc.
- Purchase and maintain the NC State University approved Health and
  Accident Insurance or other insurance plan that meets the published
  minimum coverage requirements.
- Keep your valid passport and recently signed visa certificate (I-20
  or DS-2019) with you when you travel abroad. Consult with an OIS
  advisor about visa and travel questions

Further information about immigration requirements, employment and
travel questions, cultural opportunities, and other critical information
designed to assist international students are detailed on the OIS
website. For individual advising, please call (919) 515-2961 to make
an appointment with an advisor or stop by during our walk-in hours of
10:00am-12:00pm and 1:00pm-3:00pm on Monday, Tuesday, Thursday
and Friday (no walk-ins on Wednesdays).

The Intensive English Program (Conditional Admission and IEP-only)

The Intensive English Program (IEP) at North Carolina State University is a full-time, non-credit academic program offered to international, non-native English speakers. Its mission is to provide high-quality language instruction to those seeking academic preparation, professional development and/or personal enrichment. Programs of study are offered in the fall, spring, and summer semesters.

In the IEP, students take up to 25 hours per week of intensive language study in all core language skills. Students who enroll in the IEP will be tested for the appropriate level of English instruction when they arrive on campus.

Classes are located on NC State's main campus and nearby on Hillsborough Street. IEP students are also offered the opportunity to participate in numerous cultural enrichment activities designed to help them get to know the surrounding area and interact with other students. Academic coaching (tutoring) is offered to students free of charge.

Students join the IEP as conditionally admitted students or IEP-only students. While the course of instruction is identical for both, IEP-only students are not guaranteed admission to degree programs, but may apply directly to such programs while enrolled in the IEP.

Conditional Admission

For undergraduate applicants who meet the competitive academic requirements for admission, but who do not yet possess the minimum English proficiency requirements for full, direct admission, NC State offers conditional admission. For NC State conditionally admitted students, the IEP provides the opportunity to improve one’s English language skills before moving into a degree program.

Successful completion of the IEP requires achieving at least a B or higher in each course, meeting strict attendance obligations, and passing all exit requirements.

Intensive English Program
North Carolina State University

Summer Institute in English for Speakers of Other Languages

The Summer Institute in English for Speakers of Other Languages is a five-week, intensive English language program for students from other countries. It is especially good for students from other countries who intend to pursue university studies or specialized training programs in the United States in the fall. The institute, which is jointly sponsored by the Department of Foreign Languages and Literatures and the Division of Continuing Education, is held from early July to early August each summer. It is designed to provide students with intensive instruction and practice in the use of the English language. Emphasis is on developing integrated oral and written skills in English.

The institute also offers orientation to American life and institutions to give students insight into life in the United States and to help them to adjust to the new environment. Students take part in field trips to places of historic, cultural, and scenic interest. Prospective students have usually studied English and have some experience with spoken English prior to enrolling in the institute. However, all levels from beginners to advanced are welcome. Admission to the institute does not imply admission as a degree candidate at NC State or any other campus of the University of North Carolina System.

Global Village

The world is at your doorstep in the Global Village where residents from around the world live, learn and interact. Students who live in the Global Village experience different cultures and viewpoints while creating a tight-knit community. The Village’s focus is global awareness, understanding and experience.

Global Village is located on Central Campus in Alexander Hall (https://housing.dasa.ncsu.edu/residence-hall/alexander-hall).

Village Features

• Pairing of international students and American students as roommates
• Student Ambassadors to assist in acclimating international students to American culture
• A faculty-led programming series on global and cultural issues
• Programs focused on US and international culture
• A place for students to practice their language skills
• Excursions to events/sites within North Carolina, New York City, and Washington DC
• Discussion programs focusing on international issues and global awareness
• A hall primarily for students who are sophomore classification or higher
• Hall-style living environment

Global Village Requirements

Residents who live in Global Village must:

• Attend the Global Village Fall Orientation that occurs before the start of classes
• Participate in five or more Village programs each semester
• Abide by the Student Code of Conduct, University Housing Rules and Community Standards and remain in good academic standing.
• Be an active participant within the Global Village community

Research Centers

In addition to offering more than 110 bachelor and master’s degrees in more than 110 areas of study, doctorate degrees in 61 disciplines, and a Doctorate of Veterinary Medicine, NC State also boasts more than 55 research centers and institutes. In conjunction with the colleges, these research centers support a broad spectrum of more than 3,700 sponsored scholarly endeavors.
The Research Triangle Park

NC State is one of the three Triangle-area top-tier research universities along with Duke University in Durham and the University of North Carolina at Chapel Hill. Within the 30-mile triangle formed by the three universities is the Research Triangle Park, a 7,000-acre research park founded in 1959 by leaders from academia, business, and government. Today, the Research Triangle Park is home to some of the most innovative and cutting-edge research-based companies in the world.

The unique “Research Triangle” area of North Carolina has captured national and international attention. The “triangle” is formed by the three geographic points of Raleigh, Durham and Chapel Hill that are home to the area’s top-tier research universities: NC State, Duke University and University of North Carolina at Chapel Hill. Because of this wealth of educational and research opportunities, the triangle contains one of the highest concentrations of Ph.D. scientists and engineers per capita, in the nation. The highly educated workforce in the Triangle is extremely attractive to companies, many of which engage in collaborative programs within the area universities.

Since it was established, the Research Triangle Park has witnessed a steady and stable increase in the number of companies and employees. Currently, there are more than 170 organizations located in The Research Triangle Park. More than 40,000 people work in the Park, with combined annual salaries of over $2.7 billion. Organizations in the Park include government research laboratories of the National Institute of Environmental Health Sciences, and the U.S. Environmental Protection Agency. Private companies such as IBM, GlaxoSmithKline, Nortel, Cisco, and RTI International are located in the Park. Talented scientists, engineers and managers from RTP companies frequently hold adjunct faculty appointments in one or another of the Triangle universities.

Advanced Self Powered Systems of Sensors and Technologies Center (ASSIST)

Dr. Veena Misra, Director

The mission of the Advanced Self Powered Systems of Sensors and Technologies Center (ASSIST) (https://assist.ncsu.edu) is to transform health informatics, electronics, and biomedical engineering; to develop nanotechnologies for energy harvesting, battery-free energy storage, and ultra-low-power computation/communication; to integrate low power physiological and environmental nano sensors using biocompatible materials; to empower personal environmental and health monitoring.

The Analytical Instrumentation Facility (AIF)

Jacob Jones, Director, Analytical Instrumentation Facility

The Analytical Instrumentation Facility (AIF) (http://www.aif.ncsu.edu) provides NC State faculty and students with the highest level of modern microanalysis instrumentation currently available as well as trained specialists to assist with teaching, training, instrument operation, and experimental design. The unique combination of extensive analytical instrumentation and specialized staff makes AIF a valuable asset to both teaching and research at all levels. AIF staff provides the expertise to access AIF’s state of the art analytical capabilities, conducts training and provide guidance to students. AIF is located in the Larry K. Monteith Engineering Research Center on the NC State Centennial Campus. This laboratory space, located in the mixed-use (private industry/academics) environment of Centennial Campus, provides the optimum environment for teaching, research and technology transfer. AIF analytical capabilities encompass analyses of materials including ceramics, metals, semiconductors, polymers, and biological materials. The Variable Pressure Scanning Electron Microscope (VPSEM), which can operate at high chamber pressure for charge neutralization, provides electron microscopy and EDS (Energy Dispersive X-Ray Spectroscopy) elemental analysis on uncoated non conductive samples including biological, polymeric, textile, and other materials. The VPSEM facility is used extensively by undergraduate students in a wide range of disciplines. AIF has extensive capabilities in the areas of Atomic Force Microscopy (AFM) for high resolution surface topography measurement, Field Emission Scanning Electron Microscopy (FESEM) for high resolution imaging of sample morphology, Field Emission Scanning Transmission Electron Microscopy (FE/TEM) for atomic resolution imaging and chemical characterization, dynamic Secondary Ion Mass Spectrometry (SIMS) for trace analysis, Time of Flight SIMS for spatially resolved molecular surface analysis, X-Ray and Ultraviolet Photoelectron Spectrometry (XPS, UPS) for chemical surface analysis, X-Ray Diffraction (XRD) for crystallographic analysis and Focused Ion Beam (FIB) nanomachining for sample preparation and fabrication of nanostructures and a metallurgy laboratory. In addition, AIF has extensive facilities for specimen preparation for all of the above mentioned analytical techniques.

Animal and Poultry Waste Management Center (APWMC)

Dr. Mike Williams, Director
Box 7608, 212 Scott Hall
Raleigh, NC 27695-7608
phone: (919) 513-0469
e-mail: mike_williams@ncsu.edu

The Animal and Poultry Waste Management Center (APWMC) (http://www.bae.ncsu.edu/topic/waste-mgmt-center) within the College of Agriculture and Life Sciences (CALS) at North Carolina State University (NCSU) was established in 1996. The APWMC primary mission is to support, conduct and administer programs for research, development and outreach objectives targeting environmental and social issues associated with animal production agriculture. Historically, this program has included establishment of research-based partnerships with land grant universities in the states of Alabama, Georgia, Iowa, Kentucky, Michigan, Mississippi, Missouri, Ohio, Oklahoma, Oregon, and Virginia, as well as with a number of agribusiness companies, environmental groups, and commodity associations in the food-animal industries throughout the world. APWMC current efforts are specifically targeting waste management technologies applicable for all food animal species, however the primary focus is on concentrated swine and poultry production. Broad topics include: a) air, soil and water quality protection impacting animals, production workers and society in general; b) animal and human health issues associated with pathogens of animal origin including zoonotic diseases; c) recovery of value-added products from animal waste/residuals (including energy); d) development and verification of economically feasible ‘environmentally superior technology’ per legislative mandates in N.C; and e) optimization of animal diet rations to lower feed costs and reduce environmental impacts.

Bioinformatics Research Center (BRC)

Dr. Fred Wright, Director
The mission of the Bioinformatics Research Center (BRC) (https://brc.ncsu.edu), under the College of Sciences, is to develop and implement methods for the management and interpretation of genomic data, with an emphasis on agriculture, forestry and veterinary medicine.

When the BRC at NC State University was founded in 2000, it was with the understanding that quantitative methods applied to massive datasets are essential to the comprehension of the genomic structure of even the simplest organisms. Since the creation of the center, those large datasets have only gotten larger, and the quantitative skills have become even more essential. The focus on the intersection between biology, statistics, and computer science makes the program unique.

Center for Advanced Processing and Packaging Studies

Dr. Kenneth R. Swartzel, Site Director

The Center for Advanced Processing and Packaging Studies (CAPPS) (http://www.nsf.gov/pubs/2002/nsf01168/nsf01168n.htm) was established in October 1987 to promote cooperative research between university and industrial researchers and to further scientific knowledge in areas of food and pharmaceutical aseptic processing and packaging. The mission and focus of the center is to conduct industrially relevant research directed at developing methods and technologies for the safe production of marketable, high quality aseptic and refrigerated extended shelf-life products. The center is funded by industrial members from the food processing and packaging industries and received support from the National Science Foundation and the universities involved. Students working on CAPPS projects will be exposed to industrial concerns and be given the opportunity to work first-hand with companies in solving problems and making practical application of their research. Cooperative research opportunities are available in the Department of Food, Bioprocessing and Nutrition Sciences at NC State and also at other universities, which are a part of the center.

Center for Applied Aquatic Ecology (CAAE)

Dr. JoAnn Burkholder, Director

The broad research directive of the Center for Applied Aquatic Ecology (CAAE) (https://www.ncsu.edu/wq), under the College of Agriculture and Life Sciences (CALS) is to assess and find practical solutions to water quality problems in North Carolina and the nation. The overall goal of the Center for Applied Aquatic Ecology is to provide water quality research information needed by policy makers to augment regulatory and non-regulatory programs aimed at optimizing management and wise use of water resources from the perspective of protecting fish and human health. The Center’s specific objectives are (i) to conduct relevant applied research on freshwater, estuarine and marine resources of the State, with emphasis on chronic and acute impacts of nutrient over-enrichment and related pollution on harmful algal blooms (Pfiesteria and others), seagrass meadows and other critical vegetation habitats, fish populations, and mammalian health; (ii) to provide training and support opportunities for advanced undergraduate students, graduate students, and post-doctoral fellows; (iii) to develop information databases that will contribute to environmental education and education outreach about the interdependence between ecosystem functions and natural resource management; and (iv) to serve as a focal point for the continuing advancement of research on toxic algae.

Center for Marine Sciences and Technology

Dr. Ronald Baynes, Director

The Center for Chemical Toxicology Research and Pharmacokinetics (http://www.cvm.ncsu.edu/cctrp) performs scientific research on cutaneous function and structure focused on cutaneous toxicology, metabolism and pharmacokinetics and transdermal drug delivery; employing innovative animal and mathematical models and other predictive systems including cell cultures and novel analytical techniques. Current research is focused on the absorption of chemical mixtures and the toxicology of nanomaterials. This provides the necessary research base to support a vigorous graduate and post-graduate training program in comparative pharmacology and toxicology designed to produce health scientists for academia, industry and government. Besides laboratory research, CCTRIP also operates the US and global Food Animal Residue Avoidance Databank (FARAD), performs the residue avoidance data analysis, and provides assistance to those who have questions about how to prevent residues in animal-derived food.

Center for Engineering Applications of Radioisotopes

Robin P. Gardner, Director

The Center for Engineering Applications of Radioisotopes (http://www.ne.ncsu.edu/research) was established at North Carolina State University in 1980 to advance the measurement use of radioisotopes (and radiation) and to produce highly trained graduate students and postdoctoral professionals for that industry. CEAR's faculty, Post Docs, and graduate students continue to do research at the frontier of this area, which by its very nature applies to a very broad area of technologies and sciences. CEAR has had government contracts with the USAEC, NASA, the National Cooperative Highway Research Program, EPA, NSF, NIH, the International Atomic Energy Agency (IAEA), NNSA/DOE, and Los Alamos National Laboratory (LANL) and industrial contracts with EXXON, DuPont, Alcoa, Energy Technologies Inc (ETI), Amoco, Conoco, ARCO, Mobil, Halliburton, Baker Atlas, Weatherford, Teleco, Japan National Oil Company, Shell, Computalog, Pathfinder, and Hexion (now Momentive). While this area of research and application is primarily experimental by nature, CEAR has concentrated from the beginning on the mathematical modeling (especially by Monte Carlo simulation) that is essential to understanding and use of this technology.

Center for Research in Scientific Computation

H. T. Banks, Director

The Center for Research in Scientific Computation (CRSC) (http://www.ncsu.edu/crsc) is a formally recognized, multidisciplinary center of the greater University of North Carolina System. The CRSC is administered by NC State and the College of Physical and Mathematical Sciences. The purpose of the center is to promote research in applied scientific computation and to provide a focal point for research in modeling, computational methods, and applied mathematics. Data-intensive and/or computationally intensive problems provide initial projects for training undergraduate and graduate students in applied mathematics. With a wide range of computational methodologies, students and post-doctoral fellows address important issues in applications involving model development and control design.
Research topics of interest to CRSC faculty include a variety of problems in scientific modeling and computation, numerical analysis, and numerical optimization with applications to such areas as fluid mechanics and flow control, smart materials and structures, nondestructive testing, acoustics, material sciences and manufacturing processes, population dynamics, environmental sciences, signal processing, and a broad range of biomedical and biological modeling. The CRSC, in cooperation with the Department of Mathematics, sponsors a university/industrial research project program. The main goal of the Industrial Applied Math Program (IAMP) is to provide substantive non-academic research related experiences for undergraduate and graduate students, postdoctoral and faculty participants while contributing to the research efforts of industrial participants.

**Center for Transportation and the Environment**

Downey Brill, Director

The Center for Transportation and the Environment conducts programs of research, education, and technology transfer that seek to mitigate the impacts of surface transportation on the environment. Funded in part by the U.S. Department of Transportation and the North Carolina DOT, CTE is the only university transportation in the country that pursues ways to improve surface transportation systems while protecting the environment. CTE is considered a national resource for current information about transportation and environmental research, policies, and best practices. The center conducts an innovative and aggressive outreach program, using satellite- and computer-based technologies, to assist transportation and environmental professionals with their most critical information needs. For more information, visit CTE’s website (http://www.cte.ncsu.edu/cte).

**The College of Agriculture and Life Sciences Center for Electron Microscopy**

J. M. Mackenzie, Jr., Coordinator, CALS Center for Electron Microscopy

The College of Agriculture and Life Sciences Center for Electron Microscopy (http://www.ncsu.edu/cem) occupies approximately 300 square feet in the basement of Gardner Hall. It is a centralized facility that services the ultra-structural needs of twenty-two departments. The College of Agriculture and Life Sciences Center for Electron Microscopy offers complete service support in all areas of Biological Electron Microscopy. The Center has a JEOL 5900LV scanning electron microscope, which has low vacuum capabilities and a JEOL 1200EX transmission electron microscope. The Center is equipped with all of the necessary biological, preparatory equipment including a Cressington Cryo-Fracture, Deep-Etch System.

The Center provides advanced digital imaging capabilities. We provide access for Macintosh, PC and UNIX based systems allowing transparent information transfer regardless of user’s platform preference. Formal instruction is provided through the Microbiology curriculum for scanning electron microscopy and digital imaging. The Center also provides support, service, and training in advanced digital imaging. Advanced techniques and training in transmission electron microscopy and ultramicrotomy are usually taught on an individual basis. The Coordinator invites any prospective users to discuss the most effective strategy for completing their imaging project.

**Institute for Emerging Issues**

Anita Brown-Graham, Director

The Institute for Emerging Issues (IEI) is a public policy, think-and-do-tank at NC State University. Through research, ideas, debate and action, IEI is a catalyst for innovative public policy, engaging students, faculty and the private sector in its ongoing programs of work. Encouraging civic leadership in business, government and higher education, IEI frames future challenges for North Carolina by identifying and researching emerging issues, specifically around topics that relate to the state’s growth and economic development.

The Institute brings together new combinations of leaders to debate and refine ideas mobilizing and supporting champions through programs of work that turn ideas into action.

To learn more about IEI, please visit http://iei.ncsu.edu/ or call (919) 515-7741.

**Institute for Transportation Research and Education (ITRE)**

Nagui M. Rounphail, Ph.D., Director

The Institute for Transportation Research and Education is an inter-institutional center of the University of North Carolina system. Chartered by the North Carolina General assembly in 1978, ITRE conducts transportation research and training for numerous public agencies at the federal, state, and local levels of government and private industry. Additionally, the Institute provides financial support and research opportunities for undergraduate and graduate students from various disciplines. The Institute is comprised of several specialty groups including public transportation, highway systems, visual analytic, modeling and simulation (VAMS) and pupil transportation. The Institute is also the home of the Center for Transportation and the Environment (CTE) and the North Carolina Local Transportation Assistance Program (LTAP), both federally-funded centers. To learn more about ITRE, please visit us at http://itre.ncsu.edu, or call us at (919) 515-8899.

**Integrated Manufacturing Systems Engineering Institute**

Steve Jackson, Director

The Integrated Manufacturing Systems Engineering (IMSE) Institute (http://www.imsei.ncsu.edu) was established in 1984. IMSE provides multidisciplinary graduate-level education and practical training opportunities in the theory and practice of integrated manufacturing systems engineering at the masters level. IMSE focuses on providing a manufacturing presence and a program environment in the College of Engineering where faculty, graduate students and industry can engage cooperatively in multidisciplinary graduate education, basic and applied research, and technology transfer in areas of common interest related to modern manufacturing systems technology. The objective of the IMSE program is to offer students with traditional discipline backgrounds in engineering and the physical sciences an opportunity to broaden their understanding of the multidisciplinary area of manufacturing systems. Core areas of concentration are offered in manufacturing systems, logistics, and mechatronics, and bio and medical device manufacturing.
Nanofabrication Facility
M.C. Ozturk, Director

The NC State University Nanofabrication Facility (http://www.nnf.ncsu.edu) offers NC State faculty and students the ability to fabricate micro/nano-structures and supports a large spectrum of interdisciplinary projects from different colleges and departments on topics including renewable energy, high speed electronics, memory, sensors and biotechnology. The facility is also open to users from other academic institutions and industry. The use of the facility by local industry for research and development is especially encouraged. The facility operates in a 7,400 sq. ft. Class 100/1000 clean room located in the Montieith Research Center of the Centennial Campus. The facility provides state-of-the-art equipment and processes for patterning via projection (193 nm and i-line), proximity and nano-imprint lithography, thin film deposition by physical and chemical vapor deposition, chemical and plasma etching, Si oxidation and doping, annealing and Si/SiGe Epitaxy by ultrahigh vacuum rapid thermal chemical vapor deposition. Flexible equipment sharing programs enable both academic researchers and industry to install their tools in N NF space for shared use. The facility is also used as a teaching laboratory for a variety of undergraduate and graduate level interdisciplinary courses offered in five engineering departments including electrical, mechanical, chemical, materials and industrial engineering.

Nonwovens Institute
B. Pourdeyhimi, Director

The Nonwovens Institute is the world’s first accredited academic program for the interdisciplinary study of engineered fabrics through an innovative partnership of industry, government, and academe. The institute was established February 2007 to develop, educate, and train the next generation of industry professionals. The Nonwovens Institute serves the nonwovens and affiliated industries through research, training, product development, and test-bed facilities.

The research arm of the institute is the Nonwovens Cooperative Research Center (NCRC). NCRC was founded in 1991 as a State-Industry University Cooperative Research Center from matching grants from the National Science Foundation, the State of North Carolina, and the Industry. NCRC supports over 30 graduate students from engineering, textiles, and natural resources. The center provides opportunities to gain hands-on experience in nonwovens research to students studying toward various degrees. An undergraduate minor in the science of nonwovens is offered as well as a Graduate Certificate in nonwovens and affiliated industries through research, training, product development, and test-bed facilities.

The Plant Disease and Insect Clinic (PDIC) at North Carolina State University helps commercial growers and the public grow healthy plants by diagnosing plant disease and insect problems. In consultation with faculty in Plant Pathology, Entomology, and cooperating departments, the PDIC recommends ways to treat or prevent plant disease and insect problems after diagnosis. The PDIC was founded in the Department of
Plant Pathology as the Plant Disease Clinic in 1951. The Department of Entomology joined in 1970 to form the PDIC. The PDIC receives about 3,000 samples from North Carolina and other states each year for diagnosis. As a member of the National Plant Diagnostic Network and the Southern Plant Diagnostic Network, and in cooperation with state and federal agencies, the PDIC helps to detect new or unusual outbreaks of plant diseases and insects to safeguard plant health in North Carolina’s crops, landscapes, and forests. To learn more about the PDIC, please visit us at http://www.ncsu.edu/pdic

**Precision Engineering Center**

Thomas A. Dow, Director  

The Precision Engineering Center, established in 1982, is a multidisciplinary research and graduate engineering program dedicated to providing new technology for high precision manufacturing. Research activity in the PEC involves measurement and fabrication of optical, biological, electronic, or mechanical devices where the tolerances required for operation are on the order of 1 part in 100,000; that is, for a 25 mm (1 inch) long part the error must be less than 250 nm (250 x 10-9m). Components that require this technology include contact lenses and other optical components, hard disk heads for computer memory devices, integrated circuits, space telescopes, injection molding dies, bearings and gears. Current projects in the center involve development of new mechanical designs and control algorithms, novel actuators that include piezoelectric and linear motors, unique fabrication and measurement techniques and high-speed controllers to implement these concepts. With support from government and industry, the PEC pulls together faculty, staff, and students from across the university to develop new ideas and transfer those ideas to US industry.

**Sea Grant College Program**

Susan White, Executive Director  
1575 Varsity Drive, Varsity Research Bldg.  
Module 1NC State University Raleigh, NC 27695  
(919) 515-2454; Website: www.ncseagrant.org

The North Carolina Sea Grant College Program is a state/federal partnership program involving all campuses of the UNC system, and, as appropriate, other universities in North Carolina. Headquartered at NC State, NC Sea Grant also has regional extension offices in three NC coastal communities. Sea Grant combines the universities’ expertise in research, extension and education to focus on practical solutions to coastal problems. Graduate and undergraduate research opportunities are available through Sea Grant funded faculty researchers and through several different North Carolina and nationally-based fellowship programs.

**Southeastern Plant Environment Laboratory—Phytotron**

C.H. Saravitz, Director  
Website: www.ncsu.edu/phytotron

The Southeastern Plant Environment Laboratory, commonly called the Phytotron, is especially designed for research studies on the response of biological organisms to their environment. A high degree of environmental control makes it possible to simulate the wide range of climates found in tropical, temperate and northern zones and is organized to allow many combinations of environmental factors to be studied simultaneously within the more than 60 growth chambers and greenhouses. The Phytotron provides precise control of temperature, light, humidity, carbon dioxide, water, and nutrition for research projects.

The NC State Phytotron concentrates on applied and basic research related to agricultural problems encountered in the southeastern United States. Special facilities are available for plant pathology and air pollution problems, as well as temperature and pH controlled hydroponic units for root environment studies. The facilities are available to the resident research staff, participants in NC State’s graduate research program, and visiting scientists.

**Triangle National Lithography Center**

Mehmet C. Ozturk, Director  
Operating under the NC State University Nanofabrication Facility offers state-of-the-art lithography services. The facility is equipped with an ASML 193 nm wavelength deep-UV stepper capable of forming nanostructures down to a minimum feature size of 80 nm on 6 inch wafers. Other lithography services include i-line projection lithography with a GCA stepper and contact/proximity printing with two Karl Zuss mask aligners that can handle sample sizes ranging from small chips to 6 inch wafers. The 6” Karl Zuss MA6 aligner is capable of backside alignment as well.

**Triangle Universities Laboratory**

Calvin R. Howell, Director  
TUNL (http://www.tunl.duke.edu) is a laboratory for nuclear physics research, funded by the US Department of Energy. Located on the campus of Duke University in Durham, the laboratory is staffed by faculty members and students from Duke University, UNC-Chapel Hill, and NC State. There is extensive collaboration between the participating universities and with visiting physicists from the United States and abroad. The accelerators are a 15-MeV tandem Van de Graaff accelerator and low-energy accelerators dedicated specifically to nuclear astrophysics studies. The newest addition to the TUNL accelerators is the High-Intensity Gamma-ray Source (HIGS) at the Duke Free-Electron Laser Laboratory. Polarized and pulsed beams are available as well as cryogenically polarized targets. In addition, TUNL physicists perform experiments at major national and international nuclear physics facilities.

**Water Resources Research Institute**

Susan White, Director  
website: www.ncsu.edu/wrri/

The Water Resources Research Institute (WRRI) of the University of North Carolina administers and promotes federal/state partnerships in research and information transfer on North Carolina’s water research needs. Located at NC State, WRRI serves all campuses of the UNC system and funds research conducted by faculty and students of senior colleges and universities in North Carolina. Findings from research funded by the Institute help local, state, and federal agencies make better decisions in managing water resources. Graduate and undergraduate research opportunities are available through WRRI funded faculty researchers and student internships are available through its partnership with the U.S. Geological Survey. WRRI also sponsors students to present oral and poster presentations each spring at its annual conference.
Financial Aid

Website: http://financialaid.ncsu.edu

Our mission is to make an NC State education affordable and accessible. We provide scholarships, grants, loans, and work funding to support students and their families. Our staff is here to help as you navigate the process of applying for financial aid.

To be considered for financial assistance by the Office of Scholarships and Financial Aid, a student must complete the federal government’s Free Application for Federal Student Aid (FAFSA). This form, submitted online at www.fafsa.gov (http://www.fafsa.gov), evaluates the family’s ability to pay for educational expenses. Students who submit FAFSAs to the federal processor by March 1 are given first priority for need-based scholarship and grant consideration.

By completing the FAFSA, students are considered for all forms of federal financial aid, as well as most types of state and institutional aid. Some academic scholarships may require separate applications. Determination of the applicant’s need is based on estimated educational costs as established by the Office of Scholarships and Financial Aid and a consideration of the family’s financial strength, as determined by the analysis of the FAFSA.

Aid is available on a non-discriminatory basis to all qualifying students based on the applicant’s financial need. Financial aid awards are usually made in the form of “packages,” which combine aid from all sources including the federal government, state and institutional funds, and private entities.

Award packages can include gift aid (scholarships and grants), student loans, and/or employment through the Federal Work-Study program. Students must reapply for aid each year. Renewal is based on continued financial need as well as satisfactory academic progress as defined by the Policy (http://www.ncsu.edu/finaid/academicprogress.html) on Satisfactory Academic Progress for Financial Aid Eligibility.

Please visit the Office of Scholarships & Financial Aid website (http://financialaid.ncsu.edu) for more detailed information regarding types of aid and how to apply.

Pack Promise

NC State’s mission has always been to extend a quality education to the broadest range of deserving students, regardless of income or financial need. Pack Promise is a formal extension of that mission, reaffirming NC State’s historical commitment to access, affordability, student success, and encouraging first-generation college students to attend college. The financial aid program guarantees a low-debt education, meeting 100% of participants’ demonstrated need through a combination of grants, scholarships, Federal Work-Study employment and student loans. Students who submit the FAFSA are automatically considered for Pack Promise.

Scholarships

NC State offers a variety of need-based scholarships (http://financialaid.ncsu.edu/types-of-aid/scholarships) for both incoming first-year students and those who are continuing at NC State. Consideration for these awards is given to students who are academically competitive, exhibit special talents or characteristics and demonstrate financial need. To apply for these scholarships, simply complete the FAFSA by March 1. Additionally, there are a limited number of academic scholarships for incoming freshmen which are awarded without regard to financial need. Students who apply for admission by November 1 are automatically considered for these scholarship programs.

In addition to these university-wide scholarships, many colleges and departments offer specific awards to students enrolled in their academic programs. These scholarships, funded by alumni, friends of the university, foundations, and industry, are available to both incoming freshmen and to continuing students. Consult the college or department websites for specific criteria, application materials, and important deadlines.

NC State encourages students to search for private scholarships. Many organizations offer awards based on place of residence, background, professional affiliations and/or field of study. Students should use the many free online scholarship search websites to search and apply for outside scholarships. Links to some of these search services are available on the Office of Scholarships & Financial Aid website (https://financialaid.ncsu.edu/types-of-aid/scholarships/high-school-students).

University Academic Scholarships

Park Scholarships

The Park Scholarships program, now in its 20th year, brings exceptional students to NC State University based on outstanding accomplishments and potential in scholarship, leadership, service, and character. The program develops and supports Park Scholars in these areas, preparing them for lifelong contributions to the campus, state, nation, and world.

Approximately 35 scholarships will be awarded this year to outstanding high school seniors for undergraduate study in any discipline at NC State. As one of the most prestigious and comprehensive undergraduate scholarships in the nation, the Park Scholarship covers the full cost of education for four years and includes educational trips, retreats, and seminars; enrichment grants to fund study abroad, research projects, service activities, and conferences; individualized faculty mentoring; and more.

The Park Scholarships are named for the late Roy H. Park ’31, an NC State alumnus who created the charitable Park Foundation, dedicated to education, media, and the environment. With a generous grant from the Park Foundation, the Park Scholarships program was established in 1996 to provide a superb educational opportunity for exceptionally talented and well-prepared young men and women who merit the intellectual challenge of a distinguished faculty and a superior university. To date, seventeen classes of Park Scholars have graduated and have built a vibrant alumni network. For more information, visit the Park Scholarships website (http://park.ncsu.edu).

Goodnight Scholars Program

Founded in 2008 by Dr. Jim and Ann Goodnight, the Goodnight Scholars Program develops North Carolina’s most promising and talented students to become valuable contributors and future leaders in the STEM and Education industries. Students who are selected to be a part of the Goodnight Scholars community participate in a variety of activities which focus on enhancing critical skills necessary to thrive in social, professional, and service-oriented environments while also preparing them to become invested members of the NC State community.

Each year, the Goodnight Scholars Program awards 50 renewable scholarships to entering first year students. The scholarship, valued
at $19,500 supports a Goodnight Scholar’s tuition, fees, housing, and other university expenses. The scholarship is targeted at middle income families from North Carolina and is limited to students studying in the STEM disciplines or in affiliated Education majors. In addition to the scholarship, Goodnight Scholars are given the opportunity to apply for enrichment grants which can be used for a variety of personally and professionally enriching experiences including international travel, undergraduate research, and entrepreneurial endeavors. Last, but certainly not least, Goodnight Scholars are educated and inspired by professionals in the STEM and Education industries through year-round programming featuring NC State faculty & staff, professionals in the community, and globally-recognized industry leaders.

Dr. Jim Goodnight is founder and CEO of the SAS Institute, the world’s leading business intelligence software vendor. Ann Goodnight, director of community relations at SAS, serves on the University of North Carolina Board of Governors and is a former member of the NC State Board of Trustees. Both are NC State graduates. Their frequent interactions with Goodnight Scholars provide unique and invaluable exposure to visionary leaders. Please visit the Goodnight Scholars website (http://emas.ncsu.edu/goodnight) for more information about the program and its exceptional scholars.

The Caldwell Fellows

The Caldwell Fellows is an intensive and comprehensive leadership development program that over 44 years at NC State has produced 1300+ outstanding alumni shaped by the Robert Greenleaf model of Servant Leadership. Supported through endowments held by the NC State Alumni Association, over 90 alumni ‘invest’ in individual Fellows, providing funds for their development through experiential learning. Students selected as Fellows are expected to engage deeply in the program’s rich offerings, which include community based service-learning, wilderness adventure, international engagement, and capstone training at the Center for Creative Leadership. Students receive three years of stipend (divided 70-30 between tuition and funds available for experiential learning), all contingent upon a students’ maintenance of the program ideals and a 3.25 cumulative GPA.

The application period for selection begins in January of each year, after a student’s initial semester(s) at NC State is complete. The program actively seeks applicants from all colleges at NC State. The rigorous selection process is based on an application portfolio which includes essays, a short video essay, letters of recommendation, and the first semester transcript at NC State (minimum 3.25 GPA); high school transcripts are not reviewed. The application is available on the Caldwell Fellows website (http://ncsu.edu/caldwellfellows). Application reviews by campus faculty and program alumni determine the finalists who are invited to interviews in February. Only first year students are eligible to apply.

The Caldwell Fellows program was created to honor the legacy of John T. Caldwell and to carry out his spirit and ideals. As Chancellor of NC State for 16 years, he presided over the university as a servant leader: inspiring excellence, modeling moral behavior and marshaling the strengths of the entire campus to further the common good. Guided by a deep respect for the potential inside every individual, he held a vision of NC State as a place where young people could find and refine their unique capabilities and potential. The Caldwell endowment is the only university-wide merit-based scholarship funded by alumni and supporters of NC State.

The program also derives from the NC Fellows program, originally known as the Richardson Fellows program, established in 1968 by Smith Richardson of the Richardson Vicks Corporation. Concerned for the state’s future leadership, Mr. Richardson established Fellows Programs on North Carolina campuses and charged them with developing leadership in their promising students. Caldwell Fellows maintain close ties with the internationally acclaimed Center for Creative Leadership, also created by the Smith Richardson Foundation.

Open minds and open hearts are core to the Caldwell Fellows community. Curiosity, creativity, respect for diversity, and commitment to service of the greater good are common qualities which are sought and developed in all Fellows.

Special Academic Programs

Cooperative Education Program (http://www.ncsu.edu/co-op_ed)

This optional program is structured so that students will alternate semesters of study with semesters of practical work as sophomores and juniors. Academic work is spread over a three-year period to permit alternating academic semesters with work-experience semesters. Students earn a salary while they are in industry. This income can prove useful in offsetting college expenses. The Co-op plan can be completed in five years, during which time the student receives 12 to 18 months of industrial experience.

NC State University offers undergraduate students formal opportunities for valuable experiential learning through the STEP (Short-Term Experiential Partnership) Program. STEP is an educational option that allows students to gain real workplace experience in corporate settings, schools, hospitals, government agencies, and non-profit organizations. The STEP Program is open to all NC State undergraduate students who are in good academic standing.

Students in all curricula may apply for the Co-op program if they have a grade point average of 2.5 or better. Application for admission into the Co-op program should be made early in the spring semester of the freshman year, however, it will be considered during the sophomore year or the first semester of the junior year. Undesignated students must be admitted into a degree program prior to beginning the first Co-op assignment. Further information may be obtained from the Cooperative Education Program, 2100 Pullen Hall.

NC State University offers undergraduate students formal opportunities for valuable experiential learning through the STEP (Short-Term Experiential Partnership) Program. STEP is an educational option that allows students to gain real workplace experience in corporate settings, schools, hospitals, government agencies, and non-profit organizations. The STEP Program is open to all NC State undergraduate students who are in good academic standing. Further information may be obtained from the Career Development Center, 2100 Pullen Hall.

Non-Degree Certificate Programs

Non-degree certificate programs are prescribed sets of regular academic courses that offer limited but structured non-degree opportunities. Many are designed expressly for Non-Degree Studies students. The issuing of a certificate from the department or college that offers that program recognizes satisfactory completion of the prescribed courses. Some programs utilize on-campus instruction, while others utilize Internet or videocassette delivery. The inventory of available programs changes over time in response to changing continuing education needs. The following is a sample of available programs: Computer Programming, Geographic
Information Systems, Training and Development, Professional Writing, and Textiles. Several programs are designed for students who already possess a bachelor’s degree.

For information concerning enrollment requirements and prescribed courses for a particular certificate program, consult the department or college offering that program or visit the Undergraduate Certificate website (https://oucc.dasa.ncsu.edu/undergraduate-academic-programs/university-certificates-2) or Graduate Certificate website.

**The Peer Mentor Program**

The Peer Mentor Program (PMP) is a student advisory program that targets first-year African American, Native American, and Hispanic students. The program, founded in 1982, recognizes the challenges first-year students face as they embark upon this new and vastly different segment of their lives. PMP acknowledges the complexity of this situation for minority students, particularly on a predominately white campus. The primary objective of the Peer Mentor Program is to ease this situation by contributing to and aiding in the adjustment of these students to the academic, emotional and social aspects of college life. From a broadened perspective, the program aims to increase and maintain the enrollment and retention of minority students, ensuring that each student maximizes his/her potential.

African American, Native American, and Hispanic upperclassmen are selected as mentors through an application and interview process and are subsequently paired with one to three first-year students. In general, the mentor maintains close contact throughout the year with his/her mentee(s) and acts as a “big brother/sister,” advisor and oftentimes, as a friend. Whenever possible, freshmen are paired with upperclassmen enrolled in the same major and/or college. Through training seminars, a mandatory course and personal experience, peer mentors are prepared to assist first-year students with problems, questions and situations that may arise, or refer them to the appropriate university resources. Ultimately, the peer mentor works to ensure a smooth transition from high school to the college environment. Though it is impossible to determine all of the many benefits of the program for each individual, the Peer Mentor Program remains rewarding, both intrinsically and extrinsically, for first-year students as well as mentors.

This program is coordinated by The Department of Multicultural Student Affairs, call (919) 515-3835 for more information.

**Supplemental Instruction**

Supplemental Instruction (SI) is a series of weekly review sessions for students in selected sections of historically difficult courses. SI is provided for all students who want to improve their understanding of course material and improve their grades. At each session, students are guided through material by an SI leader, a competent student who has previously taken the course. Three or four sessions are offered at various times each week, usually during the late afternoon and early evening. Attendance is voluntary. A schedule of sessions can be found on the SI website (https://tutorial.dasa.ncsu.edu/si).

**Tuition and Fees**

Note: Since tuition and fees for the 2016-2017 school year were not approved by the publication date, the rate schedules listed below represent estimated rates. These rates are subject to change. For the most current tuition and fee information available, please see the tuition information on the Cashier's Office website (http://www.fis.ncsu.edu/cashier/tuition).

- **North Carolina Resident** - $4,440 per semester (effective 2016-2017 academic year)
- **Nonresident** - $13,199 per semester (effective 2016-2017 academic year)

A statement of tuition and fees is posted on each student’s account that registered during a normal registration period. Students are notified via e-mail (eBILL) when a new statement has posted. Payment in full or approved financial aid information must be received by the due date appearing on the statement. The due date is approximately two weeks before classes begin. Students registering during a late registration period will be required to pay their tuition and fees at the time of registration and may be subject to a late registration fee. Fees are the same for both residents and nonresidents and are required of all students. Nonresident students are required to pay an additional $8,759 per semester for tuition.

1. **NOTE:** Tuition and fees are fixed items of cost. The rates listed above are for Undergraduate students in a degree program. Tuition and fee rates for Distance Education courses are billed based on the student’s affiliation, see the Cashier’s website (http://www.fis.ncsu.edu/cashier/tuition/de.asp) for full details.
2. Health Insurance is billed unless you waive out of the program each semester. For more information, visit the Student Health website (http://healthcenter.ncsu.edu).
3. Room rent is shown as main-campus, double occupancy rate
4. Meals, books and supplies, other personal expense, and transportation are shown as estimates.
Expenses Other than Tuition and General Fees

**Application Fee:** A nonrefundable fee $75 U.S. must accompany each application for admission ($100 for international students). Applicants may pay the fee online using their WolfPAW account.

**Room Rent:** New incoming students receive instructions on how to apply for housing with the letter of acceptance. Continuing students receive room reservation information each January at their residence hall rooms. The 2016-2017 residence hall room rent ranges from $2,895 to $3,753 per semester and plus a mandatory $115.00 ResNet (internet) charge. The Wolf Village Apartments charge $3,130 per semester plus mandatory charges for ResNet ($115) and cable television ($46) per person per semester. Wolf Ridge Apartments range from $3,325 per person to $3,875 per person per semester plus mandatory charges for ResNet ($115) and cable television ($46) per person per semester.

**Meals:** During their first academic year, new freshmen electing to reside on campus are required to participate in one of the university’s available meal plans. Meal plans are available to all registered students and costs for 2016-2017 range from $750 to $1,815. Students may also pay for meals individually at the various dining facilities available both on and near campus.

**Books and Supplies:** Books and supplies are usually purchased during the first week of classes directly from the NCSU Bookstores. Allow approximately $541 per semester for purchasing books and supplies.

**Personal Expenses:** Personal expenses vary widely among students but the estimate of $754 is based on what students report that they spend on these items.

**Cooperative Education Program Fee:** Required of all participating co-op students for each semester in which they are enrolled in an off campus work assignment. This fee, set at $430 for the 2016 Fall Semester, the 2017 Spring Semester, or the combined 2017 Summer Sessions, is used for partial support of the Cooperative Education Program staff in job development and placement activities. Students paying this fee are entitled to all university services, facilities, and programs during the semester or combined summer sessions for which they are enrolled.

**COE Program Enhancement Fee - Students enrolled in the College of Engineering will be charged a COE Program Enhancement Fee. This fee is used for program and infrastructure improvements in the College of Engineering to ensure our engineering students are provided career-ready skills that continue to advantage them in the marketplace. Each semester, undergraduates will be charged $500 (12 or more hours), $375.00 (9-11 hours), $250.00 (6-8 hours), and $125.00 (0-5 hours). Each semester graduate students will be charged $500 (9 or more hours), $333.30 (6-8 hours), and $166.65 (0-5 hours). Engineering students who enroll in a co-op work session will not be billed for the computing fee unless they also enroll in an NC State course.

**Professional Golf Management Fee:** Students enrolled in the Professional Golf Management program (PGM) will be charged $350/semester. The fee pays for golf play and practice privileges at several area golf courses.

**Required Fees**

Required fees are levied for services, facilities, and programs available to all students whether or not the student takes advantage of them. Students are assessed fees based on the course load they are taking. An itemization of required fees and other detailed information concerning expenses or related data can be obtained on the Cashier’s Office website (http://www.fis.ncsu.edu/cashier/tuition) or by contacting:

University Cashier’s Office
NC State, Box 7213
Raleigh, North Carolina 27695-7213
919-515-2986 (Option 4), or via e-mail at studentaccounts@ncsu.edu (studentaccounts@ncsu.edu)

**Refund Policy**

**Reduction in Hours:** The last day to reduce hours and receive a refund or reduction in rates is the same as the last day to register or add hours, typically the 10th day of a fall or spring term and the 4th day of a summer session. Tuition and Fees are not prorated after this date for reduced course loads. Specific dates are posted on the Cashier’s website and in MyPACK Portal.

**Withdrawal:** Dropping all courses for which you are registered constitutes a Withdrawal from the University. Refunds for official withdrawals from NC State University are prorated based upon the percentage of the enrollment period attended. No refunds are made for official withdrawals after 50 percent of the enrollment period has passed. The prorated withdrawal schedule for each semester is publicized on the Cashier’s website. In some instances circumstances such as severe medical issues can justify an appeal of your refund percentage. You may submit an appeal to the Fee Appeals Committee when you believe special consideration is merited. Applications for such appeals may be obtained from the Cashier’s Office website (http://www.fis.ncsu.edu/cashier/forms/appeal.asp).

**Tuition Surcharge**

Any student in the UNC system may be subject to the 50% tuition surcharge if he/she accumulates more than 140 credit hours toward his/her first 4-year baccalaureate degree. A student enrolled in an officially designated 5-year degree program may be subject to the tuition surcharge if he/she accumulates 110% of the necessary credit hours required for graduation.

For more information about tuition surcharge calculation, and coursework or circumstances that qualify as exempt from the surcharge, visit the Cashier’s Office Website (http://www.fis.ncsu.edu/cashier/tuition/surcharge.asp).

* As set forth by North Carolina General Statute 116-143.7, Section 9.10(a), effective with the 2010-2011 academic year.

**Residence Status for Tuition Purposes**

The basis for determining the appropriate tuition charge rests upon whether a student is a resident or a nonresident for tuition purposes. It is the role and responsibility of each public institution of higher education to make an initial classification of each student as in-state or out-of-state for purposes of tuition depending upon the determination of “legal residence” of the student. Students are provided four opportunities to have their classifications reviewed:
First, a student’s initial residency determination is based on information provided as a part of the admission process. Second, a student who believes that the initial classification is incorrect or experiences a change in circumstances that the student now believes makes him or her eligible for in-state status may seek re-classification at the institution. Third, a student who believes that the re-classification determination is incorrect may seek an appeal to the Residence Appeals Board at the institution. Fourth, a student who believes that the appeal determination is incorrect may seek a final appeal through the State Residence Committee.

**Initial Classification:** The student’s initial residence classification occurs during the admission application process when the student is first admitted to a community college or UNC institution.

**Reclassification:** A student, accepted for admission, who is initially classified as a nonresident and believes he or she meets the requirements of G.S. 116-143.1, -143.3, or any other applicable laws and regulations may request a reclassification review by the institution. The request for reclassification may be submitted either in direct response to the initial classification (if the student believes the initial classification is erroneous), or at a future time if the student has experienced a change in circumstances that he or she believes makes him or her eligible for in-state resident status. Students must submit requests for reclassification in accordance with approved procedures and application deadlines. The institution will not assume responsibility for initiating such an inquiry independently.

**Residency Reclassification Application Deadlines.** Except for deadlines set out in the General Statutes, institutions (undergraduate or graduate) may set their own deadlines so long as they are not inconsistent with the deadlines. The deadline to submit the reclassification application along with all supporting documentation cannot be later than the 10th business day of the term for which the student is seeking residency reclassification. All conditions necessary for achieving in-state status must still be satisfied prior to the beginning of the academic term for which the student is seeking reclassification. It is the student’s responsibility to provide the documentation necessary to support his or her claims for in-state residency for tuition purposes by the applicable deadlines.

**Residence.** To qualify as a resident for tuition purposes, a person must become a legal resident and remain a legal resident for at least twelve consecutive months (365 days) immediately prior to classification. Thus, there is a distinction between legal residence and residence for tuition purposes. Furthermore, twelve months legal residence means more than simply abode in North Carolina. In particular, it means maintaining a domicile (permanent home of indefinite duration) as opposed to “maintaining a mere temporary residence or abode incident to enrollment in an institution of higher education.” The burden of establishing facts which justify classification of a student as a resident entitled to in-state tuition rates is on the applicant for such classification, who must show his or her entitlement by the preponderance (the greater part) of the residency information.

**Parents’ Domicile.** If an individual, irrespective of age, has living parent(s) or court appointed guardian of the person, the domicile of such parent(s) or guardian is, prima facie, the domicile of the individual; but this prima facie evidence of the individual’s domicile may or may not be sustained by other information. Further, non-domiciliary status of parents is not deemed prima facie evidence of the applicant child’s status if the applicant has lived (though not necessarily legally resided) in North Carolina for the five years preceding enrollment or registration.

**Effect of Marriage.** Marriage alone does not prevent a person from becoming or continuing to be a resident for tuition purposes, nor does marriage in any circumstance insure that a person will become or continue to be a resident for tuition purposes. Marriage and the legal residence of one’s spouse are, however, relevant information in determining residency intent. Furthermore, if both a husband and his wife are legal residents of North Carolina and if one of them has been a legal resident longer than the other, then the longer duration may be claimed by either spouse in meeting the twelve month requirement for in-state tuition status.

**Military Personnel.** Any active duty member of the armed services qualifying for admission to an institution of higher education but not qualifying as a resident for tuition purposes shall be charged the in-State tuition rate and applicable mandatory fees for enrollments while the member of the armed services is abiding in this State incident to active military duty in this State. In the event the active duty member of the armed services is reassigned outside of North Carolina or retires, the member shall continue to be eligible for the in-State tuition rate and applicable mandatory fees so long as the member is continuously enrolled in the degree or other program in which the member was enrolled at the time the member is reassigned. In the event the active duty member of the armed services receives an Honorable Discharge from military service, the member shall continue to be eligible for the in-State tuition rate and applicable mandatory fees so long as the member establishes residency in North Carolina within 30 days after the discharge and is continuously enrolled in the degree of other program in which the member was enrolled at the time the member is discharged.

Any dependent relative of a member of the armed services who is abiding in this State incident to active military duty, as defined by the Board of Governors of The University of North Carolina and by the State Board of Community Colleges while sharing the abode of that member shall be eligible to be charged the in-State tuition rate, if the dependent relative qualifies for admission to an institution of higher education. The dependent relatives shall comply with the requirements of the Selective Service System, if applicable, in order to be accorded this benefit. In the event the member of the armed services is reassigned outside of North Carolina or retires, the dependent relative shall continue to be eligible for the in-State tuition rate and applicable mandatory fees so long as the dependent relative is continuously enrolled in the degree or other program in which the dependent relative was enrolled at the time the member is reassigned or retires. In the event the member of the armed services receives an Honorable Discharge from military service, the dependent relative shall continue to be eligible for the in-State tuition rate and applicable mandatory fees so long as the dependent relative establishes residency within North Carolina within 30 days after the discharge and is continuously enrolled in the degree of other program in which the dependent relative was enrolled at the time the member is discharged. A person charged less than out-of-state tuition rate solely by reason of this section shall not, during the period of receiving that benefit, qualify for or be the basis of conferring the benefit of G.S. 116-143.1.

**Grace Period.** If a person (1) has been a bona fide legal resident, (2) has consequently been classified a resident for tuition purposes, and (3) has subsequently lost North Carolina legal residence while enrolled at a public institution of higher education, that person may continue to enjoy the in-state tuition rate for a grace period of twelve months measured from the date on which North Carolina legal residence was lost. If the twelve months ends during an academic term for which the person...
is enrolled at a State institution of higher education, the grace period extends, in addition, to the end of that term. The fact of marriage to one who continues domicile outside North Carolina does not by itself cause loss of legal residence marking the beginning of the grace period.

**Minors.** Minors (persons under 18 years of age) usually have the domicile of their parents, but certain special cases are recognized by the residence classification statute in determining residence for tuition purposes.

1. Upon becoming an adult “acts, to the extent that the person’s degree of actual emancipation permits, in a manner consistent with bona fide legal residence in North Carolina” and

2. Begins enrollment at an institution of higher education not later than the fall academic term following completion of education prerequisite to admission at such institution.”

b) If a minor has lived for five or more consecutive years with relatives (other than parents) who are domiciled in North Carolina and if the relatives have functioned during this time as if they were personal guardians, the minor will be deemed a resident for tuition purposes for an enrolled term commencing immediately after at least five years in which these circumstances have existed. If under this consideration a minor is deemed to be a resident for tuition purposes immediately prior to his or her eighteenth birthday, that person on achieving majority will be deemed a legal resident of North Carolina of at least twelve months duration. This provision acts to confer in-state tuition status even in the face of other provisions of law to the contrary; however, a person deemed a resident of twelve months duration pursuant to this provision continues to be a legal resident of the State so long as he or she does not abandon North Carolina domicile.

**Lost but Regained Domicile.** If a student ceases enrollment at or graduates from an institution of higher education while classified as a resident for tuition purposes and then both abandons and re-acquires North Carolina domicile within a twelve month period, that person, if he or she continues to maintain the reacquired domicile into re-enrollment at an institution of higher education, may re-enroll at the instate tuition rate without having to meet the usual 12-month durational requirement. However, any one person may receive the benefit of this provision only once.

**Change of Status.** A student admitted to initial enrollment in an institution (or permitted to enroll following an absence from the institutional program which involved a formal withdrawal from enrollment) must be classified by the admitting institution either as a resident or as a nonresident for tuition purposes prior to actual enrollment. A residence status classification once assigned (and finalized pursuant to any appeal properly taken) may be changed thereafter (with corresponding change in billing rates) only at intervals corresponding with the established primary divisions of the academic year.

**Transfer Students.** When a student transfers from one North Carolina public institution of higher education to another, he or she is treated as a new student by the institution to which he or she is transferring and must be assigned an initial residence status classification for tuition purposes.

**Non-U.S. Citizens.** Persons who are not U.S. citizens but who have certain visa and immigration statuses that grant them the legal ability to establish and maintain a bona fide domicile in this country are subject to the same considerations as U.S. citizens in determining residence status for tuition purposes. If it is later discovered that the person’s visa or immigration status was obtained fraudulently, the institution shall have the right to seek and collect payment of full, out-of-state tuition, along with fees and costs associated with such collection. Non-U.S. citizens present in the United States under certain visa statuses such as tourists, visitors on business, and temporary foreign/international students do not have the legal capacity to establish a bona fide domicile in this country and thus, not in North Carolina. As examples, holders of non-immigrant visa statuses such as B, C, D, F, J, M, Q, S, and TN visas (and dependent visas for spouses and children such as a TD visa) cannot establish domicile with these documents, in and of themselves, unless there is a change in their visa status. An EAD, in and of itself, does not confer any immigrant or non-immigrant status and does not give the EAD holder the legal capacity to establish residency for tuition purposes in this state.

**UNC System Employees.** A person who is a full-time employee, in a permanent position, of The University of North Carolina, or is the spouse or dependent child of a full-time employee, in a permanent position, of The University of North Carolina, and who is a legal resident of North Carolina, qualifies as a resident for tuition purposes without having maintained that legal residence for at least 12 months immediately prior to his or her classification as a resident for tuition purposes.

The following categories of persons are eligible for tuition waivers:

**Survivors of Deceased Law Enforcement/ Emergency Workers.** Tuition waivers are available to the surviving spouse and children of a law enforcement officer (including sheriffs), firefighter, volunteer firefighter or rescue squad worker who was killed as a direct result of a traumatic injury sustained in the line of duty (including both active service and training for active duty). Additional eligibility requirements must be met.

**Families of Disabled Law Enforcement/Emergency Workers.** Tuition waivers are available to the spouses and children of law enforcement officers (including sheriffs), firefighters, volunteer firefighters, or rescue squad workers who are permanently and totally disabled as a direct result of a traumatic injury sustained in the line of duty (including both active service and training for active service). Additional eligibility requirements must be met.

**Note:** Decisions on residence for tuition purposes are based on NC G.S. 116-143.1 and 116-143.3 and on the State Residence Classification Manual which was prepared by the General Administration of the University of North Carolina system.

For additional information related to residency for tuition purposes, please view the North Carolina Residency Requirements (http://www.northcarolina.edu/legal/residence).

This information is subject to change.

**University Housing**

Living on campus is an investment in your success at NC State. With so many programs, activities, studies, research, classes, exams, labs and
more, you have plenty to focus on during your time here. Let University Housing take the hassle out of finding the perfect place to live so you can spend more time focusing on your academics. Our residence halls (https://housing.dasa.ncsu.edu/residence-halls-2) and on-campus apartments (https://housing.dasa.ncsu.edu/apartments) will place you right in the heart of NC State so you can keep a pulse on the Wolfpack.

Undergraduate students must be enrolled in at least 12 credit hours to be eligible to live on campus during the fall and spring terms. Students who must drop below these minimum requirements should contact University Housing to request an exception. During the summer terms, housing is provided for any enrolled student as space permits.

For more information about living on campus, contact:
University Housing
housing@ncsu.edu
(919) 515-2440
http://housing.ncsu.edu/

Or visit our office at: 1112 Pullen Hall, Raleigh NC 27695-7315.

Living and Learning Villages

NC State’s Living and Learning Villages (https://housing.dasa.ncsu.edu/villages) are interested-based living communities that engage students both inside and outside the classroom. Villages provide an unparalleled living experience where you’ll make life-long friends and immerse yourself in the NC State community.

Arts Village

The Arts Village unites students from various personal and academic backgrounds who have a passion for the arts and expose them to theater, visual arts and crafts, music, dance and more.

Black Male Initiative

The Black Male Initiative strives to establish a brotherhood and develop leaders among black male students. By promoting academic success, personal growth, professional development and self-responsibility, the group breaks through negative stereotypes and combats challenges facing African-American males in today’s society.

EcoVillage

The EcoVillage provides an interdisciplinary educational experience that prepares students for life-long sustainable living.

Engineering Village

The Engineering Village is an exciting new Living and Learning Village exclusively for first year students passionate about engineering! Engineering Village provides personal, professional and leadership development.

Entrepreneurs Village

The Albright Entrepreneurs Village (https://ei.ncsu.edu/village) provides sophomores, juniors, seniors and graduate students across all academic disciplines the opportunity to live, socialize and work with entrepreneurial-minded students. Residents can explore and develop their entrepreneurial interests in an environment that fosters creativity.

Exploratory Studies Village

The Exploratory Studies Village is for students entering the university who are knowingly undecided about a major. A year of guided inquiry and exploration coupled with one-on-one sessions with their academic advisor helps move students through the career planning and decision making process.

Global Village

Global Village is a living and learning community for those interested in living and interacting with people from differing backgrounds, experiences, countries and viewpoints.

Honors Village

The University Honors Village provides a unique living-learning environment for students in the University Honors Program (UHP). Academic engagement and research opportunities are core to the mission of the University Honors Program and student experience in the Honors Village assists them in completing UHP requirements.

Impact Leadership Village

The Impact Leadership Village provides experiential learning for students who have a passion for leadership and service. Students are given the opportunity to engage in practical application of leadership to real world issues and explore leadership development through one on one sessions with professionals. ILV enhances students' college experience and prepares leaders to make their personal IMPACT on the state, nation and world.

Native Space

Students living in the Native Space (https://housing.dasa.ncsu.edu/villages/native-space) community will demonstrate growth and learning along three focal points of the living experience: culture, academics and community engagement. Residents will find a deeper awareness of Native American history and drive cultural awareness through participation in Native American Heritage Month and the annual NC State Pow Wow.

Students Advocating for Youth (SAY) Village

The SAY Village is a community for first-year students in any academic discipline who have a passion for working with youth. Students develop one-on-one mentoring relationships with local elementary school students and learn what it means to be a youth advocate.

Scholars Village

The University Scholars Village, a collaborative effort between the University Scholars Program and University Housing, is one of the most important components of the University Scholars Program. Life in the Village centers around a wide range of social, cultural and educational activities, all designed to help students become informed citizens, ethical leaders and active contributors to our campus and community.

S.T.A.T.E. Village

The Second Year Transitions and Transfer Experience (S.T.A.T.E.) Village (https://housing.dasa.ncsu.edu/villages/state-village) provides second year and transfer students with opportunities to make the most of their NC State experience by focusing on the six core pillars essential to student success: Academic Success, Career Development, Community and Global Engagement, Diversity, Leadership and Life Skills.

Wellness Village

The Wood Wellness Village encourages and promotes the development and maintenance of a healthy body, mind and spirit through a wide array
of wellness programs and events. Students have the opportunity to experience personal growth while learning about the seven dimensions of wellness.

Women in Science and Engineering (WISE) Village

The Women in Science and Engineering (WISE) Village (https://housing.dasa.ncsu.edu/villages/wise-village) is a living and learning community created for female freshman and sophomore students majoring in science, technology, engineering and mathematics. Membership in WISE provides a powerful networking opportunity with other goal-oriented women as you pursue your STEM major.

Women Of Welch (WOW)

The Women Of Welch (WOW) Village enhances women's leadership outside the classroom through empowerment, leadership development, self-awareness and diversity/social justice. WOW creates a holistic community that fosters individual women's growth and development while challenging residents to act as citizens of a global community.

**Note:** Dates in this publication are those that have been approved by appropriate agencies of the university at the time of publication (July 2016). Changes may be announced in official university publications subsequent to this publication and maintained on the S [website](http://www.ncsu.edu/registrar/calendars/student Services Center website) ([https://studentservices.ncsu.edu/calendars/academic](https://studentservices.ncsu.edu/calendars/academic)).
Academic Degrees and Programs

Undergraduate Degrees

College of Agriculture and Life Sciences
Agricultural Business Management; Agricultural and Environmental Technology; Agricultural Science; Agricultural Education; Animal Science; Biochemistry; Biological Engineering; Bioprocessing Science; Extension Education; Food Science; Horticultural Science; Natural Resources; Nutrition Science; Plant and Soil Science; Plant Biology; Poultry Science; Soil and Land Development; Turfgrass Science; Preprofessional Programs - Pre-dental, Pre-medical, Pre-optometry and Pre-veterinary

College of Design
Architecture (fifth year program); Art and Design; Design Studies; Graphic Design; Industrial Design; Landscape Architecture

College of Education
Elementary Education; Mathematics Education-Middle School or Secondary; Middle Grades English Language Arts & Social Studies Education (MSL); Science Education-Middle School or Secondary; Technology, Engineering and Design Education

College of Engineering
Aerospace Engineering; Biomedical Engineering; Chemical Engineering; Civil Engineering; Computer Engineering; Computer Science; Construction Engineering; Electrical Engineering; Environmental Engineering; Industrial Engineering; Materials Science and Engineering; Mechanical Engineering; Mechanical Engineering Systems BSE-Offered at Havelock, NC; Mechatronics Engineering-Offered at UNC-Asheville; Nuclear Engineering

College of Humanities and Social Sciences
Anthropology; Arabic Language and Culture; Arts Studies; Asian Language; Communication; Criminology; English, Teacher Education option; English; French Language & Literature; French Language & Literature, Teacher Education option; German Studies; History; History, Teacher Education Option; Interdisciplinary Studies: Africana Studies; Interdisciplinary Studies: Self Design; Interdisciplinary Studies: Women & Gender Studies; International Studies; Leadership in the Public Sector; Philosophy; Political Science; Psychology; Religious Studies; Science, Technology and Society; Social Work; Sociology; Spanish Language & Literature; Spanish Language & Literature, Teacher Education Option

Poole College of Management
Accounting; Business Administration; Economics

College of Natural Resources
Environmental Sciences; Environmental Technology and Management; Fisheries, Wildlife and Conservation Biology; Forest Management; Natural Resources: Concentration in Ecosystem, Concentration in Policy & Administration; Parks, Recreation and Tourism Management; Professional Golf Management; Paper Science and Engineering; Sport Management; Sustainable Materials & Technology

College of Sciences
Biological Sciences; Chemistry; Genetics; Geology; Marine Sciences; Mathematics and Applied Mathematics; Meteorology; Microbiology; Natural Resources: Marine & Coastal Resources; Physics; Statistics; Zoology

College of Textiles
Fashion & Textile Design; Fashion & Textile Management; Polymer & Color Chemistry; Textile Engineering; Textile Technology

Graduate Degrees
For information about graduate programs at NC State, including admissions information, deadlines, international applications, financial support, and a list of graduate programs and their requirements, consult the NC State Graduate School website (http://www.ncsu.edu/grad/future-students). Also, please refer to the Graduate Catalog (http://www.ncsu.edu/grad/catalog).

Undergraduate Minors
Some departments at NC State offer undergraduate academic minors for students interested in a program of study in an area outside their major. All minors require at least 15 credit hours and may be either departmental or interdepartmental. Courses within the minor program may be used to satisfy university general education requirements, and the general requirements, including free electives, of a major curriculum, as applicable.

Minors are completely optional, the only requirement being that a student may not minor in the same discipline as their major. Only students who have matriculated into a major are eligible for a minor. A minor cannot be completed after graduating. Students pursuing a minor must consult with the minor coordinator on a plan of work and should file a copy of this plan with the advisor for their major as soon as the minor is declared. The student should also submit a Declare a Minor form signed by the minor coordinator to Registration and Records no later than the end of the regular registration period one semester prior to the semester of graduation. Successful completion of the minor will be noted on the final transcript following graduation. For more information about the minors available at NC State, please see the Minors website (https://occ.casa.ncsu.edu/undergraduate-academic-programs/academic-minors).

Academic Minors:
Accounting
Africana Studies
Agricultural Business Management
Agricultural and Environmental Technology
Agroecology
American Literature
Animal Science
Anthropology
Applied Ecology
Applied Sociology
Art and Design
Arts Entrepreneurship
Arts Studies
Biological Sciences
Biomanufacturing
Biotechnology
Business Administration
Chemical Engineering
Chinese Studies
Classical Studies
Coaching Education
Cognitive Science
Computer Programming
Creative Writing
Criminology
Crop Science
Dance
Design Studies
Economics
English
Entomology
Environmental Sciences
Environmental Toxicology
Ethics
Extension Education
Feed Milling
Film Studies
Fisheries Sciences
Food Science
Forensic Science
Forest Management
French
Furniture Manufacturing
Genetics
Geology
German
Graphic Communications
Graphic Design
Health
Health, Medicine, and Human Values
Healthcare Product Management
Hindi-Urdu
History
Horticultural Science
Industrial Design
Industrial Engineering
International Studies
Italian Studies

World Literature
Zoology

Agricultural Institute (p. 114)

Applicants must have graduated from an accredited high school with at least a 2.25 GPA (on a 4.0 scale), or have successfully passed the General Education Development (GED) test before being admitted to the Agricultural Institute at NC State. An application and a high school transcript must be submitted through CommonApp.org and supporting documents must be submitted directly to the Admission Office at NC State University. One letter of recommendation from someone other than a family member should be submitted directly to the Agricultural Institute Office. The regular college entrance exam (Scholastic Aptitude Test – SAT) or ACT is not required, but recommended. The 2.25 minimum high school GPA is waived for transfer students and for applicants 21 years or older at the time of enrollment in the Agricultural Institute. An Associate of Applied Science degree is awarded. Fields of study are:

- Agribusiness Management
- Field Crops Technology
- General Agriculture
- Livestock and Poultry Management
- Horticultural Science Management
• Ornamentals and Landscape Technology Concentration
• Small Scale Farming Concentration
• Turfgrass Management

Arts Studies
NC State offers a rich variety of courses in the history, analysis, and production of the arts - dance, film, music, theatre, and visual arts. Many of these courses are open to students without prerequisite, and are offered by 13 departments in four different colleges of the university.

In addition to these courses, most of which focus on a single art form, the Arts Studies Program offers courses which deal with several arts media or with the arts in connection with other areas, including politics, science, technology, and more. These courses are listed in the back of this catalog and the schedule of courses each semester under the ARS prefix.

For students who want to concentrate in Arts Studies, a major in Arts Studies is available. It is administered by the Arts Studies Program in the College of Humanities and Social Sciences. In addition, there are minors in Arts Studies, Music, Theatre, and Film Studies.

Opportunities for students to participate in arts activities offered by ARTS NC STATE include many instrumental and choral groups, student productions in University Theatre, instruction in the Craft Center, courses and concerts by the Dance Program, and visual art exhibitions. For these activities, many of which are integrated with academic courses, see Student Activities in this section of the catalog.

The Arts Studies Program together with the Music Department sponsors the Arts Now Series. The Series includes performances of and lectures about contemporary performance works that include music. Guest performers, composers, dancers, and video artists appearing in the series range from regionally based artists to international guests from Europe, Asia, and South America.

Pre-professional Programs

Pre-Law Services Office of Advising Support, Information and Services
Law schools neither prescribe nor recommend a particular undergraduate curriculum for prospective candidates. A student may prepare for law school within any of the majors offered by the nine undergraduate colleges. The University Coordinator of Pre-Law Services, in conjunction with the student's academic adviser, assists any student with an interest in attending law school and provides information and planning strategies to prepare for this process. This can include: what needs to be considered in the academic record; the selection of appropriate electives and concentrations; law schools to consider; as well as, where to look for financial information. The Coordinator also works with the Pre-Law Students Association (PLSA), which is open to all interested students. During the year the PLSA provides programs that have included: NC State Law School Fair, local attorneys, panel of Law School students, Law School Directors of Admission, information on the admissions process. At this time, the Pre-Law Advising Program is administratively housed in the Office of Advising Support, Information and Services within the Division of Undergraduate Academic Programs. For further information, contact the University Pre-law Coordinator Mary A. Tetro, 211P Park Shops, (919) 513-0912. You may also visit the Pre-Law website (http://www.ncsu.edu/prelaw).

Pre-Professional Healthcare Programs and Advising: Pre-Med, Pre-Dent, and Pre-Opt, Pre-Pharm, Pre-PT/OT, Pre-PA, Nursing etc.

Many NC State undergraduate students are planning a career in the health professions and will apply to attend medical, dental, optometry or other health care graduate schools after graduation. NC State provides a variety of services to help students explore the health professions as a possible career choices and to enhance a student’s competitiveness for admission into a health professions school. These services include the Health Professions Advising Center or Health PAC (see the information below and website link). Health PAC assists with healthcare career planning and advising, mentoring, letters of evaluation, internship and clinical opportunities, as well as numerous programs and resources to help students achieve their educational and career goals in human healthcare. The center also assists in the actual application process including personal statement development, interview preparation and more, all targeted at developing the most competitive, well rounded applicants.

Health professional schools do not require students to obtain a designated “Pre-Health” degree. Instead, they seek students who have demonstrated academic success and who also have excelled in other areas including clinical and service experience as well as social development. Like most schools, NC State does not offer a dedicated “Pre-Health” curriculum. Instead we recommend that students interested in health professions select the academic major that is of greatest interest to them while ensuring that they select courses that provide a strong foundation in the natural sciences required by most professional programs for admission. These include biology, chemistry, physics, and calculus along with recommended courses like genetics and biochemistry. It is also recommended that students select courses that improve communication and writing skills as well as provide a strong foundation in the humanities, psychology and ethics. Students interested in a program that focuses on Human Biology should visit the following link on the Biological Sciences website (http://bio.sciences.ncsu.edu).

For further information on Health PAC, contact Anita Flick, MD at health_pac@ncsu.edu or visit the Health PAC website (http://hpac.dasa.ncsu.edu).

The Health Professions Advising Center (Health PAC) and the NC State Health Professions Review Committee

In addition to a student’s departmental academic adviser, the university provides the Health Professions Advising Center (Health PAC) to further assist students interested in health careers. Housed in 2720 Bostian Hall, Health PAC is available to all NC State students (including graduate and post bac students as well as alumni). Health PAC is dedicated to mentoring students throughout their college career, helping them to prepare their application for post-graduate studies. The center assists pre-health students by answering questions and helping them explore health career options, locating and obtaining clinical and service experience, and developing future career skills (such as technical writing, research review, etc.). Health PAC also helps students compile an Achievement Portfolio that provides an accounting of their academic, clinical, service/community, and social achievements for incorporation into their application to health programs and for the subsequent interview process.
The NC State Health Professions Review Committee is available to review student applications and to prepare a university committee recommendation, which is then submitted to each of their selected schools. The composite includes not only each student’s individual letters of recommendation but also a university recommendation of the applicant along with a detailed letter from the NC State Health Professions Review Committee Chair highlighting each student’s strengths and accomplishments. Many professional programs rely heavily on these university recommendations and often require them as a component of their application screening process.

For more information on the Health Professions Advising Center and NC State Health Professions Review Committee, please contact Anita Flick, MD at health_pac@ncsu.edu or visit the Health Professions website (http://hpac.dasa.ncsu.edu).

Pre-Veterinary Program

This area of study is a non-degree option offered by the College of Agriculture and Life Sciences. This option is available to students majoring in animal science, poultry science, zoology, or biological sciences as well as in many other science curricula, such as biochemistry or chemistry. If a student is accepted to veterinary medical school before completion of their undergraduate degree, some course credits may be transferable from the veterinary program toward completion of the Bachelor of Science degree. Arrangements for this procedure should be made with the degree granting school or department prior to entering veterinary college. For further information, contact the Academic Programs Office of the College of Agriculture and Life Sciences, (919) 515-2614, or the Admissions Office for Veterinary Students of the College of Veterinary Medicine, (919) 513-6205, for general information concerning admission to the Doctor of Veterinary Medicine program at NC State.

College of Agriculture and Life Sciences

NCSU Box 7642
Raleigh, NC 27695-7642
Phone: (919) 515-2614
fax: (919) 515-5266
e-mail: cals_programs@ncsu.edu
Visit the CALS website (http://www.cals.ncsu.edu).

Academic programs in the college represent a unique blending of the agriculture and life sciences. Agriculture is a very diverse industry that touches everyone’s life in some way or another. The life sciences provide foundations for studying medical and health-related disciplines as well as environmental experiences and molecular biology.

The goals of the instructional program in the College of Agriculture and Life Sciences include proving relevant, scientific, and practical knowledge of the food, agricultural, and life sciences to its students. These programs emanate from a highly qualified and accomplished faculty committed to academic excellence and the development of the individuals to their personal and professional potential. Central to the college’s goals is the cultivation of interdisciplinary problem-solving skills that will serve its graduates well as they pursue a lifetime of learning and adaptation to change.

The overall objectives of the academic program include:

- To provide an opportunity for a broad university education
- To provide a variety of learning experiences
- To offer a choice of specialization in agriculture and life sciences
- To provide background for graduate or professional programs

Degrees

- The Bachelor of Science degree is conferred upon the completion of one of the curricula in this college.
- The degrees of Master of Science, or Master of (non-thesis) degrees are offered in the various departments in the college.*
- The Doctor of Philosophy degree is offered in the following subject areas: animal science and poultry science, biochemistry, bioinformatics†, biological and agricultural engineering, biometrics, crop science, economics, entomology, fisheries, wildlife & conservation biology, food science, functional genomics†, horticultural science, immunology†, microbiology†, nutrition, physiology, plant biology, plant pathology, and soil science.*

  * Further information on graduate offerings may be found in the Graduate Catalog.

  † Joint program with the College of Sciences.

Curriculum Offerings and Requirements

A freshman enrolling in Agriculture and Life Sciences has common core courses. The first-year courses are appropriate in all curricula. This approach allows the student time to explore various programs before selecting a curriculum. The student selects a major in a department or interdisciplinary program. All departments offer science curricula (intended primarily for students who anticipate attending graduate or professional school), several technology curricula, and the Agricultural Business Management curriculum is offered in the Department of Agriculture and Resource Economics.

Departmental Majors

Business major:

Agricultural business management is offered through the Department of Agricultural and Resource Economics. A concentration in biological sciences and the opportunity for double majoring in business and other programs are available.

Science majors:

Agricultural education, agricultural science, animal science, biochemistry, biological engineering (joint program with the College of Engineering), bioprocessing science, extension education, food science, horticultural science, natural resources, nutrition science, plant biology, plant and soil science, poultry science, and soil and land development. Preprofessional courses are offered in the science curriculum track.

Technology/Industry majors:

Agricultural and environmental technology, animal science, food science, horticultural science, plant and soil science, poultry science, and turfgrass science.

Common First Year in the Life Sciences

Beginning in fall 2014, CALS students interested in a life science-related major will pursue a common first year course of study. At the time of
admission, students will select an intended major. They will not formally matriculate into that program until after their freshman year.

**Academic Minors**

Several departments in the College of Agriculture and Life Sciences offer a minor in their discipline. Students interested in additional information regarding a minor should contact the appropriate departmental office. At present, the following minors are available:

- Plant Pests, Pathogens & People**
- Soil Science**

* Available via Distance Education
** Available via Distance Education and On Campus

**Student Activities**

Students in the College of Agriculture and Life Sciences have numerous opportunities to take part in broadening extracurricular activities. Most departments have student organizations that provide the professional as well as social experience. Representatives of these clubs form the Agri-Life Council. This council is the student organization representing the college. Student tours provide an opportunity to see firsthand the application of classroom principles. In addition, students representing agrimarketing, agronomy, animal science, horticultural science, food science, poultry science and soil science compete regionally and nationally in a number of activities, providing student members a chance to learn by travel as well as by participation.

**Honors Program**

Highly motivated students in our college have an opportunity to enhance their education experience through the invitation-only CALS Honors Program. The program inspires students to take ownership of their education, explore their passions, and pursue their academic goals beyond the classroom. Each year, we invited incoming freshmen meeting the academic requirements to join the CALS Honors Program as part of the NCSU admissions procedure. If space allows, supplemental invitations may occur in the fall of each year for students that have completed 30 credit hours at NCSU and meet our academic requirements. Participating students can choose a P.A.T.H. (pathway to honors) focused on rigorous coursework, independent research or study abroad. Please visit the 'New CALS Honors' page for specific details here (https://harvest.cals.ncsu.edu/cals-academic-programs/opportunities/new-cals-honors).

**Joint College Honors Program**

The Department of Molecular and Structural Biochemistry’s Honors Program, which is administered through the College of Agriculture and Life Sciences and the College of Sciences, is designed to encourage excellent undergraduate biochemistry majors to develop their academic potential through a selection of courses and research that will challenge their abilities and better prepare them for postgraduate careers.

Admission: Students must complete the three-semester series of Calculus I, II, and III (MA 241, and MA 242) and calculus based Physics I and II (PY 205 and PY 208). [Exceptions may be made for highly talented students who transfer into the Biochemistry curriculum after their Fall semester, and had already taken MA 131 and MA 231.]

In the first semester of their Junior year (usually in the Fall semester), students who qualify in terms of their mathematics and physics coursework and have an overall grade-point average of 3.5 or higher are invited to enter the Biochemistry Honors Program. Those students who qualify based on their mathematics and physics courses and have an overall grade-point average of 3.8 or better may be invited to enter the Biochemistry Honors Program during the second semester of their Sophomore year (usually in the Spring semester).

The Undergraduate Coordinator receives nominations from Advisors and prepares recommendations for the College of Sciences Honors Programs Committee.

Requirements: Biochemistry COS Honors Students are required to take Physical Chemistry I and II (CH 431 and CH 433), and to earn at least 3 credit hours in laboratory research (e.g., BCH 492 or BCH 493 or ALS 498H and ALS 499H). Six credit hours of research credit are highly recommended. Written scientific reports based on the students’ research
are required. In addition, students in Honors Programs must complete at least 9 credit hours of coursework drawn from at least two of the following three categories:

Category 1: Special Courses for Honors Students (courses or sections designated S or H, such as ENG 101H, MA 341S, etc.)

Category 2: Advanced Courses, such as 500-level courses

Category 3: Independent Studies and Research (such as BCH 492, BCH 493, or ALS 498H and ALS 499H) [Minimum of three hours in this category]

Certification: Following receipt of an invitation to enter the Biochemistry Honors Program, a student should make an appointment with the Undergraduate Coordinator (Room 126 Polk Hall) to inform the department of the student's desire to accept or reject the invitation. A Completion of Requirements form is prepared for each student entering the program, and as Honors requirements are met, they are recorded on the form. Upon completion of all Honors Program Requirements, the Honors Program Director (Undergraduate Coordinator) certifies that the student should receive appropriate recognition upon graduation.

Honor Societies

Students in all majors with strong academic records are recognized by national organizations that have local chapters, Phi Beta Kappa, Gamma Sigma Delta, Alpha Zeta, Alpha Epsilon Delta, and Phi Kappa Phi.

Scholarship Program

The College of Agriculture and Life Sciences awards approximately 620 scholarships each year based on a combination of selection factors including merit, financial need, academic major and/or outside interests. In order to apply for scholarships in the College of Agriculture and Life Sciences and to ensure proper consideration for all scholarships, students must complete the College's online scholarship application each year by deadlines noted on our scholarship website: cals.ncsu.edu/scholarships. Students with questions regarding scholarships or financial aid can email cals_scholarships@ncsu.edu.

Jefferson Scholars in Agriculture and Life Sciences and the Humanities

The Thomas Jefferson Scholars Program in Agriculture and Life Sciences and the Humanities is a joint program of the College of Agriculture and Life Sciences and the College of Humanities and Social Sciences. It is a program that leads participants to two degrees: one concentrating in an area of agriculture or life science and one in an area of humanities or social science. All majors in each college are available to meet each student’s particular interests and career goals. The purpose of the program is to produce potential leaders in agriculture and the life sciences who have not only technical expertise but also an appreciation for the social, political, and cultural issues that affect decision-making. The program includes special classes for Jefferson Scholars and a variety of social and service activities. Each spring a number of entering freshmen are chosen to participate in the Jefferson Program. Successful participants receive scholarship support after the sophomore year.

Accepted students interested in applying to the Jefferson Scholars program should contact either of the following people before January 15. An online application is available. Visit the Jefferson Scholars website (http://www.cals.ncsu.edu/student_orgs/jeffer) for details.

ALS - Agriculture and Life Sciences Courses

ALS 103 Freshman Transitions and Diversity in Agriculture & Life Sciences
Prerequisite: CALS Majors with less than 30 Credit Hours.
Introduction to scope and objectives of university education. Overview of curricula, academic requirements, and career opportunities in agriculture and life sciences. Overview of campus resources and support services. Discussion of expectations for academic and career success including professionalism, diversity, and inclusiveness. Restricted to CALS majors of freshman or sophomore status. Students will not receive credit for both ALS 103 and ALS 303.

ALS 110 Academic and Career Skills Seminar 1.
Prerequisite: Ag and Life Science Majors.
Students learn about the career decision-making process through integration of self-knowledge. Emphasis is placed on Agriculture and Life Sciences careers. Students assess interests, values, skills and personal strengths while learning about a variety of campus and career resources.

ALS 303 Transfer Transitions and Diversity in Agriculture & Life Sciences 1.
P: CALS Majors >30 credits.
Introduction to scope and objectives of university education. Overview of curricula, academic requirements, and career opportunities in agriculture and life sciences. Overview of campus resources and support services. Discussion of expectations for academic and career success including professionalism, diversity, and inclusiveness. Restricted to CALS majors with 30 or more credit hours completed. Students will not receive credit for both ALS 103 and ALS 303.

ALS 398 Agriculture and Life Sciences Honors Seminar 2.
Prerequisite: Enrollment by invitation for sophomores or juniors in CALS with GPA 3.35 or higher.
A seminar/discussion honors course with emphasis on a team approach to scientific research into topics that link science with issues in society; exposure to leadership skills and bioethics; requirement of detailed written or oral reports; career development in the agricultural and life sciences; required participation in on- and off-campus scholarly retreats.

ALS 494 International Learning Experience in Agriculture and Life Sciences 1-6.
Course offered as needed for international learning experiences in agriculture and life sciences involving international travel and immersion in an international culture. A written report is required and student must identify a faculty member to work with them. Travel expenses may be incurred by the student. Departmental Approval Required.
Interdisciplinary Programs

Curricula in Plant and Soil Sciences

Williams Hall, Room 2126

D. L. Lindbo, Undergraduate Coordinator Soil Science; Williams Hall, Room 2321

Phone: (919) 515-2643

Dr. Lori Unruh Snyder, Undergraduate Coordinator Crop Science, Williams Hall, Room 2126

Phone: (919) 515-7959

Visit the Department of Crop Science (http://www.cropsci.ncsu.edu) and the Department of Soil Science (http://www.soil.ncsu.edu) online.

Plant and Soil Sciences is a diverse program with concentrations in agroecology, agronomic business, agronomic science, crop biotechnology, crop production, and soil sciences.

Agroecology is the study of the ecological, environmental, economic and social interactions of agricultural production systems. In this program, students learn about the latest practices and research innovations in sustainable agriculture locally and internationally through classroom studies, hands-on experiences, and field trips. This is a multi-disciplinary concentration that will prepare students for a diversity of employment opportunities.

Agronomic Business concentration is a degree program intended to prepare students for careers in marketing, management, sales, or other economic segments of agri-industry. This concentration is a science-based curriculum with built-in flexibility that allows students to choose from a wide range of ARE or BUS electives, plant science courses, and career path electives.

Agronomic Science and Crop Biotechnology concentrations are degree programs designed for students who wish to establish professional careers in areas such as applied plant science and crop production research, crop biotechnology, plant breeding, genetics, or physiology. This program will be especially beneficial for students who wish to pursue advanced degrees in areas of applied plant sciences. Students preparing for plant biotechnology, breeding, or genetics careers must have a broad and thorough knowledge of the life and plant sciences, as well as hands on experience in the most recent scientific techniques. At the same time, scientists engaged in plant genetic manipulation at all levels should clearly understand the potential impact engineered plants may have in field production environments. The objectives of these two concentrations are to merge the scientific/technical expertise in the life sciences with knowledge of plant growth and plant development to prepare students for careers in today's rapidly changing agricultural industries.

The Crop Production concentration prepares students for career in the crop management, production, or technology. Today’s job market demands that or graduates be well versed in the life sciences and the technical aspects plant agricultural production. This concentration is a science-based curriculum with built-in flexibility that allows students to choose from a wide range of crop science courses and career path electives. The flexibility will enable our graduates to have successful careers in plant agriculture-related positions such as international agricultural development, plant protection, plant inspection, biosecurity, precision agricultural technologies, specialty crop production, and farm management.

The Soil Science concentration provides a focus on the soil resource component of crop and soil management. This concentration provides greater breadth and depth to the role of the physical, chemical and biological properties of the soil. A strong science background allows students to select from a variety of professional career opportunities. In addition to the role of soil in crop production, the soil science concentration prepares students for careers in waste management, watershed/water quality protection, erosion and sediment control, land planning and soil survey. Opportunities exist in the public sector as well as the private with the potential to become licensed as a professional soil scientist.

The Departments of Crop Science and Soil Science administer the Plant and Soil Science curriculum jointly. Crop Science relates primarily to the agroecology, biotechnology, genetics, breeding, physiology, and management of field crops. Soil Science is oriented toward soil physics, chemistry, origin, microbiology, fertility and management. For further information and employment opportunities, see the departmental headings for Crop Science and Soil Science.

Specific curriculum requirements are available on the Registration and Records website (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php#requirement-courses-list).

Curricula in Natural Resources

A. W. Oltmans, Undergraduate Coordinator Agricultural and Resource Economics; Nelson Hall Room 3304AH

D.L. Lindbo, Undergraduate Coordinator Soil Science; Williams Hall, Room 2321

Visit the Department of Soil Science (http://www.soil.ncsu.edu) online.
Wise use of all our natural resources (soil, water, air, minerals, flora, fauna, and people) for the benefit of current and future members of society is the goal of natural resource management. This important challenge recognizes the interdependence of people with their environment and requires an integrated, multi-disciplinary approach to solving society’s resource problems. Population growth, rising incomes, life style changes and urbanization lead to more intensive use of all natural resources. These trends present challenges to resource managers who must be trained in the basic principles of several disciplines in order to develop and apply sound management strategies to our resource problems. Natural resource professionals must understand resources and the social systems governing their use. They must be able to work in teams to analyze potential effects of resource use and to design ways to make efficient use of natural and environmental resources for current and future generations.

To accommodate the breadth and complexity of natural resource management, the Bachelor of Science degree in Natural Resources is a campus-wide program involving three colleges and four departments that administer seven concentrations. A common core of 84 credit hours of course work provides a balanced foundation in communication, humanities, social sciences, mathematics and the natural sciences. The core course requirements include a freshman orientation course and a senior level applications course that natural resource majors in all concentrations must complete. Within the College of Agriculture and Life Sciences, three concentrations are available: Economics and Management, Soil Resources, and Soil and Water Systems. For information on other concentrations see the Department of Forestry in the College of Natural Resources and the Department of Marine, Earth and Atmospheric Sciences in the College of Physical and Mathematical Sciences.

Specific curriculum requirements are available on the Registration and Records website (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php#requirement-courses-list).

### Department of Agricultural and Human Sciences

As of July 1, 2016, the Department of Agricultural and Extension Education has merged with the Department of Youth, Family and Community Sciences to become the Department of Agricultural and Human Sciences. The information listed below is for the Department of Agricultural and Extension Education. Click here for information on Youth, Family and Community Sciences (http://yfcs.cals.ncsu.edu).

Agricultural and Extension Education is a broad field of study and practice representing the blending of agricultural and behavioral sciences into educational programs for youth and adults. Agriculture impacts everyone’s life in terms of food, water, air, clothing, homes and the quality of life. Central to the department’s goals is the formal and nonformal teaching of problem-solving and learning skills for a lifetime of growing, evolving, and changing. The Agricultural Science degree provides graduates with both agricultural skills and leadership skills that are essential to leadership positions in the agricultural industry.

Regardless of which degree option you choose, the curriculum in agricultural and extension education has some common features. It begins with the general education courses that are required throughout the university. These courses are essential to developing a well-educated graduate. The second component of the agricultural and extension education program provides students with a broad understanding of agriculture. Students complete introductory and advanced courses in various agricultural disciplines. These courses will develop the student’s knowledge in agriculture essential to providing information to a wide variety of clients. This exposure to so many areas of agriculture also helps students decide on a specific area of agriculture in which to specialize. The third component of the department’s program requires students to complete a specialty area or a concentration in at least one area of agriculture. This specialization usually qualifies students for a minor in an agricultural discipline, which may provide students with additional employment opportunities. The final component of the agricultural and extension education program involves the courses related to providing information to people. These courses will vary, depending upon degree program selected.

There are many professional opportunities that are available to people participating in departmental programs. Graduates have the choice to plan for teaching, administrative leadership and public relations positions in secondary schools, community colleges, universities, Cooperative Extension Service, and agribusinesses. Graduates are highly qualified to enter agricultural careers and in agricultural and extension education. Career placement assistance is provided to all graduates.

### Curricula

The Agricultural Education curriculum encompasses areas of study that will enable students to participate effectively in planning, promoting, and initiating educational programs in agriculture. The program leads to a Bachelor of Science degree and is designed to prepare teachers of agriculture for secondary schools and community and technical colleges. The demand for agricultural education teachers exceeds present supply in the Carolinas, Virginia, and throughout the nation.

The Extension Education curriculum leads to a Bachelor of Science and is designed to primarily prepare individuals for careers with the Cooperative Extension Service. Students are required to complete both classroom and laboratory studies on the NC State campus and a required closely supervised; semester-long practicum in a County Extension Center during their senior year. Students have two concentrations available in this curriculum: Agriculture and Natural Resources and Youth Leadership Development. Students in the Agricultural and Natural Resources concentration select an area of study that prepares them for the important role as agricultural and/or natural resource Extension agents. Students in the Youth Leadership Development concentration take courses to prepare them to be the catalysts for positive change within communities as the educators and administrators of youth leadership programs (such as 4-H).

The Agricultural Science curriculum is designed to prepare graduates for careers in a wide variety of agricultural industry positions. The program leads to a Bachelor of Science degree in Agricultural Science. Students complete a minimum of two agricultural specialty areas, increasing their options for careers in agriculture upon graduation. In addition to preparation in the agricultural industry, students also complete a series of leadership courses to prepare them for leadership positions within the agricultural industries. Internships are not required in this curriculum, but are strongly encouraged.

Specific curriculum requirements are available on the Registration and Records website (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php#requirement-courses-list).
Minor in Extension Education

The minor in Extension Education is open to all interested baccalaureate students. The minor is especially appropriate for students enrolled in agricultural, natural resource, and nutrition majors and/or those interested in careers with the Cooperative Extension Service or other nonformal educational/community outreach organizations. Students completing a minor in Extension Education will become familiar with the organization, structure, and mission of Cooperative Extension. Students will be better equipped to perform common tasks, explore networked computer resources and solve problems associated with the various curricula in the Agricultural Institute.

Minor in Leadership in Agriculture and Life Sciences

The Leadership in Agriculture and Life Sciences minor is open to all interested baccalaureate students in the College of Agriculture and Life Sciences. The minor is especially appropriate for students interested in careers related to the agriculture and life sciences industries. Students completing this minor will be able to apply the theory, principles and skills required by leaders in their discipline. The minor requires a minimum of 15 credit hours, with 3 credit hours required and the remaining 12 credit hours from a list of leadership courses. The minimum grade required for courses counting toward the minor is a “C.” Additional information related to the minor can be found in the complete listing of minors (https://oucc.dasa.ncsu.edu/undergraduate-academic-programs/academic-minors).

Certificate in Agricultural Leadership

The department offers a certificate program in Agricultural Leadership that is available to degree and non-degree students. Students in the certificate program complete a total of 12 credit hours in agricultural leadership courses. Those who complete the leadership certificate program will be better equipped to serve in leadership positions within agricultural industry. In addition to an introductory leadership course, students can choose from personal leadership, team leadership, organizational leadership, technical writing, or presentation skills. The minimum grade required for courses counting toward the certificate is a “C.”

AEE - Agricultural and Extension Education Courses

AEE 101 Introduction to Career and Technical Education
Overview of career and technical education programs, objectives, and outcomes in secondary schools. Philosophy of career and technical education and how career and technical education programs fit into the overall mission of secondary education. Mission of agricultural education, major program objectives, and introduction to the curricula taught within the state. Roles and responsibilities of CTE teachers with specific emphasis on agricultural education teachers’ roles and responsibilities. Historical context of agricultural education and other career and technical education programs, including major legislation affecting development of career and technical education.

AEE 103 Fundamentals of Agricultural and Extension Education
Introduction to the scope, purpose, and objectives of university education with an emphasis on agricultural education, extension education, and agricultural communications. Students will explore College and departmental resources, academic policies, and procedures, the agricultural industry, career opportunities, and current trends and issues in agriculture. Cannot receive credit for both AEE 103 and ALS 103.

AEE 141 Computer Applications in the Agricultural Institute
Introduction to computing concepts and the computing infrastructure in the Agricultural Institute. Use of computing hardware and software to perform common tasks, explore networked computer resources and solve problems associated with the various curricula in the Agricultural Institute. BOSTICK.

AEE 206 Introduction to Teaching Agriculture
Introduction to teaching agricultural education in middle and secondary schools and collaborative efforts for teaching agricultural education to adults as rural community situations dictate. Field experiences include three hours per week of structured observations of classroom teachers, teacher assistant activities, and reflections of the experience.

AEE 208 Agricultural Biotechnology: Issues and Implications
Trends and issues of agricultural biotechnology in today’s society are addressed while covering the basic biological science behind the technology. Applications of and policy issues associated with plant, animal, and environmental biotechnology used in the agricultural industry are examined from an interdisciplinary approach.

AEE 226 Computer Applications and Information Technology in Agricultural & Extension Ed
Use of computers and commercially produced agricultural software; the computer as a management tool; agricultural occupational applications of the computer; a multimedia instructional tool in agricultural classrooms and training situations; use of technology for processing information and imaging; network access; and electronic communications.

AEE 230 Introduction to Cooperative Extension
This course is designed for all students who are interested pursuing a career with the cooperative extension service. An introduction to the cooperative extension mission, philosophy, history, organization, structure, administration, program areas, extension program development, extension teaching and delivery methods, and the involvement and use of volunteers. Students are expected to provide their own transportation for outside of class activities and assignments.
AEE 291 Service Learning Program Leader Development I 1.
The purpose of the course is to prepare students for their role as Alternative Service Break Team Leaders. The course will incorporate the larger issues of citizenship, social justice, and positive change and will include the logistics, risk-management, and leadership skills needed when leading a service trip. This course will require students to think critically about their role as a leader. Students will participate in a weekend overnight retreat. Transportation for the retreat will be provided by University Van rental. Expenses for the weekend retreat are covered in the ASB administrative charge paid by participants.

AEE 292 Service Learning Program Leader Development II 2.
Prerequisite: AEE 291.
The purpose of the course is to prepare students for their role as Alternative Service Break Team Leaders. Part II of the Service Learning Program Leader Development will build upon what students learned in Part I and they will be able to put into practice what has been learned with their own teams. Students will travel with their respective teams during spring break to complete the week long service-learning project. Students will be responsible for fundraising for approximately half the cost of their trip. Trip costs vary and depends on location selected.

AEE 303 Administration and Supervision of Student Organizations 3.
Prerequisite: AEE 206.
Principles and techniques for organizing, administering and supervising student organization activities.

AEE 311 Communication Methods and Media 3.
Prerequisite: ENG 101.
Foundations of agricultural communications. Technologies of agricultural communication and the systematic approach to the development of agricultural communication materials. Development of applied skills in design, production, evaluation, and dissemination of information unique to agricultural sciences and media.

AEE 322 Experiential Learning in Agriculture 3.
Prerequisite: AEE 206.
Planning, organizing, implementing, supervising and evaluating Supervised Agricultural Experience (SAE) programs in agriculture.

AEE 323 Leadership Development in Agriculture and Life Sciences 3.
Leadership development in agricultural and related settings; foundations of leadership theory and practice; techniques for developing leadership skills; development of understanding of group interactions and group leader roles, technical communication skills, interpersonal influence, commitment, and goals achievement strategies necessary for effective leaders.

AEE 325 Planning and Delivering Non-Formal Education 3.
Adult learning theory and practice, including planning non-formal educational programs for adults, methods of instructional delivery, effective use of instructional technology, marketing educational programs, and evaluation of educational outcomes. Microteaching (practice teaching presentations) and group presentations required as part of laboratory assignments.

AEE 326 Teaching Diverse Learners in AED 3.
Prerequisite: AEE 206; Junior standing; and AED Majors only.
Legislation and issues regarding diverse learners in middle and high school agricultural education are examined. Discussion and practice in planning and facilitating teaching strategies to help those with special needs in an agricultural setting are emphasized. Techniques to integrate reading and writing into the curriculum are identified and practiced. Field trips are required.

AEE 327 Conducting Summer Programs in Agricultural Education 1.
Prerequisite: AEE 206, AEE 303, AEE 322, and Corequisite of AEE 426.
Field experience emphasizing summer agricultural education programs. Individualized instruction for students during supervised agricultural experience visits and youth organization activities. Professional development and program improvement activities.

AEE 332 Youth Leadership Dev 3.
Prerequisite: AEE 323-Leadership Development in Agriculture.
This course is intended to prepare students to be effective facilitators of youth leadership development programs. Theory will be emphasized in the course because it is essential to be grounded in theory in order to apply it. Major course topics include but are not limited to: understanding the unique leadership development needs of young people, learning how to develop programs that meet those needs, and the evaluation of youth leadership programs. Students will be required to be active in and outside of class sessions. In this course you will learn by doing! Students must provide their own transportation for field trips and outside of class activities.

AEE 333 Youth Program Development and Management 3.
This course is intended to prepare students to be effective youth program facilitators. Application of theory related to youth program management will be emphasized. Major course topics include but are not limited to: understanding various educational delivery modes used in youth programming, selecting and using developmentally appropriate curriculum, using the experiential learning model to teach young people. Students will be required to be active in and outside of class sessions, including outside preparation for the lab component of the course. Students must provide their own transportation for field trips and outside of class activities. Students are encouraged to have successfully completed AEE 323 prior to enrolling in this course.

AEE 350 Personal Leadership Development in Agriculture and Life Sciences 3.
This course focuses on the impact of personal leadership on agricultural organizations and society. The best leaders are those who have internalized personal leadership concepts and apply them to the practical situations in their environment. This course teaches individuals to achieve optimal results by changing their fundamental approach to work, relationships, and problem solving, using time-honored principles in time management, leadership, and effectiveness. Restricted to CALS students.

AEE 360 Developing Team Leadership in Agriculture and Life Sciences 3.
Prerequisite: AEE 323-Leadership Development in Agriculture.
Students in this course will study the impact of organized teams and team leaders on the development of agricultural organizations. Principles and techniques involved in creating, organizing and directing teams will be explored. Students will develop skills in team decision-making and communication. Topics of discussion will include: components of a group and team, relationships of group and team members, effectiveness of groups and teams, and communication within groups and teams. This course is designed for students who are interested in positions of leadership and who want to learn more about making the groups and teams they work with more effective. Restricted to CALS students.

AEE 423 Practicum in Agricultural Extension/Industry 8.
Prerequisite: AEE 230, AEE 325, and Corequisite of AEE 490.
Participation in professional work experiences in preparation for effective leadership positions in the Cooperative Extension Service or the agribusiness industry.
AEE 424 Planning Agricultural Educational Programs 3.
Prerequisite: AEE(ED) 426, Corequisite: AEE(ED) 427.
Principles of program planning applied to educational programs in agriculture; includes theory and field experiences in planning, organizing, and evaluating high school and adult education programs.

AEE 426 Methods of Teaching Agriculture 3.
Prerequisite: Junior standing.
Discussion and practice in planning and presenting instruction in agriculture in formal and informal settings. Principles and application of approaches to teaching and organizing instruction, motivating students, developing instructional objectives, selecting and using teaching techniques, evaluating instruction, and managing classroom and laboratory instruction.

AEE 427 Student Teaching in Agriculture 8.
Prerequisite: AEE (ED) 426; Admission to Professional Semester, Corequisite: AEE (ED) 490, AEE (ED) 424;.
Skills and techniques involved in teaching vocational agriculture through practice in a public school setting with concurrent on-campus seminars.

AEE 433 Leadership and Management of Volunteers in Agricultural and Extension Education 3.
Prerequisite: Junior standing.
This course is intended to prepare students to be effective managers of volunteer programs. Theory will be emphasized in the course because it is essential to be grounded in theory in order to apply it. Major topics of the course will include, but are not limited to: volunteer recruitment, training, evaluation and reward. Students will be required to be active in and outside of class sessions, including a 20-hour field experience. Students must provide their own transportation for field trips and outside of class activities. Cannot receive credit for both AEE 433 and 533.

AEE 434 Collaborative Leadership: Building Partnerships Across Community Programs 3.
This course is intended to prepare students to become collaborative leaders- at home, at school and within their communities. Theory will be emphasized in the course because it is essential to be grounded in theory in order to apply it. Topics covered in the course include but are not limited to: what is community, how do partnerships form, challenges and opportunities for successful collaborations. This is an active course where students will be required to be engaged in and outside of class sessions. Students are encouraged to have successfully completed AEE 323 prior to enrolling in this course. Students must provide their own transportation for field trips and outside of class activities. AEE 323 encouraged but not required.

AEE 435 Professional Presentations in Agricultural Organizations 3.
This course teaches effective listening strategies, communication strategies, interpersonal skills and presentation strategies essential for use in today's workplace. AEE 435 includes strategies and techniques for effective presentations in the food, agricultural, natural resources, as well as other professions, with emphasis on oral and visual presentation techniques. Presentation skills and strategies for formal and informal situations including conferences, poster presentations along with leadership, conflict resolution, interviewing, negotiation, and group communication theory and strategies will be discussed. Restricted to CALS students; Jr or Sr level status required.

AEE 460 Organizational Leadership Development in Agriculture and Life Sciences 3.
Prerequisite: AEE 323-Leadership Development in Agriculture.
This course focuses on the impact of effective leadership in organizations in both theory and practice. Students will examine the major theories and studies that are most relevant and informative with the regard to leadership in organizations. Students will develop skills in decision-making, management of organizations, and ethical leadership related to agricultural organizations. Restricted to CALS students.

AEE 478 Advanced Issues in Extension Education 3.
Prerequisite: AEE 230.
Advanced issues and trends contributing to the administration, organization, and structure of extension education in a changing world. Senior standing required.

AEE 490 Seminar in Agricultural and Extension Education 1.
Prerequisite: Admission to Professional Semester.
Analysis of opportunities and challenges facing educational leaders in agriculture.

AEE 491 Seminar in Agricultural Education 1.
Corequisites: AEE 424 and AEE 427.
This course helps students analyze the opportunities and challenges facing teachers of agriculture as they prepare for their careers. Topics include balancing work and professional life as a teacher, portfolio assessments of teachers and programs, classroom management, teacher liability, and preparation for the job search in agricultural education.

AEE 492 External Learning Experience in Agricultural and Extension Education 1-6.
Prerequisite: Sophomore standing.
Learning experience within an academic framework that utilizes facilities and resources external to the campus. Contact and arrangements with prospective employers initiated by the student and approved by the faculty adviser, prospective employer, and the departmental teaching coordinator prior to the experience. Not intended for teaching licensure for students in AEE.

AEE 493 Special Problems in Agriculture and Extension Education 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and extension education within an academic framework that utilizes departmental campus facilities and resources. Arrangements must be initiated by the student and approved by a faculty adviser and the departmental teaching coordinator. Not intended for teacher licensure for students in AEE.

AEE 495 Special Topics in Agricultural and Extension Education 1-3.
Offered as needed to present material not normally available in regular course offerings or for offerings of new courses on a trial basis. Not intended for teacher licensure for students in AEE.

AEE 500 Agricultural Education, Schools and Society 3.
Role and structure of modern agricultural education within the overall educational system; school organization and governance, curriculum, teacher roles and responsibilities, educational philosophy and history, multiculturalism special need students, impact of technology, professionalism, and current educational trends and issues. Web-based course.

AEE 501 Foundations of Agricultural and Extension Education 3.
Development and organization of agricultural and extension education in America from colonial times to the present. Emphasis on role of societal and scientific changes, the federal government and philosophy on evolution of agricultural and extension education.
AEE 503 Youth Program Management 3.
Research, theory and principles of youth organization management. Analysis of youth development models and application of leadership theory in a youth organization. Using evaluation models to assess the effectiveness of major youth organization. Web-based course.

AEE 505 Trends and Issues in Agricultural and Extension Education 3.
Scientific, political, demographic, social, educational, technological, and environmental trends and issues that will contribute to the future structure and operation of agricultural and extension education in the United States.

AEE 507 Comparative Agricultural and Extension Education 3.
Organization and operation of formal and nonformal agricultural education and extension systems in the United States and in other countries. Field trip required - cost approx. $175.00.

AEE 521 Program Planning in Agricultural and Extension Education 3.
Prerequisite: Graduate standing or PBS status.
Consideration of the need for planning programs in education; objectives and evaluation of community programs; use of advisory group; organization and use of facilities.

AEE 522 Occupational Experience in Agriculture 3.
Prerequisite: Graduate standing or PBS status.
A major and critical element in all programs of vocational education is provision for appropriate student learning experiences in a real and simulated employment environment. Due to recent developments in education and agriculture, new and expanded concepts of occupational experience devised. Current research substantiates need and desire of teachers of agriculture for assistance in implementing new concepts. Also designed to develop depth of understanding of theoretical foundations underlying new developments in occupational experiences to stimulate individual growth and creativity in implementing further developments.

AEE 523 Adult Education in Agriculture 3.
Prerequisite: Graduate standing or PBS status.
Design to meet needs of leaders in adult education. Opportunity to study some of basic problems and values in working with adult groups. Attention given to problem of fitting educational program for adults into public school program and other educational programs as well as to methods of teaching adults.

AEE 524 Coordinating the High School Agricultural Education Program 3.
Principles of program planning applied to educational programs about agriculture; theory and field experiences in planning, organizing, and evaluating secondary agricultural education programs; development of plans for conducting all aspects of the complete agricultural education programs.

AEE 526 Information Technologies in Agricultural and Extension Education 3.
Principles, theory and techniques of using information technologies to provide instruction to learners, both in person and at a distance, in formal and non formal educational settings.

AEE 529 Curriculum Development in Agricultural and Extension Education 3.
Design and development of data based curriculum and curriculum evaluation procedures in agricultural and extension education. Critique of curriculum development models, contemporary trends and issues, curriculum resources and accountability tools. Analysis of the use of national and state standards as well as local community needs in curriculum development.

AEE 530 Priority Management in Agricultural and Extension Education 3.
Examination of theoretical, psychological and empirical bases for strategies and techniques contributing to enhancement of managerial and personal effectiveness of agricultural educators and individuals in related agricultural organizations.

AEE 533 Leadership and Management of Volunteers in Agricultural and Extension Education 3.
Graduate and Post-baccalaureate Studies students only (GR, PBS). This course is intended to prepare students to be effective managers of volunteer programs. Theory will be emphasized in the course because it is essential to be grounded in theory in order to apply it. Major topics of the course will include, but are not limited to: volunteer recruitment, training, evaluation and reward. Students will be required to be active in and outside of class sessions, including a 20-hour field experience. Students must provide their own transportation for field trips and outside of class activities. Cannot receive credit for both AEE 433 and 533.

AEE 535 Teaching Agriculture in Secondary Schools 3.
Application of theoretical models and research on effective teaching in secondary agricultural education programs. teaching strategies, planning required, and instructional management for students with varying backgrounds. Evaluation of student learning and teacher evaluation of instruction.

AEE 560 Organizational and Administrative Leadership in Agricultural and Extension Education 3.
Prerequisite: Master student or PBS status.
Organizational and administrative leadership concepts, skills and values in relation to agencies, organizations and institutions engaged in the administration of agricultural and extension education programs.

AEE 577 Evaluation in Agricultural and Extension Education 3.
Prerequisite: Graduate standing.
Evaluation principles, models, and procedures used in developing and analyzing, agricultural, vocational, technical, and extension education programs; role of comprehensive evaluation in needs assessments, program planning, program implementation, and the marketing of outcomes to major stake-holders; designs for evaluating agricultural and extension programs. Evaluation logic model is presented to identify and describe program inputs, activities, outputs, and outcomes.

AEE 578 Scientific Inquiry in Agricultural and Extension Education 3.
Prerequisite: Graduate standing.
Philosophy, design, interpretation and practice of scientific research in agricultural and extension education, with a particular focus on the skills necessary to be an effective and critical “consumer” of research that is practiced within the field. Web based course.

AEE 579 Research Design in Agricultural and Extension Education 3.
Design of Research in Agricultural and Extension education. Development of proposals for thesis research or competitive grants. Critical analyses of research in the field and proposed research.
AEE 595 Special Topics in Agricultural and Extension Education 1-6. 
Prerequisite: Graduate standing or PBS status. 
Presentation of material not normally available in regular graduate course offerings or for offerings of new 500 level courses on a trial basis.

AEE 601 Seminar 1. 
Prerequisite: Graduate standing or PBS status. 
Current topics and issues in agricultural and extension education. Selection and research of topics, presentation of seminars, and leading group discussions.

AEE 610 Special Topics 1-6. 
Prerequisite: Graduate standing or PBS status. 
Presentation of material not normally available in regular graduate course offerings or for offerings of new 500 level courses on a trial basis.

AEE 620 Special Problems in Agricultural and Extension Education 1-6. 
Exploration of topics of special interest not covered by existing courses by individual students under faculty member's directions. Readings and independent study, problems or research not related to a thesis.

AEE 641 Practicum In Agricultural and Extension Education 1-6. 
Faculty-supervised practicum in an educational, extension or agricultural industry setting.

AEE 685 Master's Supervised Teaching 1-3. 
Prerequisite: Master's student. 
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

AEE 690 Master's Examination 1-9. 
Prerequisite: Master's student. 
For students in non-thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

AEE 693 Master's Supervised Research 1-9. 
Prerequisite: Master's student. 
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student. 
Thesis research.

AEE 696 Summer Thesis Research 1. 
Prerequisite: Master's student. 
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student. 
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their thesis.

AEE 705 International Agricultural Development 3. 
Prerequisite: Graduate standing. 
This course provides an opportunity to learn about global agricultural and extension education issues, challenges and opportunities relating to agricultural development. The course emphasis is on building necessary knowledge and skills for analyzing global agricultural and extension education issues and formulating alternatives for agricultural development. This course has been designed to help graduate students understand agriculture and extension education with a global perspective.

AEE 735 Effective Teaching in Agriculture and Life Sciences 3. 
Prerequisite: Graduate standing. 
Theory and practice of effective teaching in agricultural and life sciences. Emphasis on course planning, teaching and learning styles, instructional techniques, laboratory instruction, text construction, student evaluation, instructional technology, and faculty roles and responsibilities.

AEE 777 Qualitative Research Methods in the Agricultural & Life Sciences 3. 
Qualitative research methods continue to gain popularity in the disciplines of agricultural & life sciences. It is becoming increasingly important for graduates to have a practical working knowledge of the development, implementation, and evaluation of these methodologies. Topics in the course will include but not be limited to: the foundation of qualitative research, data collection and analysis techniques, and review of qualitative research. Students are encouraged to have completed an introductory research methods course prior to enrolling. Introductory Research Methods course taken at the graduate level.

AEE 820 Special Problems in Agricultural and Extension Education 1-6. 
Exploration of topics of special interest not covered by existing courses by individual students under faculty member's directions. Readings and independent study, problems or research not related to a thesis.

AEE 841 Practicum in Agricultural and Extension Education 1-6. 
Faculty-supervised practicum in an educational, extension or agricultural industry setting.

AEE 885 Doctoral Supervised Teaching 1-3. 
Prerequisite: Doctoral student. 
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

Prerequisite: Doctoral student. 
Instruction in research and research under the mentorship of a member of the Graduate faculty.

Prerequisite: Doctoral student. 
Dissertation research.

AEE 896 Summer Dissertation Research 1. 
Prerequisite: Doctoral student. 
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student. 
For students who have completed all credit hours, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.
Department of Agricultural and Resource Economics

The Department of Agricultural and Resource Economics serves agricultural, resource and related industries through its extension, research and teaching programs. Applying principles of economics, business, and related disciplines, these programs develop an understanding of contemporary economic and business problems and equip students with knowledge of business organization fundamentals and decision-making skills useful in the operation and management of business firms.

The department offers undergraduate programs leading to a Bachelor of Science degree in Agricultural Business Management (ABM). A concentration in biological sciences and business management (BBM) is offered within the agricultural business management program.

The Agricultural Business Management Program prepares graduates for management, marketing, sales, finance and related careers. The program has sufficient flexibility to provide more extensive course work in basic and applied science and math for those students desiring to prepare for advanced graduate study as well. The concentration in biological sciences/business management prepares graduates for management, marketing, and sales careers in fields such as biotechnology, pharmaceuticals, health care, environmental protection, food processing and finance dealing with biological issues. This concentration is designed to be an attractive option for students with a strong background and interest in science who seek alternatives to technical science careers.

Opportunities

The growing number of specialized business firms producing and marketing services and products in agriculture, resource and life science-related industries has created an increasing demand for graduates trained in agriculture and biological sciences/business management, resource economics and management and environmental policy.

Employment opportunities include careers with companies in purchasing, processing, and marketing food, fiber and related products; firms producing and marketing production inputs (feed, equipment, chemicals, drugs, etc.) and services; banks; other financial and credit agencies; cooperatives; natural resources management units and consulting firms; and natural resources and environmental educational or regulatory agencies.

Many graduates pursue careers in research and education with various state and federal government agencies. These agencies include the Cooperative Extension Service, the Agricultural Research Service, the State Department of Agriculture and Consumer Services, Environmental and Natural Resources, the United States Department of Agriculture, and the Environmental Protection Agency.

Minor in Agricultural Business Management

The Department of Agricultural and Resource Economics offers a minor in Agricultural Business Management. This minor provides students an opportunity to learn basic concepts useful in many careers in agricultural business. A total of 15 hours of course work is required, including ARE (EC) 201, and four additional courses chosen from a list of selected courses in agricultural and resource economics and related business fields. The ABM minor can be completed through regular courses on campus or through courses offered via Distance Education. Consult the Department of Agricultural and Resource Economics (http://www.ag-econ.ncsu.edu) for specific information on the requirements of the minor.

ARE - Agricultural Economics Courses

ARE 104 Agricultural Business Management 3.
Insights into the management skills of a successful agribusiness firm manager. A topical approach to analytical and planning techniques applicable to business decisions. Managerial concepts such as financial analysis, budgeting, investment analysis, capital acquisition, financial and risk management of agribusiness firms. HENDRICKSON.

ARE 106 Agri Business Law 3.
The application of legal principles to agribusiness. Includes a review of our legal system contracts, real property, personal property torts, business organization, estate planning, and laws affecting agribusiness. CAMPBELL.

ARE 112 Agricultural & Agribusiness Marketing 3.
Marketing concepts, techniques and management of the U.S. marketing system from agricultural production, agribusiness, and traditional business perspectives. Broad, basic knowledge of marketing objectives, the marketing environment, strategic planning, marketing information sources, consumer demographics and lifestyle characteristics, product planning, distribution planning, promotion planning, and price planning. PHILLIPS.

ARE 113 Principles of Salesmanship 3.
“How To” course in selling. Understanding customer's behavior, establishing and maintaining customer rapport, and negotiating a sale. Developing sales skills through discussion, role playing and demonstrations. Emphasis on building self-confidence through selling exercises involving class participation, special assignments, and targeted presentations. WEEMS.

ARE 114 Value Added Agriculture and Niche Marketing 3.
Value Added Agriculture and Niche Marketing are ways to increase farm revenue without having to go off farm for employment. This course is designed to provide insights into the opportunities that are available to increase farm revenue, to see what other farms are currently doing with value added within the region, and to create a value added business plan for expanding farm offerings. Site visits are required components of this course. University transportation provided to all site visits. Student transportation (estimated at $30 per student and site visit (estimated at $7 each for 2 sites) fees apply.

ARE 115 Agribusiness Accounting 3.
Introduction to basic accounting principles and concepts applicable to an agribusiness firm. Exposure to journals, ledgers and financial statements. Topics of the accounting cycle, inventories, payrolls, accounts receivable, income taxes and the potential use of computers. RUSS.

ARE 132 Management of Personnel 3.
Personnel problems of recruiting, selecting, training, paying, and motivating employees of an agribusiness firm. Improving organizational effectiveness, functioning of a production supervisor, resolution of conflicts and leadership development. PHILLIPS.
ARE 133 Agricultural & Environmental Policy 3.
History of agricultural and environmental policy, policy formation, agricultural programs, effects of agricultural production on the environment, benefits and costs of agricultural and environmental policy, state of the environment, environmental regulations and their enforcement, optimal level of pollution, incentive-based environmental regulation, outlook for agricultural and environmental policy, and the sustainability of agriculture and of the environment. RUSS.

ARE 141 Personal Financial Management 3.
Economic analysis of personal decisions related to consumer purchases, time value of money, taxes, financial risk management, investment strategies, retirement planning and estate planning. Relationship of an individual's life cycle to budgeting and financial goals. Background information on wise use of credit, home purchase, life insurance, property insurance, health insurance and investment fundamentals. PHILLIPS.

ARE 194 International Agribusiness Management Study Abroad 1-6.
This course is designed to maximize student potential for success by developing a globally and multi-culturally competent agricultural and agribusiness workforce. This course addresses these issues by providing opportunities for students to study abroad in various locations around the world, with different destinations offered each academic year. Credit hours are variable based on length or travel and classroom instruction pre- and post-travel consistent with NCSU policies and practices. Course may be repeated for credit to visit different destinations only. Significant expenses for travel are involved. Please see the instructor for specific program details.

ARE 201 Introduction to Agricultural & Resource Economics 3.
Credit is not allowed for both ARE 201 and EC 201 or EC 205. Introduction to economic principles of marginal benefits and costs with application to consumer and producer decisions. Functions of market exchange systems in determining prices and quantities and creation of wealth. Property rights and opportunities for exchange. Role of government in dealing with agricultural and resource problems. Macroeconomic analysis including inflation, unemployment, money and banking system. Credit will not be given for both ARE 201 and either EC 201 or EC 205.

ARE 201A Introduction to Agricultural & Resource Economics 3.
AGI Students Only.
Introduction to economic principles of marginal benefits and costs with application to consumer and producer decisions. Functions of market exchange systems in determining prices and quantities and creation of wealth. Property rights and opportunities for exchange. Role of government in dealing with agricultural and resource problems. Macroeconomic analysis including inflation, unemployment, money and banking system. Credit will not be given for both ARE 201 and either EC 201 or EC 205.

ARE 215 Small Business Accounting 3.
Prerequisite: ARE 201 or EC 201 or EC 205.

ARE 260 Marketing and Risk Management in the Pork Industry 1.
Prerequisite: ANS 150.
A comprehensive overview of structure and trends in markets and marketing options available in the swine industry. Management of market risk with hedging or other contracts.

ARE 301 Intermediate Microeconomics 3.
Prerequisite: MA 121 or 131; ARE 201 or EC 205 or EC 201.
Functioning of the market economy, role of prices in determining the allocation of resources, the functioning of the firm in the economy, forces governing the production and consumption of economic goods. Credit not allowed in more than one of EC 301, 310, 401.

ARE 303 Farm Management 3.
Prerequisite: ARE 201 or EC 201 or EC 205.
Analytical and planning techniques for making business decisions centered around farm business applications. Economic principles and management concepts such as budgeting, accounting, finance credit, investment analysis, business organization, risk, and taxes as related to practical problems of operating a farm business.

ARE 304 Agribusiness Management 3.
Prerequisite: ARE 201 or EC 201 or EC 205.
Management decision-making by food, fiber, horticulture, and forestry firms. Emphasis on current agribusiness topics such as information utilization, strategic planning, organization structures, competitor intelligence, pricing, leadership, crisis management, ethics, and human resource management. Business communications, agribusiness case studies, and a computerized management simulation game.

ARE 306 Agricultural Law 3.
Prerequisite: ARE 201 or EC 201 or EC 205.
Legal principles of practical importance in an agricultural setting: the court system; tort, contract and real and personal property law; legal aspects of organizing an agribusiness; environmental and labor regulations affecting agriculture; income and estate taxation of agriculture. Credit for both ARE 306 and BUS 307 is not allowed.

ARE 309 Environmental Law & Economic Policy 3.
Prerequisite: ARE 201 or EC 201 or EC 205.
Current federal and state environmental laws and regulations and their common law foundations. Relationship of the law and its regulatory mechanisms to economic policy issues: externalities, pollution taxes, incentives, permit trading, and cost-benefit analysis. Major environmental topics including water and wetlands, solid and hazardous wastes, pesticides, clean air, endangered species and nuisance actions. Overview of the legal system.

ARE 311 Agricultural Markets 3.
Prerequisite: ARE 201 or EC 201 or EC 205.
Agricultural marketing system and economic forces affecting its structure and efficiency. Public policy issues affecting agricultural markets. Emphasis on the analysis of current sources of agricultural market information. Marketing and storage problems over time; futures markets and the management of risk; transportation and international trade; government agricultural programs.

ARE 312 Agribusiness Marketing 3.
Prerequisite: ARE 201 or EC 201 or EC 205.
Application of marketing and economic principles to decision making in contemporary agribusiness firms. Marketing strategies, marketing research and information, segmentation and targeting, marketing mix, and market plans within food, fiber, natural resource, and production input industries. Professional selling skills and knowledge. Off-campus field experience and visiting lecturers from the agribusiness industry.
ARE 321 Agricultural Financial Management 3.
Prerequisite: ARE 201 or EC 201 or EC 205.

ARE 323 Agribusiness Finance 3.
Prerequisites: (ARE 201 or EC 201) and (ACC 200 or ACC 210 or equivalent Introductory Accounting Course).
ARE 323 teaches the history of monetary systems, the development of business finance tools and banking, and detailed creation and use of business financial statements, including Income Statements, Balance Sheets, and Statements of Cash Flow, within the context of the agribusiness industry. Two Finance courses are offered in the Agribusiness Management Major: ARE 321 - Agricultural Financial Management, which focuses on the history of finance in agriculture and financial planning for farmers and similar independent agricultural enterprises; and ARE 323 - Agribusiness Finance, which focuses on finance for larger agribusinesses and for managers of agribusiness divisions in larger organizations.

ARE 332 Human Resource Management for Agribusiness 3.
Prerequisite: ARE 201 or EC 201 or EC 205.
General introduction to human resource management in agribusinesses. Skills for agribusiness owners for efficient productivity from employees in a legal and ethical manner. Topics on labor economics, human resource legislation, employee planning and recruitment, and migrant labor issues. Emphasis on techniques for training, motivating, leading, and disciplining employees.

ARE 336 Introduction to Resource and Environmental Economics 3.
Prerequisite: ARE 201 or EC 201 or EC 205.
Application of basic economic tools to understand and evaluate environmental/resource policies. Concepts such as property rights, non-market goods, allocation over time, externalities, and public goods. Current policy issues such as global climate change, evaluating natural resource damages from oil spills, reducing the costs of regulations, protecting estuaries, and dealing with non-point source pollution.

ARE 345 Global Agribusiness Management 3.
Prerequisite: EC 201 or 205 or ARE 201.
Global trade is the largest growth area in American agribusiness, and knowledge of international agribusiness markets is one of the primary qualifications desired from college graduates entering the workforce. This course provides detailed knowledge of the six major regions for agribusiness trade worldwide, to prepare students to understand, speak intelligently about, and capitalize on opportunities for NC and US agribusiness products in the global marketplace. Students will be required to provide their own transportation to local markets and incidental expenses for meals representative of the six major regions connected with class assignments. Please see the Instructor for details.

ARE 404 Advanced Agribusiness Management 3.
Prerequisite: (ARE 303 or ARE 304), ARE 321, and (ARE 311 or ARE 312).
An advanced course in business planning that integrates the risk and uncertainty associated with production, marketing, and financial management strategies of agribusiness firms. Focuses on the fundamental components required to develop a strategic business plan and design a viable business strategy in the context of the firm's market and its internal environment. Special attention is given to the application of economic theory and analysis to business decision-making processes. 80% of enrollment is restricted to Agricultural & Resource Economics students with the remaining 20% open for all other majors.

ARE 412 Advanced Agribusiness Marketing 3.
Prerequisite: ARE/EC 201 or EC 205, Pre- or Co-requisite: ARE 312 or BUS 360.
ARE provides opportunities for undergraduates to gain experience with the practical application of Marketing principles with real and fictitious Agribusiness products through two courses taken on campus: ARE 412 and ARE 413. These opportunities are provided to students that are specifically interested in pursuing a Marketing or Sales position after graduation, especially when an internship is not an option. The practical applications often require two semesters (one full academic year) to complete, so student involved in projects are encouraged to take ARE 412 in the Fall and ARE 413 in the Spring. Projects very each year.

ARE 413 Applied Agribusiness Marketing 3.
Prerequisite: ARE/EC 201 or EC 205, ARE 312, ARE 412.
ARE provides opportunities for undergraduates to gain experience with the practical application of marketing principles with real and fictitious agribusiness products through two courses taken on campus, ARE 412 and ARE 413. These opportunities are provided to students that are specifically interested in pursuing a Marketing or Sales position after graduation, especially when an internship is not an option. The practical applications often require two semesters (one full academic year) to complete, so student involved in projects are encouraged to take ARE 412 in the Fall, and ARE 413 in the Spring. Projects vary each year. This course is an elective for ABM, BBM, and related CALS majors. Departmental approval required to enroll in course.

Prerequisite: ARE(EC) 301 or ARE(EC) 401.
Government economic policies and programs affecting agricultural inputs and farm products. Analysis of the rationale, objectives, and major types of agricultural programs and their effects on resource allocation and income distribution within agriculture and between agriculture and the rest of the economy.

ARE 444 Ethics in Agribusiness 3.
Ethical behavior is a crucial issue in American business, especially after numerous ethical lapses over the past decade, and for agribusiness given claims of marketing unhealthy foods, development of genetically-modified organisms, hiring of undocumented workers, and consolidation into industrial production facilities. Students are taught ethical theories and frameworks, used to discuss general ethical questions such as death, theft, and lying, followed by the more specific agribusiness issues mentioned above. Students will formulate their own opinions about these issues, recognize and understand the opinions of others, and be able to accurately and adequately communicate those opinions.
Animal Science students gain valuable hands-on experience in involving animals and animal specimens. The Institutional Animal Care courses, students are required to participate in laboratory procedures to our educational program. To obtain full credit for Animal Science and well-being areas. Use of animals and animal specimens is critical of phases of animal science. Courses are offered in anatomy, physiology, and care of domestic animals. Throughout history, animals Animal Science is a broad field centered on the biology, production, and management, and care of domestic animals. Throughout history, animals have provided humans with a major source of food, fiber, pleasure, and companionship. Undergraduate students study subjects related to various phases of animal science. Courses are offered in anatomy, physiology, nutrition, genetics, reproduction, and management, and there are opportunities for the application of basic scientific training in animal care and well-being areas. Use of animals and animal specimens is critical to our educational program. To obtain full credit for Animal Science courses, students are required to participate in laboratory procedures involving animals and animal specimens. The Institutional Animal Care and Use Committee (IACUC) approves all activities with live animals. Many lectures also incorporate animals or animal specimens into the course. Animal Science students gain valuable hands-on experience in our on-campus teaching labs as well as at the five nearby teaching farms (horse, small ruminant, swine, beef, dairy).

**Opportunities**

Animal science graduates are qualified for positions in a wide variety of areas such as research and development at pharmaceutical and biotechnology companies; livestock, horse, or companion animal management; animal breeding and production; feed and animal healthcare product sales and service; livestock marketing; consulting; state and federal departments of agriculture; breed associations; educational and financial institutions; livestock, horse, and companion animal publications and other media; animal technical services; extension services; and public relations. Animal scientists can be found across the nation and around the world in all phases of production, research, sales, service, business, health, and education. Many students in pre-veterinary medicine obtain degrees in animal science, as do other pre-professional students including pre-medical and pre-dental before attending veterinary school, medical school or dental school. Students may elect graduate study, after which they will find opportunities in teaching, research, and extension. Advanced undergraduates have the opportunity to complete the Accelerated Bachelor's/Master's degrees, which allows students to earn both the B.S. and the Master of Animal Science degrees within five years. See listing of graduate degrees offered in the Graduate Catalog (http://www.ncsu.edu/grad/catalog). The Accelerated B.S./DVM for Animal Science Majors (3+1 Advising Guide) is a pathway for students admitted early to a College of Veterinary Medicine to complete the BS in Animal Science degree by transferring back 12 credits after one year in vet school.

**Curricula**

The degree of Bachelor of Science in Animal Science may be obtained by selecting one of three concentrations offered by the Animal Science Department in the College of Agriculture and Life Sciences. The veterinary bioscience concentration is for students who are interested in advanced study in DVM programs and has all veterinary school prerequisite courses built into the concentration. Students in this concentration must maintain an overall GPA of 3.0 or higher. The science concentration is designed for students with an interest in advanced study, such as MS and PhD programs, in disciplines such as physiology, nutrition, or genetics. This concentration gives students more flexibility to select courses that fit their disciplinary interests. The industry/business concentration is for students who are more interested in the business or production aspects of animal science. It offers flexibility in complementing animal science courses with business, marketing, economics, and applied science course work. There are many opportunities to gain undergraduate research experience with an Animal Science faculty member, to participate in one of the animal-related clubs, and to engage globally by participating in one of our Animal Science Study Abroad experiences.

Specific curriculum requirements are available on the Registration and Records website (http://www.ncsu.edu/registrar/curricula).

**Minor in Animal Science**

A minor in Animal Science is open to all interested baccalaureate students who are not majoring in Animal Science. Students completing a minor in Animal Science will become familiar with animal production and its related industries. The minor requires a minimum of 15 credit hours with a grade of "C-" or better, including Introduction to Animal Science, Animal Nutrition, and the student’s choice of Animal Science
elective courses. The program is flexible so students may emphasize the discipline or species of their interest.

See the full listing of minors (http://oucc.ncsu.edu/minors/animal-science) for more information.

**ANS - Animal Science Courses**

**ANS 101 Introduction to Livestock and Poultry Industries** 3.
General introduction to nutrition, reproduction, breeding, management and description of marketing channels of animals and poultry. Equates live animal and carcass characteristics with market specifications. Factors of pre- and post-slaughter treatment are related to the shelf life of fresh and processed meats. MCCRAW/GREGORY.

**ANS 102 Animal Feeds and Nutrition** 3.
Basics of animal nutrition and feeding. Identification and classification of common feedstuffs, including relative nutritional value for livestock and poultry. General nutrition and changes in requirements as influenced by production and the animal's life cycle. Applied aspects of feeding and nutrition of livestock and poultry. Agricultural Institute Students Only (Class= 01 or 02).

**ANS 103 Beef Production** 3.
Genetics, reproduction, nutrition, animal health, forage management and marketing channels as related to beef cattle enterprises.

**ANS 104 Swine Production** 4.
Management principles associated with swine production. Primary emphasis on interactions of health, equipment, nutrition, reproduction and genetics during nursery, finishing, farrowing and breeding phases of production. Management of farrowing, finishing and farrow to finish operations. Emphasis on management kills, computer applications and economics.

**ANS 105 Introduction to Companion Animal Science** 3.
Prerequisite: Freshman standing or Sophomore standing.
Introduction to animals that people keep as companions. Variation, behavior, anatomy, physiology, disease, and training of animals as diverse as fish, snakes, mice, rats, birds, cats, and dogs. Special relationships between humans and companion animals in a societal context.

**ANS 110 Introduction to Equine Science** 3.
Prerequisite: Freshman standing or Sophomore standing.
History, management, and use of horses and their profound impact on society. Selection, care, and enjoyment of horses with emphasis on genetics, nutrition, reproduction, behavior, and health.

**ANS 150 Introduction to Animal Science** 3.
Fundamental principles of animal management; contributions of animals and animal products to humanity; application of science to animal production; issues regarding animal production.

**ANS 151 Introduction to Animal Science Lab** 1.
Corequisite: ANS 150.
Hands-on experience and demonstrations with livestock and horses; identification of common management equipment and knowledge of proper use; animal tracts, organs, skulls, feeds, breeds, and other animal-related items or topics. The lecture (ANS 150) must be taken concurrently or have been passed previously with a C-minus or higher. This lab course is restricted to the following majors: SAS, IAS, AEX, AGS, and AED. Transportation is provided to the off-campus labs, and students will be returned to campus prior to the end of the scheduled lab period.

**ANS 201 Techniques of Animal Care** 2.
Prerequisite: ANS 150 (all ANS Majors) or ANS 101 (Ag Institute Livestock, Poultry Mgmt Program).
A laboratory course in the applied management of beef cattle, dairy cattle, swine and small ruminants with participatory assignments of common techniques utilized in livestock production.

**ANS 205 Physiology of Domestic Animals** 3.
Prerequisite: (BIO 181 or BIO 183) and Sophomore standing.
This course is designed to introduce students to mammalian physiology (structure and function) with emphasis on livestock species. Students will gain a basic understanding of body systems including circulatory, muscular, skeletal, digestive, and reproductive systems and functions of those systems with relevance to the whole animal and maintenance of homeostasis.

**ANS 206 Anatomy of Domestic Animals Lab** 1.
Corequisite: ANS 205.
This lab course is designed for Animal Science majors to take with the ANS 205 lectures (Physiology of Domestic Animals). Students will learn to identify major anatomical and cellular structures from domestic animal (livestock) specimens through examination of gross and microscopic anatomy. SAS and IAS majors only.

**ANS 208 Agricultural Biotechnology: Issues and Implications** 3.
Trends and issues of agricultural biotechnology in today's society are addressed while covering the basic biological science behind the technology. Applications of and policy issues associated with plant, animal, and environmental biotechnology used in the agricultural industry are examined from an interdisciplinary approach.

**ANS 215 Agricultural Genetics** 3.
Prerequisite: ZO 160 or BIO 183.
Basic principles of inheritance in plants and animals of agricultural significance. Transmission genetics and its effects on the usefulness of plants and animals. Basic principles of plant and animal improvement.

**ANS 220 Reproductive Physiology** 3.
Prerequisite: ANS 205 or BIO 250.
Biological processes in reproduction and lactation with emphasis on domestic mammals such as cattle, sheep, goats, horses, swine, dogs, and cats. Environmental and genetic factors that affect these processes. Identification, evaluation and solutions of problems in these physiological areas.

**ANS 221 Reproductive Physiology Lab** 1.
Corequisite of ANS 220.
ANS 221 is a laboratory course that introduces students to the application of principles of reproduction and lactation in domestic mammals. Students must have either completed or concurrently be enrolled in ANS 220. This course is restricted to Animal Science majors (SAS, IAS).

This online Principles of Animal Nutrition course is designed for non-Animal Science majors and off-campus students. It includes: feed classification, gastrointestinal tract anatomy of domestic mammals, nutrients and their functions, digestion and metabolism, feed regulations, and feeding/nutrition of cattle, small ruminants, horses, swine, poultry, dogs, cats, and rabbits. For on-campus students, ANS 225 counts toward the Animal Science minor but only counts as a Free Elective for Animal Science majors.
ANS 230 Animal Nutrition 3.
Prerequisite: ANS 150 or BIO 183; ANS 205 is also recommended.
Introduction to nutrition, digestion, and absorption in domestic mammals. Major nutrient classes and their functions in the body, feed classification and chemical analysis, feed processing, and nutrient requirements.

ANS 231 Animal Nutrition Lab 1.
Corequisite: ANS 230.
ANS 231 is a laboratory course that introduces students to the application of principles of nutrition and applied feeding of domestic mammals. Students must have either completed or concurrently be enrolled in ANS 230. This course is restricted to Animal Science Majors (SAS, IAS).

ANS 240 Livestock Merchandising 3.
Prerequisite: ANS 150; Restrictive Statement: Students must be Juniors or Seniors.
This course is designed to acquaint students with different methods for merchandising livestock and with strategies for adding value to products produced from livestock. Students will learn new ways to promote a farming operation. Required visits to Animal Educational Units outside of normal class time and student must provide own transportation. Two required mandatory Saturday events. The animal auction held on the 2nd Saturday of April and the Open House held either one or two Saturdays (varies depending on the Spring Holiday) prior to the animal auction.

ANS 240A Livestock Merchandising 3.
Prerequisite: ANS 101; Restrictive Statement: AGI Students Only.
This course is designed to acquaint students with different methods for merchandising livestock and with strategies for adding value to products produced from livestock. Students will learn new ways to promote a farming operation. Required visits to Animal Educational Units outside of normal class time and student must provide own transportation. Two required mandatory Saturday events. The animal auction held on the 2nd Saturday of April and the Open House held either one or two Saturdays (varies depending on the Spring Holiday) prior to the animal auction.

ANS 261 Swine Health and Biosecurity 1.
Prerequisite: ANS 150 or equivalent.
Introduction and basic overview of the immune system, swine disease transmission and pathobiology, standard biosecurity protocols, identification of disease in pigs, basic treatment administration, and disease prevention.

ANS 262 Swine Breeding and Gestation Management 1.
Prerequisite: ANS 150 or equivalent.
Management principles associated with breeding and gestation in swine. Emphasis on reproductive anatomy and physiology of boars and sows, development of replacement animals, semen production and evaluation, artificial insemination, and use of reproductive records. Extensive use of reproductive case studies.

ANS 263 Farrowing Management 1.
Prerequisite: ANS 150 or equivalent.
Advanced integration and application of factors important in the proper care and management of swine during farrowing and lactation.

ANS 264 Swine Nursery and Finishing Management 1.
Prerequisite: ANS 150 or equivalent.
Overview of the critical management, housing, and financial considerations relevant to the successful operation of a swine nursery, grow-finish, or wean to finish enterprise.

ANS 265 Contemporary Issues in the Swine Industry 1.
Prerequisite: ANS 150 or equivalent.
Overview of current issues affecting pork production in the United States, including, but not limited to: environment, Swine welfare and profitability/market issues. Development of skills to promote animal agriculture when dealing with the media and general public.

ANS 266 Swine Environment Management 1.
Prerequisite: ANS 150 or equivalent.
Course includes response of swine to thermal environment ventilation system design and analysis, heating and cooling, systems and examples of various designs for all phases of production. Troubleshooting and energy analysis will be included as well.

ANS 267 Swine Manure and Nutrient Management 1.
Prerequisite: ANS 150 or equivalent.
Course includes manure production rates, manure handling systems, storage and manure management planning for land applications. Some odor mitigation technologies will be covered.

ANS 268 Employee Management for the Swine Industry 1.
Prerequisite: ANS 150 or equivalent.
Effective employee management in swine production units. Principles, policies, and practices related to hiring, development and retention of employees, as well as fundamental organizational management.

ANS 269 Internship in the Swine Industry 1.
Prerequisite: ANS 150 or equivalent.
Experiential learning in the swine industry through opportunities that provide hands-on experience and exposure to the scope of pork enterprises. Students can expect to apply principles and practices already learned, and add practical experience to their skill sets and knowledge base. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

ANS 270 Pork Export Markets from a Swine Production Perspective 1.
Prerequisite: ANS 150 or equivalent.
Introduction to global markets; cultural preferences and customs associated with the global swine industry. International trade regulations and potential impact of foreign animal diseases and bioterrorism affecting the U.S. swine industry.

ANS 281 Professional Development of PreVeterinary Track Students 1.
Prerequisite: BIO 183 and Sophomore Standing.
This course introduces PreVeterinary track students to the scope of the veterinary profession and to current issues affecting veterinary professionals. The course will help students gain an understanding of the professional requirement of the veterinary school applications. Students will be expected to discuss current animal and public health issues as well as areas of national shortage in the veterinary profession. One Saturday at the NCSU vet school Open House is required (first Saturday in April). Sophomore standing is required.

ANS 291 Animal Science Study Abroad 1-6.
Course sections offered as needed for international learning experiences in Animal Science involving international travel and N.C. State University Faculty-supervised learning in the non-U.S. location. A maximum of one credit hour per week of supervised study will be assigned, and the faculty member will provide students with a syllabus outlining the requirements for successful completion (grade of "S"). This course counts as a free elective. All expenses including travel, are the responsibility of the student. The student is also responsible for obtaining a valid passport.
ANS 292 Australian Animal Agriculture 3.
Prerequisite: Cumulative GPA greater than 2.0.
This course involves travel to Australia through N.C. State University's Study Abroad Program. Participants will have the opportunity to increase their knowledge and understanding in the principle areas of animal and veterinary sciences and Australian studies. Species studied include cattle (beef and dairy), sheep, goats, pigs, native Australian animals, and non-native feral animals (such as rabbits). All expenses, including the Study Abroad fee and airline travel, are the responsibility of the student. The student is also responsible for obtaining a valid passport.

Prerequisite: ANS 110.
Conformation and function, performance, and soundness of the horse. Breed standards, rules, and regulations for evaluation, selection, and performance. Field trips.

ANS 304 Dairy Cattle Evaluation 2.
Prerequisite: ANS 150.
The first half of this course covers basic aspects of dairy cattle breeds, dairy character, form and function including type traits and linear scoring of dairy cattle, interpreting and using judging scorecards, comparing/evaluating dairy cattle, and placing animals in a class. The second half of the course develops the student's ability to correctly evaluate dairy cattle classes, but more importantly to support their opinions through oral communication.

ANS 309 Livestock Evaluation 3.
Prerequisite: ANS 150.
Students will be exposed to basic concepts associated with growth, development and value determination of livestock. Familiarization with official USDA grading standards for cattle, sheep, swine and goats is emphasized. Introduction to judging terminology, placing classes of livestock and justification through oral reasons.

ANS 322 Muscle Foods and Eggs 3.
Prerequisite: ZO 160, BIO 181 or BIO 183.
Processing and preserving fresh poultry, red meats, seafood, and eggs. Ante- and post-mortem events as they affect quality, yield, and compositional characteristics of muscle foods. Principles and procedures involved in the production of processed meat items.

ANS 324 Milk and Dairy Products 3.
Prerequisite: BIO 181 or 183, CH 101.
Introduction to the manufacture of dairy products. Dairy processing procedures from the farm, through the dairy plant, and to the consumer are studied. The course consists of 15 learning modules, three exams, and a project.

ANS 330 Laboratory Animal Science 3.
A sophomore to senior level course designed to cover the basics of laboratory animal science, a specialty dealing with the use of vertebrate animal species in intensive research. Some topics to be covered are: husbandry, facility management, animal health and welfare, diagnostics, surgical area management, research methods and administrative duties. Students will use the material for studying for the certification as a Laboratory Animal Technician via the American Association for Laboratory Animal Science (AALAS). A separate fee is required for certification; this fee is not covered by tuition for ANS 330. Must hold sophomore standing or higher.

ANS 350 Introduction to HACCP 3.
Introductory course on the Hazard Analysis and Critical Control Points System (HACCP) which is designed to decrease hazards in foods. An International HACCP Alliance approved curriculum which covers prerequisite programs. A step by step approach for developing and implementing a HACCP plan for USDA regulated food processing plants. Offered only as a world wide web course through the Office of Instructional Telecommunications.

ANS 400 Companion Animal Management 3.
Prerequisite: ANS 105 and Junior standing.
Anatomy, physiology, nutrition, genetics, and health of companion animals including cats, dogs, rabbits, rats, mice, reptiles, amphibians, and fish. Problem solving and enterprise management skills in laboratories.

ANS 402 Beef Cattle Management Lecture 2.
Prerequisite: ANS 150; Restrictive Statement: Students must be Juniors or Seniors.
ANS 402 integrates technical information in animal nutrition, breeding, genetics, and reproductive physiology and incorporates this into information on management skills, business practices, and decision-making processes. This integration requires competency in oral and written communication skills; therefore, a major strategy is to practice and improve students' communication skills during the semester.

ANS 403 Swine Management 3.
Prerequisite: ANS 150; Restrictive Statement: Students must be Juniors or Seniors.
Management principles associated with swine production. Emphasis on interactions of health, equipment, nutrition, reproduction and genetics during nursery, farrowing, and breeding phases of production. Waste management practices and alternates, development of marketing strategies and economic evaluation of management practices.

ANS 404 Dairy Cattle Management Lecture 2.
Prerequisite: (ANS 225 or ANS 230) and Junior standing.
ANS 404 covers nutritional requirements of the dairy cow, digestive physiology, practical applications of balancing rations, feeding systems, and management tools for effective feeding strategies. Students will also receive information on labor management and efficient record keeping tools.

ANS 408 Small Ruminant Management 3.
Prerequisite: ANS 150; Junior standing.
Principles and practices of production, management, and marketing of sheep and goats. Role of genetics, nutrition, reproduction and animal health. Hands-on experience and field trips during labs.

ANS 410 Equine Breeding Farm Management 3.
Prerequisite: ANS 110 and Junior standing.
Equine anatomy, physiology, nutrition, genetics and health. Laboratory emphasis on reproductive management, breeding, problem solving, and management skills. Field trips required.

ANS 411 Management of Growing and Performance Horses 3.
Prerequisite: ANS 110.
This course is an overview of scientific applications used in management of growing and performance horses. Topics include: nutrition and feeding, disease prevention, exercise conditioning, and methods of evaluation and selection. Students required to provide their own transportation to labs. Must hold junior or senior standing.
ANS 415 Comparative Nutrition 3.
Prerequisite: ANS 225 or ANS 230 or CH 220 or CH 223 or CH 227.
Principles of nutrition, including the classification of nutrients and the nutrient requirements of and metabolism by different species for health, growth, maintenance and productive functions.

ANS 425 Feed Manufacturing Technology 3.
Prerequisite: ANS(NTR,PO) 415 or ANS 230 or ANS 225.
Feed mill management, feed ingredient purchasing, inventory, storage, and quality evaluation, computerized feed formulation, feeding programs for poultry and swine, feed mill design, equipment, maintenance, operation, safety, state and federal regulations pertaining to feed manufacture.

ANS 440 Animal Genetic Improvement 3.
Prerequisite: (ANS/HS 215 or GN 311) and (ST 311 or ST/BUS 350) and Junior standing.
Modern evaluation and selection procedures for domestic animals; selection goals, estimation of breeding values and performance testing; their impact on genetic changes.

ANS 452 Comparative Reproductive Physiology and Biotechnology 3.
Prerequisite: ANS 220.
Comparative approach to examining aspects of reproductive physiology in selected vertebrate species. Detailed examination of current reproductive biotechnologies and ethical issues associated with the application of reproductive biotechnologies. Credit will not be given for both ANS 452 and ANS (PHY) 552.

ANS 453 Physiology and Genetics of Growth and Development 3.
Prerequisite: ANS 230, Junior standing.
Introduction to the basic concepts of growth with emphasis on domestic mammals. Growth of the major classes of animal tissues and regulation by endogenous and exogenous factors. Relationship to efficiency of animal production. Credit will not be given for both ANS 453 and 553.

ANS 454 Lactation, Milk and Nutrition 3.
Prerequisite: ANS 230 or FS/NTR 400; BCH 451 or ZO 421.
Nutritional properties of milk as a high-quality food with nutritional diversity. Principles of physiology, biochemistry and cell biology in the mammary gland. Procedures of milk production and milk collection for milk quality and nutrition. Human lactation vs. that of domestic animals. Impacts of biotechnology and food safety on dairy production. Credit will not be given for both ANS 454 and 554.

ANS 462 Beef Cattle Management Lab 1.
Corequisite: ANS 402.
ANS 462 is a hands-on lab held at the Beef Educational Unit of N.C. State University. This lab is required for Animal Science majors who have taken or are taking ANS 402, Beef Cattle Management Lecture. AND 462 is restricted to Animal Science majors and minors. In ANS 462, students learn proper cattle handling techniques and management practices that are important for beef cattle management.

ANS 464 Dairy Cattle Management Lab 1.
Corequisite: ANS 404.
ANS 464 lab is hands-on guide to principles of modern dairy cattle management. It will provide students an overview of a complete dairy enterprise. All students will receive instruction on the nutritional requirements of the dairy cow, digestive physiology and practical applications to balancing rations, feeding systems and management tools for effective feeding strategies, records keeping and role of diary record management system, post harvest technology including milk supply, milk processing and marketing and milk products. Restricted to Animal Science majors and minors.

ANS 480 Judging Team 1.
Prerequisite: ANS 303 or ANS 304 or ANS 309.
Students practice judging techniques for livestock, horses, or dairy animals, including ranking animals and providing oral reasons to defend the rankings. Students meet weekly with a coach to practice locally and will also travel to compete in one or two regional or national competitions. Each team (livestock, horse, dairy) is expected to raise funds to finance the trips. Students earn 1 credit for being on a team, and can earn up to 3 credits of Free Elective for ANS 480 by serving on the judging team for different species. Field trips that last several days are required. Departmental Approval Required. Course may be taken up to 3 times (once per species).

ANS 492 External Learning Experience 1-6.
Prerequisite: Sophomore standing.
A learning experience in Animal Science within an academic framework that utilizes facilities and resources which are external to the campus. Contact and arrangements with prospective employers must be initiated by the student and be approved by a faculty adviser, the prospective employer, and the departmental Internship Coordinator prior to the experience.

ANS 493 Research, Teaching, or Extension Experience 1-6.
Prerequisite: Sophomore standing.
A learning experience in Animal Science within an academic framework that utilizes campus facilities and resources for supervised undergraduate research, teaching assistant, or extension experiences. Arrangements must be initiated by the student and be approved by a faculty adviser, the prospective supervisor, and the departmental Internship Coordinator. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

ANS 495 Special Topics in Animal Science 1-3.
Offered as needed to present material not normally available in regular course offerings or for offering of new courses on a trial basis.

Prerequisite: ANS 220.
Current reproductive management techniques for each of the major mammalian livestock species. Enable students to develop reproductive decision making skills. Must hold graduate status.

Prerequisite: ANS 220, Corequisite: ANS 530.
Practical experience in routine reproductive management techniques discussed in ANS 530. Must hold graduate status.

ANS 540 Selection of Domestic Animals 3.
Prerequisite: (ANS 215 or GN 411) and (ST 311 or ST/BUS 350), or permission of instructor.
Modern evaluation and selection procedures for domestic animals; selection goals, estimation of breeding values and performance testing related to their impact on genetic changes. Multiple species including horses, dogs, cats, beef cattle, dairy cattle, pigs, sheep, and poultry will be discussed. Students cannot get credit for both ANS 440 and ANS 540.
ANS 550 Applied Ruminant Nutrition 3.
Prerequisite: ANS 230 or ANS(NTR,PO) 415. Permission given to undergraduates.
Applied concepts in ruminant nutrition for the practicing agricultural professional. Protein, energy, vitamin and mineral nutrition in relation to the nutritional needs and practical feeding of beef cattle, dairy cattle, sheep, and goats. New developments in feeding systems, feed additives and the prevention and treatment of metabolic disorders. Emphasis on solving problems in case studies. Permission given to undergraduates.

ANS 552 Advanced Reproductive Physiology and Biotechnology 3.
Prerequisite: ANS 220.
Comparative approach to examining aspects of reproductive physiology in selected vertebrate species. Detailed examination of current reproductive biotechnologies and ethical issues associated with the application of reproductive biotechnologies. Credit will not be given for both ANS 452 and ANS(PHY) 552.

ANS 553 Growth and Development of Domestic Animals 3.
Introduction to the basic concepts of growth with emphasis on domestic mammals. Growth of the major classes of animal tissues and regulation by endogenous and exogenous factors. Relationship to efficiency of animal production. Credit will not be given for both ANS 453 and 553.

ANS 561 Equine Nutrition 3.
Prerequisite: ANS 230 or ANS 225 or ANS(NTR,PO) 415 or PO/NTR 515.
This course explores concepts in equine nutrition including digestive physiology of horses, nutrient requirements for different classes of horses and feed management. Ration evaluation and balancing, as well as problem solving will be a core component to this course.

ANS 571 Regulation of Metabolism 3.
Prerequisite: BCH 451, GN 311, a course in physiology, cell biology. Study of hormonal, enzymatic and molecular-genetic regulation of carbohydrate and lipid metabolism; emphasis on mammalian species.

ANS 575 Current Topics in Genomics and Proteomics in Animal Science 3.
Prerequisite: ANS 215 or GN 411.
The objective of this course is to provide students with an integrated exposure to the major current concepts in genomics and proteomics. Genomic and proteomic methods will be covered at a level that will allow students to read and comprehend articles dealing with animal genome research.

ANS 590 Topical Problems in Animal Science 1-3.
Selection or assignment of special problems in various phases of animal science.

ANS 601 Animal Science Seminar 1.

ANS 603 Reproductive Physiology Seminar 1.

ANS 604 Animal Breeding and Genetics Seminar 1.

ANS 610 Topical Problems in Animal Science 1-6.
Selection or assignment of special problems in various phases of animal science.

ANS 641 Practicum in Animal Science 1-3.

ANS 685 Master’s Supervised Teaching 1-3.
Prerequisite: Master’s student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ANS 690 Master’s Exam 1-9.
Prerequisite: Master’s student.
For students in non-thesis master’s programs who have completed all other requirements of the degree except preparing for and taking the final master’s exam.

ANS 693 Master’s Supervised Research 1-9.
Prerequisite: Master’s student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

ANS 695 Master’s Thesis Research 1-9.
Prerequisite: Master’s student.
Thesis research.

ANS 696 Summer Thesis Research 1.
Prerequisite: Master’s student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

ANS 699 Master’s Thesis Preparation 1-9.
Prerequisite: Master’s student.
For students who have completed all credit hour requirements and full-time enrollment for the master’s degree and are writing and defending their thesis.

ANS 701 Protein and Amino Acid Metabolism 3.
Prerequisite: ANS/BCH 571 and ZO 421 and a 400-level nutrition course, such as NTR 400, 415, or 419, or equivalent type course numbers here. Study of protein and amino acid metabolism, regulation, dietary requirements and techniques for their investigation in human and other animals.

ANS 702 Reproductive Physiology of Mammals 3.
Prerequisite: ZO 421.
Survey of reproductive strategies among vertebrates; in-depth coverage of mammalian reproductive physiology; gametogenesis, fertilization, embryonic and fetal development, parturition, puberty, neuroendocrine control mechanisms in male and female mammals.

ANS 708 Genetics of Animal Improvement 3.
Prerequisite: GN 311 and ST 512.
Emphasis on the utilization of basic principles of population and quantitative genetics in animal improvement. Factors affecting genic and genotypic frequencies and methods of estimating genic and nongenetic variance, heritabilities and breeding values. The roles of mating systems and selection procedures in producing superior genetic populations.

ANS 709 Energy Metabolism 3.
Prerequisite: BCH 553.
Relationship of biochemical and physiological events within cell, tissue, organ and system with nutrient needs as sources of energy for productive animal life. Digestion, absorption and metabolism of energy sources. Processes of energy transformations within the body in relation to energetics, biological oxidation, anabolic and catabolic systems, metabolic control, partitioning and efficiency.

ANS 713 Quantitative Genetics and Breeding 3.
Prerequisite: GN 509, ST 512.
Quantitative and population genetic theory of breeding problems; partitioning of genetic variance, maternal effects, genotype by environment interaction and genetic correlation; selection indexes; design and analysis of selection experiments; marker-assisted selection.
ANS 726 Advanced Topics In Quantitative Genetics and Breeding 3.
Prerequisite: ST 511. Corequisite: ST 512.
Advanced topics in quantitative genetics pertinent to population improvement for quantitative and categorical traits with special applications to plant and animal breeding. DNA markers - phenotype associations. The theory and application of linear mixed models, BLUP and genomic selection using maximum likelihood and Bayesian approaches. Pedigree and construction of genomic relationships matrices from DNA markers and application in breeding.

ANS 780 Mammalian Endocrinology 3.
Prerequisite: BCH 451, ZO 421.
Mammalian endocrine system with emphasis on ontogeny and anatomy of key organs; synthesis and action of hormones. Role of hormones in regulation of physiological processes such as metabolism, exocrine function, digestion, ion balance, behavior, lactation, growth and reproduction.

ANS 803 Reproductive Physiology Seminar 1.
ANS 804 Animal Breeding and Genetics Seminar 1.
ANS 810 Topical Problems in Animal Science 1-6.
Selection or assignment of special problems in various phases of animal science.

ANS 841 Practicum in Animal Science 1-3.
ANS 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ANS 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

ANS 896 Summer Thesis Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hours, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

**Biological and Agricultural Engineering**

The Department of Biological and Agricultural Engineering applies engineering principles to biologically-based systems, primarily in agriculture and the environment. The BAE department provides excellent educational opportunities at the undergraduate level with programs that are well recognized as among the finest in the United States. Two undergraduate curricula are offered:

1. **Biological Engineering (BE)** and
2. **Agricultural and Environmental Technology (AET)**

The BE curriculum includes concentrations in agricultural engineering, bioprocess engineering, and environmental engineering. All concentrations within the BE curriculum emphasize core courses in biology, mathematics, physics, chemistry, hydraulics, mechanics, materials, and thermodynamics, which collectively provide solid training in basic science and engineering. The curriculum is designed to prepare each graduate to master fundamentals of engineering and biology, develop the ability to solve engineering problems, improve self-confidence, and apply the creative process of engineering design. The educational experience is capped off with a two semester senior level course that immerses each graduate in the team approach to developing engineering solutions to complex problems. By the time of graduation, approximately 80% of BE graduates will have passed the Fundamentals in Engineering exam and thus be well on their way toward licensure as a Professional Engineer.

The AET combines an understanding of agricultural, biological, and physical sciences with technology and economics so that the focus is on applying engineering principles to agricultural and environmental systems. Graduates are prepared to apply and manage the use of technical tools in production agricultural and environmental issues, or in other industries interfacing with natural resources or agriculture. The AET graduates provide a critical link in the agricultural and environmental spectrum by interacting directly with the production personnel as well as designers, implementers and managers of technological systems.

**Opportunities**

BE students learn to solve a wide variety of engineering problems and will have opportunities for specialization though selection of a specific concentration. Scientific and engineering principles are applied: to conserve and manage air, energy, soil and water resources; to manage, protect and restore natural ecosystems; to understand and utilize biological, chemical and physical processes for the production and conversion of biomass to bio energy; to analyze, understand and utilize mechanical properties of biological materials; to design and develop machinery systems for all phases of agricultural and food production; to design and evaluate structures and environmental control systems for housing animals, plant growth, and biological product storage; to develop improved systems for processing and marketing food and agricultural products; and to design sensor-based instrumentation and control systems for biological and agricultural applications.

Graduates of the BE curriculum receive a "B.S. in Biological Engineering," qualifying them for positions in design, development, and research in industry, government and public institutions. The curriculum also prepares students for post-graduate work leading to advanced degrees. Typical positions filled by recent BE graduates include: stream and wetlands restoration project manager; product design; development and testing engineer; plant engineering and management; engineering analysis and inspection for federal and state agencies; engineering consultant and research engineer. Entry-level salary ranges for BE graduates are similar to those of Civil, Industrial, and Mechanical Engineering graduates.

The AET curriculum provides graduates opportunities in technical analysis, application and evaluation of agricultural production systems and...
and environmental systems. The curriculum’s flexibility enables students to specialize technologically in agriculture, the environment, or business management. Careers include technical jobs in production agriculture, environmental systems, agribusiness sales and service, and agricultural extension.

Curricula

The BE curriculum is jointly administered by the College of Agriculture and Life Sciences and the College of Engineering and combines the fields of engineering, biology and agriculture. The BE curriculum is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. BE graduates are qualified to become registered professional engineers by passing the appropriate examinations and upon completing the engineering experience requirements. Specific curriculum requirements are available online.

The BAE faculty, in concert with program constituencies, has developed the following undergraduate program objectives. Within the first five years following graduation, NC State’s Biological Engineering graduates will:

• Excel in their careers or in graduate school by applying their knowledge of engineering principles, processes, and procedures;
• Practice engineering professionally and ethically;
• Communicate effectively in a professional environment; and
• Be engaged in life-long learning and professional development.

The AET curriculum is administered by the College of Agriculture and Life Sciences and is intended to uniquely prepare students for hands-on application of technology to efficiently manage agricultural and environmental systems. Flexibility within the program allows students to attain depth in science, business, or environmental areas. Graduates provide a critical link in the agricultural and environmental spectrum by interacting directly with both production personnel as well as the designers and implementers of technological systems.

The program objectives of the Agricultural and Environmental Technology (AET) Bachelor of Science (B.S.) degree are to:

• Develop technical knowledge of physical and biological sciences used in agricultural and environmental systems;
• Apply critical thinking, existing technology and practical approaches to solve problems in agricultural and environmental systems;
• Produce technologists able to work in teams and effectively communicate to audiences; and
• Develop in students an appreciation for life-long education that supports their careers.

Minor in Agricultural and Environmental Technology

A minor is offered to students interested in the application of engineering technology analysis in agricultural and environmental systems that utilize machinery, agricultural structures, food and feed processing, soil, water and waste management, electrical power and controls, and agricultural safety and health technology. This minor is not open to AET majors and allows majors in other programs to understand engineering technology for equipment, materials, resources, processes, and facilities utilized in their major area of study, and be knowledgeable in the application of technology for managing environmental issues, impacts, and monitoring.

AES - Agricultural and Environmental Systems Courses

AES 201 Shop Processes and Management 3.
Safety practices, materials, equipment, processes, procedures, and management techniques related to operation and maintenance of a mechanized agricultural enterprise or agriculture-related industry. Theory and practice through basic shop operations and procedures.

AES 250 Survey of Agricultural and Environmental Issues 3.
This course presents an overview of the history of technology in agriculture. Topics include how the adoption of agriculture affected society, how ancient Greek farmers gave the world the idea of the family farm, and how this notion saved the earliest attempts to colonize North America from disaster. Additionally, a broad overview of current agricultural and environmental problems and attempts to find solutions suitable not only to farmers and the agri-business community but to all urban and environmentally aware society will be covered.

AES 323 Water Management 3.
Prerequisite: Junior standing.
Water management principles applied to agriculture; hydrologic cycle, runoff, surface and sub-surface drainage, soil conservation measures to reduce erosion and sedimentation, irrigation, pond construction, open channel flow, water rights and environmental laws pertaining to water management. Emphasis on problem solving.

Prerequisite: PY 211 or PY 205.
Environmental relationships, design methods, materials and construction procedures as they relate to agricultural animal production facilities. Problem situations integrating structural design, environmental control, and waste handling.

AES 333 Processing Agricultural Products 4.
Prerequisite: PY 211 or PY 205.
Application of the principles of fluid flow, heat transfer, refrigeration, psychrometrics, and materials handling to the processing of agricultural products. Pump sizing, heat exchanger selection, refrigeration analyses, fan sizing, crop drying, and selection of materials handling equipment.

AES 343 Agricultural Electrification 4.
Junior standing or above.
Practical and efficient use of electrical energy for agricultural and home application. Energy conservation, electric rates, farm and house wiring, circuit design, single-phase and three-phase distribution systems, electric motors, lighting, space and water heating, electric controls, safety and protective devices. This course has a required field trip.

AES 411 Agricultural Machinery and Power Units 4.
Prerequisite: CH 101, CH 102, and PY 211 or PY 205.
Agricultural machinery principles, energy requirements, operation, calibration and environmental considerations. Diesel engine principles and their application to engine power, efficiencies and systems. Power trains and hydraulic systems. Application of basic machinery and power principles to mechanical needs in environmental systems.

AES 432 Agricultural and Environmental Safety and Health 3.
Prerequisite: Junior standing and 6 hrs CALS Group A, B or C Electives.
Safety and health issues for agricultural and environmental occupations. Hazard recognition, injury and illness prevention, regulations, and safety and health management strategies for agricultural production, chemical handling, and waste management. Environmental factors which affect human health and safety.
AES 443 Environmental Restoration Implementation 3.
Prerequisite: AES 323 or BAE 471.
Students will learn how to implement environmental restoration designs for streams, wetlands, and stormwater best management practices to improve ecosystem health. Topics include interpretation of construction drawings and specifications, calculating construction quantities and developing contractor bid tabs, environmental permitting and regulations, erosion and sediment control, project management and scheduling, construction oversight, specialized construction materials and equipment for environmental projects, survey stakeout, vegetation installation and management, site inspection and maintenance, and monitoring of structural and ecological conditions of restoration projects. In-class field trips are required.

BAE - Biological and Agricultural Engineering Courses

BAE 100 Introduction to Biological Engineering 1.
Technical topics and career options in Biological Engineering with concentrations in Agricultural, Bioprocess, and Environmental Engineering are introduced. Information is provided about career services, internships, and study abroad and co-op opportunities in these areas. Students develop a plan of work.

BAE 123 Light Equipment Technology 3.
Principles of operation and maintenance of powered turf, garden, and landscape equipment. Small engines, power transmission systems, equipment maintenance, and operator safety.

BAE 133 Agricultural Tractors and Machinery 4.
Principles of tractor engines, power trains, and hydraulics. Tractor operation, service and testing. Machinery management involving tractor and implement selection based on power and field requirements and on economics of ownership and operation. Implements for crop production to include tillage, planting, chemicals and harvesting. Set-up, operation and maintenance of implements. Calibration of planting and chemical equipment. Tractor and machinery safety. VEAL.

BAE 200 Computer Methods in Biological Engineering 2.
Prerequisite: Grade of C or better in MA 141 and E 115.
Students develop computer-based problem solving techniques to solve introductory problems in Biological Engineering. Emphasis is on developing solution algorithms and implementing these with spreadsheets and computer programming.

BAE 202 Introduction to Biological and Agricultural Engineering Methods 4.
Prerequisite: E 115.
Introduction to experimental design methodology, basic engineering design and problem solving methodology for Biological Engineering. Visualization skills, computer-aided 3-D solid modeling of parts, 3-D assembly of solid part geometries, computation of mass properties, 2-D engineering drawings, engineering design process, safety, tools and fabrication processes and design, and hands-on shop fabrication of semester project.

BAE 203 Introduction to AutoCAD Civil 3D for Environmental & Ecological Engineers 2.
Prerequisite: BAE 200.
Introduction to the use of AutoCAD Civil 3D for Environmental & Ecological Engineering applications. Basic drawing, managing survey data, surfaces, alignments, profiles, corridors, grading, pipe networks, plan production, GIS interface, GIS data types and sources, importing data, creation and export of objects in GIS formats. BE majors will be given priority in enrollment.

BAE 204 Introduction to Environmental and Ecological Engineering 2.
Prerequisite: BAE 200 and (BIO 181 or BIO 183); Corequisite: BAE 203 and SSC 200.
Introduction to the principles and applications related to environmental and ecological engineering. Topics include watershed hydrology, nutrient cycling, sources of environmental pollution, and the impact to ecosystems. An overview of different methods employed in these two disciplines to remediate and protect natural resources. Special emphasis on how soil, water, microbial, and plant interactions occur in ecosystems and how they are used to develop treatment technologies.

BAE 302 Transport Phenomena 3.
Prerequisite: (BAE 200, CSC 112, CSC 114 or CSC 116), (CE 215 or MAE 208), MA 341 and MAE 301; Corequisite: CE 382 or MAE 308.
Theory and application of heat and mass transfer in biological, food, and agricultural systems. Topics include fluid flow, conduction, convection, radiation, psychrometrics, and refrigeration.

BAE 305 Biological Engineering Circuits 4.
Prerequisite: MA 242, PY 208.
Fundamentals of analog and digital circuit analysis and design as applied to biological engineering instrumentation systems. Analysis and design of AC and DC circuits using Ohms and Kirchhoff's laws, the node voltage method, Thévenin and Norton's theorem, Laplace Transforms, resistance, capacitance, inductance, operational amplifiers, and frequency response, analog filter design, diode, transistors, biological signal acquisition, binary math and logical operators, digital circuit design, circuit simulation tools and techniques. Laboratory exercises supplement the topics presented in class lectures.

BAE 315 Properties of Biological Engineering Materials 3.
Prerequisite: (BIO 181 or BIO 183), and either (BAE 200, CSC 112, CSC 114 or CSC 116) and (CE 215 or MAE 208) and Corequisites: (MAE 308 or CE 382), and (MAE 314 or CE 313).
Physical properties of biological and non-biological engineering materials, their uniqueness and variability within systems. Relationships between plant, animal, and human tissues, property measurement, and evaluation of mechanical, rheological, thermal, electrical, and optical properties.

BAE 322 Introduction to Food Process Engineering 3.
Prerequisite: BAE 302; MAE 308 or CE 382; MAE 301 or CHE 315.
Introductory principles and practices of handling and preserving food products. Coverage includes the design and analysis of handling systems for discrete and continuous flow material handling systems, the selection and specification of automatic controls, food preservation principles and considerations relevant to the design of food handling systems, and the principles and practices of drying and storing grain.

BAE 325 Introductory Geomatics 3.
Prerequisite: Junior standing.
Theory and practice of plane and satellite-based surveying. Includes distance measurement, differential leveling, profile leveling, topographic surveying, and record keeping. Introduction to tapes, levels, total stations, surveying software, the global positioning system, GPS receivers and methods (stand-alone, DGPS, RTK), data collection, data processing, and applications.
BAE 361 Analytical Methods in Engineering Design 3.
Prerequisite: BAE 202, CE 215 or MAE 208, MA 341. Corequisite: MAE 314.
Engineering problem solving through studies of topics in engineering design. Kinematic analysis of linkages, analysis and design/seletion of machine structures and power transmission components, including vibration modeling and control in lumped mass mechanical and biomechanical systems.

BAE 371 Fundamentals of Hydrology for Engineers 3.
Prerequisites: (BAE 200 or CSC 112 or CSC 114 or CSC 116) and (BAE 202 or BAE 203); Corequisites: SSC 200 and (CE 382 or MAE 308).
Hydrology and erosion principles. Designing structures and selecting practices to control land runoff, erosion, sediment pollution and flooding.

BAE 376 Watershed Assessment and Water Quality Protection 3.
Application of methods to describe and protect quality. Identification of water quality problems based on physical, chemical, and biological species and intended use. Water quality sampling equipment, and sample collection strategies and methods. Macroinvertebrate sampling and interpretation. Presentation of water quality data and information. Identification of structural and non-structural best management practices (BMPs) to mitigate degradation of watersheds and ecological systems.

BAE 401 Instrumentation for Biological Systems 3.
Prerequisite: ECE 331.
Basic concepts of instrumentation for monitoring of biological systems. Study of transducers and circuits utilized in biological and agricultural engineering applications. Demonstration of concepts of error, accuracy and precision, linearity and other instrument characteristics by electronic models. Provision of hands-on experience for reinforcing lecture concepts in laboratories. Credit will not be given for both BAE 401 and BAE 501.

BAE 425 Industrial Microbiology and Bioprocessing 3.
Prerequisite: Junior or higher standing in CALS or COE; MB 351.
Introduction to the structure and functions of microbial cells and their cultivation and utilization in bioprocess engineering. Fermentation systems and downstream processing methods. Enzyme kinetics, production and application. Biomanufacturing of fuels, industrial chemicals, pharmaceuticals, food additives and food products such as beer, wine, cheese and yogurt. Microbial biomass production. Introduction to environmental biotechnology including waste water treatment, bioremediation and biomining. Biodeterioration and its control. Product development, regulations and safety. Field trip(s) are an essential educational component of the course and are required. Credit will not be given for both BAE(BBS) 425 and BAE 525.

BAE 435 Precision Agriculture Technology 3.
Prerequisite: Junior standing or Senior standing.
Overview of technology available for implementation of a comprehensive precision agriculture program. Topics include computers, GPS, sensors, mechanized soil sampling, variable rate control system, yield monitors, and postharvest processing controls. Applications of precision agriculture in crop planning, tillage, planting, chemical applications, harvesting and postharvest processing. Credit may not be received for BAE/SSC 435 and BAE/SSC 535.

BAE 442 Systems Approach to Agricultural and Environmental Issues 3.
Prerequisite: ENG 331 or ENG 332 or ENG 333; Senior standing.
Systems approach to complex agricultural and environmental issues and problematic situations including people’s views. Multiple stages of soft systems approach: open inquiry into and description of issues, conceptual modeling, feasibility and implementation of changes. Individual project using systems approach to a complex issue in agriculture or the environment.

BAE 451 Engineering Design I 2.
Prerequisite: (CE 313 or MAE 314), BAE 202, 302, 315, and either (BAE 322, 361, or 371).
Design Concepts of engineering problems; objectives, specifications, manufacturing, prior art and analysis. Oral and written exercises in reverse engineering, national and international standards, quality control, intellectual law and engineering ethics. Team projects from agricultural, bio-processing and environmental engineering. Must be within 36 credit hours of completing the BE degree. Field trips are required. Must be within 36 credit hours of completing the BE degree.

BAE 452 Engineering Design II 2.
Prerequisite: BAE 451.
Continuation of BAE 451; Project analysis, design, scheduling, construction, tests and reports. Teamwork and the function of engineering design in society. Field trips are required. Must be within 36 hours of completing the BE degree.

BAE 462 Machinery Design and Applications 3.
Prerequisite: BAE 361.
Machinery design for effective use of energy and labor in agricultural production. Engine cycles, power transmission, hydraulics, traction, combined stresses, finite element analysis, computer-aided-engineering, and engineering economics. Machinery design of agricultural field equipment and other agricultural machinery systems.

BAE 472 Irrigation and Drainage 3.
Prerequisite: BAE 471.
Design, management and evaluation of irrigation and drainage systems; concepts and processes of system design. Credit will not be given for both BAE 472 and BAE 572.

BAE 473 Introduction to Surface/Water Quality Modeling 3.
Prerequisite: BAE 471.
Concepts in basic hydrologic, erosion and chemical transport used in modeling. Evaluation of typical hydrologic/water quality models on watershed systems. Project examples using state-of-the-art models. Credit will not be given for both BAE 473 and BAE 573.

BAE 474 Principles and Applications of Ecological Engineering 3.
Prerequisites: (MB 351 or PB 321 or PB 360 or SSC 332) and BAE 371.
Governing principles of ecological engineering and the advanced biological, chemical, and physical conditions that determine the design of biological systems. Emphasis on 1) stream and wetland ecosystem restoration and 2) natural treatment systems for groundwater, stormwater, and wastewater such as riparian buffers, bioretention cells, and stormwater wetlands. A class field trip is required during non-scheduled time.
BAE 481 Structures & Environment 3.
Prerequisite: BAE 302; CE 313 or MAE 314.
Principles of environmental control and structural analysis are combined with biological principles for the design of structures. Topics include structural analysis, load estimation, material selection, fasteners, physiological reactions of animals and plants to their environment, applications of heat transfer and psychrometrics in calculating ventilation requirements, heating or cooling loads.

BAE 488 Postharvest Engineering 3.
Prerequisite: BAE 302 or MAE 310.
An introduction to the engineering aspects of the proper postharvest handling of fresh produce. Topics addressed include cleaning, grading, sorting, cooling, storing, packaging, transport, and marketing. Issues relating to food safety will be integrated throughout all the course content. A class field trip is required during non-scheduled time.

BAE 492 External Learning Experience 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes facilities and resources which are external to the campus. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

BAE 493 Special Problems in Biological and Agricultural Engineering 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes campus facilities and resources. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

BAE 495 Special Topics in Biological and Agricultural Engineering 1-3.
Offered as needed for presenting material not normally available in regular BAE departmental courses or for new BAE courses on a trial basis.

BAE 501 Instrumentation for Biological Systems 3.
Prerequisite: ECE 331.
Basic concepts of instrumentation for monitoring biological systems. Study of transducers and circuits utilized in biological and agricultural engineering applications. Demonstration of concepts of error, accuracy and precision, linearity and other instrument characteristics by electronic models. Provision of hands-on experience for reinforcing lecture concepts in laboratories. Credit will not be given for both BAE 401 and BAE 501.

BAE 502 Instrumentation for Hydrologic Applications 3.
Prerequisite: MA 341, BAE 401 or ECE 331, ST 370 or ST 511.
Basic theory of instruments and measurements. Physical parameters of interest, available methods and sensors for assessment. Sensor characteristics. Dataloggers and sensor-datalogger communications. Data transfer, management, and processing. Emphasis on hydrologic and water quality research applications. Course offered by Distance Education only.

BAE 505 Industrial Microbiology and Bioprocessing 3.
Prerequisite: MB 351.
Introduction to the structure and functions of microbial cells and their cultivation and utilization in bioprocess engineering. Fermentation systems and downstream processing methods. Enzyme kinetics, production and application. Biomanufacturing of fuels, industrial chemicals, pharmaceuticals, food additives and food products such as beer, wine, cheese, and yogurt. Microbial biomass production. Introduction to environmental biotechnology including waste water treatment, bioremediation and biomining. Biodeterioration and its control. Product development, regulations and safety. Graduate standing required. Students cannot obtain credit for both BAE(BBS) 425 and BAE 525.

Prerequisite: Introductory Organic Chemistry or Biochemistry.
This course will introduce fundamental principles and practical applications of biomass-to-renewable energy processes, including anaerobic digestion of organic wastes for biogas and hydrogen production, bioethanol production from starch and lignocellulosic materials, biodiesel production from plant oils, and thermoconversion of biomass and waste materials. Restricted to engineering seniors and graduate standing in COE, CALS, PAMS or CNR.

BAE 535 Precision Agriculture Technology 3.
Prerequisite: Junior standing or Senior standing.
Overview of technology available for implementation of a comprehensive precision agriculture program. Topics include computers, GPS, sensors, mechanized soil sampling, variable rate control system, yield monitors, and postharvest processing controls. Applications of precision agriculture in crop planning, tillage, planting, chemical applications, harvesting and postharvest processing. Credit may not be received for BAE/SSC 435 and BAE/SSC 535.

BAE 536 GIS Applications in Precision Agriculture 1.
Prerequisite: GIS 410 or GIS 510 or BAE 435 or BAE 535.
Exploration of geographic information systems (GIS) and its applications in precision agriculture. Topics will include file structure and formatting, interfacing with precision agriculture equipment, georeferencing maps, merging and clipping farm data, data field calculations, designing management zones, variable rate prescriptions, and basic data analysis.

BAE 560 Aerosol Science and Engineering 3.
Prerequisite: MA 341.
This course is designed for students who have a desire to work in the area of air quality. It will provide students with fundamental knowledge of aerosol properties, behavior and physical principles, and with hands-on experience in applying this knowledge to aerosol/PM measurements and control.

BAE 561 Agricultural Air Quality 3.
Prerequisite: MA 341.
This course will prepare students to identify agricultural air pollutants and their sources, understand the on-farm and off-farm impacts of these pollutants, measure these pollutants, characterize and model the fate of these pollutants, and select and/or design cost-effective remediation measures. This course is restricted to seniors in engineering and MEAS, and graduate students in CALS, PAMS, and CNR.

BAE 572 Irrigation and Drainage 3.
Prerequisite: BAE 471, SSC 200.
Design, management and evaluation of irrigation and drainage systems; concepts and processes of system design.
BAE 573 Introduction to Surface Hydrologic/Water Quality Modeling 3.
Prerequisite: Graduate standing, BAE 471, SSC 200. Concepts in basic hydrologic, erosion and chemical transport used in modeling. Evaluation of typical hydrologic/water quality models on watershed systems. Usage of state-of-the-art models in project examples.

BAE 574 DRAINMOD: Theory and Application 3.
Prerequisite: One of the following: BAE 471, BAE 472, BAE 573, BAE 771, or SSC 511. This course presents the theory of water movement and storage in poorly drained soils and applies the drainage/water management model DRAINMOD to a wide range of problems. Technical issues related to evaluation, design and management of drained soils and to wetland hydrology are analyzed. A series of problem sets provides experience in using the model, and demonstrates how the model may be applied to describe the complex interactions of multiple processes affecting hydrology of shallow water table soils.

Prerequisite: BAE 471 or CE 383. The design of structural stormwater Best Management Practices (BMPs) used in the urban and suburban environments is reviewed, including stormwater wetlands, bio-retention areas, sand filters, innovative wet ponds, green roofs, permeable pavement, and reinforced grass swales. The course is application oriented and includes a pair of field trips.

BAE 576 Watershed Monitoring and Assessment 3.
Prerequisite: AES323 (SSC323/BAE323) or BAE471 or FOR429 (NR420) or CE566, and ST311 or ST361 or ST511. Water measurement and structure sizing. Identification of water quality problems and water quality variable selection. Monitoring design, water quality sampling equipment, and sample collection and analysis. Statistical analysis and presentation of water quality data.

BAE 578 Agricultural Waste Management 3.
Prerequisite: Biology or Engineering background. This course covers principles of managing, handling, treating and applying animal and poultry manures and organic byproducts from an engineering perspective. Topics include waste characterization, descriptions of systems and technology, land application principles, preparation of waste management plans, biochemical/biological processes, and potential impacts to the environment. Assignments include homework, quizzes, projects, and discussions that emphasize problem solving and analysis.

BAE 579 Stream Channel Assessment and Restoration 3.
Prerequisite: BAE 471 or CE 383. Applications of fluvial geomorphology principles for assessment and restoration of natural stream channels. Topics include stream processes related to channel formation, bankfull channel dimensions, stream classification, morphological assessments, stream stability, restoration options for unstable channels, natural channel design approaches, and stream morphology monitoring. Field exercises include channel surveying using total stations, stream classification, and stability assessment. Field trips to stream restoration projects are included.

BAE 580 Introduction to Land and Water Engineering 3.
Prerequisite: MA 241. This distance course introduces students to concepts of the hydrologic cycle, water quality, precipitation, evapotranspiration, infiltration, watershed delineation, surface runoff and open channel flow. Students will apply these concepts to an engineering design problem. This course is designed for non-engineering distance graduate students and lifelong education students and students from engineering disciplines outside of BAE. It will not substitute for BAE 471. The course is only open to students with senior standing or higher.

BAE 581 Open Channel Hydraulics for Natural Systems 3.
Prerequisite: CE 382 or equivalent. CE 381 recommended. Theory and applications of hydraulics to open channels with an emphasis on natural streams and rivers. Course will introduce and develop principles of flow regimes (subcritical/critical/supercritical), and types (uniform flow, gradually varied and rapidly varied flow). Application will include hydraulics of flow measuring devices, step-backwater analysis and rating curve development, and flood studies using hydraulic models. A lab-scale flume will be used to illustrate concepts. Laptops will be used in class to learn and apply HEC-RAS (water surface profiles model). CE 382 or equivalent required. CE 381 recommended.

BAE 582 Risk and Failure Assessment of Stream Restoration Structures 1.
Prerequisite: CE 382 or MAE 308 or equivalent. This course defines uncertainty and risk pertaining to stream restoration structures and identifies and quantifies sources of such. Students will review various in-stream structures and, using an example study of the rock cross vane as a guide, will investigate a structure of their choice applying the concepts of risk and uncertainty. Modules include: Introduction to structures and definitions; Types and modes of failure; Uncertainty in Stream Restoration Design; Probability of failures, cost of failures; and Failure modes and effects.

BAE 583 Ecohydraulics and River Corridor Function 1.
Prerequisite: CE 382 or MAE 308 or equivalent. This course provides an ecological perspective of lotic systems and introduces students to ecological processes that structure river corridors. This course defines hydraulic, hydrologic, chemical, sedimentary, and biotic influences on an aquatic ecosystem. The five modules define components of aquatic ecosystems and their interactions, and explore ecological implications of engineered designs and cause-effect relationships from the watershed scale down to individual organisms. This course assumes students have a working knowledge of general biological and physical principles related to fluvial ecosystems.

BAE 584 Introduction to Fluvial Geomorphology 3.
Prerequisite: BAE 471 or BAE 580. This distance course provides an introduction to applied fluvial geomorphology as it relates to natural physical stream processes. Students will learn about watershed hydrology, stream gage data analysis, bankfull stage identification, hydraulic geometry relationships, stream channel assessment and classification, stream stability and channel evolution.

BAE 585 Integrating AutoCAD Civil 3D and GIS 1.
Basics of the AutoCAD Civil 3D user interface, drawing tools, importing and handling of survey data, generation of surfaces. GIS data sources and formats. Accessing and using GIS data for Civil 3D design purposes. Creation of GIS objects within Civil 3D and exporting to GIS formats.
BAE 590 Special Problems 1-6.
Prerequisite: Senior standing or Graduate standing in Biological and Agricultural Engineering.
Selection of a subject by each student on which to do research and write a technical report on the results. The individual may choose a subject pertaining to his or her particular interest in any area of study in biological and agricultural engineering.

BAE 591 Master's Research Methods I 1.
This is the first in a series of research methods courses for MS students majoring in Biological and Agricultural Engineering. Students will develop research questions to be answered by their thesis project and produce a literature review focusing on those questions. Students will also observe formal seminar presentations, providing critiques and participating in discussions of proper seminar delivery. This course is restricted to MS students majoring in BAE.

BAE 592 Master's Research Methods II 1.
Prerequisite: BAE 591.
This is the second in a series of research methods courses for MS students majoring in Biological and Agricultural Engineering. Students will develop a research proposal for their thesis work and will present the proposal in both a practice and a final seminar. This course is restricted to MS students majoring in BAE.

BAE 610 Special Topics 1-6.
Prerequisite: Graduate standing.
A study of topics in the special fields of interest of graduate students under the direction of the graduate faculty.

BAE 620 Special Problems 1-6.
Prerequisite: Senior standing or Graduate standing in Biological and Agricultural Engineering.
Selection of a subject by each student on which to do research and write a technical report on the results. The individual may choose a subject pertaining to his or her particular interest in any area of study in biological and agricultural engineering.

BAE 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

BAE 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

BAE 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

BAE 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their thesis.

BAE 771 Theory Of Drainage--Saturated Flow 3.
Prerequisite: MA 301.
Discussion of physical concepts and properties of fluids and porous media in relation to soil-water movement. Derivation and discussion of the fundamental laws and equations governing saturated flow in porous media. Analysis of mathematical solutions of steady-state and transient flow equations to determine their applicability to drainage problems. Consideration of analogs and models of particular drainage problems.

BAE 785 Food Rheology 3.
Prerequisite: FS 231 or MAE 314.
Principles and methods for measuring rheological properties. Theories of elastic, viscous, viscoelastic and viscoplastic behavior and relationships to food texture and commodity damage during harvest, handling and processing. Influence of time, composition and processing.

BAE 790 Special Topics 1-6.
Special topics in BAE.

BAE 791 Doctoral Research Methods I 1.
Prerequisite: BAE 791.
This is the first in a series of research methods courses for PhD students majoring in Biological and Agricultural Engineering. Students will develop PhD level research questions to be answered in their dissertation project and will produce a PhD level literature review on those questions. Students will also observe seminars, providing critiques and discussions of proper seminar delivery. This course is restricted to PhD students majoring in BAE.

BAE 792 Doctoral Research Methods II 1.
Prerequisite: BAE 791.
This is the second in a series of research methods for PhD students majoring in Biological and Agricultural Engineering. Students will develop a research proposal appropriate for their dissertation project and will present the proposal in both a practice and final seminar. The course is restricted to PhD students majoring in BAE.

BAE 801 Seminar 1.
Prerequisite: Graduate standing in BAE.
Elaboration of subject areas, techniques and methods peculiar to professional interest through presentations of personal and published works; opportunity for students to present and critically defend ideas, concepts and inferences. Discussions to point up analytical solutions and analogies between problems in biological and agricultural engineering and other technologies, and to present relationship of biological and agricultural engineering to socio-economic enterprise.

BAE 810 Special Topics 1-6.
A study of topics in the special fields of interest of graduate students under the direction of the graduate faculty.

BAE 820 Special Problems 1-6.
Prerequisite: Senior standing or Graduate standing in Biological and Agricultural Engineering.
Selection of a subject by each student on which to do research and write a technical report on the results. The individual may choose a subject pertaining to his or her particular interest in any area of study in biological and agricultural engineering.

BAE 821Theory Of Drainage--Unsaturated Flow 3.
Prerequisite: MA 301.
Discussion of physical concepts and properties of fluids and porous media in relation to soil-water movement. Derivation and discussion of the fundamental laws and equations governing unsaturated flow in porous media. Analysis of mathematical solutions of steady-state and transient flow equations to determine their applicability to drainage problems. Consideration of analogs and models of particular drainage problems.
BAE 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

BAE 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

BAE 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hours, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertation.

Department of Crop and Soil Sciences

As of July 1, 2016, the Department of Crop Science has merged with the Department of Soil Science to become the Department of Crop and Soil Sciences. The information listed below is for the Department of Crop Science. Click here for information on Soil Science (p. 109).

Crop Science is the discipline of producing abundant, safe and sustainable food, feed, fiber, and fuel crops and enhancing the quality of recreational and ornamental turfgrasses. The Department of Crop Science offers two areas of study: Plant and Soil Sciences (formerly Agronomy) and Turfgrass Science. The Plant and Soil Sciences major offers flexible curricula in several areas of study including concentrations in Agroecology, Agronomic Science, Agronomic Business, Crop Biotechnology, Crop Production and Soil Science (administered by the Department of Soil Science). Undergraduate students in both majors study adaptation, production practices, sustainability, genetics, pest management, soil management and soil fertility associated with producing various commodities. These curricula options allow students with diverse backgrounds and career goals to select courses that meet their individual interests and needs.

Opportunities

There are numerous career opportunities for Plant and Soil Sciences and Turfgrass Science graduates. For example, Agroecology is a multi-disciplinary concentration that will prepare students for a diversity of employment opportunities including, government agricultural research, agriculture extension and education, non-governmental organizations, conservation and wildlife management and international agricultural research and development. Many of our Crop Biotechnology and Agronomic Science graduates enroll in graduate programs here at NCSU or at major universities throughout the country. Others find employment as research specialists with companies engaged in biotechnology, plant improvement, genetic enhancement of plant traits, and agri-chemical development. Crop Production and Agronomic Business graduates often secure jobs as consultants, extension agents, farm managers, seed production specialists, agribusiness agronomists and managers, soil survey specialists, soil conservationists, technical sales representatives, and waste management specialists. Graduates from our Turfgrass Science program find employment as golf course superintendents, athletic field managers, home and recreational lawn professionals, and turfgrass sod producers.

Minors

Minor in Crop Science

The Crop Science Minor is open to any degree seeking undergraduate student (except Plant and Soil Sciences majors) interested in gaining knowledge of the development, productivity and sustainability of crop management systems, genetic improvement and pest management strategies, and the interaction of crops with their physical and biotic environment. It is intended to complement other curricula that are related to crop-environment and agro-ecological studies. An appreciation of agronomic approaches, which lead to a more efficient use of crop production inputs and to a less invasive impact on the environment, is emphasized. It is not intended to prepare students for a professional career in Crop Science. Additional courses are recommended for students who plan graduate work in this discipline.

Minor in Agroecology

The Agroecology minor is open to all baccalaureate students (except Plant and Soil Sciences - Agroecology majors). It is designed for students majoring in the biological sciences, agronomy, horticulture and animal sciences, but will be of interest to a wide array of students as agriculture has broad implications in the life sciences, economics, and sociology. Agroecology instruction provides students a fundamental understanding of agriculture and its interaction with natural and social systems. Students selecting the Agroecology minor will gain an understanding of modern production agriculture from an ecological and sociological perspective, obtain new skills in analyzing agricultural systems, and acquire the knowledge to design a plan for change. This knowledge will improve a student’s ability to work with agricultural professionals to implement a system that meets ecological and social needs while remaining profitable for farmers.

Minor in Turfgrass Science

The Turfgrass Science minor is open to all undergraduate students except those with a major in Turfgrass Science. It is designed for students majoring in Plant and Soil Sciences, Biological Sciences, Horticultural Science, Parks and Recreation and related disciplines but will be of interest to a wide variety of students desiring expertise in establishing and maintaining turfgrass commonly grown throughout the United States. This knowledge will improve the student’s ability to provide high quality turfgrass cover for a variety of situations including home lawns, commercial grounds, parks and other areas.
Certificate in Agronomic Crop Production (Distance Education)

The Certificate in Agronomic Crop Production provides an undergraduate course of study in the fundamentals of agronomic crop production. The program courses cover the importance of agronomic crops for the state and national economy; the interaction of agronomic growth, development and yield with environmental factors; sound and sustainable production systems for agronomic crops; scientific and societal issues related to biotechnology applications in crop production; and the marketing and distribution of these crops and their relation to overcoming world hunger.

CS - Crop Science Courses

CS 101 Field Crop and Turfgrass Management Orientation 1.
Introduction to NCSU and the Agricultural Institute with an emphasis on areas related to Field Crops Technology and Turfgrass Management. Students will explore university, college, and departmental resources, academic policies and procedures, career opportunities, and current trends and issues in our related disciplines. Students cannot receive credit for both CS 10 and AGI 10. FCT or TGM only.

CS 103 Introductory Topics in Crop, Soil and Turfgrass Sciences 1.
Introduction to the scope, purpose, and objectives of a university education with an emphasis on areas related to Crop, Soil and Turfgrass Sciences. Students will explore university, college and departmental resources, academic policies and procedures, opportunities for minors, career opportunities, and current trends and issues in our related disciplines. Students cannot receive credit for both CS 103 and ALS 103. Freshman Only; PAA, PAB, PAC, PAE, PCB, SST, TFG.

CS 111 Field Crop Production 4.
Management of field crops, including growth and development, establishment, pest management, environmental considerations, rotations of crops and chemicals, harvesting, storage and marketing. SPEARS.

CS 121 Turfgrasses and Their Uses 3.
An introduction to turfgrass species and their uses. Emphasis on: size and scope of the turfgrass industry, basic concepts of grass growth and development, characteristics of cool- and warm-season turfgrasses and their use for golf courses, lawns, athletic fields, and other applications. Techniques for successful establishment and maintenance of turfgrass areas.

CS 122 Principles of Turfgrass Management 3.
An examination of cultural practices essential for management of high quality turfgrass areas. Topics include: function of plant nutrients, fertilizer characteristics and application techniques, irrigation programming, construction of high use turfgrass areas, calibration of spreaders and sprayers, aerification, pesticide fate and developing effective management systems. ERICKSON.

CS 124 Agriculture and Seeds 2.
This course will explore seeds, their importance in local and global agriculture, new biotechnology applications for agriculture, how biotechnology has changed the seed industry and agriculture, how seeds deliver new AG biotechnology discoveries and how seeds and biotechnology are addressing world hunger issues. Field trip is required.

CS 151 Forage Production 3.
Characteristics of major forage crops and their response to agronomic and animal management factors. Utilization methods, growth and quality characteristics related to animal performance. GREEN.

CS 152 Weed Control in Field Crops 3.
Principles involved in development of weed control programs and practical application of weed management techniques for major North Carolina cropping systems. Emphasis on proper use of herbicides. Laboratory includes weed identification and herbicide application methods. JORDAN.

CS 153 Turfgrass and Ornamental Weed Control 3.
General principles in development of turfgrass and ornamental weed prevention and management programs. Different weeds and their life cycles and management techniques and factors affecting herbicide performance. Laboratory includes weed identification and herbicide application methods. YELVERTON.

CS 154 Turf Weed and Disease Management 3.
General principles in turfgrass weed and disease development and management programs. Different weeds, their life cycles, management techniques, and factors affecting herbicide application performance will be covered. Students will learn the causes, development, identification and management of turfgrass diseases. Laboratory includes weed identification and herbicide application methods. Certain laboratory exercises will require personal transportation to Lake Wheeler Road Turf Field Lab unless otherwise specified by the lab instructors. The course is restricted to AGI students only.

CS 155 Advanced Turf Management 3.
Turfgrass management covering mineral nutrition, water relations, environmental stress responses and management regimes for low maintenance turf, golf courses, athletic fields and other turf settings. PEACOCK.

CS 162 Flue-Cured Tobacco Production 1.
Flue-cured tobacco production, with emphasis on crop management practices, variety selection, transplant production, integrated pest management, fertilization, harvesting and curing, competitiveness in the world market, product needs of the tobacco manufacturing industry, and the role of climate and soil on yield and quality. FISHER.

CS 163 Peanut Production 1.
Principles of modern peanut production. Emphasis on the history and dispersal of peanuts, supply management programs, physiology of peanut growth and development, weed, disease, and insect management, fertility practices, recommended cultural practices including IPM, methods of maturity determination, recommended harvesting, curing, and handling practices. JORDAN.

CS 164 Soybean Production 1.
Introduction to the production of soybeans in North Carolina and the southeastern United States. Growth and development, tillage, fertility, varieties, seed quality, planting decision, pest management, harvesting, production economics, marketing, environmental quality, and social responsibility. DUNPHY.

CS 165 Cotton Production 1.
Cotton production, marketing, and improvement. Emphasis on current information regarding varieties, fertilization, disease, insect and weed control, cultural practices, equipment, harvesting and marketing. EDMISTEN.

CS 166 Corn Production 1.
Growth, management, and markets for corn in North Carolina.

CS 167 Wheat Production 1.
Practical approach to growing wheat and other small grain crops. Topics will include growth, management, and markets for small grains in North Carolina.
CS 190 Turf Seminar 1.
Discussions of the operations, opportunities, and problems existing in various phases of the turf industry by leaders in the various facets of the industry.

CS 191 Field Crops Seminar 2.
Guest speakers, students presentations, and outside assignments will address professionalism; professional development; and current challenges, issues, and opportunities facing profitable and sustainable agronomic crop production. A grade of C or better is required. FCT Only.

CS 200 Introduction to Turfgrass Management 4.
Prerequisite: BIO 181(preferred) or ZO 160(alternate) BO 200, or CS 213. Turfgrass selection, establishment, maintenance, and pest management in lawns, golf courses, athletic fields, and roadside care; Emphasis on understanding the impact of the environment on management practices and turfgrass performance. Field trips in laboratory.

CS 210 Lawns and Sports Turf 3.
Utilization of turfgrasses for lawns and recreational areas. Emphasis on: the cultural and environmental benefits of grassed areas, concepts of grass growth and development, selecting adapted grasses for proper use, techniques for successful establishment and management of cool- and-warm-season turfgrasses, fertilization, irrigation, aeration, and pest management. The history and benefit of natural and artificial sports fields will also be discussed. Credit will not be awarded for both CS 200 and CS 210.

CS 211 Plant Genetics 3.
Prerequisite: BIO 183 or ZO 160. Fundamentals of plant genetics. Genetic basis for plant improvement. Genetic analysis of Mendelian traits, molecular structure and organization of genetic material, crop biotechnology, distribution and behavior of genes in populations.

CS 213 Crops: Adaptation & Production 4.
Prerequisite: BIO 181(preferred) or ZO 160(alternate) or BO 200. Fundamental structure and reproductive features of crops. Their adaptation and importance in global agriculture. Practices and inputs needed for economic production of a quality product and interaction of these factors within the constraints of climate, soils, and topography in maintaining a quality environment.

CS 214 Crop Science Laboratory 1.
Prerequisite: BIO 181 or BIO 183 or PB 200 or PB 250; Co-requisite: CS 213.
The laboratory's intent is to provide students enrolled in the CS 213 lecture course opportunity to apply under field and controlled environmental conditions the crop production principles introduced in the lecture course. Using a hands-on approach targeting a variety of crop management approaches, students will examine the growth and development characteristics that relate most directly to final yield and quality of the marketed product. Students will employ a spectrum of treatment combinations aimed at strengthening understanding of the interaction of genotype, environment, and management, with the goal of identifying influential factors of crop yield and quality.

CS 216 Oilseed Crop Production 3.
Fundamental agronomic practices associated with the production of oilseed crops (soybean, peanuts and cotton). Discussions will include crop growth and development stages, variety characteristics, planting strategies, fertility and pest management programs, harvest and storage options, and the use of technologies associated with the production and maintenance of quality oilseed crops.

CS 218 Cereal Grain Crop Production 2.
Fundamental agronomic practices associated with the productio of cereal grain crops (corn and small grains). Discussions will include crop growth and development stages, how to choose the best varities and hybrids, planting strategies, fertility and pest management programs, harvest and t=storage options, and the use of technologies associated with the production and maintenance of quality grain.

CS 224 Seeds, Biotechnology and Societies 3.
An exploration of seeds, how seeds are the delivery system for crop biotechnology and how a specific culture’s perception of science and agriculture influence the acceptance or rejections of modern genetic technologies. Topics include seed germination, survival and preservation; seed industry influence on societies and how societies are influencing the seed industry; seed production - commercially and at home; how our diverse genetic resources are preserved; how biotechnology is applied to agriculture and delivered through seeds; the impact biotech is having on the seed industry and subsequently on us and global agriculture; concerns and potential benefits of biotechnology application to crops.

CS 230 Introduction to Agroecology 3.
Prerequisite: BIO 105 or BIO 181 or BIO/ZO 160 or BO 200 or BO 250 or HS 201 or CS 213.
This course will examine the biological and physical attributes of farming systems and their associated ecological and social impacts in temperate and tropical regions. It will address the ecological consequences of indigenous food and fiber production systems, conventional agricultural systems and “alternative” systems that incorporate biological pest control and natural nutrient inputs. Students will examine several case studies that integrate their understanding of concepts.

CS 290 Professional Development in Plant & Soil Sciences 1.
This course is designed to prepare students for careers in Plant and Soil Sciences. Student discussions with faculty and industry professionals will center on structure and requirements for internship and jobs, research and extension opportunities, resume building and writing, professionalism and professional development, interpersonal skills, undergraduate program management, and career planning. Student development of an e-portfolio is required. Must hold sophomore or junior standing in: TAA, TAB, TAC, TSS, TFG.

CS 312 Grassland Management for Natural Resources Conservation 3.
Prerequisite: BIO 181(preferred) or ZO 160(alternate) CS 213, SSC 200. Basic principles and practices of production and utilization of pasture and forage crops; impact on developing sustainable systems for livestock feed, soil and water conservation; use of computers to assist in whole farm planning and information retrieval.

CS 400 Turf Cultural Systems 3.
Prerequisite: C- or better in CS 200.
Topics include: golf course design considerations, fertilizer characteristics and application techniques, irrigation programming, construction of high use turfgrass areas, calibration of spreaders and sprayers, aeration, and pesticide fate and development of effective management systems.

CS 411 Crop Ecology 3.
Prerequisite: PB 321 or PB 421.
CS 413 Plant Breeding 2.  
Prerequisite: GN 411 or ANS 215.  
Discussion of reproductive systems of higher plants; the genetic basis for plant improvement and the selection, evaluation, and utilization of crop varieties.

CS 414 Weed Science 4.  
Prerequisite: CH 220.  
History, current status and fundamentals of weed biology and cultural, biological, and chemical weed control; properties and uses of herbicides; weed identification; proper use of herbicide application equipment; current weed management practices in crops and non-cropland situations.

CS 415 Integrated Pest Management 3.  
Prerequisite: BIO 181(preferred) or ZO 160(alternate) or BO 200 or BO 250.  
History, principles, and application of techniques for managing plant pests. Theory and practice of integrating pest control tactics to manage pests within economic, environmental, and sociological constraints. Topics include pest monitoring methodology, economic aesthetic thresholds, biological control, efficient pesticide use, biotechnology, and global positioning systems.

CS 424 Seed Physiology 3.  
Prerequisite: PB 321 or PB 421 or FOR 303.  
This course will explore the physiological processes associated with seed formation, development, maturation, germination, and deterioration of agronomic and horticultural species. We will also study the physiological aspects of seed dormancy, how dormancy is manifested and overcome in cultivated and noncultivated systems and dormancy's impact on weed seedbank ecology.

CS 430 Advanced Agroecology 4.  
P: CS 230.  
This course applies agroecological principles introduced in CS 230 and critical thinking to evaluate various agroecosystems. Students will examine food, fiber, and other commodity production systems for security, productivity, and sustainability and address the simultaneous need to protect natural environments and the biodiversity on which agroecosystems depend. Topics include discussion of national and international government policies, research programs, and education programs that influence the future application of agroecosystem principles.

CS 462 Soil-Crop Management Systems 3.  
Prerequisite: CS 213, CS 414, SSC 342, SSC 452, Senior standing.  
Unites principles of soil science and crop science with those of allied areas into realistic agronomic applications; practical studies in planning and evaluation of soil and crop management systems.

CS 465 Turf Management Systems and Environmental Quality 3.  
Prerequisite: CS 400 and Senior standing.  
Integration of turfgrass management systems and the use of BMPs and IPM to protect environmental quality. Examination of water quality issues relative to turf. Application of Best Management Practice and Integrated Pest Management strategies. Credit cannot be received for both CS 465 and CS 565. Senior standing.

CS 470 Advanced Turfgrass Pest Management 2.  
Prerequisite: C- or better in CS 200.  
Characteristics and ecology of turfgrass weed, insect, and disease pests; identification and diagnosis of turfgrass pests, strategies for managing pests including cultural, mechanical, biological, and chemical methods; development of integrated pestmanagement programs, characteristics and modes of action for herbicides, insecticides, fungicides, and plant growth regulators; behavior and fate of pesticides in soil; and the development and management of pesticide resistant pest populations.

CS 490 Senior Seminar in Crop Science and Soil Science 1.  
Prerequisite: Senior standing in Agronomy, Plant and Soil Sciences, or Turfgrass Science.  
Review and discussion of current topics in crop science, soil science, agronomy and natural resource management. Preparation and presentation of scientific information in written and oral format. Senior standing in Agronomy, Plant and Soil Sciences, or Turfgrass Science.

CS 492 External Learning Experience 1-6.  
Prerequisite: Sophomore standing.  
A learning experience in agriculture and life sciences within an academic framework that utilizes facilities and resources which are external to the campus. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

CS 493 Special Problems in Crop Science 1-6.  
Prerequisite: Sophomore standing.  
A learning experience in agriculture and life sciences within an academic framework that utilizes campus facilities and resources. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer the departmental teaching coordinator and the academic dean prior to the experience.

CS 495 Special Topics in Crop Science 1-6.  
Offered as needed to present materials not normally available in regular course offerings or for offering of new courses on a trial basis.

CS 502 Plant Disease: Methods & Diagnosis 2.  
Prerequisite: PP 315.  
Introduction to the basic principles of disease causality in plants and the methodology for the study and diagnosis of plant diseases caused by fungi. Identification of plant-pathogenic fungi. Research project, disease profiles and field trips are required.

CS 524 Seed Physiology 3.  
Prerequisite: (CH 220 or CH 221 or CH 225) and (PB 321 or PB 421 or FOR 303).  
This course will explore the physiological processes associated with seed formation, development, maturation, germination, and deterioration of agronomic and horticultural species. We will also study the physiological aspects of seed dormancy, how dormancy is manifested and overcome in cultivated and noncultivated systems and dormancy's impact on weed seedbank ecology.

CS 541 Plant Breeding Methods 3.  
Prerequisite: ST 511, Corequisite: ST 512.  
Overview of plant breeding methods for advanced undergraduate and beginning graduate students. Covers principles and concepts of inheritance, germplasm resources, pollen control, measurement of genetic variances, and heterosis. Special topics include heritability, genotype-environment interaction, disease resistance, and polyploidy. In-depth coverage on methods for breeding cross-pollinated and self-pollinated crops. Prepares students for advanced plant breeding courses.
CS 565 Turf Management Systems and Environmental Quality 3.
Prerequisite: CS 400.
Integration of turfgrass management systems and the use of BMPs and IPM to protect environmental quality. Examination of water quality issues relative to turf. Application of Best Management Practice and Integrated Pest Management strategies. Credit cannot be received for both CS 465 and CS 565.

CS 590 Special Topics 1-6.
CS 591 Special Problems 1-6.
Special problems in various phases of crop science. Problems may be selected or will be assigned. Emphasis on review of recent and current research. Credits Arranged.

CS 601 Seminar 1.
Prerequisite: Graduate standing.
Review and discussion of scientific articles, progress reports in research and special problems of interest to agronomists. Maximum of two credits allowed toward master's degree; however, additional credits toward doctorate allowed.

CS 620 Special Problems 1-6.
Special problems in various phases of crop science. Problems may be selected or will be assigned. Emphasis on review of recent and current research. Credits Arranged.

CS 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

CS 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

CS 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

CS 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

CS 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

CS 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their thesis.

CS 714 Crop Physiology: Plant Response to Environment 3.
Prerequisite: (PB 321 or PB 421) and (CH 223 or CH 227).
Examines interactions between plants and the environment. Light environment, plant canopy development, photosynthesis, source-sink relations, growth analysis, growth regulation, water relations, and environmental stresses are addressed.

CS 717 Weed Management Systems 1.
Prerequisite: CS 414.
Weed management systems including integration of cultural, biological, mechanical and chemical methods for vegetables, fruits, ornamentals, turf, small grains, corn, tobacco, cotton, peanuts, aquatic and non-cropland settings. Taught second 5 week of semester. Drop date is by last day of 3rd week of minicourse.

CS 720 Molecular Biology In Plant Breeding 3.
Prerequisite: CS(GN,HS) 741, GN 701, GN 702, GN 703.
Theory and principles of molecular biology applied to plant breeding. Experimental approaches to induce genetic change, cytoplasmic recombination, haploid utilization and potentials of molecular techniques for solving breeding problems.

CS 725 Pesticide Chemistry 1.
Prerequisite: (CH 201 or CH 203) and (CH 221 or CH 225).
Chemical properties of pesticides including hydration and solvation, ionization, volatilization, lipophilicity, molecular structure and size, and reactivity and classification according to chemical description, mode of action or ioniizability. Taught during the first 5 weeks of semester. Drop date is last day of 3rd week of the minicourse.

CS 726 Advanced Topics In Quantitative Genetics and Breeding 3.
Prerequisite: ST 511, Corequisite: ST 512.
Advanced topics in quantitative genetics pertinent to population improvement for quantitative and categorical traits with special applications to plant and animal breeding. DNA markers - phenotype associations. The theory and application of linear mixed models, BLUP and genomic selection using maximum likelihood and Bayesian approaches. Pedigree and construction of genomic relationships matrices from DNA markers and application in breeding.

CS 727 Pesticide Behavior and Fate in the Environment 2.
Prerequisite: CS(HS,SSC,TOX) 725, SSC 200.
Sorption/desorption, soil reactivity, movement, volatilization, bioavailability, degradation and stability of pesticides in the environment. Taught during the last 10 weeks of semester. Drop date is last day of 3rd week of the minicourse.

CS 729 Herbicide Behavior In Plants 2.
Prerequisite: BO 751 and BO 752 and CS(HS,SSC) 725.
Chemical, physiological and biochemical actions of herbicides in plants including uptake, translocation, metabolism and mechanism of action.
CS 745 Quantitative Genetics In Plant Breeding 1.
Prerequisite: CS(GN, HS) 541, ST 712, course in quantitative genetics recommended.
Theory and principles of plant quantitative genetics. Experimental approaches of relationships between type and source of genetic variability, concepts of inbreeding, estimations of genetic variance and selection theory.

CS 746 Breeding Methods 2.
Prerequisite: CS (GN, HS) 741, ST 535.
Theory and principles of plant breeding methodology including population improvement, selection procedures, genotypic evaluation, cultivar development and breeding strategies.

CS 755 Applied Research Methods and Analysis for Plant Sciences 3.
Prerequisite: ST 511.
Students will gain understanding of the common principles of scientific method. They will gain knowledge and experience with planning for research, developing research objectives, methodology considerations, experimental design, statistical analyses, and presentation of data. Class will have a heavy focus on experimental methods in applied plant science research.

CS 795 Special Topics 1-6.

CS 801 Seminar 1.
Prerequisite: Graduate standing.
Review and discussion of scientific articles, progress reports in research and special problems of interest to agronomists. Maximum of two credits allowed toward master's degree; however, additional credits toward doctorate allowed.

CS 820 Special Problems 1-6.
Special problems in various phases of crop science. Problems may be selected or will be assigned. Emphasis on review of recent and current research. Credits Arranged.

CS 860 Plant Breeding Laboratory 1.
Prerequisite: CS(GN, HS) 741.
Visitation of plant breeding projects in the Depts. of CS and HS at NC State, along with commercial seed companies. Discussion and viewing of breeding objectives, methods and equipment and teaching and practice of hybridization methods.

CS 861 Plant Breeding Laboratory 1.
Prerequisite: CS(GN, HS) 741.
Visitation of plant breeding projects in the Depts. of CS and HS at NC State, along with commercial seed companies. Discussion and viewing of breeding objectives, methods and equipment and teaching and practice of hybridization methods.

CS 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

CS 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

CS 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Department of Entomology and Plant Pathology

As of July 1, 2016, the Department of Entomology has merged with the Department of Plant Pathology to become the Department of Entomology and Plant Pathology. The information listed below is for the Department of Entomology. Click here for information on Plant Pathology (p. 103).

Undergraduate instruction in entomology provides introductory and advanced courses in the basic science of entomology and the management of beneficial and pest insects. Courses at the 200- and 400-level fulfill General Education Requirements in Natural Sciences or Science and Technology and serve students majoring in biological sciences, agronomy, horticultural science, agricultural education, crop science, forestry and plant biology. They also provide fundamental training for graduate study in entomology (see the Graduate Catalog (http://www.ncsu.edu/grad/catalog)).

Opportunities

For graduates with advanced degrees in entomology, opportunities include research, teaching, and extension positions in colleges and universities; research, development, production, control, and sales positions in private industries; consultative positions in pest management; research and regulatory positions with state and federal agencies; and curatorial positions in museums.

Curricula

There is no undergraduate major in entomology. Those students with a primary interest in entomology are advised to choose a general biological science curricula and minor in entomology.

Minor in Entomology

The Department of Entomology offers an undergraduate minor available to all baccalaureate degree students at North Carolina State University. The minor is especially appropriate for (but not limited to) students interested in biological or agricultural sciences, veterinary medicine, or other health sciences. A basic knowledge of insect biology may also be useful to students seeking careers in government, industry, or education.

The minor consists of a minimum of 15 credit hours, including one core course (ENT 402 or ENT 425). The remaining hours can be selected from a group of restricted electives.
ENT - Entomology Courses

ENT 110 General Entomology 3.
Consider how insects live, their internal and external structures and their functions, classification and identification and control when desirable. Recognition of economically important beneficial and destructive insects and mites occurring in North Carolina and neighboring states, stressing information on their life histories, damage and control.

ENT 121 Pesticides and Their Utilization 3.
Basic characterization, classification, chemical and physical properties of pesticides. Use of pesticides including environmental effects; Federal and State laws and regulations relating to their manufacture, distribution and use; safety procedures including handling and storage; and application equipment including types, calibration, use and maintenance. TOTH.

ENT 132 Urban Pest Management 3.
AGI Students Only.
Insects and related arthropods found in residential and industrial buildings, nature of damage, and their control. Identification and life history of the different pest species, methods to detect their presence, and integrated pest management strategies. Hands-on learning of species in laboratory with emphasis on current control techniques. Field trips required. Agricultural Institute Students only.

ENT 163 Ornamental & Turf Insects 3.
Practical course in the biology, recognition, and management of common insect and related arthropod pests that attack ornamentals and turf. WALDVOGEL.

ENT 190 Current Topics in Pest Management 1.
Discussions of current topics of pest management. Topics selected by the students and instructors to include different phases of pest management. Discussions led by leaders in the various facets of the industry.

ENT 201 Insects and People 3.
Introduction to the fascinating world of insects and how they interact with people. Survey of insect history, diversity, structure and function, and behavior. Examples of harmful and beneficial insects in a variety of human activities concluding with some profound impacts insects have had on history, society and culture.

ENT 203 An Introduction to the Honey Bee and Beekeeping 3.
Introduction to honey bee biology and a fundamental understanding of beekeeping management including crop pollination by bees. Examination of the relationships between honey bees and humans from prehistoric through modern times and the behavior and social system of one of the animal world’s most complex and highly organized non-human societies.

ENT 207 Insects and Human Disease 3.
This course is an introduction to the many interactions between insects, other arthropods and humans that result in disease, ranging from simple anxiety, phobias, discomfort and pain, to transmission of pathogenic organisms causing sickness and even death. Included will be an understanding of the special physical and chemical adaptations of insects that enable them to cause us harm. The major groups of insects, mites, ticks and related arthropods associated with human suffering and disease as well as an introduction to the diseases transmitted by them will be presented. Finally, the course will present information on how major outbreaks of disease transmitted by the insects have influenced human populations, demographics, warfare, religion, and societal structure throughout recorded history.

ENT 212 Basic Entomology 1.
This course offers a brief and basic introduction to the world of insects and the discipline of entomology. It is intended as a primer for several other more specialized entomology classes such as forensic entomology and forest entomology.

ENT 305 Introduction to Forensic Entomology 3.
This course provides a broad overview of forensic entomology—a specialized field of entomology employed in medicocriminal investigations. Forensic entomology relies on knowledge of insect ecology, biology, taxonomy, physiology and development to elucidate the circumstances surrounding death. The role of arthropods associated with decomposed human remains is one of several valued disciplines in forensic sciences. Understanding the general principles of forensic entomology and their application will be the focus of this course.

ENT 401 Honey Bee Biology and Management 3.
Prerequisite: (ENT 201, ENT 203, ENT 425, BIO 105 or PB 200).
A hands-on course in honey bee management including bee pollination of selected crops based on an understanding of bee biology, bee behavior, bee pathology, and bee botany. Students must be able to provide their transportation to field sites or arrange to work with a beekeeping mentor. Students may choose, but are not required, to purchase their own beekeeping equipment and hive.

ENT 402 Forest Entomology 3.
Prerequisite: Junior standing.
Fundamentals of morphology, classification, biology, ecology and control of insects attacking trees, with emphasis on silvicultural practices.

ENT 425 General Entomology 3.
Prerequisite: BIO 181 or BIO 140 or BIO 350.
Explores the science of entomology by focusing on the basic principles of systematics, morphology, physiology, development, behavior, ecology, and control of insects. Field trips provide opportunities to collect insects and study their adaptations to a wide variety of natural environments.

ENT 470 Advanced Turfgrass Pest Management 2.
Prerequisite: C- or better in CS 200.
Characteristics and ecology of turfgrass weed, insect, and disease pests; identification and diagnosis of turfgrass pests, strategies for managing pests including cultural, mechanical, biological, and chemical methods; development of integrated pest management programs, characteristics and modes of action for herbicides, insecticides, fungicides, and plant growth regulators; behavior and fate of pesticides in soil; and the development and management of pesticide resistant pest populations.

ENT 492 External Learning Experience 1-6.
Prerequisite: Sophomore standing.
A learning experience within an academic framework that utilizes facilities and resources which are external to the campus. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

ENT 493 Special Problems in Entomology 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes campus facilities and resources. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.
practical experience in the study of insect function.

ENT 504 Professional Development for Entomologists 2.
A successful professional career in entomology is not limited to understanding just the science of Entomology. Also required is an understanding of career paths, professional ethics, written and verbal communication, safety, how to work with animals and human subjects, personal interactions, vita preparation, networking, and future directions of the discipline. These skills are essential to taking the knowledge obtained in entomology and applying them to a career in the discipline. Graduate Standing required.

ENT 506 Principles of Genetic Pest Management 3.
Introduction to the biological aspects of genetic pest management (GPM). Genetic techniques for GPM, including historical uses (such as the sterile insect technique) and approaches that are currently in development. Practical issues relating to the deployment of GPM, including ecological and economic considerations.

ENT 509 Biology of Aquatic Insects 3.
Prerequisite: ENT 425 or Graduate standing.
Life history descriptions and identification of aquatic insects. Emphasis on behavioral and physiological adaptations to diverse habitats and the role of insects in aquatic ecosystem function and as indicators of water quality.

ENT 520 Insect Behavior 3.
This course stresses comprehensive coverage of the principles of animal behavior using insects as models and examples. Physiology, genetics, mechanisms, behavioral ecology, and evolution of insect behavior will be covered.

ENT 525 Entomology for Educators 3.
Prerequisite: General Biology.
Insects and other arthropods used as paradigms for teaching basic principles of Biology and Ecology. Project-oriented format covering topics embracing the learnign cycle, scientific method, critical thinking skills, and hand-on laboratory activities.

This is a multidisciplinary class, and lectures cover many aspects of organic production given by a number of experts from both on and off campus. Classes also include discussions of issues and controversies surrounding organic production, as well as field trips to selected farms. This course is restricted to upper level undergraduate, graduate, or post-baccalaureate continuing education students.

Prerequisite: ENT 425 or Graduate Standing.
The principles underlying modern methods for protecting food, clothing, shelter and health from insect attack.

ENT 560 Techniques in Molecular Ecology and Evolution 3.
Laboratory-intensive course providing hands-on experience in application of several commonly used techniques in molecular ecology and evolution. Lectures cover theory and application of specific techniques in the context of case studies from the primary literature. By end of course, students should be comfortable with theory and application of molecular markers in studies of ecology and evolution, and should be able to incorporate one or more techniques into their thesis research. Graduate standing or permission of the instructors required.

ENT 582 Medical and Veterinary Entomology 3.
Prerequisite: ENT 425 or Graduate standing.
The morphology, taxonomy, biology and control of the arthropod parasites and disease vectors of man and animals. The ecology and behavior of vectors in relation to disease transmission and control.

ENT 591 Special Topics In Entomology 1-6.
Prerequisite: Graduate standing.
A variable credit lecture and laboratory series offering topics such as advanced beekeeping, morphology, physiology, systematics, behavior, biological control, nursery and ornamental pests, host plant resistance, information retrieval, biological monitoring and sampling, population modeling, extension entomology, computer methods and urban, forest and stored product pests.

ENT 601 Seminar 1.
Prerequisite: Graduate standing in ENT or closely allied fields.
Discussion of entomological topics selected and assigned by seminar chair.

ENT 604 Insect Natural History and Field Ecology 1.
Prerequisite: Graduate standing in Entomology.
Diversity of ecological roles and lifestyles of insects and related arthropods using techniques in field ecology. Two week-long field trips to Coastal Plain and Mountains with orientation walks, evening lectures, and field projects. Taught during the two weeks prior to the Fall semester.

ENT 620 Special Problems 1-6.
Original research on special problems in entomology not related to a thesis problem. Provides experience and training in research. Credits Arranged.

ENT 641 Agricultural Entomology Practicum 3.
Prerequisite: Economic entomology (ENT 762 recommended).
Practical experience in research, extension and commercial aspects of insect pest management on a broad range of agricultural crops under actual field conditions. Class meets 9 hours each Friday for 10 weeks from early June to mid-August. Students should register for second summer session.

ENT 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ENT 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.
ENT 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

ENT 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their theses.

ENT 726 Biological Control of Insects and Weeds 3.
Prerequisite: ENT 425 or Graduate Standing.
Overview of the field of biological control and its role in Integrated Pest Management programs. Emphasis on the diversity and sometimes unusual interactions of insect parasitoids and predators with their hosts/prey, controversies in biological control, critical analysis of selected projects, and basic conceptual and "hands-on" tools for approaching biological control research and implementing projects.

ENT 731 Insect Ecology 3.
Prerequisite: ENT 425 or Graduate standing.
The interrelationships among insects and components of their effective environments which result in dynamic spatial and temporal patterns of particular species. Also, the diverse roles of insects in structure and function of communities and ecosystems.

ENT 762 Insect Pest Management In Agricultural Crops 3.
Prerequisite: Graduate Standing.
Critical review of the biology and ecology of representative beneficial and injurious insects and arachnids of agricultural crops and the advantages and limitations of advanced concepts of their management in selected agroecosystems.

ENT 791 Special Topics In Entomology 1-6.
Prerequisite: Graduate standing.
A variable credit lecture and laboratory series offering topics such as advanced beekeeping, morphology, physiology, systematics, behavior, biological control, nursery and ornamental pests, host plant resistance, information retrieval, biological monitoring and sampling, population modelling, extension entomology, computer methods and urban, forest and stored product pests.

ENT 801 Seminar 1.
Prerequisite: Graduate standing in ENT or closely allied fields.
Discussion of entomological topics selected and assigned by seminar chair.

ENT 804 Insect Natural History and Field Ecology 1.
Prerequisite: Graduate standing in Entomology.
Diversity of ecological roles and lifestyles of insects and related arthropods using techniques in field ecology. Two-week-long field trips to Coastal Plain and Mountains with orientation walks, evening lectures, and field projects. Taught during the two weeks prior to the Fall semester.

ENT 820 Special Problems 1-6.
Original research on special problems in entomology not related to a thesis problem. Provides experience and training in research.

ENT 841 Agricultural Entomology Practicum 3.
Prerequisite: Economic entomology (ENT 762 recommended).
Practical experience in research, extension and commercial aspects of insect pest management on a broad range of agricultural crops under actual field conditions. Class meets 9 hours each Friday for 10 weeks from early June to mid-August. Students should register for second summer session.

ENT 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ENT 890 Doctoral Preliminary Exam 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

ENT 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Department of Food, Bioprocessing and Nutrition Science

The Department of Food, Bioprocessing and Nutrition Sciences offers three undergraduate degree programs:

1. Food Science
2. Bioprocessing Science
3. Nutrition Science

These programs focus on the application and integration of chemistry, biology, biochemistry, biotechnology, and engineering disciplines in the development, production, and delivery of safe and nutritious foods and other products (including drugs) from food and bioprocessing operations, in addition to understanding the role of diet and how it generally affects human health. In support of each program, the department maintains modern, fully-equipped laboratories and a host of Nutrition outreach opportunities for teaching and research. All three undergraduate programs are compatible with pre-professional school curricula, such as pre-med or pre-vet, and many students elect to take on a minor in an area that enhances their major coursework. There are also opportunities
to double major both within departmental majors as well as external majors such as Biochemistry.

**Opportunities**

Consumer demand for safe, high quality, nutritious foods and biopharmaceutical products, as well as for educational programs designed to promote healthy eating, creates a variety of career opportunities in the food, pharmaceutical and the allied health industries. Industrial opportunities include management, research and development, process supervision, quality control and assurance, procurement, distribution, and sales. Public health opportunities include educational program development, delivery, and assessment. In addition, graduates hold positions with government agencies and many with advanced degrees have teaching and/or research positions in colleges and universities.

**Food Science**

Many career opportunities exist in the food and beverage industry, the world’s largest manufacturing sector, for graduates with a Food Science degree. Food science professionals are involved in the discovery of new food sources, new methods of food preservation, advances in food chemistry and sensory science and even product development. Positions are found worldwide, providing technical support to the food, beverage, and pharmaceutical industries and also government agencies. Food scientists work to ensure the safety and quality of foods through the application of basic scientific principles. The demand for food scientists continues to increase as the food industry expands.

**Bioprocessing Science**

The Bioprocessing Science degree is a unique program designed to provide graduates with a special skill set specific to bioprocessing and biomanufacturing. Graduates from this degree program will have exciting opportunities to biomanufacture medicines, vaccines, enzymes and other products that improve the quality of life.

**Nutrition Sciences**

Jobs for those with training in Nutrition Science are increasing due to the growing and aging population, public interest, especially related to obesity and chronic disease risk, and a desire to develop nutritious products for a health conscious consumer. Nutrition scientists may be employed in a variety of settings including clinical or private practice, health management organizations, wellness centers, health-related government agencies or non-profit organizations, and the food industry. Because of the key role that diet plays in the prevention, development, and treatment of many major diseases, health professionals benefit from an understanding of nutrition. Therefore, a degree in Nutrition Science is also highly relevant for those desiring a career in an allied health field.

**Scholarships**

The department provides both merit and financial need scholarships to encourage and assist students preparing for careers in Food, Bioprocessing, or Nutrition Science.

**Curricula**

The Food Science Bachelor of Science degree is offered through two curricula emphasizing science or technology. The science curriculum is designed for students desiring a more analytically intense program leading to technical careers in the food industry or graduate school. Students with an interest in business opportunities will find the technology program permits greater flexibility to pursue coursework in business, agricultural economics, or related fields.

The Bioprocessing Science Bachelor of Science degree prepares students for technical careers in biomanufacturing through formal training in fundamental sciences, as well as preparing students for careers in industries whose products are based on biological systems, including biopharmaceutical and biotechnology companies.

The Nutrition Science Bachelor of Science degree has two sub-plans to choose from: the Science track or the Applied track. The Science curriculum is designed for those students with an interest in graduate school or post-graduate training in a human health profession for which physics and 4 semesters of chemistry are required. The Applied curriculum is designed for those interested in health-related jobs immediately after graduation, obtaining further training to become a Registered Dietitian after graduation, or going on for post-graduate training in a human health profession for which no physics courses and only 3 semesters of chemistry are required.

**Minor in Food Science**

The Food Science Minor is designed to provide students with important food science principles and concepts, giving a competitive edge to individuals seeking employment in the food, pharmaceutical and related industries. A minor provides technical information to improve the student’s knowledge and understanding of food and its manufacture. While a comprehensive coverage of Food Science cannot be accomplished in 15 credit hours, flexibility in developing the minor permits tailoring each program to complement a student’s major. An introductory course (FS 201) is required, but other courses are selected to build on the student’s major.

**Minor in Nutrition**

A Nutrition Science minor is designed to provide knowledge of the principles of nutrition associated with healthful diets and to apply an understanding of nutrient structure, function, and sources to the evaluation of information and policies concerning foods and dietary and/or feeding practices. Introductory Biochemistry is a required course; students then select an additional 12 credit hours from a list of 200-500 level classes, including on- and off-campus independent study or research experiences.

Specific curriculum requirements are available on the Registration and Records website (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php#requirement-courses-list).

**BBS - Bioprocessing Courses**

**BBS 201 Introduction to Biopharmaceutical Science** 3.

Through this course, students will experience laboratory and manufacturing terminology relevant to the biomanufacturing industries. Students will also gain exposure to regulatory and compliance procedures and issues facing this industry. This course will provide an introduction to prepare students to meet the demands and expectations of this industry and the bioprocessing science program.
BBS 301 Process Validation Science 3.
Prerequisite: (FS 231 and BBS 201) or BBS 426.
Process validation is a tested and documented subset of the panel of activities that are performed during the production of a biopharmaceutical. This course will introduce the concept of process validation as it applies to the biotechnology industry, and more specifically, to the manufacture of protein molecules as therapeutic agents.

BBS 426 Upstream Biomanufacturing Laboratory 2.
Prerequisite: (MB 351 and FS 231) CHE/BEC 463.
This course is an introduction to current food manufacturing practice (CGMP) as applied to the growth of microbial cells in bioreactors. Hands-on experience is obtained in the operation and control of 30 liter bioreactors to study agitation, oxygen transfer, cleaning, sterilization, media preparation and the growth of recombinant E. coli for protein production. Credit will not be awarded in both BBS 426 and BBS/FS 526. This is an eight week course.

BBS 526 Upstream Biomanufacturing Laboratory 2.
Prerequisite: (MB 351 and FS 231) CHE/BEC 463.
This course is an introduction to current food manufacturing practice (CGMP) as applied to the growth of microbial cells in bioreactors. Hands-on experience is obtained in the operation and control of 30 liter bioreactors to study agitation, oxygen transfer, cleaning, sterilization, media preparation and the growth of recombinant E. coli for protein production. Credit will not be awarded in both BBS 426 and BBS/FS 526. This is an eight week course.

FS - Food Science Courses

FS 201 Introduction to Food Science 3.
Science and practice of providing a wholesome, nutritious, economical and readily available supply of basic and processed foodstuffs. Chemical nature of foods, nutritional requirements, health-related dietary considerations, microorganisms, foodborne illnesses, preservation and processing, food additives, food labeling, food safety and the consumer.

FS 231 Principles of Food and Bioprocess Engineering 4.
Prerequisite: PY 211.
Engineering concepts and their applications to the food and bioprocessing industries. Mass and energy balances and principles related to fluid flow, heat transfer, refrigeration and freezing, psychrometrics, and selected unit operations found in these industries.

FS 250 Basics of Food Safety & Quality 3.
This course examines the programs that maintain food safety and quality in food processing environments. It is based on international standards for food safety prerequisite programs in food manufacturing. Students will learn how to evaluate and manage pre-requisite programs for food safety. Examples include Good Manufacturing Practices (GMPs), Sanitation Standard Operating Procedures (SSOPs), Sanitation Control Procedures, and Preventive Controls.

FS 290 Careers in Food and Bioprocessing Sciences 1-4.
Careers and opportunities related to food and bioprocessing industries and regulatory agencies. Development of professional enhancement skills. Resume preparation, interviewing techniques, leadership development, oral and written communication, and team building. Benefits of undergraduate research, internships, and graduate education.

FS 295 Special Topics in Food Science 1-4.
Offerings of new or experimental courses in Food Science at the early undergraduate level.

FS 301 Introduction to Human Nutrition 3.
Prerequisite: Sophomore standing.
Functions, dietary sources, digestion and absorption, deficiencies and excesses of essential nutrients in humans; dietary guidelines; food labels; the study of diet-disease relationships; the role of diet in heart disease, diabetes, hypertension, osteoporosis; energy balance and weight control; dietary supplement regulation; diet and athletic performance.

FS 322 Muscle Foods and Eggs 3.
Prerequisite: ZO 160, BIO 181 or BIO 183.
Processing and preserving fresh poultry, red meats, seafood, and eggs. Ante- and post-mortem events as they affect quality, yield, and compositional characteristics of muscle foods. Principles and procedures involved in the production of processed meat items.

FS 324 Milk and Dairy Products 3.
Prerequisite: BIO 181 or 183, CH 101.
Introduction to the manufacture of dairy products. Dairy processing procedures from the farm, through the dairy plant, and to the consumer are studied. The course consists of 15 learning modules, three exams, and a project.

FS 330 Science of Food Preparation 3.
Prerequisite: FS 201 and CH 101.
Basic elements of culinary practices are taught in conjunction with the scientific basis for how flavor, texture, and appearance of foods are created or maintained during food preparation.

FS 350 Introduction to HACCP 3.
Introductory course on the Hazard Analysis and Critical Control Points System (HACCP) which is designed to decrease hazards in foods. An International HACCP Alliance approved curriculum which covers prerequisite programs. A step by step approach for developing and implementing a HACCP plan for USDA regulated food processing plants. Offered only as a world wide web course through the Office of Instructional Telecommunications.

FS 351 Sanitation Standard Operating Procedures in Food Safety Control 3.
This course is one of a series of six courses that are part of North Carolina State University’s Food Safety Certification program. "Sanitation Standard Operating Procedures (SSOP’s) in Food Safety Control" addresses current federal regulatory requirements for seafood, meat, and poultry processing operations. The course also addresses the international dimensions of sanitary standards in import/export of food. The course is designed to provide the student with the background necessary to develop, implement and maintain a sanitation plan based on sanitation standard operating procedures (SSOP’s).

FS 352 Introduction to Microbiological Food Safety Hazards 3.
For non-science students. The course is designed to provide an introduction to the more prominent microbial foodborne safety hazards and their control. Lessons are provided on specific pathogens, their pathogenesis and transmission and the scientific basis for specific control options. In addition, the course provides up-to-date information on current “hot-topics” in food microbiology, including food safety regulations and emerging food safety issues. Course is offered to non-science majors. Students may not receive credit for both FS 352 and FS 405.
FS 353 Good Manufacturing Practices 3.
Food Safety sanitation in the United States is primarily regulated by FDA under their "Good Manufacturing Practices (GMP)." This course will introduce the student to the GMP and consider how and why they were developed. Students will become familiar with the issues of compliance and consider the regulations in light of international laws and current practices. The student should have some familiarity with food processing and safety.

FS 354 Food Sanitation 3.
Prerequisite: FS/ANS/PO 350 or equivalent HACCP industry experience.
Discussion of hygienic practices, requirements for sanitation programs, and modern sanitation practices in food processing facilities. At the end of this course, students will have the knowledge to develop and maintain a sanitation program.

FS 401 Advanced Nutrition and Metabolism 3.
Prerequisite: (NTR 301 or NTR 415) and (CH 221 or CH 220 or CH 225).
Nutritional biochemistry and physiology as it relates to establishment of nutrient requirements and Dietary Reference Intakes. Digestion, absorption, metabolism, storage, and excretion of nutrients and other markers of nutritional adequacy or excess with emphasis on micronutrients. Functions of nutrients, in bone muscle, blood, growth and development and communication. Credit will not be awarded for both NTR (FS) 401 and NTR (FS) 501.

FS 402 Chemistry of Food and Bioprocessed Materials 4.
Prerequisite: CH 220 or 221 or 225.
The course focuses on the properties of biological molecules (e.g., proteins, enzymes, lipids, carbohydrates and pigments) found in foods and pharmaceuticals. Basic elements of molecules, such as structure and reactive groups, are presented in regard to how they affect the properties of foods and pharmaceuticals. Reactions such as Maillard browning and lipid oxidation are discussed regarding mechanisms, products and controlling processes. Laboratory experiments emphasize basic concepts discussed in lecture and provide a practical working knowledge of select analytical equipment.

FS 403 Analytical Techniques in Food & Bioprocessing Science 4.
Prerequisite: FS 402.
Principles, methods and techniques for quantitative physical and chemical analyses of food, nutraceutical, and pharmaceutical products. Results of analyses evaluated in terms of quality standards and governing regulations.

FS 405 Food Microbiology 3.
Prerequisite: MB 351.
Microorganisms of importance in foods and their metabolic activities. Source of microbial contamination during food production, processing and storage. Microbial spoilage; foods as vectors of human pathogens. Physical and chemical destruction of microorganisms in foods and the kinetics involved. Conversions of raw foods by microorganisms into food products. Microbiological standards for regulatory and trade purposes. Credit will not be given for both FS/MB 405 and FS/MB 505.

FS 406 Food Microbiology Lab 1.
Prerequisite: MB 351 and Corequisite: FS 405 or FS 505.
Laboratory experience to complement FS/MB 405. Skills in detecting and quantitating microorganisms and their toxins in foods. Application of colony and direct microscopic counts, most probable numbers, enzyme immunoassays, nucleic acid probes and computer modeling are used to understand the numbers and types of microorganisms or microbial end products in foods. Laboratory safety and oral and written reports are emphasized.

FS 407 Risk Analysis and Hazard Analysis in Food Safety 3.
Prerequisite: FS/ANS/PS 350 or equivalent HACCP industry experience.
In-depth focus on the application of the first HACCP principle, Hazard Analysis, on the identification of food safety hazards, as well as the emerging importance of risk assessment. Distance Education Only.

FS 416 Quality Control in Food and Bioprocessing 3.
Prerequisite: ST 311.
Organization and principles of quality control in the food and bioprocessing industries. Regulations and process control to maintain safety and quality. Evaluation of physical, microbiological, chemical, sensory, and stability testing for food and bioprocessed materials. Risk assessment, hazard analysis and critical control point (HACCP), process control, water quality, waste water analysis and reduction. Cleaning and sanitation and compliance inspection.

FS 421 Food Preservation 3.
Prerequisite: FS 231 and FS 405.
Food preservation methods. Emphasis on thermal, freezing, drying and fermentation processes and corresponding physical, chemical and organoleptic changes to products. Application of preservation schemes to the development of an overall processing operation.

FS 426 Upstream Biomanufacturing Laboratory 2.
Prerequisite: (MB 351 and FS 231) CHE/BEC 463.
This course is an introduction to current food manufacturing practice (CGMP) as applied to the growth of microbial cells in bioreactors. Hands-on experience is obtained in the operation and control of 30 liter bioreactors to study agitation, oxygen transfer, cleaning, sterilization, media preparation and the growth of recombinant E. coli for protein production. Credit will not be awarded in both BBS 426 and BBS/FS 526. This is an eight week course.

FS 453 Food Laws and Regulations 3.
Prerequisite: Junior standing.
Federal and state laws and regulations, and case law history affecting food production, processing, packaging, marketing, and distribution of food and food products. History of food law, enactment of laws and regulations, legal research, and regulatory agencies. Credit will not be given for both FS 453 and FS 553.

FS 462 Postharvest Physiology 3.
Prerequisite: PB 421.
Preharvest and postharvest factors that affect market quality of horticultural commodities with an emphasis on technologies to preserve postharvest quality and extend storage life of fruits, vegetables and ornamentals.

FS 475 Problems and Design in Food and Bioprocessing Science 3.
Prerequisite: FS 231, FS 402, FS 405 or BAE(BBS) 425.
Team approach to problem solving and product/process design and development. Ingredient functionality; formulation, safety, processing, packaging, sensory evaluation, regulatory issues, hazard analysis, critical control points (HACCP), nutritional labeling and other pertinent scientific, technical, marketing and financial aspects. Oral and written presentations are required.

FS 492 External Learning Experience 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes facilities and resources which are external to the campus. Contact and arrangements with prospective employers must be initiated by the student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.
FS 493 Special Problems in Food Science 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes campus facilities and resources. Contact and arrangements with prospective employers must be initiated by the student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

FS 495 Special Topics in Food Science 1-3.
Offered as needed to present materials not normally available in regular course offerings or for offering new courses on a trial basis.

FS 501 Advanced Nutrition and Metabolism 3.
Prerequisite: (NTR 301 or NTR 415 or NTR 500) and (CH 221 or CH 220 or CH 225).
Nutritional biochemistry and physiology as it relates to establishment of nutrient requirements and Dietary Reference Intakes. Digestion, absorption, metabolism, storage, and excretion of nutrients and other markers of nutritional adequacy or excess with emphasis on micronutrients. Functions of nutrients, in bone, muscle, blood, growth and development, and communication. Credit will not be awarded for both NTR(FS) 401 and NTR(FS) 501.

FS 502 Chemistry of Food and Bioprocessed Materials 4.
Prerequisite: CH 220 or 221 or 225.
The course focuses on the properties of biological molecules (e.g., proteins, enzymes, lipids, carbohydrates and pigments) found in foods and pharmaceuticals. Basic elements of molecules, such as structure and reactive groups, are presented in regard to how they affect the properties of foods and pharmaceuticals. Reactions such as Maillard browning and lipid oxidation are discussed regarding mechanisms, products and controlling processes. Laboratory experiments emphasize basic concepts discussed in lecture and provide a practical working knowledge of select analytical equipment.

FS 505 Food Microbiology 3.
Prerequisite: MB 351.
Microorganisms of importance in foods and their metabolic activities. Source of microbial contamination during food production, processing and storage. Microbial spoilage; foods as vectors of human pathogens. Physical and chemical destruction of microorganisms in foods and the kinetics involved. Conversions of raw foods by microorganisms into food products. Microbiological standards for regulatory and trade purposes. Credit will not be given for both FS/MB 405 and FS/MB 505.

FS 506 Food Microbiology Lab 1.
Prerequisite: MB 351 and Corequisite: FS 405 or FS 505.
Laboratory experience to complement FS/MB 405. Skills in detecting and quantifying microorganisms and their toxins in foods. Application of colony and direct microscopic counts, most probable numbers, enzyme immunosassays, nucleic acid probes and computer modeling are used to understand the numbers and types of microorganisms or microbial end products in foods. Laboratory safety and oral and written reports are emphasized.

FS 520 Pre-Harvest Food Safety 3.
Dairy, beef, swine, poultry, and seafood modules: production, government regulation of products, use of antimicrobials in production, and the emergence of resistant human pathogens. Field fruit and vegetable crops section: hazards in food including pesticide residues and philosophy and practice of organic farming and public's perception of food and biotechnology.

FS 521 Food Preservation 3.
Corequisite: MB 351.
Food preservation methods. Emphasis on thermal, freezing, drying and fermentation processes and corresponding physical, chemical and organoleptic changes to products. Application of preservation schemes to the development of an overall processing operation.

FS 522 Food Packaging 3.
This course deals with the history of packaging, types of packages, and packaging equipment, factors involved in choice of package, aseptic packaging, shelf-life studies, modified atmospheric packaging, active packaging, packaging for e-commerce, automatic identification and data capture, closures, seal integrity, tamper evidence, graphic design & printing, distribution, labeling, environmental issues, regulatory agencies and stipulations, new frontiers in packaging, and packaging resources. Restricted to students enrolled in (or degree received) in the Food Bioprocessing and Nutrition Sciences Program or a closely related program such as the Biological & Agricultural Engineering Program.

FS 526 Upstream Biomanufacturing Laboratory 2.
Prerequisite: (MB 351 and FS 231) CHE/BEC 463.
This course is an introduction to current food manufacturing practice (CGMP) as applied to the growth of microbial cells in bioreactors. Hands-on experience is obtained in the operation and control of 30 liter bioreactors to study agitation, oxygen transfer, cleaning, sterilization, media preparation and the growth of recombinant E. coli for protein production. Credit will not be awarded in both BBS 426 and BBS/FS 526. This is an eight week course.

FS 530 Post-Harvest Food Safety 3.
Prerequisite: MB 351/352.
Background on the current issues and developments associated with post-harvest food safety, including biological, chemical, and physical food safety hazards. Additionally, regulations governing food safety and consumer perceptions.

FS 540 Food Safety and Public Health 3.
Prerequisite: MB 351/352.
Issues and developments related to the relationship between food safety and public health, including emerging foodborne pathogens; virulence and pathogenicity; foodborne toxins; epidemiological techniques used in the investigation of foodborne disease; rapid detection methods; and quantitative microbial risk assessment in food safety.

FS 550 Food Industry Study Tour 2.
The Food Industry Study Tour is designed to give students a behind the scenes look into the food processing industry. This week-long trip, will allow students to travel throughout North Carolina and the Southeast region, touring various meat, dairy, seafood, produce, cereal, snack food, beverage, and candy production facilities. The class trip will run 5-6 days during the week of Spring Break holiday. Enrollment is limited and subject to the permission of the instructor.

FS 553 Food Laws and Regulations 3.
Federal and state laws and regulations and case law history affecting food production, processing, packaging, marketing and distribution of food and food products. History of food law, enactment of laws and regulations, legal research, and regulatory agencies. Credit for both FS 453 and FS 553 is not allowed.
FS 554 Lactation, Milk, and Nutrition 3.
Prerequisite: ANS 230 or FS/NTR 400; BCH 451 or ZO 421.
Nutritional properties of milk as a high-quality food with nutritional diversity. Principles of physiology, biochemistry and cell biology in the mammary gland. Procedures of milk production and milk collection for milk quality and nutrition. Human lactation vs. that of domestic animals. Impacts of biotechnology and food safety on dairy production. Credit will not be given for both ANS 454 and 554.

FS 555 Exercise Nutrition 3.
Prerequisite: NTR 400/500.
Metabolism of macro- and micronutrients as affected by exercise and physical activity. Effects of dietary patterns, specific foods, dietary supplements and ergogenic aids on sports performance. Reading and discussion of current literature and individual or group projects.

FS 557 Nutraceuticals and Functional Foods 3.
This course evaluates the weight of evidence from peer-reviewed scientific literature relating food bioactives, whole foods, and diets to disease prevention, athletic performance, and cognitive development/enhancement. Data are viewed in the context of processing effects, global food and supplement regulations, as well as commercial marketing claims. Key concepts include dose-response, signal transduction, and the use of advanced technologies such as genomics, proteomics and metabolomics. Students will work in teams to develop and write a critical review manuscript suitable for publication.

FS 562 Postharvest Physiology 3.
Prerequisite: PB 321.
Pre- and post-harvest factors that affect market quality of horticultural commodities with an emphasis on technologies to preserve quality and extend storage life of crops.

FS 567 Sensory Analysis of Foods 3.
Prerequisite: Statistics 511.
Techniques of sensory analysis and data interpretation, a crucial aspect of food science research and marketing both at the academic and industrial levels. Fundamental and applied aspects of sensory analysis of foods, including human senses, descriptive analysis, scaling, consumer testing and sensory-instrumental relationships.

FS 580 Professional Development and Ethics in Food Safety 1.
Prerequisite: FSA 520 or FSA 530 or FS 540.
Professional development and thics related to food safety. Food safety communications to lay-audiences and the media; the ethical frontier between science/policy and science/profit. Planned student and faculty presentations as well as guest lectures on current topical issues.

FS 591 Special Problems In Food Science 1-6.
Prerequisite: Graduate standing or Senior standing.
Analysis of scientific, engineering and economic problems of current interest in foods. Problems designed to provide training and experience in research.

FS 592 Special Research Projects in Food Science 1-6.
FS 620 Special Problems In Food Science 1-6.
Prerequisite: Graduate standing or Senior standing.
Analysis of scientific, engineering and economic problems of current interest in foods. Problems designed to provide training and experience in research.

FS 623 Special Research Problems In Food Science 1-6.
Directed research in a specialized phase of food science designed to provide experience in research methodology and philosophy.

FS 658 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

FS 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

FS 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

FS 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their theses.

FS 706 Vitamin Metabolism 2.
Prerequisite: ANS(NTR,PO) 415 and BCH 453.
Structures, chemical and physical properties, functions, deficiency symptoms, distribution, absorption, transport, metabolism, storage, excretion and toxicity of vitamins in humans and domestic animals. Nutritional significance of essential fatty acids and metabolism of prostaglandins, prostacyclins and leucotrienes.

FS 725 Fermentation Microbiology 3.
Prerequisite: BCH 451, MB 351.
Fermentation bioprocessing and characteristics, function and ecology of responsible microorganisms. Fermentative activities, growth responses and culture interactions related to metabolism, physiology and genetics of lactic acid bacteria and selected yeasts and molds. Current developments in starter culture technology and genetics; application to food and industrial fermentations.

FS 741 Thermal Processing of Foods 3.
Prerequisite: FS 231.
Fluid flow, heat transfer, food preservation, kinetics of chemical, microbiological, and enzymatic reactions, decimal reduction time, pasteurization, sterilization, cook value, process lethality, canning of foods, thermal process evaluation, quality considerations, optimization, shelf-life studies, thermal processing equipment, hot-fill, extended shelf-life products, heat exchanger design, pumps, sanitation, aseptic processing, minimal processing, NFPA bulletins, alternative processing technologies, regulatory issues, HACCP.
FS 751 Food Ingredient Technology in Product Development 4.
Prerequisite: FS 402, FS 405, FS 421.
Chemistry and functional properties of major food ingredient materials.
Legal and regulatory restrictions, as well as consumer biases, in
existence with respect to selection of ingredients, package materials,
processes and labeling statements. Necessary skills and techniques for
efficiently and successfully conducting food product development projects
in a competitive corporate setting.

FS 765 Polymer and Colloidal Properties of Foods 3.
Prerequisite: (CH 221 or CH 225) and (CH 223 or CH 227) and FS 402.
Theoretical and practical elements of applying principles from
polymer and colloidal chemistry to foods. Major focus on proteins and
polysaccharides in sols, foams, emulsions and gels.

FS 780 Seminar in Food Science 1.
Preparation and presentation of scientific papers, progress reports and
research and special topics of interest in foods.

FS 785 Food Rheology 3.
Prerequisite: FS 331 or MAE 314.
Principles and methods for measuring rheological properties. Theories of
elastic, viscous, viscoelastic and viscoplastic behavior and relationships
to food texture and commodity damage during harvest, handling and
processing. Influence of time, composition and processing.

FS 791 Special Problems in Food Science 1-6.
Directed research in a specialized phase of food science designed to
provide experience in research methodology and philosophy. Credits
Arranged.

FS 792 Special Research Projects in Food Science 1-6.
Credits Arranged.

FS 820 Special Problems in Food Science 1-6.
Prerequisite: Graduate standing or Senior standing.
Analysis of scientific, engineering and economic problems of current
interest in foods. Problems designed to provide training and experience in
research.

FS 823 Special Research Problems in Food Science 1-6.
Directed research in a specialized phase of food science designed to
provide experience in research methodology and philosophy.

FS 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the
student in planning for the teaching assignment, observe and provide
feedback to the student during the teaching assignment, and evaluate the
student upon completion of the assignment.

FS 890 Doctoral Preliminary Exam 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral
preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of
the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

FS 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course
work during a summer session and who will be devoting full time to thesis
research.

Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment,
preliminary examination, and residency requirements for the doctoral
degree, and are writing and defending their dissertations.

NTR - Nutrition Courses

NTR 220 Food and Culture 3.
This course explores traditional food cultures around the world;
highlighting foodways, flavor profiles, and commonly used ingredients.
This course focuses on how and to what extent traditional foodways of
US immigrants are impacted by the majority culture and how regional
cuisines have been impacted by historical migration patterns. Students
will examine their own food culture, biases, and how these impact
personal interactions with others through a semester-long project. Food
tastings and sensory experiences will expose students to a variety
of global and US regional cuisines allowing students to compare and
contrast flavor profiles and commonly used ingredients. Course is
available to all majors.

NTR 301 Introduction to Human Nutrition 3.
Prerequisite: Sophomore standing.
Functions, dietary sources, digestion and absorption, deficiencies and
excesses of essential nutrients in humans; dietary guidelines; food labels;
the study of diet-disease relationships; the role of diet in heart disease,
diabetes, hypertension, osteoporosis; energy balance and weight control;
dietary supplement regulation; diet and athletic performance.

NTR 302 Introduction to Nutrition Research, Communication, and
Careers 3.
Prerequisite: NTR 301.
This course exposes students to scientific literature, communication,
and careers in the field of nutrition. Students will learn how to critically
evaluate scientific literature and communicate that information both
orally and in writing. Course topics include: research design, nutritional
epidemiology, statistics, scientific writing, professionalism, and current
nutrition-related "hot topics." Class time will be a combination of lecture
and small or large group discussions and individual or group in-class
assignments. Student evaluations include in-class assignments, writing
assignments, oral presentations, and exams.

NTR 320 Nutrition Education 3.
Prerequisite: NTR 301.
This course exposes students to the principles behind the development,
implementation, and evaluation of nutrition education programs in
the United States. Course topics will cover behavior change models,
educational pedagogies, nutrition needs assessments, curricular and
tool development, social marketing, and social media and technology
related to nutrition education. The course is a flipped-course design with
course content posted online through pre-recorded lectures and reading
assignments. In-class lecture time will be reserved for class discussion
and in-class assignments. Student evaluations include exams, in-class
assignments, and a term paper.
NTR 330 Public Health Nutrition 3.
Students will explore factors that affect the health and nutrition of the population as well as how those factors are identified, studied, and applied to improve health issues. Students will identify services and programs available to address nutrition and health issues. Students will analyze current events related to public health, evaluate nutrition related policy, and advocate for issues related to nutrition.

NTR 401 Advanced Nutrition and Metabolism 3.
Prerequisite: (NTR 301 or NTR 415) and (CH 221 or CH 220 or CH 225). Nutritional biochemistry and physiology as it relates to establishment of nutrient requirements and Dietary Reference Intakes. Digestion, absorption, metabolism, storage, and excretion of nutrients and other markers of nutritional adequacy or excess with emphasis on micronutrients. Functions of nutrients, in bone muscle, blood, growth and development and communication. Credit will not be awarded for both NTR (FS) 401 and NTR (FS) 501.

NTR 410 Maternal and Infant Nutrition 3.
Prerequisite: NTR 301.
Students will explore the current research, controversies, and biological mechanisms related to nutrition for women before, during, and after pregnancy, as well as for infants in utero and after birth.

NTR 415 Comparative Nutrition 3.
Prerequisite: ANS 225 or ANS 230 or CH 220 or CH 223 or CH 227. Principles of nutrition, including the classification of nutrients and the nutrient requirements of and metabolism by different species for health, growth, maintenance and productive functions.

NTR 419 Human Nutrition and Chronic Disease 3.
Prerequisite: Junior standing, ANS 230, or ANS/FS/NTR 301 or ANS/ NTR/PO 415.
Current concepts regarding, and physiological bases of the roles of nutrition in the prevention and treatment of acute and chronic disease states in humans with emphasis on the process of scientific discovery, reading of original research and transformation of research findings to public policy.

NTR 420 Community Nutrition 4.
Prerequisite: NTR 301 and junior standing required.
This course exposes students to nutrition-related community programs, agencies, and activities. Through service-learning experiences, students will apply course material to teach nutrition in the community. Course topics will also cover behavior change models, educational pedagogies, and nutrition among diverse populations. Students are expected to provide their own transportation for the community service in the greater Raleigh area. Instructor consent required; Credit will not be given for both NTR 420 and NTR 520.

NTR 421 Life Cycle Nutrition 3.
Prerequisite: NTR 301 and junior standing required.
This course focuses on the physiologic changes and nutritional needs throughout the life cycle. Additionally, students will explore psychosocial and environmental influencers on food consumption and diet quality at each stage of life. Pregnancy and lactation, fetal development, infancy, early childhood, childhood, adolescence, young and middle adulthood, and geriatrics will be examined. Student will apply course content to real-world settings through individual and/or group service-learning projects. Credit will not be given for both NTR 421 and NTR 521.

NTR 454 Lactation, Milk and Nutrition 3.
Prerequisite: ANS 230 or FS/NTR 400; BCH 451 or ZO 421.
Nutritional properties of milk as a high-quality food with nutritional diversity. Principles of physiology, biochemistry and cell biology in the mammary gland. Procedures of milk production and milk collection for milk quality and nutrition. Human lactation vs. that of domestic animals. Impacts of biotechnology and food safety on dairy production. Credit will not be given for both ANS 454 and 554.

NTR 490 Senior Capstone Experience in Nutrition 4.
Prerequisite: Nutrition Science majors only; Senior status required.
In this capstone course, students will work in groups to complete research and service projects for community partners while gaining professional experiences in nutrition. Students will be expected to apply their knowledge and skills gained throughout their nutrition coursework to develop solutions to problems in public health and community nutrition. Students will complete comprehensive written and poster presentations about their work as a group, in addition to individual reflection(s) about their learnings. Students must provide their own transportation when visiting their community partner site. Students should complete this course in the last semester (or year) of their degree. NTS and NTA Majors only; Senior status required.

NTR 492 External Learning Experience 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes facilities and resources which are external to the campus. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

NTR 493 Special Problems in Nutrition 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes campus facilities and resources. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

NTR 495 Special Topics in Nutrition 1-3.
Offered as needed to present materials not normally available in regular course offerings or for offering of new courses on a trial basis.

NTR 500 Principles of Human Nutrition 3.
Prerequisite: CH 220 and (CH 221 or CH 223) and (ZO 160 or BIO 181/183).
Overview of fields of Nutritional Sciences; functions of nutrients in the human body; sources and properties of nutrients; relationships of food industry practices to nutrition. Credit will not be given for both NTR (FS)400 and NTR 500.

NTR 501 Advanced Nutrition and Metabolism 3.
Nutritional biochemistry and physiology as it relates to establishment of nutrient requirements and Dietary Reference Intakes. Digestion, absorption, metabolism, storage, and excretion of nutrients and other markers of nutritional adequacy or excess with emphasis on micronutrients. Functions of nutrients, in bone, muscle, blood, growth and development, and communication. Credit will not be awarded for both NTR(FS) 401 and NTR(FS) 501.
NTR 510 Maternal and Infant Nutrition 3.
P: NTR 301 or NTR 500.
Students will explore the current research, controversies, and biological mechanisms related to nutrition for women before, during, and after pregnancy, as well as for infants in utero and after birth.

NTR 515 Advanced Comparative Nutrition 3.
An in-depth presentation of core nutrition principles stressing the role nutrient availability plays in digestive and metabolic adaptations of a variety of animal species. Consideration will be given to translational biomedical nutrition issues that apply to both human and animal health. Students are expected to develop a term paper suitable for submission in a peer-reviewed scientific journal that reviews the latest information in metabolic or digestive adaptations of a specific species as related to nutritional processes. Credit will not be allowed for both ANS/NTR/PO 415 comparative Nutrition and NTR/PO 515 Advanced Comparative Nutrition.

NTR 520 Community Nutrition 4.
Prerequisite: NTR 301 and junior standing required.
This course exposes students to nutrition-related community programs, agencies, and activities. Through service-learning experiences, students will apply course material to complete a needs assessment for a target audience, design and implement a program, and evaluate the program's effectiveness. Course topics will also cover behavior change models, educational pedagogies, and nutrition among diverse populations. Twenty hours of service is required. Students are expected to provide their own transportation for the community service in the greater Raleigh area. Instructor consent required; Credit will not be awarded for both NTR 420 and NTR 520.

NTR 521 Life Cycle Nutrition 3.
Prerequisite: NTR 301 or other introductory human nutrition course.
This course focuses on the physiological changes and nutritional needs throughout the life cycle. Additionally, students will explore psychological and environmental influencers on food consumption and diet quality at each stage of life. Pregnancy and lactation, fetal development, infancy, early childhood, childhood, adolescence, young and middle adulthood, and geriatrics will be examined. Students will apply course content to real-world settings through individual and/or group service-learning projects.

NTR 525 Advanced Feed Science and Technology 3.
Prerequisite: PO/ANS/NTR 415 or ANS 230 or related feed industry experience.
Feed mill management, equipment, maintenance, operation, safety, and regulations pertaining to feed manufacturing. Feed ingredient purchasing, inventory, storage, quality evaluation, and computerized feed formulation. Advanced NTR 525 topics include more detailed aspects of feed science and technology, feed mill design and process flow, operations management, feed quality assurance, regulations, and computer applications. The Distance Education section will have independent study assignments in place of lab experience. Credit will not be given for both PO/ANS 425 and NTR 525.

NTR 550 Applied Ruminant Nutrition 3.
Prerequisite: ANS 230 or ANS (NTR, PO) 415.
Applied concepts in ruminant nutrition for the practicing agricultural professional. Protein, energy, vitamin and mineral nutrition in relation to the nutritional needs and practical feeding of beef cattle, dairy cattle, sheep, and goats. New developments in feeding systems, feed additives and the prevention and treatment of metabolic disorders. Emphasis on solving problems in case studies. Permission given to undergraduates.

NTR 554 Lactation, Milk, and Nutrition 3.
Prerequisite: ANS 230 or FS/NTR 400; BCH 451 or ZO 421.
Nutritional properties of milk as a high-quality food with nutritional diversity. Principles of physiology, biochemistry and cell biology in the mammary gland. Procedures of milk production and milk collection for milk quality and nutrition. Human lactation vs. that of domestic animals. Impacts of biotechnology and food safety on dairy production. Credit will not be given for both ANS 454 and 554.

NTR 555 Exercise Nutrition 3.
Prerequisite: NTR 400/500.
Metabolism of macro- and micronutrients as affected by exercise and physical activity. Effects of dietary patterns, specific foods, dietary supplements and ergogenic aids on sports performance. Reading and discussion of current literature and individual or group projects.

NTR 557 Nutraceuticals and Functional Foods 3.
This course evaluates the weight of evidence from peer-reviewed scientific literature relating food bioactives, whole foods, and diets to disease prevention, athletic performance, and cognitive development/ enhancement. Data are viewed in the context of processing effects, global food and supplement regulations, as well as commercial marketing claims. Key concepts include dose-response, signal transduction, and the use of advanced technologies such as genomics, proteomics and metabolomics. Students will work in teams to develop and write a critical review manuscript suitable for publication.

NTR 561 Equine Nutrition 3.
Prerequisite: ANS 230 or ANS 225 or ANS (NTR, PO) 415 or PO/NTR 515.
This course explores concepts in equine nutrition including digestive physiology of horses, nutrient requirements for different classes of horses and feed management. Ration evaluation and balancing, as well as problem solving will be a core component to this course.

NTR 594 Special Topics in Nutrition 1-6.

NTR 601 Master's Seminar 1-3.

NTR 624 Topical Problems In Nutrition 1-6.
Prerequisite: Graduate standing or Senior standing.
Analysis of current problems in nutrition. Also entails the scientific appraisal and solution of a selected problem designed to provide training and experience in research.

NTR 625 Advanced Special Problems In Nutrition 1-6.
Prerequisite: Graduate standing.
Directed research in a specialized phase of nutrition designed to provide experience in research methodology and philosophy.

NTR 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

NTR 690 Advanced Special Problems In Nutrition 1-6.
Prerequisite: Graduate standing.
Directed research in a specialized phase of nutrition designed to provide experience in research methodology and philosophy.

NTR 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.
NTR 699 Research In Nutrition 1-9.
Prerequisite: Graduate standing.
Original research preparatory to the thesis for Master of Science or Doctor of Philosophy degree.

NTR 701 Protein and Amino Acid Metabolism 3.
Prerequisite: BCH 453, ZO 421, a 400-level nutrition course.
Study of protein and amino acid metabolism, regulation, dietary requirements and techniques for their investigation in human and other animals.

NTR 706 Vitamin Metabolism 2.
Prerequisite: ANS(NTR,PO) 415 and BCH 453.
Structures, chemical and physical properties, functions, deficiency symptoms, distribution, absorption, transport, metabolism, storage, excretion and toxicity of vitamins in humans and domestic animals. Nutritional significance of essential fatty acids and metabolism of prostaglandins, prostacyclins and leukotrienes.

NTR 708 Energy Metabolism 3.
Prerequisite: BCH 453 and an introductory NTR course.
Relationship of biochemical and physiological events within the cell, tissue, organ and system with the nutrient needs as sources of energy for productive animal life. Digestion, absorption and metabolism of energy sources. Presentation of processes of energy transformations within living structures in relation to energetics, biological oxidations, coupled reactions, anabolic and catabolic systems, metabolic control, partitioning and efficiency.

NTR 764 Advances in Gastrointestinal Pathophysiology 3.
Prerequisite: PHY 503, PHY 504.
This course will focus on advanced gastrointestinal physiology and the pathophysiology of diseases of relevance to scientists involved in animal-related research. In particular, the course will cover the pathophysiology of ulceration, infectious diarrhea, ischemia, motility disorders, and inflammatory diseases of the gut. An in-depth review paper will be required based on recent literature regarding a specific gastrointestinal disease.

NTR 775 Mineral Metabolism 3.
Prerequisite: NTR(FM) 415, BCH 451 and ZO 421.
Requirements, function, distribution, absorption, excretion and toxicity of minerals in humans and domestic animals. Interactions between minerals and other factors affecting mineral metabolism or availability. Emphasis on mechanisms associated with mineral functions and the metabolic bases for the development of signs of deficiency.

NTR 785 Digestion and Metabolism in Ruminants 3.
Prerequisite: Graduate standing.
Advanced concepts in ruminant digestion and metabolism, with emphasis on bovine, ovine, and caprine species. Major topics include voluntary intake, ruminal fermentation, mechanisms and rates of digestion, absorption and passage of dietary components, and postabsorptive metabolism of carbohydrates, lipids, and proteins. New developments in feeding systems, feed additives and the prevention and treatment of metabolic disorders.

NTR 790 Advanced Feed Formulation 3.
Prerequisite: NTR(FM) 525.
Principles of feed and ingredient quality assurance and how to develop a comprehensive quality assurance program. The course will include the development of an approved supplier list, ingredient specifications, feed manufacturing quality assurance procedures, and risk based feed safety programs.

NTR 794 Special Topics in Nutrition 1-6.

NTR 801 Doctoral Seminar 1.

NTR 824 Topical Problems In Nutrition 1-6.
Prerequisite: Graduate standing or Senior standing.
Analysis of current problems in nutrition. Also entails the scientific appraisal and solution of a selected problem designed to provide training and experience in research.

NTR 825 Advanced Special Problems In Nutrition 1-6.
Prerequisite: Graduate standing.
Directed research in a specialized phase of nutrition designed to provide experience in research methodology and philosophy.

NTR 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

NTR 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

NTR 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Department of Horticultural Science

Horticulture is a dynamic segment of agriculture. The development, growth, distribution, and utilization of fruits, vegetables, flowers, and ornamental plants, plus the art and science of landscape designing enrich our lives with nutritious foods and more attractive surroundings. North Carolina’s varied climatic conditions favor the production of a wide variety of horticultural crops on a commercial scale, as well as numerous beautiful parks, gardens, and arboreta. The growing interest in local foods and home gardening has created a demand for more information.
about fruits and vegetable production and new crop varieties adapted to North Carolina’s environments. Urban population growth fuels a need for ornamental plants and a thriving nursery industry. Designers skilled in residential and commercial landscaping, interior plantscaping, and plant maintenance are in high demand. The growth in demand for horticultural information by the consumer, schools, and state and county government continues to increase.

Undergraduate programs in horticultural science offer a broad based education in physical and biological sciences and a sound production background. Students can concentrate in areas of fruit and vegetable science, floriculture, woody ornamental plant science, landscape design, or pursue a general approach encompassing all the specialties. They are prepared for graduate study or for diverse professional service.

Opportunities
Horticulture graduates fill positions in production, processing, sales, service, and outreach. Among these are:

- county extension agents
- vocational agriculture teachers
- landscape designers and landscape contractors
- farm operators
- orchard
- nursery
- greenhouse
- and garden center managers
- research
- production
- and promotional specialists with commercial seed
- fertilizer
- chemical and food companies
- urban horticulture specialists
- garden writers
- inspectors
- quality control technologists
- USDA specialists
- county and state government planners
- leaders in other phases of agricultural and industrial developments
- Students also prepare for careers in research, teaching or extension in horticulture

Curricula
The degree of Bachelor of Science with a major in horticultural science can be earned in either science or technology. Under the science curriculum, specialized education is offered in fruit and vegetable crops, floriculture, and ornamental horticulture. Under the technology curriculum, education is offered in landscape design or in a general approach, which allows for specialization in fruit and vegetable science, floriculture, and woody ornamental plant science.

Specific curriculum requirements are available on the Registration and Records website (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php#requirement-courses-list).

Minor in Horticultural Science
The academic minor in Horticultural Science is offered to students who desire a strong foundation in the principles of horticultural science. Students may choose to enhance their own major by selecting courses in a specialized area of horticulture such as fruits and vegetables, ornamentals, floriculture, or landscape horticulture, or they may pursue a more general approach to the entire field of study. Sixteen or seventeen credit hours are required for the minor, depending on courses selected.

Certificate in Horticultural Science
The undergraduate certificate in Horticulture provides a basic introduction into the science of Horticulture and Horticultural practices as they pertain to the home garden. A broad-range of courses are available in a distance education format. A minimum of fifteen credits is required for the certificate.

HS - Horticulture Science Courses
HS 101 Introduction to Ornaments and Landscape Technology 1.
Introduction to the collegiate experience, academic skills of successful students, and scope, purpose, and objectives of the Agricultural Institute with an emphasis on areas related to the ornamental and landscape plants industry. Students will explore college and departmental resources, academic policies and procedure, the green industry, career opportunities, and current trends and issues in horticulture.

HS 111 Plant ID 3.
Identification, adaptation, culture, and use of ornamental trees, shrubs, vines, ground covers and herbaceous plants.

HS 115 Plant Growth and Development 3.
Examination of how plants grow and respond to environmental and cultural stimuli. Topics include: cell growth; flower, fruit, seed, shoot, and root development and functions; anatomy of stems, roots and leaves; hormonal regulation of growth; adaptations for survival; plant responses to temperature, light and gravity; photosynthesis, transpiration, and absorption of water and nutrients.

HS 121 Plant Propagation 3.
Principles and practices involved in sexual (seed) and asexual (vegetative) propagation of a variety of plants. Methods of asexual propagation include cuttings, layering, budding and grafting, division, separation, and micropropagation (tissue culture). Emphasis on factors affecting the regeneration of species by particular techniques.

HS 131 Fruit & Vegetable Production 3.
The objective of this course is to give students a fundamental and practical understanding of small-scale fruit & vegetable production in North Carolina. Agricultural Institute students only.

HS 141 Greenhouse Crop Production 4.
Production of greenhouse crops. Emphasis on greenhouse construction and environmental manipulation of crop growth. Site selection, construction materials, greenhouse design. Specific flowering crops as models to demonstrate potted flowering plant, cut flower, and bedding plant production systems. Hands-on crop production experience plus trips to commercial floriculture production and marketing facilities.

HS 144 Weeds & Diseases of Ornaments 3.
The objective of this course is to give students a fundamental and practical understanding of weed, disease, and pesticide management in the ornamental industries in North Carolina. Agricultural Institute students only.
HS 151 Nursery Production 3.
Total aspects of field and container nursery stock production including site selection and development, propagation, growing procedures, harvesting, marketing, shipping and labor management practices.

HS 162 Landscape Maintenance 3.
A study of the maintenance of landscaped areas including plant material selection, installation, pruning, fertilization, and pest control of trees, shrubs, lawns, flower beds, and interior plants.

HS 171 Landscape Construction 3.
This course will provide students a fundamental and practical understanding of landscape construction techniques and equipment. AGI students only.

HS 200 Home Horticulture 3.
Introduction and review of home horticulture as it relates to the horticultural enthusiast. A general understanding of plant growth, structure, and development; house plant selection and care, selecting trees, shrubs, and flowers for the home landscape, and other related topics.

Principles of plant growth and development relating to production and utilization of fruit, vegetable, floricultural, and ornamental crops. Historical, economic, and global importance of horticultural crops and services.

HS 202 Power of Plants: Appreciation and Use 3.
Power of Plants will focus on how plants are names and can be used in different horticultural situations and growing environments. Uniqueness, use, and plant descriptions of a wide range of horticultural plants will be considered including bonsai, topiary, espalier, and rain gardens. Not for horticultural science majors (SH, THG, THL).

HS 203 Home Plant Propagation 3.
Not for Horticultural Science Majors (SH, THG, THL). Substitution of HS 203 for HS 301 are not allowed. An introduction to the basic principles of sexual and asexual plant propagation, including seeds, cuttings, layering, Grafting, and Division.

HS 204 Home Landscape Maintenance 3.
Prerequisite: HS 200 or HS 201.
An understanding of the basic principles of landscape maintenance including, but not limited to, soil fertility and management, tree biology, pruning, turfgrass maintenance, plant selection, irrigation management and waterwise gardening, integrated pest management, and hardscape construction. Not for Horticultural Science majors (SH, THG, THL).

HS 205 Home Food Production 3.
Home food production will play an important role in increasing the sustainability of the world’s food systems for the foreseeable future. The goal of this course is to familiarize students with the scientific knowledge and tried-and-true practices needed to successfully produce food at home, even in small-scale environments such as decks and patios. On-campus students will be required to participate in two Saturday field trips to visit local home gardens. Distance education students will be required to visit two home gardens in their area. Not for Horticultural Science Majors (SH, THG, THL).

HS 215 Agricultural Genetics 3.
Prerequisite: ZO 160 or BIO 183.
Basic principles of inheritance in plants and animals of agricultural significance. Transmission genetics and its effects on the usefulness of plants and animals. Basic principles of plant and animal improvement.

HS 242 Introduction to Small Scale Landscape Design 3.
Landscape Horticulture is concerned with the small-scale design and use of plants and other materials to help humans relate better to the land. In this course, we will pursue an understanding of this relationship and explore the social, environmental, and economic implications of landscape design and the processes by which this understanding can be employed to design residential landscapes. There are an infinite number of design possibilities for each project, so it’s a designer’s responsibility and challenge to develop a creative and functional design that accommodates the needs of the users and is appropriate for a specific site.

HS 250 Home Landscape Design: Creating Garden Spaces 3.
Home landscape design is a 3-credit hour course for non-landscape design majors. Students will be introduced to the various issues associated with landscape design at the residential level. Through a series of Power Point lectures, on-line discussions, and small projects/ exercises, students will gain an understanding of landscape graphics. Skills in design, and develop landscape plans and other forms of landscape graphics. Students will use all of their learned skills to develop a design for a given site using provided design software.

HS 252 Landscape Graphic Communication 2.
Prerequisite: Horticultural Science Majors.
This class is an introduction to the basic graphic skills necessary to develop and communicate creative ideas in landscape design. In the design process, we use graphic skills to communicate our ideas, starting with analysis, moving on to concept, then to design development, and finally to illustrative renderings. The design process will be introduced and serve as a backdrop for incrementally introducing graphic skills. The class will become confident in the use of manual drawing skills, and will be introduced to the use of computer drafting skills. Graphics supplies, with an estimated expense of $120.00, are required for the course.

HS 280 Hands-On-Horticulture 3.
This course will provide students a fundamental and practical understanding of applied techniques in horticulture. Students will learn basic hardscape construction, basic wooden landscape structure construction, vegetable harvest, propagation of perennial plants, principles of irrigation installation, safe and efficient use of landscape equipment including arboriculture, and professional certification and licensing. Pesticide Licensing Fee of $75 required.

HS 290 Horticulture: Careers and Opportunities 1.
Introduction and orientation to programs in horticultural science. Discussion of current status of horticulture, extension and research. Emphasis on undergraduate program management, internships, graduate education, and career planning. Guest lectures, career opportunities and qualifications for employment in horticulture and related fields.

HS 301 Plant Propagation 4.
Prerequisite: BIO 181 or BO 200.
Theoretical basis and techniques for successful asexual and sexual propagation of seed plants and ferns. Influence of heredity, phytopathological infection, and environmental conditions on success and quality of propagules. Recent developments and innovations in propagation techniques and methodologies.

HS 302 Gardening with Herbaceous Perennials 3.
Prerequisite: BIO 183 or BO 200.
Examination of the use of herbaceous perennials in the home garden and commercial landscapes. Topics include: general plant characteristics, culture and management, garden attributes, design usage, horticultural history, propagation, use of exotic (nonnative) species in the garden, heirloom roses and ornamental grasses.
HS 303 Ornamental Plant Identification I 3.
Prerequisite: BIO 181.
Identification, distribution, growth, characteristics, adaptation, and usage of ornamental plants. Emphasizes bedding plants, trees, and gymnosperms.

HS 304 Ornamental Plant Identification II 3.
Prerequisite: BIO 181.
Identification, distribution, growth, characteristics, adaptation, and usage of ornamental plants. Emphasizes shrubs, ground covers, vines, bulbs, and interior landscape plants.

HS 357 Site Design and Construction Materials 4.
Prerequisite: Landscape Horticulture (11HORTTHL) students, HS 252 and HS 342.
Site design of small scale landscape design projects including: understanding two-dimensional and three-dimensional representation of landform, landform manipulation, surveying and measuring, base map development, site analysis, grading and drainage plans, small circulation systems (pedestrian and vehicular), pavement, functional role of plants, designing site structures (steps, ramps, walls, and fences), documenting and analyzing user information, and special population site requirements. Exploration of appropriate construction materials and their properties occurs concurrently with the above topics. Field trips will be required.

HS 400 Residential Landscaping 6.
Prerequisite: HS 211, 212, 342, LAR 430, Corequisite: LAR 457.
Equips students with the necessary skills to create functional, aesthetic, and humanistic designs for residential and other small scale projects. Aspects of problem identification, project organization, design, execution, and evaluation. Required field trip with fee.

HS 401 Landscape Construction Studio 6.
Prerequisite: THL Majors, HS 357, 400.
Small scale landscape design with a concentrated focus on detail design and construction documentation. Development of skills in designing, drawing, and building landscape features. Opportunities for hands-on experiences.

HS 411 Nursery Management 3.
Prerequisite: BIO 181, SSC 200, Junior standing.
Principles and practices of production, management, and marketing of field-grown and container-grown nursery plants. One of three scheduled weekend field trips required at students' expense.

HS 416 Planting Design 4.
Prerequisite: Landscape Horticulture (11HORTTHL) concentration, HS 400.
Developing and cultivating a design process for creating meaningful and compelling ornamental planting designs through the study and practice of spatial articulation (form, enclosure, permeability), physical properties of plants (line, form, texture, color), client/site analysis and program development, visual journaling, garden narrative, presentation skills, utilizing principles of visual composition, design communication, and understanding and resolving technical and horticultural issues in contemporary planting design.

HS 418 Digital Media Graphic for Landscape Designers 3.
Prerequisite: HS 242 and HS 400.
Digital media is used in the landscape design profession as a tool with analytic, expressive, and representational abilities. The course focuses on introducing landscape design students to digital representational tools used to communicate design ideas for small scale landscape design projects. Students will be introduced to techniques used in AutoCAD, Photoshop, Illustrator, InDesign, and Sketch Up modeling programs. Digital representation will be used to develop the variety of images necessary to explore and communicate design intentions. Materials for this course will cost approximately $50.

HS 421 Temperate-Zone Tree Fruits: Physiology and Culture 3.
Prerequisite: BIO 181 or B0 200.
Physiology and culture of the major temperate-zone tree fruit and nut crops of the United States. Fundamental principles underlying woody plant growth as applied to the culture of specific tree-fruit crops with emphasis on crops of commercial importance to North Carolina.

HS 422 Small Fruit Production 3.
Prerequisite: BIO 181, SSC 200, HS 201.
Importance and economic value of blackberries, blueberries, cranberries, grapes, raspberries, strawberries and minor small fruit crops in the agricultural economy of the USA and the world. Cultural requirements of these crops and manipulation of their known morphological and physiological traits for successful production. Six all afternoon field trips are required.

HS 423 Viticulture 3.
Prerequisite: Junior standing or Senior standing.
A presentation of the commercial importance, distribution, anatomy, physiology, and production of Genus Vitis (grapes) including cultivars, propagation, canopy management, diseases, weed control, physiology, anatomy, irrigation, wine production, climates and soils. This course will not require students to provide their own transportation. Non-scheduled class time for field trips or out-of-class activities IS required for this class.

HS 428 Service-Learning in Urban Agriculture Systems 1.
Prerequisite: SSC 200 or equivalent, BIO 181 or 183, and CH 101.
Course provides students a hands-on experience in urban agriculture with under-served youth in the Raleigh area. Students partner with a community gardening organization to provide knowledge and experience in soil science and agriculture to youth with the goals of increasing urban food security and developing student leadership skills. Particular emphasis is places on reflecting on course activities and deepening of skills related to extension, outreach, and working with diverse populations. Course designed to be taken as a companion course to SSC 427, however can be taken as a stand-alone course.

HS 431 Vegetable Production 4.
Prerequisite: BIO 181, SSC 200.
Principles and practices of production and marketing of seventeen vegetable crops grown in the U.S. Additional topics include pest management, seed technology, food safety, sustainable agriculture, use of genetically engineered crops, and consumer issues.
HS 432 Introduction to Permaculture 3.
Permaculture means "permanent culture," and ..."is the conscious design and maintenance of cultivated ecosystems that have the diversity, stability, and resilience of a natural ecosystem." (Bill Mollison) This course will explore a design/thinking methodology that seeks to provide our essential physical needs, food, water, shelter, energy, etc., while doing so in an environmentally friendly, sustainable manner. The three weekend field trips are required. This course is restricted to upper level undergraduate, graduate, or matriculated continuing education students. STUDENTS MAY NOT RECEIVE CREDIT FOR BOTH HS 432 AND HS 532.

HS 440 Greenhouse Management 3.
Perspective of greenhouse systems management. Selection of greenhouse site, construction, heating, cooling and production systems. Emphasis on greenhouse operations, cost accounting and analysis. Other topics; root substrates, sanitation, water, fertilization, chemical growth regulation, temperature, light and marketing. Hands-on experience in greenhouse operations plus trips to commercial greenhouses and markets.

HS 442 Floriculture Crop Production 3.
Prerequisite: SSC 200 and HS 201.
Production of floricultural crops. Emphasis on environmental manipulation and scheduling of crop growth and development for targeted market periods. Specific flowering crops as models to demonstrate potted flowering plant, cut flower, and bedding plant production systems. Hands-on crop production experience plus field trips to commercial floriculture production and marketing facilities.

HS 451 Plant Nutrition 3.
Prerequisite: SSC 200.
An understanding of the basic mineral nutrient requirements, nutritional monitoring procedures, and fertilizer application methods in horticultural production systems including those for fruits, field vegetables, fruits and vegetables under plasticulture, nursery crops, landscapes, greenhouse flowers and vegetables, interior plantscapes, hydroponics, and organic farming.

HS 462 Postharvest Physiology 3.
Prerequisite: PB 421.
Preharvest and postharvest factors that affect market quality of horticultural commodities with an emphasis on technologies to preserve postharvest quality and extend storage life of fruits, vegetables and ornamentals.

HS 471 Tree and Grounds Maintenance 4.
Prerequisite: SSC 200.
Principles and practices of tree and grounds maintenance. Physical (water) and chemical (fertility) properties of urban soils. Tree and shrubbery: physiology, selection, transplanting, pruning, fertilization, and protection. Weed biology and nonchemical and chemical management options.

HS 492 Horticulture Internship 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes facilities and resources which are external to the campus. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

HS 493 Independent Study in Horticultural Science 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes campus facilities and resources. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience. Individualized/Independent Study and Research courses require a "Course Agreement for Students Enrolled in Non-Standard Courses" be completed by the student and faculty member prior to registration by the department.

HS 495 Experimental Courses in Horticultural Science 1-6.
Offering of new courses on a trial basis.

HS 502 Plant Disease: Methods & Diagnosis 2.
Prerequisite: PP 315.
Introduction to the basic principles of disease causality in plants and the methodology for the study and diagnosis of plant diseases caused by fungi. Identification of plant-pathogenic fungi. Research project, disease profiles and field trips are required.

HS 516 Planting Design 4.
P: HS 400.
Developing and cultivating a design process for creating meaningful and compelling ornamental planting designs through the study and practice of spatial articulation (form, enclosure, permeability), physical properties of plants (line, form, texture, color), client/site analysis and program development, visual journaling, garden narrative, presentation skills, utilizing principles of visual composition, design communication, and understanding and resolving technical and horticultural issues in contemporary planting design.

HS 521 Temperate-Zone Tree Fruits: Physiology and Culture 3.
Physiology and culture of the major temperate-zone tree fruit and nut crops of the United States. Fundamental principles underlying woody plant growth as applied to the culture of specific tree-fruit crops with emphasis on crops of commercial importance to North Carolina.

HS 523 Viticulture 3.
Prerequisite: BS Horticulture/Plant Science or permission from the instructor.
A presentation of the commercial importance, distribution, anatomy, physiology, and production of Genus Vitis (grapes) including cultivars, propagation, canopy management, diseases, weed control, physiology, anatomy, irrigation, wine production, climates and soils. This course will not require students to provide their own transportation. Non-scheduled class time for field trips or out-of-class activities is required for this class. One Saturday field-trip will be scheduled. Students may not receive credit for both HS 423 and HS 523.
HS 532 Introduction to Permaculture 3.
Permaculture means “permanent culture,” and ...“is the conscious design and maintenance of cultivated ecosystems that have the diversity, stability, and resilience of a natural ecosystem.” (Bill Mollison) This course will explore a design/thinking methodology that seeks to provide our essential physical needs, food, water, shelter, energy, etc., while doing so in an environmentally friendly, sustainable manner. The three weekend field trips are required. This course is restricted to upper level undergraduate, graduate, or matriculated continuing education students. STUDENTS MAY NOT RECEIVE CREDIT FOR BOTH HS 432 AND HS 532.

HS 533 Public Garden Administration 3.
This course addresses the practices, programs, and professional skills that are critical to the successful management of public gardens. The aim of the course is to better prepare graduate students and upper-level undergraduates for potential careers in public garden administration. Topics will include a brief history, impact, and current trends of public gardens in the United States; plant collections; managing staff, volunteers, and boards; and the visiting public; finances and fund raising; educational programming; visitor services; and careers in public gardens. Two Saturday off-campus field trips are required.

HS 541 Plant Breeding Methods 3.
Prerequisite: ST 511, Corequisite: ST 512.
Overview of plant breeding methods for advanced undergraduate and beginning graduate students. Covers principles and concepts of inheritance, germplasm resources, pollen control, measurement of genetic variances, and heterosis. Special topics include heritability, genotype-environment interaction, disease resistance, and polyplody. In-depth coverage on methods for breeding cross-pollinated and self-pollinated crops. Prepares students for advanced plant breeding courses.

HS 550 Environmental Nursery Production 3.
Prerequisite: HS 411, Nursery Management, or an equivalent course.
The course focuses on the impacts of the nursery industry on the environment and environmentally sound nursery practices. Exploration of the major challenges facing the nursery industry that drive decision making during production. Evaluation of past and current research addressing these challenges and sampling procedures and interpretation will be learned. Graduate status and an undergraduate nursery production or management course or working knowledge of nursery production required.

HS 551 Plant Nutrition 3.
Prerequisite: SSC 200.
An understanding of the basic mineral nutrient requirements, nutritional monitoring procedures, and fertilizer application methods in horticultural production systems including those for fruits, field vegetables, fruits and vegetables under plasticulture, nursery crops, landscapes, greenhouse flowers and vegetables, interior plantscapes, hydroponics, and organic farming.

HS 562 Postharvest Physiology 3.
Pre- and post-harvest factors that affect market quality of horticultural commodities with an emphasis on technologies to preserve quality and extend storage life of crops.

HS 583 Advanced Floral Crop Production and Handling 3.
Principles and commercial practices for producing floral potted crops and cut flowers emphasizing the physical responses of plants to their environment and post-harvest physiology. Lab will be conducted at the student's home location and students will document plant growth with photos or video. Some live plants will be mailed to the student; however, the student will be required to purchase some plants (e.g. African violet). Course is restricted to graduates students only.

HS 590 Special Problems in Horticultural Science 1-6.
HS 601 Professional Presentation Skills in Horticultural Science 2.
The purpose of this course is to familiarize the students with the professional presentation skills they need to be successful. These skills include speaking, writing, poster and website development, based on the student's proposed research/project and literature review.

HS 610 Special Topics in Horticultural Science 1-6.
Investigation of special theoretical problems at 600 level in horticultural science not related to a thesis problem; new 600-level courses during developmental phase.

HS 615 Advanced Special Topics 1-6.
Investigation of theoretical problems at the 600 level in horticultural science not related to a thesis problem; new 600-level courses during the development phase.

HS 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

HS 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

HS 689 Non-Thesis Master Continuous Registration - Half Time Registration 3.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

HS 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

HS 693 Master’s Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

HS 695 Master’s Thesis Research 1-9.
Prerequisite: Master's student.
Thesis research.
HS 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
Original research on specific problems in fruit, vegetable and ornamental crops.

HS 701 Plant Metabolism 1.
Prerequisite: (CH 223 or CH 227) and PB 421.
A brief introduction to various aspects of metabolism in plants including the basic biochemical processes including the syntheses, utilization and roles of amino acids, lipids, carbohydrates and secondary metabolites in plant growth, development and response to the environment. This course is taught as a 5-week mini course.

HS 702 Biology of Plant Hormones 1.
Prerequisite: BO 421, (GN 411 or BCH 451). Recent developments and current literature on the physiology, biochemistry, molecular biology, and practical applications of the primary plant hormones. The biosynthesis, signal transduction pathways, and biological functions of specific plant hormones will be examined. Taught as a five-week mini course.

HS 703 Breeding Asexually Propagated Crops 1.
Prerequisite: CS 413.
Principles and problems associated with breeding clonally propagated crops and techniques used in overcoming these problems. Taught third five weeks of semester. Drop date is by last day of 3rd week of minicourse.

HS 704 Plant Nomenclature 1.
Prerequisite: PB 421.
A practical foundation in plant nomenclature and nomenclatural references. Emphasis on the evolution of international rules for naming plant taxa and their application in both wild and cultivated plants. Nomenclature applications used in patents, cultivar releases and journal articles. Taught mid-semester. Taught five weeks of semester.

HS 705 Physiology Of Flowering 1.
Prerequisite: PB 421.
Examination of physiological basis of flowering in plants such as: floral initiation, transition to reproductive growth; floral development; plant response to light, temperature, nutrition, water supply; plant age; chemical growth regulation and in vitro flowering. Taught first five weeks of fall semester. Drop date is by last day of 3rd week of minicourse.

HS 706 Fruit Development and Postharvest Physiology 1.
Prerequisite: PB 421.
Theories of plant senescence, both physiological and biochemical, and postharvest changes in all types of plant parts. Emphasis on physiological principles underlying current postharvest handling and storage techniques. A study of fruit development from fruit set to senescence. Taught third five weeks of semester. Drop date is by last day of 3rd week of minicourse.

HS 707 Environmental Stress Physiology 1.
Prerequisite: PB 421. Physiology of plant responses to environmental stresses, with emphasis on current research in selected physiological, molecular, and biochemical mechanisms for tolerance to environmental stresses such as temperature extremes, drought, salt, pathogens and other plants.

HS 717 Weed Management Systems 1.
Prerequisite: CS 414. Weed management systems including integration of cultural, biological, mechanical and chemical methods for vegetables, fruits, ornamentals, turf, small grains, corn, tobacco, cotton, peanuts, aquatic and non-cropland settings. Taught second 5 weeks of semester. Drop date is by last day of 3rd week of minicourse.

HS 720 Molecular Biology In Plant Breeding 3.
Prerequisite: CS(GN,HS) 741. Theory and principles of molecular biology applied to plant breeding. Experimental approaches to induce genetic change, cytoplasmic recombination, haploid utilization and potentials of molecular techniques for solving breeding problems.

HS 725 Pesticide Chemistry 1.
Prerequisite: (CH 201 or CH 203) and (CH 221 or CH 225). Chemical properties of pesticides including hydration and solvation, ionization, volatility, lipophilicity, molecular structure and size, and reactivity and classification according to chemical description, mode of action or ionizability. Taught during the first 5 weeks of semester. Drop date is last day of 3rd week of the minicourse.

HS 727 Pesticide Behavior and Fate In the Environment 2.
Prerequisite: CS(HS,SSC,TOX)725,SSC 200. Sorption/desorption, soil reactivity, movement, volatility, bioavailability, degradation and stability of pesticides in the environment. Taught during the last 10 weeks of semester. Drop date is last day of 3rd week of the minicourse.

HS 729 Herbicide Behavior In Plants 2.
Prerequisite: BO 751 and BO 752 and CS(HS,SSC) 725. Chemical, physiological and biochemical actions of herbicides in plants including uptake, translocation, metabolism and mechanism of action.

HS 745 Quantitative Genetics In Plant Breeding 1.
Prerequisite: CS(GN, HS) 741, ST 512, course in quantitative genetics recommended. Theory and principles of plant quantitative genetics. Experimental approaches of relationships between type and source of genetic variability, concepts of inbreeding, estimations of genetic variance and selection theory.

HS 746 Breeding Methods 2.
Prerequisite: CS (GN, HS) 741, ST 512. Theory and principles of plant breeding methodology including population improvement, selection procedures, genotypic evaluation, cultivar development and breeding strategies.

HS 790 Special Problems in Horticultural Science 1-6.

HS 815 Advanced Special Topics 1-6.
Investigation of theoretical problems at 600 level in horticultural science not related to a thesis problem; new 600-level courses during development phase.

HS 860 Plant Breeding Laboratory 1.
Prerequisite: CS(GN,HS)741. Visitation of plant breeding projects in the Depts. of CS and HS at NC State, along with commercial seed companies. Discussion and viewing of breeding objectives, methods and equipment and teaching and practice of hybridization methods.
HS 861 Plant Breeding Laboratory 1.
Prerequisite: CS(GN,HS)741.
Visitation of plant breeding projects in the Depts. of CS and HS at NC State, along with commercial seed companies. Discussion and viewing of breeding objectives, methods and equipment and teaching and practice of hybridization methods.

HS 885 Doctoral Supervised Teaching 1-3.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

HS 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation Research.

HS 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour requirements, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Department of Molecular and Structural Biochemistry

Biochemistry is the science which is concerned with the discovery and understanding of the chemical principles of life. It is a wide-ranging field from the composition, biosynthesis, structure and function of biomolecules to the control and regulation of biochemical processes within organelles, cells, organs and organisms. Biochemical principles form the basis of most laboratory procedures within the life cycle.

Opportunities
The Biochemistry program provides B.S. graduates with the scientific background and skills required for employment in biochemistry, molecular biology, biotechnology, and genetics and for the health fields of medicine, veterinary science pharmacology, and related fields.

Awards
The H. Robert Horton Award is given to the outstanding student in Biochemistry based on scholarly and research achievements.

Honors
The honors program in Biochemistry is jointly administered within the College of Agriculture and Life Sciences and the College of Sciences. It is designed for students who wish to explore advanced courses and be rewarded for outstanding academic achievement.

To be admitted to the honors program, a student must complete the three-semester sequence of Calculus (MA 141, MA 241, MA 242) and the calculus based Physics sequence (PY 205 and PY 208). Exceptions can be made for transfer students. Students with a GPA of at least 3.5 are invited into the program in their junior year. To complete the program, a student must take two semesters of Physical Chemistry sequence (CH 431 and CH 433), at least three hours of research and six hours of advanced or honors courses at the 300- or 400-level. Interested students should contact the Undergraduate Coordinator of Biochemistry for more detailed information.

Curricula
The curriculum emphasizes the fundamentals of biological and physical sciences, offering students both breadth of knowledge and depth of understanding. It is designed to provide students with broad experience in biological and chemical sciences and to encourage the development of experimental skills. One important aspect is the requirement of at least one semester experience in a Biochemistry laboratory. Because of the breadth of the course requirements, many students can easily add a second major in Biological Sciences, Chemistry, or other science as well as add a minor in Genetics.

Specific curriculum requirements are available on the Registration and Records website (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php#requirement-courses-list).

BCH - Biochemistry Courses

BCH 101 Introduction to Microbiology and Biochemistry Laboratory Practices 3.
Curricular bridge between high school and college for high school and transitional students. A "hands on" introduction to fundamentals in Microbiology and Biochemistry. Bacterial isolation, identification and growth using aseptic technique, microscopy, and metabolic analysis. Experiments with DNA isolation and analysis, protein isolation, and purification, and enzyme kinetics. Lectures and readings on background, theory and applications of these techniques. Field trips to university and industry research laboratories. This course is part of the Summer College in Biotechnology and Life Sciences (SCIBLS) as well as other pre-college, transitional and early-college programs and is offered as 4 week intensive course. Applicants should have completed high school courses in biology and chemistry. Students must have completed no more than 30 credit hours. Departmental approval is required for current NCSU students.

BCH 103 Introduction to Biochemistry 1.
Introduction to curriculum and career requirements for biochemistry and being a successful student at NCSU. Emphasis is placed on curricular requirements, interactions with faculty and students in the Department of Molecular and Structural Biochemistry, introduction to key resource programs on campus, exposure to research opportunities and ongoing career planning. Enrollment is limited to new or transfer Biochemistry majors with less than 45 hours.
BCH 220 Role of Biotechnology in Society 3.
Prerequisite: BIO 181, CH 101.
BCH 220 is an introductory science course that takes a semi-technical look at the emerging role of biotechnology in human society. Expectations are that students will gain an appreciation for biotechnology, the ability to understand how biotechnology works. Offered only in Poland through Study Abroad (4-week course).
Departmental approval required.

BCH 330 Physical Biochemistry 3.
P: (CH 201 or CH 203) and (BCH 351 or BCH 451) and (MA 231 or MA 242) and (PY 208 or PY 212).
This course provides a descriptive survey of the concepts of physical chemistry with emphasis on their use in applications designed to characterize and manipulate biological molecules and systems. Topics are drawn from thermodynamics (bonding, protein folding energies, linkage, spectroscopic and differential scanning calorimetric binding measurements), kinetics (enzymatic catalysis, perturbation techniques), statistical mechanics (distributions, ensembles, molecular mechanical & dynamics calculations), electrochemistry, hydrodynamics (diffusion, friction, electrophoresis, viscosity, sedimentation, organism size and shape), quantum mechanics (wave functions operators, uncertainty principle, dipoles, orbitals and resonance energy coupling), and spectroscopy (absorbance and light scattering, fluorescence, nuclear and electronic paramagnetic resonance, MR imaging and x-ray diffraction).

BCH 351 General Biochemistry 4.
Prerequisite: (CH 223 or CH 227) and BIO 183.
This course is an introduction to the basic principles of biochemistry. It emphasizes biochemical structures, properties, and functions, including enzymes and metabolic processes. It discusses amino acids and proteins, carbohydrates, lipids, and nucleic acids. The pathways discussed will include glycolysis, gluconeogenesis, and the Krebs cycle. It can serve as a prerequisite for BCH 452 with permission of the department. This course is designed for those students who are not majoring in Biochemistry and do not require a more comprehensive introduction to biochemistry. It is not intended for graduate students. Credit is not allowed for both BCH 351 and BCH 451.

Prerequisite: CH 223 or CH 227.
Introduction to the fundamental principles of biochemistry. Emphasis on biochemical structures, properties, functions and interactions, including enzymes and central pathways of metabolism.

BCH 452 Introductory Biochemistry Laboratory 2.
Corequisite: BCH 451.
Laboratory experience to complement BCH 451. Basic skills in the use of volumetric equipment, spectrophotometers, chromatography, and electrophoresis. Manipulation and assay of small quantities of biological materials, and analysis of laboratory data.

BCH 453 Biochemistry of Gene Expression 3.
Prerequisite: BCH 451, Corequisite: GN 311, MB 351.

BCH 454 Advanced Biochemistry Laboratory 4.
Prerequisite: BCH 452, Corequisite: BCH 453.

BCH 455 Proteins and Molecular Mechanisms 3.
Prerequisite: BCH 451, BCH 453/553.
Principles of protein structure and function, protein folding, enzymology, ligand binding, protein transport, and metabolic pathways.

BCH 492 External Learning Experience 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes facilities and resources which are external to the campus. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and academic dean prior to the experience.

BCH 493 Special Problems in Biochemistry 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes campus facilities and resources. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

BCH 495 Special Topics in Biochemistry 1-5.
Prerequisite: Junior standing.
Offered as needed to present materials not normally available in regular BCH departmental courses or for new BCH courses on a trial basis.

BCH 552 Experimental Biochemistry 3.
Prerequisite: BCH 452; BCH 453.
An advanced laboratory to give students practical experiences in purification and quantitative characterization of enzymes and nucleic acids. Studies with carbohydrates and membrane lipids. Credit may be applied toward biotechnology minor.

BCH 553 Biochemistry of Gene Expression 3.
Prerequisite: BCH 451, Corequisite: GN 311, MB 351.

BCH 555 Proteins and Molecular Mechanisms 3.
Prerequisite: BCH 451, BCH 453/553.
Principles of protein structure and function, protein folding, enzymology, ligand binding, protein transport, and metabolic pathways.

BCH 560 Molecular Biology for Teachers 3.
Introduction to molecular biology for teachers. Emphasis will be on developing basic laboratory skills applicable to middle or high school biology classes. Teachers will develop their own labs during the last week of class. This is an intensive three-week class, five hours per day. Students should have at least one biotechnology course before enrolling in this course. Prior secondary school teaching experience preferred.

BCH 571 Regulation of Metabolism 3.
Prerequisite: BCH 451, GN 411, a course in physiology, cell biology. Study of hormonal, enzymatic and molecular-genetic regulation of carbohydrate and lipid metabolism; emphasis on mammalian species.

BCH 590 Special Topics in Biochemistry 1-6.
Prerequisite: BCH 451.
The study of topics of special interest by small groups of students instructed by members of the faculty.
BCH 610 Special Topics 1-6.
Prerequisite: BCH 451.
The study of topics of special interest by small groups of students instructed by members of the faculty.

BCH 615 Special Topics in Biochemistry 1-6.
Prerequisite: Graduate standing in BCH.
Critical study of special problems and selected topics of current interest in biochemistry and related fields.

BCH 670 Laboratory Rotations 1.
Prerequisite: BCH 451.
Performance of highly directed research by biochemistry students in one or more laboratories of student's choice prior to beginning thesis research. Each laboratory experience lasts 5 weeks and gives 1 hr. of credit. No more than 4 credits earned in BCH 692.

BCH 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

BCH 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all other requirement of the degree except preparing for and taking the final master's exam.

BCH 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

BCH 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their thesis.

BCH 701 Macromolecular Structure 3.
Prerequisite: BCH 453 or BCH 553; a course in physical chemistry highly recommended.
Introduction to the current understanding and methods used for the study of structures, thermodynamics and conformational dynamics of proteins, nucleic acids and membranes.

BCH 703 Macromolecular Synthesis and Regulation 3.
Prerequisite: BCH 453 or BCH 553.
Biochemistry of DNA replication, transcription, RNA processing and translation. Development of key concepts, techniques and applications relating to mechanisms and regulation of these processes by analysis of primary literature.

BCH 705 Molecular Biology of the Cell 3.
Prerequisite: BCH 701 or BCH 703.
Regulation of cellular processes, membrane structure and function, signal transduction, protein trafficking/sorting, secretion, photosynthesis and nitrogen fixation.

BCH 710 Biological Scanning Electron Microscopy 2.
Prerequisite: Graduate standing with some biological background.
On demand. Theory and application of scanning electron microscopy, including specimen preparation, microscope alignment and operation, performance evaluation, interpretation of problems and darkroom technique. (Limited to 8 students with prior approval of instructor.).

BCH 715 Biophysical Chemistry 3.
Prerequisite: BCH 451; one sem. of physical chemistry.
Fundamental and practical aspects of biological macromolecular structure, thermodynamics, hydrodynamics, kinetics and spectroscopy with emphasis on mechanisms in functionally important structural transformations.

BCH 760 Protein Crystallography and Macromolecular Modeling 3.
Prerequisite: BCH 455 or BCH 555 or equivalent.
Basic principles and practice of protein crystallography and the application of molecular dynamics to evaluate structural models. The computer lab provides hands-on experience in structure determination, refinement, model building, and molecular dynamics using CHARMM.

BCH 761 Advanced Molecular Biology of the Cell 3.
Prerequisite: BCH 703 and 705.
An advanced treatment involving integrated approaches to biological problems at the molecular level, encompassing biochemistry, cell biology and molecular genetics. Broad, multidisciplinary approaches to solving research problems in biology and theoretical study of primary scientific literature, the development of a research proposal, oral presentations and class discussions.

BCH 762 Biochemistry of Hormone Action 3.
Prerequisite: BCH 705 or GN 757.
Study of well-defined models of steroid and protein hormone action via lectures, assigned readings and discussions. Students add breadth to the course and depth to their own understanding by searching the literature and writing or lecturing about a particular hormone of their own choosing.

Prerequisite: BCH 701 and 703.
An advanced treatment involving integrated approaches to biological problems at the molecular level, encompassing biochemistry, cell biology and molecular genetics. Broad, multidisciplinary approaches to solving research problems in biology and theoretical study of primary scientific literature, the development of a research proposal, oral presentations and class discussions.

BCH 770 Enzyme Kinetics and Mechanisms 3.
Prerequisite: BCH 451 and BCH 455/555 or equivalent.
An advanced course in enzyme kinetics and mechanisms with particular emphasis on experimental design and interpretation. The first half of the course covers the derivation and application of single and multisubstrate kinetic equations, inhibition and pre-steady state kinetics. The second half of the course covers fundamental chemical and physical principles of enzyme catalysis and specificity.

BCH 801 Seminar in Biochemistry 1.

BCH 810 Special Topics 1-6.
Prerequisite: BCH 451.
The study of topics of special interest by small groups of students instructed by members of the faculty.
Many majors continue with graduate studies state and natural parks, and as employees of environmental education, or government, or industrial labs, as field botanists and conservationists in plant sciences. Graduates are employed as researchers in academic, horticulture, crop science, plant pathology, natural resource management and conservation.

Curricula

The Bachelor of Science degree with a major in Plant Biology is offered under the science curriculum of the College of Agriculture and Life Sciences. Students can choose to pursue a general major with courses in different areas of Plant Biology, or can specialize their study in one of the following areas: Ethnobotany; Plant Biotechnology and Cell and Molecular Biology; and Plant Ecology, Biodiversity, and Conservation. The Bachelor of Science in Plant Biology with a with double-major in another life science or applied plant science is possible, as is a double-major in economics or in a humanities and social sciences discipline (anthropology, English, history, philosophy, psychology, or political science). Selected faculty in Plant and Microbial Biology also work with the Biological Sciences faculty in the College of Sciences to offer the B.S. degree in Microbiology, details about which are located at: http://next-catalog.ncsu.edu/undergraduate/collegeofsciences/biology

Minor in Plant Biology

The minor in Plant Biology is available to all degree-seeking students at NC State University who are not enrolled in the plant biology major. The minor requires 15 hours comprised of a 4 credit hour introductory course (PB 200 or PB 250) and 11 hours of plant biology elective coursework. Up to 4 credit hours of special topics or special problems courses can be used to meet the elective hour requirements.

Minor in Biotechnology

The Minor in Biotechnology provides first-hand laboratory experience with a variety of technologies that use gene manipulation, recombinant organisms, or cell culture. The laboratory courses typically are started in the junior year, following completion of BIO 183 and Organic Chemistry (CH 223) with a grade of C- or better. BIT 410, “Manipulation of Recombinant DNA” is required for all students but BCH 454 can be substituted. Other requirements for the minor include 3 credit research internship, 4 credits of advanced biotechnology laboratory courses, and a biotechnology ethics course. Interested students should visit the website http://biotech.ncsu.edu/, or contact Dr. Laura Ott at leneuder@ncsu.edu for more information.

PB - Plant Biology Courses

PB 103 Perspectives on Botany 1.
Orientation to modern botany, including discussions of historical background, relation to other sciences, the nature of modern subdisciplines, professionalism and ethics, local resources of personnel and facilities, educational opportunities, and career possibilities.

PB 200 Plant Life 4.
An introduction to the structure, processes, and reproduction of higher plants, including the diversity of the plant kingdom and principles of inheritance, ecology, and evolution. Credit cannot be given for both BO 200 and BO 250.
PB 205 Our Green World 3.
Awareness and understanding of plants in the world for the non-science student. Essential fundamental concepts of plant structure, growth, processes, uses, biotechnology, evolution, environmental issues and ecology. Short field trips will be held that may require students to provide their own transportation. Credit cannot be received for both PB 205 and (PB 200 or PB 250).

PB 208 Agricultural Biotechnology: Issues and Implications 3.
Trends and issues of agricultural biotechnology in today's society are addressed while covering the basic biological science behind the technology. Applications of and policy issues associated with plant, animal, and environmental biotechnology used in the agricultural industry are examined from an interdisciplinary approach.

PB 213 Plants and Civilization 3.
This course covers plant use in ancient civilizations, including the economic, social, political, religious, culinary and medical roles of plants and plant products. Plant use in ancient cultures, including but not limited to, Amazonian, Celtic, Chinese, Egyptian, Greek, Inca, Indian, Maya, Mesopotamian, Nubian, Persian, and Roman will be discussed. Topics include foods, beverages, medicines, fibers, construction materials, psychoactive drugs, and religious symbols.

PB 215 Medicinal Plants 3.
Prerequisite: CH 101 and any one of the following courses: BIO 125,BIO 181,PB 200,ZO 150,ZO 160.
Plants and their derived pharmaceuticals in Western medicine and in herbal medicine.

PB 219 Plants in Folklore, Myth, and Religion 3.
The structural and functional biology of plants and cultural inclusions in folklore, myth, and religion. The myth/religion-plant-human culture nexus. Mythical and religious themes covered, but not limited to, are: the world tree and cosmic order; plants and the creation of Earth; the unity of plants and divine entities; the tree of life; life-giving waters and human immortality; human descent from plants; origin of food plants from humans; plants of witchcraft and magic; psychoactive plants and access to deities; solidarity between humans and plants; death and resurrection of plants and humans.

PB 220 Local Flora 3.
Prerequisite: BIO 125 or PB 200.
Structural terminology of vascular plants, field identification of plant species using popularized field guides, description of plant community types and their soil and topographic features.

PB 250 Plant Biology 4.
An introduction for Life Science majors to the ecology, structure, function, processes, reproduction and evolution of higher plants. BIO 181 and BIO 183 or BIO 125 ; Students may not receive credit for both BO 200 and BO 250.

PB 295 Special Topics in Botany 1-4.
Trial offerings of new or experimental courses in Botany at the early undergraduate level.

PB 321 Introduction to Whole Plant Physiology 3.
Prerequisite: (BIO 183 or PB 200 or PB 250) and CH 101/102.
Physiology of higher plants with emphasis on whole plant aspects including structure-function relationships, water and solute movement, energy sources and needs, plant growth and development, and the impact of plant physiology findings on agriculture. Students cannot receive credit for both PB 321 and PB 421.

PB 345 Economic Botany 3.
Prerequisite: BIO 181 or PB 200 or PB 250.
This course covers plants of economic importance that have been valued by societies regionally, nationally and globally from the modern era to the present day. Topics include, but are not limited to, plant species used as food, spices, beverages, oils, fibers, paper, dyes, perfumes, body care, construction materials, fuels and ornamentals. Aspects related to the botany and ethnobotany of economically important plant species will be discussed including taxonomy, anatomy, physiology, ecology, conservation, human uses, social and environmental issues, and roles in the economy.

PB 346 Economic Botany Lab 1.
Prerequisite: BIO 181 or PB 200 or PB 250; Co-requisite: PB 345.
This lab course explores plants and plant products of economic importance through hands-on activities. Aspects related to the botany and ethnobotany of economically important plant species will be covered including taxonomy, anatomy, physiology, ecology, conservation, human uses, social and environmental issues, and roles in the economy.

PB 360 Ecology 4.
Prerequisite: C- or better in BIO 181.
The science of ecology, including factors which control distribution and population dynamics of organisms, structure and function of biological communities, and energy flow and nutrient cycling in ecosystems; contrasts among the major biomes; and principles governing ecological responses to global climatic and other environmental changes.

PB 400 Plant Diversity and Evolution 4.
Prerequisite: BIO 181 or PB 200 or PB 250.
Diversity, morphology, taxonomy, and evolutionary history of living and fossil plants including fungi, algae, bryophytes, pteridophytes, gymnosperms, and angiosperms. Two one-day weekend field trips required.

PB 403 Systematic Botany 4.
Prerequisite: PB 200, PB 250, BIO 183, Junior standing.
The course introduces basic and contemporary systematic principles and methods as applied to vascular plants, with emphasis on flowering plants. It covers classification, identification, phylogenetics, and molecular approaches, and surveys important and common plant families representing major groups of vascular plants.

PB 405 Wetland Flora 3.
Prerequisite: PB 200 or PB 250 or PB 403 or FOR 212.
Plant morphological terminology and identifications of wetland plants; discussion of wetland flora, plant communities, functions and values of North Carolina wetland types; several one-day weekend field trips required.

PB 413 Plant Anatomy 2.
Prerequisite: PB 200 or PB 250 or PB 321 or PB 421.
Organelles, cells, tissues and organs of flowering plants and selected gymnosperms. Emphasis placed on developmental patterns and structural adaptations for survival. Laboratory focuses on dissection, histochemistry, and imaging of plant cells and tissues. Students cannot reserve credit for both PB 413 and PB 513.

PB 414 Cell Biology 3.
Prerequisite: C- or better in BIO 183 and (CH 221 or CH 225).
The chemical and physical bases of cellular structure and function with emphasis on methods and interpretations.
PB 421 Plant Physiology 3.
Prerequisite: BIO 183 or ZO 160, or PB 200 and CH 220 or CH 221 or CH 225.
Physiology of higher plants with emphasis on biochemical, cell biological and molecular aspects of how plants function. Unique aspects of regulation of plant metabolism including photosynthesis, respiration, nitrogen fixation, cell wall biosynthesis, growth and stress responses will be emphasized. The course is intended for students interested in postgraduate studies in plant biology. Students cannot receive credit for both PB 321 and PB 421.

PB 445 Paleobotany 4.
Prerequisite: BIO 181 or MEA 102.
Morphologic, taxonomic, geologic and evolutionary relationships of fossil plants; emphasis on vascular plants; discussions of taphonomy, biogeography and palynology. Requires weekend field trips at student expense. Credit will not be allowed for both BO 445 and BO 545.

PB 464 Rare Plants of North Carolina 3.
Prerequisite: One of the following: (PB 200, PB 220, PB 403, or PB 405). This course provides a taxonomic survey of the rare plants of North Carolina, focusing primarily on federally- and secondarily on state-listed species. Particular attention will be placed on: (1) the identification of rare species, their congeners, and morphologically similar species, (2) the biogeography of rare species, (3) optimum survey windows, and (4) the conservation biology of select taxa. Two Saturday field trips required. Junior level or higher. Students cannot receive credit for both PB 464 and PB 564.

PB 480 Introduction to Plant Biotechnology 3.
Prerequisite: BCH 454 or BIT 410 or CS 211 or GN 311 or PB/BIO 414 or PB 421.
Introduction to gene cloning, plant tissue culture and transformation, and the development of agriculturally important transgenic traits. Critical thinking, case studies, and discussions are used to examine global approaches to the regulation and risks of genetically-modified organisms, plant and gene patents, and the consequences of these factors on food sovereignty and trade. Students cannot receive credit for both PB 480 and PB 580.

PB 481 Plant Tissue Culture and Transformation 2.
Prerequisite: BIT 360 or MB 409 or BCH 454 or ZO 480.
Basic techniques in plant tissue culture and transformation. Empirical approaches to techniques in plant tissue culture, designing transgenes for expression in specific plant cell organelles and tissues, use of reporter genes to optimize transformation, and troubleshooting transformation. Laboratory sessions provide hands-on experience with plant tissue culture and transformation. Use of reporter genes, fluorescence microscopy and digital imaging. Half semester course, first part.

PB 492 External Learning Experience 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes facilities and resources which are external to the campus. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

PB 493 SP Problems in BO 1-6.
A learning experience within an academic framework that utilizes campus facilities and resources. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

PB 495 Special Topics in Botany 1-6.
Prerequisite: 8 hrs. of Botany courses.
Individualized study, under faculty supervision, of botanical topics in the student’s area of interest and not covered in existing courses. Development of a new course on a trial basis.

PB 501 Biology of Plant Pathogens 3.
Prerequisite: PP 315, or PP 318, or an introductory course in microbiology.
Biology of microbes that cause plant diseases. The ecology, genetics, physiology, taxonomy, and mechanisms of parasitism, pathogenicity and virulence of bacteria (and other prokaryotes), fungi (and oomycetes), nematodes, and viruses that cause plant diseases. Prepares graduate students for advanced courses in plant pathology, host-parasite interactions, and provides a knowledge base for students in other disciplines involved with plant pathogens or who seek to broaden their knowledge of microbes.

PB 503 Systematic Botany 4.
Prerequisite: PB 200, PB 250, BIO 183, Junior standing.
The course introduces basic and contemporary systematic principles and methods as applied to vascular plants, with emphasis on flowering plants. It covers classification, identification, phylogenetics, and molecular approaches, and surveys important and common plant families representing major groups of vascular plants.

PB 513 Plant Anatomy 2.
Prerequisite: PB 200 or PB 250 or PB 321 or PB 421.
Organelles, cells, tissues and organs of flowering plants and selected gymnosperms. Emphasis placed on developmental patterns and structural adaptations for survival. Laboratory focuses on dissection, histochemistry, and imaging of plant cells and tissues. Students cannot receive credit for both PB 513 and PB 564.

PB 545 Paleobotany 4.
Prerequisite: PB 400, 403, 413, 544, MEA 423.
Morphologic, taxonomic, geologic and evolutionary relationships of fossil plants; emphasis on vascular plants; discussions of taphonomy, biogeography and palynology. Required field trips.

PB 564 Rare Plants of North Carolina 3.
Prerequisite: One of the following: (PB 200, PB 220, PB 403, or PB 405). This course provides a taxonomic survey of the rare plants of North Carolina, focusing primarily on federally- and secondarily on state-listed species. Particular attention will be placed on: (1) the identification of rare species, their congeners, and morphologically similar species, (2) the biogeography of rare species, (3) optimum survey windows, and (4) the conservation biology of select taxa. Two Saturday field trips required. Junior level or higher. Students cannot receive credit for both PB 464 and PB 564.

Prerequisite: PB 360 or ZO 260.
Consideration of structure and function of terrestrial vascular plant communities, with emphasis on both classical and recent research. Measurement and description of community properties, classification, ordination, vegetation pattern in relation to environment, ecological succession and a survey of vegetation of North America.

PB 570 Plant Functional Ecology 3.
Prerequisite: PB/BIO 360.
Mechanisms by which plants interact with their environment, with an emphasis on the role of physiological, morphological, and life history traits, and the evolution of these traits.
PB 575 Introduction to Mycology 4.

PB 580 Introduction to Plant Biotechnology 3.
Prerequisite: BCH 454 or BIT 410 or CS 211 or GN 311 or PB/BIO 414 or PB 421.
Introduction to gene cloning, plant tissue culture and transformation, and the development of agriculturally important transgenic traits. Critical thinking, case studies, and discussions are used to examine global approaches to the regulation and risks of genetically modified organisms, plant and gene patents, and the consequences of these factors on food sovereignty and trade. Students cannot receive credit for both PB 480 and PB 580.

PB 595 Special Topics Botany 1-6.

PB 601 Botany Seminar 1.

PB 620 Special Problems In Botany 1-6.
Directed research in some phase of botany other than a thesis problem, but designed to provide experience and training in research. Credits Arranged.

PB 624 Topical Problems 1-4.
Discussions and readings on problems of current interest in fields of ecology, anatomy and morphology, taxonomy, plant physiology and cell biology. May be repeated with a change in topic for a maximum of six credits.

PB 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

PB 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's Student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

PB 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master's Student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

PB 690 Master's Examination 1-9.
Prerequisite: Master's Student.
For students in non-thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

PB 693 Master's Supervised Research 1-9.
Prerequisite: Master's Student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's Student.
Thesis Research.

PB 696 Summer Thesis Research 1.
Prerequisite: Master's Student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's Student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their thesis.

PB 704 Plant Nomenclature 1.
A practical foundation in plant nomenclature and nomenclatural references. Emphasis on the evolution of international rules for naming plant taxa and their application in both wild and cultivated plants. Nomenclature applications used in patents, cultivar releases and journal articles. Taught mid-semester. Taught five weeks of semester.

PB 730 Fungal Genetics and Physiology 3.
Prerequisite: BCH 451, PB 575, GN 411 or PP 501.
Basic concepts of genetics and physiology of fungi, with emphasis on saprophytic and plant pathogenic mycelial fungi. Current literature on evolution, cell structure, growth and development, gene expression, metabolism, sexual and asexual reproduction and incompatibility systems. Laboratory exercises on mutant isolation, sexual and parasexual analysis, genetic transformation, and RFLP and isozyme analysis.

PB 733 Plant Growth and Development 3.
Prerequisite: PB(ZO) 414 or PB 421, organic chemistry.
Advanced course in plant physiology covering plant growth, development, differentiation, senescence and biological control mechanisms.

PB 751 Advanced Plant Physiology I 3.
Prerequisite: PB 421.
Cellular mechanisms and regulatory features related to plant respiration, photosynthesis, sulfur metabolism, nitrogen fixation and metabolism, and signal transduction. One of two courses covering field of plant physiology.

PB 774 Phycology 3.
Prerequisite: BIO 125 or PB 200.
Introduction to taxonomy, morphology, reproduction and ecological importance of organisms which may be included in the algae. Attention to local freshwater flow and physiology of selected species in relation to algal blooms, water quality and nutrient loading in aquatic habitats.

PB 780 Plant Molecular Biology 3.
Prerequisite: BCH 451, GN 411.
Molecular analysis of plant growth and development. Molecular techniques and their application to understanding control of gene expression in plants.

PB 795 Special Topics Botany 1-6.

PB 801 Seminar 1.

PB 820 Special Problems 1-6.
Directed research in some phase of botany other than a thesis problem, but designed to provide experience and training in research. Credits Arranged.
PB 824 Topical Problems 1-4.
Discussions and readings on problems of current interest in fields of ecology, anatomy and morphology, taxonomy, plant physiology and cell biology. May be repeated with a change in topic for a maximum of six credits.

PB 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral Student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

PB 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral Student.
For students who are preparing for and taking written and/or oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation Research.

PB 896 Summer Dissertation Research 1.
Prerequisite: Doctoral Student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral Student.
For students who have completed all credit hours, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Department of Entomology and Plant Pathology

As of July 1, 2016, the Department of Entomology and Plant Pathology has merged with the Department of Entomology to become the Department of Entomology and Plant Pathology. The information below is for the Department of Plant Pathology. Click here for information on Entomology (p. 77).

Plant Pathology is a diverse discipline that provides fundamentally important information to many of the undergraduate degree programs offered in CALS at NC State. Undergraduate instruction in plant pathology provides introductory and advanced courses on the biology of plant pathogens and the nature and control of plant diseases to students majoring in crop science, horticultural science, the life sciences, and forestry. It also provides the fundamental training necessary for graduate study in plant pathology and related fields.

Kelman Scholars

Thanks to the generosity of Dr. Arthur and Mrs. Helen Kelman, family and friends, the department offers the S.E. Kelman Memorial Scholarship to one or more outstanding undergraduates enrolled at NC State or other universities. This competitive program allows selected applicants to gain research experiences as interns working under the supervision of a faculty member in the Department of Plant Pathology. For details about this scholarship program, please see scholarship’s information page (https://plantpath.cals.ncsu.edu/undergraduate-studies/summer-research).

Curricula

There is no undergraduate major or minor in plant pathology. We co-direct with the Department of Entomology a certificate in Plant Pests, Pathogens, and People (https://oucc.dasa.ncsu.edu/plant-pests-pathogens-and-people), which offers a course of study in the biology, ecology, economic significance, and management of plant diseases and insects. This program may be completed on-campus or totally online.

Opportunities

As a graduate department, our graduates, with advanced degrees in plant pathology, are competitive for employment in many areas. Employment opportunities at the M.S. and Ph.D. levels include research, extension, teaching and regulatory sciences with universities and colleges, the U.S. Department of Agriculture, including APHIS and CPHIST, a wide array of agriculturally related industry, and private consulting. The rapid development of biotechnology, regulatory sciences, agricultural chemicals and biocontrol offers numerous opportunities for exciting and rewarding careers that service societal needs and advance our sciences.

PP - Plant Pathology Courses

PP 144 Weeds & Diseases of Ornamentals 3.
The objective of this course is to give students a fundamental and practical understanding of weed, disease, and pesticide management in the ornamental industries in North Carolina. Agricultural Institute students only.

PP 150 Introduction to Plant Molecular Biology 3.
Hands-on introduction to modern molecular biology techniques. Isolation of SNA from tobacco leaves, isolating a plant gene through polymerase chain reaction (PCR), cloning DNA fragments in plasmid vectors, bacterial transformation and plasmid DNA purification, restriction digestion and gel electrophoresis, gene transfer and expression of reporter genes in plant cell lines through a biolistic gene gun. Field trips, poster assignment and poster presentation are mandatory. This course is part of the Summer College in Biotechnology and Life Sciences (SCIBLS) and other pre-college, transitional and early-college programs. Students must have no more than 30 credit hours. Department approval required.

PP 154 Turf Weed and Disease Management 3.
General principles in turfgrass weed and disease development and management programs. Different weeds, their life cycles, management techniques, and factors affecting herbicide application performance will be covered. Students will learn the causes, development, identification and management of turfgrass diseases. Laboratory includes weed identification and herbicide application methods. Certain laboratory exercises will require personal transportation to Lake Wheeler Road Turf Field Lab unless otherwise specified by the lab instructors. The course is restricted to AGI students only.

PP 155 Diseases of Ornamentals and Turfgrasses 3.
Causes, development, identification and management of diseases of greenhouses and landscape ornamentals and turfgrasses. WARFIELD.
PP 222 Kingdom of Fungi 3.
Prerequisite: Any 100-level course in Biology or 200-level course in Plant Biology.
Influence and impact of fungi in our world. The role of fungi in history, ecology, medicine, human and plant diseases, industry, food and politics. Mushrooms, molds, mildews and symbiosis.

PP 241 The Worm’s Tale: Parasites In Our Midst 3.
This is a 3 credit hour survey course on the impact of parasites on society, including development and exploration, wars and expansion, agriculture, health and medicine, economic impacts, political impacts, and attempts at control/management. From the fiery serpent to the scourge of malaria, parasitic organisms have played a significant, and sometimes pivotal role in the development and progress of human society. This course presents an overview that provides students the necessary information and resources to understand this ubiquitous and critically important group of organisms. Parasites represent a significant hurdle to overcome as global society continues to move forward.

PP 315 Principles of Plant Pathology 4.
Fundamental principles of plant pathology with emphasis on disease etiology, nature of pathogenesis, ecology of host/parasite interaction, epidemiology of plant diseases, current strategies and practices for integrated disease control.

PP 318 Forest Pathology 3.
Prerequisite: PB 200.
Major diseases of forest trees and deterioration of wood products emphasizing principles of plant pathology; diagnosis; nature, physiology, ecology, and dissemination of disease-causing agents; mechanisms of pathogenesis; epidemiology and environmental influences; principles and practices of control.

PP 470 Advanced Turfgrass Pest Management 2.
Prerequisite: C- or better in CS 200.
Characteristics and ecology of turfgrass weed, insect, and disease pests; identification and diagnosis of turfgrass pests, strategies for managing pests including cultural, mechanical, biological, and chemical methods; development of integrated pest management programs, characteristics and modes of action for herbicides, insecticides, fungicides, and plant growth regulators; behavior and fate of pesticides in soil; and the development and management of pesticide resistant pest populations.

PP 492 External Learning Experience 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes facilities and resources which are external to the campus. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

PP 493 Special Problems in Plant Pathology 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes campus facilities and resources. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

PP 495 Special Topics in Plant Pathology 1-3.
Offered as needed to present materials not normally available in regular course offerings or for offering of new courses on a trial basis.

PP 501 Biology of Plant Pathogens 3.
Prerequisite: PP 315, or PP 318, or an introductory course in microbiology.
Biology of microbes that cause plant diseases. The ecology, genetics, physiology, taxonomy, and mechanisms of parasitism, pathogenicity and virulence of bacteria (and other prokaryotes), fungi (and oomycetes), nematodes, and viruses that cause plant diseases. Prepares graduate students for advanced courses in plant pathology, host-parasite interactions, and provides a knowledge base for students in other disciplines involved with plant pathogens or who seek to broaden their knowledge of microbes.

PP 502 Plant Disease: Methods & Diagnosis 2.
Prerequisite: PP 315.
Introduction to the basic principles of disease causality in plants and the methodology for the study and diagnosis of plant diseases caused by fungi. Identification of plant-pathogenic fungi. Research project, disease profiles and field trips are required.

PP 506 Epidemiology and Plant Disease Control 3.
Prerequisite: PP 315 or PP 318.
Consideration of fundamental concepts and principles of epidemiology as applied to modern strategies of plant disease control. Special consideration given to evaluation of current techniques for control of fungal, bacterial, viral and nematode pathogens in an integrated crop protection system.

PP 530 Agriculture, Ethics and the Environment 3.
Case studies in ethical theory and moral issues in agriculture and life sciences research including ethical theories, populations, food, ozone depletion, soil quality, sustainable and organic agriculture, plant biotechnology and biodiversity, animal rights and welfare, water quality, pesticides, risk assessment, biologically-based pest management, environmental policy and research ethics. Students are active participants and use role playing to present a forum.

PP 540 Tropical Plant Pathology 2.
Class introduces students to agriculture in the tropics and disease on tropical crops including cacao, banana, potato, root vegetables and coffee will be given. Trade issues relevant to US and Central American farmers are discussed. A week-long trip to Costa Rica in the summer and tours of coffee, banana, pineapple, tropical fruit, cacao and vegetable farms in the country is required. Learn about the diseases, social and political issues facing farmers in the developing world.

PP 575 Introduction to Mycology 4.

PP 590 Special Topics 1-3.

PP 601 Seminar 1.
Discussion of assigned phytopathological topics.

PP 610 Special Topics 1-6.

PP 615 Advanced Special Topics in Plant Pathology 1-6.
Prerequisite: PP 501, 502, Corequisite: ST 511.
Offered as needed to present materials not normally available in regular course offerings or for offering of new courses on a trial basis.

PP 620 Special Problems 1-6.
Investigation of special problems in plant pathology not related to thesis problem. Investigations may consist of original research and/or literature survey.
PP 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment and evaluate the student upon completion of the assignment.

PP 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

PP 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

Prerequisite: Graduate standing.
Original research in plant pathology.

PP 707 Plant Microbe Interactions 3.
Prerequisite: PP 501.
Fundamental concepts and current status of research on the physiology, biochemistry and molecular biology of host-pathogen interactions during plant disease. Topics include recognition, penetration and colonization, pathogenicity and virulence determinants, resistance mechanisms, sign transduction, programmed cell death, and other current topics. Information presented in context of viral-, bacterial-, fungal- and nematode-plan interactions. Credit cannot be received for both PP 507 and PP 707.

This course will introduce nonparametric and model-based methods for making inferences on population processes (mutation, migration, drift, recombination, and selection). The goal is to provide a conceptual overview of these methods and hands-on training on how to implement and interpret the results. Sample data sets in computer laboratories will integrate summary statistic, cladistic, coalescent, and bayesian approaches to examine population processes in different pathosystems with specific emphasis on eukaryotic microbes, viruses and bacteria.

PP 727 Ecology of Soil Ecosystems 3.
Prerequisite: One course in: (SSC 332, SSC 511, SSC 521, or SSC 532), or ecology (BO 360 or CS 430), or microbiology (MB 351), or consent of instructor.
An interdisciplinary course primarily focusing on the interactions between soil organisms and their environment, and the ecological consequences of these diverse complex interactions. A broad range of topics, including soil biodiversity, plant-microbial interactions, trophic interactions, energy flow and nutrient cycling, and microbial controls over plant and ecosystem responses to natural and anthropogenic perturbation (e.g., tillage or global change components) are addressed.

PP 728 Soilborne Plant Pathogens 3.
Prerequisite: PP 501, 502.
In-depth study of ecology of soilborne fungal and bacterial pathogens inducing root and wilts diseases in plants. Concepts and principles including but not limited to the rhizosphere, inoculum potential, soil fungistasis, survival, root disease models and biological control.

PP 730 Fungal Genetics and Physiology 3.
Prerequisite: BCH 451, BO 775, GN 411 or PP 501.
Basic concepts of genetics and physiology of fungi, with emphasis on saprophytic and plant pathogenic mycelial fungi. Current literature on evolution, cell structure, growth and development, gene expression, metabolism, sexual and asexual reproduction and incompatibility systems. Laboratory exercises on mutant isolation, sexual and parasexual analysis, genetic transformation, and RFLP and isozyme analysis.

P: Basic Undergraduate Level Genetics Class.
This class deals with the major concepts in plant disease resistance: Its molecular and biochemical bases, its effectiveness and methods of deployment and conventional and transgenic breeding methods used to incorporate improved disease resistance into crop species.

PP 790 Special Topics 1-6.

PP 795 Advanced Special Topics 1.

PP 801 Seminar In Plant Pathology 1.
Discussion of assigned phytopathological topics.

PP 810 Special Topics 1-6.

PP 815 Advanced Special Topics 1-6.

PP 820 Special Problems In Plant Pathology 1-6.
Investigation of special problems in plant pathology not related to thesis problem. Investigations may consist of original research and/or literature survey.

PP 865 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

PP 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation Research.

PP 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour requirements, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree and are writing and defending their dissertations.
Prestage Department of Poultry Science

The Prestage Department of Poultry Science provides instruction in the principles of vertically integrated poultry production and in such related disciplines as nutrition, physiology, genetics, immunology, toxicology, biotechnology, and general poultry management. Through teaching, research, and extension, the department serves students, poultry producers, and allied industries. Poultry production has increased rapidly during the last two decades and ranks first in North Carolina as a source of agricultural income. North Carolina currently ranks second (http://www.ncagr.gov/stats/crops/Ranking.pdf) nationally in the production of poultry products. Growing demand for poultry products, our climate and economic conditions in the state provide a sound base for continued expansion.

Opportunities

The transition from small farm operations to large commercial poultry enterprises has created more specialized positions than there are available poultry graduates. Production-oriented positions and off-the-farm operations in areas such as processing and distribution offer new job opportunities. The allied industries—feed, equipment, financing, pharmaceutical and other supplies—need additional employees trained in Poultry Science. Graduates hold positions as managers and field representatives for business identified with or serving the poultry industry. Graduates are also employed in the communication and public relations sectors, as teachers, and extension and research specialists. Some graduates develop their own poultry businesses.

Curricula

Students desiring a Bachelor of Science degree with a major in Poultry Science may choose either the science or technology curriculum offered by the Prestage Department of Poultry Science. One may obtain a double major in other curricula through careful use of electives and/or summer school attendance. These students should consult the undergraduate advisers in the department(s) concerned. Currently, the pre-veterinary science student may obtain all requirements toward a Bachelor of Science degree in the science option. The science curriculum reflects a student’s interest in the basic biological and physical sciences. These students are better prepared for advanced study in various disciplines such as genetics, nutrition, physiology, and pathology. Several pre-veterinary students are currently enrolled in this curriculum and are seeking a Bachelor of Science degree in Poultry Science. (See the Pre-professional Program in Veterinary Medicine).

The technology curriculum in Poultry Science is designed to prepare students for direct entry into the poultry industry upon graduation. It allows a greater selection of courses in business and economics; and offers a student both basic and applied knowledge in poultry production which can be utilized in a poultry operation upon graduation.

Specific curriculum requirements are available on the Registration and Records website (http://www.ncsu.edu/registrar/curricula).

Minor in Poultry Science

A minor in Poultry Science is open to all interested baccalaureate students who are not majoring in Poultry Science. This minor is appropriate for (but not limited to) students majoring in Agricultural Business Management, Agricultural Economics, Agricultural Education, Agricultural Science, Agronomy, Animal Science, Biological Science, Food Science, Nutritional Science and Zoology. Students completing a minor in Poultry Science will become familiar with poultry production and with its related industries. The minor requires a minimum of 15 credit hours with a grade of “C-” or better. The program is flexible so that students may emphasize the discipline or species of their interest.

See the complete listing of minors (https://oucc.dasa.ncsu.edu/undergraduate-academic-programs/academic-minors) for more information.

PO - Poultry Science Courses

PO 111 Poultry Production 3.
Introduction to poultry science and production. Domestication of key poultry species, embryology and hatchery management, anatomy and physiology, poultry rations, housing refinements, and diseases relative to the production of poultry meats and eggs. STAFF.

PO 150 Poultry Management 3.
Principles and practices of commercial market turkey, broiler, and roaster management. Includes breeding, nutrition, housing, related production parameters, and an examination of contracts and grower-company relationships.

PO 162 Livestock and Poultry Disease Management 3.
Basic principles of disease and disease management in livestock and poultry. Disease prevention through sanitation and vaccination. Diseases of horses, pigs, ruminants, poultry, and disease prevention programs for each species.

PO 201 Poultry Science and Production 3.
Fundamental principles of broiler, turkey and egg production including poultry physiology, breeding, incubation, housing, nutrition, disease control, management and marketing.

PO 201A Poultry Science and Production 3.
Fundamental principles of broiler, turkey and egg production including poultry physiology, breeding, incubation, housing, nutrition, disease control, management and marketing.

PO 202 Poultry Science and Production Laboratory 1.
Corequisite: PO 201.
This laboratory course will cover the fundamental principles of broiler, turkey and egg production including poultry physiology, breeding, incubation, housing, nutrition, disease control, management and marketing. This course includes field trips for which transportation will be provided.
PO 202A Poultry Science and Production Laboratory 1.
This laboratory course will cover the fundamental principles of broiler, turkey, and egg production including poultry physiology, breeding, incubation, housing, nutrition, disease control, management and marketing. This course includes field trips for which transportation will be provided.

PO 212 Poultry and People: Why did the chicken cross the world? 3.
Poultry species play a vital role in modern society. This course engages students to develop research skills including information literacy, data collection, and developing arguments based on evidence. Specific course topics are developed by students during each course offering. General course content will include, but is not limited by the following topics: History of Domestication, Religious Symbolism, Social and Culinary Practice, and Modern Poultry Production (post-1950) commercial and hobby. Delivery of this course will be inquiry based and focus on utilizing research techniques to gather information, develop a hypothesis, collect information, interpret the results, and report findings in multiple formats.

PO 290 Poultry Seminar 1.
Prerequisite: Sophomore standing.
Exploration of topics related with current and future potential to influence the poultry industry. Guest lectures from industry representatives will include: vertically integrated poultry production, primary breeders, marketing, animal health, veterinary medicine as it relates to poultry, allied equipment manufacturers, and management of poultry companies. Special emphasis on summer internships and career services.

PO 322 Muscle Foods and Eggs 3.
Prerequisite: ZO 160, BIO 181 or BIO 183.
Processing and preserving fresh poultry, red meats, seafood, and eggs. Ante- and post-mortem events as they affect quality, yield, and compositional characteristics of muscle foods. Principles and procedures involved in the production of processed meat items.

Prerequisite: PO 201.
To provide students with experience handling live poultry as well as working with an learning about USDA grades and evaluation of poultry meat, meat products, and eggs. Develop an understanding of product specifications.

PO 350 Introduction to HACCP 3.
Introductory course on the Hazard Analysis and Critical Control Points System (HACCP) which is designed to decrease hazards in foods. An International HACCP Alliance approved curriculum which covers prerequisite programs. A step by step approach for developing and implementing a HACCP plan for USDA regulated food processing plants. Offered only as a world wide web course through the Office of Instructional Telecommunications.

PO 404 Avian Anatomy and Physiology 4.
Prerequisite: PO 201.
Principles of avian physiology integrating physiological functions and anatomical structures of organs and organ systems. Practical problems associated with poultry production. The importance of maximizing growth and productivity via exploitation of environmental influences on physiological systems. Credit not given for PO 404 and 504.

PO 406 Physiological Aspects of Poultry Management 3.
Prerequisite: PO 201, Corequisite: PO 407.
Application of physiological principles to modern poultry management and research. Poultry physiology will be related to practical and research management topics including nutrition, housing, ventilation, disease, heat stress, and lighting programs. Students cannot receive credit for both PO 406 and PO 506.

PO 407 Physiological Aspects of Poultry Management Laboratory 1.
Prerequisite: PO 201, Corequisite: PO 406.
Practical experience with poultry husbandry, animal environment management, and feeding in a research environment. Laboratory exercises include feeding and nutrition programs, weighing birds, lighting management and infrastructure, biosecurity and sanitation, vaccinations, hatching egg management, brooding, ventilation programs and infrastructure, housing design and infrastructure, SOP development, human safety and health training, and animal care training. Laboratory exercises will prepare students for both commercial poultry industry and animal research management careers. Co-requisite with PO 406. Personal transportation to Chicken Educational Unit required.

PO 410 Production and Management of Game Birds in Confinement 3.
Management principles associated with the successful propagation and rearing of game birds, ornamental birds and waterfowl in confinement. Housing and pen requirements, nutrition, disease control and regulatory issues included.

PO 411 Agrosecurity 3.
Junior standing or above.
This course is designed to increase the awareness of the issues and vulnerabilities of the IS agricultural system, the importance of agriculture in the US economy, and the importance of protecting it from disease and/or attack. This course is organized to integrate and assimilate knowledge across multiple disciplines including agriculture, animal health, human health, infectious diseases, business, economics, and public policy. Students will identify and analyze the interactions between these disciplines in light of increasing population and concentrated agriculture's increased vulnerability to major disruptions in food production. Students will also analyze where potential links in the food chain are susceptible to disruptions by individuals (or natural disasters), the consequences of these disruptions, and how to minimize the associated risks by developing case studies and strategies for defending against specific threats. Students must have junior standing.

PO 412 Emerging Topics in Poultry Science 3.
This course is designed to allow students to merge science taught in previous Poultry Science courses with topics considered of interest or emerging in the poultry industry. Students will utilize science and critical thinking skills to solve real world scenarios. This course is designed for students that have completed PO 201 and PO 202. Junior or Senior standing.

PO 415 Comparative Nutrition 3.
Prerequisite: ANS 225 or ANS 230 or CH 220 or CH 223 or CH 227.
Principles of nutrition, including the classification of nutrients and the nutrient requirements of and metabolism by different species for health, growth, maintenance and productive functions.

PO 421 Commercial Egg Production 2.
Prerequisite: PO 201.
Principles and current practices of commercial egg production.
PO 424 Poultry Meat Production 3.
Prerequisite: PO 201.
Principles and current practices of vertically integrated broiler and turkey production; encompassing management, nutrition, poultry health, environmental, and related areas.

PO 425 Feed Manufacturing Technology 3.
Feed mill management, feed ingredient purchasing, inventory, storage, and quality evaluation, computerized feed formulation, feeding programs for poultry and swine, feed mill design, equipment, maintenance, operation, safety, state and federal regulations pertaining to feed manufacture.

PO 433 Poultry Processing and Products 3.
Prerequisite: PO 201.
Poultry processing, further processing, and resulting products as affected by basic muscle composition and function during the conversation of muscle to meat. Microbiology of spoilage and pathogenic organisms, and the regulatory and HACCP programs designed to minimize problems. Overall business functions of poultry processing to understand profit/loss factors, and skills necessary for communication and management. Various sections on sanitary design/construction, pest control, wastewater treatment, and further processed egg products. Credit for both PO 533 and PO 433 is not allowed. Transportation to field trips will be provided. Non-scheduled class time for field trips or out-of-class activities may be required for this class. Transportation to scheduled labs at Lake Wheeler CEU/Poultry Processing Lab will be provided by students.

PO 435 Poultry Incubation & Breeding 4.
Prerequisite: PO 201.
Principles and current practices of modern poultry incubation and breeding production systems. Students will be able to describe basic elements of breeding management and production practices, to apply those elements to specific scenarios, and to strengthen their ability to interpret and make critical judgements relative to the breeding of poultry, production of hatching eggs, and the subsequent incubation and hatching process.

PO 492 External Learning Experience 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes facilities and resources which are external to the campus. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

PO 493 Special Problems in Poultry Science 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes campus facilities and resources. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

PO 495 Special Topics in Poultry Science 1-3.
Offered as needed to present materials not normally available in regular course offerings or for offering of new courses on a trial basis.

PO 504 Avian Anatomy and Physiology 4.
Prerequisite: PO 201.
Principles of avian physiology integrating physiological functions and anatomical structures of organs and organ systems. Practical problems associated with poultry production. The importance of maximizing growth and productivity via exploitation of environmental influences on physiological systems. Credit not given for PO 404 and 504.

PO 506 Physiological Aspects of Poultry Management 3.
Prerequisite: PO 201.
Application of physiological principles to modern poultry management and research. Poultry physiology will be related to practical and research management topics including nutrition, housing, ventilation, disease, heat stress, and lighting programs. Students cannot receive credit for both PO 406 and 506.

PO 510 Poultry Product Safety: An On-Farm Model 3.
PO 515 Advanced Comparative Nutrition 3.
An in-depth presentation of core nutrition principles stressing the role nutrient availability plays in digestive and metabolic adaptations of a variety of animal species. Consideration will be given to translational biomedical nutrition issues that apply to both human and animal health. Students are expected to develop a term paper suitable for submission in a peer-reviewed scientific journal that reviews the latest information in metabolic or digestive adaptations of a specific species as related to nutritional processes. Credit will not be allowed for both ANS/NTR/PO 415 comparative Nutrition and NTR/PO 515 Advanced Comparative Nutrition.

PO 524 Comparative Endocrinology 3.
Prerequisite: BIO 421 or PO 405.
Basic concepts of endocrinology, including functions of major endocrine glands involved in processes of growth, metabolism and reproduction.

PO 533 Poultry Processing and Products 3.
Prerequisite: PO 201.
Poultry processing, further processing, and resulting products as affected by basic muscle composition and function during the conversation of muscle to meat. Microbiology of spoilage and pathogenic organisms, and the regulatory and HACCP programs designed to minimize problems. Overall business functions of poultry processing to understand profit/loss factors, and skills necessary for communication and management. Various sections on sanitary design/construction, pest control, wastewater treatment, and further processed egg products. Credit for both PO 533 and PO 433 is not allowed. Transportation to field trips will be provided. Non-scheduled class time for field trips or out-of-class activities may be required for this class. Transportation to scheduled labs at Lake Wheeler CEU/Poultry Processing Lab will be provided by students.

PO 566 Animal Cell Culture Techniques 2.
Prerequisite: BIT 360 or BIT 810 equivalent.
Introduction to animal cell culture techniques. Aseptic technique for vertebrate cell culture, media formulation, primary cell culture, long-term maintenance of cell lines, application of molecular techniques in vitro situations. Half semester course, second part.

PO 580 Feed and Ingredient Quality Assurance 3.
Prerequisite: NTR(FM) 525.
The course will teach students the principles of feed and ingredient quality assurance and how to develop a comprehensive quality assurance program. The course will include the development of an approved supplier list, ingredient specifications, feed manufacturing quality assurance procedures, and risk based feed safety programs.
PO 590 Special Problems in Poultry Science 1-6.

PO 601 Seminar 1.
Preparation for research, research perspectives, rising concerns in poultry production, orientation for graduate studies in poultry science. Required of all graduate students in the Department of Poultry Science.

PO 620 Special Problems 1-6.
Prerequisite: Graduate standing.
Specific problems of study assigned in various phases of poultry science.

PO 685 Master’s Supervised Teaching 1-3.
Prerequisite: Master’s student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

PO 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master’s student.
For students in non-thesis master’s programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master’s exam, etc.

PO 689 Non-Thesis Master Continuous Registration - Full Time Registration 1.
Prerequisite: Master’s student.
For students in non-thesis master’s programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master’s exam, etc. Students may register for this course a maximum of one semester.

PO 690 Master’s Examination 1-9.
Prerequisite: Master’s student.
For students in non-thesis master’s programs who have completed all other requirements of the degree except preparing for and taking the final master’s exam.

PO 693 Master’s Supervised Research 1-9.
Prerequisite: Master’s student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

PO 695 Master’s Thesis Research 1-9.
Prerequisite: Master’s student.
Theiss Research.

PO 696 Summer Thesis Research 1.
Prerequisite: Master’s student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

PO 699 Master’s Thesis Preparation 1-9.
Prerequisite: Master’s student.
For students who have completed all credit hour requirements and full-time enrollment for the master’s degree and are writing and defending their thesis.

PO 757 Comparative Immunology 3.
Prerequisite: MB 751 or MB 441 or BIO 414.
Compare and contrast the immune system structure and function of animal species of agricultural and veterinary significance with that of humans and traditional biomedical model organisms. Discuss key evolutionary differences, how different species use different mechanisms to achieve the same outcomes, and the clinical implications for these differences.

PO 775 Mineral Metabolism 3.
Prerequisite: ANS(NTR,PO) 415, BCH 451 and ZO 421.
Requirements, function, distribution, absorption, excretion and toxicity of minerals in humans and domestic animals. Interactions between minerals and other factors affecting mineral metabolism or availability. Emphasis on mechanisms associated with-mineral functions and the metabolic bases for the development of signs of deficiency.

PO 801 Graduate Seminar In Poultry Science 1.
Preparation for research, research perspectives, rising concerns in poultry production, orientation for graduate studies in poultry science. Required of all graduate students in the Department of Poultry Science.

PO 820 Special Problems In Poultry Science 1-9.
Prerequisite: Graduate standing.
Specific problems of study assigned in various phases of poultry science.

PO 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment and evaluate the student upon completion of the assignment.

PO 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

PO 893 Doctoral Supervised Research 1-9.
Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation Research.

PO 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour requirements, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Department of Crop and Soil Sciences

As of July 1, 2016, the Department of Soil Science has merged with the Department of Crop Science to become the Department of Crop and Soil Sciences. The information listed below is for the Department of Soil Science. Click here for information on Crop Science (p. 72).
The Department of Soil Science trains students in the use and management of land. Graduates will understand both the fundamentals of soils and the principles of land management. The curriculum will show how these principles are applied in agriculture as well as real estate development. Soils constitute one of the largest capital investments in farming, and proper soil management is essential for efficient production. Future world food needs will be met by proper use of soil resources and fertilizers. Soil properties are important for non-agricultural, environmental, and real estate development as well. For managing any use of land, knowledge of soil and its interaction with potential pollutants is essential in maintaining environmental quality. People trained in soils and land management are sought by private consulting companies, land developers, agribusiness, research, service planning-development, education and conservation-related agencies.

Opportunity

Soil science graduates fill positions of leadership and service in land resource planning, environmental science, real estate development, conservation, natural resource management and agriculture. Among these are opportunities as: farm operators and managers; county agricultural extension agents; employees of other public advisory agencies; private sector soil consultants for real estate development, and Natural Resources Conservation Service and other conservation-related agencies concerned with soil resources. Graduates also serve as technical representatives and salesmen in fertilizer companies and in other agribusiness activities. Many opportunities exist for privately consulting soil scientists who serve a variety of clientele needs including helping plan real estate developments. Environmental concerns usually require soil science expertise, especially in land-based waste management. Provisions are made for students wishing for more thorough training in biological sciences, chemistry, mathematics and physics leading to graduate study. (See the Graduate Catalog for a listing of graduate degrees). Students with an advanced degree have greater opportunities in teaching, research, service and extension with state, federal and private educational or research institutions and agencies.

Curricula

The Bachelor of Science degree may be obtained with a major in Soil and Land Development, Plant and Soil science, or Natural Resources, Soil and Land Development is designed to train students for work in the real estate industry. Two concentrations are offered: Soil and Land Development and Soil Science. A minor in Business Administration is encouraged for students in the Land Management concentration who may want to start their own business. The Soil Science concentration will be of interest to students planning to go to graduate school. The Plant and Soil Science Program is administered jointly with the Department of Crop Science. A soil science concentration is available in the Plant and Soil Science curriculum. Two soils concentrations are available in the Natural Resources curriculum, Soil Resources and Soil and Water Resource Systems. (The Plant and Soil Science, Natural Resources, and Environmental Sciences curricula are shown previously within the College of Agriculture and Life Sciences).

Minor in Soil Science

The minor in Soil Science is offered to students desiring a strong knowledge of the principles of Soil Science to complement their major. The program is intended to strengthen the understanding of basic physical and chemical soil properties that would be relevant to students interested in land management. These interests may include (but are not limited to):

- Forestry
- Geology
- Natural Resources
- Environmental Sciences
- Plant and Soil Science
- Turfgrass Management
- Plant Biology
- Landscape Architecture
- Horticulture
- Biological and Agricultural Engineering
- Agricultural Business Management
- Agricultural Education

Note: Fourteen (14) hours of required courses and three hours of electives are necessary to complete the minor.

SSC - Soil Science Courses

SSC 103 Introductory Topics in Crop, Soil and Turfgrass Sciences

Introduction to the scope, purpose, and objectives of a university education with an emphasis on areas related to Crop, Soil and Turfgrass Sciences. Students will explore university, college and departmental resources, academic policies and procedures, opportunities for minors, career opportunities, and current trends and issues in our related disciplines. Students cannot receive credit for both CS 103 and ALS 103. Freshman Only; PAA, PAB, PAC, PAE, PCB, SST, TFG.

SSC 112 Principles of Soil Science

Fundamental soil physical and chemical properties and principles. Major lecture topics: soil description, formation, soil water and the hydrologic cycle, and soil fertility and fertilizers. Laboratory exercises in identifying soil horizons, determining soil texture, identifying nutrient deficiency symptoms in plants and interpreting soil fertility test reports. BROOME.

SSC 151 Fertilizers and Soil Fertility

Principles of managing plant nutrients in soils for crop, turfgrass and other plant production; nutrient requirements; deficiency symptoms, nutrient availability in soils; soil acidity and liming; fertilizer materials; organic fertilizers; and environmental effects of fertilizers. BROOME.

SSC 185 Land and Life

Soil is a fundamental natural resource that sustains life on earth. Detailed information is provided about soils at local, community, regional, national, and global scales; and their importance to world food security and human health, agricultural production, environmental quality, and sustainable ecosystems. Students will gain practical knowledge about soils, their use and management, and their critical role in supporting life. Understanding basic soil properties, their interactions, and how they are influenced or impacted by human activity is essential to everyday life and to being a well-informed citizen.

SSC 200 Soil Science

Prerequisite: CH 101 or CH 100.

Fundamentals of soils including origin, composition and classification; their physical, chemical, and biological properties; significance of these properties to soil-plant relationships and soil management.
SSC 201 Soil Science Laboratory 1.
Corequisite: SSC 200.
Hands-on laboratory experience in fundamentals of soils including origin, composition and classification; their physical, chemical, and biological properties; significance of these properties to soil-plant relationships, soil management and the environment.

SSC 332 Environmental Soil Microbiology 3.
Prerequisite: BIO 181 and SSC 200.
Analysis of the effects of soil environments on microbial growth. Relationships and significance of microbes to mineral transformations, plant development, and environmental quality. Management of soil microorganisms in different ecosystems.

SSC 341 Soil Fertility and Fertilizers 3.
Prerequisite: SSC 200.
Principles of managing plant nutrition for crop production, fertilizer materials, crop fertilization, soil fertility maintenance and management practices for optimizing fertilizer use; soil and plant tissue testing as diagnostic tools in nutrient management.

SSC 342 Soil Fertility Laboratory 1.
Corequisite: SSC 341.
Soil sampling and analyses for acidity and nutrient content. Calculating lime and fertilizer recommendations and calibrating fertilizer spreaders. Discussion of fertilizer materials and calculation of least cost blends. Computer programs to confirm recommendations and least cost blends. Field trip to a fertilizer distributor and to a fertilizer user.

SSC 421 Role of Soils in Environmental Management 3.
Prerequisite: SSC 200.
Importance of soils in land application of municipal, industrial and agricultural wastes; onsite disposal of domestic wastewater; bioremediation of contaminated sites; erosion and sedimentation control; farm nutrient management; and nonpoint source water pollution.

SSC 427 Biological Approaches to Sustainable Soil Systems 3.
Prerequisite: SSC 200 or equivalent, BIO 181 or 183, and CH 101.
Ecological and biochemical concepts will be applied to managing soils in agro-ecological settings such as organic and conventionally managed farms and gardens, emphasizing microbial transformations of nutrients and matter. Topics covered include soil organic matter formation and fractionation, decomposition, microbial assimilation of nutrients, fertilizer management, tillage, crop rotations, cover crop management. Companion course SSC 428 and SSC 341 recommended.

SSC 428 Service-Learning in Urban Agriculture Systems 1.
Prerequisite: SSC 200 or equivalent, BIO 181 or 183, and CH 101.
Course provides students a hands-on experience in urban agriculture with under-served youth in the Raleigh area. Students partner with a community gardening organization to provide knowledge and experience in soil science and agriculture to youth with the goals of increasing urban food security and developing student leadership skills. Particular emphasis is placed on reflecting on course activities and deepening of skills related to extension, outreach, and working with diverse populations. Course designed to be taken as a companion course to SSC 427, however can be taken as a stand-alone course.

Prerequisite: SSC 200.
Geographic information systems (GIS), global positioning system (GPS), and remote sensing to manage spatially variable soils, vegetation, other natural resources. Develop: function understanding of GIS principles, working knowledge of ArcGIS, problem-solving/critical-thinking necessary to use GIS to characterize and manage soils, agriculture, natural resources. Introduction to GIS; Maps/Cartography; Vector/Raster Data Models; Georeferencing/Coordinate Systems; Spatial Data Sources; GPS/GPS skills/ Remote Sensing; Statistics/Interpolation; Precision Agriculture; Computer Aided Design and GIS; Creating Analyzing 3-D Surfaces. Credit not given for both SSC 440 and SSC 540.

SSC 442 Soil and Environmental Biogeochemistry 3.
Prerequisite: SSC 200 and (CH 101, or CH 220, or CH 221).
Quantitative approaches to the cycling of elements and chemical species in soils and the environment, including carbon and organic contaminants, non-metallic macronutrients, metals and metalloids.

SSC 452 Soil Classification 4.
Prerequisite: SSC 200.
Genesis, morphology, and classification of soils; characterization of soils according to their diagnostic properties; interpreting soil use potential; emphasis on North Carolina soils and their taxonomy; field exercise in soil mapping and site evaluation; several field trips, one overnight.

SSC 455 Soils, Environmental Quality and Global Challenges 3.
P: SSC 200 or ES 100 or Instructor permission.
As the world population grows to 9 billion people by 2050, we will be pressed to increase food security, respond to the consequences of a changing climate, and improve human health -- all while protecting the environment and maintaining natural resources. Soils play a critical role in many of these challenges. The goal of this course is to teach students how soils regulate environmental quality through a host of chemical, physical and biological processes. We will examine a series of global challenges, assess their related environmental issues and policies, and analyse the roles of soils in each issue.

SSC 461 Soil Physical Properties and Plant Growth 3.
Prerequisite: SSC 200.
Soil physical properties and their influence on plant growth and environmentally sound land use; soil solid-porosity-density relationships, soil water, heat and air relations and transport. Principles and applications of these topics using current literature in agronomy, turf, horticulture, water quality, waste management and urban land use.

SSC 462 Soil-Crop Management Systems 3.
Prerequisite: CS 213, CS 414, SSC 342, SSC 452; senior standing.
Unites principles of soil science and crop science with those of allied areas into realistic agronomic applications; practical studies in planning and evaluation of soil and crop management systems.

SSC 470 Wetland Soils 3.
Prerequisite: SSC 200, SSC 452 recommended.
Wetland definitions, concepts, functions and regulations; chemical, physical and morphological characteristics of wetland soils. Wetland soil identification using field indicators and monitoring equipment; principles of wetland creation, restoration and mitigation. Special project required for SSC 570. Two mandatory field trips. Field trips for distance education students are not required but optional. Credit will not be given for both SSC 470 and SSC 570.
SSC 490 Senior Seminar in Crop Science and Soil Science 1.
Prerequisite: Senior standing in Agronomy, Plant and Soil Sciences, or Turfgrass Science.
Review and discussion of current topics in crop science, soil science, agronomy and natural resource management. Preparation and presentation of scientific information in written and oral format. Senior standing in Agronomy, Plant and Soil Sciences, or Turfgrass Science.

SSC 492 External Learning Experience 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes facilities and resources which are external to the campus. Contact and arrangements with the prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

SSC 493 Special Problems in Soil Science 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes campus facilities and resources. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator prior to the experience.

SSC 495 Special Topics in Soil Science 1-6.
Prerequisite: SSC 200.
Offered as needed to present materials not normally available in regular course offerings or for offering of new courses on a trial basis.

SSC 511 Soil Physics 4.
Prerequisite: SSC 200, PY 212.
Soil physical properties and theory of selected instrumentation to measure them. Topics including soil solids, soil water, air and heat. Emphasis on transport processes and the energy concept of soil and water.

SSC 521 Soil Chemistry 3.
Prerequisite: SSC 200, one yr. of general inorganic chemistry.
A consideration of the chemical and colloidal properties of clay and soil systems, including ion exchange and retention, soil solution reactions, solvation of clays and electrokinetic properties of clay-water systems.

SSC 532 Soil Microbiology 4.
Prerequisite: MB 351; CH 220.
Soil as a medium for microbial growth, the relation of microbes to important mineral transformations in soil, the importance of biological equilibrium and significance of soil microbes to environmental quality.

Prerequisite: SSC 200.
Geographic information systems (GIS), global positioning system (GPS), and remote sensing to manage spatially variable soils, vegetation, other natural resources. Develop: function understanding of GIS principles, working knowledge of ArcGIS, problem-solving/critical-thinking necessary to use GIS to characterize and manage soils, agriculture, natural resources. Introduction to GIS; Maps/Cartography; Vector/Raster Data Models; Georeferencing/Coordinate Systems; Spatial Data Sources; GPS/GPS skills/ Remote Sensing; Statistics/Interpolation; Precision Agriculture; Computer Aided Design and GIS; Creating Analyzing 3-D Surfaces. Credit not given for both SSC 440 and SSC 540.

SSC 541 Soil Fertility 3.
Prerequisite: SSC 341.
Soil conditions affecting plant growth and the chemistry of soil and fertilizer interrelationships. Factors affecting the availability of nutrients. Methods of measuring nutrient availability.

SSC 545 Remote Sensing Applications in Soil Science and Agriculture 3.
Prerequisite: SSC 200, PY 212.
Overview of remote sensing including history, evolution, vocabulary, and physical principles, i.e., electromagnetic radiation and its interaction with matter. Distant and proximate remote sensing techniques (aerial photography, satellite imaging, radar, lidar, etc.), hardware, and platforms and their application in the characterization and management of soils and crops. Development of strategies for incorporating remote sensing into soil and agronomic research, and of practical skills for processing, analysis, display, and discussion of remote sensing data with applications in soil science and agriculture.

SSC 551 Soil Morphology, Genesis and Classification 3.
Prerequisite: SSC 200.

SSC 562 Environmental Applications Of Soil Science 3.
Prerequisite: SSC 200.
Identification and evaluation of basic factors influencing movement of potential pollutants through soil and their underlying strata. Development of understanding of processes of soil and site evaluation for waste disposal and transport of pollutants through soils.

SSC 570 Wetland Soils 3.
Prerequisite: SSC 200, SSC 452 recommended.
Wetland definitions, concepts, functions and regulations; chemical, physical and morphological characteristics of wetland soils. Wetland soil identification using field indicators and monitoring equipment; principles of wetland creation, restoration and mitigation. Special project required for SSC 570. Two mandatory field trips. Field trips for distance education students are not required but optional. Credit will not be given for both SSC 470 and SSC 570.

SSC 573 Introduction to Surface Hydrologic/Water Quality Modeling 3.
Prerequisite: BAE 471, SSC 200.
Concepts in basic hydrologic, erosion and chemical transport used in modeling. Evaluation of typical hydrologic/water quality models on watershed systems. Usage of state-of-the-art models in project examples.

SSC 590 Special Problems 1-6.
Prerequisite: SSC 200.
Special problems in various phases of soils. Emphasis placed on review of recent and current research. Credits Arranged.

SSC 601 Seminar 1.
Prerequisite: Graduate standing in SSC.
A maximum of two semester hours allowed toward the master's degree, but any number toward the doctorate. Scientific articles, progress reports in research and special problems of interest to soil scientists reviewed and discussed.
SSC 609 Colloquium In Soil Science 1-3.
Prerequisite: Graduate standing in SSC.
Seminar-type discussions and lectures on specialized and advanced topics in soil science. Credits Arranged.

SSC 620 Special Problems 1-6.
Prerequisite: SSC 200.
Special problems in various phases of soils. Emphasis placed on review of recent and current research. Credits Arranged.

SSC 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment and evaluate the student upon completion of the assignment.

SSC 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

SSC 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

SSC 690 Master's Exam 1-9.
Prerequisite: Master's student.
For students in non thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam. Credits Arranged.

SSC 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

SSC 695 Master's Thesis Research 1-9.
Prerequisite: Master's student.
Thesis Research.

SSC 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their thesis. Credits arranged.

SSC 720 Soil and Plant Analysis 3.
Prerequisite: PY 212; CH 315; at least three soils courses including SSC 341.
Theory and advanced principles of utilization of chemical instruments to aid research on the heterogeneous systems of soils and plants.

SSC 722 Advanced Soil Chemistry 3.
Prerequisite: SSC 521, CH 730.
Critical review of application of chemical thermodynamics and kinetics to under standing soil systems, solution equilibria, precipitation and dissolution, complexation, reduction-oxidation, surface-solute interactions and chemical transport. Application of chemical speciation models.

SSC 725 Pesticide Chemistry 1.
Prerequisite: (CH 201 or CH 203) and (CH 221 or CH 225).
Chemical properties of pesticides including hydration and solvation, ionization, volatility, lipophilicity, molecular structure and size, and reactivity and classification according to chemical description, mode of action or ionizability. Taught during the first 5 weeks of semester. Drop date is last day of 3rd week of the minicourse.

SSC 727 Pesticide Behavior and Fate In the Environment 2.
Prerequisite: CS(HS,SSC,TOX) 725, SSC 200.
Sorption/desorption, soil reactivity, movement, volatilization, bioavailability, degradation and stability of pesticides in the environment. Taught during the last 10 weeks of semester. Drop date is last day of 3rd week of the minicourse.

SSC 753 Soil Mineralogy 3.
Prerequisite: SSC 200, SSC 341.
Composition, structure, classification, identification, origin, occurrence and significance of soil minerals with emphasis on primary weatherable silicates, layer silicate clays and sesquioxides.

SSC 771 Theory Of Drainage--Saturated Flow 3.
Discussion of physical concepts and properties of fluids and porous media in relation to soil-water movement. Derivation and discussion of the fundamental laws and equations governing saturated flow in porous media. Analysis of mathematical solutions of steady-state and transient flow equations to determine their applicability to drainage problems. Consideration of analogs and models of particular drainage problems.

SSC 790 Special Topics 1-6.

SSC 801 Seminar 1.

SSC 809 Colloquium In Soil Science 1-3.
Prerequisite: Graduate standing in SSC.
Seminar-type discussions and lectures on specialized and advanced topics in soil science. Credits Arranged.

SSC 820 Special Problems 1-6.
Prerequisite: SSC 200.
Special problems in various phases of soils. Emphasis placed on review of recent and current research. Credits Arranged.

SSC 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

SSC 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.
Primary emphases are devoted to two areas: 1) the production, agricultural, biological, physical, social, and environmental sciences. This research includes field and laboratory experimentation in the agriculture and life science industries in North Carolina. The faculty of NCARS conducts research, which has a direct impact on problems and opportunities that will benefit citizens, businesses and communities. Copies of technical bulletins may be obtained from the North Carolina General Assembly, federal formula funds, grants and contracts.

**North Carolina Agricultural Research Service (NCARS)**

The North Carolina Agricultural Research Service (NCARS) is the research function of the College of Agriculture and Life Sciences. Research programs range from fundamental to applied in support of agriculture, the environment, as well as health and well being. Forestry research is a jointly conducted program between NCARS and the College of Natural Resources. NCARS is funded principally by appropriations from the North Carolina General Assembly, federal formula funds, grants and contracts.

**Our Mission**

The mission of NCARS is to develop the knowledge and technology needed to:

- Improve productivity, profitability and sustainability of industries in agriculture and the life sciences;
- Conserve and improve the state’s natural resources and environment;
- Improve the health, well being and quality of life of North Carolina's citizens;
- Provide the science base for research and extension programs.

Many research faculty in NCARS have joint appointments in teaching or extension. In classroom and informal teaching functions, our research scientists develop and teach quality science-based curricula in the fields of agriculture, biology, social sciences and the environment. Our faculty also contribute to the graduate training of students destined to become leaders, teachers, and scientists who will help sustain viable agriculture and life science industries.

**Publications**

NCARS publishes bulletins and scientific papers on research solutions to problems and opportunities that will benefit citizens, businesses and communities. Copies of technical bulletins may be obtained from the Department of Communication Services Customer Service at (919) 513-3045 and scientific papers from authors.

**Services**

The faculty of NCARS conducts research, which has a direct impact on the agriculture and life science industries in North Carolina. This research includes field and laboratory experimentation in the agricultural, biological, physical, social, and environmental sciences. Primary emphases are devoted to two areas: 1) the production, processing, distribution, and consumption of the many agricultural and forestry commodities and products produced throughout the State and 2) developing and marketing life-science based processes and technologies. Together, these two research areas help improve the quality of life of both rural and urban citizens.

**North Carolina Cooperative Extension Service**

Patterson Hall, Room 120
Phone: (919) 515-2813

The NC Cooperative Extension Service at NC State University is part of a national Extension network that transforms the research knowledge of the university system into practical learning experiences and opportunities for all residents of NC to improve their lives. Client’s value Cooperative Extension based on our proven ability to help people improve their lives though their personal application of the new knowledge they learn. Dedicated staff are committed to finding the best unbiased information and then helping individuals one-on-one or creating educational programs to help solve real problems and address relevant issues. Respect for individual needs and the belief that education can improve lives has built a strong and respected relationship throughout the state and nation.

The NC Cooperative Extension Service partners with County Governments and the Eastern Band of Cherokee Indian Tribal leadership to provide locally based Agents with the skills and passion to provide the education and hands-on training needed to impact local issues. Agents use advisory councils of local residents to identify key issues and concerns in their families, businesses, and communities. Once key issues are identified, agents develop educational programs and appropriate teaching and experiential learning methodologies to help targeted audiences learn what they can do to improve their practices, behaviors and lives. Outcomes and impacts of these programs are determined through evaluations to ensure public trust and accountability of resources provided.

North Carolina Cooperative Extension Service key areas of educational expertise include: Strengthening the economic and environmental vitality of NC food, feed, fiber and forest systems and ornamental plant based industries; Family health and nutrition; Positive youth development and leadership (4-H); and Community Development.

**Agricultural Institute**

100 Patterson Hall
NCSU Box 7642
Raleigh, NC 27695-7642
Phone: (919) 515-3248
Fax: (919) 513-1421
E-mail: ag_institute@ncsu.edu
Visit the AGI website (http://harvest.cals.ncsu.edu/agnstitute)

Modern-day society depends heavily on the abilities of highly trained people for its success. It would be impossible for a single individual to be a nutritionist, a plant and animal disease specialist, a mechanic, or a management expert all combined into one. These are only a few of the skills that make up the highly technical, rapidly advancing field we know as agriculture today.
The Agricultural Institute was organized by North Carolina State University in the fall of 1959 to meet the ever-increasing demand for technically trained people in agriculture and related fields. It is a two-year program that awards the Associate of Applied Science Degree upon successful completion of at least one of the curricula. Provision for the Agricultural Institute was made by the 1959 North Carolina General Assembly.

Instructional programs of the Agricultural Institute are organized and conducted as a part of the overall program in the College of Agriculture and Life Sciences. The Agricultural Institute is an addition to and not a substitute for the bachelor of science degree-granting program of the College of Agriculture and Life Sciences. However, faculty for the four-year program are responsible for organizing and teaching courses offered by the Agricultural Institute. The Institute uses the same facilities (classrooms, laboratories, farms) as the four-year program. Facilities are available for both teaching and observing how technology is applied in agriculture and other areas.

People with the kind of training offered by the Agricultural Institute are in demand in North Carolina and the nation. By adding new courses of study to keep up with rapidly changing technology, the Agricultural Institute strives constantly to meet the needs of its students. In doing so, it prepares them to be highly trained candidates for careers in agribusiness, agriculture, pest management, ornamentals, landscape, turfgrass, and other related areas.

Agricultural sciences and related areas are challenging businesses that continue to grow more complex every day. The scientific age in which we live has given an entirely different meaning to what we knew as agriculture a half century ago.

College of Design

NCSU Box 7701
Raleigh, NC 27695-7701

Now in its sixth decade, the College of Design at North Carolina State University has from the beginning prepared designers who, in the broadest sense, shape the world. Design education is more than an attempt to teach a set of technical skills. The environment— including the spaces in which people live and work, the products they consume, and the messages they receive— have a powerful impact on how humans function as a society. Good design, therefore, requires attention and sensitivity to social, economic, political, cultural, and behavioral issues. The aim of the curricula in the College of Design is to develop the designer’s perception, knowledge, skills, and problem-solving abilities.

The College of Design admits students through a selective process that ensures a highly motivated and heterogeneous design community. The entering student body consistently ranks at the top of academic achievement in the university and the college graduation rates are the highest in the institution. While providing undergraduate and graduate study in multiple disciplines and encouraging individual plans of study, the college functions as a unified, interactive education center, dedicated to preparing designers capable of shaping the environment to various scales in response to society’s needs.

The First Year Experience

Students enter the College of Design into one of five majors: Architecture, Art + Design, Graphic Design, Industrial Design, and Design Studies (non-studio based major). The first year experience centers on courses that are populated with a mix of students from the five disciplines. They include introductions to the design process, a design vocabulary, and fundamental principles of designing. Project activities include hands-on work, discussions, demonstrations, critiques, and occasional field trips. Emphasis is on interaction, independence, self-discipline and self-motivation.

In both semesters, the first year experience emphasizes learning how to use the design process, establishing disciplined work habits, communicating about design, using studio design vocabulary, and working in collaboration with others, thus forming the foundation for all subsequent design activity in the college and later in the professions.

Curricula and Degrees

The College of Design offers undergraduate instruction leading to the four-year Bachelor of Environmental Design in Architecture, Bachelor of Art + Design, Bachelor of Graphic Design, Bachelor of Industrial Design, Bachelor of Arts in Design Studies (non-studio based), as well as a one-year postgraduate program leading to the Bachelor of Architecture. The General Education component of each curriculum consists of courses in mathematical and natural sciences, physical education, science/technology/society, and communication and information technology. In addition to 6-credit hour design studios (not applicable to Bachelor of Arts in Design Studies, a non-studio based major) where students apply their expanding knowledge and skills to theoretical and practical design problems, majors in the College of Design take support courses dealing with design knowledge and skills, such as communication and presentation, human behavior, environment, history, philosophy, physical elements and systems, methods and management. The curriculum path has some flexibility, affording students the opportunity to concentrate in one area, while making contact with the other design disciplines. In addition to their faculty mentors, students are exposed to a broad range of design professionals through guest lecturers, juries, projects, and workshops.

Graduate studies are designed for students who want to build on undergraduate education and professional experience, as well as for those who come from non-design backgrounds and want to pursue advanced design degrees. The college offers graduate study leading to the Master of Architecture, Master of Art + Design (Animation or Fibers), Master of Graphic Design, Master of Industrial Design, Master of Landscape Architecture, and Ph.D. in Design. Please refer to the NC State University Graduate Catalog for specific curriculum information on master’s and doctoral programs in the College of Design.

School of Architecture

In a world of changing conditions- social, cultural, economic and technological- the central task of the architect remains to give meaningful form to the physical environment. These rapid changes, however, force today’s architects to not only concern themselves with traditional design issues like shelter, appropriateness, comfort, and beauty, but also to address emerging concerns like sustainability, environmental conservation, rapidly expanding cities, adaptive uses and preservation of older buildings, providing built environments in a global market, and new means of producing architecture. The aesthetic revolution of the past few decades has also freed architects from the rigidity of earlier theory allowing for greater diversity and expressiveness in architectural design.

The School of Architecture has addressed the diversity of roles and responsibilities through its faculty and its curricula. Its distinguished faculty embrace a broad definition of the practice of architecture and
is, therefore, free of a singular, dogmatic, or stylistic bias. This diversity is evident in the experience, area of interest, national origins, and educational backgrounds of the faculty. The architecture curriculum balances mathematics, English, natural sciences and humanities and integrates with architectural design studios and a rich selection of design support courses. The design studio- a working laboratory in which the student learns how to design buildings under the guidance of a professor-is central to the curriculum.

The undergraduate Bachelor of Environmental Design in Architecture is a pre-professional degree that stresses the education of the individual and serves as the foundation for advanced, professional study in the discipline. The first semester is spent on design fundamentals in a studio common to all students in the College of Design. Following this introductory experience students receive a broad introduction to architectural design, theory, history, technology, and design processes, while exploring educational opportunities within the university.

Following the pre-professional program students may continue their studies in either of two professional programs: the one-year, post-graduate Bachelor of Architecture or two-year Master of Architecture program (see the Graduate Catalog for information on the latter program). Entry into both of these programs is competitive. To be accepted students must demonstrate potential for professional accomplishment, capability in design, and satisfy a specific set of professionally-oriented undergraduate requirements. Many students spend one or more years gaining professional experience in architecture firms or related fields before pursuing the advanced degrees. Educational enrichment is an important characteristic of the architectural program. The College of Design regularly presents public lectures by leading professionals and exhibitions of design and artwork. Electives are available in related disciplines- painting, sculpture, photography, landscape architecture, industrial design, and graphic design. Also available are field trips to buildings in urban centers of architectural interest, urban design studios conducted at the College of Design’s Downtown Design Studio, and a variety of foreign study programs including the College of Design’s Prague Institute.

Specific curriculum requirements are available on the Registration and Records website (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php).

**Accreditation**

In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes three types of degrees: the Bachelor of Architecture, the Master of Architecture, and the Doctor of Architecture. A program may be granted a six-year, three-year, or two-year term of accreditation, depending on the extent of its conformance with established educational standards. Doctor of Architecture and Master of Architecture degree programs may consist of a pre-professional undergraduate degree and a professional graduate degree that, when earned sequentially, constitute an accredited professional education. However, the pre-professional degree is not, by itself, recognized as an accredited degree. The NAAB Conditions for Accreditation, including the required Student performance Criteria, can be viewed on the NAAB website (http://www.naab.org).

The North Carolina State University School of Architecture offers the following NAAB accredited degree programs:

- B. Arch. (pre-professional degree + 30 in professional program)
- M. Arch. (pre-professional degree + 48 graduate hours)
- M. Arch (non pre-professional degree + 96 hours)

Next accreditation visit for all programs: 2017

**ARC - Architecture Courses**

**ARC 140 Experiencing Architecture 3.**
Contemporary and historic houses, public buildings and cities illustrate the practical and aesthetic aspects of architecture. The basic elements of architectural form, design process, and architectural criticism.

**ARC 162 An Introduction to Architecture 3.**
Prerequisite: D 104 and BED-A students; Corequisite: D 105.
The purpose of architecture examined through its practices, theories and key principles. Lectures, projects, and readings expose students to the diverse world of ideas, creative work and practical considerations which make up the discipline of architecture.

**ARC 201 Architectural Design: Environment 6.**
Prerequisite: D 105; BED-A students only; Corequisite: ARC 211.
Investigation of the relationships between environment and built form. Solar orientation, topography, vegetation, and constructed context in relationship to user needs as parameters for justifying design proposals. Particular emphasis on architectural conventions of communication.

**ARC 202 Architectural Design: Form 6.**
Prerequisite: ARC 201 and BED-A students.
Investigation of relationships between idea and form. Composition and precedent as parameters for generating, developing, and justifying architectural form. Particular emphasis on electronic media in drawing and modeling.

**ARC 211 Natural Systems and Architecture 3.**
Prerequisite: D 105.
Restricted to students in BEDA Program. Relationship between natural and architectural systems. Exploration of the implications of natural forces - sun, wind and daylight- on architecture. Energy-conscious architectural design and site planning strategies to fulfill thermal comfort requirements of people in designed environments.

**ARC 232 Structures and Materials 3.**
An introduction to construction materials and building structures. Explorations of materials’ properties, aesthetics, environmental impact, and performance. Quantitative and qualitative analysis of structural building elements. Course integrates lecture and laboratory. Off-campus field trips are included (students may need to coordinate transportation).

**ARC 241 Introduction to World Architecture 3.**
History of the built environment (buildings, urban planning, and associated arts) in western and non-western cultures, ranging from dawn of civilization to dawn of modern era, including high-style architecture, vernacular buildings, and traditional forms.

**ARC 242 History of Western Architecture 3.**
Prerequisite: ARC 241 or Consent of Instructor.
History of western architecture (including some landscape architecture and city planning) from the beginnings of the Renaissance in early 15th century to late 19th century in the United States.
ARC 298 Architectural Travel Study I 3.
**Prerequisite:** ARC 141 and ARC 142.
The study of cities, architectural sites, buildings, building complexes, and architectural elements conducted independently by students as part of a planned travel-study tour. Includes advance research and approval of proposed study topic and itinerary. Students will document study through sketches, analytical notations, and a summary paper. Departmental Approval Required.

ARC 292 Special Topics in Architecture 1-3.
Topics of current interest in Architecture. Normally used to develop new courses.

ARC 301 Architectural Design: Tectonics 6.
**Prerequisite:** ARC 202 and ARC 211 and ARC 232; **Corequisite:** ARC 331 and ARC 432.
An introduction to the fundamentals of building systems on architectural design. Emphases on building assemblages, vertical-load structural systems, circulation, and passive heating, cooling, and ventilation. Particular emphasis on physical models. Limited to BED-A Students. Junior Standing. Students are required to purchase project materials.

**Prerequisite:** ARC 301 and ARC 331 and ARC 432.
An investigation of building technical systems as fundamental elements of the design process with emphasis on lateral load resisting structural strategies, environmental control/energy, enclosure assembly detail, and their architectural implications. Particular emphasis on physical models. Restricted to BED-A students, Junior standing. Students are required to purchase project materials for projects.

ARC 331 Architectural Structures I 3.
**Prerequisite:** ARC 232.
Structural design process. Combined role of imposed loads and architectural function in shaping the form of the building. Interaction of elements in structural systems containing beams, columns, trusses, space frames, slabs, arches, vaults, domes, cables, cable networks, fabrics and diaphragms. Case studies emphasized.

ARC 332 Architectural Structures II 3.
**Prerequisite:** ARC 331.

**Prerequisite:** ARC 302 and BED-A student.
An architectural design studio intended to explore and integrate design issues of all types within an urban environment. Emphasis will be placed on both formal and technical issues of urban sites including transportation and land use planning, phasing of projects over time, relationships to other structures, and the application of development codes, regulations, and urban design principles to the fabric of the city.

**Prerequisite:** ARC 401 and BED-A students.
Advanced architectural design studios in which projects of many types and scales are employed to investigate a range of educational, theoretical and professional studies. Particular emphasis on independent research and exploration of design issues and their implications as defined by faculty.

**Prerequisite:** Masters of Architecture students; **Co-requisite:** ARC 211.
An introductory architectural design studio for M. Arch. Track 3 students investigating the relationship between environment and built form. Solar orientation, climate, topography, vegetation, and constructed context in relationship to user needs as parameters for design proposals. Particular emphasis on design fundamentals and conventions of Architectural communication.

**Prerequisite:** Masters of Architecture Track 3 students; ARC 403; **Co-requisite:** ARC 251.
An introductory architectural design studio for M. Arch. Track 3 students investigating relationships between idea and form. Composition and precedent as parameters for generating, developing, and justifying architectural form. Particular emphasis on electronic media in drawing and modeling.

**Prerequisite:** Master of Architecture students; ARC 404; **Co-requisite:** ARC 331 and ARC 432.
An introductory architectural design studio for M. Arch. Track 3 students in which the technical systems of building - structure, environmental control/energy, materials, enclosure, and circulation; their fabrication and assembly; and their capacity to affect form and tectonic expression - are explored as fundamental elements of the design process. Particular emphasis on physical models.

ARC 414 Environmental Control Systems 3.
**Prerequisite:** ARC 211.
Studies in light, heat, moisture, air motion, and sound in architectural environments. Mechanical, electrical and/or electronic equipment for illumination, heating, cooling, ventilation, vertical transportation and communication in buildings. Water and waste, fire protection and safety, and acoustic systems in architecture.

ARC 432 Architectural Construction Systems 3.
**Prerequisite:** ARC 232.
Building construction systems related to architectural design. Historical and current building practices. Implications for design and systems selection. Case studies. Field trips are required.

ARC 441 History of Contemporary Architecture 3.
**Prerequisite:** ARC 241, ARC 242; BED-A students, Bachelor of Architecture students, or Masters of Architecture students.
A survey and critical examination of modern architecture from its origins in 19th-century philosophy and technology to the most recent developments in world architecture.

ARC 442 History of NC Architecture 3.
**Prerequisite:** ARC 241, ARC 242.
Survey of NC Architecture from 17th-century settlement to World War II. Coverage of a wide range of building types and development patterns.
ARC 500 Architectural Design: Professional Studio 3.

Prerequisite: ARCH 451.

A comprehensive and integrative architectural design studio for M.Arch degree (or equivalent). Special projects in architecture developed under the direction of a faculty member on a tutorial basis. Individualized/Independent Study and Research courses require a "Course Agreement for Students Enrolled in Non-Standard Courses" be completed by the student and faculty member prior to registration by the department.

Prerequisite: BEDA degree.

Design studio investigations aimed at the development of an understanding of the major issues confronting the contemporary architect and at the expanding of problem solving abilities in architectural design.

ARC 502 Professional Architecture Studio II 6.

Prerequisite: ARC 501.

Design investigation aimed at the development of an understanding of the major issues confronting the contemporary architect and at the expanding of problem solving abilities in architectural design. This is an individualized, final project studio.

ARC 503 Advanced Architectural Design (Series) 6.

Prerequisite: Graduate standing.

Advanced studies in architectural design. Projects concerning various aspects of building design, urban design and community design in comprehensive and integrative manner.

ARC 520 Sustainable Architecture 3.

Architecture or Environmental Design in Architecture Majors Only.

This survey course provides students with a solid knowledge base in the numerous aspects of sustainable design touching not only upon strategies, but also various philosophies behind sustainability and the green building movement. This course examines the impact of the built environment on natural systems and questions what it truly means to build responsibly. Lectures, discussions, guest speakers, and field trips create a critical foundation for green building considerations to be references in design at a variety of scales. Restricted to M. Arch, B. Arch, and BEDA seniors. Non-architecture majors by instructor's permission.

This course will discuss and develop strategies for the design of sustainable buildings. The two primary topics addressed are: 1) energy efficiency and 2) renewable energy. The students will learn and discuss ways to improve energy efficiency in buildings. The renewable energy technologies, such as solar and geothermal, are explored to discuss the applicability of those in the building design.

This course deals with the fundamentals of building sciences in terms of energy systems. Energy modeling and simulation technologies are used to predict and analyze the energy performance of buildings. The students calculate the energy consumption of heating, cooling, lighting, and equipment by hand to understand the energy & thermal behavior of buildings and then compare and analyze them with those calculated by energy modeling and simulation programs.

ARC 523 Building Energy Modeling and Simulation 3.

Prerequisite: ARC 414.

This course deals with the fundamentals of building sciences in terms of energy systems. Energy modeling and simulation technologies are used to predict and analyze the energy performance of buildings. The students calculate the energy consumption of heating, cooling, lighting, and equipment by hand to understand the energy & thermal behavior of buildings and then compare and analyze them with those calculated by energy modeling and simulation programs.

ARC 524 Building Energy Optimization 3.

Prerequisite: ARC 523.

This course introduces energy optimization technologies in buildings using computer simulation. The EnergyPlus program, a whole-building computational energy simulation tool developed by USDOE, is used. The maximum energy savings potential of Energy Efficiency Measures (EEMs) are identified and implemented for the energy optimization process. Students obtain a great deal of information about a building’s potential for energy savings, well before the first brick is even laid.

ARC 530 Tectonics and Craft 3.

Prerequisite: Architecture Majors, ARC 432.

Studies of construction and material form in architecture. Case studies of select examples of contemporary architecture that exemplify the technique and craft of modern construction. Analysis of functional, tectonic, and experiential aspects of building methods within the context of economics and culture. Examination of assembly as a determinant of building form.

ARC 534 Design of Architectural Details 3.

Using detail patterns based on function, constructability, and aesthetics, students analyze existing successful building details, diagnose problems in existing buildings, and design details for their own projects. Restricted to Bachelors and Masters students in Architecture.
ARC 535 Experiments in Architecture Prototypes 3.
Prerequisite: ARC 232 or equivalent.
Examination of significant architecture prototypes of the Modern Movement. Seminar will investigate the effectiveness of prototypes in proposing solutions to technological, social, and environmental issues such as housing, education, and sustainability. Students will explore the possibilities of prototype design and construction in contemporary practice. Field trips required.

ARC 536 Materials for Design 3.
P.
Contemporary buildings that have insightfully integrated design intention and materials are analyzed using the case study method. Each student uses an iterative analytical process to probe deeply and specifically to find each building’s key lessons regarding materials. Key drawings and photographs will be graphically presented, with a narrative summarizing findings regarding the project’s general design intentions and its technical embodiment. Restricted to M. Arch or B. Arch Students.

ARC 537 Digital Materials Translations 3.
Prerequisite: (ARC 251 or ARC 451 or equivalent) and (ARC 232 or equivalent).
This seminar combines architectural material research with instruction in advanced digital design software. Students will examine specific materials to determine attributes, and then use parametric, NURBS-based software, and CNC machinery to propose new material applications. The course is limited to College of Design students unless instructors grant permission.

ARC 538 Manufacturing Architecture 3.
Prerequisite: Architecture Majors, ARC 432.
Focuses on customized repetitive manufacturing for architecture components. Specifically includes repetitive processes that make repeated uses of tooling (e.g. molds, patterns, or jigs) to form components. We will investigate repetitive manufacturing processes and architectural case studies. Limited to MArch, BArch, and BED-A students, senior standing.

ARC 540 Architectural Theory 3.
This course provides an introduction to the major themes and associated figures of architectural theory. It focuses on 20th and 21st century texts with a particular emphasis on historicism, phenomenology, structuralism and post-structuralism. Each week there is assigned reading from a range of texts, including extra-disciplinary writers. Lectures and discussions serve to identify principal themes, connect to contemporary issues, and establish relevancy to architectural design. Restricted to M. Arch, B. Arch, and BEDA Seniors. Non-architecture majors by instructor's permission.

ARC 541 Architecture, Culture, and Meaning 3.
This course focuses on architecture as a cultural artifact and provides an overview of the interrelationship of architectural form, organization, symbolism, use and meaning. A broad range of examples from a variety of cultures, religions, and historical periods are covered (including "non-Western"), illustrated by detailed case studies. Syncretic, holistic and hermeneutical approaches to understanding the meaning and significance of architecture are emphasized. Phenomenological and hermeneutica methods of interpretation are introduced and pertinent philosophical traditions discussed. Restricted to M.Arch., B.Arch., and BEDA seniors. Non-architecture majors by instructor's permission.

ARC 542 Sacred Architecture 3.
This course focuses on the meaning and cultural significance of sacred architecture, including its environmental and socio-political contexts, and doctrinal and liturgical influences. The course is structured according to the world's principal faiths and presented comparatively and holistically. There is a particular emphasis on the communicative roles of architecture and the symbolism and ritual use of sacred places. Contemporary theoretical methodologies are introduced and applied as means establish relevancy to contemporary issues and architectural design. Restricted to graduate students.

ARC 543 Analysis of Precedent 3.
Prerequisite: Grad. standing
Investigation of architectural elements, relationships and ordering ideas through comparative graphic analysis of buildings designed by architects. Emphasis on buildings as physical artifacts.

ARC 544 American City Planning History 3.
Prerequisite: ARC 241 and ARC 242 and ARC 441 or permission of instructor.
An examination of the history of American cities, their founding, plans, and development with emphasis on the colonial era to the late 19th century. Broad study of the larger historical trends in city planning balanced by readings focused on major cities (New York, Chicago, Los Angeles) and smaller ones (Savannah, New Orleans). Major issues include street patterns, parks, and public buildings and spaces; and the roles of government and private citizen groups. Restricted to graduate students in the MArch, seniors in the BArch, and seniors in the BEDA programs; or by permission of the instructor.

ARC 546 Theory of Building Types 3.
Prerequisite: Two ARC studios.
Theoretical implications and practical applications of typology in architecture. Analysis and documentation of selected building types in their historical evolution. Graphic identification of type characteristics.

ARC 548 Vernacular Architecture 3.
Prerequisite: M.Arch student without an undergraduate degree in architecture must have completed ARC 211, ARC 241, ARC 232.
Readings in theories of vernacular architecture. Case studies of selected examples of vernacular architecture of the world: architectural analysis of utilitarian, tectonic, and perceptual aspects of buildings and urban fabrics against the background of place and culture. Examination of influences of various vernacular traditions on contemporary practice.

ARC 561 The Practice of Architecture 3.
A lecture course examination of the practice of architecture through a lecture course, with emphasis upon both normative and emerging procedures in the private architectural firm. Special attention upon the role and function of the practicing architect, legal and regulatory conditions, the nature of professional services, office management and project management processes.

ARC 562 Legal Issues in Architecture 3.
Prerequisite: Architecture Majors, ARC 561.
The main principles of law affecting the profession of architecture as it is influenced by contracts, torts, agency, property, and environmental restrictions.

ARC 570 Anatomy of the City 3.
A morphological investigation of cities throughout urban history, with emphasis on formal principles of spatial organization. Part one: examination of the descriptive properties of cities in terms of interdisciplinary concepts and principles. Part two: examination of the organizational characteristics of urban space.
ARC 571 Urban House 3.
Prerequisite: Graduate standing.
This seminar is intended to investigate the interrelationships between the form of housing and the demands of a rapidly changing society. Reference is made to the physical, economic, social, cultural, and economic factors that influence housing design.

ARC 572 Regional Infrastructures 3.
Restricted to: M. Arch, B. Arch, BEDA seniors, and M. LArch.
This seminar provides students with a solid knowledge base about current urban issues and design theory surrounding the contemporary networked metropolis. Through lectures, discussions, and workshops the course examines how infrastructural systems might be expanded in order to catalyze additional environmental, social, and economic processes. Students research specific infrastructural systems (conducting food, water, or energy) at a systems-defined regional scale to better understand the characteristics of 21st century American cities and speculate on new opportunities for architects and landscape architects to practice. Restricted to M. Arch, B. Arch, BEDA seniors, and M. LArch.

ARC 574 Place and Place Making 3.
Prerequisite: Graduate standing.
Examination of the definitions, concepts and emergent research findings useful in explaining the human sense of place through seminar-lecture course. Particular emphasis upon those physical aspects and relationships influencing this sense of place and affording some designer control.

ARC 576 Community Design 3.
Processes through which citizens shape and manage built environment. Strategic planning, visioning process, community action, and mediation will be discussed and illustrated with case study examples from architecture, landscape architecture and planning. Analysis and assessment from case studies of participation techniques such as charrette, study circles, and visual appraisal.

ARC 577 Sustainable Communities 3.

ARC 581 Project Preparation Seminar 3.
Quantitative and qualitative conditions, considerations and determinants as preparation for architectural design. Emphasis on research methods, data collection and interpretation, theoretical discourse, site analysis, programming and architectural precedent. Required enrollment in B.Arch.

ARC 589 Architectural Travel Study II 3.
Independent study while traveling. Submission of sketchbook/journal and paper upon return. Research on topic of concentration and approval of itinerary in advance required. Graphic documentation and critical evaluation of buildings and urban spaces. Required of all participants in Dept. of Architecture Foreign Exchange and Summer Abroad Programs. Restricted to departmental approval.

ARC 590 Special Topics in Architecture 1-6.
Prerequisite: Graduate standing.
Topics of current interest by faculty in the Department of Architecture. Subjects under this number normally to test and develop new courses.

ARC 598 Final Project Studio In Architecture 6.
Prerequisite: 18 hrs. of ARC 503 and ARC 697.
Final project for graduate students supervised by members of their graduate advisory committee. Requires department approval.

ARC 630 Independent Study 1-3.
Prerequisite: Graduate standing.
Development of research and projects in various aspects of architecture under the direction of architecture faculty member on tutorial basis. Requires a faculty sponsor and departmental approval.

ARC 685 Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ARC 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

ARC 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

ARC 696 Summer Thesis Res 1.
ARC 697 Final Project Research in Architecture 1-6.
Prerequisite: Graduate standing.
Investigation of selected problems and projects in architecture of particular interest to graduate students under the direction of a faculty member on a tutorial basis. Credits and content vary to meet the scope of the project proposal.

ARC 896 Summer Dissert Res 1.

Department of Art + Design

The Department of Art and Design awards the Bachelor of Art and Design degree and the Bachelor of Arts in Design Studies. The pedagogical core of the program aims to reinforce foundation principles of design theory as applied to two-and three-dimensional design. Our curriculum addresses broad cultural, ecological, and societal considerations and promotes in our graduates the ability to meet the challenges of collaborative design. We emphasize the application of creative thinking and problem solving to design projects ranging from single to mass-produced artifacts. The areas of application span the range from formal design, fibers and surface design to emerging areas in media arts. Examples of current areas of study are hybrid applications of traditional and digital media that encompass imaging, animation, fiber and surface design, photography, printmaking, illustration, form generation and installations.

The Department of Art and Design believes there is an essential need for students in a technically-based research university to engage in course work that fosters creative thinking and problem solving. To meet this need, the department offers courses to all students in the university a minor in Art and Design. Minors are guided through a selection of courses with the consultation from a design adviser.
Opportunities

Career opportunities for graduates of the Department of Art and Design range from independent artist-designers to corporate level art-design directors. Graduates of this department are currently working in fields such as software design, multimedia, illustration, textile design, fashion and apparel design, art and design education, photography, filmmaking, special effects-digital, set design, exhibition design, museum education, public art and entrepreneurs.

Curricula and Degrees

Bachelor of Art and Design

The Department of Art and Design awards the Bachelor of Art and Design degree. The Bachelor of Art and Design degree is a broadly based, multidisciplinary undergraduate experience that fully utilizes a diverse faculty and bridges art and design with new technology. Students work closely with faculty in a well-planned sequence of progressively complex and in-depth studios. Students are advised through learning paths designed to produce optimal outcomes. This degree program provides a sound, well-rounded visual design education with a focus on providing students skills that allow them to perform and succeed in a wide variety of art and design professions after graduation.

While the degree is not profession-specific, students selecting the Bachelor of Art and Design degree may wish to use it as a foundation for graduate study in a specific art or design discipline. The goal of the curriculum is to provide structure for the creation of a new model of art and design professional. These individual artistic and practical talents are developed as different expressions of one potentiality.

Specific curriculum requirements are available on the Registration and Records website (http://www.ncsu.edu/registrar/curricula).

Bachelor of Arts in Design Studies

The Bachelor of Arts in Design Studies is a non-studio based program that provides an interdisciplinary orientation to the history and theory of the design disciplines, material culture and design thinking. Design Studies focuses on the social, historical, technological and physical contexts in which design is produced. It presents the formative role of design in shaping human values and experiences.

Undergraduate students will be introduced to the breadth of the design disciplines expanding their awareness of design and the design process. Students can explore the range of career options in the fields of design through Design Studies concentrations in Non-Profits Studies, Business Administration or Museum Studies. Individuals preparing for a graduate education in design theory and criticism, museum practice, business management, entrepreneurship or marketing in design may choose courses suited to their unique objectives. Students who want more general education will develop an understanding of design and its intrinsic relationship to the broader culture.

Design Studies is:

- Open to students whose interests and talents in design are more general and/or cross-disciplinary than those in the specific student-based programs
- Broadly engaged in issues of material culture.
- Preparatory for later advanced study in the design professions
- A blend of aesthetic, cultural, historical, social, physical, technological, business and entrepreneurial knowledge
- Collaborative in providing the learning and background necessary for further study in archival and cultural preservation, museum practice, conversation, collections administration, costume and theatre design, criticism, research, and arts and nonprofits management

Design Studies is not a transitional program from which to transfer into one of the studio-based degree programs in the College of Design. Design Studies students who wish to change majors will need to apply for competing seats in the freshmen class of a studio-based program and are subject to the select admissions process that requires a portfolio review.

Specific curriculum requirements are available on the Registration and Records website (http://www.ncsu.edu/registrar/curricula).

Minor in Art and Design

The Minor in Art and Design’s objectives are to discover basic principles through hands-on activities, to apply design process and theory to solve problems creatively and efficiently, to increase awareness of one’s self and environment, and to foster an appreciation and understanding of the disciplines of Art and Design. Any curious undergraduate student with an overall grade point average of 2.75 in the university who seeks alternative methods of experiencing the environment in which we live will benefit from this minor.

The minor in Art and Design consists of 15 total credits hours of study, of which six (6) hours must be satisfied at the basic course level. The remaining nine (9) hours of courses may be selected from the course list in the information provided by the Art and Design adviser. A grade of “B” or better will be required for credit in all courses in the minor in Art and Design program. The course selection will be determined with guidance from the student’s minor adviser and tailored to the needs, interests, and goals of the student. Interested students seeking this minor should contact Professor Hernan Marchant.

Although, all efforts are made to accommodate minors, it is important for potential students to know and understand that access to Art and Design courses are based on a hierarchy where priority access goes to Design majors.

Minor in Design Studies (Non-Design Majors)

This minor’s objectives are to provide a general orientation to the practice and theory of design for students whose primary study and employment will be in the other disciplines, to clarify the role design plays in society, and to create informed consumers who are able to make intelligent decisions about communication, products, and environments in work and in their personal lives. Any undergraduate student in the university who is not majoring in a design discipline would benefit from this program. Any student seeking this minor should contact Professor Hernan Marchant in the College of Design for an application and assignment of a minor adviser.

ADN - Art and Design Courses

ADN 111 Two Dimensional Design 3.
An introduction to the fundamentals of design studies through two dimensional problems. The basic elements and concepts of design explored as abstract and applied problems through design issues. Provides non-design students an introduction to design principles and a language of design.
ADN 112 Three Dimensional Design 3.
An introduction to the fundamentals of design studies through three-dimensional problems. The basic elements and concepts of design explored as abstract and applied problems through the design issue. Provides non-design students a working knowledge of design principles and a language of design.

Prerequisites: D 100, D 101, and ENG 101; Co-requisites: (ENG 201 or ENG 214 or ENG 215 or ENG 422) and Sophomore standing.
This course will introduce students to a variety of perspectives and lenses through which to examine and evaluate design in the world. Students will consider design studies through theory and criticism of design, as well as applied to business administration, museum studies, and environmental studies. In addition, students will be encouraged to find evidence of and define design studies in areas that are uniquely suited to their individual areas of interest. As an advised elective, this course is required for Design Studies majors who are sophomores in their major.

Prerequisite: D 104, D 105, or permission of department, ADN majors only.
Emphasis on fundamental Art & Design visual language through investigative problem solving.

ADN 212 Basic Photography 3.
Introduction to the processes and visual skills necessary for the beginning photographer. Darkroom experimentation, pinhole camera, basic rudiments of camera use, film development and printing. Exploration of issues related to the quality of visual communication.

ADN 219 Digital Imaging 3.
Prerequisite: D104 or ADN 111.
Introduction to exploring, creating, and modifying images through the use of computers. Emphasis is on creativity, experimentation, and intuitive image-making using various computer techniques.

ADN 220 Digital Illustration 3.
Hands-on exploration of digital drawing, painting, and image editing techniques with the use of pressure sensitive digital drawing tablets and image editing software; Development of ability to design and communicate convincing 3-dimensional forms and environments using 2D digital techniques with an emphasis on gesture, shape, volume, intuitive perspective, color, and light; Application of design process and research to generate images for visual concept development; Examination of relationships between historic and contemporary conventions for traditional and digital image-making.

ADN 221 Digital Illustration II 3.
Prerequisite: ADN 220.
Hands-on exploration of digital drawings, painting, and image editing techniques with the use of pressure sensitive digital drawing tablets and image editing software; Development of ability to integrate multiple visual elements to illustrate narratives and create illusionistic environments. Emphasis shot design, linear perspective, light, color, texture, and atmosphere; Application of design process and research to generate images for visual concept development and mood; Examination of relationship between historic and contemporary illustration, compositing, and matte painting techniques.

ADN 224 Digital Motion 3.
Hands-on exploration of motion, animation principles, and keyframing strategies; Development of animated experiments and sequences that focus on convincing and exaggerated movement, physics, and acting; Introduction to range of key animation software and techniques. Restricted to Art and Design Majors Only.

ADN 226 Sequential Imaging 3.
Hands-on development of story-boards, story-reels, and animatics to plan and examine visual sequences; Development of freehand sketching techniques; Exploration of drawing and image-making as a tool for visual and conceptual development; Examination of traditional and contemporary visual storytelling techniques and conventions; Exploration of common strategies for developing narrative structure. Restricted to Art and Design Majors Only.

ADN 272 Introduction to Printing and Surface Design 3.
Prerequisite: C- or better in D104, ADN 111, or ADN 112.
Design and production of screen printed, painted and pattern-dyed fabrics. Development of design abilities (color use, pattern generation) and technical skills (screen printing, painting, use of fabric dyes). Production of fabric samples, studies, yardage, and/or end products.
Awareness of industrial processes.

ADN 273 Fibers Materials and Processes 3.
Prerequisite: ADN 111 or ADN 112 or D 105.
Introduction to historical and contemporary hand processes used by the textile designer. Students will learn a variety of textile techniques utilizing traditional and experimental methods. Emphasis will be on technical exploration and development.

ADN 274 Basic Woven and Constructed Textiles 3.
Hands-on introduction to structures and techniques of hand weaving and related off-loom textile structures. Focus on basic hand weaving structures, including plain weave, twills and satins, acquired through threading the loom and weaving with a variety of materials. Off-loom techniques explore a variety of structures made with simple hand tools. Projects focus on materials choice; color experimentation and control; pattern manipulations; scale and balance; and the design process as applied to hand constructed textile artifacts.

ADN 275 Survey of Fibers in Art and Design 3.
Design Students Only.
This course introduces the student to the vast world of fibers within the Art-Design community and industry. Students will learn the basics of fiber construction and terminology and explore the specialties within the fibers world (including costume design, fashion, fiber art, textile design, etc.). College of Design students only.

ADN 281 Basic Drawing 3.
Prerequisite: Design Majors and Design Minors.
A beginning descriptive drawing experience which teaches students to see, analyze, and transcribe observed subject matters. The transcription incorporates formal drawing issues (line, form, texture) with traditional and contemporary material space exploration.

ADN 292 Special Topics in Design 1-3.
Topics of current interest in the School of Design. Used to develop new courses.

ADN 311 Basic Visual Laboratories 3.
Prerequisite: ADN 111, ADN 112.
Study of basic visual communication skills that relate to Art & Design areas of focus.

ADN 312 Intermediate Photography 3.
Prerequisite: ADN 212.
Continuation of an advanced level of the skills and techniques developed in Basic Photography. Purpose is to develop use of camera as a perceptual tool to increase awareness and sensitivity of visual imagery.
ADN 319 Introduction to Animation 3.
Prerequisite: ADN 219.
An intensive introduction to animation which integrates traditional hand generated animation, digital techniques and technology. Students will explore animation’s fundamental principles of linear formats, sequenced movement and time-based imaging.

ADN 372 Surface Embellishment 3.
Hands-on experimentation with classic hand, machine, and digital stitching techniques on fabric; personal exploration of non-traditional materials and applications at different scales; and examination of historic and contemporary stitching through visits to the Gregg Museum and directed library and internet research.

ADN 384 Basic Painting 3.
Prerequisite: D 104 or both ADN 111 and ADN 112.
Introduction to the principles of painting through class projects that expose students to different painting materials and techniques. Students learn to build a stretcher, size and prime a canvas as well as other rigid painting surfaces. Acrylic and oil paint used; projects assigned and open themes.

ADN 386 Basic Sculpture 3.
Prerequisite: D 104 or ADN 112.
Studio course introducing basic concepts, materials, and processes of sculpture. Instruction incorporates both traditional and contemporary form generation with emphasis on developing formal perception and projection.

ADN 400 Design Studio 6.
Prerequisite: ADN 202.
Studio offering Art & Design undergraduates the opportunity to intensively study general design issues (form, color, structure, proportions, scale, etc.) as applies to the study of Art & Design.

ADN 402 Senior Studio 6.
Prerequisite: Seven studios and ADN 219.
Advanced Design studio emphasizing the exploration of past, current and potential future technologies within Design Department content areas (e.g., painting, sculpture, fibers, jewelry, color and light, etc.). Students are expected to work independently, develop their own problem statements.

ADN 411 Visual Laboratory II 3.
Prerequisite: D 105 or ADN 111 or ADN 112 or ADN 281.
Study of intermediate visual communication skills that relate to Art & Design areas of focus.

ADN 414 Color and Light 3.
Physical and perceptual nature of color, color awareness, sensitivity and skills in visual communication with color as a designer’s tool.

ADN 415 Visualizing Narrative 3.
Prerequisites: (ADN 111 (2D) and ADN 219) OR PERMISSION OF THE INSTRUCTOR. Restricted to: JUNIOR AND ABOVE STANDING IN THE MAJOR, COLLEGE OF DESIGN STUDENTS ONLY.
This course will build upon previous knowledge in Art and Design through a focus on the basic historic, stylistic and compositional attributes of type to enhance storytelling in their work. Main topics addressed in the course will cover the relationship between form and content to support pacing, transition, structure, voice, action and resolution for richer visual narratives. We will use both found text as well as stories that students create in the class to explore the many ways that type can enunciate the meaning, tone and spirit of a story. There are printing fees estimated at $100 associated with this.

ADN 418 Contemporary Issues in Art and Design 3.
Prerequisite: D 101 and D 103; Requisite: Junior Standing in ADN or Design Studies.
Explore a range of issues about contemporary art and design ideologies. Concentration on selected readings which provide a platform for discussion of various ideas, approaches, perspectives and practices in the contemporary fields of art and design.

ADN 419 Multimedia and Digital Imaging 3.
Prerequisite: D 105, ADN 219.
Intensive hands-on investigation of the tools, techniques, and processes for the development of interactive multi-media projects. Media teams will emphasize shaping an idea into a well thought-out design that works as an interactive experience.

ADN 423 Digital Modeling 3.
Hands on introduction to 3D digital modeling tools and techniques for artists and designers who want to expand their skill sets to include 3D practices. The course has applications in several disciplines including; animation, illustration, surface design, and concept development. Explores the use of surface textures, lighting, and compositing. Examines strategies for using 3D tools to create prototypes for physical objects, integrate 3D elements into 2D images, and create models for animation. Restricted to Art and Design Majors Only.

ADN 428 Art and Design: Theory and Practice 3.
Prerequisite: Senior Level (6 studios), Art and Design Major.
Conceptual basis for developing a personal philosophy regarding the practice of art and design. Theory based history of diverse cultures and forces of change: political, economic, religious, social, intellectual and philosophical as they affect the fields of art and design.

Prerequisite: ADN 219 and ADN 400.
An intensive study of advanced image-making processes, software, and various computer platforms used in the creation of multimedia. In a studio mode, students will place emphasis on creating interactive interface systems with audio and special effects.

ADN 470 Fibers and Surface Design Studio 6.
Prerequisite: Grade of C- or better in (ADN 400 or ARC 202 or ID 202 or GD 202).
Practice of widely varying textile techniques with the solving of practical and conceptual design problems. Textile end products are designed and produced at full scale in appropriate materials. Focus includes weaving, knitting, printing and dyeing of fabrics, and a wide variety of fabric construction and embellishment processes. Textile history is an ongoing part of the study. Emphasis on synthesis of techniques and ideas.

ADN 472 Advanced Surface Design 3.
Prerequisite: D 104, ADN 272.
Advanced problems in the design and production of hand-printed and pattern-dyed fabrics. Experimentation with advanced color application techniques. Exploration of pattern and image production on fabric and development of design abilities in textile media. Specific focus changes each semester.
ADN 473 Advanced Three-Dimensional Fibers Forms and Structures 3.
Prerequisite: ADN 273 or equivalent.
Advanced explorations of three-dimensional textiles forms and structures including works small and large scale installations and sculptures, planar structures in space, and textiles that interact with interior or exterior architecture, the body, or public or site-specific spaces. Technical focus on construction, joining mixed materials, armatures, integration of found materials, and both traditional and experimental structures and applications. Use of hand and power tools.

ADN 474 Advanced Digital Hand Weaving 3.
Introduction to use of the computer as a tool for designing, drafting, and hand weaving, using simple software packages. Hand weaving on 24-harness computer assisted looms, 8 harness hand looms, and TC-1 digital hand jacquard loom. 4 to 24 harness woven structures including twill, satin, shadow weave, double weave, woven shibori, dyed warps, and other weave structures. Focus on designing, technical skills, and solving technical problems.

ADN 475 Pre-Industrial World Textiles 3.
Prerequisite: Sophomore standing.
Research on and discussion of hand-made textiles of the world, introducing major textile traditions from Africa, Asia, Europe, North and South America. Focus on geographic and cultural contexts, developments in making, and design characteristics, including impact of 20th century fiber art movements. Seminar format.

ADN 480 Intermediate Studio 6.
Prerequisite: Grade of C- or better in (ADN 400 or ARC 202 or ID 202 or GD 202).
Studio format offering upper level undergraduates the opportunity to intensively study general design issues (form, color, structure, proportions, scale, etc.) through individual study in drawing, painting, sculpture, photography, or printmaking.

ADN 481 Intermediate Drawing 3.
Prerequisite: ADN 281.
An intermediate-level drawing course that further develops the designer's graphic, analytic, observational, and conceptual skills.

ADN 484 Intermediate Painting 3.
Prerequisite: D 105 or both ADN 111 and ADN 112.
An intermediate-level painting course that through slide lectures, class projects, and assigned readings exposes students to contemporary painting art movements. Special emphasis given to the formal and interpretative analysis of a painting. Acrylic and oil paint are used; Projects have assigned and open themes.

ADN 485 Intermediate Sculpture 3.
Prerequisite: ADN 386.
An intermediate-level sculpture course that further develops the designer's analytic, observational, and conceptual skills.

Prerequisite: Junior standing, Design Majors, Approval Study Abroad Office.
Define Art and Design problems and develop design solutions in an international setting. Studio projects related to design, culture, and traditional and contemporary art forms. Focus on artifact making through direct studies. Taught off campus.

ADN 491 Special Seminar in Design 1-3.
Seminars on subjects of current interest in design.

ADN 492 Special Topics in Design 1-3.
Topics of current interest in Design & Technology. Used to develop new courses.

ADN 493 Art and Design Senior Lecture 3.
Prerequisite: ADN 219, ADN 281, ADN 418, completion of a 400 level studio; Corequisite: ADN 400, ADN 460, ADN 470, or ADN 480.
ADN 493 is a capstone course for seniors in Art and Design. The course prepares and equips students with the necessary tools and communication skills to present themselves professionally as competent practitioners. Students are required to integrate their work from previous Art and Design courses into a comprehensive portfolio and personal website. Students are required to participate in the Art and Design Senior Exhibition and provide their own transportation to the exhibition.

ADN 494 Internship in Design 1-6.
Prerequisite: Junior standing; 3.0 GPA or better.
Supervised field experience in design offices, galleries, museums and other organizations. Maximum of 6 credit hours. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

ADN 495 Independent Study in Design 1-6.
Prerequisite: Junior standing in Design with 3.0 in Design or better.
Special projects in art and design developed under the direction of a faculty member on a tutorial basis. Maximum 6 credit hours. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

ADN 502 Advanced Visual Laboratory 3.
ADN 502 is a general title of Advanced Visual Laboratories under the supervision of an Art and Design faculty member to provide intensive experimental work in various phenomena and disciplines related to design.

ADN 503 Graduate Seminar in Art & Design 3.
Seminar introduction to research in art and design, addressing theoretical, historical, and methodological contexts for individual exploration. Reading, discussion, and presentations will emphasize current work and concept development in all art media. Methods of examining idea sources, process, documentation, critiquing, speaking, and writing about visual concepts.

ADN 560 Advanced Animation Studio 6.
Prerequisite: ADN 460, ADN 419; College of Design Graduate Student.
The studio serves as an intensive investigation of the tools, techniques, and processes for experimental multimedia animation. The studio will address the entire creative animation process, from initial storyboard concept to final production. The studio will serve as an advanced study of animation and imaging by investigating multimedia animation from numerous perspectives, including filmmaking, cognitive psychology, the fine arts and interaction design. Creativity in concept and execution (the creative process) will be a major focus of the studio experience.

ADN 561 Digital Animation and Imaging Seminar 3.
Prerequisite: ADN 460, ADN 419; College of Design Graduate Student.
Intensive research, presentation, and discussion of animation. Addressing historical animation issues related to media, culture and technology. Advanced study of animation and imaging through study of the history of multimedia animation from numerous perspectives, including filmmaking, painting and drawing, theater and animation history.
ADN 570 Advanced Fibers and Surface Design Studio 6.
Advanced studio in Art & Design. Creation of fibers and surface design products, with special emphasis given to design process; creative problem-solving, exploration, and innovation; and application of advanced art and design techniques and method to hands-on making of textile objects. All projects will be individually conceived and executed.

ADN 571 Fibers and Surface Design Seminar 3.
Prerequisite: ADN 503.
Seminar on current professional issues in fibers and surface design, focusing on theory, history, critical analysis, and philosophy. Reading, discussion, presentations, research, and writing about contemporary and historical thought in the field.

ADN 575 Pre-Industrial World Textiles 3.
Research on and discussion of hand-made textiles of the world, introducing major textile traditions from Africa, Asia, Europe, North and South America. Focus on geographic and cultural contexts, development of production, and design characteristics, including 20th-century fiber art movements. Seminar format.

ADN 581 Final Project Research 3.
Directed research to prepare background documentation for the final project, including historical and contemporary context, formation of project parameters, statement of goals, and documentation/project outline.

ADN 588 Final Project Studio 6.
Prerequisite: ADN 570(18cr) and ADN 581. Student in last semester of graduate enrollment.
Final studio project for graduate students in Art & Design, under the supervision of graduate advisory committee members.

ADN 592 Special Topics in Art and Design 1-6.
Topics of current interest to the program or concentration offered by faculty in the department of Art and Design. Subjects offered under this number are normally used to test and develop new courses.

ADN 630 Independent Study in Art & Design 1-3.
Prerequisite: ADN 503; and ADN 570.
Independent study in art and design under the supervision of a specific Art & Design faculty member. Restricted to graduate students in Art & Design with consent of the supervising faculty. May not be taken in the first semester of graduate study.

ADN 685 Supervised Teaching 1-3.
Prerequisite: Master’s student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ADN 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master’s student.
For students in non-thesis master’s programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master’s exam, etc.

ADN 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master’s student.
For students in non-thesis master’s programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master’s exam, etc. Students may register for this course a maximum of one semester.

**Graphic Design**

Graphic design is the process of bringing meaningful visual form to communication. Graphic designers translate communication goals through printed, environmental, and electronic presentations of information. Graphic designers use words and images to express messages that inform, persuade, and incite people to action. Graphic designers are active in all aspects of communication design. For example, they design books, magazines and newspapers for the publishing industry. They also create printed materials such as logotypes, symbols, annual reports, newsletters, business forms, and other related literature for corporations, institutions, businesses, and governmental agencies. Graphic designers also design user experiences (UX), websites, computer interfaces, and motion graphics such as film titles and typographic treatments for video, as well as on-air graphics for television. Graphic designers are employed in a variety of settings, including graphic design offices, advertising agencies, communication businesses, as well as corporations, institutions, or governmental agencies as part of internal communications departments.

The Graphic Design program is a part of the Department of Graphic and Industrial Design. The Graphic Design program awards a Bachelor of Graphic Design, a professional degree, recognized by the American Institute of Graphic Arts (AIGA) and is accredited by the National Association of Schools of Art and Design (NASAD). The program includes the study of visual, theoretical, historical, and technical aspects of the discipline. The curriculum provides comprehensive experiences in the analysis of communication problems, the development of creative solutions to those problems, and the implementation and evaluation of those solutions. Required courses in typography explore the role of words and language in graphic communication, while courses in imaging provide students with experiences in a range of photographic, videographic, and computer media. Instruction in computer software programs is fully integrated in design courses, and is not taught as a separate activity. In their studio coursework, graphic design majors prepare for careers in the field through the execution of demonstration projects of varying complexity and scale.

Specific curriculum requirements are available on the Registration and Records website (http://www.ncsu.edu/registrar/curricula).

**GD - Graphic Design Courses**

GD 201 Design, Context, and Experience 6.
Prerequisite: D 101, D 103, and D 103. Co-requisite: GD 210, GD 217. Introduction to analysis and form-making in graphic design through investigations of design artifacts as components of larger and physical, social, cultural, and technological systems. Appropriate student-owned technology and software required. Graphic Design Majors Only, except with Department Head permission.
GD 202 Designing for Settings, People, and Use 6.
Prerequisite: GD 201, GD 210, GD 217; Corequisite: GD 310, GD 317.
Relationships among audience/user interpretive behavior, attributes of physical and cultural settings, and objects with attention to different perspectives on the role of the designer. Graphic Design Majors Only, except with Department Head permission.

Events, ideas, movements, designs and individuals that have historical significance and influence on contemporary graphic design and the graphic design profession. Concentration on graphic design of the last 100 years.

GD 210 Image and Technology 3.
Prerequisite: D 101, D 103, and D 105.
Introduction to representation and visualization strategies particular to the applied communication contexts of graphic design, including mapping, diagramming, and photography. Discussion of the role of various technologies in the construction of meaning. Digital camera and appropriate student-owned technology and software required. Graphic Design majors only, except with Department Head permission.

GD 217 Typography and Technology 3.
Prerequisite: D 101, D 103, and D 105.
Introduction to typography with respect to four primary systems: reading, form, language, and technology. Appropriate student-owned technology and software required. Graphic Design majors only, except with Department Head permission.

GD 292 Special Topics in Graphic Design 1-3.
Topics of current interest in Graphic Design. Normally used to develop new courses.

Investigations of branding, interaction, and service design in response to problems of complex systems and contexts. Graphic Design majors only, except with Department Head permission.

GD 303 Graphic Design Theory and Practice 3.
An examination of theories and critical perspectives shaping graphic practice. The course includes a discussion of contemporary design strategy in business and the role of visual communication in the information age.

GD 310 Visualization, Representation, and Display 3.
Prerequisite: GD 210.
Surveying, documenting, and interpreting sites and subjects; representing relationships among settings, people, and objects through image-making strategies, such as activity maps, interviews, panoramas, and visual essays. Graphic Design majors only, except with Department Head permission for other college of design majors.

GD 317 Typographic Language, Writing, and Reading 3.
Prerequisite: GD 217.
Continuation of typography and technology with greater emphasis on the individual reading experience, including page sequencing, grids, and the relationship between historical conventions and new interpretive demands on readers. Graphic Design majors only, except with Department Head permission.

GD 400 Advanced Graphic Design Studio 6.
Prerequisites: GD 301 and GD 203 and GD 303.
Topical and interdisciplinary studios addressing advanced visual communication problems. Graphic Design Majors only, except with Department Head permission.

GD 401 Capstone Graphic Design Studio 6.
Prerequisite: GD 400.
Capstone experience focused on the transition from school to work. Individual capstone project, collaborative work, and professional practice discussions. Graphic Design majors only, Seniors.

GD 410 Online and Mobile Interaction Design Systems 3.
Prerequisite: GD 310.
Exploration of dynamic communication systems, including methods for visualizing user interaction, setting conditions for user experience, and managing collaborative work. Graphic Design majors only, except with Department Head permission for other College of Design majors.

GD 417 Information and Publishing Design Systems 3.
Prerequisite: GD 317.
Continuation of typographic language, writing, and reading with attention to advanced grid, form, and font systems in the design of multi-page documents, as well as issues of production and printing. Graphic Design majors only, except with Department Head permission.

Prerequisite: Junior standing in the major and Study Abroad Office approval.
Define visual communication design problems and develop design solutions in an international setting. Studio projects related to design, culture, and traditional and contemporary visual communication. Directed studies in history and culture, and in artfckt making. Additional travel and trip costs are required beyond registration fees, as well as appropriate immunizations. Graphic Design majors and departmental approved Elective ("swing") Studio for all other College of Design Majors with Junior or Graduate Standing in Major.

GD 492 Special Topics in Graphic Design 1-3.
Prerequisite: Jr standing in Graphic Design major.
Topics of current interest in Graphic Design. Normally used to develop new courses. Graphic Design Majors, and department approved elective for all other college of Design Majors with Junior or Graduate standing in major.

GD 494 Internship in Graphic Design 3.
Prerequisite: Junior standing in Graphic Design and 3.0 GPA or better.
Supervised field experience in graphic design offices and organizations. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

GD 495 Independent Study in Graphic Design 1-3.
Prerequisite: Junior standing in Graphic Design and 3.0 GPA or better.
Special projects in graphic design developed under the direction of a faculty member on a tutorial basis. Individualized/Independent Study and Research courses require a "Course Agreement for Students Enrolled in Non-Standard Courses" be completed by the student and faculty member prior to registration by the department.

GD 501 Graduate Graphic Design Studio 9.
Corequisite: GD 571.
Student-defined graphic design projects in response to critical content framework presentation by GD 571 faculty. Center of framework on role of design objects as cognitive artifacts and extension, transformation or diminishment of human thought by their form and content. Interaction of potential audiences with designer-created artifacts. Graphic design majors only.
GD 502 Graduate Graphic Design Studio II 9.
Prerequisite: GD 501, Corequisite: GD 572.
Student-defined graphic design projects in response to critical content framework presentation by GD 572 faculty. Center of framework on role of design objects as cultural artifacts and their reflection on social diversity of both designers and audiences. Creation, reproduction, distribution and reception of messages in both designer-created artifacts and audience's response. Graphic design majors only.

GD 503 Graduate Graphic Design Studio III 9.
Prerequisite: GD 573, Corequisite: GD 671.
Student-defined graphic design projects in response to critical content framework presentation by GD 671 faculty. Center of framework on nature of new information environments. Shape and response of technologies to new cognitive and cultural relationships among audiences.

GD 510 Imaging for Graphic Design IV 3.
Prerequisite: GD 410, Design Majors.
Advanced problems in the visual design and structuring of information in interactive multimedia presentations. Topics include the design of interfaces, navigation, motion graphics, and websites as well as exploration of narrative and hypermedia approaches to the organization of content.

GD 517 Type IV 3.
Prerequisite: GD 417, Design Majors.
Advanced problems of typographic expression/communication in which typographic variables are used to alter, enhance, or reinforce verbal meaning. Historic precedent and experimentation with the conventions for typographic form are explored. The impact of the computer on changes in typographic aesthetics, including motion graphics, typeface design, and website design.

GD 571 Design As Cognitive Artifact 3.
Relationship between theories of human cognition and graphic design. Analysis and critique of design objects as cognitive artifacts and extension, transformation or diminishment of human thought by their form and content. A critical examination of cognitive, linguistic and social science theories shaping graphic design. Non-majors by permission only.

GD 572 Design as Cultural Artifact 3.
Introduction to recent theories in various disciplines concerning a cultural understanding of graphic design. Theories of mass and popular culture, critiques of creativity and authorial intentionality, influences of interpretive criticism, theories of consumption and issues of cultural representation. Emphasis on adaptation of these theories to an understanding of the cultural significance of graphic design. Non-majors by permission only.

GD 573 New Information Environments 3.
Prerequisite: GD 503.
Changing role of graphic design in new information environments. Implications of new technology on social construction of meaning, impact of electronic media on culture and cognition, and differences in designing artifacts and designing experiences. Non-majors by permission only.

GD 580 Special Topics In Graphic Design History 1-6.
Prerequisite: GD 242.
Topics of current interest in interpretation, criticism, methodology and research, relating to graphic design history. Further specialized study in history of printing, typography, communication, image-making and information systems. Investigation of how we study artifacts, production and producers.

GD 581 Graphic Design Final Project Research 3.
Prerequisite: GD 502.
A seminar course to assist students in preparing foundation for final project to be conducted in GD 688 Final Project Studio.

GD 588 Final Project Studio In Graphic Design 6.
Prerequisite: GD 581.
Final project for graduate students supervised by members of their graduate advisory committees.

GD 592 Special Topics In Graphic Design 1-6.
Prerequisite: Graduate standing.
Topics of current interest to program/option offered by faculty in School. Subjects offered under this number normally used to test and develop new courses.

GD 610 Special Topics In Graphic Design 1-6.
Prerequisite: Permission of grad. advisor.
An investigation of special topics in graphic design of a particular interest to advanced students under direction of chair of graduate committee on a tutorial basis; credit and content vary with each student.

GD 630 Independent Study In Graphic Design 1-3.
Prerequisite: Graduate standing.
Special problems in various aspects of graphic design developed under the direction of a faculty member on a tutorial basis.

GD 676 Special Project In Graphic Design 1-3.
Prerequisite: Graduate standing.
Seminar on subjects of current interest in graphic design, presented by persons not part of regular faculty.

GD 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

GD 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

GD 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

GD 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

Industrial Design

The Industrial Design program is a part of the Department of Graphic and Industrial Design. The Industrial Design program awards a Bachelor of Industrial Design degree. The pedagogical core of the department aims to reinforce the foundation principles of design theory as applied
to traditional and advanced technologies, i.e. new media, materials, and production techniques. Our curriculum addresses broad cultural, technological, and societal considerations and promotes in our graduates the ability to meet the challenges of technological complexity through collaborative design. We emphasize the application of creative thinking and problem solving to design projects ranging from single to mass-produced artifacts. The areas of application span the range from industrial design to interactive multimedia. The program is recognized by the Industrial Designers Society of America (IDSA) and accredited by the National Association of Schools of Art and Design (NASAD).

Opportunities

Career opportunities for graduates of the Department of Graphic and Industrial Design span the range from industrial design to virtual design. Graduates of this department are currently working in fields such as product development, furniture design, recreational product design, toy design, exhibition design, textile design, fashion design, photography, film making, special effects, set design, ergonomics and human factors.

Curricula and Degrees

The Department of Graphic and Industrial Design offers a four-year bachelor degree and two-year or more master’s degrees. Industrial Design is concerned with all human aspects of machine-made products and their relationship to people. The industrial designer is responsible for product safety, aesthetics, maintenance, and cost. Industrial designers deal with consumer and industrial products. In order to achieve these ends, designers must be involved in four major design and research areas: human behavior, human-machine relationships, the environment, and the product itself. In addition, the designer’s responsibility extends into sustainability product liability and cross-cultural issues.

Areas of study in the Bachelor of Industrial Design include:

- furniture
- textiles, house wares
- appliances
- transportation
- tools
- farm equipment
- medical instruments
- electronics
- human-computer interfaces
- recreational support equipment

The goal of the Industrial Design curriculum is to teach the design and development of products or product systems and their relationship to human beings and the environment.

Graduates of the Bachelor of Industrial Design program have career opportunities in three general types of practice: corporate design offices in manufacturing companies, independent consulting offices, and governmental agencies.

Specific curriculum requirements are available on the Registration and Records website (http://www.ncsu.edu/registrar/curricula).

ID - Industrial Design Courses

ID 201 Basic Industrial Design Studio I 6.
Prerequisite: D104 and D105; Corequisite: ID 215, ID 255, and ID 318.
Introduction to the theories, methods, and language of industrial design; elementary problems in form and function; transitional implications of human-comfort and mass-produced objects, in various materials. Industrial Design majors, department approved minor, and department approved elective (“swing”) studio for all other College of Design majors.

ID 202 Basic Industrial Design Studio II 6.
Prerequisite: ID 201, ID 215, ID 255, ID 318; Corequisite: ID 315, ID 418.
Introduction to the fundamentals of product development and design with emphasis on analytical and intuitive approaches to problem solving, technical skills, manufacturing and structural considerations in design of simple products/systems.

ID 215 Introduction to digital Techniques 3.
Prerequisite: D 104, D 105.
Introduction to the computer as a design tool for generating and manipulation of two-dimensional raster and vector imagery; techniques in two-dimensional concept rendering; desktop publishing applications for design and production of presentation documentation; and visual editors for creating and managing web sites. Industrial design majors, department approved minor, and department approved elective for all other college of design majors.

ID 255 Contemporary Manufacturing Processes I 3.
Prerequisite: D 104, D 105.
Introduction to mass production processes and their influences on design. Wood, paper and metal manufacturing processes utilized in quantity production. Emphasis on materials comparison and process selection in relation to product function, form, safety, human factors and manufacturability. Field trips required. Industrial Design majors, department approved minor, and department approved elective for all other college of Design majors.

ID 256 Contemporary Manufacturing Processes II 3.
Prerequisite: ID 255.
Second course in mass production processes and their influences on design. Emphasis on material search and process selection in relation to form, function, human factors, finishes, and joining methods. Plastics and rubber and their specific manufacturing processes utilized in mass production. Industrial Design Majors and Department approved Elective for all other College of Design Majors.

ID 262 Professional Practice in Industrial Design 3.
Issues and situations encountered in a design practice. Topics include patents, trademarks, contracts, basic marketing skills within corporations and in free-lance design.

ID 292 Special Topics in Industrial Design 1-3.
Topics of current interest in Industrial Design. Normally used to develop new courses.
Prerequisite: ID 202, ID 255, ID 315, ID 418; Corequisite: ID 415 (Fall), ID 445 (Spring).
Individual and team-oriented design experiences that expand upon and combine intellectual and manual skills required for the practice of industrial design. Emphasis on identifying and solving design problems through manipulation of design theory, application of human factors, product safety awareness, universal design principles, ecological/environmental concerns, appropriate combination of materials and manufacturing techniques, and presentation of concepts. Extensive integration of computer technology, including 3-D digital modeling, rapid prototyping, interactive virtual product visualization, and world wide web-based presentation.

ID 315 Digital Product Modeling 3.
Prerequisite: ID 215.
Progression of digital experiences that expand upon and combine the intellectual and conceptual skills required for 3-dimensional design visualization. Emphasis on solving design problems through development and manipulation of 3-dimensional form within the virtual environment.

ID 318 Ideation I 3.
Prerequisite: D 104, D 105.
The ideation process of conceiving, developing and recording ideas two-dimensionally. These techniques defined and practiced as an extension of understanding the human idea motor process.

ID 400 Advanced Industrial Design Studio Series 6.
Prerequisite: ID 255, ID 300, ID 315, ID 418, ID 445.
A series of advanced studio experiences that expands upon and combines intellectual and manual skills required for the practice of industrial design. Emphasis on identifying and solving design problems through manipulation of design theory, application of human factors, product safety awareness, appropriate combination of materials and manufacturing techniques, and presentation of concepts.

ID 415 Advanced Digital Product Modeling 3.
Prerequisite: ID 315.
Advanced concepts for planning and executing efficient workflow practices for manufacturable product surfaces. Emphasis on theory and application of three-dimensional surface modeling tools, accurate development of wire frame geometry, rapid prototyping and animation techniques. Introduction of animations to aid with dynamic visual analysis of digital product design concepts.

ID 418 Ideation II 3.
Prerequisite: ID 318.
This is an advanced course which expands the ideation process with greater emphasis directed toward the creative development and recording of conceptual design phase.

ID 444 History of Industrial Design 3.
The history of industrial design examines the field of industrial design in relationship to developments in engineering, applied and theoretical sciences, and developments in aesthetic theories. It covers the periods from the early enlightenment (1700s) through present day issues. Students will examine such relationships in detail in three short presentations and a comprehensive term paper. As a four-hundred level course, students are expected to be able to work independently and expand their knowledge well beyond lectures and readings.

ID 445 Human-Centered Design 3.
Junior standing or above.
Introduction to the spectrum of human physical and cognitive capabilities as they relate to user interaction with designed products and environments. Industrial Design Majors and Department approved Elective for all other College of Design Majors with Junior or Graduate standing in Major.

ID 490 Industrial Design International Studio 6.
Prerequisite: Junior standing in Major, Approval of Study Abroad Office.
Define industrial design problems and develop design solutions in an international setting. Studio projects related to design, culture, and traditional and contemporary limited and mass produced products. Focus on artifact making through directed studies. Industrial Design Majors, and Department approved Elective (“swing”) Studio for all other College of Design Majors with Junior or Graduate standing in Major.

ID 492 Special Topics in Industrial Design 1-3.
Junior standing or above.
Topics of current interest in Industrial Design. Normally used to develop new courses. Industrial Design Majors, and Department approved Elective for all other College of Design Majors with Junior or Graduate standing in Major.

ID 494 Internship in Industrial Design 1-6.
Prerequisite: Junior standing, 3.0 GPA or better.
Supervised field experience in product design offices, galleries, museums and other related organizations. Maximum of 6 credit hours. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

ID 495 Independent Study in Industrial Design 1-3.
Prerequisite: Junior standing in Industrial Design and 3.0 GPA or better.
Special projects in industrial design developed under the direction of a faculty member on a tutorial basis. Maximum 6 credit hours - May be repeated. Individualized/Independent Study and Research courses require a "Course Agreement for Students Enrolled in Non-Standard Courses" be completed by the student and faculty member prior to registration by the department.

ID 500 Advanced Industrial Design (Series) 6.
Prerequisite: Portfolio review.
Advanced studies in industrial design. Special emphasis given to problem identification, program formulation and application of advanced design methods. All problems of an individual nature leading to a synthesis of previous design experience.

ID 511 Industrial Design Materials and Processes I 3.
Prerequisite: Graduate standing.
Analysis of paper, wood, metal and manufacturing processes utilized in production of mass-produced products. Advanced studies in mass production processes and their influence on design and development of products. Emphasis on material search and process selection in relation to product safety, cost, function, human factors, form, finishes and joining methods.

ID 512 Industrial Design Materials and Processes II 3.
Prerequisite: Graduate standing.
Analysis of plastics and rubber and related manufacturing processes utilized in production of mass-produced products. Advanced studies in mass production processes and their influence on design and development of products. Emphasis on material search and process selection in relation to cost, product safety, function, human factors, form, finishes and joining methods.
Department of Landscape Architecture

Landscape architecture is a multi-faceted profession dedicated to the welfare of the physical environment and the living communities of the earth. It is a diverse and growing design profession that combines art, science, engineering, and technology. Landscape Architecture at the College of Design is especially concerned with the stewardship, restoration, and regeneration of the natural and cultural environments in urban, rural, and wilderness settings.

Bachelor of Landscape Architecture

The Bachelor of Landscape Architecture program was phased out beginning Fall 2011. No new students will be accepted into the program. If you are interested in pursuing landscape architecture at the College of Design, please view our Master of Landscape Architecture program.

The Department of Landscape Architecture currently enjoys full accreditation from the Landscape Architecture Accreditation Board (LAAB).

Minor in Landscape Architecture

The Minor in Landscape Architecture will provide a basic understanding of the nature of the profession of Landscape Architecture. Knowledge of Landscape Architecture history and theory provides a useful addition to a major in any of the University disciplines.

The Minor in Landscape Architecture is designed to:

- Provide a general background in the discipline with regard to landscape architecture research, development and design for students, whose primary professional practice will be in another discipline.
- Clarify the role of the profession of Landscape Architecture.
- Define how the profession of Landscape Architecture and all related professional disciplines contribute to the successful practice of design.

For more information, contact Gene Bressler: gene_bressler@ncsu.edu

College of Education

NCSU Box 7801
Raleigh, NC 27895-7801

Mission

The College of Education is a voice of innovation for learning across the lifespan. We prepare professionals who educate and lead. Our inquiry and practice reflect integrity, a commitment to social justice, and the value of diversity in a global community.

Vision

The College of Education will lead the way in North Carolina in increasing opportunities for success in education and reducing achievement gaps.

Undergraduate Degree Programs

Undergraduate degree programs that lead to a public school teaching license are offered in elementary education (K-6), mathematics education (9-12), middle grades education(6-9) (language arts, social studies, math, science), science education (9-12), and technology engineering and design education(7-12). In addition to being admitted to a curriculum, all teacher education candidates must meet program and unit requirements for admission to candidacy in teacher education (including a minimum 2.75 overall grade point average after completing 45 semester hours) and for admission to student teaching (including a minimum 2.75 GPA overall.)
All teacher education students must successfully complete a set of core courses (ED 204, ED 311, ED 312, EDP 304, ELP 344) as part of their professional studies course work. Candidates for licensure must also complete the edTPA and a required number of non-credit professional development activities.

The College of Education also jointly administers teacher preparation programs with the College of Agriculture and Life Sciences (Agriculture Education, 7-12) and the College of Humanities and Social Sciences (English, 9-12 and World Languages, K-12). Candidates enrolled in these affiliated programs must also complete the college core courses, edTPA, and non-credit professional development activities.

Students enrolled in a natural science or a mathematical science curriculum have the option of double majoring in the Department of Science, Technology, Engineering and Mathematics Education to earn a license to teach (6-9 or 9-12).

In addition, the College of Education offers graduate programs in:

- Adult and Higher Education
- New Literacies and Global Learning
- Counselor Education
- Higher Education
- Curriculum and Developmental Supervision
- Middle Grades Education
- Educational Administration
- Reading Education
- Educational Leadership and Policy Studies
- Mathematics Education
- Science Education
- Technology, Engineering and Design Education
- Social Studies Education
- Elementary Education
- Special Education
- English Education
- Training and Development
- Instructional Technology

The College also offers a Master of Arts in Teaching (MAT) for individuals who have degrees in other fields but wish to pursue a program leading to a master’s degree and an initial teaching license. The MAT program includes elementary education (K-6), English as a second language (K-12), English education (9-12), math education (9-12), middle grades education (6-9), science education (9-12), secondary social studies education (9-12), special education: general curriculum (K-12). Candidates for licensure must also complete the edTPA and a required number of non-credit professional development activities.

See the Graduate Catalog or contact faculty members for information on graduate programs. Public schools post-master’s licensure programs are available in some curricular areas.

All of the bachelor’s level and graduate level licensure programs are approved by the North Carolina State Board of Education. The college is accredited by the Council for the Accreditation of Counseling & Related Programs (CACREP) and the Council for the Accreditation of Educator Preparation (CAEP).

The College of Education is located in Poe Hall. It includes a Media Center and Instructional Computing Labs. The building houses laboratories for technology engineering and design education, reading, science, counseling and testing activities.

**Student Success and Advising Center (SSAC)**

The Student Success and Advising Center provides professional advising for all freshman, sophomores and transfer students in programs within the College of Education. The SSAC also serves as a resource for all College of Education students by offering services and programming such as student success workshops, student engagement opportunities and leadership development opportunities. Advisors are trained professionals who can supply valuable information about majors, courses, careers, requirements, policies, social life, academic support and transition issues.

**Scholarships and Awards**

Through the generous support of corporations and friends, the College of Education is able to offer over 45 scholarships to our undergraduate and graduate students each year based on merit and/or need. Scholarship amounts range from $1,200 to $5,000. High school counselors receive information for all College of Education scholarships.

Find more information about Scholarships and Awards online (https://ced.ncsu.edu/undergraduate/undergraduate-scholarships-and-financial-aid/).

**Honors Society**

**Kappa Delta Pi**

The College of Education maintains the Omicron Rho chapter of Kappa Delta Pi (http://www.kdp.org), an international honor society in education. It elects those to membership who exemplify high academic achievement and exhibit the ideals of scholarship, high personal standards, and promise in teaching and allied professions.

Contact Dr. Drinda Benge for more information. E-mail: Drinda_Benge@ncsu.edu

**Epsilon Pi Tau International Honor Society for Professions in Technology**

Epsilon Pi Tau (http://ced.ncsu.edu/student-life/organizations) recognizes student excellence in the study of technology and technology education and prepares practitioners for the technology professions. The Department of Science, Technology, Engineering, and Mathematics Education hosts the local chapter Alpha Pi. (https://ced.ncsu.edu/undergraduate/undergraduate-clubs-and-organizations/).

Contact Dr. Cameron Denson, Chapter Trustee, for more information. E-mail: Cameron_Denson@ncsu.edu

**SAY Village**

The college and University Housing have partnered to provide a living and learning residential experience for first year students called Students Advocating for Youth (SAY Village). Housed in Syme Hall, this experience targets students interested in working with elementary-aged youth. No matter what the major or aspirations for the future, advocating for youth spans many fields of study. For more information, visit the Say Village website (https://ced.ncsu.edu/undergraduate/undergraduate-student-support-and-engagement-programs/students-advocating-for-youth-say/). Additionally, sophomore students who return to SAY Village
and live in Syme Hall comprise what is known as the "DAY" portion of the program - "Determined Area Youth." The DAY component enables those students returning to SAY to teach self-advocacy skills to area middle school youth.

**International Activities**

Faculty members have been involved in overseas projects in China, Ghana, Honduras, Japan, New Zealand, Peru, Puerto Rico, Russia, and South Africa. Some of the foreign language teacher education students spend a year in France or Spain in an exchange program. International students in several of the education programs and elsewhere at NC State participate in on-campus, multi-cultural opportunities. The College of Education has begun extensive efforts at globalization that will include opportunities to study abroad and student teach in countries such as China, Brazil, and other sites. You can find more information about the College of Education's Study Abroad opportunities (http://ced.ncsu.edu/study-abroad) online.

**Accreditation**

All of the bachelor’s level and graduate level licensure programs are approved by the North Carolina State Board of Education. The college is accredited by the Council for the Accreditation of Counseling and Related Programs (CACREP) and the Council for the Accreditation of Educator Preparation. (CAEP). Please visit the College of Education's website (http://ced.ncsu.edu/academics/licensureaccreditation). (https://ced.ncsu.edu/academics/professional-education).

**Agricultural Teacher Education**

**OVERVIEW:**

Students desiring to become teachers of agriculture will be enrolled in the College of Agriculture and Life Sciences. The curriculum requirements for the teacher education program can be found under the Department of Agricultural and Extension Education. Below is a brief summary of the degree:

Agriculture remains one of the largest and diverse components of the economy of this country and the world. Teaching agriculture at the middle school or high school level is an exciting career. Agriculture teachers prepare students to either enter this dynamic industry of agriculture or for advanced study at two-year or four-year institutions leading to agricultural careers.

In addition to classroom and laboratory instruction in agriculture, our graduates are prepared to assist students in developing and conducting supervised agricultural experience programs that reinforce what is learned in the classroom. They also develop the skills necessary to be an FFA advisor and to provide those leadership and career development opportunities for their students.

Completion of the B.S. in Agricultural Education leads to teacher licensure in Agricultural Education, grades 6-12. There is a strong demand for agriculture teachers, and salaries are competitive with other agricultural careers. There are over 350 secondary agriculture teachers located throughout North Carolina.

Because agriculture is a diverse industry, students are allowed to select one area of agriculture in which to concentrate their studies. The concentrations are listed to the left. Often students choose to complete a minor in a second area of concentration.

For more information, please see the Agricultural and Extension Education website (http://www.cals.ncsu.edu/agexed).

Specific curriculum requirements are available on the Registration and Records website (http://www.ncsu.edu/registrar/curricula).

**AEE - Agricultural and Extension Education Courses**

**AEE 101 Introduction to Career and Technical Education**

Overview of career and technical education programs, objectives, and outcomes in secondary schools. Philosophy of career and technical education and how career and technical education programs fit into the overall mission of secondary education. Mission of agricultural education, major program objectives, and introduction to the curricula taught within the state. Roles and responsibilities of CTE teachers with specific emphasis on agricultural education teachers' roles and responsibilities. Historical context of agricultural education and other career and technical education programs, including major legislation affecting development of career and technical education.

**AEE 103 Fundamentals of Agricultural and Extension Education**

Introduction to the scope, purpose, and objectives of university education with an emphasis on agricultural education, extension education, and agricultural communications. Students will explore College and departmental resources, academic policies and procedures, the agricultural industry, career opportunities, and current trends and issues in agriculture. Cannot receive credit for both AEE 103 and ALS 103.

**AEE 141 Computer Applications in the Agricultural Institute**

Introduction to computing concepts and the computing infrastructure in the Agricultural Institute. Use of computing hardware and software to perform common tasks, explore networked computer resources and solve problems associated with the various curricula in the Agricultural Institute. BOSTICK.

**AEE 206 Introduction to Teaching Agriculture**

Introduction to teaching agricultural education in middle and secondary schools and collaborative efforts for teaching agricultural education to adults as rural community situations dictate. Field experiences include three hours per week of structured observations of classroom teachers, teacher assistant activities, and reflections of the experience.

**AEE 208 Agricultural Biotechnology: Issues and Implications**

*Prerequisite:* (BIO 105 or BIO 115 or BIO 181 or BIO 183).

Trends and issues of agricultural biotechnology in today's society are addressed while covering the basic biological science behind the technology. Applications of and policy issues associated with plant, animal, and environmental biotechnology used in the agricultural industry are examined from an interdisciplinary approach.

**AEE 226 Computer Applications and Information Technology in Agricultural & Extension Ed**

Use of computers and commercially produced agricultural software; the computer as a management tool; agricultural occupational applications of the computer; a multimedia instructional tool in agricultural classrooms and training situations; use of technology for processing information and imaging; network access; and electronic communications.
AEE 230 Introduction to Cooperative Extension 3.
This course is designed for all students who are interested pursuing a career with the cooperative extension service. An introduction to the cooperative extension mission, philosophy, history, organization, structure, administration, program areas, extension program development, extension teaching and delivery methods, and the involvement and use of volunteers. Students are expected to provide their own transportation for outside of class activities and assignments.

AEE 291 Service Learning Program Leader Development I 1.
The purpose of the course is to prepare students for their role as Alternative Service Break Team Leaders. The course will incorporate the larger issues of citizenship, social justice, and positive change and will include the logistics, risk-management, and leadership skills needed when leading a service trip. This course will require students to think critically about their role as a leader. Students will participate in a weekend overnight retreat. Transportation for the retreat will be provided by University Van rental. Expenses for the weekend retreat are covered in the ASB administrative charge paid by participants.

AEE 292 Service Learning Program Leader Development II 2.
Prerequisite: AEE 291.
The purpose of the course is to prepare students for their role as Alternative Service Break Team Leaders. Part II of the Service Learning Program Leader Development will build upon what students learned in Part I and they will be able to put into practice what has been learned with their own teams. Students will travel with their respective teams during spring break to complete the week long service-learning project. Students will be responsible for fundraising for approximately half the cost of their trip. Trip costs vary and depends on location selected.

AEE 303 Administration and Supervision of Student Organizations 3.
Prerequisite: AEE 206.
Principles and techniques for organizing, administering and supervising student organization activities.

AEE 311 Communication Methods and Media 3.
Prerequisite: ENG 101.
Foundations of agricultural communications. Technologies of agricultural communication and the systematic approach to the development of agricultural communication materials. Development of applied skills in design, production, evaluation, and dissemination of information unique to agricultural sciences and media.

AEE 322 Experiential Learning in Agriculture 3.
Prerequisite: AEE 206.
Planning, organizing, implementing, supervising and evaluating Supervised Agricultural Experience (SAE) programs in agriculture.

AEE 323 Leadership Development in Agriculture and Life Sciences 3.
Leadership development in agricultural and related settings; foundations of leadership theory and practice; techniques for developing leadership skills; development of understanding of group interactions and group leader roles, technical communication skills, interpersonal influence, commitment, and goals achievement strategies necessary for effective leaders.

AEE 325 Planning and Delivering Non-Formal Education 3.
Adult learning theory and practice, including planning non-formal educational programs for adults, methods of instructional delivery, effective use of instructional technology, marketing educational programs, and evaluation of educational outcomes. Microteaching (practice teaching presentations) and group presentations required as part of laboratory assignments.

AEE 326 Teaching Diverse Learners in AED 3.
Prerequisite: AEE 206; Junior standing; and AED Majors only.
Legislation and issues regarding diverse learners in middle and high school agricultural education are examined. Discussion and practice in planning and facilitating teaching strategies to help those with special needs in an agricultural setting are emphasized. Techniques to integrate reading and writing into the curriculum are identified and practiced. Field trips are required.

AEE 327 Conducting Summer Programs in Agricultural Education 1.
Prerequisite: AEE 206, AEE 303, AEE 322, and Corequisite of AEE 426.
Field experience emphasizing summer agricultural education programs. Individualized instruction for students during supervised agricultural experience visits and youth organization activities. Professional development and program improvement activities.

AEE 332 Youth Leadership Development 3.
Prerequisite: AEE 323-Leadership Development in Agriculture.
This course is intended to prepare students to be effective facilitators of youth leadership development programs. Theory will be emphasized in the course because it is essential to be grounded in theory in order to apply it. Major course topics include but are not limited to: understanding the unique leadership development needs of young people, learning how to develop programs that meet those needs, and the evaluation of youth leadership programs. Students will be required to be active in and outside of class sessions. In this course you will learn by doing! Students must provide their own transportation for field trips and outside of class activities.

AEE 333 Youth Program Development and Management 3.
This course is intended to prepare students to be effective youth program facilitators. Application of theory related to youth program management will be emphasized. Major course topics include but are not limited to: understanding various educational delivery modes used in youth programming, selecting and using developmentally appropriate curriculum, using the experiential learning model to teach young people. Students will be required to be active in and outside of class sessions, including outside preparation for the lab component of the course. Students must provide their own transportation for field trips and outside of class activities. Students are encouraged to have successfully completed AEE 323 prior to enrolling in this course.

AEE 350 Personal Leadership Development in Agriculture and Life Sciences 3.
This course focuses on the impact of personal leadership on agricultural organizations and society. The best leaders are those who have internalized personal leadership concepts and apply them to the practical situations in their environment. This course teaches individuals to achieve optimal results by changing their fundamental approach to work, relationships, and problem solving, using time-honored principles in time management, leadership, and effectiveness. Restricted to CALS students.
AEE 360 Developing Team Leadership in Agriculture and Life Sciences 3.
Prerequisite: AEE 323-Leadership Development in Agriculture.
Students in this course will study the impact of organized teams and team leaders on the development of agricultural organizations. Principles and techniques involved in creating, organizing and directing teams will be explored. Students will develop skills in team decision-making and communication. Topics of discussion will include: components of a group and team, relationships of group and team members, effectiveness of groups and teams, and communication within groups and teams. This course is designed for students who are interested in positions of leadership and who want to learn more about making the groups and teams they work with more effective. Restricted to CALS students.

AEE 423 Practicum in Agricultural Extension/Industry 8.
Prerequisite: AEE 230, AEE 325, and Corequisite of AEE 490.
Participation in professional work experiences in preparation for effective leadership positions in the Cooperative Extension Service or the agribusiness industry.

AEE 424 Planning Agricultural Educational Programs 3.
Prerequisite: AEE(ED) 426, Corequisite: AEE(ED) 427.
Principles of program planning applied to educational programs in agriculture; includes theory and field experiences in planning, organizing, and evaluating high school and adult education programs.

AEE 426 Methods of Teaching Agriculture 3.
Prerequisite: Junior standing.
Discussion and practice in planning and presenting instruction in agriculture in formal and informal settings. Principles and application of approaches to teaching and organizing instruction, motivating students, developing instructional objectives, selecting and using teaching techniques, evaluating instruction, and managing classroom and laboratory instruction.

AEE 427 Student Teaching in Agriculture 8.
Prerequisite: AEE (ED) 426; Admission to Professional Semester, Corequisite: AEE (ED) 490, AEE (ED) 424:
Skills and techniques involved in teaching vocational agriculture through practice in a public school setting with concurrent on-campus seminars.

AEE 433 Leadership and Management of Volunteers in Agricultural and Extension Education 3.
Prerequisite: Junior standing.
This course is intended to prepare students to be effective managers of volunteer programs. Theory will be emphasized in the course because it is essential to be grounded in theory in order to apply it. Major topics of the course will include, but are not limited to: volunteer recruitment, training, evaluation and reward. Students will be required to be active in and outside of class sessions, including a 20-hour field experience. Students must provide their own transportation for field trips and outside of class activities. Cannot receive credit for both AEE 433 and 533.

AEE 434 Collaborative Leadership: Building Partnerships Across Community Programs 3.
This course is intended to prepare students to become collaborative leaders- at home, at school and within their communities. Theory will be emphasized in the course because it is essential to be grounded in theory in order to apply it. Topics covered in the course include but are not limited to: what is community, how do partnerships form, challenges and opportunities for successful collaborations. This is an active course where students will be required to be engaged in and outside of class sessions. Students are encouraged to have successfully completed AEE 323 prior to enrolling in this course. Students must provide their own transportation for field trips and outside of class activities. AEE 323 encouraged but not required.

AEE 435 Professional Presentations in Agricultural Organizations 3.
This course teaches effective listening strategies, communication strategies, interpersonal skills and presentation strategies essential for use in today’s workplace. AEE 435 includes strategies and techniques for effective presentations in the food, agricultural, natural resources, as well as other professions, with emphasis on oral and visual presentation techniques. Presentation skills and strategies for formal and informal situations including conferences, poster presentations along with leadership, conflict resolution, interviewing, negotiation, and group communication theory and strategies will be discussed. Restricted to CALS students; Jr or Sr level status required.

AEE 460 Organizational Leadership Development in Agriculture and Life Sciences 3.
Prerequisite: AEE 323-Leadership Development in Agriculture.
This course focuses on the impact of effective leadership in organizations in both theory and practice. Students will examine the major theories and studies that are most relevant and informative with the regard to leadership in organizations. Students will develop skills in decision-making, management of organizations, and ethical leadership related to agricultural organizations. Restricted to CALS students.

AEE 478 Advanced Issues in Extension Education 3.
Prerequisite: AEE 230.
Advanced issues and trends contributing to the administration, organization, and structure of extension education in a changing world. Senior standing required.

AEE 490 Seminar in Agricultural and Extension Education 1.
Prerequisite: Admission to Professional Semester.
Analysis of opportunities and challenges facing educational leaders in agriculture.

AEE 491 Seminar in Agricultural Education 1.
Corequisites: AEE 442 and AEE 427.
This course helps students analyze the opportunities and challenges facing teachers of agriculture as they prepare for their careers. Topics include balancing work and professional life as a teacher, portfolio assessments of teachers and programs, classroom management, teacher liability, and preparation for the job search in agricultural education.

AEE 492 External Learning Experience in Agricultural and Extension Education 1-6.
Prerequisite: Sophomore standing.
Learning experience within an academic framework that utilizes facilities and resources external to the campus. Contact and arrangements with prospective employers initiated by the student and approved by the faculty adviser, prospective employer, and the departmental teaching coordinator prior to the experience. Not intended for teaching licensure for students in AEE.
AEE 493 Special Problems in Agriculture and Extension Education 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and extension education within an academic framework that utilizes departmental campus facilities and resources. Arrangements must be initiated by the student and approved by a faculty adviser and the departmental teaching coordinator. Not intended for teacher licensure for students in AEE.

AEE 495 Special Topics in Agricultural and Extension Education 1-3.
Offered as needed to present material not normally available in regular course offerings or for offerings of new courses on a trial basis. Not intended for teacher licensure for students in AEE.

AEE 500 Agricultural Education, Schools and Society 3.
Role and structure of modern agricultural education within the overall educational system; school organization and governance, curriculum, teacher roles and responsibilities, educational philosophy and history, multiculturalism special need students, impact of technology, professionalism, and current educational trends and issues. Web-based course.

AEE 501 Foundations of Agricultural and Extension Education 3.
Development and organization of agricultural and extension education in America from colonial times to the present. Emphasis on role of societal and scientific changes, the federal government and philosophy on evolution of agricultural and extension education.

AEE 503 Youth Program Management 3.
Research, theory and principles of youth organization management. Analysis of youth development models and application of leadership theory in a youth organization. Using evaluation models to assess the effectiveness of major youth organization. Web-based course.

AEE 505 Trends and Issues in Agricultural and Extension Education 3.
Scientific, political, demographic, social, educational, technological, and environmental trends and issues that will contribute to the future structure and operation of agricultural and extension education in the United States.

AEE 507 Comparative Agricultural and Extension Education 3.
Organization and operation of formal and nonformal agricultural education and extension systems in the United States and in other countries. Field trip required - cost approx. $175.00.

AEE 521 Program Planning in Agricultural and Extension Education 3.
Prerequisite: Graduate standing or PBS status.
Consideration of the need for planning programs in education; objectives and evaluation of community programs; use of advisory group; organization and use of facilities.

AEE 522 Occupational Experience in Agriculture 3.
Prerequisite: Graduate standing or PBS status.
A major and critical element in all programs of vocational education is provision for appropriate student learning experiences in a real and simulated employment environment. Due to recent developments in education and agriculture, new and expanded concepts of occupational experience devised. Current research substantiates need and desire of teachers of agriculture for assistance in implementing new concepts. Also designed to develop depth of understanding of theoretical foundations underlying new developments in occupational experiences to stimulate individual growth and creativity in implementing further developments.

AEE 523 Adult Education in Agriculture 3.
Prerequisite: Graduate standing or PBS status.
Designed to meet needs of leaders in adult education. Opportunity to study some of basic problems and values in working with adult groups. Attention given to problem of fitting educational program for adults into public school program and other educational programs as well as to methods of teaching adults.

AEE 524 Coordinating the High School Agricultural Education Program 3.
Principles of program planning applied to educational programs about agriculture; theory and field experiences in planning, organizing, and evaluating secondary agricultural education programs; development of plans for conducting all aspects of the complete agricultural education programs.

AEE 526 Information Technologies in Agricultural and Extension Education 3.
Principles, theory and techniques of using information technologies to provide instruction to learners, both in person and at a distance, in formal and nonformal educational settings.

AEE 529 Curriculum Development in Agricultural and Extension Education 3.
Design and development of data based curriculum and curriculum evaluation procedures in agricultural and extension education. Critique of curriculum development models, contemporary trends and issues, curriculum resources and accountability tools. Analysis of the use of national and state standards as well as local community needs in curriculum development.

AEE 530 Priority Management in Agricultural and Extension Education 3.
Examination of theoretical, psychological and empirical bases for strategies and techniques contributing to enhancement of managerial and personal effectiveness of agricultural educators and individuals in related agricultural organizations.

AEE 533 Leadership and Management of Volunteers in Agricultural Education 3.
Graduate and Post-baccalaureate Students only (GR, PBS). This course is intended to prepare students to be effective managers of volunteer programs. Theory will be emphasized in the course because it is essential to be grounded in theory in order to apply it. Major topics of the course will include, but are not limited to: volunteer recruitment, training, evaluation and reward. Students will be required to be active in and outside of class sessions, including a 20-hour field experience. Students must provide their own transportation for field trips and outside of class activities. Cannot receive credit for both AEE 433 and 533.

AEE 535 Teaching Agriculture in Secondary Schools 3.
Application of theoretical models and research on effective teaching in secondary agricultural education programs. Teaching strategies, planning required, and instructional management for students with varying backgrounds. Evaluation of student learning and teacher evaluation of instruction.

AEE 560 Organizational and Administrative Leadership in Agricultural and Extension Educa 3.
Prerequisite: Master student or PBS status.
Organizational and administrative leadership concepts, skills and values in relation to agencies, organizations and institutions engaged in the administration of agricultural and extension education programs.
AEE 577 Evaluation in Agricultural and Extension Education 3.
**Prerequisite:** Graduate standing.

Evaluation principles, models, and procedures used in developing and analyzing, agricultural, vocational, technical, and extension education programs; role of comprehensive evaluation in needs assessments, program planning, program implementation, and the marketing of outcomes to major stake-holders; designs for evaluating agricultural and extension programs. Evaluation logic model is presented to identify and describe program inputs, activities, outputs, and outcomes.

AEE 578 Scientific Inquiry in Agricultural and Extension Education 3.

Philosophy, design, interpretation and practice of scientific research in agricultural and extension education, with a particular focus on the skills necessary to be an effective and critical “consumer” of research that is practiced within the field. Web based course.

AEE 579 Research Design in Agricultural and Extension Education 3.

Design of Research in Agricultural and Extension education. Development of proposals for thesis research or competitive grants. Critical analyses of research in the field and proposed research.

AEE 595 Special Topics in Agricultural and Extension Education 1-6.
**Prerequisite:** Graduate standing or PBS status.

Presentation of material not normally available in regular graduate course offerings or for offerings of new 500 level courses on a trial basis.

AEE 601 Seminar 1.
**Prerequisite:** Graduate standing or PBS status.

Current topics and issues in agricultural and extension education. Selection and research of topics, presentation of seminars, and leading group discussions.

AEE 610 Special Topics 1-6.
**Prerequisite:** Graduate standing or PBS status.

Presentation of material not normally available in regular graduate course offerings or for offerings of new 500 level courses on a trial basis.

AEE 620 Special Problems in Agricultural and Extension Education 1-6.

Exploration of topics of special interest not covered by existing courses by individual students under faculty member’s directions. Readings and independent study, problems or research not related to a thesis.

AEE 641 Practicum In Agricultural and Extension Education 1-6.

Faculty-supervised practicum in an educational, extension or agricultural industry setting.

AEE 685 Master’s Supervised Teaching 1-3.
**Prerequisite:** Master’s student.

Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

AEE 690 Master’s Examination 1-9.
**Prerequisite:** Master’s student.

For students in non-thesis master’s programs who have completed all other requirements of the degree except preparing for and taking the final master’s exam.

AEE 693 Master’s Supervised Research 1-9.
**Prerequisite:** Master’s student.

Instruction in research and research under the mentorship of a member of the Graduate Faculty.

AEE 695 Master’s Thesis Research 1-9.
**Prerequisite:** Master’s student.

Thesis research.

AEE 696 Summer Thesis Research 1.
**Prerequisite:** Master’s student.

For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

AEE 699 Master’s Thesis Preparation 1-9.
**Prerequisite:** Master’s student.

For students who have completed all credit hour requirements and full-time enrollment for the master’s degree and are writing and defending their thesis.

AEE 705 International Agricultural Development 3.
**Prerequisite:** Graduate standing.

This course provides an opportunity to learn about global agricultural and extension education issues, challenges and opportunities relating to agricultural development. The course emphasis is on building necessary knowledge and skills for analyzing global agricultural and extension education issues and formulating alternatives for agricultural development. This course has been designed to help graduate students understand agriculture and extension education with a global perspective.

AEE 735 Effective Teaching in Agriculture and Life Sciences 3.
**Prerequisite:** Graduate standing.

Theory and practice of effective teaching in agricultural and life sciences. Emphasis on course planning, teaching and learning styles, instructional techniques, laboratory instruction, text construction, student evaluation, instructional technology, and faculty roles and responsibilities.

AEE 777 Qualitative Research Methods in the Agricultural & Life Sciences 3.

Qualitative research methods continue to gain popularity in the disciplines of agricultural & life sciences. It is becoming increasingly important for graduates to have a practical working knowledge of the methodologies. Topics in the course will include but not be limited to: the foundation of qualitative research, data collection and analysis techniques, and review of qualitative research. Students are encouraged to have completed an introductory research methods course prior to enrolling. Introductory Research Methods course taken at the graduate level.

AEE 820 Special Problems in Agricultural and Extension Education 1-6.

Exploration of topics of special interest not covered by existing courses by individual students under faculty member’s directions. Readings and independent study, problems or research not related to a thesis.

AEE 841 Practicum in Agricultural and Extension Education 1-6.

Faculty-supervised practicum in an educational, extension or agricultural industry setting.

AEE 885 Doctoral Supervised Teaching 1-3.
**Prerequisite:** Doctoral student.

Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

**Prerequisite:** Doctoral student.

Instruction in research and research under the mentorship of a member of the Graduate faculty.
Prerequisite: Doctoral student.
Dissertation research.

AEE 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hours, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Education, General Studies

The General Studies Education program serves those students previously enrolled in teacher education programs at North Carolina State University, but whose career goals have changed.

Specific curriculum requirements are available on the Registration and Records website (http://www.ncsu.edu/registrar/curricula).

ED - Education Courses

ED 100 Intro to Education 2.
This course serves as an introduction to teaching and learning in 21st century K-12 classrooms and as an orientation to the College and University experience. through technology-assisted plenary and small group seminars, students will examine the knowledge, skills and dispositions necessary to become globally aware, ethical, reflective teachers of diverse populations in the 21st century. Topics include academic skills, student success strategies, standards for teachers, and programs in the College of Education. This course is restricted to Teacher Education majors only.

ED 101 Freshman Teaching Fellows Forum I 1.
Topics related to educational issues and requirements of the Teaching Fellows program. Topics will include current practices, policies and research in education.Restricted to Students Admitted to the Teaching Fellows Program.

ED 150 Students Advocating for Youth I 1.
Building upon a passion for advocacy. Investigating issues related to youth in today's North Carolina. Exploring youth advocacy and ethics. Exploring youth advocacy and diversity. Exploring youth advocacy as a vocation. Practical youth advocacy field work. Participation in field experiences required. Restricted to students admitted to the SAY program.

ED 151 Students Advocating for Youth II 1.
Prerequisite: ED 150.
Continuing to build upon a passion for advocacy. Understanding how legislation and policy affects youth advocacy and youth organizations. Exploring changes within the career field. Exploring peer influence processes among youth. Practical youth advocacy field work. Participation in field experiences required. Field experience may extend beyond normal class time. Restricted to students admitted to the SAY program.

ED 201 Sophomore Teaching Fellows Forum I 1.
Prerequisite: Students in Teaching Fellows Program.
Topics related to educational issues and requirements of the Teaching Fellows program. Topics will include current practices, policies and research in education.

ED 204 Introduction to 21st Century Teaching 2.
Prerequisite: Sophomore standing; Corequisite: ECI 204 or EMS 204, or EMS 205, or TDE 202.
Overview of teaching as work and a profession in the 21st century. Course focuses on establishing a respectful environment for a diverse student population, dispositions and practices required for effective teaching, and processes and outcomes of collaborative lesson study. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

ED 296 Special Topics in Education 1-3.
Individual or group study of particular areas of education at the freshman and sophomore levels. Specific topics will vary from semester to semester.

ED 299 Field Experience for 21st Century Teaching 1.
Prerequisite: ECI 204 and ED 204.
This course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Foreign Language Education majors.

ED 301 Junior Teaching Fellows Forum I 1.
Topics related to educational issues and requirements of the Teaching Fellows program. Topics will include current practices, policies and research in education.Restricted to Students Admitted to the Teaching Fellows Program.

ED 302 Junior Teaching Fellows Forum II 1.
Topics related to educational issues and requirements of the Teaching Fellows program. Topics will include current practices, policies and research in education.Restricted to Students Admitted to the Teaching Fellows Program.

ED 311 Classroom Assessment Principles and Practices 2.
Prerequisites: Admission to Teacher Education Candidacy (gpa 2.75) and (AEE 206 or ELM 250 or ED 204); Co-requisite: ED 312.
This course will enable students to understand and use appropriate classroom assessment practices to promote positive student achievement. Students will apply knowledge of pedagogy and development to high-quality strategies for formative and summative assessment. Students will explore best practices using developmentally-appropriate assessment strategies, including authentic assessment, portfolios and electronic portfolios, real-time feedback, open-and closed-ended formal assessments, and standardized testing. Particular attention to examining the rationale for assessment and the implications of assessment. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Educatio.
ED 312 Classroom Assessment Principles and Practices
Professional Learning Lab 1.
Prerequisite: Admission to Teacher Education Candidacy (gpa 2.75) and ED 204; Co-requisite: ED 311.
This class is a co-requisite professional learning lab to ED 311, Classroom Assessment Principles and Practices. It will enable students to engage in the application of assessments using both case study and classroom data sets. The course will help students understand and use appropriate formative and summative classroom assessment in a learning community/learning team to improve student learning. Students will explore best practices in assessment through the guidance of professional educators and the use of commercially available products for formative and summative assessment. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

ED 403 Teaching Fellows Senior Seminar 1.
Prerequisite: Senior standing.
A casebook study of first-year teacher experiences and an examination of professional, ethical, and legal issues in education as found in cases dealing with new teachers.

ED 496 Special Topics in Education 1-3.
Prerequisite: Junior standing or Senior standing.
Individual or group study of special topics in professional education. The topic and mode of study are determined by the faculty member after discussion with the student.

ED 507 Principles of Developing and Interpreting Assessment 2.
Designed to enable students to understand and use appropriate classroom assessment practices by applying knowledge of pedagogy and development to high-quality strategies for formative and summative assessment. Students will explore best practices using developmentally-appropriate assessment strategies including authentic assessment, portfolios, and electronic portfolios, real-time feedback, open-ended assessments, and standardized testing. Particular attention will be paid to examining the rationale for assessment, and the implications of assessment.

ED 508 Exploring Diversity in Classroom and Community 3.
Students will explore and apply the major philosophical and historical influences to current educational context as they relate to issues of diversity. Focus will be placed on theoretical and practical issues of diversity in classroom settings, especially related to culture, race, gender, ethnicity, language, and socio-economic levels. (Field-based experiences will be required).

ED 569 Teaching Internship: MAT 4.
A supervised teaching experience requiring a minimum of 10 consecutive full-time weeks in an appropriate school classroom. Designed to develop the knowledge, skills, and dispositions necessary for teaching at the elementary, middle and/or secondary level. Includes regularly scheduled clinical observations and conferences. Requires successful completion of at least 21 hrs. in the MAT program and approval by specialty area faculty. Student responsible for transportation to placement site.

ED 570 Classroom Action Research 1.
Provides a brief introduction to educational research focusing specifically on classroom action research. Requires admission to MAT; completion of 6 hours in the program.

ED 571 Inquiry and Professional Development 1.
Builds on earlier course work (ED 570) preparing students to refine an action research proposal, collect data in a school setting, write a report, and to identify resources and activities that will support their ongoing professional development; requires 9 hours of graduate credit in the MAT curriculum.

ED 572 Teacher Leadership 1.
This course explores the multiple contexts, roles, and approaches to teacher leadership in classrooms, schools, communities, and professional organizations. Requires at least 30 credit hours in the MAT program.

ED 590 Special Problems in Teaching and Learning 1-6.
In-depth study of topical problems in teaching and learning of current and special interest to K-12 Classroom teachers.

ED 605 Special Problems in Teaching 1-3.
Prerequisite: Graduate standing.
In-depth study of topical problems in teaching selected from areas of current concern to K-12 teachers.

ED 700 Introduction to Research Design in Education 3.
Survey of the field of educational research specifically with regard to the modes of inquiry, variety of methodologies, and ethical standards for conducting research with human participants. Limited to doctoral students in Education or by permission of instructor.

ED 710 Applied Quantitative Methods in Education I 3.
Prerequisite: ED 700, or ECI 510, or ELP 532, or ST 507.
This course is designed for educational researchers and leaders to gain experience with designing and evaluating research using a quantitative approach to answer research questions in educational research and policy analysis. Students will examine design issues in research, create data sets, develop research questions from data provided, use a variety of descriptive and inferential procedures to answer formulated research questions, interpret the results and write the results in the language of educational research. Restricted to doctoral students in Education or by permission of instructor.

ED 711 Applied Quantitative Methods in Education II 3.
Prerequisite: ED 710.
Students will apply and enhance their quantitative skills through analysis of existing datasets. Course goals include practicing and extending Multiple Regression knowledge and skills, generating and testing hypotheses in a multiple regression framework, and appropriately disseminating results. Restricted to doctoral students in Education Research only.

Prerequisite: ED 710.
Introduces students to the skills and resources needed to design and conduct a survey in educational settings. Students who take this course will be able to identify and develop specific survey objectives, design survey studies, sample respondents, develop reliable and valid self-administered questionnaires, administer surveys, and process data.

ED 730 Introduction to Qualitative Research in Education 3.
Design of qualitative studies, conduct of field work including open-ended interviews and participant observation, analysis of data and understanding of theoretical and philosophical background of this research approach.
ED 731 Advanced Qualitative Research and Data Analysis in Education 3.
Prerequisite: ELP 736, EAC 785 or ED 730.
Intensive course in the use of field-based and general qualitative research data analysis methods in the social study of education. The course is to help participants acquire skills and gain experience in using various methodological and analytical research techniques. The course emphasis is on the collection, management, analysis, and interpretation of qualitative data.

ED 750 Mixed Methods Research in Education 3.
Prerequisite: ED 711, ED 730, ST 507, ELP 736 or equivalent and/or permission of the instructor.
Explores the theoretical and practical issues surrounding the combining of quantitative and qualitative methods in educational research studies. It addresses how to design, implement and write-up mixed methods research as well as how to critically review and interpret mixed methods research studies.

ED 795 Special Topics in Education Research 3-6.
This course provides in-depth instruction and applications in new or emerging areas of educational research, studies or venues. May be repeated for credit if topic changes. Doctoral students in education only.

English Teacher Education

Students desiring to become secondary English teachers in grades 9-12 will be enrolled in the College of Humanities and Social Sciences. In that college’s section of this catalog, curriculum requirements for the teacher education option can be found under the Department of English. Students desiring to become Language Arts teachers in grades 6-9 will be enrolled in the College of Education.

ECI - Curriculum and Instruction Courses

ECI 201 Intro to Instructional Technology for Educators 3.
Introduction to effective technology integration in teaching practices across the curriculum for pre-service teachers. Exploration of different technology-based tools commonly integrated in instruction, including desktop, Internet/ Web-based, mobile, and cloud applications. Examination of integration challenges using relevant, real-world examples from current teacher practices. Planning for student-centered, project-based lessons that make use of diverse technologies.

ECI 204 Intro to Teaching 1-2.
Prerequisite: Sophomore standing; Corequisite: ED 204.
For prospective teachers in Middle and Secondary Business and Marketing, English, Foreign Languages, Language Arts, and Social Studies. Emphasis on what it means to be an educator as well as differing aspects and procedures of instruction and analysis of competencies required of teachers. The course has a required fieldwork component in local K-12 school, and students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

ECI 205 Introduction to Teaching Humanities and social Sciences 3.
Prerequisite: Sophomore standing.
For prospective teachers in secondary and middle years social studies, English, language arts, and foreign languages. An emphasis on differing aspects and procedures of instruction and analysis of competencies required of teachers. Field work in a variety of education settings including an extended period in one curriculum area.

ECI 296 Special Topics in Education 1-3.
Individual or group study of particular areas of education at the freshman and sophomore levels. Specific topics will vary from semester to semester.

ECI 305 Principles of Teaching Diverse Populations 3.
Prerequisite: ED 204.
Impact of cultural factors on experiences of teachers and students in contemporary schools. Teaching techniques and development of instructional plans to enhance schooling experiences of culturally diverse students.

ECI 306 Middle Years Reading 3.
Prerequisite: Six hours in ED or PSY.
Reading skills in middle years education developed with emphasis on application of the reading process to content area.

ECI 307 Teaching Writing Across the Curriculum 3.
Prerequisite: ENG 101.
For prospective teachers of all disciplines in middle/high school. Practical strategies for writing as a learning tool and for teaching writing. Lesson plans, assignments, experiences appropriate to content areas. Focus on writing, writing instruction, and technology. Separate sections for Middle Grades (MSL) and English (LTN) majors.

ECI 309 Teaching in the Middle Years 3.
Prerequisite: Six hours in ED or PSY.
Nature and purposes of middle grades education. Early adolescent development, curriculum, teaching/learning methods, school organization, and characteristics of effective middle years teachers. Includes field experience.

ECI 332 Health Promotion and Disease Prevention 3.
Prerequisite: For credentialed health professionals only.
Emphasis on education of the public regarding general health concerns including cancer, cardiovascular disease, accident prevention, nutrition, drugs, alcohol, mental health, sexuality, and environmental hazards.

ECI 333 Health Care Delivery 3.
The historical basis of health care delivery in the U. S. with emphasis on hospitals, health maintenance organizations, ambulatory care centers, ambulatory surgery, nursing homes, and private care practice. Philosophical issues of funding health care, promoting health care, and the training of health care workers.

ECI 335 Planning Classroom and Clinical Curricula 3.
Prerequisite: For Certification Majors: EOE 101, 205; For Non-Certification Majors: EOE 101. For credentialed health professionals. Procedures for planning health occupations curricula for classroom and clinical settings. Practice in writing, updating, and refining health curriculum with emphasis on selection and sequencing. Comparison of styles of writing curricula. Roles and responsibilities of healthy curriculum planner.
ECI 336 Strategies for Teaching a Health Occupations Course 3.
Prerequisite: For credentialed health professionals.
Planning and implementation of effective instructional strategies for clinical and classroom settings. The nature of the teaching/learning process, psychological and philosophical aspects of teacher choice of various strategies.

ECI 405 Literature for Adolescents 3.
Prerequisite: Junior standing.
The history, types, and characteristics of literature for adolescents. Emphasizes reading and analyzing the literature by exploring the themes, literary elements, and rationale for teaching literature for adolescents. Addresses ways in which this literature can be integrated and implemented in English/Language Arts curriculum.

ECI 414 Human Relations and Discipline in the Classroom 3.
Prerequisite: PSY 304 or EDP 304 and 6 hours of education.
Designed to help prospective teachers foster positive interpersonal relationships in classrooms, build a sense of community and create a purposeful environment for learning. Investigates issues such as group building, active listening, and major approaches to discipline. Uses case studies and problem solving methods.

ECI 416 Teaching Exceptional Students in the Mainstreamed Classroom 3.
Prerequisite: Six hours in ED or PSY.
Provides classroom teachers in all disciplines and grade levels with a knowledge of various handicapping conditions, as well as with techniques to assist exceptional students within the mainstreamed classroom. Required for MSL majors.

ECI 423 Methods and Materials in Teaching Modern Foreign Languages 4.
Prerequisite: Admission to Professional Semester, Corequisite: ECI 424.
Methods and materials of teaching French or Spanish grades K-12 with an emphasis on lesson and unit planning, second language acquisition, national standards, and demonstrations/practice teaching in micro-lessons. This course provides opportunities for prospective French and Spanish teachers to integrate knowledge of their language with effective materials, strategies, and methods of instruction to prepare students for K-12 French or Spanish teaching. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools.

ECI 424 Student Teaching in French or Spanish 12.
Prerequisite: Admission to Professional semester, Corequisite: ECI 423.
Teaching experience for prospective teachers of French or Spanish in a selected elementary, middle or high school under the supervision of a cooperating teacher and a university faculty supervisor. Additional school observations and on campus seminars are a part of this course. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools. Students are covered under the General Statute affording liability protection.

ECI 430 Methods and Materials for Teaching Language Arts in the Middle Grades 4.
Prerequisite: ECI 205, ELP 344, PSY 304 or EDP 304, ECI 309, ECI 306, ECI 307, Senior standing, candidacy in Middle Grades Teacher Education, Corequisite: ECI 435.
Inquiry, activity-oriented course provides opportunities for prospective language arts middle school teachers to integrate knowledge of English with effective materials, strategies, methods of instruction. Students observe middle school classes, plan lessons, and units, practice varied classroom strategies, technologies in micro-lessons. Prepared students for teaching language arts with other content areas in middle schools.

ECI 435 Methods and Materials for Teaching Social Studies in the Middle Grades 4.
Prerequisite: Admission to professional semester.
For preservice middle school social studies teachers. Focus on: teaching and evaluation skills, adaptation of instruction to individual learner differences, identification and creation of instructional materials appropriate for use in social studies teaching.

ECI 438 Medical Law and Ethics 3.
Ethical and legal issues involved in delivering health care, such as euthanasia, reproductive technology, organ transplants, patients' rights, and confidentiality. Classical ethical theories and principles. Systematic review procedures and current medical law used to examine current case dilemmas in the health professions.

ECI 442 Field Experience in Business and Marketing Education 3.
Prerequisite: Junior standing.
Supervised off-campus work experience in an approved business and marketing content related job. The work experience relates on-the-job experiences to the technical competencies taught in the North Carolina Standard Course of Study for business and marketing education. Students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

ECI 444 Administration of Business and Marketing Education 3.
Prerequisite: ED 204 and ECI 204 and MKE Business and Marketing Education Major.
Development of successful business and information technology, and marketing education programs. Program promotion, managing cooperative education experiences, managing DECA and FBLA chapters, and determining professional development strategies. Primary roles of the business and information technology and marketing education teachers' classroom instruction. Program management, classroom management, management of career-technical student organizations, cooperative education, and program development.

Prerequisite: Senior Standing; Corequisite: ECI 430 and ECI 435.
Inquiry, activity-oriented course designed to engage students in theory and practice related to 21st century skills, new literacies, and emerging technologies, as well as focused support for developing the culminating electronic portfolio. Course provides opportunity for pre-service, English Language Arts/Social Studies middle School teachers to integrate knowledge of English and Social Studies with emerging technologies and digital literacy applications.
ECI 446 Curriculum and Methods of Teaching Business and Marketing Education 4.
Prerequisite: Admission to Teacher Education Candidacy; MKE Business and Marketing Education Majors.
Study of the curriculum common to business and information technology and marketing education and the research behind its development. Methods common to instructional planning, implementation, and evaluation of effective business and information technology and marketing education programs are topics included in this course. Twenty hours of field work are required. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details in acquiring the insurance and the current charge. MKE students only.

ECI 447 Student Teaching in Business and Marketing Education 9.
Prerequisite: Admission to Professional Semester; MKE Business and Marketing Education Majors; Corequisite: ECI 494.
Fifteen weeks full-time student teaching business and marketing subjects in the public schools under the supervision of a cooperating teacher and university supervisor. Students will develop skills in instruction, evaluation, advisement, administration, and observation. Students are expected to provide their own transportation to and from assigned public schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details in acquiring the insurance and the current charge. MKE students only.

ECI 448 E-Business Applications in Business and Marketing Education 3.
Prerequisite: Junior standing.
Emphasis on design and construction of advanced web pages, business and marketing applications of electronic commerce, as well as economic, social, legal, and ethical issues that are related to conducting business in a virtual environment. Content prepares students to apply principles to the business and marketing education curriculum in the public schools. Credit for both ECI 448 and ECI 548 is not allowed.

ECI 450 Methods and Materials in Teaching English 4.
Prerequisite: ECI 204, ELP 344, PSY 304 or EDP 304; Senior standing and admission to Teacher Education candidacy with a Major in English.
Methods and materials of teaching English in grades 9-12, with an emphasis on lesson planning and demonstrations/practice in teaching literature, study skills, speaking, listening, and writing. Taught during the first seven weeks of the semester.

ECI 451 Teaching Reading Across Disciplines 3.
Prerequisite: Six hours in ED or PSY.
Facilitates study of methods and materials for teaching literacy across disciplines. Develops instructional strategies in the use of print and digital texts and media to support disciplinary learning.

ECI 454 Student Teaching in English/Language Arts 1-12.
Prerequisite: Admission to Student Teaching Professional Semester; For MSL students: ECI 430, 416, 464.
Provides the prospective teacher with experience in the techniques and skills involved in teaching English in secondary schools or Language Arts in middle schools in a selected off-campus station. Student interns become familiar with the total school program, eventually carrying a full teaching load, and participate in relevant school and community activities. Students are required to provide their own transportation. TED and MSL majors only.

Prerequisite: ECI 205, ELP 344, Sr. standing and admission to professional semester with a major in either history, sociology, political science.
Teaching techniques, innovations, and development of teaching and evaluation skills in the area of secondary school social studies. Adaptation of instruction to individual learner differences, and selection and design of instructional materials. Taught during the first six weeks of the semester. Taught during the first six weeks of the semester.

ECI 464 Student Teaching in Social Studies 1-8.
Prerequisite: Admission to professional semester, Corequisite: For LTH, LTP, LTS students: ECI 460. For MSL students: ECI 454, 430, 416.
Skills and techniques in teaching social studies in secondary and middle schools. Each student spends ten weeks in a selected off-campus center. The student demonstrates competencies essential for teaching social studies, becomes familiar with the total school program, and participates in a variety of school and community activities.

ECI 471 Educational Implications of Learning and Developmental Theory 3.
Prerequisite: NC TEACH Participants.
Topics related to human psychological development. Cognitive, social, physical changes, and their interaction among adolescence. Departmental Approval Required.

ECI 472 Interaction of Classroom Management and Instruction 3.
Prerequisite: ECI 471; NC TEACH Participants.
Topics related to teaching in the content area and classroom management. Lesson planning, principles applied to education, measurement and evaluation procedures, behavior therapy, and student motivation. Departmental Approval Required.

ECI 473 Subject Specific Methods 3.
Prerequisite: ECI 472; NC TEACH Participants, Corequisite: ECI 474.
Topics related to cultural factors and how they affect teachers and students in the classroom. Instructional techniques and the development of instructional plans that enhance school experiences of culturally diverse students. Departmental Approval Required.

ECI 474 Curriculum and Instruction Practices 1 3.
Prerequisite: ECI 472; NC TEACH participants, Corequisite: ECI 473.
Topics related to essential skills and concepts needed by beginning teachers. The class focuses on questioning, test preparation, discussion skills, familiarity with national standards, multiple teaching strategies, and assessment + evaluation of students. Departmental Approval Required.

ECI 475 Peer Mentoring in Alternative Licensure 3.
Prerequisite: ECI 474; NC TEACH Participants, Corequisite: ECI 476.
Topics related to observing and evaluating fellow teachers in relation to the national state teaching competencies. Classroom observations, videotaping, and group evaluations that are shared and discussed with fellow teachers. Departmental Approval Required.

ECI 476 Curriculum and Instruction Practices 2 3.
Prerequisite: ECE 474; NC TEACH Participants, Corequisite: ECI 475.
Topics related to inquiry, activity based instruction, and constructivist principles. Analysis of principles, strategies and application of new teaching approaches. Departmental Approval Required.

ECI 494 Senior Seminar in Business and Marketing Education 3.
Prerequisite: Admission to Professional Semester; MKE Business and Marketing Education Majors; Corequisite: ECI 447.
Discussion and analysis of problems, trends, and issues experienced while student teaching in the public schools.
ECI 496 Special Topics in Education 1-3.
Prerequisite: Junior standing or Senior standing.
Individual or group study of special topics in professional education. The topic and mode of study are determined by the faculty member after discussion with the student.

ECI 500 Theory and Practice In Teaching Diverse Populations 3.
Prerequisite: Graduate standing.
Analysis of literature and research in related to impact of cultural factors on teaching and learning in contemporary schools. Exploration of teaching techniques and curricular directions designed to improve school experiences for diverse populations in K-12 settings.

Prerequisite: 12 sem. hrs. graduate ED and PSY.
Origin, development, and current status of elementary and secondary school curriculum and an evaluation of trends and issues likely to influence the curriculum in the future.

ECI 502 Continuous Improvement of School Technology Initiatives 3.
Introduction to the models, strategies, and tools for evaluating and making informed decisions about technology initiatives; examination of technology evaluation case studies, evaluation proposals, and stakeholder reports.

ECI 505 Issues and Trends in Foreign Language Education: Theory & Practice 3.
Prerequisite: Graduate standing.
An exploration of theory and practice issues related to foreign language teaching. Inquiry into proficiency-oriented instruction, innovative methodological approaches, the National Standards and learning scenarios, integrating culture, options for testing and assessment, content-based instruction, the role of grammar in second language acquisition, teaching foreign language students with learning disabilities, and Foreign Language in the Elementary School (FLES) in North Carolina. Students will examine case studies related to these topics and engage in a classroom action research project.

ECI 506 Instructional Technology in Foreign Language Education: Addressing the National 3.
Prerequisite: Graduate standing.
Hands-on experience in appropriately selecting and applying a number of instructional technologies to foreign language teaching and learning in relation to the current National Standards. Analysis and use of effective technology tools including hardware, software, and courseware. Emphasis will be on the application of Technology-Enhanced Language Learning (TELL) as it integrates the National Standards' goals of Communication, Cultures, Connections, Comparisons, and Communities.

ECI 507 Social Justice Education 3.
Prerequisite: ECI 500.
Introduction to principles of social justice education and their centrality in progressive policies and pedagogies that lead to equity in all teaching contexts. Students will develop strategies for successfully incorporating a social justice education framework in scholarship and professional practice.

ECI 508 Teachers as Leaders 3.
Prerequisite: Graduate standing.
Examines teacher leadership research, theory, and practice. Prepares teachers to assume leadership roles in classrooms, schools, school systems, and the larger educational community. Independent research projects required.

ECI 509 Special Problems in Curriculum and Instruction 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 510 Research Applications In Curriculum and Instruction 3.
Prerequisite: ST 507, Doctoral student, C and I Major.
Focus on current issues and research methods used in the areas of curriculum development and supervision, instructional technology, English education, middle grades education, reading education, social studies education and special education.

ECI 511 Technology Integration Theory and Practice 3.
Prerequisite: Graduate standing.
Foundational study of technology integration standards, models, and conditions informed by research. Analysis of micro classroom and macro school/institutional technology plans, and development of sample technology plans and projects representative of integration across curricular areas.

ECI 512 Emerging Technologies for Teaching and Learning 3.
Examination of emerging technologies as applied in educational settings with a focus on related research, case studies, theoretical underpinnings, and strategies for effective integration.

ECI 513 Teaching and Learning with Digital Video 3.
Prerequisite: Graduate standing.
Development and implementation of digital video within educational contexts and situations. Design of educational watching, analyzing, and creating activities with video. Application of conventions and genres of digital video capture and editing to sample technology projects across curricular areas.

ECI 514 Multimedia Design and Applications in Instruction 3.
Prerequisite: Graduate standing.
Examination of learning theories and research-based principles for multimedia design to select/apply appropriate digital resources and create maximally effective educational products.

ECI 515 Online Collaborations in Education 3.
Examination of models of collaboration, sample online collaborative strategies and projects, tools supportive of cross-classroom collaborations, and research findings from collaborative initiatives.

ECI 516 Design and Evaluation Of Instructional Materials 3.
Prerequisite: Graduate standing.
Characteristics and selection of various media for instruction and their use in educational settings. Design and production of instructional materials. Analysis of research in the field. Individualized projects and assignments. Application of grounded research and theory concerning learning to design of instructional materials. Structured projects and practical experiences used to transfer design principles and evaluate instructional products.

ECI 517 Theoretical Foundations of Advanced Learning Environments 3.
Examination and application of behavioral, cognitive, and constructivist theoretical frameworks underlying the design and development of advanced technology-enhanced learning environments.

ECI 518 Digital Learning Program and Staff Development 3.
Prerequisite: ECI 511, ECI 514, ECI 515, ECI 642.
Study and application of principles related to digital learning program planning, facilities and resource management, and staff development in K-12 settings.
ECI 519 Special Problems in Digital Learning and Teaching 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in digital learning and teaching selected from areas of current concern to practitioners in education.

ECI 520 The Teaching Of Composition 3.
Prerequisite: 9 hrs. of ED, PSY and/or ENG.
For classroom teachers. Practical field-tested ideas to help students improve as writers by focusing on composition as a process as well as a product. Activities for teaching prewriting, drafting, revising, proofreading, grammar and evaluating with suggestions for individual and group learning. Writing in content areas and composition research/ theory. To take this course in sum. as part of Capital Area Writing Project, student must apply and be selected.

ECI 521 Teaching Literature For Young Adults 3.
Prerequisite: Senior standing or Graduate standing or PBS status.
Designed to acquaint in-service and pre-service teachers with breadth and diversity of contemporary literature for adolescents, with emphasis on teaching young adult literature. Addresses history and themes of young adult literature, readability of materials, reading preferences, literary merit, skills that can be taught through literature, censorship, motivating students to read and organizing literature units.

ECI 522 Trends and Issues in English Language Arts Education 3.
Prerequisite: Graduate standing.
Consideration of past, current, and future trends and issues in English Language arts instruction, standards, and methodologies. Examination of research, theory, and practice in concert with trends, issues, and questions. Independent research projects required.

ECI 523 Teacher as Researcher 3.
Prerequisite: Graduate standing.
This course is designed to introduce the methods and skills required for designing, conducting, interpreting, and applying action research - the systematic inquiry into curriculum, instruction, teaching, and learning. This course will focus on reflective inquiry and practical applications.

ECI 524 Theory and Research in Global Learning 3.
An examination of theoretical frameworks for global learning and comparative studies of various national approaches to K-12 education. This course provides students with multiple lenses through which to consider how we teach and learn given the demands and opportunities present in our interconnected world.

ECI 525 Contemporary Approaches in the Teaching Of Social Studies 3.
Prerequisite: Advanced Undergraduate standing or Graduate standing.
Analysis of principles, strategies and application of new teaching approaches. Structured projects and practical experiences.

ECI 526 Theory and Research On Teaching and Learning Social Studies 3.
Prerequisite: ECI 530 or ECI 525.
A critical analysis of the literature relating to the teaching and learning of social studies and the drawing of implications for instructional practices.

ECI 528 Strategies for Teaching English in Secondary Schools 3.
Methods and materials of teaching English in grades 9-12, with and emphasis on lesson planning and demonstrations/practice in teaching literature, study skills, speaking, listening, media literacy, and writing. Some classes and assignments will be completed in a field setting.

ECI 530 Social Studies In the Elementary School 3.
Prerequisite: Six hrs. in ECI.
Advanced professional training in teaching of social studies for middle grades and elementary teachers, including in-depth introduction to research-based teaching strategies, instructional resources and literature of the field.

ECI 531 Advanced Writing in Education 3.
Appropriate for any specialty area in Education. Focus on writing required in graduate courses, research reviews for educational reports and National Board Certification, writing for educational journals, theses, and dissertations. Opportunities to gain knowledge, tools, and strategies to meet the academic community's standards. Strategies to develop and/or enhance form, style, content, quality of academic writing, and on researching, composing, revising, and editing. Students will compose, self-evaluate and give feedback on the work of their peers. Graduate status.

ECI 532 Diagnosis Of Reading Disabilities 3.
Prerequisite: Six hrs. in ECI.
Formal and informal instruments for diagnosing reading disabilities including completion of a diagnostic case study describing reading performance of a disabled reader.

ECI 533 Remediation Of Reading Disabilities 3.
Prerequisite: ECI 540 or ECI 541.
Advanced approaches to reading remediation including theory and research related to remedial instructional strategies, analyses of instructional designs and evaluations of effectiveness of intervention programs.

ECI 534 Theory and Research in Literacy 3.
Prerequisite: ECI 540.
Advanced study of theoretical models of reading, research issues in reading and in other language processes. In-depth theoretical models of reading. Emphasis on critical examination and analysis of research investigating reading acquisition, maturereading behavior and related language processes.
ECI 546 New Literacies & Media 3.
Critical analysis of new literacies that are prompted by emerging technologies and participatory media in K-12. Design and application of new literacies and media instructional practices to literacy curriculum and other discipline areas.

ECI 547 Knowledge Construction: Implications for Multicultural Education 3.
Prerequisite: ECI 500.
Exploration of sociopolitical factors involved in the construction of knowledge in education as well as the implications for practitioners and learners in schools and other educational settings. Particular emphasis on critiquing traditional epistemologies that limit the production, dissemination, and validation of progressive discourses in education in order to promote the production of knowledge that affirms the principles of social justice education.

ECI 548 E-Business Applications in Business and Marketing Education 3.
Emphasis on design and construction of advanced web pages, business and marketing applications of electronic commerce, as well as economic, social, legal, and ethical issues that are related to conducting business in a virtual environment. Content prepares students to apply principles to the business and marketing education curriculum in the public schools. Credit for both ECI 448 and ECI 548 is not allowed.

ECI 549 Special Problems in Reading 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in reading education selected from areas of current concern to practitioners in education.

ECI 550 Foundations Of Middle Years Education 3.
Prerequisite: 6 hours of ED or PSY.
Examination of five major aspects of middle years education: (a) history and purposes of middle/junior high school, (b) pre- and early adolescent needs, interests and abilities, (c) curriculum design and content, (d) teaching methods and (e) school organization. Emphasis on both theoretical understandings and effective classroom strategies.

ECI 551 Teaching/Learning Approaches For Emerging Adolescents 3.
Prerequisite: ECI 550; Graduate standing.
Exploration of teaching/learning approaches appropriate to emerging adolescents. Learning styles; interdisciplinary inquiry; community-based curriculum; simulations and games; learning centers; minicourses; design of physical space; all-school activities.

ECI 552 Program Development & Evaluation in Youth & Family Settings 3.
Historical and contemporary foundations of program development and evaluation in non-formal, community-based family life and youth development settings are examined including theory, research, and three holistic program development constructs: 1) planning; 2) design and implementation; 3) impact evaluation and accountability.

ECI 553 Applied Concepts in Child and Youth Development 3.
This course explores the fundamental concepts of child and youth development (including early childhood through adolescence) as applied to programmatic and organizational contexts. A special focus is placed upon the concepts as applied to Community Youth theories & practice.

ECI 554 Collaborations & Partnerships in Family & Youth Settings 3.
To prepare educators (formal and non-formal) to better establish, lead and manage collaborations and partnerships in family settings and those that support holistic community-based youth development organizational systems. Specific foci include: types and levels of partnerships; environmental scanning and socio-organizational linkage contextual factors affecting community collaborations; leadership factors affecting community collaborations; and human, financial and programmatic management in collaborations. Some on-campus meetings are required.

ECI 556 Organizational Systems in Youth and Family Settings 3.
Prerequisite: ECI 506.
Preparation for current and future community family and youth development professionals leading and managing community-based organizations. Course includes: fundamentals of management and leadership; institutional and organizational structures; administrative and strategic planning; working with advisory and governing groups; marketing and program delivery systems; information management systems; and human resource, financial, facilities and risk management systems.

ECI 557 Volunteerism in Youth and Family Settings 3.
Preparation for current and future community-based youth and family professionals to better manage volunteers in local program service delivery. Specific foci include: volunteerism as a social phenomenon; volunteer resource management; new forms of volunteerism; and future trends in volunteerism. Restricted to graduate and post-baccalaureate students only.

ECI 560 Professional Development in Business and Marketing Education 3.
Prerequisite: Graduate standing.
Designed to prepare business and marketing educators with the knowledge and skills necessary to design and implement strategies for organizational improvement that will benefit business and marketing education programs. Attendance and participation meaningful, organized professional development activity is an integral component of the course.

ECI 561 Curriculum and Instruction in Business and Marketing Education 3.
Prerequisite: Graduate standing.
Designed to develop competencies needed to be a successful Business and Marketing Education Teacher-Coordinator. Focus primarily on the activities involved in planning and managing the curriculum and instructional skills needed to effectively implement the curriculum and meet educational needs of middle and high school students. For ED & MKZ students. Requires instructor approval.

ECI 562 Program Management in Business and Marketing Education 3.
Prerequisite: ECI 561.
This course includes the administration of middle and secondary business and marketing education programs, including career guidance; the management of DECA or FBLA chapter; supervision of work-based learning strategies; and school program promotion and development. ED & MKZ students only. Requires permission of instructor.

ECI 563 is a course that involves teaching techniques, innovations, development of teaching and evaluation skills, and in-depth subject matter inquiry in the area of secondary school social studies. Adaptation of instruction to individual learner differences, and selection and design of instructional materials will be explored. Must be enrolled in Secondary Social Studies MAT Program.
ECI 566 Advanced Instructional Strategies in Business and Marketing 3.
Prerequisite: ECI 561.
Advanced strategies and techniques related to teaching and learning in the business and marketing education curricula, classrooms, work places, and technology environments in middle and secondary education. MKZ students only.

ECI 567 Career and Technical Education Fundamentals and Program Administration 3.
Emphasis on assisting various school district personnel in acquiring the knowledge and skills needed to effectively provide quality career and technical education (CTE) programming at the district level. Content includes federal CTE legislation, theory and research on educational reform, local and regional economic development, sources of funding for CTE programming and continuous improvement.

ECI 568 Designing College and Career Ready Programs 3.
Examination of current school system instructional practices to assist various school district personnel in aligning core academic and career and technical education programming to prepare students for successful post-secondary education, careers, and life-long learning. Content includes an examination of education reform initiatives with an emphasis on foundational theory and research, needed workplace knowledge and skills, innovative education programs/models, and research-based best practices for success in transitioning students to post-secondary success.

ECI 569 Special Problems in Business and Marketing Education 1-6.
In-depth study of topical problems in business and marketing education selected from areas of current concern to practitioners in education.

ECI 570 Learning Disabilities 3.
Prerequisite: ECI 585.
Field of learning disabilities, including definitions, prevalence, etiology, characteristics and current educational trends for educating students with learning disabilities.

ECI 571 Methods and Materials In Learning Disabilities 3.
Current methods and materials for the teaching students with learning disabilities in elementary and/or secondary schools, including curriculum and instructional techniques. Focus on examination of commercial materials and development of teacher-made materials for use with students with learning disabilities.

ECI 572 Resource Teaching In Special Education 3.
Prerequisite: ECI 585.
Resource teaching in area of special education, with emphasis on resource teaching with students with special needs. Types of resource programs, establishment and maintenance of a program, selection of students, curriculum and materials.

ECI 573 Applied Behavior Analysis for Teachers 3.
Concepts and procedures involved in design and implementation of techniques for managing the behavior of students in classroom setting. Focus on methods for defining, measuring, increasing, decreasing, maintaining, and generalizing classroom behaviors in all learners.

ECI 574 Intellectual Disabilities 3.
Prerequisite: ECI 585.
Content presented includes definitions, classifications, and assessment of person with intellectual disability from medical, sociological, and educational points of view. Issues related to labeling, etiology, characteristics, levels of severity, litigation, legislation, family and societal issues, history, and controversies are emphasized related to persons with intellectual disability.

ECI 575 Communication Disorders In the Classroom 3.
Prerequisite: ECI 570.
Occurrence of communication disorders in the school-age population, including types of disorders, prevalence, etiology, characteristics and corrective therapy. Focus on communication disorders among exceptional students and classroom teacher's role in working with communication disorders.

ECI 576 Teaching Functional and Life Skills to Students with Disabilities 3.
Prerequisite: ECI 585 and ED 574.
Methods of instruction and materials related to teaching children and persons with mild-moderate levels of disability are emphasized. Effective general pedagogical approaches are stressed, as well as the teaching of functional academic skills, curricula used in instruction teaching social and adaptive behavior as well as daily living skills, and transition-related skills necessary for independent adult life.

ECI 577 Education Of Severely Handicapped 3.
Prerequisite: ECI 585 or ECI 574.
Severe and profound mental retardation and autism, including assessment procedures, educational and social/vocational programs, instructional strategies and evaluation. Legal and ethical issues involved in working with severely handicapped.

ECI 579 Organization and Behavioral Management of Inclusive Classrooms 3.
To increase students' knowledge of persons with high incidence disabilities (i.e., learning disability, mild intellectual disability, and serious emotional disability), and how to manage the behavior of all pupils in educational environments. Characteristics of students with high incidence disabilities will be emphasized, as well as strategies to reduce the likelihood of problem behavior of all pupils in the classroom.

ECI 580 Transition Program For Students With Mild Disabilities 3.
Prerequisite: ECI 585.
Educational and other procedures involved in providing transition programming to students with mild disabilities. Examination of secondary-level special education service delivery, as well as post-secondary interventions, from critical, practical, empirical and theoretical perspectives.

ECI 581 Educational Diagnosis and Prescription For Children With Exceptionalities 3.
Prerequisite: ECI 585.
Concept of educational diagnosis of students with exceptionalities, including examination of educational diagnostic procedures in current use in special education. Development of informal diagnostic techniques and procedures for adapting curriculum and instruction for learner with exceptionalities.

ECI 583 Behavior Disorders 3.
Prerequisite: ECI 585.
Definitions, etiology, characteristics, philosophies and approaches to educational programming for children and youth with behavior disorders, including emotionally handicapped, autistic and socially maladjusted.

ECI 584 Intervention for Behavior Problems of Students with Disabilities 3.
Prerequisite: ECI 583.
Curriculum materials, instructional strategies and behavior management techniques related to teaching children and youth with behavioral disorders including individualized instruction, group process, organization and evaluation of classroom programs, parent involvement, community resources and teachers' personal and professional growth and development.
ECI 585 Education Of Exceptional Children 3.
Prerequisite: 9 hrs. of ED or PSY.
Introduction to field of special education. Focus on historical overview, definitions and terminology in basic areas of exceptionality; etiological factors in exceptionality; developmental and learning characteristics of each area of exceptionality; and educational settings and strategies employed in special education. Review of current educational laws and policies affecting special education.

ECI 603 Advanced Seminar In Literacy Research 3-6.
Prerequisite: ECI 648.
Critical analyses of research and methodology in reading comprehension processes and strategies for comprehension and retention of written discourse. Opportunity for design and conduct of a research project in reading or related area.

ECI 606 Seminar on Teacher as Learner: Developmental Theory, Research and Practice 3.
Prerequisite: Graduate standing (6 hrs course work at 500-level).
Analysis of major contemporary theories and research of learning and development as a basis for individual and organizational change and development in educational settings.

ECI 607 Advanced Seminar in Multicultural Education 3.
Prerequisite: Graduate standing and ECI 500.
Application and analysis of research and scholarship in multicultural education and topics related to effective schools for contemporary culturally diverse student populations in K-12 settings.

ECI 620 Special Problems In Curriculum and Instruction 1-6.
Prerequisite: Six hrs. of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 630 Independent Study in Curriculum and Instruction 1-6.
Independent curriculum or research project in curriculum and instruction.

ECI 640 Practicum in Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised practical experiences in schools and area agencies concerned with curriculum and instruction or educational supervision.

ECI 641 Practicum in Mentoring and Coaching 1-6.
Prerequisite: ECI 705, Graduate standing in College of ED and PSY.
Supervised practical experiences in which participants become mentor to a student teacher or a teacher in a school system.

ECI 645 Diagnostic-Prescriptive Practicum in Reading 3.
Prerequisite: ECI 540, ECI 541 and ECI 543; Graduate standing in College of ED and PSY.
Supervised teaching experience with students using diagnostic test data to prescribe remedial programs for reading-disabled individual's, implementing instructional prescriptions and evaluating success of remedial plans.

ECI 647 Practicum in Business and Marketing Education 3.
Prerequisite: ECI 569.
Supervised practical experiences in schools and area agencies concerned with business and marketing education.

ECI 648 Practicum in Special Education 1-6.
Prerequisite: Graduate standing in College of ED and PSY.
Supervised practical experiences in schools and area agencies concerned with teaching children and adolescents with disabilities.

ECI 650 Internship In Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with curriculum development and/or educational supervision.

ECI 652 Field-Based Applications of Digital Learning and Teaching 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities to design, test, and revise digital learning and teaching solutions in authentic, field-based settings.

ECI 654 Internship In Elementary Education 1-6.
Prerequisite: 3 hrs. grad.-level elementary education course work, Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with elementary grades education.

ECI 656 Internship In Middle Grades Education 1-6.
Prerequisite: ECI 550, ECI 551, Graduate standing in College. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with the education of young adolescents.

ECI 657 Internship in Business and Marketing Education 1-6.
Prerequisite: ECI 561.
Supervised opportunities for advance professional development in contexts concerned with business and marketing education. Requires instructor approval.

ECI 658 Internship In Special Education 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with special education.

ECI 681 Seminar in Special Education Literacy 3.
Prerequisite: ECI 540 or ECI 541 and ECI 581, ECI 585.
A case study approach is used in the seminar that requires the application of assessment techniques and instructional intervention methodologies in literacy for K-12 students with disabilities. Assigned activities require access to and experience in schools and/or related settings. This seminar is designed to be completed during the last half of the graduate program. It is restricted to graduate students in SPE, SPL, SPM, SPB or consent of instructor.

Prerequisite: ECI 585.
This seminar is designed to provide special education teachers to provide empirically supported instruction in numerical concepts and skills to students with disabilities in special education and general education settings. Particular attention will be paid to student characteristics that impact learning in arithmetic and mathematics and to addressing state and national curriculum standards using instructional organization and strategies that have been shown through research to be effective for this population. Field work in schools and/or related settings is required. Restricted to students in SPE, SPB, SPL, SPM or by consent of instructor.
ECI 683 Seminar in Special Education Learning Strategies 3.
Prerequisite: ECI 585.
This seminar is designed to prepare special education teachers to evaluate and teach empirically supported learning strategies to students with disabilities in special education and collaborative settings. Particular attention will be paid to learning strategies shown to help students with disabilities organize, learn, and apply facts, skills and routines that provide access to and mastery of critical information across the curriculum. Field work in schools and/or related settings is required. Restricted to graduate students in SPE, SPB, SPL, SPM or consent of instructor.

ECI 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ECI 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

ECI 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

ECI 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

ECI 692 Research Projects In Curriculum and Instruction 1-3.
Prerequisite: ELP 532.
Project or problem in research in education for graduate students, supervised by members of graduate faculty. Research chosen on basis of individual students' interests and not to be part of thesis or dissertation research.

ECI 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

ECI 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their theses.

ECI 700 Curriculum Theory and Development 3.
Prerequisite: 9 sem. hrs. graduate PSY, ECI 502, ECI 514.
Theory and research in behavioral sciences and education designed to provide theoretical background for development of elementary and secondary curricula. Exploration of knowledge base and skills for critical review of curricula and instructional materials and provision of an application opportunity.

ECI 705 Instructional Coaching and Supervision Of Teachers 3.
Theory, research and practice of the professional role of a supervisor in the development of the effective and self-analytic teacher: pre-service (student teacher) and in-service (beginning and experienced teacher). For persons with at least two years of teaching experience in K-12 schools.

ECI 709 Special Problems In Curriculum and Instruction 1-6.
Prerequisite: Six hrs. of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 711 Computer Applications and Curriculum Integration 3.
Prerequisite: Graduate standing.
Use and evaluation of existing educational software, research findings with respect to integration of computers and new technologies in instruction.

ECI 714 Multimedia Design and Applications in Instruction 3.
Prerequisite: Six hrs. ED or PSY.
Emphasis on use and evaluation of existing educational software and research findings with respect to uses of computers in instruction.

ECI 715 Internet Applications and Web Page Design in Instruction 3.
Prerequisite: Six hrs. ED or PSY.
Instructional design principles underlying development of microcomputer-based instructional software and accompanying materials and programming principles and their implementation in courseware development. Additional topics include authoring languages, programming languages and graphics.

ECI 716 Design and Evaluation Of Instructional Materials 3.
Prerequisite: Graduate standing.
Characteristics and selection of various media for instruction and their use in educational settings. Design and production of instructional materials. Analysis of research in the field. Individualized projects and assignments. Application of grounded research and theory concerning learning to design of instructional materials. Structured projects and practical experiences used to transfer design principles and evaluate instructional products.

ECI 717 Advanced Multimedia Design and Applications in Instruction 3.
Prerequisite: ECI 511, ECI 514.
Advanced study and application of instructional design principles underlying development, evaluation, and integration of multimedia and hypermedia in K-12 settings.

ECI 718 Digital Learning Program and Staff Development 3.
Prerequisite: ECI 511, ECI 514, ECI 515, ECI 642.
Study and application of principles related to digital learning program planning, facilities and resource management, and staff development in K-12 settings.
ECI 719 Special Problems in Digital Learning and Teaching 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in digital learning and teaching selected from areas of current concern to practitioners in education.

ECI 720 The Teaching Of Composition 3.
Prerequisite: 9 hrs. of ED, PSY and/or ENG; to take this course in sum. as part of Capital Area Writing Project, student must apply and be selected.

For classroom teachers. Practical field-tested ideas to help students improve as writers by focusing on composition as a process as well as a product. Activities for teaching prewriting, drafting, revising, proofreading, grammar and evaluating with suggestions for individual and group learning. Writing in content areas and composition research/ theory.

ECI 727 Special Problems in Social Studies Education 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in social studies education selected from areas of current concern to practitioners in education.

ECI 729 Special Problems in English Education 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in English education selected from areas of current concern to practitioners in education.

ECI 745 Literacy Theory and Research 3.
Prerequisite: ECI 540.
Advanced study of theoretical models of reading, research issues in reading and in other language processes. In-depth theoretical models of reading. Emphasis on critical examination and analysis of research investigating reading acquisition, maturereading behavior and related language processes.

ECI 801 Seminar In Curriculum and Instruction 1-3.
Prerequisite: Doctoral student.
Consideration of contemporary issues, trends and recent research and development findings in curriculum and instruction.

ECI 803 Advanced Seminar In Literacy 3.
Prerequisite: ECI 545.
Critical analyses of research and methodology in reading comprehension processes and strategies for comprehension and retention of written discourse. Opportunity for design and conduct of a research project in reading or related area.

ECI 804 Seminar On Attention Deficit Hyperactivity Disorder, Research and Treatment 3-6.
Prerequisite: 9 hrs. grad. credit in PSY or SPE.
Critical analysis of theory, research and interventions in Attention-Deficit-Hyperactivity-Disorder. Reading and synthesis of literature and student-led class discussions of such topics as characteristics, diagnosis, etiology, long-term outcomes and management of ADHD.

ECI 806 Seminar on Teacher as Learner: Developmental Theory, Research and Practice 3-6.
Prerequisite: Graduate standing (6 hrs course work at 500-level).
Analysis of major contemporary theories and research of learning and development as a basis for individual and organizational change and development in educational settings.

ECI 807 Advanced Seminar In Multicultural Education 3.
Prerequisite: Graduate standing and ECI 500.
Application and analysis of research and scholarship in multicultural education and topics related to effective schools for contemporary culturally diverse student populations in K-12 settings.

ECI 820 Special Problems In Curriculum and Instruction 1-6.
Prerequisite: Six hrs. of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 830 Independent Study in Curriculum and Instruction 1-3.
Independent curriculum or research project in curriculum and instruction.

ECI 840 Practicum In Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised practical experiences in schools and area agencies concerned with curriculum and instruction or educational supervision.

ECI 841 Practicum In Mentoring and Coaching 1-6.
Prerequisite: ECI 705, Graduate standing in College of ED and PSY.
Supervised practical experiences in which participants become mentor to a student teacher or a teacher in a school system.

ECI 847 Practicum in Business and Marketing Education 1-6.
Supervised practical experiences in schools and area agencies concerned with business and marketing education.

ECI 850 Internship In Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with curriculum development and/or educational supervision.

ECI 851 Internship In Mentoring 1-6.
Prerequisite: ECI 845 and ECI 705, Graduate standing in Col. of ED and PSY.
Supervised opportunities teaching educational personnel in local school systems how to serve as mentors to their colleagues.

ECI 880 Directed Study In Curriculum and Instruction 1-6.
Curriculum or research project in curriculum and instruction under the direct supervision of a faculty member.

ECI 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ECI 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

ECI 892 Research Projects In Curriculum and Instruction 1-3.
Prerequisite: ELP 732.
Project or problem in research in education for graduate students, supervised by members of graduate faculty. Research chosen on basis of individual students’ interests and not to be part of thesis or dissertation research.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.
ECI 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

French Teacher Education

Students desiring to be licensed to teach French K-12 by the State of North Carolina will be enrolled in the College of Humanities and Social Sciences. The curriculum requirements for the teacher education option in French can be found under the Department of Foreign Languages and Literatures in the College of Humanities and Social Sciences.

ECI - Curriculum and Instruction Courses

ECI 201 Intro to Instructional Technology for Educators 3.
Introduction to effective technology integration in teaching practices across the curriculum for pre-service teachers. Exploration of different technology-based tools commonly integrated in instruction, including desktop, Internet/ Web-based, mobile, and cloud applications. Examination of integration challenges using relevant, real-world examples from current teacher practices. Planning for student-centered, project-based lessons that make use of diverse technologies.

ECI 204 Intro to Teaching 1-2.
Prerequisite: Sophomore standing; Corequisite: ED 204.
For prospective teachers in Middle and Secondary Business and Marketing, English, Foreign Languages, Language Arts, and Social Studies. Emphasis on what it means to be an educator as well as differing aspects and procedures of instruction and analysis of competencies required of teachers. The course has a required fieldwork component in local K-12 school, and students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

ECI 205 Introduction to Teaching Humanities and social Sciences 3.
Prerequisite: Sophomore standing.
For prospective teachers in secondary and middle years social studies, English, language arts, and foreign languages. An emphasis on differing aspects and procedures of instruction and analysis of competencies required of teachers. Field work in a variety of education settings including an extended period in one curriculum area.

ECI 296 Special Topics in Education 1-3.
Individual or group study of particular areas of education at the freshman and sophomore levels. Specific topics will vary from semester to semester.

ECI 305 Principles of Teaching Diverse Populations 3.
Prerequisite: ED 204.
Impact of cultural factors on experiences of teachers and students in contemporary schools. Teaching techniques and development of instructional plans to enhance schooling experiences of culturally diverse students.

ECI 306 Middle Years Reading 3.
Prerequisite: Six hours in ED or PSY.
Reading skills in middle years education developed with emphasis on application of the reading process to content area.

ECI 307 Teaching Writing Across the Curriculum 3.
Prerequisite: ENG 101.
For prospective teachers of all disciplines in middle/high school. Practical strategies for writing as a learning tool and for teaching writing. Lesson plans, assignments, experiences appropriate to content areas. Focus on writing, writing instruction, and technology. Separate sections for Middle Grades (MSL) and English (LTN) majors.

ECI 309 Teaching in the Middle Years 3.
Prerequisite: Six hours in ED or PSY.
Nature and purposes of middle grades education. Early adolescent development, curriculum, teaching/learning methods, school organization, and characteristics of effective middle years teachers. Includes field experience.

ECI 332 Health Promotion and Disease Prevention 3.
Prerequisite: For credentialed health professionals only.
Emphasis on education of the public regarding general health concerns including cancer, cardiovascular disease, accident prevention, nutrition, drugs, alcohol, mental health, sexuality, and environmental hazards.

ECI 333 Health Care Delivery 3.
The historical basis of health care delivery in the U. S. with emphasis on hospitals, health maintenance organizations, ambulatory care centers, ambulatory surgery, nursing homes, and private care practice. Philosophical issues of funding health care, promoting health care, and the training of health care workers.

ECI 335 Planning Classroom and Clinical Curricula 3.
Prerequisite: For Certification Majors: EOE 101, 205; For Non-Certification Majors: EOE 101. For credentialed health professionals.
Processes for planning health occupations curricula for classroom and clinical settings. Practice in writing, updating, and refining health curriculum with emphasis on selection and sequencing. Comparison of styles of writing curricula. Roles and responsibilities of healthy curriculum planner.

ECI 336 Strategies for Teaching a Health Occupations Course 3.
Prerequisite: For credentialed health professionals.
Planning and implementation of effective instructional strategies for clinical and classroom settings. The nature of the teaching/learning process, psychological and philosophical aspects of teacher choice of various strategies.

ECI 405 Literature for Adolescents 3.
Prerequisite: Junior standing.
The history, types, and characteristics of literature for adolescents. Emphasizes reading and analyzing the literature by exploring the themes, literary elements, and rationale for teaching literature for adolescents. Addresses ways in which this literature can be integrated and implemented in English/Language Arts curriculum.

ECI 414 Human Relations and Discipline in the Classroom 3.
Prerequisite: PSY 304 or EDP 304 and 6 hours of education.
Designed to help prospective teachers foster positive interpersonal relationships in classrooms, build a sense of community and create a purposive environment for learning. Investigates issues such as group building, active listening, and major approaches to discipline. Uses case studies and problem solving methods.
ECI 416 Teaching Exceptional Students in the Mainstreamed Classroom 3.
Prerequisite: Six hours in ED or PSY.
Provides classroom teachers in all disciplines and grade levels with a knowledge of various handicapping conditions, as well as with techniques to assist exceptional students within the mainstreamed classroom. Required for MSL majors.

ECI 423 Methods and Materials in Teaching Modern Foreign Languages 4.
Prerequisite: Admission to Professional Semester, Corequisite: ECI 424. Methods and materials of teaching French or Spanish grades K-12 with an emphasis on lesson and unit planning, second language acquisition, national standards, and demonstrations/practice teaching in micro-lessons. This course provides opportunities for prospective French and Spanish teachers to integrate knowledge of their language with effective materials, strategies, and methods of instruction to prepare students for K-12 French or Spanish teaching. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools.

ECI 424 Student Teaching in French or Spanish 12.
Prerequisite: Admission to Professional semester, Corequisite: ECI 423. Teaching experience for prospective teachers of French or Spanish in a selected elementary, middle or high school under the supervision of a cooperating teacher and a university faculty supervisor. Additional school observations and on campus seminars are a part of this course. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools. Students are covered under the General Statute affording liability protection.

ECI 430 Methods and Materials for Teaching Language Arts in the Middle Grades 4.
Prerequisite: ECI 205, ELP 344, PSY 304 or EDP 304, ECI 309, ECI 306, ECI 307, Senior standing, candidacy in Middle Grades Teacher Education, Corequisite: ECI 435. Inquiry, activity-oriented course provides opportunities for prospective language arts middle school teachers to integrate knowledge of English with effective materials, strategies, methods of instruction. Students observe middle school classes, plan lessons, and units, practice varied classroom strategies, technologies in micro-lessons. Prepared students for teaching language arts with other content areas in middle schools.

ECI 435 Methods and Materials for Teaching Social Studies in the Middle Grades 4.
Prerequisite: Admission to professional semester.
For preservice middle school social studies teachers. Focus on: teaching and evaluation skills, adaptation of instruction to individual learner differences, identification and creation of instructional materials appropriate for use in social studies teaching.

ECI 438 Medical Law and Ethics 3.
Ethical and legal issues involved in delivering health care, such as euthanasia, reproductive technology, organ transplants, patients' rights, and confidentiality. Classical ethical theories and principles. Systematic review procedures and current medical law used to examine current case dilemmas in the health professions.

ECI 442 Field Experience in Business and Marketing Education 3.
Prerequisite: Junior standing.
Supervised off-campus work experience in an approved business and marketing content related job. The work experience relates on-the-job experiences to the technical competencies taught in the North Carolina Standard Course of Study for business and marketing education. Students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

ECI 444 Administration of Business and Marketing Education 3.
Prerequisite: ED 204 and ECI 204 and MKE Business and Marketing Education Major.
Development of successful business and information technology, and marketing education programs. Program promotion, managing cooperative education experiences, managing DECA and FBLA chapters, and determining professional development strategies. Primary roles of the business and information technology and marketing education teachers' classroom instruction. Program management, classroom management, management of career-technical student organizations, cooperative education, and program development.

Prerequisite: Senior Standing; Corequisite: ECI 430 and ECI 435. Inquiry, activity-oriented course designed to engage students in theory and practice related to 21st century skills, new literacies, and emerging technologies, as well as focused support for developing the culminating electronic portfolio. Course provides opportunity for pre-service, English Language Arts/ Social Studies middle School teachers to integrate knowledge of English and Social Studies with emerging technologies and digital literacy applications.

ECI 446 Curriculum and Methods of Teaching Business and Marketing Education 4.
Prerequisite: Admission to Teacher Education Candidacy ; MKE Business and Marketing Education Majors.
Study of the curriculum common to business and information technology and marketing education and the research behind its development. Methods common to instructional planning, implementation, and evaluation of effective business and information technology and marketing education programs are topics included in this course. Twenty hours of field work are required. Student are expected to provide their own transportation to and from assigned public schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details in acquiring the insurance and the current charge. MKE students only.

ECI 447 Student Teaching in Business and Marketing Education 9.
Prerequisite: Admission to Professional Semester ; MKE Business and Marketing Education Majors, Corequisite: ECI 494.
Fifteen weeks full-time student teaching business and marketing subjects in the public schools under the supervision of a cooperating teacher and university supervisor. Students will develop skills in instruction, evaluation, advisement, administration, and observation. Students are expected to provide their own transportation to and from assigned public schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. MKE students only.
ECI 448 E-Business Applications in Business and Marketing Education 3.
Prerequisite: Junior standing.
Emphasis on design and construction of advanced web pages, business and marketing applications of electronic commerce, as well as economic, social, legal, and ethical issues that are related to conducting business in a virtual environment. Credit for both ECI 448 and ECI 548 is not allowed.

ECI 450 Methods and Teaching English 4.
Prerequisite: ECI 204, ELP 344, PSY 304 or EDP 304; Senior standing and admission to Teacher Education candidacy with a Major in English.
Methods and materials of teaching English in grades 9-12, with an emphasis on lesson planning and demonstrations/practice in teaching literature, study skills, speaking, listening, and writing. Taught during the first seven weeks of the semester.

ECI 451 Teaching Reading Across Disciplines 3.
Prerequisite: Six hours in ED or PSY.
Facilitates study of methods and materials for teaching literacy across disciplines. Develops instructional strategies in the use of print and digital texts to support disciplinary learning.

ECI 454 Student Teaching in English/Language Arts 1-12.
Prerequisite: Admission to Student Teaching Professional Semester; For MSL students: ECI 430, 416, 464.
Provides the prospective teacher with experience in the techniques and skills involved in teaching English in secondary schools or Language Arts in middle schools in a selected off-campus station. Student interns become familiar with the total school program, eventually carrying a full teaching load, and participate in relevant school and community activities. Students are required to provide their own transportation. TED and MSL majors only.

Prerequisite: ECI 205, ELP 344, Sr. standing and admission to professional semester with a major in either history, sociology, political science.
Teaching techniques, innovations, and development of teaching and evaluation skills in the area of secondary school social studies. Adaptation of instruction to individual learner differences, and selection and design of instructional materials. Taught during the first six weeks of the semester. Taught during the first six weeks of the semester.

ECI 464 Student Teaching in Social Studies 1-8.
Prerequisite: Admission to professional semester. Corequisite: For LTH, LTP, LTS students: ECI 460. For MSL students: ECI 454, 430, 416.
Skills and techniques in teaching social studies in secondary and middle schools. Each student spends ten weeks in a selected off-campus center. The student demonstrates competencies essential for teaching social studies, becomes familiar with the total school program, and participates in a variety of school and community activities.

ECI 471 Educational Implications of Learning and Developmental Theory 3.
Prerequisite: NC TEACH Participants.
Topics related to human psychological development. Cognitive, social, physical changes, and their interaction among adolescence. Departmental Approval Required.

ECI 472 Interaction of Classroom Management and Instruction 3.
Prerequisite: ECI 471; NC TEACH Participants.
Topics related to teaching in the content area and classroom management. Lesson planning, principles applied to education, measurement and evaluation procedures, behavior therapy, and student motivation. Departmental Approval Required.

ECI 473 Subject Specific Methods 3.
Prerequisite: ECI 472; NC TEACH Participants, Corequisite: ECI 474.
Topics related to cultural factors and how they affect teachers and students in the classroom. Instructional techniques and the development of instructional plans that enhance schooling experiences of culturally diverse students. Departmental Approval Required.

ECI 474 Curriculum and Instruction Practices 1 3.
Prerequisite: ECI 472; NC TEACH participants, Corequisite: ECI 473.
Topics related to essential skills and concepts needed by beginning teachers. The class focuses on questioning, test preparation, discussion skills, familiarity with national standards, multiple teaching strategies, and assessment + evaluation of students. Departmental Approval Required.

ECI 475 Peer Mentoring in Alternative Licensure 3.
Prerequisite: ECI 474; NC TEACH Participants, Corequisite: ECI 476.
Topics related to observing and evaluating fellow teachers in relation to the national state teaching competencies. Classroom observations, videotaping, and group evaluations that are shared and discussed with fellow teachers. Departmental Approval Required.

ECI 476 Curriculum and Instruction Practices 2 3.
Prerequisite: ECE 474; NC TEACH Participants, Corequisite: ECI 475.
Topics related to inquiry, activity based instruction, and constructivist principles. Analysis of principles, strategies and application of new teaching approaches. Departmental Approval Required.

ECI 494 Senior Seminar in Business and Marketing Education 3.
Prerequisite: Admission to Professional Semester; MKE Business and Marketing Education Majors, Corequisite: ECI 447.
Discussion and analysis of problems, trends, and issues experienced while student teaching in the public schools.

ECI 496 Special Topics in Education 1-3.
Prerequisite: Junior standing or Senior standing.
Individual or group study of special topics in professional education. The topic and mode of study are determined by the faculty member after discussion with the student.

ECI 500 Theory and Practice in Teaching Diverse Populations 3.
Prerequisite: Graduate standing.
Analysis of literature and research in related to impact of cultural factors on teaching and learning in contemporary schools. Exploration of teaching techniques and curricular directions designed to improve school experiences for diverse populations in K-12 settings.

Prerequisite: 12 sem. hrs. graduate ED and PSY.
Origin, development, and current status of elementary and secondary school curriculum and an evaluation of trends and issues likely to influence the curriculum in the future.

ECI 502 Continuous Improvement of School Technology Initiatives 3.
Introduction to the models, strategies, and tools for evaluating and making informed decisions about technology initiatives; examination of technology evaluation case studies, evaluation proposals, and stakeholder reports.
ECI 505 Issues and Trends in Foreign Language Education: Theory & Practice 3.
Prerequisite: Graduate standing.
An exploration of theory and practice issues related to foreign language teaching. Inquiry into proficiency-oriented instruction, innovative methodological approaches, the National Standards and learning scenarios, integrating culture, options for testing and assessment, content-based instruction, the role of grammar in second language acquisition, teaching foreign language students with learning disabilities, and Foreign Language in the Elementary School (FLES) in North Carolina. Students will examine case studies related to these topics and engage in a classroom action research project.

ECI 506 Instructional Technology in Foreign Language Education: Addressing the National 3.
Prerequisite: ECI 500.
Hands-on experience in appropriately selecting and applying a number of instructional technologies to foreign language teaching and learning in relation to the current National Standards. Analysis and use of effective technology tools including hardware, software, and courseware. Emphasis will be on the application of Technology-Enhanced Language Learning (TELL) as it integrates the National Standards' goals of Communication, Cultures, Connections, Comparisons, and Communities.

ECI 507 Social Justice Education 3.
Prerequisite: ECI 500.
Introduction to principles of social justice education and their centrality in progressive pedagogies and pedagogies that lead to equity in all teaching contexts. Students will develop strategies for successfully incorporating a social justice education framework in scholarship and professional practice.

ECI 508 Teachers as Leaders 3.
Prerequisite: Graduate standing.
Examines teacher leadership research, theory, and practice. Prepares teachers to assume leadership roles in classrooms, schools, school systems, and the larger educational community. Independent research projects required.

ECI 509 Special Problems in Curriculum and Instruction 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 510 Research Applications In Curriculum and Instruction 3.
Prerequisite: ST 507, Doctoral student, C and I Major.
Focus on current issues and research methods used in the areas of curriculum development and supervision, instructional technology, English education, middle grades education, reading education, social studies education and special education.

ECI 511 Technology Integration Theory and Practice 3.
Prerequisite: Graduate standing.
Foundational study of technology integration standards, models, and conditions informed by research. Analysis of micro classroom and macro school/institutional technology plans, and development of sample technology plans and projects representative of integration across curricular areas.

ECI 512 Emerging Technologies for Teaching and Learning 3.
Examination of emerging technologies as applied in educational settings with a focus on related research, case studies, theoretical underpinnings, and strategies for effective integration.

ECI 513 Teaching and Learning with Digital Video 3.
Prerequisite: Graduate standing.
Development and implementation of digital video within educational contexts and situations. Design of educational watching, analyzing, and creating activities with video. Application of conventions and genres of digital video capture and editing to sample technology projects across curricular areas.

ECI 514 Multimedia Design and Applications in Instruction 3.
Prerequisite: Graduate standing.
Examination of learning theories and research-based principles for multimedia design to select/apply appropriate digital resources and create maximally effective educational products.

ECI 515 Online Collaborations in Education 3.
Examines of models of collaboration, sample online collaborative strategies and projects, tools supportive of cross-classroom collaborations, and research findings from collaborative initiatives.

ECI 516 Design and Evaluation Of Instructional Materials 3.
Prerequisite: Graduate standing.
Characteristics and selection of various media for instruction and their use in educational settings. Design and production of instructional materials. Analysis of research in the field. Individualized projects and assignments. Application of grounded research and theory concerning learning to design of instructional materials. Structured projects and practical experiences used to transfer design principles and evaluate instructional products.

ECI 517 Theoretical Foundations of Advanced Learning Environments 3.
Examination and application of behavioral, cognitive, and constructivist theoretical frameworks underlying the design and development of advanced technology-enhanced learning environments.

ECI 518 Digital Learning Program and Staff Development 3.
Prerequisite: ECI 511, ECI 514, ECI 515, ECI 642.
Study and application of principles related to digital learning program planning, facilities and resource management, and staff development in K-12 settings.

ECI 519 Special Problems in Digital Learning and Teaching 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in digital learning and teaching selected from areas of current concern to practitioners in education.

ECI 520 The Teaching Of Composition 3.
Prerequisite: 9 hrs. of ED, PSY and/or ENG.
For classroom teachers. Practical field-tested ideas to help students improve as writers by focusing on composition as a process as well as a product. Activities for teaching prewriting, drafting, revising, proofreading, grammar and evaluating with suggestions for individual and group learning. Writing in content areas and composition research/ theory. To take this course in sum. as part of Capital Area Writing Project, student must apply and be selected.

ECI 521 Teaching Literature For Young Adults 3.
Prerequisite: Senior standing or Graduate standing or PBS status.
Designed to acquaint in-service and pre-service teachers with breadth and diversity of contemporary literature for adolescents, with emphasis on teaching young adult literature. Addresses history and themes of young adult literature, readability of materials, reading preferences, literary merit, skills that can be taught through literature, censorship, motivating students to read and organizing literature units.
ECI 522 Trends and Issues in English Language Arts Education 3.
Prerequisite: Graduate standing.
Consideration of past, current, and future trends and issues in English Language arts instruction, standards, and methodologies. Examination of research, theory, and practice in concert with trends, issues, and questions. Independent research projects required.

ECI 523 Teacher as Researcher 3.
Prerequisite: Graduate standing.
This course is designed to introduce the methods and skills required for designing, conducting, interpreting, and applying action research - the systematic inquiry into curriculum, instruction, teaching, and learning. This course will focus on reflective inquiry and practical applications.

ECI 524 Theory and Research in Global Learning 3.
An examination of theoretical frameworks for global learning and comparative studies of various national approaches to K-12 education. This course provides students with multiple lenses through which to present how we teach and learn given the demands and opportunities present in our interconnected world.

ECI 525 Contemporary Approaches In the Teaching Of Social Studies 3.
Prerequisite: Advanced Undergraduate standing or Graduate standing. Analysis of principles, strategies and application of new teaching approaches. Structured projects and practical experiences.

ECI 526 Theory and Research On Teaching and Learning Social Studies 3.
Prerequisite: ECI 530 or ECI 525. A critical analysis of the literature relating to the teaching and learning of social studies and the drawing of implications for instructional practices.

ECI 528 Strategies for Teaching English in Secondary Schools 3.
Methods and materials of teaching English in grades 9-12, with an emphasis on lesson planning and demonstrations/practice in teaching literature, study skills, speaking, listening, media literacy, and writing. Some classes and assignments will be completed in a field setting.

ECI 530 Social Studies In the Elementary School 3.
Prerequisite: Six hrs. in ECI. Advanced professional training in teaching of social studies for middle grades and elementary teachers, including an-depth introduction to research-based teaching strategies, instructional resources and literature of the field.

ECI 531 Advanced Writing in Education 3
Appropriate for any specialty area in Education. Focus on writing required in graduate courses, research reviews for educational reports and National Board Certification, writing for educational journals, theses, and dissertations. Opportunities to gain knowledge, tools, and strategies to meet the academic community's standards. Strategies to develop and/or enhance form, style, content, quality of academic writing, and on researching, composing, revising, and editing. Students will compose, self-evaluate and give feedback on the work of their peers. Graduate status.

ECI 535 Methods and Materials for Teaching Social Studies in the Middle Grades 3.
For preservice middle school social studies teachers. Focus on: teaching and evaluation skills, adaptation of instruction to individual learner differences, identification and creation of instructional materials appropriate for use in social studies teaching. Cannot earn credit for ECI 435 and ECI 535.

ECI 537 Teaching Children's Literature 3.
Instructions for educators in quality children's literature, specific needs of young reader, genres of children's literature, strategies for instructing children's literature, ways to target reader's interests, and design of literature units.

ECI 540 Reading In the Elementary School 3.
Prerequisite: Six hrs. ED or PSY. Theoretical foundations of reading instruction and current methods and materials for teaching reading, with emphasis on planning and implementing reading programs for children in kindergarten through grade six.

ECI 541 Reading In the Content Areas 3.
Prerequisite: Six hours in ED or PSY. Methods in instruction for applying reading to content areas, with emphasis on means of improving comprehension, vocabulary and learning strategies in subject matter classrooms.

ECI 543 Diagnosis Of Reading Disabilities 3.
Prerequisite: ECI 540 or ECI 541. Formal and informal instruments for diagnosing reading disabilities including completion of a diagnostic case study describing reading performance of a disabled reader.

ECI 544 Remediation Of Reading Disabilities 3.
Prerequisite: ECI 543. Advanced approaches to reading remediation including theory and research related to remedial instructional strategies, analyses of instructional designs and evaluations of effectiveness of intervention programs.

ECI 545 Theory and Research in Literacy 3.
Prerequisite: ECI 540. Advanced study of theoretical models of reading, research issues in reading and in other language processes. In-depth theoretical models of reading. Emphasis on critical examination and analysis of research investigating reading acquisition, maturereading behavior and related language processes.

ECI 546 New Literacies & Media 3.
Critical analysis of new literacies that are prompted by emerging technologies and participatory media in K-12. Design and application of new literacies and media instructional practices to literacy curriculum and other discipline areas.

ECI 547 Knowledge Construction: Implications for Multicultural Education 3.
Prerequisite: ECI 500. Exploration of sociopolitical factors involved in the construction of knowledge in education as well as the implications for practitioners and learners in schools and other educational settings. Particular emphasis on critiquing traditional epistemologies that limit the production, dissemination, and validation of progressive discourses in education in order to promote the production of knowledge that affirms the principles of social justice education.

ECI 548 E-Business Applications in Business and Marketing Education 3.
Emphasis on design and construction of advanced web pages, business and marketing applications of electronic commerce, as well as economic, social, legal, and ethical issues that are related to conducting business in a virtual environment. Content prepares students to apply principles to the business and marketing education curriculum in the public schools. Credit for both ECI 448 and ECI 548 is not allowed.
ECI 549 Special Problems in Reading 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in reading education selected from areas of current concern to practitioners in education.

ECI 550 Foundations Of Middle Years Education 3.
Prerequisite: 6 hours of ED or PSY.
Examination of five major aspects of middle years education: (a) history and purposes of middle/junior high school, (b) pre- and early adolescent needs, interests and abilities, curriculum design and content, (d) teaching methods and (e) school organization. Emphasis on both theoretical understandings and effective classroom strategies.

ECI 551 Teaching/Learning Approaches For Emerging Adolescents 3.
Prerequisite: ECI 550; Graduate standing.
Exploration of teaching/learning approaches appropriate to emerging adolescents. Learning styles; interdisciplinary inquiry; community-based curriculum; simulations and games; learning centers; minicourses; design of physical space; all-school activities.

ECI 552 Program Development & Evaluation in Youth & Family Settings 3.
Historical and contemporary foundations of program development and evaluation in non-formal, community-based family life and youth development settings are examined including theory, research, and three holistic program development constructs: 1) planning; 2) design and implementation; 3) impact evaluation and accountability.

ECI 553 Applied Concepts in Child and Youth Development 3.
This course explores the fundamental concepts of child and youth development (including early childhood through adolescence) as applied to programmatic and organizational contexts. A special focus is placed upon the concepts as applied to Community Youth theories & practice.

ECI 554 Collaborations & Partnerships in Family & Youth Settings 3.
To prepare educators (formal and non-formal) to better establish, lead and manage collaborations and partnerships in family settings and those that support holistic community-based youth development organizational systems. Specific foci include: types and levels of partnerships; environmental scanning and socio-organizational linkage contextual factors affecting community collaborations; leadership factors affecting community collaborations; and human, financial and programmatic management in collaborations. Some on-campus activities are required.

ECI 555 Organizational Systems in Youth and Family Settings 3.
Prerequisite: ECI 506.
Preparation for current and future community family and youth development professionals leading and managing community-based organizations. Course includes: fundamentals of management and leadership; institutional and organizational structures; administrative and strategic planning; working with advisory and governing groups; marketing and program delivery systems; information management systems; and human resource, financial, facilities and risk management systems.

ECI 557 Volunteerism in Youth and Family Settings 3.
Preparation for current and future community-based youth and family professionals to better manage volunteers in local program service delivery. Specific foci include: volunteerism as a social phenomenon; volunteer resource management; new forms of volunteerism; and future trends in volunteerism. Restricted to graduate and post-baccalaureate students only.

ECI 560 Professional Development in Business and Marketing Education 3.
Prerequisite: Graduate standing.
Designed to prepare business and marketing educators with the knowledge and skills necessary to design and implement strategies for organizational improvement that will benefit business and marketing education programs. Attendance and participation meaningful, organized professional development activity is an integral component of the course.

ECI 561 Curriculum and Instruction in Business and Marketing Education 3.
Prerequisite: Graduate standing.
Designed to develop competencies needed to be a successful Business and Marketing Education Teacher-Coordinator. Focus primarily on the activities involved in planning and managing the curriculum and instructional skills needed to effectively implement the curriculum and meet educational needs of middle and high school students. For ED & MKZ students. Requires instructor approval.

ECI 562 Program Management in Business and Marketing Education 3.
Prerequisite: ECI 561.
This course includes the administration of middle and secondary business and marketing education programs, including career guidance; the management of DECA or FBLA chapter; supervision of work-based learning strategies; and school program promotion and development. ED & MKZ students only. Requires permission of instructor.

ECI 563 is a course that involves teaching techniques, innovations, development of teaching and evaluation skills, and in-depth subject matter inquiry in the area of secondary school social studies. Adaptation of instruction to individual learner differences, and selection and design of instructional materials will be explored. Must be enrolled in Secondary Social Studies MAT Program.

ECI 566 Advanced Instructional Strategies in Business and Marketing 3.
Prerequisite: ECI 561.
Advanced strategies and techniques related to teaching and learning in the business and marketing education curricula, classrooms, work places, and technology environments in middle and secondary education. MKZ students only.

ECI 567 Career and Technical Education Fundamentals and Program Administration 3.
Emphasis on assisting various school district personnel in acquiring the knowledge and skills needed to effectively provide quality career and technical education (CTE) programming at the district level. Content includes federal CTE legislation, theory and research on educational reform, local and regional economic development, sources of funding for CTE programming and continuous improvement.

ECI 568 Designing College and Career Ready Programs 3.
Examination of current school system instructional practices to assist various school district personnel in aligning core academic and career and technical education programming to prepare students for successful post-secondary education, careers, and life-long learning. Content includes an examination of education reform initiatives with an emphasis on foundational theory and research, needed workplace knowledge and skills, innovative education programs/models, and research-based best practices for success in transitioning students to post-secondary success.
ECI 569 Special Problems in Business and Marketing Education 3-6.
In-depth study of topical problems in business and marketing education selected from areas of current concern to practitioners in education.

ECI 570 Learning Disabilities 3.
Prerequisite: ECI 585.
Field of learning disabilities, including definitions, prevalence, etiology, characteristics and current educational trends for educating students with learning disabilities.

ECI 571 Methods and Materials In Learning Disabilities 3.
Current methods and materials for the teaching students with learning disabilities in elementary and/or secondary schools, including curriculum and instructional techniques. Focus on examination of commercial materials and development of teacher-made materials for use with students with learning disabilities.

ECI 572 Resource Teaching In Special Education 3.
Prerequisite: ECI 585.
Resource teaching in area of special education, with emphasis on resource teaching with students with special needs. Types of resource programs, establishment and maintenance of a program, selection of students, curriculum and materials.

ECI 573 Applied Behavior Analysis for Teachers 3.
Concepts and procedures involved in design and implementation of techniques for managing the behavior of students in classroom setting. Focus on methods for defining, measuring, increasing, decreasing, maintaining, and generalizing classroom behaviors in all learners.

ECI 574 Intellectual Disabilities 3.
Prerequisite: ECI 585.
Content presented includes definitions, classifications, and assessment of person with intellectual disability from medical, sociological, and educational points of view. Issues related to labeling, etiology, characteristics, levels of severity, litigation, legislation, family and societal issues, history, and controversies are emphasized related to persons with intellectual disability.

ECI 575 Communication Disorders In the Classroom 3.
Prerequisite: ECI 570.
Occurrence of communication disorders in the school-age population, including types of disorders, prevalence, etiology, characteristics and corrective therapy. Focus on communication disorders among exceptional students and classroom teacher's role in working with communication disorders.

ECI 576 Teaching Functional and Life Skills to Students with Disabilities 3.
Prerequisite: ECI 585 and ED 574.
Methods of instruction and materials related to teaching children and persons with mild/moderate levels of disability are emphasized. Effective general pedagogical approaches are stressed, as well as the teaching of functional academic skills, curricula used in instructions, teaching social and adaptive behavior as well as daily living skills, and transition-related skills necessary for independent adult life.

ECI 577 Education Of Severely Handicapped 3.
Prerequisite: ECI 585 or ECI 574.
Severe and profound mental retardation and autism, including assessment procedures, educational and social/vocational programs, instructional strategies and evaluation. Legal and ethical issues involved in working with severely handicapped.

ECI 579 Organization and Behavioral Management of Inclusive Classrooms 3.
To increase students' knowledge of persons with high incidence disabilities (i.e., learning disability, mild intellectual disability, and serious emotional disability), and how to manage the behavior of all pupils in educational environments. Characteristics of students with high incidence disabilities will be emphasized, as well as strategies to reduce the likelihood of problem behavior of all pupils in the classroom.

ECI 580 Transition Program For Students With Mild Disabilities 3.
Prerequisite: ECI 585.
Educational and other procedures involved in providing transition programming to students with mild disabilities. Examination of secondary-level special education service delivery, as well as post-secondary interventions, from critical, practical, empirical and theoretical perspectives.

ECI 581 Educational Diagnosis and Prescription For Children With Exceptionalities 3.
Prerequisite: ECI 585.
Concept of educational diagnosis of students with exceptionalities, including examination of educational diagnostic procedures in current use in special education. Development of informal diagnostic techniques and procedures for adapting curriculum and instruction for learner with exceptionalities.

ECI 583 Behavior Disorders 3.
Prerequisite: ECI 585.
Definitions, etiology, characteristics, philosophies and approaches to educational programming for children and youth with behavioral disorders, including emotionally handicapped, autistic and socially maladjusted.

ECI 584 Intervention for Behavior Problems of Students with Disabilities 3.
Prerequisite: ECI 583.
Curriculum materials, instructional strategies and behavior management techniques related to teaching children and youth with behavioral disorders including individualized instruction, group process, organization and evaluation of classroom programs, parent involvement, community resources and teachers' personal and professional growth and development.

ECI 585 Education Of Exceptional Children 3.
Prerequisite: 9 hrs. of ED or PSY.
Introduction to field of special education. Focus on historical overview, definitions and terminology in basic areas of exceptionality; etiological factors in exceptionality; developmental and learning characteristics of each area of exceptionality; and educational settings and strategies employed in special education. Review of current educational laws and policies affecting special education.

ECI 603 Advanced Seminar In Literacy Research 3-6.
Prerequisite: ECI 648.
Critical analyses of research and methodology in reading comprehension processes and strategies for comprehension and retention of written discourse. Opportunity for design and conduct of a research project in reading or related area.

ECI 606 Seminar on Teacher as Learner: Developmental Theory, Research and Practice 3.
Prerequisite: Graduate standing (6 hrs course work at 500-level).
Analysis of major contemporary theories and research of learning and development as a basis for individual and organizational change and development in educational settings.
ECI 607 Advanced Seminar in Multicultural Education 3.
Prerequisite: Graduate standing and ECI 500.
Application and analysis of research and scholarship in multicultural education and topics related to effective schools for contemporary culturally diverse student populations in K-12 settings.

ECI 620 Special Problems In Curriculum and Instruction 1-6.
Prerequisite: Six hrs. of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 630 Independent Study in Curriculum and Instruction 1-6.
Independent curriculum or research project in curriculum and instruction.

ECI 640 Practicum In Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised practical experiences in schools and area agencies concerned with curriculum and instruction or educational supervision.

ECI 641 Practicum In Mentoring and Coaching 1-6.
Prerequisite: ECI 705, Graduate standing in College of ED and PSY.
Supervised practical experiences in which participants become mentor to a student teacher or a teacher in a school system.

ECI 645 Diagnostic-Prescriptive Practicum in Reading 3.
Prerequisite: ECI 540, ECI 541 and ECI 543; Graduate standing in College of ED and PSY.
Supervised teaching experience with students using diagnostic test data to prescribe remedial programs for reading-disabled individuals, implementing instructional prescriptions and evaluating success of remedial plans.

ECI 647 Practicum in Business and Marketing Education 3.
Prerequisite: ECI 569.
Supervised practical experiences in schools and area agencies concerned with business and marketing education.

ECI 648 Practicum in Special Education 1-6.
Prerequisite: Graduate standing in College of ED and PSY.
Supervised practical experiences in schools and area agencies concerned with teaching children and adolescents with disabilities.

ECI 650 Internship In Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with curriculum development and/or educational supervision.

ECI 652 Field-Based Applications of Digital Learning and Teaching 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities to design, test, and revise digital learning and teaching solutions in authentic, field-based settings.

ECI 654 Internship In Elementary Education 1-6.
Prerequisite: 3 hrs. grad.-level elementary education course work, Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with elementary grades education.

ECI 656 Internship In Middle Grades Education 1-6.
Prerequisite: ECI 550, ECI 551, Graduate standing in College. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with the education of young adolescents.

ECI 657 Internship in Business and Marketing Education 1-6.
Prerequisite: ECI 561.
Supervised opportunities for advance professional development in contexts concerned with business and marketing education. Requires instructor approval.

ECI 658 Internship In Special Education 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with special education.

ECI 681 Seminar in Special Education Literacy 3.
Prerequisite: ECI 540 or ECI 541 and ECI 581, ECI 585.
A case study approach is used in the seminar that requires the application of assessment techniques and instructional intervention methodologies in literacy for K-12 students with disabilities. Assigned activities require access to and experience in schools and/or related settings. This seminar is designed to be completed during the last half of the graduate program. It is restricted to graduate students in SPE, SPL, SPM, SPB or consent of instructor.

Prerequisite: ECI 585.
This seminar is designed to prepare special education teachers to provide empirically supported instruction in numerical concepts and skills to students with disabilities in special education and general education settings. Particular attention will be paid to student characteristics that impact learning in arithmetic and mathematics and to addressing state and national curriculum standards using instructional organization and strategies that have been shown through research to be effective for this population. Field work in schools and/or related settings is required. Restricted to students in SPE, SPB, SPL, SPM or by consent of instructor.

ECI 683 Seminar in Special Education Learning Strategies 3.
Prerequisite: ECI 585.
This seminar is designed to prepare special education teachers to evaluate and teach empirically supported learning strategies to students with disabilities in special education and collaborative settings. Particular attention will be paid to learning strategies shown to help students with disabilities organize, learn, and apply facts, skills and routines that provide access to and mastery of critical information across the curriculum. Field work in schools and/or related settings is required. Restricted to graduate students in SPE, SPB, SPL, SPM or consent of instructor.

ECI 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ECI 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.
ECI 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

ECI 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

ECI 692 Research Projects in Curriculum and Instruction 1-3.
Prerequisite: ELP 532.
Project or problem in research in education for graduate students, supervised by members of graduate faculty. Research chosen on basis of individual students' interests and not to be part of thesis or dissertation research.

ECI 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

ECI 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their theses.

ECI 700 Curriculum Theory and Development 3.
Prerequisite: 9 sem. hrs. graduate PSY, ECI 502, ECI 514.
Theory and research in behavioral sciences and education designed to provide theoretical background for development of elementary and secondary curricula. Exploration of knowledge base and skills for critical review of curricula and instructional materials and provision of an application opportunity.

ECI 705 Instructional Coaching and Supervision Of Teachers 3.
Theory, research and practice of the professional role of a supervisor in the development of the effective and self-analytic teacher: pre-service (student teacher) and in-service (beginning and experienced teacher). For persons with at least two years of teaching experience in K-12 schools.

ECI 707 Special Problems In Curriculum and Instruction 1-6.
Prerequisite: Six hrs. of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 711 Computer Applications and Curriculum Integration 3.
Prerequisite: Graduate standing.
Use and evaluation of existing educational software, research findings with respect to integration of computers and new technologies in instruction.

ECI 714 Multimedia Design and Applications in Instruction 3.
Prerequisite: Six hrs. ED or PSY.
Emphasis on use and evaluation of existing educational software and research findings with respect to uses of computers in instruction.

ECI 715 Internet Applications and Web Page Design in Instruction 3.
Prerequisite: Six hrs. ED or PSY.
Instructional design principles underlying development of microcomputer-based instructional software and accompanying materials and programming principles and their implementation in courseware development. Additional topics include authoring languages, programming languages and graphics.

ECI 716 Design and Evaluation Of Instructional Materials 3.
Prerequisite: Graduate standing.
Characteristics and selection of various media for instruction and their use in educational settings. Design and production of instructional materials. Analysis of research in the field. Individualized projects and assignments. Application of grounded research and theory concerning learning to design of instructional materials. Structured projects and practical experiences used to transfer design principles and evaluate instructional products.

ECI 717 Advanced Multimedia Design and Applications in Instruction 3.
Prerequisite: ECI 511, ECI 514.
Advanced study and application of instructional design principles underlying development, evaluation, and integration of multimedia and hypermedia in K-12 settings.

ECI 718 Digital Learning Program and Staff Development 3.
Prerequisite: ECI 511, ECI 514, ECI 515, ECI 642.
Study and application of principles related to digital learning program planning, facilities and resource management, and staff development in K-12 settings.

ECI 719 Special Problems in Digital Learning and Teaching 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in digital learning and teaching selected from areas of current concern to practitioners in education.

ECI 720 The Teaching Of Composition 3.
Prerequisite: 9 hrs. of ED, PSY and/or ENG; to take this course in sum. as part of Capital Area Writing Project, student must apply and be selected.
For classroom teachers. Practical field-tested ideas to help students improve as writers by focusing on composition as a process as well as a product. Activities for teaching prewriting, drafting, revising, proofreading, grammar and evaluating with suggestions for individual and group learning. Writing in content areas and composition research/theory.

ECI 727 Special Problems in Social Studies Education 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in social studies education selected from areas of current concern to practitioners in education.

ECI 729 Special Problems in English Education 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in English education selected from areas of current concern to practitioners in education.
ECI 745 Literacy Theory and Research 3.
Prerequisite: ECI 540.
Advanced study of theoretical models of reading, research issues in reading and in other language processes. In-depth theoretical models of reading. Emphasis on critical examination and analysis of research investigating reading acquisition, maturereading behavior and related language processes.

ECI 801 Seminar In Curriculum and Instruction 1-3.
Prerequisite: Doctoral student.
Consideration of contemporary issues, trends and recent research and development findings in curriculum and instruction.

ECI 803 Advanced Seminar In Literacy 3.
Prerequisite: ECI 545.
Critical analyses of research and methodology in reading comprehension processes and strategies for comprehension and retention of written discourse. Opportunity for design and conduct of a research project in reading or related area.

ECI 804 Seminar On Attention Deficit Hyperactivity Disorder, Research and Treatment 3-6.
Prerequisite: 9 hrs. grad. credit in PSY or SPE.
Critical analysis of theory, research and interventions in Attention-Deficit-Hyperactivity-Disorder. Reading and synthesis of literature and student-led class discussions of such topics as characteristics, diagnosis, etiology, long-term outcomes and management of ADHD.

ECI 806 Seminar on Teacher as Learner: Developmental Theory, Research and Practice 3-6.
Prerequisite: Graduate standing (6 hrs course work at 500-level). Analysis of major contemporary theories and research of learning and development as a basis for individual and organizational change and development in educational settings.

ECI 807 Advanced Seminar in Multicultural Education 3.
Prerequisite: Graduate standing and ECI 500.
Application and analysis of research and scholarship in multicultural education and topics related to effective schools for contemporary culturally diverse student populations in K-12 settings.

ECI 820 Special Problems In Curriculum and Instruction 1-6.
Prerequisite: Six hrs. of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 830 Independent Study in Curriculum and Instruction 1-3.
Independent curriculum or research project in curriculum and instruction.

ECI 840 Practicum In Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised practical experiences in schools and area agencies concerned with curriculum and instruction or educational supervision.

ECI 841 Practicum In Mentoring and Coaching 1-6.
Prerequisite: ECI 705, Graduate standing in College of ED and PSY.
Supervised practical experiences in which participants become mentor to a student teacher or a teacher in a school system.

ECI 843 Practicum in Business and Marketing Education 1-6.
Supervised practical experiences in schools and area agencies concerned with business and marketing education.

ECI 850 Internship In Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with curriculum development and/or educational supervision.

ECI 851 Internship In Mentoring 1-6.
Prerequisite: ECI 845 and ECI 705, Graduate standing in Col. of ED and PSY.
Supervised opportunities teaching educational personnel in local school systems how to serve as mentors to their colleagues.

ECI 880 Directed Study in Curriculum and Instruction 1-6.
Curriculum or research project in curriculum and instruction under the direct supervision of a faculty member.

ECI 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ECI 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

ECI 892 Research Projects In Curriculum and Instruction 1-3.
Prerequisite: ELP 732.
Project or problem in research in education for graduate students, supervised by members of graduate faculty. Research chosen on basis of individual students’ interests and not to be part of thesis or dissertation research.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

ECI 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Spanish Teacher Education

Students desiring to be licensed to teach Spanish K-12 by the State of North Carolina will be enrolled in the College of Humanities and Social Sciences. The curriculum requirements for the teacher education option in Spanish can be found under the Department of Foreign Languages and Literatures in the College of Humanities and Social Sciences.
ECI - Curriculum and Instruction Courses

ECI 201 Intro to Instructional Technology for Educators 3.
Introduction to effective technology integration in teaching practices across the curriculum for pre-service teachers. Exploration of different technology-based tools commonly integrated in instruction, including desktop, Internet/ Web-based, mobile, and cloud applications. Examination of integration challenges using relevant, real-world examples from current teacher practices. Planning for student-centered, project-based lessons that make use of diverse technologies.

Prerequisite: Sophomore standing; Corequisite: ED 204.

ECI 204 Intro to Teaching 1-2.
Prerequisite: Sophomore standing; Corequisite: ED 204.
For prospective teachers in Middle and Secondary Business and Marketing, English, Foreign Languages, Language Arts, and Social Studies. Emphasis on what it means to be an educator as well as differing aspects and procedures of instruction and analysis of competencies required of teachers. The course has a required fieldwork component in local K-12 school, and students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

ECI 205 Introduction to Teaching Humanities and social Sciences 3.
Prerequisite: Sophomore standing.
For prospective teachers in secondary and middle years social studies, English, language arts, and foreign languages. An emphasis on differing aspects and procedures of instruction and analysis of competencies required of teachers. Fieldwork in a variety of education settings including an extended period in one curriculum area.

ECI 295 Special Topics in Education 1-3.
Individual or group study of particular areas of education at the freshman and sophomore levels. Specific topics will vary from semester to semester.

ECI 305 Principles of Teaching Diverse Populations 3.
Prerequisite: ED 204.
Impact of cultural factors on experiences of teachers and students in contemporary schools. Teaching techniques and development of instructional plans to enhance schooling experiences of culturally diverse students.

ECI 306 Middle Years Reading 3.
Prerequisite: Six hours in ED or PSY.
Reading skills in middle years education developed with emphasis on application of the reading processes to content area.

ECI 307 Teaching Writing Across the Curriculum 3.
Prerequisite: ENG 101.
For prospective teachers of all disciplines in middle/high school. Practical strategies for writing as a learning tool and for teaching writing. Lesson plans, assignments, experiences appropriate to content areas. Focus on writing, writing instruction, and technology. Separate sections for Middle Grades (MSL) and English (LTN) majors.

ECI 309 Teaching in the Middle Years 3.
Prerequisite: Six hours in ED or PSY.
Nature and purposes of middle grades education. Early adolescent development, curriculum, teaching/learning methods, school organization, and characteristics of effective middle years teachers. Includes field experience.

ECI 312 Health Promotion and Disease Prevention 3.
Prerequisite: For credentialed health professionals only.
Emphasis on education of the public regarding general health concerns including cancer, cardiovascular disease, accident prevention, nutrition, drugs, alcohol, mental health, sexuality, and environmental hazards.

ECI 333 Health Care Delivery 3.
The historical basis of health care delivery in the U.S. with emphasis on hospitals, health maintenance organizations, ambulatory care centers, ambulatory surgery, nursing homes, and private care practice. Philosophical issues of funding health care, promoting health care, and the training of health care workers.

ECI 335 Planning Classroom and Clinical Curricula 3.
Prerequisite: For Certification Majors: EOE 101, 205; For Non-Certification Majors: EOE 101. For credentialed health professionals.
Procedures for planning health occupations curricula for classroom and clinical settings. Practice in writing, updating, and refining health curriculum with emphasis on selection and sequencing. Comparison of styles of writing curricula. Roles and responsibilities of healthy curriculum planner.

ECI 336 Strategies for Teaching a Health Occupations Course 3.
Prerequisite: For credentialed health professionals.
Planning and implementation of effective instructional strategies for clinical and classroom settings. The nature of the teaching/learning process, psychological and philosophical aspects of teacher choice of various strategies.

ECI 405 Literature for Adolescents 3.
Prerequisite: Junior standing.
The history, types, and characteristics of literature for adolescents. Emphasizes reading and analyzing the literature by exploring the themes, literary elements, and rationale for teaching literature for adolescents. Addresses ways in which this literature can be integrated and implemented in English/Language Arts curriculum.

ECI 414 Human Relations and Discipline in the Classroom 3.
Prerequisite: PSY 304 or EDP 304 and 6 hours of education.
Designed to help prospective teachers foster positive interpersonal relationships in classrooms, build a sense of community and create a purposeful environment for learning. Investigates issues such as group building, active listening, and major approaches to discipline. Uses case studies and problem solving methods.

ECI 416 Teaching Exceptional Students in the Mainstreamed Classroom 3.
Prerequisite: Six hours in ED or PSY.
Provides classroom teachers in all disciplines and grade levels with a knowledge of various handicapping conditions, as well as with techniques to assist exceptional students within the mainstreamed classroom. Required for MSL majors.

ECI 423 Methods and Materials in Teaching Modern Foreign Languages 4.
Prerequisite: Admission to Professional Semester, Corequisite: ECI 424.
Methods and materials of teaching French or Spanish grades K-12 with an emphasis on lesson and unit planning, second language acquisition, national standards, and demonstrations/practice teaching in microunits. This course provides opportunities for prospective French and Spanish teachers to integrate knowledge of their language with effective materials, strategies, and methods of instruction to prepare students for K-12 French or Spanish teaching. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools.
ECI 424 Student Teaching in French or Spanish 12.
Prerequisite: Admission to Professional semester. Corequisite: ECI 423.
Teaching experience for prospective teachers of French or Spanish in a selected elementary, middle or high school under the supervision of a cooperating teacher and a university faculty supervisor. Additional school observations and on campus seminars are a part of this course. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools. Students are covered under the General Statute affording liability protection.

ECI 430 Methods and Materials for Teaching Language Arts in the Middle Grades 4.
Prerequisite: ECI 205, ELP 344, PSY 304 or EDP 304, ECI 309, ECI 306, ECI 307, Senior standing, candidacy in Middle Grades Teacher Education, Corequisite: ECI 435.
Inquiry, activity-oriented course provides opportunities for prospective language arts middle school teachers to integrate knowledge of English with effective materials, strategies, methods of instruction. Students observe middle school classes, plan lessons, and units, practice varied classroom strategies, technologies in micro-lessons. Prepared students for teaching language arts with other content areas in middle schools.

ECI 435 Methods and Materials for Teaching Social Studies in the Middle Grades 4.
Prerequisite: Admission to Professional semester.
For preservice middle school social studies teachers. Focus on: teaching and evaluation skills, adaptation of instruction to individual learner differences, identification and creation of instructional materials appropriate for use in social studies teaching.

ECI 438 Medical Law and Ethics 3.
Ethical and legal issues involved in delivering health care, such as euthanasia, reproductive technology, organ transplants, patients’ rights, and confidentiality. Classical ethical theories and principles. Systematic review procedures and current medical law used to examine current case dilemmas in the health professions.

ECI 442 Field Experience in Business and Marketing Education 3.
Prerequisite: Junior standing.
Supervised off-campus work experience in an approved business and marketing content related job. The work experience relates on-the-job experiences to the technical competencies taught in the North Carolina Standard Course of Study for business and marketing education. Students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

ECI 444 Administration of Business and Marketing Education 3.
Prerequisite: ED 204 and ECI 204 and MKE Business and Marketing Education Major.
Development of successful business and information technology, and marketing education programs. Program promotion, managing cooperative education experiences, managing DECA and FBLA chapters, and determining professional development strategies. Primary roles of the business and information technology and marketing education teachers’ classroom instruction. Program management, classroom management, management of career-technical student organizations, cooperative education, and program development.

Prerequisite: Senior Standing; Corequisite: ECI 430 and ECI 435.
Inquiry, activity-oriented course designed to engage students in theory and practice related to 21st century skills, new literacies, and emerging technologies, as well as focused support for developing the culminating electronic portfolio. Course provides opportunity for pre-service, English Language Arts/ Social Studies middle school teachers to integrate knowledge of English and Social Studies with emerging technologies and digital literacy applications.

ECI 446 Curriculum and Methods of Teaching Business and Marketing Education 4.
Prerequisite: Admission to Teacher Education Candidacy; MKE Business and Marketing Education Majors.
Study of the curriculum common to business and information technology and marketing education and the research behind its development. Methods common to instructional planning, implementation, and evaluation of effective business and information technology and marketing education programs are topics included in this course. Twenty hours of field work are required. Students are expected to provide their own transportation to and from assigned public schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details in acquiring the insurance and the current charge. MKE students only.

ECI 447 Student Teaching in Business and Marketing Education 9.
Prerequisite: Admission to Professional Semester; MKE Business and Marketing Education Majors. Corequisite: ECI 494.
Fifteen weeks full-time student teaching business and marketing subjects in the public schools under the supervision of a cooperating teacher and university supervisor. Students will develop skills in instruction, evaluation, advisement, administration, and observation. Students are expected to provide their own transportation to and from assigned public schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. MKE students only.

ECI 448 E-Business Applications in Business and Marketing Education 3.
Prerequisite: Junior standing.
Emphasis on design and construction of advanced web pages, business and marketing applications of electronic commerce, as well as economic, social, legal, and ethical issues that are related to conducting business in a virtual environment. Content prepares students to apply principles to the business and marketing education curriculum in the public schools. Credit for both ECI 448 and ECI 548 is not allowed.

ECI 450 Methods and Materials in Teaching English 4.
Prerequisite: ECI 204, ELP 344, PSY 304 or EDP 304; Senior standing and admission to Teacher Education candidacy with a Major in English.
Methods and materials of teaching English in grades 9-12, with an emphasis on lesson planning and demonstrations/practice in teaching literature, study skills, speaking, listening, and writing. Taught during the first seven weeks of the semester.

ECI 451 Teaching Reading Across Disciplines 3.
Prerequisite: Six hours in ED or PSY.
Facilitates study of methods and materials for teaching literacy across disciplines. Develops instructional strategies in the use of print and digital texts and media to support disciplinary learning.
ECI 454 Student Teaching in English/Language Arts 1-12.
Prerequisite: Admission to Student Teaching Professional Semester; For MSL students: ECI 430, 416, 464.
Provides the prospective teacher with experience in the techniques and skills involved in teaching English in secondary schools or Language Arts in middle schools in a selected off-campus station. Student interns become familiar with the total school program, eventually carrying a full teaching load, and participate in relevant school and community activities. Students are required to provide their own transportation. TED and MSL majors only.

Prerequisite: ECI 205, ELP 344, Sr. standing and admission to professional semester with a major in either history, sociology, political science.
Teaching techniques, innovations, and development of teaching and evaluation skills in the area of secondary school social studies. Adaptation of instruction to individual learner differences, and selection and design of instructional materials. Taught during the first six weeks of the semester. Taught during the first six weeks of the semester.

ECI 464 Student Teaching in Social Studies 1-8.
Prerequisite: Admission to professional semester, Corequisite: For LTH, LTP, LTS students: ECI 460. For MSL students: ECI 454, 430, 416.
Skills and techniques in teaching social studies in secondary and middle schools. Each student spends ten weeks in a selected off-campus center. The student demonstrates competencies essential for teaching social studies, becomes familiar with the total school program, and participates in a variety of school and community activities.

ECI 471 Educational Implications of Learning and Developmental Theory 3.
Prerequisite: NC TEACH Participants.
Topics related to human psychological development. Cognitive, social, physical changes, and their interaction among adolescence. Departmental Approval Required.

ECI 472 Interaction of Classroom Management and Instruction 3.
Prerequisite: ECI 471; NC TEACH Participants.
Topics related to teaching in the content area and classroom management. Lesson planning, principles applied to education, measurement and evaluation procedures, behavior therapy, and student motivation. Departmental Approval Required.

ECI 473 Subject Specific Methods 3.
Prerequisite: ECI 472; NC TEACH Participants, Corequisite: ECI 474.
Topics related to cultural factors and how they affect teachers and students in the classroom. Instructional techniques and the development of instructional plans that enhance schooling experiences of culturally diverse students. Departmental Approval Required.

ECI 474 Curriculum and Instruction Practices 1-3.
Prerequisite: ECI 472; NC TEACH participants, Corequisite: ECI 473.
Topics related to essential skills and concepts needed by beginning teachers. The class focuses on questioning, test preparation, discussion skills, familiarity with national standards, multiple teaching strategies, and assessment + evaluation of students. Departmental Approval Required.

ECI 475 Peer Mentoring in Alternative Licensure 3.
Prerequisite: ECI 474; NC TEACH Participants, Corequisite: ECI 476.
Topics related to observing and evaluating fellow teachers in relation to the national state teaching competencies. Classroom observations, videotaping, and group evaluations that are shared and discussed with fellow teachers. Departmental Approval Required.

ECI 476 Curriculum and Instruction Practices 2 3.
Prerequisite: ECE 474; NC TEACH Participants, Corequisite: ECI 475.
Topics related to inquiry, activity based instruction, and constructivist principles. Analysis of principles, strategies and application of new teaching approaches. Departmental Approval Required.

ECI 494 Senior Seminar in Business and Marketing Education 3.
Prerequisite: Admission to Professional Semester; MKE Business and Marketing Education Majors, Corequisite: ECI 447.
Discussion and analysis of problems, trends, and issues experienced while student teaching in the public schools.

ECI 496 Special Topics in Education 1-3.
Prerequisite: Junior standing or Senior standing.
Individual or group study of special topics in professional education. The topic and mode of study are determined by the faculty member after discussion with the student.

ECI 500 Theory and Practice In Teaching Diverse Populations 3.
Prerequisite: Graduate standing.
Analysis of literature and research in related to impact of cultural factors on teaching and learning in contemporary schools. Exploration of teaching techniques and curricular directions designed to improve school experiences for diverse populations in K-12 settings.

Prerequisite: 12 sem. hrs. graduate ED and PSY.
Origin, development, and current status of elementary and secondary school curriculum and an evaluation of trends and issues likely to influence the curriculum in the future.

ECI 502 Continuous Improvement of School Technology Initiatives 3.
Prerequisite: Graduate standing.
Introduction to the models, strategies, and tools for evaluating and making informed decisions about technology initiatives; examination of technology evaluation case studies, evaluation proposals, and stakeholder reports.

ECI 505 Issues and Trends in Foreign Language Education: Theory & Practice 3.
Prerequisite: Graduate standing.
An exploration of theory and practice issues related to foreign language teaching. Inquiry into proficiency-oriented instruction, innovative methodological approaches, the National Standards and learning scenarios, integrating culture, options for testing and assessment, content-based instruction, the role of grammar in second language acquisition, teaching foreign language students with learning disabilities, and Foreign Language in the Elementary School (FLES) in North Carolina. Students will examine case studies related to these topics and engage in a classroom action research project.

ECI 506 Instructional Technology in Foreign Language Education: Addressing the National 3.
Prerequisite: Graduate standing.
Hands-on experience in appropriately selecting and applying a number of instructional technologies to foreign language teaching and learning in relation to the current National Standards. Analysis and use of effective technology tools including hardware, software, and courseware. Emphasis will be on the application of Technology-Enhanced Language Learning (TELL) as it integrates the National Standards’ goals of Communication, Cultures, Connections, Comparisons, and Communities.
ECI 507 Social Justice Education 3.
Prerequisite: ECI 500.
Introduction to principles of social justice education and their centrality in progressive policies and pedagogies that lead to equity in all teaching contexts. Students will develop strategies for successfully incorporating a social justice education framework in scholarship and professional practice.

ECI 508 Teachers as Leaders 3.
Prerequisite: Graduate standing.
Examines teacher leadership research, theory, and practice. Prepares teachers to assume leadership in classrooms, schools, school systems, and the larger educational community. Independent research projects required.

ECI 509 Special Problems in Curriculum and Instruction 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 510 Research Applications In Curriculum and Instruction 3.
Prerequisite: ST 507, Doctoral student, C and I Major.
Focus on current issues and research methods used in the areas of curriculum development and supervision, instructional technology, English education, middle grades education, reading education, social studies education and special education.

ECI 511 Technology Integration Theory and Practice 3.
Prerequisite: Graduate standing.
Foundational study of technology integration standards, models, and conditions informed by research. Analysis of micro classroom and macro school/institutional technology plans, and development of sample technology plans and projects representative of integration across curricular areas.

ECI 512 Emerging Technologies for Teaching and Learning 3.
Examination of emerging technologies as applied in educational settings with a focus on related research, case studies, theoretical underpinnings, and strategies for effective integration.

ECI 513 Teaching and Learning with Digital Video 3.
Prerequisite: Graduate standing.
Development and implementation of digital video within educational contexts and situations. Design of educational watching, analyzing, and creating activities with video. Application of conventions and genres of digital video capture and editing to sample technology projects across curricular areas.

ECI 514 Multimedia Design and Applications in Instruction 3.
Prerequisite: Graduate standing.
Examination of learning theories and research-based principles for multimedia design to select/apply appropriate digital resources and create maximally effective educational products.

ECI 515 Online Collaborations in Education 3.
Prerequisite: Graduate standing.
Examination of models of collaboration, sample online collaborative strategies and projects, tools supportive of cross-classroom collaborations, and research findings from collaborative initiatives.

ECI 516 Design and Evaluation Of Instructional Materials 3.
Prerequisite: Graduate standing.
Characteristics and selection of various media for instruction and their use in educational settings. Design and production of instructional materials. Analysis of research in the field. Individualized projects and assignments. Application of grounded research and theory concerning learning to design of instructional materials. Structured projects and practical experiences used to transfer design principles and evaluate instructional products.

ECI 517 Theoretical Foundations of Advanced Learning Environments 3.
Examination and application of behavioral, cognitive, and constructivist theoretical frameworks underlying the design and development of advanced technology-enhanced learning environments.

ECI 518 Digital Learning Program and Staff Development 3.
Prerequisite: ECI 511, ECI 514, ECI 515, ECI 642.
Study and application of principles related to digital learning program planning, facilities and resource management, and staff development in K-12 settings.

ECI 519 Special Problems in Digital Learning and Teaching 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in digital learning and teaching selected from areas of current concern to practitioners in education.

ECI 520 The Teaching Of Composition 3.
Prerequisite: 9 hrs. of ED, PSY and/or ENG;.
For classroom teachers. Practical field-tested ideas to help students improve as writers by focusing on composition as a process as well as a product. Activities for teaching prewriting, drafting, revising, proofreading, grammar and evaluating with suggestions for individual and group learning. Writing in content areas and composition research/theory. To take this course in sum. as part of Capital Area Writing Project, student must apply and be selected.

ECI 521 Teaching Literature For Young Adults 3.
Prerequisite: Senior standing or Graduate standing or PBS status.
Designed to acquaint in-service and pre-service teachers with breadth and diversity of contemporary literature for adolescents, with emphasis on teaching young adult literature. Addresses history and themes of young adult literature, readability of materials, reading preferences, literary merit, skills that can be taught through literature, censorship, motivating students to read and organizing literature units.

ECI 522 Trends and Issues in English Language Arts Education 3.
Prerequisite: Graduate standing.
Consideration of past, current, and future trends and issues in English Language arts instruction, standards, and methodologies. Examination of research, theory, and practice in concert with trends, issues, and questions. Independent research projects required.

ECI 523 Teacher as Researcher 3.
Prerequisite: Graduate standing.
This course is designed to introduce the methods and skills required for designing, conducting, interpreting, and applying action research - the systematic inquiry into curriculum, instruction, teaching, and learning. This course will focus on reflective inquiry and practical applications.

ECI 524 Theory and Research in Global Learning 3.
An examination of theoretical frameworks for global learning and comparative studies of various national approaches to K-12 education. This course provides students with multiple lenses through which to consider how we teach and learn given the demands and opportunities present in our interconnected world.
ECI 525 Contemporary Approaches In the Teaching Of Social Studies 3.
Prerequisite: Advanced Undergraduate standing or Graduate standing.
Analysis of principles, strategies and application of new teaching approaches. Structured projects and practical experiences.

ECI 526 Theory and Research On Teaching and Learning Social Studies 3.
Prerequisite: ECI 530 or ECI 525.
A critical analysis of the literature relating to the teaching and learning of social studies and the drawing of implications for instructional practices.

ECI 528 Strategies for Teaching English in Secondary Schools 3.
Methods and materials of teaching English in grades 9-12, with and emphasis on lesson planning and demonstrations/practice in teaching literature, study skills, speaking, listening, media literacy, and writing. Some classes and assignments will be completed in a field setting.

ECI 530 Social Studies In the Elementary School 3.
Prerequisite: Six hrs. in ECI.
Advanced professional training in teaching of social studies for middle grades and elementary teachers, including in-depth introduction to research-based teaching strategies, instructional resources and literature of the field.

ECI 531 Advanced Writing in Education 3.
Appropriate for any specialty area in Education. Focus on writing required in graduate courses, research reviews for educational reports and National Board Certification, writing for educational journals, theses, and dissertations. Opportunities to gain knowledge, tools, and strategies to meet the academic community's standards. Strategies to develop and/or enhance form, style, content, quality of academic writing, and on researching, composing, revising, and editing. Students will compose, self-evaluate and give feedback on the work of their peers. Graduate status.

ECI 535 Methods and Materials for Teaching Social Studies in the Middle Grades 3.
For preservice middle school social studies teachers. Focus on: teaching and evaluation skills, adaptation of instruction to individual learner differences, identification and creation of instructional materials appropriate for use in social studies teaching. Cannot earn credit for ECI 435 and ECI 535.

ECI 537 Teaching Children's Literature 3.
Instructions for educators in quality children's literature, specific needs of young reader, genres of children's literature, strategies for instructing children's literature, ways to target reader's interests, and design of literature units.

ECI 540 Reading In the Elementary School 3.
Prerequisite: Six hrs. ED or PSY.
Theoretical foundations of reading instruction and current methods and materials for teaching reading, with emphasis on planning and implementing reading programs for children in kindergarten through grade six.

ECI 541 Reading In the Content Areas 3.
Prerequisite: Six hours in ED or PSY.
Methods in instruction for applying reading to content areas, with emphasis on means of improving comprehension, vocabulary and learning strategies in subject matter classrooms.

ECI 543 Diagnosis Of Reading Disabilities 3.
Prerequisite: ECI 540 or ECI 541.
Formal and informal instruments for diagnosing reading disabilities including completion of a diagnostic case study describing reading performance of a disabled reader.

ECI 544 Remediation Of Reading Disabilities 3.
Prerequisite: ECI 543.
Advanced approaches to reading remediation including theory and research related to remedial instructional strategies, analyses of instructional designs and evaluations of effectiveness of intervention programs.

ECI 545 Theory and Research in Literacy 3.
Prerequisite: ECI 540.
Advanced study of theoretical models of reading, research issues in reading and in other language processes. In-depth theoretical models of reading. Emphasis on critical examination and analysis of research investigating reading acquisition, maturereading behavior and related language processes.

ECI 546 New Literacies & Media 3.
Critical analysis of new literacies that are prompted by emerging technologies and participatory media in K-12. Design and application of new literacies and media instructional practices to literacy curriculum and other discipline areas.

ECI 547 Knowledge Construction: Implications for Multicultural Education 3.
Prerequisite: ECI 500.
Exploration of sociopolitical factors involved in the construction of knowledge in education as well as the implications for practitioners and learners in schools and other educational settings. Particular emphasis on critiquing traditional epistemologies that limit the production, dissemination, and validation of progressive discourses in education in order to promote the production of knowledge that affirms the principles of social justice education.

ECI 548 E-Business Applications in Business and Marketing Education 3.
Emphasis on design and construction of advanced web pages, business and marketing applications of electronic commerce, as well as economic, social, legal, and ethical issues that are related to conducting business in a virtual environment. Content prepares students to apply principles to the business and marketing education curriculum in the public schools. Credit for both ECI 448 and ECI 548 is not allowed.

ECI 549 Special Problems in Reading 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in reading education selected from areas of current concern to practitioners in education.

ECI 550 Foundations Of Middle Years Education 3.
Prerequisite: 6 hours of ED or PSY.
Examination of five major aspects of middle years education: (a) history and purposes of middle/junior high school, (b) pre- and early adolescent needs, interests and abilities, (c) curriculum design and content, (d) teaching methods and (e) school organization. Emphasis on both theoretical understandings and effective classroom strategies.
ECI 551 Teaching/Learning Approaches For Emerging Adolescents 3.
Prerequisite: ECI 550; Graduate standing.
Exploration of teaching/learning approaches appropriate to emerging adolescents. Learning styles; interdisciplinary inquiry; community-based curriculum; simulations and games; learning centers; minicourses; design of physical space; all-school activities.

ECI 552 Program Development & Evaluation in Youth & Family Settings 3.
Historical and contemporary foundations of program development and evaluation in non-formal, community-based family life and youth development settings are examined including theory, research, and three holistic program development constructs: 1) planning; 2) design and implementation; 3) impact evaluation and accountability.

ECI 553 Applied Concepts in Child and Youth Development 3.
This course explores the fundamental concepts of child and youth development (including early childhood through adolescence) as applied to programmatic and organizational contexts. A special focus is placed upon the concepts as applied to Community Youth theories & practice.

ECI 554 Collaborations & Partnerships in Family & Youth Settings 3.
To prepare educators (formal and non-formal) to better establish, lead and manage collaborations and partnerships in family settings and those that support holistic community-based youth development organizational systems. Specific foci include: types and levels of partnerships; environmental scanning and socio-organizational linkage contextual factors affecting community collaborations; leadership factors affecting community collaborations; and human, financial and programmatic management in collaborations. Some on-campus meetings are required.

ECI 555 Organizational Systems in Youth and Family Settings 3.
Prerequisite: ECI 506.
Preparation for current and future community family and youth development professionals leading and managing community-based organizations. Course includes: fundamentals of management and leadership; institutional and organizational structures; administrative and strategic planning; working with advisory and governing groups; marketing and program delivery systems; information management systems; and human resource, financial, facilities and risk management systems.

ECI 556 Collaborations & Partnerships in Family & Youth Settings 3.
Preparation for current and future community-based youth and family professionals to better manage volunteers in local program service delivery. Specific foci include: volunteerism as a social phenomenon; volunteer resource management; new forms of volunteerism; and future trends in volunteerism. Restricted to graduate and post-baccalaureate students only.

ECI 557 Professional Development in Business and Marketing Education 3.
Prerequisite: Graduate standing.
Designed to develop competencies needed to be a successful business and marketing education programs, including career guidance; the management of DECA or FBLA chapter; supervision of work-based learning strategies; and school program promotion and development. ED & MKZ students only. Requires instructor approval.

ECI 558 Advanced Instructional Strategies in Business and Marketing 3.
Prerequisite: ECI 561.
Advanced strategies and techniques related to teaching and learning in the business and marketing education curricula, classrooms, workplaces, and technology environments in middle and secondary education. For ED & MKZ students only.

ECI 561 Curriculum and Instruction in Business and Marketing Education 3.
Prerequisite: Graduate standing.
Designed to develop competencies needed to be a successful Business and Marketing Education Teacher-Coordinator. Focus primarily on the activities involved in planning and managing the curriculum and instructional skills needed to effectively implement the curriculum and meet educational needs of middle and high school students. For ED & MKZ students. Requires instructor approval.

ECI 562 Program Management in Business and Marketing Education 3.
Prerequisite: ECI 561.
This course includes the administration of middle and secondary business and marketing education programs, including career guidance; the management of DECA or FBLA chapter; supervision of work-based learning strategies; and school program promotion and development. ED & MKZ students only. Requires permission of instructor.

ECI 564 Social Studies MAT Program.
Prerequisite: ECI 563.
Designed to develop competencies needed to be a successful Business and marketing education programs, including career guidance; the management of DECA or FBLA chapter; supervision of work-based learning strategies; and school program promotion and development. ED & MKZ students only.

ECI 565 Special Problems in Business and Marketing Education 3.
Prerequisite: ECI 585.
Field of learning disabilities, including definitions, prevalence, etiology, characteristics and current educational trends for educating students with learning disabilities.
ECI 571 Methods and Materials In Learning Disabilities 3.
Current methods and materials for the teaching students with learning disabilities in elementary and/or secondary schools, including curriculum and instructional techniques. Focus on examination of commercial materials and development of teacher-made materials for use with students with learning disabilities.

ECI 572 Resource Teaching In Special Education 3.
Prerequisite: ECI 585.
Resource teaching in area of special education, with emphasis on resource teaching with students with special needs. Types of resource programs, establishment and maintenance of a program, selection of students, curriculum and materials.

ECI 573 Applied Behavior Analysis for Teachers 3.
Concepts and procedures involved in design and implementation of techniques for managing the behavior of students in classroom setting. Focus on methods for defining, measuring, increasing, decreasing, maintaining, and generalizing classroom behaviors in all learners.

ECI 574 Intellectual Disabilities 3.
Prerequisite: ECI 585.
Content presented includes definitions, classifications, and assessment of person with intellectual disability from medical, sociological, and educational points of view. Issues related to labeling, etiology, characteristics, levels of severity, litigation, legislation, family and societal issues, history, and controversies are emphasized related to persons with intellectual disability.

ECI 575 Communication Disorders In the Classroom 3.
Prerequisite: ECI 570.
Occurrence of communication disorders in the school-age population, including types of disorders, prevalence, etiology, characteristics and corrective therapy. Focus on communication disorders among exceptional students and classroom teacher's role in working with communication disorders.

ECI 576 Teaching Functional and Life Skills to Students with Disabilities 3.
Prerequisite: ECI 585 and ED 574.
Methods of instruction and materials related to teaching children and persons with mild-moderate levels of disability are emphasized. Effective general pedagogical approaches are stressed, as well as the teaching of functional academic skills, curricula used in instructions, teaching social and adaptive behavior as well as daily living skills, and transition-related skills necessary for independent adult life.

ECI 577 Education Of Severely Handicapped 3.
Prerequisite: ECI 585 or ECI 574.
Severe and profound mental retardation and autism, including assessment procedures, educational and social/vocational programs, instructional strategies and evaluation. Legal and ethical issues involved in working with severely handicapped.

ECI 579 Organization and Behavioral Management of Inclusive Classrooms 3.
To increase students' knowledge of persons with high incidence disabilities (i.e., learning disability, mild intellectual disability, and serious emotional disability), and how to manage the behavior of all pupils in educational environments. Characteristics of students with high incidence disabilities will be emphasized, as well as strategies to reduce the likelihood of problem behavior of all pupils in the classroom.

ECI 580 Transition Program For Students With Mild Disabilities 3.
Prerequisite: ECI 585.
Educational and other procedures involved in providing transition programming to students with mild disabilities. Examination of secondary-level special education service delivery, as well as post-secondary interventions, from critical, practical, empirical and theoretical perspectives.

ECI 581 Educational Diagnosis and Prescription For Children With Exceptionalities 3.
Prerequisite: ECI 585.
Concept of educational diagnosis of students with exceptionalities, including examination of educational diagnostic procedures in current use in special education. Development of informal diagnostic techniques and procedures for adapting curriculum and instruction for learner with exceptionalities.

ECI 583 Behavior Disorders 3.
Prerequisite: ECI 585.
Definitions, etiology, characteristics, philosophies and approaches to educational programming for children and youth with behavior disorders, including emotionally handicapped, autistic and socially maladjusted.

ECI 584 Intervention for Behavior Problems of Students with Disabilities 3.
Prerequisite: ECI 583.
Curriculum materials, instructional strategies and behavior management techniques related to teaching children and youth with behavioral disorders including individualized instruction, group process, organization and evaluation of classroom programs, parent involvement, community resources and teachers' personal and professional growth and development.

ECI 585 Education Of Exceptional Children 3.
Prerequisite: 9 hrs. of ED or PSY.
Introduction to field of special education. Focus on historical overview, definitions and terminology in basic areas of exceptionality; etiological factors in exceptionality; developmental and learning characteristics of each area of exceptionality; and educational settings and strategies employed in special education. Review of current educational laws and policies affecting special education.

ECI 603 Advanced Seminar In Literacy Research 3-6.
Prerequisite: ECI 648.
Critical analyses of research and methodology in reading comprehension processes and strategies for comprehension and retention of written discourse. Opportunity for design and conduct of a research project in reading or related area.

ECI 606 Seminar on Teacher as Learner: Developmental Theory, Research and Practice 3.
Prerequisite: Graduate standing (6 hrs course work at 500-level). Analysis of major contemporary theories and research of learning and development as a basis for individual and organizational change and development in educational settings.

ECI 607 Advanced Seminar in Multicultural Education 3.
Prerequisite: Graduate standing and ECI 500.
Application and analysis of research and scholarship in multicultural education and topics related to effective schools for contemporary culturally diverse student populations in K-12 settings.

ECI 620 Special Problems In Curriculum and Instruction 1-6.
Prerequisite: Six hrs. of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.
ECI 630 Independent Study in Curriculum and Instruction 1-6.
Independent curriculum or research project in curriculum and instruction.

ECI 640 Practicum in Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised practical experiences in schools and area agencies concerned with curriculum and instruction or educational supervision.

ECI 641 Practicum in Mentoring and Coaching 1-6.
Prerequisite: ECI 705, Graduate standing in College of ED and PSY.
Supervised practical experiences in which participants become mentor to a student teacher or a teacher in a school system.

ECI 645 Diagnostic-Prescriptive Practicum in Reading 3.
Prerequisite: ECI 540, ECI 541 and ECI 543; Graduate standing in College of ED and PSY.
Supervised teaching experience with students using diagnostic test data to prescribe remedial programs for reading-disabled individuals, implementing instructional prescriptions and evaluating success of remedial plans.

ECI 647 Practicum in Business and Marketing Education 3.
Prerequisite: ECI 569.
Supervised practical experiences in schools and area agencies concerned with business and marketing education.

ECI 648 Practicum in Special Education 1-6.
Prerequisite: Graduate standing in College of ED and PSY.
Supervised practical experiences in schools and area agencies concerned with teaching children and adolescents with disabilities.

ECI 650 Internship in Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with curriculum development and/or educational supervision.

ECI 652 Field-Based Applications of Digital Learning and Teaching 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities to design, test, and revise digital learning and teaching solutions in authentic, field-based settings.

ECI 654 Internship in Elementary Education 1-6.
Prerequisite: 3 hrs. grad.-level elementary education course work, Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with elementary grades education.

ECI 656 Internship in Middle Grades Education 1-6.
Prerequisite: ECI 550, ECI 551, Graduate standing in College of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with the education of young adolescents.

ECI 657 Internship in Business and Marketing Education 1-6.
Prerequisite: ECI 561.
Supervised opportunities for advance professional development in contexts concerned with business and marketing education. Requires instructor approval.

ECI 658 Internship in Special Education 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with special education.

ECI 681 Seminar in Special Education Literacy 3.
Prerequisite: ECI 540 or ECI 541 and ECI 581, ECI 585.
A case study approach is used in the seminar that requires the application of assessment techniques and instructional intervention methodologies in literacy for K-12 students with disabilities. Assigned activities require access to and experience in schools and/or related settings. This seminar is designed to be completed during the last half of the graduate program. It is restricted to graduate students in SPE, SPL, SPB or consent of instructor.

Prerequisite: ECI 585.
This seminar is designed to prepare special education teachers to provide empirically supported instruction in numerical concepts and skills to students with disabilities in special education and general education settings. Particular attention will be paid to student characteristics that impact learning in arithmetic and mathematics and to addressing state and national curriculum standards using instructional organization and strategies that have been shown through research to be effective for this population. Field work in schools and/or related settings is required. Restricted to students in SPE, SPB, SPL, or by consent of instructor.

ECI 683 Seminar in Special Education Learning Strategies 3.
Prerequisite: ECI 585.
This seminar is designed to prepare special education teachers to evaluate and teach empirically supported learning strategies to students with disabilities in special education and collaborative settings. Particular attention will be paid to learning strategies shown to help students with disabilities organize, learn, and apply facts, skills and routines that provide access to and mastery of critical information across the curriculum. Field work in schools and/or related settings is required. Restricted to graduate students in SPE, SPB, SPL, or by consent of instructor.

ECI 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ECI 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

ECI 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

ECI 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.
ECI 692 Research Projects In Curriculum and Instruction 1-3.  
Prerequisite: ELP 532.  
Project or problem in research in education for graduate students, supervised by members of graduate faculty. Research chosen on basis of individual students’ interests and not to be part of thesis or dissertation research.

ECI 693 Master’s Supervised Research 1-9.  
Prerequisite: Master’s student.  
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

ECI 695 Master’s Thesis Research 1-9.  
Prerequisite: Master’s student.  
Thesis research.

ECI 696 Summer Thesis Research 1.  
Prerequisite: Master’s student.  
For graduate students whose programs of work specify no formal coursework during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master’s student.  
For students who have completed all credit hour requirements and full-time enrollment for the master’s degree and are writing and defending their theses.

ECI 700 Curriculum Theory and Development 3.  
Prerequisite: 9 sem. hrs. graduate PSY, ECI 502, ECI 514.  
Theory and research in behavioral sciences and education designed to provide theoretical background for development of elementary and secondary curricula. Exploration of knowledge base and skills for critical review of curricula and instructional materials and provision of an application opportunity.

ECI 705 Instructional Coaching and Supervision Of Teachers 3.  
Theory, research and practice of the professional role of a supervisor in the development of the effective and self-analytic teacher: pre-service (student teacher) and in-service (beginning and experienced teacher). For persons with at least two years of teaching experience in K-12 schools.

ECI 709 Special Problems In Curriculum and Instruction 1-6.  
Prerequisite: Six hrs. of ED or PSY.  
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 711 Computer Applications and Curriculum Integration 3.  
Prerequisite: Graduate standing.  
Use and evaluation of existing educational software, research findings with respect to integration of computers and new technologies in instruction.

ECI 714 Multimedia Design and Applications in Instruction 3.  
Prerequisite: Six hrs. ED or PSY.  
Emphasis on use and evaluation of existing educational software and research findings with respect to uses of computers in instruction.

ECI 715 Internet Applications and Web Page Design in Instruction 3.  
Prerequisite: Six hrs. ED or PSY.  
Instructional design principles underlying development of microcomputer-based instructional software and accompanying materials and programming principles and their implementation in courseware development. Additional topics include authoring languages, programming languages and graphics.

ECI 716 Design and Evaluation Of Instructional Materials 3.  
Prerequisite: Graduate standing.  
Characteristics and selection of various media for instruction and their use in educational settings. Design and production of instructional materials. Analysis of research in the field. Individualized projects and assignments. Application of grounded research and theory concerning learning to design of instructional materials. Structured projects and practical experiences used to transfer design principles and evaluate instructional products.

ECI 717 Advanced Multimedia Design and Applications in Instruction 3.  
Prerequisite: ECI 511, ECI 514.  
Advanced study and application of instructional design principles underlying development, evaluation, and integration of multimedia and hypermedia in K-12 settings.

ECI 718 Digital Learning Program and Staff Development 3.  
Prerequisite: ECI 511, ECI 514, ECI 515, ECI 642.  
Study and application of principles related to digital learning program planning, facilities and resource management, and staff development in K-12 settings.

ECI 719 Special Problems in Digital Learning and Teaching 1-6.  
Prerequisite: Six hours of ED or PSY.  
In-depth study of topical problems in digital learning and teaching selected from areas of current concern to practitioners in education.

ECI 720 The Teaching Of Composition 3.  
Prerequisite: 9 hrs. of ED, PSY and/or ENG; to take this course in sum. as part of Capital Area Writing Project, student must apply and be selected.  
For classroom teachers. Practical field-tested ideas to help students improve as writers by focusing on composition as a process as well as a product. Activities for teaching prewriting, drafting, revising, proofreading, grammar and evaluating with suggestions for individual and group learning. Writing in content areas and composition research/ theory.

ECI 721 Special Problems in Social Studies Education 1-6.  
Prerequisite: Six hours of ED or PSY.  
In-depth study of topical problems in social studies education selected from areas of current concern to practitioners in education.

ECI 722 Special Problems in English Education 1-6.  
Prerequisite: Six hours of ED or PSY.  
In-depth study of topical problems in English education selected from areas of current concern to practitioners in education.

ECI 723 Literacy Theory and Research 3.  
Prerequisite: ECI 540.  
Advanced study of theoretical models of reading, research issues in reading and in other language processes. In-depth theoretical models of reading. Emphasis on critical examination and analysis of research investigating reading acquisition, maturereading behavior and related language processes.

ECI 801 Seminar In Curriculum and Instruction 1-3.  
Prerequisite: Doctoral student.  
Consideration of contemporary issues, trends and recent research and development findings in curriculum and instruction.

ECI 803 Advanced Seminar In Literacy 3.  
Prerequisite: ECI 545.  
Critical analyses of research and methodology in reading comprehension processes and strategies for comprehension and retention of written discourse. Opportunity for design and conduct of a research project in reading or related area.
ECI 804 Seminar On Attention Deficit Hyperactivity Disorder, Research and Treatment 3-6. 
Prerequisite: 9 hrs. grad. credit in PSY or SPE. 
Critical analysis of theory, research and interventions in Attention-Deficit-Hyperactivity-Disorder. Reading and synthesis of literature and student-led class discussions of such topics as characteristics, diagnosis, etiology, long-term outcomes and management of ADHD.

ECI 806 Seminar on Teacher as Learner: Developmental Theory, Research and Practice 3-6. 
Prerequisite: Graduate standing (6 hrs course work at 500-level). 
Analysis of major contemporary theories and research of learning and development as a basis for individual and organizational change and development in educational settings.

ECI 807 Advanced Seminar in Multicultural Education 3. 
Prerequisite: Graduate standing and ECI 500. 
Application and analysis of research and scholarship in multicultural education and topics related to effective schools for contemporary culturally diverse student populations in K-12 settings.

ECI 820 Special Problems In Curriculum and Instruction 1-6. 
Prerequisite: Six hrs. of ED or PSY. 
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 830 Independent Study in Curriculum and Instruction 1-3. 
Independent curriculum or research project in curriculum and instruction.

ECI 840 Practicum in Curriculum and Instruction 1-6. 
Prerequisite: Graduate standing in Col. of ED and PSY. 
Supervised practical experiences in schools and area agencies concerned with curriculum and instruction or educational supervision.

ECI 841 Practicum In Mentoring and Coaching 1-6. 
Prerequisite: ECI 705, Graduate standing in College of ED and PSY. 
Supervised practical experiences in which participants become mentor to a student teacher or a teacher in a school system.

ECI 847 Practicum in Business and Marketing Education 1-6. 
Supervised practical experiences in schools and area agencies concerned with business and marketing education.

ECI 850 Internship In Curriculum and Instruction 1-6. 
Prerequisite: Graduate standing in Col. of ED and PSY. 
Supervised opportunities for advanced professional development in contexts concerned with curriculum development and/or educational supervision.

ECI 851 Internship In Mentoring 1-6. 
Prerequisite: ECI 845 and ECI 705, Graduate standing in Col. of ED and PSY. 
Supervised opportunities teaching educational personnel in local school systems how to serve as mentors to their colleagues.

ECI 880 Directed Study in Curriculum and Instruction 1-6. 
Curriculum or research project in curriculum and instruction under the direct supervision of a faculty member.

ECI 885 Doctoral Supervised Teaching 1-3. 
Prerequisite: Doctoral student. 
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ECI 890 Doctoral Preliminary Examination 1-9. 
Prerequisite: Doctoral student. 
For students who are preparing for and taking written and/or oral preliminary exams.

ECI 892 Research Projects In Curriculum and Instruction 1-3. 
Prerequisite: ELP 732. 
Project or problem in research in education for graduate students, supervised by members of graduate faculty. Research chosen on basis of individual students' interests and not to be part of thesis or dissertation research.

Prerequisite: Doctoral student. 
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student. 
Dissertation research.

ECI 896 Summer Dissertation Research 1. 
Prerequisite: Doctoral student. 
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student. 
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Department of Educational Leadership, Policy, and Human Development (ELPHD)

This program is only offered at the Graduate level. For more information on this program, please visit https://ced.ncsu.edu/elphd.

Department of Science, Technology, Engineering and Mathematics Education (STEM)

http://ced.ncsu.edu/step

The Department of Science, Technology, Engineering and Mathematics Education prepares undergraduate students to become teachers of mathematics, science and technology. The department traditionally prepares competent professionals who have strong subject matter backgrounds and pedagogical skills. Departmental majors may seek licensure for teaching high school grades 9-12 or middle grades 6-9. Students in the high school curriculum in mathematics or science education take approximately 45 percent of their program in science and mathematics and may complete a double major, receiving a second degree in mathematics, statistics, or one of the sciences. Students in Technology, Engineering and Design Education may be licensed as teachers of technology programs in middle grades and high schools, 7-12. All pre-service teaching programs provide a broad background; an in-depth study in mathematics, technology or an area of science; and the development of professional competencies. In addition, the technology education curriculum provides a non-teaching
graphic communications option with a general background for a variety of employment opportunities in business and industry. A minor in Technology, Engineering and Design Education is available.

The department also offers a minor in Graphic Communications in which the student develops proficiency in applying graphic techniques in both career and leisure activities.

Specific curriculum requirements are available online: https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php

EMS - Math Science Education Courses

EMS 204 Introduction to Mathematics Education 2. 
Prerequisite: ED 100; Corequisite: ED 204.
This course introduces students to the teaching of Mathematics in middle and high schools. Students will become familiar with state mathematics standards and national recommendations for teaching mathematics. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

EMS 205 Introduction to Teaching Science 2. 
Prerequisite: Sophomore standing; Corequisite: ED 204.
Introduces perspective teachers to the teaching of science in the middle school and high school. Topics include nature of the science learner, common alternative conceptions in science, introduction to science teaching strategies, and the science curriculum in middle and high school. Sophomore status or higher is required. Sophomore status or higher is required.

EMS 296 Special Topics in Education 1-3. 
Individual or group study of particular areas of education at the freshman and sophomore levels. Specific topics will vary from semester to semester.

EMS 373 Instructional Materials in Science 3. 
Prerequisite or Corequisite: EMS 205 and ED 204.
Development and selection of teaching materials that reflect concepts of content and emphasis in middle and secondary school science. Experimental and laboratory approaches, including use of microcomputer and video technologies. 2 lecture hours and 6 lab hours per week for 7 weeks.

EMS 375 Methods of Teaching Science I 3. 
Prerequisite: EMS 205, ED 204.
Classroom, laboratory, and internship experiences for pre-service teachers to effectively prepare, plan and assess learning environments in the middle and secondary science classroom and instructional laboratory. Emphasis placed on knowledge, skills, and dispositions for inquiry-based learning environments.

EMS 470 Methods and Materials for Teaching Mathematics 3. 
Prerequisite: Admission to professional semester.
Purposes, methods, curricula and evaluation practices for teaching mathematics in middle school and high school. Taught during the first seven weeks of the semester.

EMS 471 Student Teaching in Mathematics 1-12. 
Prerequisite: Admission to professional semester, Corequisite: EMS 470.
Supervised experience in a selected middle or secondary school for the semester, to develop and practice the skills and techniques for teaching mathematics. Students are required to provide their own transportation. MED, MSM and MSD majors only.

EMS 472 Teaching Mathematics Topics in Senior High School 3. 
Prerequisite: EMS 480 passed with a C or better. 
Preparation for teaching mathematics from both the college repertoire (algebra, geometry, trigonometry, advanced mathematics) and general courses (pre-algebra, technical and consumer mathematics) offered in grades 9-12. This course includes a school-based field experience. Students are required to provide their own transportation. MED Majors only.

EMS 473 Teaching Mathematics Topics in Middle Grades 3. 
Prerequisite: EMS 480 passed with a C or better.
Methods of teaching arithmetic, geometry, algebra and pre-algebra topics in grades 6-9. Emphasizes approaches that actively involve learners and relate operations on concrete and pictorial representations to mathematical symbols. This course includes a school-based field experience. Students are required to provide their own transportation. MSM Majors only.

EMS 474 Teaching Mathematics Topics in the Middle Grades 3. 
Prerequisite: EMS 480 passed with a C or better.
Goals, methods, curricula, and evaluation practices in teaching the physical and biological sciences at the middle and secondary school levels. Taught during the fall.

EMS 475 Methods of Teaching Science II 3. 
Prerequisite: EMS 375.
Supervised experience in a selected middle or secondary school for the semester, to develop and practice the skills and techniques for teaching Science. Students are required to provide their own transportation. SED and MSS majors only. Students are required to purchase internships liability insurance to participate in student teaching. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge.

EMS 476 Student Teaching in Science 1-12. 
Prerequisite: EMS 475; and Corequisite: EMS 495.
Supervised experience in a selected middle or secondary school for the semester, to develop and practice the skills and techniques for teaching Science. Students are required to provide their own transportation. SED and MSS majors only. Students are required to purchase internships liability insurance to participate in student teaching. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge.

EMS 480 Teaching Mathematics with Technology 3. 
Prerequisite: EMS 204 with a B- or better; MA 131 or 141.
Prepares prospective mathematics teachers to use technology in their classrooms to assist students in formulating and solving math problems in the middle and high school mathematics curricula.
EMS 490 School Mathematics from an Advanced Perspective 3.
Prerequisite: MA 403 or MA 407, MA 308 or MA 408, MA 205 or MA 305 or MA 405.
This course will serve as a culminating experience for all students majoring in mathematics education and intending to become high school mathematics teachers. Course content includes functions in both secondary and collegiate mathematics, development of euclidean geometry from euclid's elements, and historical overview of algebra, and other mathematics subject matter, a trigonometry review from both triangle basis and function basis, connections between linear algebra and the high school presentation of matrices, and other topics. For Math Education majors only.

EMS 495 Senior Seminar in Mathematics and Science Education 1-3.
Prerequisite: EMS 471.
Focus on theory, research, and methodology of teaching and learning EMS programs.
Course restricted to mathematics education students in the MED, MS or PBS or Graduate Standing.

EMS 496 Special Topics in Education 1-3.
Prerequisite: Junior or senior standing.
Individual or group study of special topics in professional education. The topic and mode of study are determined by the faculty member after discussion with the student.

EMS 505 Methods of Teaching Science I 3.
Graduate students new to science teaching will read current research literature that defines best practices and incorporate these practices to lesson planning that enhances student learning. Classroom, laboratory, and school-based experiences in middle and secondary science classrooms and instructional laboratories will help students to effectively prepare, plan, and assess learning environments. Emphasis placed on the development of knowledge, skills, and dispositions for inquiry-based learning environments. Underlying theoretical framework is constructivism, and experiences will be discussed using current learning theory. PBS or Graduate Standing.

EMS 506 Methods of Teaching Science II 3.
Second course in the MAT science series. Students will plan units of instruction for student teaching, and an emphasis is placed on planning for classroom management and student diversity. Current theoretical frameworks are emphasized in the context of practical field experiences. PBS or Graduate Standing.

EMS 510 Interactions In the Mathematics Classroom 3.
This course focuses on interactions between students and teachers in the mathematics classroom. Topics studied will include: whole class instruction, small group activity, questioning and facilitating classroom discussion. This course will include a field experience in the schools for which students will be required to provide their own transportation. Course restricted to mathematics education students in the MED, MS or MAT programs.

EMS 512 Teaching and Learning Elementary and Middle Grades Mathematics 3.
Prerequisite: EMS 471.
Focus on theory, research, and methodology of teaching and learning mathematics in elementary and middle grades. Emphasizes the development of a foundation for understanding and assessing mathematical growth and learning through historical and psychological sources, research, and reflective practice. Emphasis is placed upon understanding how children come to learn elementary mathematics meaningfully and what this necessarily implies about the way mathematics is taught and how elementary and middle grades education can be improved.

EMS 513 Teaching and Learning of Algebraic Thinking 3.
Prerequisite: EMS 471 or equivalent teaching experience. Teaching and learning of algebra from a developmental perspective; research-based methods for developing students' algebraic thinking; structure and processes used in algebra. Focus on how students develop algebraic ideas from upper elementary grades through Algebra I.

EMS 514 Teaching and Learning of Geometric Thinking 3.
Prerequisite: EMS 471 and either MA 308 or MA 408.
Focus will be on the development of geometric thinking in grades K-12 using multiple instructional approaches, including technology, and considered using different theories of learning and frameworks (e.g., Van Hiele, SOLO taxonomy). Topics may include: measurement, similarity, congruence, properties of 2 and 3 dimensional figures, circles, non-Euclidean geometries. Synthetic, analytic and transformational, formal and informal approaches will be highlighted.

EMS 519 Teaching and Learning of Statistical Thinking 3.
Prerequisite: ST 507 or ST 511.
This course is designed to bridge theory and practice on how students develop understandings of key concepts in data analysis, statistics, and probability. Discussion of students' understandings, teaching strategies and the use of manipulatives and technology tools. Topics include distribution, measures of center and spread, sampling, sampling distribution, randomness, and law of large numbers. Must complete a first level graduate statistics course ( ST 507, ST 511, or equivalent) before enrolling.

EMS 521 Advanced Methods in Science Education I 3.
Prerequisite: Graduate standing in Science Education.
Current research literature will guide the development of plans to improve classroom teaching practices. Action research used to evaluate instructional impact of modifications to classroom strategies. What it means to teach science, what it means to teach a diverse population of students and how to develop, interpret, and implement alternative assessment.

EMS 522 Advanced Methods in Science Education II 3.
Prerequisite: EMS 521 and graduate standing in Science Education.
Examines science instruction through analysis of curriculu, instructional practices, current research on science learning and teaching. Five areas of interest: curriculum, instruction, assessment, diversity, learning environments and technology in science education.

EMS 531 Introduction to Research in Science Education 3.
Prerequisite: Graduate standing in Science Education.
Introduction to techniques and designs specific to and/or in the context of science education research. Analyze and critique findings of other science education researchers in current science education research literature. Perform and interpret quantitative and qualitative analyses commonly used in science education research. Carry out research project focusing on an aspect of science education, communicate research findings in both oral and written form.

EMS 570 Methods and Materials for Teaching Mathematics 3.
Prerequisites: Methods, curricula and evaluation practices for teaching mathematics in middle school and high school. Taught during the first seven weeks of the semester. Credit for both EMS 470 and EMS 570 is not allowed.

EMS 572 Teaching Mathematics Topics in Senior High School 3.
Preparation for teaching mathematics from both the college preparatory (algebra, geometry, trigonometry, advanced mathematics) and general courses (pre-algebra, technical and consumer mathematics) in grades 9-12. Credit for both EMS 472 and EMS 572 not allowed.
Prerequisite: Graduate standing or alternative license program.  
Project-based course to improve the understanding and use of technology tools useful in science teaching. Computer and calculator based laboratory probeware and software, imaging and presentation technologies. Research-based evaluation of tool use in the science laboratory and classroom.

EMS 575 Foundations Of Science Education 3.  
Prerequisite: EMS 475.  
Study and analysis of philosophical, historical, sociological, political and economic factors affecting science education in schools of the U.S. Implications for science education of various learning theories along with models for curriculum development and program planning. Critical analysis of current trends, issues and problems in science education in terms of multiple perspectives.

EMS 577 Improving Classroom Instruction In Science 3.  
Prerequisite: EMS 475.  
Application of major principles of education and psychology to improvement of science teaching in elementary, middle and secondary schools. Emphasis on critical analysis of research and the development of research-based classroom applications. Goals and objectives of science teaching, instructional strategies, development or selection of science materials, evaluation of achievement and elements of a desirable classroom climate.

EMS 580 Teaching Mathematics with Technology 3.  
Prepares mathematics teachers to use technology in their classrooms to assist students in formulating and solving math problems in the middle and high school mathematics curricula. Credit not allowed for both EMS 480 and EMS 580.

EMS 581 Advanced Applications of Technology in Mathematics Education 3.  
Research-based applications of technology tools in secondary and middle school mathematics. Advanced use of various technology tools for learning and teaching mathematics, including design of technology environments, appropriate investigation tasks, and professional development.

EMS 592 Special Problems In Mathematics Teaching 1-6.  
Prerequisite: EMS 471.  
In-depth investigation of topical problems in mathematics teaching chosen from areas of curriculum, methodology, technology, supervision and research.

EMS 594 Special Problems In Science Teaching 1-3.  
Prerequisite: EMS 476.  
In-depth investigation of topics in science education not covered in existing courses. Includes critical analysis of research and may include field work. May be offered on individual basis or as a class.

EMS 621 Special Problems In Mathematics Teaching 1-6.  
Prerequisite: EMS 471.  
In-depth investigation of topical problems in mathematics teaching chosen from areas of curriculum, methodology, technology, supervision and research.

EMS 622 Special Problems In Science Teaching 1-6.  
Prerequisite: EMS 476.  
In-depth investigation of topics in science education not covered in existing courses. Includes critical analysis of research and may include field work. May be offered on individual basis or as a class.

EMS 630 Independent Study in EMS 1-3.  
Detailed investigation of topics of particular interest to graduate students under faculty direction on a tutorial basis. Determination of credits and content by faculty member in consultation with department head.

EMS 641 Practicum In Science and Mathematics Education 1-6.  
Prerequisite: EMS 770 or EMS 775.  
Supervised practicum in appropriate settings both on- and off-campus. Provision for opportunity for development, implementation and evaluation in science and mathematics in clinical environment under faculty supervision.

EMS 651 Internship In Mathematics And Science Education 1-9.  
Prerequisite: Nine hrs. in grad. level courses.  
Utilizing the participant-observed role, required participation in selected educational situations with emphasis upon development of observational skills, ability to record relevant observations by means of written journals, skills in analyzing experiences identifying critical incidents and projection of events and consequences. Student required to develop possible alternative courses of action in various situations, select one of the alternatives and evaluate consequences of selected course of action.

EMS 675 Portfolio Development 1.  
Techniques of portfolio construction for documenting attainment of advanced competencies in science teaching. For students in the last or next to last semester of coursework in the Science Education Masters Program.

EMS 685 Master's Supervised Teaching 1-3.  
Prerequisite: Master's student.  
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

EMS 686 Teaching In College 3.  
Focus on development of competencies to perform fundamental tasks of a college teacher as well as consideration of more long-range tasks such as course development and university responsibilities of a professor. In addition to attending lectures and other types of presentations, students make video tapes of their teaching, develop tests, design introductory courses in their teaching fields and consider current issues related to university and college teaching.

EMS 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.  
Prerequisite: Master's student.  
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

EMS 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.  
Prerequisite: Master's student.  
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

EMS 690 Master's Examination 1-9.  
Prerequisite: Master's student.  
For students in non-thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.
EMS 692 Research Projects In Mathematics and Science Education 1-3.
Prerequisite: ELP 532.
A project or problem in research in education for graduate students, supervised by members of the graduate faculty. The research chosen on basis of individual students' interests and not to be part of thesis or dissertation research.

EMS 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

EMS 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their theses.

EMS 703 Teaching Mathematics and Science In Higher Education 3.
Prerequisite: EMS 770, 621 or 622, Graduate standing.
Examination of collegiate mathematics and science instruction with respect to goals and objectives, design of courses and curricula, innovative programs and facilities, and methods and materials for instruction.

EMS 704 Curriculum Development and Evaluation In Science and Mathematics 3.
Prerequisite: 500-level statistics, PSY 535.
Critical study of elements of curriculum design and theory in mathematics education and science education and examination of evaluation procedures for assessing educational innovations.

EMS 705 Education and Supervision Of Teachers Of Mathematics and Science 3.
Prerequisite: EMS 770 or 621 or 622.
Critical analysis of theories, programs and techniques designed to promote interpersonal interactions leading to more effective teaching of science and mathematics.

EMS 711 Research on the Teaching and Learning of Math at Secondary and Early College Levels 3.
This course familiarizes students with theories and research related to mathematical thinking, learning and teaching at the secondary and early college levels with a focus on the following topics: function, expressions and equations, geometry, proof, limit, calculus, differential equations, and linear algebra. Students will apply theories to analyze secondary and freshmen/sophomore standing mathematical thinking, synthesize research findings, explain difficulties students experience, and design and conduct research. Restriction: at least 18 hrs of 400-500 level mathematics and a PhD student in Mathematics Education.

EMS 712 Teaching Mathematics In Elementary and Junior High School 3.
Prerequisite: EMS 471.
Comprehensive study of teaching mathematics in elementary and junior high schools. Major emphasis on building skills in teaching arithmetic, elementary algebra and intuitive geometry. Thorough search of literature relative to mathematics curricula conducted, designing and sequencing of learning activities, teaching mathematical concepts and relationships, building skill in computation, reading mathematics, problem solving and measurement.

EMS 730 Trends and Issues in Science Education 3.
Prerequisite: Graduate standing.
Provides an in-depth examination and analysis of literature and research in science education as well as current trends in science education reform. Emphasis is placed on the analysis of theoretical models of inquiry. Course includes the development of a review of literature and the formation of research questions specific to science education.

EMS 731 Fundamentals of Research in Science Education: Qualitative and Quantitative Inq 3.
Prerequisite: Graduate standing and ST 507 or 511, Corequisite: ST 508 or 512.
Analyze the range of research designs currently utilized by science education researchers. Develop an understanding of the assumptions and frameworks of different types of inquiry in science education. A brief history of research in science education is examined as a means to orient students to the trends that have taken place. Read, comprehend, and critically analyze qualitative and quantitative designs in science education.

EMS 732 Theoretical and Critical Perspectives of Science Education 3.
Prerequisite: Graduate standing.
Examines current theoretical and critical perspectives of science education. Examines a variety of approaches which re-assess cultural notions of meaning, identity, power, and representation in the sciences and science education. Applies research theory to reform in science education.

EMS 733 Critical Theory In Science Education: Qualitative and Quantitative Inq 3.
Prerequisite: Graduate standing.
Examines critical theory in science education. Examines a variety of approaches which re-assess cultural notions of meaning, identity, power, and representation in the sciences and science education. Applies research theory to reform in science education.

EMS 734 Improving Classroom Instruction In Science 3.
Prerequisite: EMS 471.
The current status of mathematics education with special emphasis on study and critical analysis of current practices in mathematics instruction from elementary school through college.

EMS 735 Foundations Of Mathematics Education 3.
Prerequisite: EMS 475.
Study and analysis of philosophical, historical, sociological, political and economic factors affecting science education in schools of the U.S. Implications for science education of various learning theories along with models for curriculum development and program planning. Critical analysis of current trends, issues and problems in science education in terms of multiple perspectives.

EMS 736 Improving Classroom Instruction In Science 3.
Prerequisite: EMS 475.
Application of major principles of education and psychology to improvement of science teaching in elementary, middle and secondary schools. Emphasis on critical analysis of research and the development of research-based classroom applications. Goals and objectives of science teaching, instructional strategies, development or selection of science materials, evaluation of achievement and elements of a desirable classroom climate.
EMS 786 Teaching in College 3.
Focus on development of competencies to perform fundamental tasks of a college teacher as well as consideration of more long-range tasks such as course development and university responsibilities of a professor. In addition to attending lectures and other types of presentations, students make video tapes of their teaching, develop tests, design introductory courses in their teaching fields and consider current issues related to university and college teaching.

EMS 792 Special Problems in Math Teaching 3-6.
In-depth investigation of topical problems in mathematics teaching chosen from areas of curriculum, methodology, technology, supervision and research.

EMS 794 Special Problems in Science Teaching 3-6.
Prerequisite: EMS 476.
In-depth investigation of topics in science education not covered in existing courses. Includes critical analysis of research and may include field work. May be offered on individual basis or as a class.

EMS 802 Seminar In Mathematics Education 1-12.
Prerequisite: Departmental Majors.
In-depth examination and analysis of literature and research in a particular topic(s) in mathematics education.

EMS 803 Seminar In Science Education 2.
Prerequisite: Department Majors.
In-depth examination and analysis of literature and research in a particular topic(s) in science education.

EMS 821 Special Problems In Mathematics Teaching 1-6.
Prerequisite: EMS 471.
In-depth investigation of topical problems in mathematics teaching chosen from areas of curriculum, methodology, technology, supervision and research.

EMS 822 Special Problems In Science Teaching 1-6.
Prerequisite: EMS 476.
In-depth investigation of topics in science education not covered in existing courses. Includes critical analysis of research and may include field work. May be offered on individual basis or as a class.

EMS 832 Research Applications in Science Education 3.
Prerequisite: EMS 730, EMS 731, ST 508.
Provides students with the opportunity to design science education research including formulating research questions, designing the methodologies to be used in the study, selecting assessments and protocols, and identifying appropriate analyses. Theoretical frameworks and associated assumptions are identified and critiqued. Develop advanced skills in reviewing different types of science education research and identifying issues of validity and reliability.

EMS 841 Practicum In Science and Mathematics Education 1-6.
Prerequisite: EMS 770 or EMS 775.
Supervised practicum in appropriate settings both on- and off-campus. Provision for opportunity for development, implementation and evaluation in science and mathematics in clinical environment under faculty supervision.

EMS 851 Internship In Mathematics and Science Education 1-9.
Prerequisite: Nine hrs. in grad. level courses.
Utilizing the participant-observer role, required participation in selected educational situations with emphasis upon development of observational skills, ability to record relevant observations by means of written journals, skills in analyzing experiences identifying critical incidents and projection of events and consequences. Student required to develop possible alternative courses of action in various situations, select one of the alternatives and evaluate consequences of selected course ofaction.

EMS 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

EMS 890 Doctoral Preliminary Exam 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

EMS 892 Research Projects In Mathematics and Science Education 1-3.
Prerequisite: ELP 532.
A project or problem in research in education for graduate students, supervised by members of the graduate faculty. The research chosen on basis of individual students’ interests and not to be part of thesis or dissertation research.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

EMS 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

GC - Graphic Communications Courses
GC 120 Foundations of Graphics 3.
Introductory course providing orientation to language of graphics for students majoring in any field. Designed to help develop ability to use CAD within the context of a concurrent design process to understand how everyday objects are designed, analyzed and created. Emphasis placed on decision-making processes involved with creating geometry and development of modeling strategies that incorporate intentions of designer.
GC 250 Architectural Graphic Communications 3.
Prerequisite: GC 120 or TDE 220.
Architectural Graphic Communications is an advanced graphic course designed to expand on the concepts covered in the introductory courses (GC 120, GC 210, GC 211). The emphasis is on strengthening architectural sketching and CAD drawing skills and showing how specific construction processes and materials selected for an architectural design affect commercial and residential production architectural drawings. Topics include perspective drawing, shadow projection, texturization, rendered plans, elevations and other related topics.

GC 320 3D Spatial Relations 3.
Prerequisite: GC 101 or GC 120 or GC/IE 210.
Analysis and solution of three-dimensional space problems utilizing graphic principles of orthogonal projection techniques. Application of studies of lines; surfaces; solids; surface intersections; surface development; vectors; and civil, mechanical, and geographical structures.

GC 330 Basic Technical Animation 3.
Prerequisite: GC 120 or TDE 220.
Create technical animations to communicate scientific and technical information to a variety of audiences and environments. Includes performing basic skills in image processing including cropping, transformations, color manipulation and color enhancement. Students will apply basic concepts of constructing 3-D objects, spaces, and environments. Create technical animations which apply environmental attributes including surface study, texture, color, lighting models, photorealism, and raytracing.

GC 340 Concepts of Website Development 3.
An introduction to the essential elements of web site development for students in Technology Education and Graphic Communications. Content focuses on planning and executing web site for educational effectiveness, user interfaces, site testing, and maintenance. Course provides instruction in software appropriate for creating a website.

GC 350 Applied CAD/D and Geometric Controls 3.
Prerequisite: GC 120.

GC 420 Visual Thinking 3.
Prerequisite: Engineering or technical student.
Develop visual thinking skills through a series of exercises using various visual media. Integrates and stresses drawing and construction activities essential to visual thinking. Emphasis on direct observation (seeing), mental imagery and sketching that is based upon three-dimensional space. Develops students’ visual and drawing skills and provides for their application toward solving open-ended spatial problems. Intended for the scientific and technically oriented student.

GC 450 Advanced Graphics Usage with CAD 3.
Prerequisite: GC 350.
Advanced applications of 3-dimensional solid modeling tools in technical and engineering environments. Theory and application of manufacturing databases developed with 3-D modeling tools. Development and management of 3-D geometry using modeling software. Emphasis on application of 3-D modeling technology.

GC 496 Special Topics in Graphic Communications 1-4.
Topical study in areas of current interest and need to students and/or needs of curricula served by Graphic Communications.

GC 498 Independent Study in Graphic Communications 1-4.
Prerequisite: GC 120 or TDE 220.
Independent study in areas of current interests and needs of students in the field of Graphic Communications and the visual sciences. Individualized/Independent Study and Research courses require a "Course Agreement for Students Enrolled in Non-Standard Courses" be completed by the student and faculty member prior to registration by the department.

TDE - Technology Engineering and Design Education Courses

TDE 101 Introduction to Technology Education 1.
Orientation to technology teacher education curricula. Overview of the philosophy, objectives and scope of technology education programs in the public schools, multicultural and individual differences of students. A study of current technology issues will be conducted throughout the course.

Basic knowledge and skills needed to process common materials and produce functional products of woods, metals, plastics, and composite materials. Includes laboratory safety, use of hand tools, operation of materials, and teaching strategies. Laboratory experiences in materials testing and construction of multi-material projects.

TDE 131 Technology through Engineering and Design I 3.
Prerequisite: TDE 110.
Study of engineering and design processes used to solve technological problems, innovate and invent. Students will actively design, model and test solutions to technological problems and explore methods to teach middle and high school students about engineering design and the design process.

TDE 202 Introduction to Teaching Technology Engineering and Design Education 1.
Prerequisite: Sophomore standing; Corequisite: ED 204.
Introduction to teaching technology engineering and design education programs in middle and secondary schools. Field experiences and course assignments include two hours each week assisting classroom teachers in the public schools. Students are responsible for their own transportation to the field experience sites. Students are required to purchase internship liability insurance to participate in this course.
Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. The URL for information on this policy is: http://www2.acs.ncsu.edu/insurance/Students.html.

TDE 205 Desktop Publishing and Imaging Technology 3.
An introduction to digital document production and techniques. Explores software packages used in producing documents for print. Structured for public school teachers and other interested persons, the course introduces basic standards and concepts of page layout, copyright and trademark laws, document usability, readability, and methods of document production.

TDE 220 Civil Engineering Graphics 3.
Civil engineering graphics is an introductory course in basic graphic principles for constructed facilities. The emphasis is on sketching and CAD (computer-aided design) drawing skills and how specific construction systems and materials selected for a design affect production of civil engineering drawings for buildings, residences, and other constructed facilities through CAD. Topics include orthographic and axonometric engineering drawing of site plans, plat plans, section details, utility structure details, elevations and related topics. Restricted to Civil Engineering Majors.
TDE 230 Scientific and Technical Visualization 3.
Communication of scientific and technical information with graphics. Using current practice in science, technology, and engineering disciplines as the context, the class will use general and discipline-specific techniques to explore how to effectively communicate with graphics. Current software and computer technologies will be used to design and create graphics. Students will also learn to critically examine and discuss graphics produced by themselves and others.

TDE 261 Digital Media Education 3.
Prerequisite: TDE 205.
Image creation and control, aesthetics, production processes and environments, and media transfer are explored. This course emphasizes concepts of audio and video design, various digital media technologies, and nonlinear editing concepts through laboratory experiments and projects in radio, television, original audio development, and video production. TDE Majors or instructor permission.

TDE 331 Technology Through Engineering and Design II 3.
Prerequisite: TDE 131 and Corequisite: GC 350.
Students will explore the contributions of systems engineering for developing and sustaining our designed world. Appropriate measurement, analysis and simulation tools will be used to make informed decisions and solve problems. Students will explore methods to teach middle and high school students about engineering design and the design process. TDE Majors or instructor approval.

Contemporary and historical examples of the art and craft of ceramics will be studied. Experiences in designing ceramic forms and expressing individual ideas through the medium of clay.

TDE 359 Electronics Technology 3.
Prerequisite: Junior standing.
Direct current, alternating current, and semiconductors. Measurement and circuit behavior. Experimentation with application circuits.

Prerequisite: TDE 131 and GC 120.
Examination of current and projected technology topics which are growing in importance but are not presently reflected in the Technology Education programs of NC public schools. Laboratory experiences include development, revision, and field testing of appropriate learning activities for middle and high school students in the selected topic areas.

TDE 385 Robotics Education 1.
Corequisite: TDE 386.
This course is an introduction to design and invention system control mechanisms and robot sensors. Students will classify foundational technical developments in autonomous, computer, and radio-control teleoperations. Students will explore the history and evolution of robots and automation and their social, economic, industrial, and educational impacts.

TDE 386 Robotics Education Lab 3.
Corequisite: TDE 385.
Students will apply technological problem solving skills toward 21st century design and innovation. This includes experiences multiple robotics design and invention systems and related programming and designing, prototyping, and programming an autonomous robot to resolve a real world issue.

TDE 407 Field Work in Technology Education 1-6.
Supervised off-campus field experience in Technology Education that relates on-the-job experiences in the field to the technical competencies which are the content of the curriculum. May be repeated for a maximum of 6 credits.

TDE 452 Lab Planning in Technology Education 3.
Laboratory planning, management, and safety for technology education. Physical layout, selection, specification, and cost of equipment; the safe operation, repair and maintenance of power and hand tools; specification of expendable supplies, estimating, and ordering.

Prerequisite: Technology Education Majors, Admission to teacher education candidacy.
Methods of teaching Technology Education. Emphasis on curriculum development, instructional methods, laboratory instruction, meeting needs of special populations, and management of student organizations. Field experiences and course assignments two hours each week. Students are responsible for their own transportation.

TDE 457 Student Teaching in Technology Education 1-8.
Skills and techniques involved in teaching technology education through practice in a public school setting.

TDE 481 Research & Development in Technology Education 3.
Prerequisite: TDE 331, TDE 385, and TDE 386.
Senior design, research, and development experience in technology education. Students research a problem, ideate potential solutions, select a final solution, construct a prototype, and complete a final report analyzing the chosen solution. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

TDE 490 Special Problems in Technology Education 1-6.
Prerequisite: Junior standing.
Supervised, independent investigation in a defined area of interest in Technology Education.

TDE 495 Senior Seminar in Technology Education 3.
Prerequisite: Junior standing.
An in-depth investigation of a topic or a set of problems and/or issues in Technology Education.

TDE 498 Independent Study in Technology Education 1-3.
Prerequisite: Junior standing.
Individual or group study of special topics in professional technology education. The topic and mode of study are determined by the faculty member after discussion with the student. May be repeated for a maximum of 6 credits. Individualized/Independent Study and Research courses require a "Course Agreement for Students Enrolled in Non-Standard Courses" be completed by the student and faculty member prior to registration by the department.

TED - Technology Education Courses

TED 530 Foundations for Teaching Technology 3.
Prerequisite: Graduate standing.
Three topics related to teaching technology at the secondary and post-secondary levels: philosophical and historical foundations; methodology and curriculum development; and current trends and issues. Emphasis is on developing critical thinking skills, research, technology skill development, and writing procedures.
Prerequisite: Graduate standing.
Current trends in the technology, techniques, and theories relating to technical graphics education. Discussion will center on assigned readings and student-researched presentations on topical subjects. Readings will be drawn from journals and texts, on-line databases and articles, and current news media sources.

TED 534 Instructional Design in Technical and Technology Education 3.
Prerequisite: Graduate standing.
Create instructional activities for technical and technology education. Examine learning theories appropriate for technical and technology education. Explore and apply models for instructional design. Examine issues relative to electronic applications in technical and technology education classrooms.

TED 536 Scientific and Technical Visualization: Theory and Practice 3.
Theory and practice of scientific and technical visualization as a means of displaying scientific data and concepts using graphical methods. Both practitioner and theory driven models of communication are considered. How computer and print graphics can be used to assist individuals in the exploration of scientific and technical concepts. Particular focus on how to integrate scientific/technical graphics into the instructional settings.

TED 551 Technology Education: A Discipline 3.
Prerequisite: Graduate standing or PBS status.
Defines essential attributes of technology and examines the relationship between technology education and related disciplines. Analyzes the theory, models, and literature that constitute the foundation of technology education. Synthesizes relevant research and identifies areas of needed research.

TED 552 Curricula for Emerging Technologies 3.
Prerequisite: Graduate standing or PBS status.
Analyze advanced technologies and develop instructional programs for technology education curricula in secondary schools. Topics include technologies in production, transportation and communication.

TED 555 Developing and Implementing Technology Education 3.
Prerequisite: Graduate standing or PBS status.
Technology Education curriculum trends, standards, design, implementation and management. Students will analyze current curricular trends and develop strategies for implementing and managing technology education programs.

TED 556 Laboratory Management and Safety in TED 3.
Prerequisite: Graduate standing.
Laboratory management, planning, and safety considerations for technology education. Analysis of recent research, environmental factors, development of a safety system, safety education, and legal implications. Use of student leaders in management of a safe learning environment. Offered by Distance Education Only.

TED 558 Teaching Creative Problem Solving 3.
Prerequisite: Graduate standing or PBS status.
Provides teachers with the opportunity to study the research associated with creativity and apply these theories to implement a creative problem solving program.

TED 601 Practicum in Technology Education 1-6.
Prerequisite: Graduate standing or PBS status.
Faculty supervised experience in educational, industrial or governmental setting where a student analyzes activities associated with planning, implementing and evaluating instructional and/or services in technology education. This plan is developed by students and approved by supervisor.

TED 602 Practicum in TED 1-3.

TED 610 Special Topics in Technology Education 1-6.
Prerequisite: Graduate standing or PBS status.
Individual or group of special topics in professional education. The faculty member determines the topic and mode of study after discussion with students.

TED 621 Special Problems in Technology Education 1-6.
Prerequisite: Graduate standing or PBS status.
Guided independent or group or current problems in technology education.

TED 641 Internship in Technology Education 3.
Prerequisite: Graduate standing or PBS status.
Classroom teachers will document products of learning to include: content pedagogy, student development, multiple instructional strategies, motivation and management, professional growth and community involvement.

TED 646 Field-based Research in Technology Education 3.
Prerequisite: Graduate standing or PBS status.
Employ methods of field-based research to examine and improve instructional effectiveness and student achievement.

TED 655 Internship in Graphic Communications Education 3.
Prerequisite: TED 530 or EOE 751 with Consent of Instructor.
Mentoring during a higher education level teaching experience in the field of technical graphics with emphasis on providing help in teaching visualization, graphical sciences, and technical graphics standards. *Course is offered as needed to 2-3 students at a time (Independent Study).

TED 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

TED 690 Master’s Examination 1-9.
Prerequisite: Master’s student.
For students in non thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

TED 692 Research Project in Technology Education 1-6.
Prerequisite: ELP 732.
A project or problem in research in education for graduate students, supervised by members of graduate faculty. The research chosen on the basis of individual students' interests and not to be part of thesis or dissertation research.

TED 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Thesis research.
TED 696 Summer Thesis Research 1.
TED 709 Seminar in Technology Education 1-3.
Prerequisite: Graduate standing or PBS status.
Seminar type course with topics selected for each class with attention given to broad concepts of and issues facing technology education at each level of delivery and implementation.
TED 751 Technology Education: A Discipline 3.
Prerequisite: Graduate standing or PBS status.
Defines essential attributes of technology and examines the relationship between technology education and related disciplines. Analyzes the theory, models, and literature that constitute the foundation of technology education. Synthesizes relevant research and identifies areas of needed research.
TED 752 Curricula for Emerging Technologies 3.
Prerequisite: Graduate standing or PBS status.
Analyze advanced technologies and develop instructional programs for technology education curricula in secondary schools. Topics include technologies in production, transportation and communication.
TED 755 Developing and Implementing Technology Education 3.
Prerequisite: Graduate standing or PBS status.
Technology Education curriculum trends, standards, design, implementation and management. Students will analyze current curricular trends and develop strategies for implementing and managing technology education programs.
TED 756 Planning of Change in TED 3.
Theories, research, strategies and practices needed to function as a technology education change agent; demonstrate a working knowledge of planned change in technology education; observe, assess, design and competently plan intervention strategies and aptly use behavioral tools to achieve success.
TED 757 Leadership Development in TED 3.
Prerequisite: Graduate standing or PBS status.
Research, development and practice of individual and organizational leadership in technology education. Content builds leadership knowledge, skill and practice with emphasis on student assessment and development.
TED 758 Teaching Creative Problem Solving 3.
Prerequisite: Graduate standing or PBS status.
Provides teachers with the opportunity to study the research associated with creativity and apply these theories to implement a creative problem solving program.
TED 801 Practicum in Technology Education 1-6.
Prerequisite: Graduate standing or PBS status.
Faculty supervised experience in educational, industrial or governmental setting where a student analyzes activities associated with planning, implementing and evaluating instructional and/or services in technology education. This plan is developed by student and approved by supervisor.
TED 810 Special Topics in Technology Education 1-6.
Prerequisite: Graduate standing or PBS status.
Individual or group of special topics in professional education. The faculty member determines the topic and mode of study after discussion with students.
TED 821 Special Problems in Technology Education 1-6.
Prerequisite: Graduate standing or PBS status.
Guided independent or group or current problems in technology education.
Prerequisite: Master's student.
Dissertation research.
TED 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Mathematics Education, Secondary

http://ced.ncsu.edu/academics/departments/stem/mathematics-education/undergraduate

With six different options in undergraduate degrees, including dual majors, our Mathematics Education program prepares professionals for a variety of positions of instructional leadership in the field of mathematics education. We offer degrees for middle school (grades 6 – 9) and high school (grades 9 – 12) education.

Specific curriculum requirements are available on the Registration and Records website (http://www.ncsu.edu/registrar/curricula).

EMS - Math Science Education Courses

EMS 204 Introduction to Mathematics Education 2.
Prerequisite: ED 100; Corequisite: ED 204.
This course introduces students to the teaching of Mathematics in middle and high schools. Students will become familiar with state mathematics standards and national recommendations for teaching mathematics. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

EMS 205 Introduction to Teaching Science 2.
Prerequisite: Sophomore standing; Corequisite: ED 204.
Introduces perspective teachers to the teaching of science in the middle school and high school. Topics include nature of the science learner, common alternative conceptions in science, introduction to science teaching strategies, and the science curriculum in middle and high school. Sophomore status or higher is required. Sophomore status or higher is required.

EMS 296 Special Topics in Education 1-3.
Individual or group study of particular areas of education at the freshman and sophomore levels. Specific topics will vary from semester to semester.

EMS 375 Instructional Materials in Science 3.
Prerequisite or Corequisite: EMS 205 and ED 204.
Development and selection of teaching materials that reflect concepts of content and emphasis in middle and secondary school science. Experimental and laboratory approaches, including use of microcomputer and video technologies. 2 lecture hours and 6 lab hours per week for 7 weeks.

EMS 473 Teaching Mathematics Topics in the Middle Grades 3.
Prerequisite: EMS 480 passed with a C or better.
Methods of teaching arithmetic, geometry, algebra, and pre-algebra topics in grades 6-9. Emphasizes approaches that actively involve learners and relate operations on concrete and pictorial representations to mathematical symbols. This course includes a school-based field experience. Students are required to provide their own transportation. MSM Majors only.

EMS 475 Methods of Teaching Science II 3.
Prerequisite: EMS 375.
Goals, methods, curricula, and evaluation practices in teaching the physical and biological sciences at the middle and secondary school levels. Taught during the fall.

EMS 476 Student Teaching in Science 1-12.
Prerequisite: EMS 475; and Corequisite: EMS 495.
Supervised experience in a selected middle or secondary school for the semester, to develop and practice the skills and techniques for teaching Science. Students are required to provide their own transportation. SED and MSS majors only. Students are required to purchase internships liability insurance to participate in student teaching. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge.

EMS 474 Teaching Mathematics Topics in the Middle Grades 3.
Prerequisite: EMS 480 passed with a C or better.
Methods of teaching arithmetic, geometry, algebra, and pre-algebra topics in grades 6-9. Emphasizes approaches that actively involve learners and relate operations on concrete and pictorial representations to mathematical symbols. This course includes a school-based field experience. Students are required to provide their own transportation. MSM Majors only.

EMS 480 Teaching Mathematics with Technology 3.
Prerequisite: EMS 204 with a B- or better; MA 131 or 141.
Prepares prospective mathematics teachers to use technology in their classrooms to assist students in formulating and solving math problems in the middle and high school mathematics curricula.

EMS 490 School Mathematics from an Advanced Perspective 3.
Prerequisite: MA 403 or MA 407, MA 308 or MA 408, MA 205 or MA 305 or MA 405.
This course will serve as a culminating experience for all students majoring in mathematics education and intending to become high school mathematics teachers. Course content includes functions in both secondary and collegiate mathematics, development of euclidean geometry from euclid’s elements, and historical overview of algebra, and other mathematics subject matter, a trigonometry review from both triangle basis and function basis, connections between linear algebra and the high school presentation of matrices, and other topics. For Math Education majors only.

EMS 495 Senior Seminar in Mathematics and Science Education 1-3.
Prerequisite: Advanced Undergraduate standing.
In-depth investigation of one or more teaching areas in mathematics or science education.

EMS 496 Special Topics in Education 1-3.
Prerequisite: Junior or senior standing.
Individual or group study of special topics in professional education. The topic and mode of study are determined by the faculty member after discussion with the student.

EMS 505 Methods of Teaching Science I 3.
Graduate students new to science teaching will read current research literature that defines best practices and incorporate these practices to lesson planning that enhances student learning. Classroom, laboratory, and school-based experiences in middle and secondary science classrooms and instructional laboratories will help students to effectively prepare, plan, and assess learning environments. Emphasis placed on the development of knowledge, skills, and dispositions for inquiry-based learning environments. Underlying theoretical framework is constructivism, and experiences will be discussed using current learning theory. PBS or Graduate Standing.
EMS 506 Methods of Teaching Science II 3.
Second course in the MAT science series. Students will plan units of instruction for student teaching, and an emphasis is placed on planning for classroom management and student diversity. Current theoretical frameworks are emphasized in the context of practical field experiences. PBS or Graduate Standing.

EMS 510 Interactions In the Mathematics Classroom 3.
This course focuses on interactions between students and teachers in the mathematics classroom. Topics studied will include: whole class instruction, small group activity, questioning and facilitating classroom discussion. This course will include a field experience in the schools for which students will be required to provide their own transportation. Course restricted to mathematics education students in the MED, MS or MAT programs.

EMS 512 Teaching and Learning Elementary and Middle Grades Mathematics 3.
Prerequisite: EMS 471.
Focus on theory, research, and methodology of teaching and learning mathematics in elementary and middle grades. Emphasizes the development of a foundation for understanding and assessing mathematical growth and learning through historical and psychological sources, research, and reflective practice. Emphasis is placed upon understanding how children come to learn elementary mathematics meaningfully and what this necessarily implies about the way mathematics is taught and how elementary and middle grades education can be improved.

EMS 513 Teaching and Learning of Algebraic Thinking 3.
Prerequisite: EMS 471 or equivalent teaching experience.
Teaching and learning of algebra from a developmental perspective; research-based methods for developing students’ algebraic thinking; structure and processes used in algebra. Focus on how students develop algebraic ideas from upper elementary grades through Algebra I.

EMS 514 Teaching and Learning of Geometric Thinking 3.
Prerequisite: EMS 471 and either MA 308 or MA 408.
Focus will be on the development of geometric thinking in grades K-12 using multiple instructional approaches, including technology, and considered using different theories of learning and frameworks (e.g., Van Hiele, SOLO taxonomy). Topics may include: measurement, similarity, congruence, properties of 2 and 3 dimensional figures, circles, non-Euclidean geometries. Synthetic, analytic and transformational, formal and informal approaches will be highlighted.

EMS 519 Teaching and Learning of Statistical Thinking 3.
Prerequisite: ST 507 or ST 511.
This course is designed to bridge theory and practice on how students develop understandings of key concepts in data analysis, statistics, and probability. Discussion of students’ understandings, teaching strategies and the use of manipulatives and technology tools. Topics include distribution, measures of center and spread, sampling, sampling distribution, randomness, and law of large numbers. Must complete a first level graduate statistics course (ST 507, ST 511, or equivalent) before enrolling.

EMS 521 Advanced Methods in Science Education I 3.
Prerequisite: Graduate standing in Science Education.
Current research literature will guide the development of plans to improve classroom teaching practices. Action research used to evaluate instructional impact of modifications to classroom strategies. What it means to teach science, what it means to teach a diverse population of students and how to develop, interpret, and implement alternative assessment.

EMS 522 Advanced Methods in Science Education II 3.
Prerequisite: EMS 521 and graduate standing in Science Education.
Examines science instruction through analysis of curriculum, instructional practices, current research on science learning and teaching. Five areas of interest: curriculum, instruction, assessment, diversity, learning environments and technology in science education.

EMS 531 Introduction to Research in Science Education 3.
Prerequisite: Graduate standing in Science Education.
Introduction to techniques and designs specific to and/or in the context of science education research. Analyze and critique findings of research in current science education literature. Perform and interpret quantitative and qualitative analyses commonly used in science education research. Carry out research project focusing on an aspect of science education, communicate research findings in both oral and written form.

EMS 570 Methods and Materials for Teaching Mathematics 3.
Prerequisite: ST 507 or ST 511.
Preparation for teaching mathematics from both the college preparatory (algebra, geometry, trigonometry, advanced mathematics) and general courses (pre-algebra, technical and consumer mathematics) in grades 9-12. Credit for both EMS 470 and EMS 570 is not allowed.

EMS 572 Teaching Mathematics Topics in Senior High School 3.
Prerequisite: EMS 506.
Preparation for teaching mathematics from both the college preparatory (algebra, geometry, trigonometry, advanced mathematics) and general courses (pre-algebra, technical and consumer mathematics) in grades 9-12. Credit for both EMS 472 and EMS 572 not allowed.

Prerequisite: Graduate standing or alternative license program.
Project-based course to improve the understanding and use of technology tools useful in science teaching. Computer and calculator based laboratory probeware and software, imaging and presentation technologies. Research-based evaluation of tool use in the science laboratory and classroom.

EMS 575 Foundations Of Science Education 3.
Prerequisite: EMS 475.
Study and analysis of philosophical, historical, sociological, political and economic factors affecting science education in schools of the U.S. Implications for science education of various learning theories along with models for curriculum development and program planning. Critical analysis of current trends, issues and problems in science education in terms of multiple perspectives.

EMS 577 Improving Classroom Instruction In Science 3.
Prerequisite: EMS 475.
Application of major principles of education and psychology to improvement of science teaching in elementary, middle and secondary schools. Emphasis on critical analysis of research and the development of research-based classroom applications. Goals and objectives of science teaching, instructional strategies, development or selection of science materials, evaluation of achievement and elements of a desirable classroom climate.

EMS 580 Teaching Mathematics with Technology 3.
Prerequisite: Graduate standing in Science Education.
Prepares mathematics teachers to use technology in their classrooms to assist students in formulating and solving math problems in the middle and high school mathematics curricula. Credit not allowed for both EMS 480 and EMS 580.
EMS 581 Advanced Applications of Technology in Mathematics Education 3.
Research-based applications of technology tools in secondary and middle school mathematics. Advanced use of various technology tools for learning and teaching mathematics, including design of technology environments, appropriate investigation tasks, and professional development.

EMS 592 Special Problems In Mathematics Teaching 1-6.
Prerequisite: EMS 471.
In-depth investigation of topical problems in mathematics teaching chosen from areas of curriculum, methodology, technology, supervision and research.

EMS 594 Special Problems In Science Teaching 1-3.
Prerequisite: EMS 476.
In-depth investigation of topics in science education not covered in existing courses. Includes critical analysis of research and may include field work. May be offered on individual basis or as a class.

EMS 621 Special Problems In Mathematics Teaching 1-6.
Prerequisite: EMS 471.
In-depth investigation of topical problems in mathematics teaching chosen from areas of curriculum, methodology, technology, supervision and research.

EMS 622 Special Problems In Science Teaching 1-6.
Prerequisite: EMS 476.
In-depth investigation of topics in science education not covered in existing courses. Includes critical analysis of research and may include field work. May be offered on individual basis or as a class.

EMS 630 Independent Study in EMS 1-3.
Detailed investigation of topics of particular interest to graduate students under faculty direction on a tutorial basis. Determination of credits and content by faculty member in consultation with department head.

EMS 641 Practicum In Science and Mathematics Education 1-6.
Prerequisite: EMS 770 or EMS 775.
Supervised practicum in appropriate settings both on- and off-campus. Provision for opportunity for development, implementation and evaluation in science and mathematics in clinical environment under faculty supervision.

EMS 651 Internship In Mathematics And Science Education 1-9.
Prerequisite: Nine hrs. in grad. level courses.
Utilizing the participant-observed role, required participation in selected educational situations with emphasis upon development of observational skills, ability to record relevant observations by means of written journals, skills in analyzing experiences identifying critical incidents and projection of events and consequences. Student required to develop possible alternative courses of action in various situations, select one of the alternatives and evaluate consequences of selected course of action.

EMS 675 Portfolio Development 1.
Techniques of portfolio construction for documenting attainment of advanced competencies in science training. For students in the last or next to last semester of coursework in the Science Education Masters Program.

EMS 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

EMS 686 Teaching In College 3.
Focus on development of competencies to perform fundamental tasks of a college teacher as well as consideration of more long-range tasks such as course development and university responsibilities of a professor. In addition to attending lectures and other types of presentations, students make video tapes of their teaching, develop tests, design introductory courses in their teaching fields and consider current issues related to university and college teaching.

EMS 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

EMS 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

EMS 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

EMS 692 Research Projects In Mathematics and Science Education 1-3.
Prerequisite: ELP 532.
A project or problem in research in education for graduate students, supervised by members of the graduate faculty. The research chosen on basis of individual students' interests and not to be part of thesis or dissertation research.

EMS 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

EMS 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their theses.

EMS 703 Teaching Mathematics and Science In Higher Education 3.
Prerequisite: EMS 770, 621 or 622, Graduate standing.
Examination of collegiate mathematics and science instruction with respect to goals and objectives, design of courses and curricula, innovative programs and facilities, and methods and materials for instruction.
EMS 704 Curriculum Development and Evaluation In Science and Mathematics 3.
Prerequisite: 500-level statistics, PSY 535.
Critical study of elements of curriculum design and theory in mathematics education and science education and examination of evaluation procedures for assessing educational innovations.

EMS 705 Education and Supervision Of Teachers Of Mathematics and Science 3.
Prerequisite: EMS 770 or 621 or 622.
Critical analysis of theories, programs and techniques designed to promote interpersonal interactions leading to more effective teaching of science and mathematics.

EMS 711 Research on the Teaching and Learning of Math at Secondary and Early College Levels 3.
This course familiarizes students with theories and research related to mathematical thinking, learning and teaching at the secondary and early college levels with a focus on the following topics: function, expressions and equations, geometry, proof, limit, calculus, differential equations, and linear algebra. Students will apply theories to analyze secondary and freshmen/sophomore standing mathematical thinking, synthesize research findings, explain difficulties students experience, and design and conduct research. Restriction: at least 18 hrs of 400-500 level mathematics and a PhD student in Mathematics Education.

EMS 712 Teaching Mathematics In Elementary and Junior High School 3.
Prerequisite: EMS 471.
Comprehensive study of teaching mathematics in elementary and junior high schools. Major emphasis on building skills in teaching arithmetic, elementary algebra and intuitive geometry. Thorough search of literature relative to mathematics curricula conducted, designing and sequencing of learning activities, teaching mathematical concepts and relationships, building skill in computation, reading mathematics, problem solving and measurement.

EMS 730 Trends and Issues in Science Education 3.
Prerequisite: Graduate standing.
Provides an in-depth examination and analysis of literature and research in science education as well as current trends in science education reform. Emphasis is placed on the analysis of theoretical models of inquiry. Course includes the development of a review of literature and the formation of research questions specific to science education.

EMS 731 Fundamentals of Research in Science Education: Qualitative and Quantitative Inqu 3.
Prerequisite: Graduate standing and ST 507 or 511, Corequisite: ST 508 or 512.
Analyze the range of research designs currently utilized by science education researchers. Develop an understanding of the assumptions and frameworks of different types of inquiry in science education. A brief history of research in science education is examined as a means to orient students to the trends that have taken place. Read, comprehend, and critically analyze qualitative and quantitative designs in science education.

EMS 732 Theoretical and Critical Perspectives of Science Education 3.
Prerequisite: Graduate standing.
Examines current theoretical and critical perspectives of science education. Examines a variety of approaches which re-assess cultural notions of meaning, identity, power, and representation in the sciences and science education. Applies research theory to reform in science education.

EMS 770 Foundations Of Mathematics Education 3.
Prerequisite: EMS 471.
The current status of mathematics education with special emphasis on study and critical analysis of current practices in mathematics instruction from elementary school through college.

EMS 775 Foundations Of Science Education 3.
Prerequisite: EMS 475.
Study and analysis of philosophical, historical, sociological, political and economic factors affecting science education in schools of the U.S. Implications for science education of various learning theories along with models for curriculum development and program planning. Critical analysis of current trends, issues and problems in science education in terms of multiple perspectives.

EMS 776 Teaching in College 3.
Focus on development of competencies to perform fundamental tasks of a college teacher as well as consideration of more long-range tasks such as course development and university responsibilities of a professor. In addition to attending lectures and other types of presentations, students make field work. May be offered on individual basis or as a class.

EMS 794 Special Problems in Science Teaching 3-6.
In-depth investigation of topical problems in science teaching not covered in existing courses. Includes critical analysis of research and the development of research-based classroom applications. Goals and objectives of science teaching, instructional strategies, development or selection of science materials, evaluation of achievement and elements of a desirable classroom climate.

EMS 796 Teaching in College 3.
Focus on development of competencies to perform fundamental tasks of a college teacher as well as consideration of more long-range tasks such as course development and university responsibilities of a professor. In addition to attending lectures and other types of presentations, students make field work. May be offered on individual basis or as a class.

EMS 799 Special Problems in Science Teaching 3.
Prerequisite: EMS 476.
In-depth investigation of topics in science education not covered in existing courses. Includes critical analysis of research and field work. May be offered on individual basis or as a class.

EMS 802 Seminar In Mathematics Education 1-12.
Prerequisite: Departmental Majors.
In-depth examination and analysis of literature and research in a particular topic(s) in mathematics education.

EMS 803 Seminar In Science Education 2.
Prerequisite: Department Majors.
In-depth examination and analysis of literature and research in a particular topic(s) in science education.

EMS 821 Special Problems In Mathematics Teaching 1-6.
Prerequisite: EMS 471.
In-depth investigation of topical problems in mathematics teaching chosen from areas of curriculum, methodology, technology, supervision and research.

EMS 822 Special Problems In Science Teaching 1-6.
Prerequisite: EMS 476.
In-depth investigation of topics in science education not covered in existing courses. Includes critical analysis of research and field work. May be offered on individual basis or as a class.
EMS 832 Research Applications in Science Education 3.
Prerequisite: EMS 730, EMS 731, ST 508.
Provides students with the opportunity to design science education research including formulating research questions, designing the methodologies to be used in the study, selecting assessments and protocols, and identifying appropriate analyses. Theoretical frameworks and associated assumptions are identified and critiqued. Develop advanced skills in reviewing different types of science education research and identifying issues of validity and reliability.

EMS 841 Practicum In Science and Mathematics Education 1-6.
Prerequisite: EMS 770 or EMS 775.
Supervised practicum in appropriate settings both on- and off-campus. Provision for opportunity for development, implementation and evaluation in science and mathematics in clinical environment under faculty supervision.

EMS 851 Internship In Mathematics and Science Education 1-9.
Prerequisite: Nine hrs. in grad. level courses.
Utilizing the participant-observer role, required participation in selected educational situations with emphasis upon development of observational skills, ability to record relevant observations by means of written journals, skills in analyzing experiences identifying critical incidents and projection of events and consequences. Student required to develop possible alternative courses of action in various situations, select one of the alternatives and evaluate consequences of selected course of action.

EMS 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

EMS 890 Doctoral Preliminary Exam 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

EMS 892 Research Projects In Mathematics and Science Education 1-3.
Prerequisite: ELP 532.
A project or problem in research in education for graduate students, supervised by members of the graduate faculty. The research chosen on basis of individual students' interests and not to be part of thesis or dissertation research.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

EMS 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Science Education, Secondary

In our high-quality Department of STEM Education, the Science Education program thoroughly prepares teacher leaders for middle school and high school science teaching in the concentration areas of Biology, Chemistry, Physics, Earth Science and Middle Grades Science.

Specific curriculum requirements are available online (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php).

EMS - Math Science Education Courses

EMS 204 Introduction to Mathematics Education 2.
Prerequisite: ED 100; Corequisite: ED 204.
This course introduces students to the teaching of Mathematics in middle and high schools. Students will become familiar with state mathematics standards and national recommendations for teaching mathematics. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

EMS 205 Introduction to Teaching Science 2.
Prerequisite: Sophomore standing; Corequisite: ED 204.
Introduces perspective teachers to the teaching of science in the middle school and high school. Topics include nature of the science learner, common alternative conceptions in science, introduction to science teaching strategies, and the science curriculum in middle and high school. Sophomore status or higher is required. Sophomore status or higher is required.

EMS 296 Special Topics in Education 1-3.
Individual or group study of particular areas of education at the freshman and sophomore levels. Specific topics will vary from semester to semester.
EMS 373 Instructional Materials in Science 3.
Prerequisite or Corequisite: EMS 205 and ED 204.
Development and selection of teaching materials that reflect concepts of content and emphasis in middle and secondary school science. Experimental and laboratory approaches, including use of microcomputer and video technologies. 2 lecture hours and 6 lab hours per week for 7 weeks.

EMS 375 Methods of Teaching Science I 3.
Prerequisite: EMS 205, ED 204.
Classroom, laboratory, and internship experiences for pre-service teachers to effectively prepare, plan and assess learning environments in the middle and secondary science classroom and instructional laboratory. Emphasis placed on knowledge, skills, and dispositions for inquiry-based learning environments.

EMS 470 Methods and Materials for Teaching Mathematics 3.
Prerequisite: Admission to professional semester.
Purposes, methods, curricula and evaluation practices for teaching mathematics in middle school and high school. Taught during the first seven weeks of the semester.

EMS 471 Student Teaching in Mathematics 1-12.
Prerequisite: Admission to professional semester. Corequisite: EMS 470.
Supervised experience in a selected middle or secondary school for the semester, to develop and practice the skills and techniques for teaching mathematics. Students are required to provide their own transportation. MED, MSM and MSD majors only.

EMS 472 Teaching Mathematics Topics in Senior High School 3.
Prerequisite: EMS 480 passed with a C or better.
Preparation for teaching mathematics from both the college repertoire (algebra, geometry, trigonometry, advanced mathematics) and general courses (pre-algebra, technical and consumer mathematics) offered in grades 9-12. This course includes a school-based field experience. Students are required to provide their own transportation. MED Majors only.

EMS 474 Teaching Mathematics Topics in the Middle Grades 3.
Prerequisite: EMS 480 passed with a C or better.
Methods of teaching arithmetic, geometry, algebra, and pre-algebra topics in grades 6-9. Emphasizes approaches that actively involve learners and relate operations on concrete and pictorial representations to mathematical symbols. This course includes a school-based field experience. Students are required to provide their own transportation. MSM Majors only.

EMS 475 Methods of Teaching Science II 3.
Prerequisite: EMS 375.
Goals, methods, curricula, and evaluation practices in teaching the physical and biological sciences at the middle and secondary school levels. Taught during the fall.

EMS 476 Student Teaching in Science 1-12.
Prerequisite: EMS 475; and Corequisite: EMS 495.
Supervised experience in a selected middle or secondary school for the semester, to develop and practice the skills and techniques for teaching Science. Students are required to provide their own transportation. SED and MSS majors only. Students are required to purchase internships liability insurance to participate in student teaching. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge.

EMS 480 Teaching Mathematics with Technology 3.
Prerequisite: EMS 204 with a B- or better; MA 131 or 141.
Prepares prospective mathematics teachers to use technology in their classrooms to assist students in formulating and solving math problems in the middle and high school mathematics curricula.

EMS 490 School Mathematics from an Advanced Perspective 3.
Prerequisite: MA 403 or MA 407, MA 308 or MA 408, MA 205 or MA 305 or MA 405.
This course will serve as a culminating experience for all students majoring in mathematics education and intending to become high school mathematics teachers. Course content includes functions in both secondary and collegiate mathematics, development of Euclidean geometry from Euclid’s elements, and historical overview of algebra, and other mathematics subject matter, a trigonometry review from both triangle basis and function basis, connections between linear algebra and the high school presentation of matrices, and other topics. For Math Education majors only.

EMS 495 Senior Seminar in Mathematics and Science Education 1-3.
Prerequisite: Advanced Undergraduate standing.
In-depth investigation of one or more teaching areas in mathematics or science education.

EMS 496 Special Topics in Education 1-3.
Prerequisite: Junior or senior standing.
Individual or group study of special topics in professional education. The topic and mode of study are determined by the faculty member after discussion with the student.

EMS 505 Methods of Teaching Science I 3.
Graduate students new to science teaching will read current research literature that defines best practices and incorporate these practices to lesson planning that enhances student learning. Classroom, laboratory, and school-based experiences in middle and secondary science classrooms and instructional laboratories will help students to effectively prepare, plan, and assess learning environments. Emphasis placed on the development of knowledge, skills, and dispositions for inquiry-based learning environments. Underlying theoretical framework is constructivism, and experiences will be discussed using current learning theory. PBS or Graduate Standing.

EMS 506 Methods of Teaching Science II 3.
Second course in the MAT science series. Students will plan units of instruction for student teaching, and an emphasis is placed on planning for classroom management and student diversity. Current theoretical frameworks are emphasized in the context of practical field experiences. PBS or Graduate Standing.

EMS 510 Interactions In the Mathematics Classroom 3.
This course focuses on interactions between students and teachers in the mathematics classroom. Topics studied will include: whole class instruction, small group activity, questioning and facilitating classroom discussion. This course will include a field experience in the schools for which students will be required to provide their own transportation. Course restricted to mathematics education students in the MED, MS or MAT programs.
EMS 512 Teaching and Learning Elementary and Middle Grades Mathematics 3.
Prerequisite: EMS 471.
Focus on theory, research, and methodology of teaching and learning mathematics in elementary and middle grades. Emphasizes the development of a foundation for understanding and assessing mathematical growth and learning through historical and psychological sources, research, and reflective practice. Emphasis is placed upon understanding how children come to learn elementary mathematics meaningfully and what this necessarily implies about the way mathematics is taught and how elementary and middle grades education can be improved.

EMS 513 Teaching and Learning of Algebraic Thinking 3.
Prerequisite: EMS 471 or equivalent teaching experience.
Teaching and learning of algebra from a developmental perspective; research-based methods for developing students’ algebraic thinking; structure and processes used in algebra. Focus on how students develop algebraic ideas from upper elementary grades through Algebra I.

EMS 514 Teaching and Learning of Geometric Thinking 3.
Prerequisite: EMS 471 and either MA 308 or MA 408.
Focus will be on the development of geometric thinking in grades K-12 using multiple instructional approaches, including technology, and considered using different theories of learning and frameworks (e.g., Van Hiele, SOLO taxonomy). Topics may include: measurement, similarity, congruence, properties of 2 and 3 dimensional figures, circles, non-Euclidean geometries. Synthetic, analytic and transformational, formal and informal approaches will be highlighted.

EMS 519 Teaching and Learning of Statistical Thinking 3.
Prerequisite: ST 507 or ST 511.
This course is designed to bridge theory and practice on how students develop understandings of key concepts in data analysis, statistics, and probability. Discussion of students’ understandings, teaching strategies and the use of manipulatives and technology tools. Topics include distribution, measures of center and spread, sampling, sampling distribution, randomness, and law of large numbers. Must complete a first level graduate statistics course (ST 507, ST 511, or equivalent) before enrolling.

EMS 521 Advanced Methods in Science Education I 3.
Prerequisite: Graduate standing in Science Education.
Current research literature will guide the development of plans to improve classroom teaching practices. Action research used to evaluate instructional impact of modifications to classroom strategies. What it means to teach science, what it means to teach a diverse population of students and how to develop, interpret, and implement alternative assessment.

EMS 522 Advanced Methods in Science Education II 3.
Prerequisite: EMS 521 and graduate standing in Science Education.
Examines science instruction through analysis of curriculum, instructional practices, current research on science learning and teaching. Five areas of interest: curriculum, instruction, assessment, diversity, learning environments and technology in science education.

EMS 523 Advanced Methods in Science Education III 3.
Prerequisite: Graduate standing in Science Education.
Introduction to techniques and designs specific to and/or in the context of science education research. Analyze and critique findings of other science education researchers in current science education research literature. Perform and interpret quantitative and qualitative analyses commonly used in science education research. Carry out research project focusing on an aspect of science education, communicate research findings in both oral and written form.

EMS 531 Introduction to Research in Science Education 3.
Prerequisite: Graduate standing in Science Education.
Study and analysis of philosophical, historical, sociological, political and economic factors affecting science education in schools of the U.S. Implications for science education of various learning theories along with models for curriculum development and program planning. Critical analysis of current trends, issues and problems in science education in terms of multiple perspectives.

EMS 532 Advanced Methods in Science Education IV 3.
Prerequisite: EMS 531.
Examines science instruction through analysis of curriculum, instructional practices, current research on science learning and teaching. Five areas of interest: curriculum, instruction, assessment, diversity, learning environments and technology in science education.

EMS 533 Advanced Methods in Science Education V 3.
Prerequisite: Graduate standing in Science Education.
Introduction to techniques and designs specific to and/or in the context of science education research. Analyze and critique findings of other science education researchers in current science education research literature. Perform and interpret quantitative and qualitative analyses commonly used in science education research. Carry out research project focusing on an aspect of science education, communicate research findings in both oral and written form.

EMS 570 Methods and Materials for Teaching Mathematics 3.
Prerequisite: Graduate standing in Science Education.
Prepares mathematics teachers to use technology in their classrooms to assist students in formulating and solving math problems in the middle and high school mathematics curriculum. Credit not allowed for both EMS 470 and EMS 570.

EMS 571 Teaching Mathematics Topics in Senior High School 3.
Prerequisite: Graduate standing or alternative license program.
Application-based course to improve the understanding and use of technology tools useful in science teaching. Computer and calculator based laboratory probeware and software, imaging and presentation technologies. Research-based evaluation of tool use in the science laboratory and classroom.

EMS 572 Teaching Mathematics Topics in Senior High School 3.
Prerequisite: Graduate standing or alternative license program.
Application-based course to improve the understanding and use of technology tools useful in science teaching. Computer and calculator based laboratory probeware and software, imaging and presentation technologies. Research-based evaluation of tool use in the science laboratory and classroom.

EMS 575 Foundations of Science Education 3.
Prerequisite: EMS 475.
Study and analysis of philosophical, historical, sociological, political and economic factors affecting science education in schools of the U.S. Implications for science education of various learning theories along with models for curriculum development and program planning. Critical analysis of current trends, issues and problems in science education in terms of multiple perspectives.

EMS 580 Teaching Mathematics with Technology 3.
Prerequisite: EMS 475.
Focus on theory, research, and methodology of teaching and learning mathematics in elementary and middle grades. Emphasizes the development of a foundation for understanding and assessing mathematical growth and learning through historical and psychological sources, research, and reflective practice. Emphasis is placed upon understanding how children come to learn elementary mathematics meaningfully and what this necessarily implies about the way mathematics is taught and how elementary and middle grades education can be improved.

EMS 581 Advanced Applications of Technology in Mathematics Education 3.
Research-based applications of technology tools in secondary and middle school mathematics. Advanced use of various technology tools for learning and teaching mathematics, including design of technology environments, appropriate investigation tasks, and professional development.
EMS 592 Special Problems In Mathematics Teaching 1-6.
Prerequisite: EMS 471.
In-depth investigation of topical problems in mathematics teaching chosen from areas of curriculum, methodology, technology, supervision and research.

EMS 594 Special Problems In Science Teaching 1-3.
Prerequisite: EMS 476.
In-depth investigation of topics in science education not covered in existing courses. Includes critical analysis of research and may include field work. May be offered on individual basis or as a class.

EMS 621 Special Problems In Mathematics Teaching 1-6.
Prerequisite: EMS 471.
In-depth investigation of topical problems in mathematics teaching chosen from areas of curriculum, methodology, technology, supervision and research.

EMS 622 Special Problems In Science Teaching 1-6.
Prerequisite: EMS 476.
In-depth investigation of topics in science education not covered in existing courses. Includes critical analysis of research and may include field work. May be offered on individual basis or as a class.

EMS 630 Independent Study in EMS 1-3.
Detailed investigation of topics of particular interest to graduate students under faculty direction on a tutorial basis. Determination of credits and content by faculty member in consultation with department head.

EMS 641 Practicum In Science and Mathematics Education 1-6.
Prerequisite: EMS 770 or EMS 775.
Supervised practicum in appropriate settings both on- and off-campus. Provision for opportunity for development, implementation and evaluation in science and mathematics in clinical environment under faculty supervision.

EMS 651 Internship In Mathematics And Science Education 1-9.
Prerequisite: Nine hrs. in grad. level courses.
Utilizing the participant-observed role, required participation in selected educational situations with emphasis upon development of observational skills, ability to record relevant observations by means of written journals, skills in analyzing experiences identifying critical incidents and projection of events and consequences. Student required to develop possible alternative courses of action in various situations, select one of the alternatives and evaluate consequences of selected course of action.

EMS 675 Portfolio Development 1.
Techniques of portfolio construction for documenting attainment of advanced competencies in science training. For students in the last or next to last semester of coursework in the Science Education Masters Program.

EMS 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

EMS 686 Teaching In College 3.
Focus on development of competencies to perform fundamental tasks of a college teacher as well as consideration of more long-range tasks such as course development and university responsibilities of a professor. In addition to attending lectures and other types of presentations, students make video tapes of their teaching, develop tests, design introductory courses in their teaching fields and consider current issues related to university and college teaching.

EMS 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

EMS 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

EMS 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

EMS 692 Research Projects In Mathematics and Science Education 1-3.
Prerequisite: ELP 532.
A project or problem in research in education for graduate students, supervised by members of the graduate faculty. The research chosen on basis of individual students’ interests and not to be part of thesis or dissertation research.

EMS 693 Master's Supervised Research 1-9.
Prerequisite: Master’s student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

EMS 696 Summer Thesis Research 1.
Prerequisite: Master’s student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their theses.

EMS 703 Teaching Mathematics and Science In Higher Education 3.
Prerequisite: EMS 770, 621 or 622, Graduate standing.
Examination of collegiate mathematics and science instruction with respect to goals and objectives, design of courses and curricula, innovative programs and facilities, and methods and materials for instruction.

EMS 704 Curriculum Development and Evaluation In Science and Mathematics 3.
Prerequisite: 500-level statistics, PSY 535.
Critical study of elements of curriculum design and theory in mathematics education and science education and examination of evaluation procedures for assessing educational innovations.
EMS 705 Education and Supervision Of Teachers Of Mathematics and Science 3.
Prerequisite: EMS 770 or 621 or 622.
Critical analysis of theories, programs and techniques designed to promote interpersonal interactions leading to more effective teaching of mathematics and science.

EMS 711 Research on the Teaching and Learning of Math at Secondary and Early College Levels 3.
This course familiarizes students with theories and research related to mathematical thinking, learning and teaching at the secondary and early college levels with a focus on the following topics: function, expressions and equations, geometry, proof, limit, calculus, differential equations, and linear algebra. Students will apply theories to analyze secondary and freshmen/sophomore standing mathematical thinking, synthesize research findings, explain difficulties students experience, and design and conduct research. Restriction: at least 18 hrs of 400-500 level mathematics and a PhD student in Mathematics Education.

EMS 712 Teaching Mathematics In Elementary and Junior High School 3.
Prerequisite: EMS 471.
Comprehensive study of teaching mathematics in elementary and junior high schools. Major emphasis on building skills in teaching arithmetic, elementary algebra and intuitive geometry. Thorough search of literature relative to mathematics curricula conducted, designing and sequencing of learning activities, teaching mathematical concepts and relationships, building skill in computation, reading mathematics, problem solving and measurement.

EMS 730 Trends and Issues in Science Education 3.
Prerequisite: Graduate standing.
Provides an in-depth examination and analysis of literature and research in science education as well as current trends in science education reform. Emphasis is placed on the analysis of theoretical models of inquiry. Course includes the development of a review of literature and the formation of research questions specific to science education.

EMS 731 Fundamentals of Research in Science Education: Qualitative and Quantitative Inqu 3.
Prerequisite: Graduate standing and ST 507 or 511, Corequisite: ST 508 or 512.
Analyze the range of research designs currently utilized by science education researchers. Develop an understanding of the assumptions and frameworks of different types of inquiry in science education. A brief history of research in science education is examined as a means to orient students to the trends that have taken place. Read, comprehend, and critically analyze qualitative and quantitative designs in science education.

EMS 732 Theoretical and Critical Perspectives of Science Education 3.
Prerequisite: Graduate standing.
Examines current theoretical and critical perspectives of science education. Examines a variety of approaches which re-assess cultural notions of meaning, identity, power, and representation in the sciences and science education. Applies research theory to reform in science education.

EMS 770 Foundations Of Mathematics Education 3.
Prerequisite: EMS 471.
The current status of mathematics education with special emphasis on study and critical analysis of current practices in mathematics instruction from elementary school through college.

EMS 775 Foundations Of Science Education 3.
Prerequisite: EMS 475.
Study and analysis of philosophical, historical, sociological, political and economic factors affecting science education in schools of the U.S. Implications for science education of various learning theories along with models for curriculum development and program planning. Critical analysis of current trends, issues and problems in science education in terms of multiple perspectives.

EMS 777 Improving Classroom Instruction In Science 3.
Prerequisite: EMS 475.
Application of major principles of education and psychology to improvement of science teaching in elementary, middle and secondary schools. Emphasis on critical analysis of research and the development of research-based classroom applications. Goals and objectives of science teaching, instructional strategies, development or selection of science materials, evaluation of achievement and elements of a desirable classroom climate.

EMS 786 Teaching in College 3.
Focus on development of competencies to perform fundamental tasks of a college teacher as well as consideration of more long-range tasks such as course development and university responsibilities of a professor. In addition to attending lectures and other types of presentations, students make video tapes of their teaching, develop tests, design introductory courses in their teaching fields and consider current issues related to university and college teaching.

EMS 792 Special Problems in Math Teaching 3-6.
In-depth investigation of topical problems in mathematics teaching chosen from areas of curriculum, methodology, technology, supervision and research.

EMS 794 Special Problems in Science Teaching 3-6.
Prerequisite: EMS 476.
In-depth investigation of topics in science education not covered in existing courses. Includes critical analysis of research and may include field work. May be offered on individual basis or as a class.

EMS 802 Seminar In Mathematics Education 1-12.
Prerequisite: Departmental Majors.
In-depth examination and analysis of literature and research in a particular topic(s) in mathematics education.

EMS 803 Seminar In Science Education 2.
Prerequisite: Departmental Majors.
In-depth examination and analysis of literature and research in a particular topic(s) in science education.

EMS 821 Special Problems In Mathematics Teaching 1-6.
Prerequisite: EMS 471.
In-depth investigation of topical problems in mathematics teaching chosen from areas of curriculum, methodology, technology, supervision and research.

EMS 822 Special Problems In Science Teaching 1-6.
Prerequisite: EMS 476.
In-depth investigation of topics in science education not covered in existing courses. Includes critical analysis of research and may include field work. May be offered on individual basis or as a class.
EMS 832 Research Applications in Science Education 3.  
Prerequisite: EMS 730, EMS 731, ST 508.  
Provides students with the opportunity to design science education research including formulating research questions, designing the methodologies to be used in the study, selecting assessments and protocols, and identifying appropriate analyses. Theoretical frameworks and associated assumptions are identified and critiqued. Develop advanced skills in reviewing different types of science education research and identifying issues of validity and reliability.

EMS 841 Practicum In Science and Mathematics Education 1-6.  
Prerequisite: EMS 770 or EMS 775.  
Supervised practicum in appropriate settings both on- and off-campus. Provision for opportunity for development, implementation and evaluation in science and mathematics in clinical environment under faculty supervision.

EMS 851 Internship In Mathematics and Science Education 1-9.  
Prerequisite: Nine hrs. in grad. level courses.  
Utilizing the participant-observer role, required participation in selected educational situations with emphasis upon development of observational skills, ability to record relevant observations by means of written journals, skills in analyzing experiences identifying critical incidents and projection of events and consequences. Student required to develop possible alternative courses of action in various situations, select one of the alternatives and evaluate consequences of selected course of action.

EMS 885 Doctoral Supervised Teaching 1-3.  
Prerequisite: Doctoral student.  
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

EMS 890 Doctoral Preliminary Exam 1-9.  
Prerequisite: Doctoral student.  
For students who are preparing for and taking written and/or oral preliminary exams.

EMS 892 Research Projects In Mathematics and Science Education 1-3.  
Prerequisite: ELP 532.  
A project or problem in research in education for graduate students, supervised by members of the graduate faculty. The research chosen on basis of individual students' interests and not to be part of thesis or dissertation research.

Prerequisite: Doctoral student.  
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.  
Dissertation research.

EMS 896 Summer Dissertation Research 1.  
Prerequisite: Doctoral student.  
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.  
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Technology, Engineering and Design Education

With an emphasis on innovation and active learning, this program prepares individuals for a variety of engineering and design employment opportunities, including a teacher licensure option and a non-licensure graphics communications option.

Specific curriculum requirements are available online (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php).

GC - Graphic Communications Courses

GC 120 Foundations of Graphics 3.  
Introductory course providing orientation to language of graphics for students majoring in any field. Designed to help develop ability to use CAD within the context of a concurrent design process to understand how everyday objects are designed, analyzed and created. Emphasis placed on decision-making processes involved with creating geometry and development of modeling strategies that incorporate intentions of designer.

GC 250 Architectural Graphic Communications 3.  
Prerequisite: GC 120 or TDE 220.  
Architectural Graphic Communications is an advanced graphic course designed to expand on the concepts covered in the introductory courses (GC 120, GC 210, GC 211). The emphasis is on strengthening architectural sketching and CAD drawing skills and showing how specific construction processes and materials selected for an architectural design affect commercial and residential production architectural drawings. Topics include perspective drawing, shadow projection, texturization, rendered plans, elevations and other related topics.

GC 320 3D Spatial Relations 3.  
Prerequisite: GC 101 or GC 120 or GC/IE 210.  
Analysis and solution of three-dimensional space problems utilizing graphic principles of orthogonal projection techniques. Application of studies of lines; surfaces; solids; surface intersections; surface development; vectors; and civil, mechanical, and geographical structures.

GC 330 Basic Technical Animation 3.  
Prerequisite: GC 120 or TDE 220.  
Create technical animations to communicate scientific and technical information to a variety of audiences and environments. Includes performing basic skills in image processing including cropping, transformations, color manipulation and color enhancement. Students will apply basic concepts of constructing 3-D objects, spaces, and environments. Create technical animations which apply environmental attributes including surface study, texture, color, lighting models, photorealism, and raytracing.
GC 340 Concepts of Website Development 3.
An introduction to the essential elements of web site development for students in Technology Education and Graphic Communications. Content focuses on planning and executing web site for educational effectiveness, user interfaces, site testing, and maintenance. Course provides instruction in software appropriate for creating a website.

GC 350 Applied CAD/D and Geometric Controls 3.
Prerequisite: GC 120.

GC 420 Visual Thinking 3.
Prerequisite: Engineering or technical student.
Develop visual thinking skills through a series of exercises using various visual media. Integrates and stresses drawing and construction activities essential to visual thinking. Emphasis on direct observation (seeing), mental imagery and sketching that is based upon three-dimensional space. Develops students' visual and drawing skills and provides for their application toward solving open-ended spatial problems. Intended for the scientific and technically oriented student.

GC 450 Advanced Graphics Usage with CAD 3.
Prerequisite: GC 350.
Advanced applications of 3-dimensional solid modeling tools in technical and engineering environments. Theory and application of manufacturing databases developed with 3-D modeling tools. Development and management of 3-D geometry using modeling software. Emphasis on application of 3-D modeling technology.

GC 496 Special Topics in Graphic Communications 1-4.
Topical study in areas of current interest and need to students and/or needs of curricula served by Graphic Communications.

GC 498 Independent Study in Graphic Communications 1-4.
Prerequisite: GC 120 or TDE 220.
Independent study in areas of current interests and needs of students in the field of Graphic Communications and the visual sciences. Individualized/Independent Study and Research courses require a "Course Agreement for Students Enrolled in Non-Standard Courses" be completed by the student and faculty member prior to registration by the department.

TDE - Technology Engineering and Design Education Courses

TDE 101 Introduction to Technology Education 1.
Orientation to technology teacher education curricula. Overview of the philosophy, objectives and scope of technology education programs in the public schools, multicultural and individual differences of students. A study of current technology issues will be conducted throughout the course.

Basic knowledge and skills needed to process common materials and produce functional products of woods, metals, plastics, and composite materials. Includes laboratory safety, use of hand tools, operation of materials, and teaching strategies. Laboratory experiences in materials testing and construction of multi-material projects.

TDE 131 Technology through Engineering and Design I 3.
Prerequisite: TDE 110.
Study of engineering and design processes used to solve technological problems, innovate and invent. Students will actively design, model and test solutions to technological problems and explore methods to teach middle and high school students about engineering design and the design process.

TDE 202 Introduction to Teaching Technology Engineering and Design Education 1.
Prerequisite: Sophomore standing; Corequisite: ED 204.
Introduction to teaching technology engineering and design education programs in middle and secondary schools. Field experiences and course assignments include two hours each week assisting classroom teachers in the public schools. Students are responsible for their own transportation to the field experience sites. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. The URL for information on this policy is: http://www2.acs.ncsu.edu/insurance/Students.html.

TDE 205 Desktop Publishing and Imaging Technology 3.
An introduction to digital document production and techniques. Explores software packages used in producing documents for print. Structured for public school teachers and other interested persons, the course introduces basic standards and concepts of page layout, copyright and trademark laws, document usability, readability, and methods of document production.

TDE 220 Civil Engineering Graphics 3.
Civil engineering graphics is an introductory course in basic graphic principles for constructed facilities. The emphasis is on sketching and CAD (computer-aided design) drawing skills and how specific construction systems and materials selected for a design affect production of civil engineering drawings for buildings, residences, and other constructed facilities through CAD. Topics include orthographic and axonometric engineering drawing of site plans, plat plans, section details, utility structure details, elevations and related topics. Restricted to Civil Engineering Majors.

TDE 230 Scientific and Technical Visualization 3.
Communication of scientific and technical information with graphics. Using current practice in science, technology, and engineering disciplines as the context, the class will use general and discipline-specific techniques to explore how to effectively communicate with graphics. Current software and computer technologies will be used to design and create graphics. Students will also learn to critically examine and discuss graphics produced by themselves and others.

TDE 261 Digital Media Education 3.
Prerequisite: TDE 205.
Image creation and control, aesthetics, production processes and environments, and media transfer are explored. This course emphasizes concepts of audio and video design, various digital media technologies, and nonlinear editing concepts through laboratory experiments and projects in radio, television, original audio development, and video production. TDE Majors or instructor permission.
TDE 331 Technology Through Engineering and Design II 3.
Prerequisite: TDE 131 and Corequisite: GC 350.
Students will explore the contributions of systems engineering for developing and sustaining our designed world. Appropriate measurement, analysis and simulation tools will be used to make informed decisions and solve problems. Students will explore methods to teach middle and high school students about engineering design and the design process. TDE Majors or instructor approval.

Contemporary and historical examples of the art and craft of ceramics will be studied. Experiences in designing ceramic forms and expressing individual ideas through the medium of clay.

TDE 359 Electronics Technology 3.
Prerequisite: Junior standing.
Direct current, alternating current, and semiconductors. Measurement and circuit behavior. Experimentation with application circuits.

Prerequisite: TDE 131 and GC 120.
Examination of current and projected technology topics which are growing in importance but are not presently reflected in the Technology Education programs of NC public schools. Laboratory experiences include development, revision, and field testing of appropriate learning activities for middle and high school students in the selected topic areas.

TDE 385 Robotics Education 1.
Corequisite: TDE 386.
This course is an introduction to design and invention system control mechanisms and robot sensors. Students will classify foundational technical developments in autonomous, computer, and radio-control teleoperations. Students will explore the history and evolution of robots and automation and their social, economic, industrial, and educational impacts.

TDE 386 Robotics Education Lab 3.
Corequisite: TDE 385.
Students will apply technological problem solving skills toward 21st century design and innovation. This includes experiences multiple robotics design and invention systems and related programming and designing, prototyping, and programming an autonomous robot to resolve a real world issue.

TDE 407 Field Work in Technology Education 1-6.
Supervised off-campus field experience in Technology Education that relates on-the-job experiences in the field to the technical competencies which are the content of the curriculum. May be repeated for a maximum of 6 credits.

TDE 452 Lab Planning in Technology Education 3.
Laboratory planning, management, and safety for technology education. Physical layout, selection, specification, and cost of equipment; the safe operation, repair and maintenance of power and hand tools; specification of expendable supplies, estimating, and ordering.

Prerequisite: Technology Education Majors, Admittance to teacher education candidacy.
Methods of teaching Technology Education. Emphasis on curriculum development, instructional methods, laboratory instruction, meeting needs of special populations, and management of student organizations. Field experiences and course assignments two hours each week. Students are responsible for their own transportation.

TDE 457 Student Teaching in Technology Education 1-8.
Skills and techniques involved in teaching technology education through practice in a public school setting.

TDE 481 Research & Development in Technology Education 3.
Prerequisite: TDE 331, TDE 385, and TDE 386.
Senior design, research, and development experience in technology education. Students research a problem, ideate potential solutions, select a final solution, construct a prototype, and complete a final report analyzing the chosen solution. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

TDE 490 Special Problems in Technology Education 1-6.
Prerequisite: Junior standing.
Supervised, independent investigation in a defined area of interest in Technology Education.

TDE 495 Senior Seminar in Technology Education 3.
Prerequisite: Junior standing.
An in-depth investigation of a topic or a set of problems and/or issues in Technology Education.

TDE 498 Independent Study in Technology Education 1-3.
Prerequisite: Junior standing.
Individual or group study of special topics in professional technology education. The topic and mode of study are determined by the faculty member after discussion with the student. May be repeated for a maximum of 6 credits. Individualized/Independent Study and Research courses require a "Course Agreement for Students Enrolled in Non-Standard Courses" be completed by the student and faculty member prior to registration by the department.

Minor in Graphic Communications

http://ced.ncsu.edu/stem

Specific curriculum requirements are available online (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php).

This 15 hour minor develops competencies in selecting and applying graphic techniques in both career and leisure activities, provides in-depth manual and computer skills, and enriches visual perception and critical thought in graphic areas. Minor programs are individually designed to meet the needs of the student and to fit with the student’s major, such as engineering or technology, engineering, and education.

Admissions

Students may declare their intention to complete the Technology, Engineering and Design minor by consulting with the contact person listed below and must submit a “Declare a Minor (https://ncsu.service-now.com/kb_view.do?sysparm_article=KB0011754)” form.

Certification

The person listed below will certify the minor prior to graduation. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State.
GC - Graphic Communications Courses

GC 120 Foundations of Graphics
Introductory course providing orientation to language of graphics for students majoring in any field. Designed to help develop ability to use CAD within the context of a concurrent design process to understand how everyday objects are designed, analyzed and created. Emphasis placed on decision-making processes involved with creating geometry and development of modeling strategies that incorporate intentions of designer.

GC 250 Architectural Graphic Communications
Prerequisite: GC 120 or TDE 220.
Architectural Graphic Communications is an advanced graphic course designed to expand on the concepts covered in the introductory courses (GC 120, GC 210, GC 211). The emphasis is on strengthening architectural sketching and CAD drawing skills and showing how specific construction processes and materials selected for an architectural design affect commercial and residential production architectural drawings. Topics include perspective drawing, shadow projection, texturization, rendered plans, elevations and other related topics.

GC 320 3D Spatial Relations
Prerequisite: GC 101 or GC 120 or GC/IE 210.
Analysis and solution of three-dimensional space problems utilizing graphic principles of orthogonal projection techniques. Application of studies of lines; surfaces; solids; surface intersections; surface development; vectors; and civil, mechanical, and geographical structures.

GC 330 Basic Technical Animation
Prerequisite: GC 120 or TDE 220.
Create technical animations to communicate scientific and technical information to a variety of audiences and environments. Includes performing basic skills in image processing including cropping, transformations, color manipulation and color enhancement. Students will apply basic concepts of constructing 3-D objects, spaces, and environments. Create technical animations which apply environmental attributes including surface study, texture, color, lighting models, photorealism, and raytracing.

GC 340 Concepts of Website Development
An introduction to the essential elements of web site development for students in Technology Education and Graphic Communications. Content focuses on planning and executing web site for educational effectiveness, user interfaces, site testing, and maintenance. Course provides instruction in software appropriate for creating a website.

GC 350 Applied CAD/D and Geometric Controls
Prerequisite: GC 120.

GC 420 Visual Thinking
Prerequisite: Engineering or technical student.
Develop visual thinking skills through a series of exercises using various visual media. Integrates and stresses drawing and construction activities essential to visual thinking. Emphasis on direct observation (seeing), mental imagery and sketching that is based upon three-dimensional space. Develops students' visual and drawing skills and provides for their application toward solving open-ended spatial problems. Intended for the scientific and technically oriented student.

GC 450 Advanced Graphics Usage with CAD
Prerequisite: GC 350.
Advanced applications of 3-dimensional solid modeling tools in technical and engineering environments. Theory and application of manufacturing databases developed with 3-D modeling tools. Development and management of 3-D geometry using modeling software. Emphasis on application of 3-D modeling technology.

GC 496 Special Topics in Graphic Communications
Topical study in areas of current interest and need to students and/or needs of curricula served by Graphic Communications.

GC 498 Independent Study in Graphic Communications
Prerequisite: GC 120 or TDE 220.
Independent study in areas of current interest and needs of students in the field of Graphic Communications and the visual sciences. Individualized/Independent Study and Research courses require a “Course Agreement for Students Enrolled in Non-Standard Courses” be completed by the student and faculty member prior to registration by the department.

Minor in Technology, Engineering and Design Education

https://ced.ncsu.edu/programs/technology-engineering-and-design-education-bachelor/

Specific curriculum requirements are available online (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php).

This minor relates well with many majors and provides students a blend of cognitive and psychomotor experiences that enhance the understanding of technology and allow development of fundamental skills in selected technical areas. By allowing students to pursue professional interests within an area of technology and broadening their perspectives, the Technology Education minor should increase career options available to graduates in other majors.

More details may be found here (https://oucc.dasa.ncsu.edu/technology-engineering-and-design-education-13tem).

Admissions

Students may declare their intention to complete the Technology, Engineering and Design minor by consulting with the contact person listed below and must submit a “Declare a Minor (https://ncsu.service-now.com/kb_view.do?sysparm_article=KB0011754)” form.

Certification

Prior to the end of the second week of the student’s final semester, the student must sign the Application for Minor form (provided by the minor contact person). This form is a list of all grades received in the courses to
TDE - Technology and Engineering Design Education Courses

TDE 101 Introduction to Technology Education 1.
Orientation to technology teacher education curricula. Overview of the philosophy, objectives and scope of technology education programs in the public schools, multicultural and individual differences of students. A study of current technology issues will be conducted throughout the course.

Basic knowledge and skills needed to process common materials and produce functional products of woods, metals, plastics, and composite materials. Includes laboratory safety, use of hand tools, operation of materials, and teaching strategies. Laboratory experiences in materials testing and construction of multi-material projects.

TDE 131 Technology through Engineering and Design I 3.
Prerequisite: TDE 110.
Study of engineering and design processes used to solve technological problems, innovate and invent. Students will actively design, model and test solutions to technological problems and explore methods to teach middle and high school students about engineering design and the design process.

TDE 202 Introduction to Teaching Technology Engineering and Design Education 1.
Prerequisite: Sophomore standing; Corequisite: ED 204.
Introduction to teaching technology engineering and design education programs in middle and secondary schools. Field experiences and course assignments include two hours each week assisting classroom teachers in the public schools. Students are responsible for their own transportation to the field experience sites. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. The URL for information on this policy is: http://www2.acs.ncsu.edu/insurance/Students.html.

TDE 205 Desktop Publishing and Imaging Technology 3.
An introduction to digital document production and techniques. Explores software packages used in producing documents for print. Structured for public school teachers and other interested persons, the course introduces basic standards and concepts of page layout, copyright and trademark laws, document usability, readability, and methods of document production.

TDE 220 Civil Engineering Graphics 3.
Civil engineering graphics is an introductory course in basic graphic principles for constructed facilities. The emphasis is on sketching and CAD (computer-aided design) drawing skills and how specific construction systems and materials selected for a design affect production of civil engineering drawings for buildings, residences, and other constructed facilities through CAD. Topics include orthographic and axonometric engineering drawing of site plans, plat plans, section details, utility structure details, elevations and related topics. Restricted to Civil Engineering Majors.

TDE 230 Scientific and Technical Visualization 3.
Communication of scientific and technical information with graphics. Using current practice in science, technology, and engineering disciplines as the context, the class will use general and discipline-specific techniques to explore how to effectively communicate with graphics. Current software and computer technologies will be used to design and create graphics. Students will also learn to critically examine and discuss graphics produced by themselves and others.

TDE 261 Digital Media Education 3.
Prerequisite: TDE 205.
Image creation and control, aesthetics, production processes and environments, and media transfer are explored. This course emphasizes concepts of audio and video design, various digital media technologies, and nonlinear editing concepts through laboratory experiments and projects in radio, television, original audio development, and video production. TDE Majors or instructor permission.

TDE 331 Technology Through Engineering and Design II 3.
Prerequisite: TDE 131 and Corequisite: GC 350.
Students will explore the contributions of systems engineering for developing and sustaining our designed world. Appropriate measurement, analysis and simulation tools will be used to make informed decisions and solve problems. Students will explore methods to teach middle and high school students about engineering design and the design process. TDE Majors or instructor approval.

Contemporary and historical examples of the art and craft of ceramics will be studied. Experiences in designing ceramic forms and expressing individual ideas through the medium of clay.

TDE 359 Electronics Technology 3.
Prerequisite: Junior standing.
Direct current, alternating current, and semiconductors. Measurement and circuit behavior. Experimentation with application circuits.

Prerequisite: TDE 131 and GC 120.
Examination of current and projected technology topics which are growing in importance but are not presently reflected in the Technology Education programs of NC public schools. Laboratory experiences include development, revision, and field testing of appropriate learning activities for middle and high school students in the selected topic areas.

TDE 385 Robotics Education 1.
Corequisite: TDE 386.
This course is an introduction to design and invention system control mechanisms and robot sensors. Students will classify foundational technical developments in autonomous, computer, and radio-control teleoperations. Students will explore the history and evolution of robots and automation and their social, economic, industrial, and educational impacts.
TDE 386 Robotics Education Lab 3.
Corequisite: TDE 385.
Students will apply technological problem solving skills toward 21st century design and innovation. This includes experiences multiple robotics design and invention systems and related programming and designing, prototyping, and programming an autonomous robot to resolve a real world issue.

TDE 407 Field Work in Technology Education 1-6.
Supervised off-campus field experience in Technology Education that relates on-the-job experiences in the field to the technical competencies which are the content of the curriculum. May be repeated for a maximum of 6 credits.

TDE 452 Lab Planning in Technology Education 3.
Laboratory planning, management, and safety for technology education. Physical layout, selection, specification, and cost of equipment; the safe operation, repair and maintenance of power and hand tools; specification of expendable supplies, estimating, and ordering.

Prerequisite: Technology Education Majors, Admittance to teacher education candidacy.
Methods of teaching Technology Education. Emphasis on curriculum development, instructional methods, laboratory instruction, meeting needs of special populations, and management of student organizations. Field experiences and course assignments two hours each week.

TDE 457 Student Teaching in Technology Education 1-8.
Skills and techniques involved in teaching technology education through practice in a public school setting.

TDE 481 Research & Development in Technology Education 3.
Prerequisite: TDE 331, TDE 385, and TDE 386.
Senior design, research, and development experience in technology education. Students research a problem, ideate potential solutions, select a final solution, construct a prototype, and complete a final report analyzing the chosen solution. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

TDE 490 Special Problems in Technology Education 1-6.
Prerequisite: Junior standing.
Supervised, independent investigation in a defined area of interest in Technology Education.

TDE 495 Senior Seminar in Technology Education 3.
Prerequisite: Junior standing.
An in-depth investigation of a topic or a set of problems and/or issues in Technology Education.

TDE 498 Independent Study in Technology Education 1-3.
Prerequisite: Junior standing.
Individual or group study of special topics in professional technology education. The topic and mode of study are determined by the faculty member after discussion with the student. May be repeated for a maximum of 6 credits. Individualized/Independent Study and Research courses require a "Course Agreement for Students Enrolled in Non-Standard Courses" be completed by the student and faculty member prior to registration by the department.

Department of Teacher Education and Learning Sciences (TELS)

The Department of Teacher Education and Learning Sciences advances education through scholarship, leadership, and advocacy. We prepare professionals who are committed to equity and social justice, have deep content knowledge, demonstrate strong working knowledge of effective pedagogies, and realize the potential of digital technologies to enhance learning. We shape the field of education by engaging in research that addresses current challenges, and by participating in cross-disciplinary work that deals with real problems in forward-looking ways. The department exemplifies an innovative merging of teacher education and the learning sciences that results in new pathways for teaching, scholarship, leadership, and service. The preparation that our students receive is unmatched in scope, priorities, and outcomes, assuring that our graduates are able to make profound contributions to education and society.

With over 300 undergraduate students, 200 graduate students, and 30 full-time faculty members, we offer more than 10 programs spanning the bachelor’s, master’s and PhD levels. We are the place where a deep understanding of current issues in teaching and learning comes together with a forward-looking vision for the promises of equity and digital learning to push the field of education forward.

Our nationally ranked graduate degree and certificate programs are led by faculty and staff who are committed to the success of our students. For information about our graduate programs, please go to https://ced.ncsu.edu/tels/graduate-programs/

ECI - Curriculum and Instruction Courses

ECI 201 Intro to Instructional Technology for Educators 3.
Introduction to effective technology integration in teaching practices across the curriculum for pre-service teachers. Exploration of different technology-based tools commonly integrated in instruction, including desktop, Internet/ Web-based, mobile, and cloud applications. Examination of integration challenges using relevant, real-world examples from current teacher practices. Planning for student-centered, project-based lessons that make use of diverse technologies.

ECI 204 Intro to Teaching 1-2.
Prerequisite: Sophomore standing; Corequisite: ED 204.
For prospective teachers in Middle and Secondary Business and Marketing, English, Foreign Languages, Language Arts, and Social Studies. Emphasis on what it means to be an educator as well as differing aspects and procedures of instruction and analysis of competencies required of teachers. The course has a required fieldwork component in local K-12 school, and students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

ECI 205 Introduction to Teaching Humanities and social Sciences 3.
Prerequisite: Sophomore standing.
For prospective teachers in secondary and middle years social studies, English, language arts, and foreign languages. An emphasis on differing aspects and procedures of instruction and analysis of competencies required of teachers. Field work in avariety of education settings including an extended period in one curriculum area.
ECI 296 Special Topics in Education 1-3.
Individual or group study of particular areas of education at the freshman and sophomore levels. Specific topics will vary from semester to semester.

ECI 305 Principles of Teaching Diverse Populations 3.
Prerequisite: ED 204.
Impact of cultural factors on experiences of teachers and students in contemporary schools. Teaching techniques and development of instructional plans to enhance schooling experiences of culturally diverse students.

ECI 306 Middle Years Reading 3.
Prerequisite: Six hours in ED or PSY.
Reading skills in middle years education developed with emphasis on application of the reading process to content area.

ECI 307 Teaching Writing Across the Curriculum 3.
Prerequisite: ENG 101.
For prospective teachers of all disciplines in middle/high school. Practical strategies for writing as a learning tool and for teaching writing. Lesson plans, assignments, experiences appropriate to content areas. Focus on writing, writing instruction, and technology. Separate sections for Middle Grades (MSL) and English (LTN) majors.

ECI 309 Teaching in the Middle Years 3.
Prerequisite: Six hours in ED or PSY.
Nature and purposes of middle grades education. Early adolescent development, curriculum, teaching/learning methods, school organization, and characteristics of effective middle years teachers. Includes field experience.

ECI 332 Health Promotion and Disease Prevention 3.
Prerequisite: For credentialed health professionals only.
Emphasis on education of the public regarding general health concerns including cancer, cardiovascular disease, accident prevention, nutrition, drugs, alcohol, mental health, sexuality, and environmental hazards.

ECI 333 Health Care Delivery 3.
The historical basis of health care delivery in the U. S. with emphasis on hospitals, health maintenance organizations, ambulatory care centers, ambulatory surgery, nursing homes, and private care practice. Philosophical issues of funding health care, promoting health care, and the training of health care workers.

ECI 335 Planning Classroom and Clinical Curricula 3.
Prerequisite: For Certification Majors: EOE 101, 205; For Non-Certification Majors: EOE 101. For credentialed health professionals.
Procedures for planning health occupations curricula for classroom and clinical settings. Practice in writing, updating, and refining health curriculum with emphasis on selection and sequencing. Comparison of styles of writing curricula. Roles and responsibilities of healthy curriculum planner.

ECI 336 Strategies for Teaching a Health Occupations Course 3.
Prerequisite: For credentialed health professionals.
Planning and implementation of effective instructional strategies for clinical and classroom settings. The nature of the teaching/learning process, psychological and philosophical aspects of teacher choice of various strategies.

ECI 405 Literature for Adolescents 3.
Prerequisite: Junior standing.
The history, types, and characteristics of literature for adolescents. Emphasizes reading and analyzing the literature by exploring the themes, literary elements, and rationale for teaching literature for adolescents. Addresses ways in which this literature can be integrated and implemented in English/Language Arts curriculum.

ECI 414 Human Relations and Discipline in the Classroom 3.
Prerequisite: PSY 304 or EDP 304 and 8 hours of education.
Designed to help prospective teachers foster positive interpersonal relationships in classrooms, build a sense of community and create a purposeful environment for learning. Investigates issues such as group building, active listening, and major approaches to discipline. Uses case studies and problem solving methods.

ECI 416 Teaching Exceptional Students in the Mainstreamed Classroom 3.
Prerequisite: Six hours in ED or PSY.
Provides classroom teachers in all disciplines and grade levels with a knowledge of various handicapping conditions, as well as with techniques to assist exceptional students within the mainstreamed classroom. Required for MSL majors.

ECI 423 Methods and Materials in Teaching Modern Foreign Languages 4.
Prerequisite: Admission to Professional Semester, Corequisite: ECI 424.
Methods and materials of teaching French or Spanish grades K-12 with an emphasis on lesson and unit planning, second language acquisition, national standards, and demonstrations/practice teaching in micro-lessons. This course provides opportunities for prospective French and Spanish teachers to integrate knowledge of their language with effective materials, strategies, and methods of instruction to prepare students for K-12 French or Spanish teaching. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools.

ECI 424 Student Teaching in French or Spanish 12.
Prerequisite: Admission to Professional semester, Corequisite: ECI 423.
Teaching experience for prospective teachers of French or Spanish in a selected elementary, middle or high school under the supervision of a cooperating teacher and a university faculty supervisor. Additional school observations and on campus seminars are a part of this course. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools. Students are covered under the General Statute affording liability protection.

ECI 430 Methods and Materials for Teaching Language Arts in the Middle Grades 4.
Prerequisite: ECI 205, ELP 344, PSY 304 or EDP 304, ECI 306, ECI 307, Senior standing, candidacy in Middle Grades Teacher Education, Corequisite: ECI 435.
Inquiry, activity-oriented course provides opportunities for prospective language arts middle school teachers to integrate knowledge of English with effective materials, strategies, methods of instruction. Students observe middle school classes, plan lessons, and units, practice varied classroom strategies, technologies in micro-lessons. Prepared students for teaching language arts with other content areas in middle schools.
ECI 435 Methods and Materials for Teaching Social Studies in the Middle Grades 4.
Prerequisite: Admission to professional semester.
For preservice middle school social studies teachers. Focus on: teaching and evaluation skills, adaptation of instruction to individual learner differences, identification and creation of instructional materials appropriate for use in social studies teaching.

ECI 438 Medical Law and Ethics 3.
Ethical and legal issues involved in delivering health care, such as euthanasia, reproductive technology, organ transplants, patients' rights, and confidentiality. Classical ethical theories and principles. Systematic review procedures and current medical law used to examine current case dilemmas in the health professions.

ECI 442 Field Experience in Business and Marketing Education 3.
Prerequisite: Junior standing.
Supervised off-campus work experience in an approved business and marketing content related job. The work experience relates on-the-job experiences to the technical competencies taught in the North Carolina Standard Course of Study for business and marketing education. Students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

ECI 444 Administration of Business and Marketing Education 3.
Prerequisite: ED 204 and ECI 204 and MKE Business and Marketing Education Major.
Development of successful business and information technology, and marketing education programs. Program promotion, managing cooperative education experiences, managing DECA and FBLA chapters, and determining professional development strategies. Primary roles of the business and information technology and marketing education teachers' classroom instruction. Program management, classroom management, management of career-technical student organizations, cooperative education, and program development.

Prerequisite: Senior Standing; Corequisite: ECI 430 and ECI 435.
Inquiry, activity-oriented course designed to engage students in theory and practice related to 21st century skills, new literacies, and emerging technologies, as well as focused support for developing the culminating electronic portfolio. Course provides opportunity for pre-service, English Language Arts/ Social Studies middle School teachers to integrate knowledge of English and Social Studies with emerging technologies and digital literacy applications.

ECI 446 Curriculum and Methods of Teaching Business and Marketing Education 4.
Prerequisite: Admission to Teacher Education Candidacy; MKE Business and Marketing Education Majors.
Study of the curriculum common to business and information technology and marketing education and the research behind its development. Methods common to instructional planning, implementation, and evaluation of effective business and information technology and marketing education programs are topics included in this course. Twenty hours of field work are required. Student are expected to provide their own transportation to and from assigned public schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details in acquiring the insurance and the current charge. MKE students only.

ECI 447 Student Teaching in Business and Marketing Education 9.
Prerequisite: Admission to Professional Semester; MKE Business and Marketing Education Majors, Corequisite: ECI 494.
Fifteen weeks full-time student teaching business and marketing subjects in the public schools under the supervision of a cooperating teacher and university supervisor. Students will develop skills in instruction, evaluation, advisement, administration, and observation. Students are expected to provide their own transportation to and from assigned public schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details in acquiring the insurance and the current charge. MKE students only.

ECI 448 E-Business Applications in Business and Marketing Education 3.
Prerequisite: Junior standing.
Emphasis on design and construction of advanced web pages, business and marketing applications of electronic commerce, as well as economic, social, legal, and ethical issues that are related to conducting business in a virtual environment. Content prepares students to apply principles to the business and marketing education curriculum in the public schools. Credit for both ECI 448 and ECI 548 is not allowed.

ECI 450 Methods and Materials in Teaching English 4.
Prerequisite: ECI 204, ELP 344, PSY 304 or EDP 304; Senior standing and admission to Teacher Education candidacy with a Major in English.
Methods and materials of teaching English in grades 9-12, with an emphasis on lesson planning and demonstrations/practice in teaching literature, study skills, speaking, listening, and writing. Taught during the first seven weeks of the semester.

ECI 451 Teaching Reading Across Disciplines 3.
Prerequisite: Six hours in ED or PSY.
Facilitates study of methods and materials for teaching literacy across disciplines. Develops instructional strategies in the use of print and digital texts and media to support disciplinary learning.

ECI 454 Student Teaching in English/Language Arts 1-12.
Prerequisite: Admission to Student Teaching Professional Semester; For MSL students: ECI 430, 416, 464.
Provides the prospective teacher with experience in the techniques and skills involved in teaching English in secondary schools or Language Arts in middle schools in a selected off-campus station. Student interns become familiar with the total school program, eventually carrying a full teaching load, and participate in relevant school and community activities. Students are required to provide their own transportation. TED and MSL majors only.

Prerequisite: ECI 205, ELP 344, Sr. standing and admission to professional semester with a major in either history, sociology, political science.
Teaching techniques, innovations, and development of teaching and evaluation skills in the area of secondary school social studies. Adaptation of instruction to individual learner differences, and selection and design of instructional materials. Taught during the first six weeks of the semester. Taught during the first six weeks of the semester.
Discussion with the student. Topic and mode of study are determined by the faculty member after individual or group study of special topics in professional education. The prerequisite: Junior standing or Senior standing.

Topics related to cultural factors and how they affect teachers and students in the classroom. Instructional techniques and the development of instructional plans that enhance schooling experiences of culturally diverse students. Departmental Approval Required.

Topics related to human psychological development. Cognitive, social, physical changes, and their interaction among adolescence. Departmental Approval Required.

ECI 472 Interaction of Classroom Management and Instruction 3. Prerequisite: ECI 471; NC TEACH Participants. Topics related to teaching in the content area and classroom management. Lesson planning, principles applied to education, measurement and evaluation procedures, behavior therapy, and student motivation. Departmental Approval Required.

ECI 473 Subject Specific Methods 3. Prerequisite: ECI 472; NC TEACH Participants, Corequisite: ECI 474. Topics related to cultural factors and how they affect teachers and students in the classroom. Instructional techniques and the development of instructional plans that enhance schooling experiences of culturally diverse students. Departmental Approval Required.

ECI 475 Peer Mentoring in Alternative Licensure 3. Prerequisite: ECI 474; NC TEACH Participants, Corequisite: ECI 476. Topics related to observing and evaluating fellow teachers in relation to the national state teaching competencies. Classroom observations, videotaping, and group evaluations that are shared and discussed with fellow teachers. Departmental Approval Required.

ECI 476 Curriculum and Instruction Practices 1 3. Prerequisite: ECI 472; NC TEACH participants, Corequisite: ECI 473. Topics related to essential skills and concepts needed by beginning teachers. The class focuses on questioning, test preparation, discussion skills, familiarity with national standards, multiple teaching strategies, and assessment + evaluation of students. Departmental Approval Required.

ECI 494 Senior Seminar in Business and Marketing Education 3. Prerequisite: Admission to Professional Semester; MKE Business and Marketing Education Majors, Corequisite: ECI 447. Discussion and analysis of problems, trends, and issues experienced while student teaching in the public schools.

ECI 496 Special Topics in Education 1-3. Prerequisite: Junior standing or Senior standing. Individual or group study of special topics in professional education. The topic and mode of study are determined by the faculty member after discussion with the student.

ECI 500 Theory and Practice in Teaching Diverse Populations 3. Prerequisite: Graduate standing. Analysis of literature and research in related to impact of cultural factors on teaching and learning in contemporary schools. Exploration of teaching techniques and curricular directions designed to improve school experiences for diverse populations in K-12 settings.

ECI 501 Foundations of Curriculum 3. Prerequisite: 12 sem. hrs. graduate ED and PSY. Origin, development, and current status of elementary and secondary school curriculum and an evaluation of trends and issues likely to influence the curriculum in the future.

ECI 502 Continuous Improvement of School Technology Initiatives 3. Introduction to the models, strategies, and tools for evaluating and making informed decisions about technology initiatives; examination of technology evaluation case studies, evaluation proposals, and stakeholder reports.

ECI 505 Issues and Trends in Foreign Language Education: Theory & Practice 3. Prerequisite: Graduate standing. An exploration of theory and practice issues related to foreign language teaching. Inquiry into proficiency-oriented instruction, innovative methodological approaches, the National Standards and learning scenarios, integrating culture, options for testing and assessment, content-based instruction, the role of grammar in second language acquisition, teaching foreign language students with learning disabilities, and Foreign Language in the Elementary School (FLES) in North Carolina. Students will examine case studies related to these topics and engage in a classroom action research project.

ECI 506 Instructional Technology in Foreign Language Education: Addressing the National 3. Prerequisite: Graduate standing. Hands-on experience in appropriately selecting and applying a number of instructional technologies to foreign language teaching and learning in relation to the current National Standards. Analysis and use of effective technology tools including hardware, software, and courseware. Emphasis will be on the application of Technology-Enhanced Language Learning (TELL) as it integrates the National Standards’ goals of Communication, Cultures, Connections, Comparisons, and Communities.

ECI 507 Social Justice Education 3. Prerequisite: ECI 500. Introduction to principles of social justice education and their centrality in progressive policies and pedagogies that lead to equity in all teaching contexts. Students will develop strategies for successfully incorporating a social justice education framework in scholarship and professional practice.

ECI 508 Teachers as Leaders 3. Prerequisite: Graduate standing. Examines teacher leadership research, theory, and practice. Prepares teachers to assume leadership roles in classrooms, schools, school systems, and the larger educational community. Independent research projects required.

ECI 509 Special Problems in Curriculum and Instruction 1-6. Prerequisite: Six hours of ED or PSY. In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.
ECI 510 Research Applications In Curriculum and Instruction 3.
Prerequisite: ST 507, Doctoral student, C and I Major.
Focus on current issues and research methods used in the areas of curriculum development and supervision, instructional technology, English education, middle grades education, reading education, social studies education and special education.

ECI 511 Technology Integration Theory and Practice 3.
Prerequisite: Graduate standing.
Foundational study of technology integration standards, models, and conditions informed by research. Analysis of micro classroom and macro school/institutional technology plans, and development of sample technology plans and projects representative of integration across curricular areas.

ECI 512 Emerging Technologies for Teaching and Learning 3.
Examination of emerging technologies as applied in educational settings with a focus on related research, case studies, theoretical underpinnings, and strategies for effective integration.

ECI 513 Teaching and Learning with Digital Video 3.
Prerequisite: Graduate standing.
Development and implementation of digital video within educational contexts and situations. Design of educational watching, analyzing, and creating activities with video. Application of conventions and genres of digital video capture and editing to sample technology projects across curricular areas.

ECI 514 Multimedia Design and Applications in Instruction 3.
Prerequisite: Graduate standing.
Examination of learning theories and research-based principles for multimedia design to select/apply appropriate digital resources and create maximally effective educational products.

ECI 515 Online Collaborations in Education 3.
Examination of models of collaboration, sample online collaborative strategies and projects, tools supportive of cross-classroom collaborations, and research findings from collaborative initiatives.

ECI 516 Design and Evaluation Of Instructional Materials 3.
Prerequisite: Graduate standing.
Characteristics and selection of various media for instruction and their use in educational settings. Design and production of instructional materials. Analysis of research in the field. Individualized projects and assignments. Application of grounded research and theory concerning learning to design of instructional materials. Structured projects and practical experiences used to transfer design principles and evaluate instructional products.

ECI 517 Theoretical Foundations of Advanced Learning Environments 3.
Examination and application of behavioral, cognitive, and constructivist theoretical frameworks underlying the design and development of advanced technology-enhanced learning environments.

ECI 518 Digital Learning Program and Staff Development 3.
Prerequisite: ECI 511, ECI 514, ECI 515, ECI 642.
Study and application of principles related to digital learning program planning, facilities and resource management, and staff development in K-12 settings.

ECI 519 Special Problems in Digital Learning and Teaching 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in digital learning and teaching selected from areas of current concern to practitioners in education.

ECI 520 The Teaching Of Composition 3.
Prerequisite: 9 hrs. of ED, PSY and/or ENG;
For classroom teachers. Practical field-tested ideas to help students improve as writers by focusing on composition as a process as well as a product. Activities for teaching prewriting, drafting, revising, proofreading, grammar and evaluating with suggestions for individual and group learning. Writing in content areas and composition research/ theory. To take this course in sum. as part of Capital Area Writing Project, student must apply and be selected.

ECI 521 Teaching Literature For Young Adults 3.
Prerequisite: Senior standing or Graduate standing or PBS status.
Designed to acquaint in-service and pre-service teachers with breadth and diversity of contemporary literature for adolescents, with emphasis on teaching young adult literature. Addresses history and themes of young adult literature, readability of materials, reading preferences, literary merit, skills that can be taught through literature, censorship, motivating students to read and organizing literature units.

ECI 522 Trends and Issues in English Language Arts Education 3.
Prerequisite: Graduate standing.
Consideration of past, current, and future trends and issues in English Language arts instruction, standards, and methodologies. Examination of research, theory, and practice in concert with trends, issues, and questions. Independent research projects required.

ECI 523 Teacher as Researcher 3.
Prerequisite: Graduate standing.
This course is designed to introduce the methods and skills required for designing, conducting, interpreting, and applying action research - the systematic inquiry into curriculum, instruction, teaching, and learning. This course will focus on reflective inquiry and practical applications.

ECI 524 Theory and Research in Global Learning 3.
An examination of theoretical frameworks for global learning and comparative studies of various national approaches to K-12 education. This course provides students with multiple lenses through which to consider how we teach and learn given the demands and opportunities present in our interconnected world.

ECI 525 Contemporary Approaches In the Teaching Of Social Studies 3.
Prerequisite: Advanced Undergraduate standing or Graduate standing.
Analysis of principles, strategies and application of new teaching approaches. Structured projects and practical experiences.

ECI 526 Theory and Research On Teaching and Learning Social Studies 3.
Prerequisite: ECI 530 or ECI 525.
A critical analysis of the literature relating to the teaching and learning of social studies and the drawing of implications for instructional practices.

ECI 528 Strategies for Teaching English in Secondary Schools 3.
Methods and materials of teaching English in grades 9-12, with an emphasis on lesson planning and demonstrations/practice in teaching literature, study skills, speaking, listening, media literacy, and writing. Some classes and assignments will be completed in a field setting.

ECI 530 Social Studies In the Elementary School 3.
Prerequisite: Six hrs. in ECI.
Advanced professional training in teaching of social studies for middle grades and elementary teachers, including in-depth introduction to research-based teaching strategies, instructional resources and literature of the field.
ECI 531 Advanced Writing in Education 3.
Appropriate for any specialty area in Education. Focus on writing required in graduate courses, research reviews for educational reports and National Board Certification, writing for educational journals, theses, and dissertations. Opportunities to gain knowledge, tools, and strategies to meet the academic community's standards. Strategies to develop and/or enhance form, style, content, quality of academic writing, and on researching, composing, revising, and editing. Students will compose, self-evaluate and give feedback on the work of their peers. Graduate status.

ECI 535 Methods and Materials for Teaching Social Studies in the Middle Grades 3.
For preservice middle school social studies teachers. Focus on: teaching and evaluation skills, adaptation of instruction to individual learner differences, identification and creation of instructional materials appropriate for use in social studies teaching. Cannot earn credit for ECI 435 and ECI 535.

ECI 537 Teaching Children's Literature 3.
Instructions for educators in quality children's literature, specific needs of young reader, genres of children's literature, strategies for instructing children's literature, ways to target reader's interests, and design of literature units.

ECI 540 Reading In the Elementary School 3.
Prerequisite: Six hrs. ED or PSY.
Theoretical foundations of reading instruction and current methods and materials for teaching reading, with emphasis on planning and implementing reading programs for children in kindergarten through grade six.

ECI 541 Reading In the Content Areas 3.
Prerequisite: Six hours in ED or PSY.
Methods in instruction for applying reading to content areas, with emphasis on means of improving comprehension, vocabulary and learning strategies in subject matter classrooms.

ECI 543 Diagnosis Of Reading Disabilities 3.
Prerequisite: ECI 540 or ECI 541.
Formal and informal instruments for diagnosing reading disabilities including completion of a diagnostic case study describing reading performance of a disabled reader.

ECI 544 Remediation Of Reading Disabilities 3.
Prerequisite: ECI 543.
Advanced approaches to reading remediation including theory and research related to remedial instructional strategies, analyses of instructional designs and evaluations of effectiveness of intervention programs.

ECI 545 Theory and Research in Literacy 3.
Prerequisite: ECI 540.
Advanced study of theoretical models of reading, research issues in reading and in other language processes. In-depth theoretical models of reading. Emphasis on critical examination and analysis of research investigating reading acquisition, maturereading behavior and related language processes.

ECI 546 New Literacies & Media 3.
Critical analysis of new literacies that are prompted by emerging technologies and participatory media in K-12. Design and application of new literacies and media instructional practices to literacy curriculum and other discipline areas.

ECI 547 Knowledge Construction: Implications for Multicultural Education 3.
Prerequisite: ECI 500.
Exploration of sociopolitical factors involved in the construction of knowledge in education as well as the implications for practitioners and learners in schools and other educational settings. Particular emphasis on critiquing traditional epistemologies that limit the production, dissemination, and validation of progressive discourses in education in order to promote the production of knowledge that affirms the principles of social justice education.

ECI 548 E-Business Applications in Business and Marketing Education 3.
Emphasis on design and construction of advanced web pages, business and marketing applications of electronic commerce, as well as economic, social, legal, and ethical issues that are related to conducting business in a virtual environment. Content prepares students to apply principles to the business and marketing education curriculum in the public schools. Credit for both ECI 448 and ECI 548 is not allowed.

ECI 549 Special Problems in Reading 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in reading education selected from areas of current concern to practitioners in education.

ECI 550 Foundations Of Middle Years Education 3.
Prerequisite: 6 hours of ED or PSY.
Examination of five major aspects of middle years education: (a) history and purposes of middle/junior high school, (b) pre- and early adolescent needs, interests and abilities, curriculum design and content, (d) teaching methods and (e) school organization. Emphasis on both theoretical understandings and effective classroom strategies.

ECI 551 Teaching/Learning Approaches For Emerging Adolescents 3.
Prerequisite: ECI 550; Graduate standing.
Exploration of teaching/learning approaches appropriate to emerging adolescents. Learning styles; interdisciplinary inquiry; community-based curriculum; simulations and games; learning centers; minicourses; design of physical space; all-school activities.

ECI 552 Program Development & Evaluation in Youth & Family Settings 3.
Historical and contemporary foundations of program development and evaluation in non-formal, community-based family life and youth development settings are examined including theory, research, and three holistic program development constructs: 1) planning; 2) design and implementation; 3) impact evaluation and accountability.

ECI 553 Applied Concepts in Child and Youth Development 3.
This course explores the fundamental concepts of child and youth development (including early childhood through adolescence) as applied to programmatic and organizational contexts. A special focus is placed upon the concepts as applied to Community Youth theories & practice.

ECI 554 Collaborations & Partnerships in Family & Youth Settings 3.
To prepare educators (formal and non-formal) to better establish, lead and manage collaborations and partnerships in family settings and those that support holistic community-based youth development organizational systems. Specific foci include: types and levels of partnerships; environmental scanning and socio-organizational linkage contextual factors affecting community collaborations; leadership factors affecting community collaborations; and human, financial and programmatic management in collaborations. Some on-campus meetings are required.
ECI 556 Organizational Systems in Youth and Family Settings 3.  
Prerequisite: ECI 506.  
Preparation for current and future community family and youth development professionals leading and managing community-based organizations. Course includes: fundamentals of management and leadership; institutional and organizational structures; administrative and strategic planning; working with advisory and governing groups; marketing and program delivery systems; information management systems; and human resource, financial, facilities and risk management systems.  

ECI 557 Volunteerism in Youth and Family Settings 3.  
Preparation for current and future community-based youth and family professionals to better manage volunteers in local program service delivery. Specific foci include: volunteerism as a social phenomenon; volunteer resource management; new forms of volunteerism; and future trends in volunteerism. Restricted to graduate and post-baccalaureate students only.  

ECI 560 Professional Development in Business and Marketing Education 3.  
Prerequisite: Graduate standing.  
Designed to prepare business and marketing educators with the knowledge and skills necessary to design and implement strategies for organizational improvement that will benefit business and marketing education programs. Attendance and participation meaningful, organized professional development activity is an integral component of the course.  

ECI 561 Curriculum and Instruction in Business and Marketing Education 3.  
Prerequisite: Graduate standing.  
Designed to develop competencies needed to be a successful Business and Marketing Education Teacher-Coordinator. Focus primarily on the activities involved in planning and managing the curriculum and instructional skills needed to effectively implement the curriculum and meet educational needs of middle and high school students. For ED & MKZ students. Requires instructor approval.  

ECI 562 Program Management in Business and Marketing Education 3.  
Prerequisite: ECI 561.  
This course includes the administration of middle and secondary business and marketing education programs, including career guidance; the management of DECA or FBLA chapter; supervision of work-based learning strategies; and school program promotion and development. ED & MKZ students only. Requires permission of instructor.  

ECI 563 is a course that involves teaching techniques, innovations, development of teaching and evaluation skills, and in-depth subject matter inquiry in the area of secondary school social studies. Adaptation of instruction to individual learner differences, and selection and design of instructional materials will be explored. Must be enrolled in Secondary Social Studies MAT Program.  

ECI 566 Advanced Instructional Strategies in Business and Marketing 3.  
Prerequisite: ECI 561.  
Advanced strategies and techniques related to teaching and learning in the business and marketing education curricula, classrooms, work places, and technology environments in middle and secondary education. MKZ students only.  

ECI 567 Career and Technical Education Fundamentals and Program Administration 3.  
Emphasis on assisting various school district personnel in acquiring the knowledge and skills needed to effectively provide quality career and technical education (CTE) programming at the district level. Content includes federal CTE legislation, theory and research on educational reform, local and regional economic development, sources of funding for CTE programming and continuous improvement.  

ECI 568 Designing College and Career Ready Programs 3.  
Examination of current school system instructional practices to assist various school district personnel in aligning core academic and career and technical education programming to prepare students for successful post-secondary education, careers, and life-long learning. Content includes an examination of education reform initiatives with an emphasis on foundational theory and research, needed workplace knowledge and skills, innovative education programs/models, and research-based best practices for success in transitioning students to post-secondary success.  

ECI 569 Special Problems in Business and Marketing Education 1-6.  
In-depth study of topical problems in business and marketing education selected from areas of current concern to practitioners in education.  

ECI 570 Learning Disabilities 3.  
Prerequisite: ECI 585.  
Field of learning disabilities, including definitions, prevalence, etiology, characteristics and current educational trends for educating students with learning disabilities.  

ECI 571 Methods and Materials In Learning Disabilities 3.  
Current methods and materials for the teaching students with learning disabilities in elementary and/or secondary schools, including curriculum and instructional techniques. Focus on examination of commercial materials and development of teacher-made materials for use with students with learning disabilities.  

ECI 572 Resource Teaching In Special Education 3.  
Prerequisite: ECI 585.  
Resource teaching in area of special education, with emphasis on resource teaching with students with special needs. Types of resource programs, establishment and maintenance of a program, selection of students, curriculum and materials.  

ECI 573 Applied Behavior Analysis for Teachers 3.  
Concepts and procedures involved in design and implementation of techniques for managing the behavior of students in classroom setting. Focus on methods for defining, measuring, increasing, decreasing, maintaining, and generalizing classroom behaviors in all learners.  

ECI 574 Intellectual Disabilities 3.  
Prerequisite: ECI 585.  
Content presented includes definitions, classifications, and assessment of person with intellectual disability from medical, sociological, and educational points of view. Issues related to labeling, etiology, characteristics, levels of severity, litigation, legislation, family and societal issues, history, and controversies are emphasized related to persons with intellectual disability.  

ECI 575 Communication Disorders In the Classroom 3.  
Prerequisite: ECI 570.  
Occurrence of communication disorders in the school-age population, including types of disorders, prevalence, etiology, characteristics and corrective therapy. Focus on communication disorders among exceptional students and classroom teacher's role in working with communication disorders.
ECI 576 Teaching Functional and Life Skills to Students with Disabilities 3.
Prerequisite: ECI 585 and ED 574.
Methods of instruction and materials related to teaching children and persons with mild-moderate levels of disability are emphasized. Effective general pedagogical approaches are stressed, as well as the teaching of functional academic skills, curricula used in instructions, teaching social and adaptive behavior as well as daily living skills, and transition-related skills necessary for independent adult life.

ECI 577 Education Of Severely Handicapped 3.
Prerequisite: ECI 585 or ECI 574.
Severe and profound mental retardation and autism, including assessment procedures, educational and social/vocational programs, instructional strategies and evaluation. Legal and ethical issues involved in working with severely handicapped.

ECI 579 Organization and Behavioral Management of Inclusive Classrooms 3.
To increase students' knowledge of persons with high incidence disabilities (i.e., learning disability, mild intellectual disability, and serious emotional disability), and how to manage the behavior of all pupils in educational environments. Characteristics of students with high incidence disabilities will be emphasized, as well as strategies to reduce the likelihood of problem behavior of all pupils in the classroom.

ECI 580 Transition Program For Students With Mild Disabilities 3.
Prerequisite: ECI 585.
Educational and other procedures involved in providing transition programming to students with mild disabilities. Examination of secondary-level special education service delivery, as well as post-secondary interventions, from critical, practical, empirical and theoretical perspectives.

ECI 581 Educational Diagnosis and Prescription For Children With Exceptionalities 3.
Prerequisite: ECI 585.
Concept of educational diagnosis of students with exceptionalities, including examination of educational diagnostic procedures in current use in special education. Development of informal diagnostic techniques and procedures for adapting curriculum and instruction for learner with exceptionalities.

ECI 583 Behavior Disorders 3.
Prerequisite: ECI 585.
Definitions, etiology, characteristics, philosophies and approaches to educational programming for children and youth with behavior disorders, including emotionally handicapped, autistic and socially maladjusted.

ECI 584 Intervention for Behavior Problems of Students with Disabilities 3.
Prerequisite: ECI 583.
Curriculum materials, instructional strategies and behavior management techniques related to teaching children and youth with behavioral disorders including individualized instruction, group process, organization and evaluation of classroom programs, parent involvement, community resources and teachers' personal and professional growth and development.

ECI 585 Education Of Exceptional Children 3.
Prerequisite: 9 hrs. of ED or PSY.
Introduction to field of special education. Focus on historical overview, definitions and terminology in basic areas of exceptionality; etiological factors in exceptionality; developmental and learning characteristics of each area of exceptionality; and educational settings and strategies employed in special education. Review of current educational laws and policies affecting special education.

ECI 603 Advanced Seminar In Literacy Research 3-6.
Prerequisite: ECI 648.
Critical analyses of research and methodology in reading comprehension processes and strategies for comprehension and retention of written discourse. Opportunity for design and conduct of a research project in reading or related area.

ECI 606 Seminar on Teacher as Learner: Developmental Theory, Research and Practice 3.
Prerequisite: Graduate standing (6 hrs course work at 500-level).
Analysis of major contemporary theories and research of learning and development as a basis for individual and organizational change and development in educational settings.

ECI 607 Advanced Seminar in Multicultural Education 3.
Prerequisite: Graduate standing and ECI 500.
Application and analysis of research and scholarship in multicultural education and topics related to effective schools for contemporary culturally diverse student populations in K-12 settings.

ECI 620 Special Problems In Curriculum and Instruction 1-6.
Prerequisite: Six hrs. of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 630 Independent Study in Curriculum and Instruction 1-6.
Independent curriculum or research project in curriculum and instruction.

ECI 640 Practicum In Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised practical experiences in schools and area agencies concerned with curriculum and instruction or educational supervision.

ECI 641 Practicum In Mentoring and Coaching 1-6.
Prerequisite: ECI 705, Graduate standing in College of ED and PSY.
Supervised practical experiences in which participants become mentor to a student teacher or a teacher in a school system.

ECI 645 Diagnostic-Prescriptive Practicum in Reading 3.
Prerequisite: ECI 540, ECI 541 and ECI 543; Graduate standing in College of ED and PSY.
Supervised teaching experience with students using diagnostic test data to prescribe remedial programs for reading-disabled individuals, implementing instructional prescriptions and evaluating success of remedial plans.

ECI 647 Practicum in Business and Marketing Education 3.
Prerequisite: ECI 569.
Supervised practical experiences in schools and area agencies concerned with business and marketing education.

ECI 648 Practicum in Special Education 1-6.
Prerequisite: Graduate standing in College of ED and PSY.
Supervised practical experiences in schools and area agencies concerned with teaching children and adolescents with disabilities.
ECI 650 Internship In Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with curriculum development and/or educational supervision.

ECI 652 Field-Based Applications of Digital Learning and Teaching 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities to design, test, and revise digital learning and teaching solutions in authentic, field-based settings.

ECI 654 Internship In Elementary Education 1-6.
Prerequisite: 3 hrs. grad.-level elementary education course work, Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with elementary grades education.

ECI 656 Internship In Middle Grades Education 1-6.
Prerequisite: ECI 550, ECI 551, Graduate standing in College. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with the education of young adolescents.

ECI 657 Internship In Business and Marketing Education 1-6.
Prerequisite: ECI 561.
Supervised opportunities for advance professional development in contexts concerned with business and marketing education. Requires instructor approval.

ECI 658 Internship In Special Education 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with special education.

ECI 681 Seminar in Special Education Literacy 3.
Prerequisite: ECI 540 or ECI 541 and ECI 581, ECI 585.
A case study approach is used in the seminar that requires the application of assessment techniques and instructional intervention methodologies in literacy for K-12 students with disabilities. Assigning activities require access to and experience in schools and/or related settings. This seminar is designed to be completed during the last half of the graduate program. It is restricted to graduate students in SPE, SPL, SPM, SPB or consent of instructor.

Prerequisite: ECI 585.
This seminar is designed to prepare special education teachers to provide empirically supported instruction in numerical concepts and skills to students with disabilities in special education and general education settings. Particular attention will be paid to student characteristics that impact learning in arithmetic and mathematics and to addressing state and national curriculum standards using instructional organization and strategies that have been shown through research to be effective for this population. Field work in schools and/or related settings is required. Restricted to students in SPE, SPB, SPL, SPM or by consent of instructor.

ECI 683 Seminar in Special Education Learning Strategies 3.
Prerequisite: ECI 585.
This seminar is designed to prepare special education teachers to evaluate and teach empirically supported learning strategies to students with disabilities in special education and collaborative settings. Particular attention will be paid to learning strategies shown to help students with disabilities organize, learn, and apply facts, skills and routines that provide access to and mastery of critical information across the curriculum. Field work in schools and/or related settings is required. Restricted to graduate students in SPE, SPB, SPL, SPM or consent of instructor.

ECI 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

ECI 687 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

ECI 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

ECI 692 Research Projects In Curriculum and Instruction 1-3.
Prerequisite: ELP 532.
Project or problem in research in education for graduate students, supervised by members of graduate faculty. Research chosen on basis of individual students' interests and not to be part of thesis or dissertation research.

ECI 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

Prerequisite: Master's student.
Thesis research.

ECI 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.
Prerequisite: Master’s student.  
For students who have completed all credit hour requirements and full-time enrollment for the master’s degree are writing and defending their theses.

ECI 700 Curriculum Theory and Development 3.  
Prerequisite: 9 sem. hrs. graduate PSY, ECI 502, ECI 514.  
Theory and research in behavioral sciences and education designed to provide theoretical background for development of elementary and secondary curricula. Exploration of knowledge base and skills for critical review of curricula and instructional materials and provision of an application opportunity.

ECI 705 Instructional Coaching and Supervision Of Teachers 3.  
Theory, research and practice of the professional role of a supervisor in the development of the effective and self-analytic teacher; pre-service (student teacher) and in-service (beginning and experienced teacher). For persons with at least two years of teaching experience in K-12 schools.

ECI 709 Special Problems In Curriculum and Instruction 1-6.  
Prerequisite: Six hrs. of ED or PSY.  
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 711 Computer Applications and Curriculum Integration 3.  
Prerequisite: Graduate standing.  
Use and evaluation of existing educational software, research findings with respect to integration of computers and new technologies in instruction.

ECI 714 Multimedia Design and Applications in Instruction 3.  
Prerequisite: Six hrs. ED or PSY.  
Emphasis on use and evaluation of existing educational software and research findings with respect to uses of computers in instruction.

ECI 715 Internet Applications and Web Page Design In Instruction 3.  
Prerequisite: Six hrs. ED or PSY.  
Instructional design principles underlying development of microcomputer-based instructional software and accompanying materials and programming principles and their implementation in courseware development. Additional topics include authoring languages, programming languages and graphics.

ECI 716 Design and Evaluation Of Instructional Materials 3.  
Prerequisite: Graduate standing.  
Characteristics and selection of various media for instruction and their use in educational settings. Design and production of instructional materials. Analysis of research in the field. Individualized projects and assignments. Application of grounded research and theory concerning learning to design of instructional materials. Structured projects and practical experiences used to transfer design principles and evaluate instructional products.

ECI 717 Advanced Multimedia Design and Applications in Instruction 3.  
Prerequisite: ECI 511, ECI 514.  
Advanced study and application of instructional design principles underlying development, evaluation, and integration of multimedia and hypermedia in K-12 settings.

ECI 718 Digital Learning Program and Staff Development 3.  
Prerequisite: ECI 511, ECI 514, ECI 515, ECI 642.  
Study and application of principles related to digital learning program planning, facilities and resource management, and staff development in K-12 settings.

ECI 719 Special Problems in Digital Learning and Teaching 1-6.  
Prerequisite: Six hours of ED or PSY.  
In-depth study of topical problems in digital learning and teaching selected from areas of current concern to practitioners in education.

ECI 720 The Teaching Of Composition 3.  
Prerequisite: 9 hrs. of ED, PSY and/or ENG; to take this course in sum. as part of Capital Area Writing Project, student must apply and be selected.  
For classroom teachers. Practical field-tested ideas to help students improve as writers by focusing on composition as a process as well as a product. Activities for teaching prewriting, drafting, revising, proofreading, grammar and evaluating with suggestions for individual and group learning. Writing in content areas and composition research/ theory.

ECI 727 Special Problems in Social Studies Education 1-6.  
Prerequisite: Six hours of ED or PSY.  
In-depth study of topical problems in social studies education selected from areas of current concern to practitioners in education.

ECI 729 Special Problems in English Education 1-6.  
Prerequisite: Six hours of ED or PSY.  
In-depth study of topical problems in English education selected from areas of current concern to practitioners in education.

ECI 745 Literacy Theory and Research 3.  
Prerequisite: ECI 540.  
Advanced study of theoretical models of reading, research issues in reading and in other language processes. In-depth theoretical models of reading. Emphasis on critical examination and analysis of research investigating reading acquisition, maturereading behavior and related language processes.

ECI 801 Seminar In Curriculum and Instruction 1-3.  
Prerequisite: Doctoral student.  
Consideration of contemporary issues, trends and recent research and development findings in curriculum and instruction.

ECI 803 Advanced Seminar In Literacy 3.  
Prerequisite: ECI 545.  
Critical analyses of research and methodology in reading comprehension processes and strategies for comprehension and retention of written discourse. Opportunity for design and conduct of a research project in reading or related area.

ECI 804 Seminar On Attention Deficit Hyperactivity Disorder, Research and Treatment 3-6.  
Prerequisite: 9 hrs. grad. credit in PSY or SPE.  
Critical analysis of theory, research and interventions in Attention-Deficit-Hyperactivity-Disorder. Reading and synthesis of literature and student-led class discussions of such topics as characteristics, diagnosis, etiology, long-term outcomes and management of ADHD.

ECI 806 Seminar on Teacher as Learner: Developmental Theory, Research and Practice 3-6.  
Prerequisite: Graduate standing (6 hrs course work at 500-level).  
Analysis of major contemporary theories and research of learning and development as a basis for individual and organizational change and development in educational settings.

ECI 807 Advanced Seminar in Multicultural Education 3.  
Prerequisite: Graduate standing and ECI 500.  
Application and analysis of research and scholarship in multicultural education and topics related to effective schools for contemporary culturally diverse student populations in K-12 settings.
ECI 820 Special Problems In Curriculum and Instruction 1-6.
Prerequisite: Six hrs. of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 830 Independent Study in Curriculum and Instruction 1-3.
Independent curriculum or research project in curriculum and instruction.

ECI 840 Practicum In Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised practical experiences in schools and area agencies concerned with curriculum and instruction or educational supervision.

ECI 841 Practicum In Mentoring and Coaching 1-6.
Prerequisite: ECI 705, Graduate standing in College of ED and PSY.
Supervised practical experiences in which participants become mentor to a student teacher or a teacher in a school system.

ECI 847 Practicum in Business and Marketing Education 1-6.
Supervised practical experiences in schools and area agencies concerned with business and marketing education.

ECI 850 Internship In Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with curriculum development and/or educational supervision.

ECI 851 Internship In Mentoring 1-6.
Prerequisite: ECI 845 and ECI 705, Graduate standing in Col. of ED and PSY.
Supervised opportunities teaching educational personnel in local school systems how to serve as mentors to their colleagues.

ECI 880 Directed Study in Curriculum and Instruction 1-6.
Curriculum or research project in curriculum and instruction under the direct supervision of a faculty member.

ECI 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ECI 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

ECI 892 Research Projects In Curriculum and Instruction 1-3.
Prerequisite: ELP 732.
Project or problem in research in education for graduate students, supervised by members of graduate faculty. Research chosen on basis of individual students’ interests and not to be part of thesis or dissertation research.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

ECI 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

EDP - Educational Psychology Courses

EDP 304 Educational Psychology 3.
Prerequisite: Sophomore standing.
Psychological principles applied to education, including cognitive and personality development, individual differences, learning and behavior theory, cognitive strategies for learning and remembering, critical thinking and problem-solving strategies, student motivation, classroom management techniques, components of teacher effectiveness, measurement and student evaluation procedures, characteristics of exceptional children, mainstreaming in the classroom, and multicultural education.

EDP 370 Applied Child Development 3.
Prerequisite: Sophomore standing.
Students will explore how biological, cognitive, and social/emotional development affects children's learning and behavior. The course will focus on applying important theories and current findings in development to issues in education such as lesson planning, curriculum design, behavior management, motivation, an appropriate assessment. Students will also apply knowledge of development to issues such as creating actively engaging individuated experiences to deal with gifted students, students with diverse ethnic or cultural backgrounds, and students with exceptionalities or disabilities.

EDP 476 Psychology of Adolescent Development 3.
Prerequisite: PSY 200 or EDP 304.
Theories, principles, and issues of human psychological development emphasizing adolescence. Cognitive, social, and physical changes; their interaction. Implications for teaching and parenting adolescents.

EDP 504 Advanced Educational Psychology 3.
Prerequisite: Graduate standing.
A critical appraisal of current psychological findings relevant to educational practice and theory.

Prerequisite: Graduate standing.
The study of principles of educational testing and measurement, particularly classroom assessment, including norm and criterion referenced assessment, classroom testing methods and principles, standardized testing and measurement, item analysis, and an introduction to basic descriptive statistics. A brief introduction to innovative assessment is also included.

EDP 575 Multicultural Lifespan Development 3.
This course surveys theories, principles, and issues of psychological development throughout the lifespan. Emphasis will be placed on understanding current developmental research and its application to the enhancement of development from birth to late adulthood. Implications for helping professionals working in multicultural contexts will be provided.
EDP 582 Adolescent Development 3.
Prerequisite: 6 hours in PSY.
Current theories and research on development during adolescence.
Topics include: physical growth, cognitive changes, relationships with peers, parents and teachers, quest for identity and independence, morality and sexuality.

EDP 590 Special Problems in Educational Psychology 1-6.
In-depth study of topical problems in cognition, motivation, assessment, or other educational psychology area of current and special interest to educators.

EDP 605 Special Problems in Educational Psychology 1-6.
In-depth study of topical problems in educational psychology selected from areas of current concern to educators.

EDP 696 Summer Thesis Res 1.

EDP 704 Theories and Research in Educational Psychology 3.
Doctoral students only (DR).
Review and synthesis of pertinent literature in specialized topics and areas of research in educational psychology. Topic selection will vary by semester and instructor. Graduate standing or permission of instructor.

EDP 723 Motivation in Education 3.
P: ED 700 or equivalent.
The purpose of this course is to inform students about motivation theories and how various concepts from these theories are related to education practice. The course components are designed to provide students with an understanding of research in motivation, as well as the relationships between theoretical perspectives of human motivation and the teaching practice.

EDP 750 Mixed Methods Research in Education 3.
Prerequisite: ED 711, ED 730, ST 507, ELP736 or equivalent and/or permission of the instructor.
Explores the theoretical and practical issues surrounding the combining of quantitative and qualitative methods in educational research studies. It addresses how to design, implement and write-up mixed methods research as well as how to critically review and interpret mixed methods research studies.

EDP 896 Summer Dissert Res 1.

ELM - Elementary Education Courses

ELM 250 Introduction to Elementary Education in a Global Society 3.
Prerequisite: Sophomore standing.
Introduction to the major conceptual and intellectual foundations of the teaching profession, the sociology and culture of elementary schools and classrooms, and the world of work of elementary teachers. Fieldwork in schools and related settings maybe required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences. Students interested in Elementary Education.

ELM 310 Children's Thinking and Additive Reasoning 3.
Prerequisite: ELM 250, Junior standing, Elementary Education Majors.
Examination of mathematical reasoning processes in primary grade children and the theory and practice of active teaching strategies designed to motivate and engage children in mathematics learning in grades K-3. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 320 Teaching Science in the Primary Grades 3.
Prerequisite: ELM 250, Junior standing, Elementary Education Majors.
Examination of science knowledge and thinking in primary-age children. Development and application of methods for teaching science in the primary grades that leads to active learning of science as a process of inquiry. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 330 Teaching Reading in Elementary School: K-2 3.
Prerequisite: ELM 250, Junior standing, Elementary Education Majors.
ELM 330 is designed to prepare preservice teachers to teach reading and to lead to licensure in the elementary grades. Specific topics that relate to the theory and practice of teaching reading for early and emergent readers, including literature and struggling readers, will be examined. Fieldwork in schools and related settings may be required in lieu of lecture in occasion. Students are responsible for transportation to and from their school based experiences.

ELM 335 Teaching Reading in the Elementary School: 3-5 3.
Prerequisite: ELM 330, Junior standing, Elementary Education Majors.
ELM 335 is designed to prepare preservice teachers to teach reading and to lead to licensure in the elementary grades. Specific topics that relate to the theory and practice of teaching reading for upper elementary grade readers, including information and media literacy and literature, will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experience.

ELM 340 Children Design, Create and Invent 3.
Prerequisite: ELM 370, Junior standing, Elementary Education Majors.
An active hands-on class where prospective elementary school teachers develop learning activities that children can use to stimulate their imaginations and learn fundamental concepts in science, technology, engineering, and mathematics. Part of a program leading to licensure in Elementary Education.

ELM 350 Assessment of Learning and Behavior 3.
Prerequisite: ELM 250, Junior standing, Elementary Education Majors.
Application of knowledge of pedagogy and development to develop high-quality strategies for formative and summative assessment. Best practices using developmentally-appropriate assessment strategies including authentic assessment, portfolios and electronic portfolios, real-time feedback, open- and closed-ended formal assessments, and standardized testing. Particular attention to examining the rationale for assessment and the implications of assessment.

ELM 370 Connections Seminar I The Elementary Classroom and School Community 3.
Prerequisite: ELM 250, Junior standing, Elementary Education Majors.
The purpose of this course is to introduce preservice teachers to the world of public school classrooms and school communities and to the tasks of teaching. Particular emphasis is placed on building a positive classroom climate and implementing effective classroom management strategies and routines. Weekly fieldwork in schools and related settings is required 3 hours a week. Students are responsible for transportation to and from their school based experiences.
ELM 375 Connections Seminar II Cultural Identity, Social Justice and Diverse Learners 3.
Prerequisite: ELM 370. Junior standing. Elementary Education majors.
The purpose of the course is to help prospective elementary grades teachers develop the competencies to provide equitable opportunities to all of their future students. To do this, students will investigate issues of systemic injustice and the role of the school in interrupting cycles of inequity, and develop the capacity to engage in culturally relevant pedagogy. Weekly fieldwork in schools and related settings is required 3 hours a week. Students are responsible for transportation to and from their school based experiences.

ELM 400 Connections Seminar III Instructional Design and Assessment 3.
Prerequisite: ELM 375, Senior standing, Elementary Education Majors.
In this course preservice elementary educators will examine research-verified practices in instructional design and assessment that are designed to meet the needs of diverse K-6 learners. This course will prepare candidates to plan appropriate units of study, learning experiences and assessment methods for use in the elementary classroom. Weekly fieldwork in schools and related settings is required. Students are responsible for transportation to and from their school based experiences.

ELM 410 Children's Thinking and Multiplicative Reasoning 3.
Prerequisite: ELM 310, Junior standing, Elementary Education Majors.
This course is designed to prepare preservice teachers to teach math in the intermediate grades and to lead to licensure in the elementary grades. Specific methodologies that relate to the theory and practice of teaching of math will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 420 Teaching Science in the Intermediate Grades 3.
Prerequisite: ELM 320, Senior standing, Elementary Education Majors.
This course is designed to prepare preservice teachers to teach science in intermediate grades and to lead to licensure in the elementary grades. Specific methodologies that relate to the theory and practice of teaching science will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 430 Teaching Language Arts in the Elementary School 3.
Prerequisite: ELM 335, Senior standing, Elementary Education Majors.
This course is designed to prepare preservice teachers to teach language arts and to lead to licensure in the elementary grades. Specific methodologies that relate to the theory and practice of teaching language arts will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 440 Teaching Children with Special Needs in the Elementary Classroom 3.
Prerequisite: ELM 350, ELM 375, Senior standing, Elementary Education Majors, Corequisite: ELM 420.
This course is designed to prepare preservice teachers to teach students with special needs and to lead to licensure in the elementary grades. Specific methodologies that relate to the theory and practice of teaching students with special needs will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 450 The Arts for Elementary Education 3.
Prerequisite: ELM 375, Senior standing, Elementary Education Majors.
This course is designed to prepare preservice teachers to integrate the arts; visual music, dance and drama, into the content areas. Successful completion of this course leads to licensure in the elementary grades. Specific methodologies that relate to the theory and practice of teaching the arts will be examined.

ELM 460 Social Studies for the Young Learner 3.
Prerequisite: ELM 370, Junior standing, Elementary Education Majors.
This course is designed to prepare preservice teachers to teach social studies and to lead to licensure in the elementary grades. The course is an examination of curriculum, instruction, and learning in K-6 social studies education. Emphases include development of the social studies; curricular principles and components; teaching strategies; and learner outcomes. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

Prerequisite: ELM 400, Elementary Education Majors, Admission to the Professional Semester, Corequisite: ELM 484.
ELM 480 Linking Theory and Practice is designed as the capstone course in the Elementary Education Program. Teacher candidates will meet regularly to analyze and discuss their student teaching experiences and connect new learning to previous university coursework. In addition, teacher candidates will complete their edTPA Tasks and other culminating activities required by the program.

ELM 484 Student Teaching in Elementary Education 9.
Prerequisite: ELM 480, ELM 400, Elementary Education Majors, Admission to the Professional Semester.
Culminating experience for Elementary Education majors. A minimum of 10 weeks of supervised teaching in an elementary school classroom, demonstrating competent applications of standards-based practices and other required knowledge, skill, and dispositional outcomes. Taken concurrently with ELM 480. Students responsible for transportation to placement site.

ELM 515 Instructional Practice in Schools I 1.
Prepares pre-service teachers to develop competencies in assessment, instructional design, and tutoring and leads to initial licensure in the elementary grades. Includes 15-20 hours of fieldwork; transportation to schools is the responsibility of the students.

ELM 516 Instructional Practice in Schools II 2.
Corequisite: ELM 572, ELM 573, ELM 575.
Prepares pre-service teachers to develop competencies in assessment, instructional design, and teaching in whole class settings and leads to initial licensure in the elementary grades. Includes 30 hours of fieldwork; transportation to the schools is the responsibility of the students.

ELM 520 Methods of Teaching Elementary School Science 3.
This course is intended for teachers seeking to expand their knowledge and skills in teaching elementary school science. The course examines the purposes, scope, sequences, materials, and methodologies for teaching science in elementary schools to a diverse student body. It develops skill in planning, instructing, and assessing understanding of science content and processes. It links instruction and assessment and addresses relevant content topics in chemistry, biology, physics, and earth and space science.
ELM 530 Social Studies In the Elementary School 3.
Advanced professional training in teaching of social studies for middle grades and elementary teachers, including in-depth introduction to research-based teaching strategies, instructional resources and literature of the field.

ELM 533 Targeted Literacy Assessment and Instruction for Elementary School 3.
Intended for teachers seeking to expand their knowledge and skills in assessing and teaching elementary reading, particularly to students with reading difficulties. Exploring the purposes, sequences, and materials for identifying students’ instructional strengths and learn methods for providing appropriate evidence-based reading instruction. Closely links reading assessment and reading instruction and addresses relevant content topics in elementary reading development, assessment, and instruction.

ELM 537 Teaching Children’s Literature 3.
Instructions for educators in quality children’s literature, specific needs of young reader, genres of children’s literature, strategies for instructing children’s literature, ways to target reader’s interests, and design of literature units.

ELM 539 Special Problems in Elementary School 1-6.
In-depth study of topical problems in elementary education selected from areas of current concern to practitioners in education.

ELM 540 Reading In the Elementary School 3.
Theoretical foundations of reading instruction and current methods and materials for teaching reading, with emphasis on planning and implementing reading programs for children in kindergarten through grade six.

ELM 555 Number Systems and Operations: K-5 Mathematical Tasks 3.
Analysis and construction of effective mathematical tasks in teaching number systems and operations at the K-5 level; attention is also given to the expansion of content knowledge.

Focus on rational number concepts through learning trajectories at the K-5 level; attention also given to problem solving and content knowledge.

ELM 557 Data Analysis and Measurement: K-5 Classroom Interactions 3.
Focus on statistical literacy of elementary teachers and the teaching of data analysis and measurement to K-5 students; attention is also given to learning methods which facilitate appropriate classroom interactions.

ELM 558 Algebraic Reasoning: K-5 Discourse and Questioning 3.
Focus on the early algebra concepts of functional thinking and generalized arithmetic in relationship to pedagogical practices centered on questioning in the mathematics classroom.

ELM 559 Geometry and Spatial Visualization: K-5 Assessment 3.
Formative and summative assessment strategies of students’ geometric thinking in elementary grades; Concept development of 2- and 3-dimensional Geometry. Attention also given to diagnosis of student errors.

Generating mathematical representations and making explicit connections between concepts; Pedagogy designed to equip elementary teachers to become mathematics teacher-leaders in school settings; Focus given to topics integrated within mathematical strands.

ELM 571 Language Arts, New Literacies and Media for Initial License 3.
Examine research-based processes for writing instruction, effects of and approaches for use of technology on literacy development, and effects of media and new literacies (non-print literacies, e.g. digital, visual, film) on literacy learning and development in elementary schools. Restricted to ELM MAT students.

ELM 572 Methods for Teaching Reading in the Elementary Classroom for Initial License 3.
ELM 572 prepares pre-service teachers to teach reading and leads to licensure in the elementary grades. The course examines specific research-based methodology that relates to the theory and practice of teaching reading for elementary readers. Restricted to ELM, MAT students.

ELM 573 Methods for Teaching Elementary School Science for Initial License 3.
ELM 573 prepares preservice teachers to teach science and leads to licensure in the elementary grades. The course examines specific research verified methodologies that relate to the theory and practice of teaching science to elementary students. Restricted to ELM MAT students.

ELM 574 Methods for Teaching Mathematics in the Elementary Classroom for Initial License 3.
ELM 574 prepares preservice teachers to teach mathematics and leads to licensure in the elementary grades. Examines specific research-based methodologies that relate to the theory and practice of teaching mathematics to elementary students. Limited to students enrolled in MAT Elementary Education program.

ELM 575 Social Studies in the Elementary School for Initial License 3.
Designed to prepare pre-service teachers to teach social studies and to lead to licensure in the elementary grades. The course is an examination of curriculum, instruction, and learning in K-6 social studies education. Emphasis include development of the social studies, curricular principles and components, research verified teaching strategies, and learner outcomes. Restricted to ELM MAT students.

ELM 576 Special Problems in Elementary Education 1-6.
In-depth study of topical problems in teaching and learning of current and special interest to elementary education practitioners.

ELM 630 Independent Study in Elementary Education 1-3.
Detailed investigation of topics of particular interest to graduate students under faculty direction on a tutorial basis. Determination of credits and content by faculty member in consultation with department head.

ELM 644 Practicum in Elementary Education 1-6.
Supervised practical experiences in schools and area agencies concerned with education of elementary-age students.

ELM 654 Internship in Elementary Education 1-6.
Supervised opportunities for advanced professional development in contexts concerned with elementary grades education.

Middle Grades Language Arts and Social Studies Program (MSL)
The Middle Grades Language Arts and Social Studies (MSL) undergraduate program in the Department of Teacher Education and Learning Sciences seeks to prepare teachers who can effectively educate young adolescents, while being responsive to their unique
needs, interests, and abilities. Graduates earn licensure for teaching in grades 6-9 in two subject disciplines: language arts and social studies.

For Middle Grades Education, Mathematics/Science, see the Department of Mathematics, Science, and Technology, Engineering, and Design Education. https://ced.ncsu.edu/stem-ed/undergraduate-programs/

**ECI - Curriculum and Instruction Courses**

**ECI 201 Intro to Instructional Technology for Educators 3.**
Introduction to effective technology integration in teaching practices across the curriculum for pre-service teachers. Exploration of different technology-based tools commonly integrated in instruction, including desktop, Internet/ Web-based, mobile, and cloud applications. Examination of integration challenges using relevant, real-world examples from current teacher practices. Planning for student-centered, project-based lessons that make use of diverse technologies.

**Prerequisite: Sophomore standing; Corequisite: ED 204.**

**For prospective teachers in Middle and Secondary Business and Marketing, English, Foreign Languages, Language Arts, and Social Studies.** Emphasis on what it means to be an educator as well as differing aspects and procedures of instruction and analysis of competencies required of teachers. The course has a required fieldwork component in local K-12 school, and students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

**ECI 204 Intro to Teaching 1-2.**

**Prerequisite: Sophomore standing; Corequisite: ED 204.**

For prospective teachers in middle and high school. Focus on discipline, classroom management, building, active listening, and major approaches to discipline. Uses case studies and problem solving methods.

**Prerequisite: PSY 304 or EDP 304 and 6 hours of education.**

**ECI 205 Introduction to Teaching Humanities and social Sciences 3.**

**Prerequisite: Sophomore standing.**

For prospective teachers in secondary and middle years social studies, English, language arts, and foreign languages. An emphasis on differing aspects and procedures of instruction and analysis of competencies required of teachers. Field work in a variety of education settings including an extended period in one curriculum area.

**ECI 296 Special Topics in Education 1-3.**

Individual or group study of particular areas of education at the freshman and sophomore levels. Specific topics will vary from semester to semester.

**ECI 305 Principles of Teaching Diverse Populations 3.**

**Prerequisite: ED 204.**

Impact of cultural factors on experiences of teachers and students in contemporary schools. Teaching techniques and development of instructional plans to enhance schooling experiences of culturally diverse students.

**ECI 306 Middle Years Reading 3.**

**Prerequisite: Six hours in ED or PSY.**

Reading skills in middle years education developed with emphasis on application of the reading process to content area.

**ECI 307 Teaching Writing Across the Curriculum 3.**

**Prerequisite: ENG 101.**

For prospective teachers of all disciplines in middle/high school. Practical strategies for writing as a learning tool and for teaching writing. Lesson plans, assignments, experiences appropriate to content areas. Focus on writing, writing instruction, and technology. Separate sections for Middle Grades (MSL) and English (LTN) majors.

**ECI 309 Teaching in the Middle Years 3.**

**Prerequisite: Six hours in ED or PSY.**

Nature and purposes of middle grades education. Early adolescent development, curriculum, teaching/learning methods, school organization, and characteristics of effective middle years teachers. Includes field experience.

**ECI 332 Health Promotion and Disease Prevention 3.**

**Prerequisite: For credentialed health professionals only.**

Emphasis on education of the public regarding general health concerns including cancer, cardiovascular disease, accident prevention, nutrition, drugs, alcohol, mental health, sexuality, and environmental hazards.

**ECI 333 Health Care Delivery 3.**

The historical basis of health care delivery in the U.S. with emphasis on hospitals, health maintenance organizations, ambulatory care centers, ambulatory surgery, nursing homes, and private care practice. Philosophical issues of funding health care, promoting health care, and the training of health care workers.

**ECI 335 Planning Classroom and Clinical Curricula 3.**

**Prerequisite: For Certification Majors: EOE 101, 205; For Non-Certification Majors: EOE 101. For credentialed health professionals.**

Procedures for planning health occupations curricula for classroom and clinical settings. Practice in writing, updating, and refining health curriculum with emphasis on selection and sequencing. Comparison of styles of writing curricula. Roles and responsibilities of healthy curriculum planner.

**ECI 336 Strategies for Teaching a Health Occupations Course 3.**

**Prerequisite: For credentialed health professionals.**

Planning and implementation of effective instructional strategies for clinical and classroom settings. The nature of the teaching/learning process, psychological and philosophical aspects of teacher choice of various strategies.

**ECI 405 Literature for Adolescents 3.**

**Prerequisite: Junior standing.**

The history, types, and characteristics of literature for adolescents. Emphasizes reading and analyzing the literature by exploring the themes, literary elements, and rationale for teaching literature for adolescents. Addresses ways in which this literature can be integrated and implemented in English/Language Arts curriculum.

**ECI 414 Human Relations and Discipline in the Classroom 3.**

**Prerequisite: PSY 304 or EDP 304 and 6 hours of education.**

Designed to help prospective teachers foster positive interpersonal relationships in classrooms, build a sense of community and create a purposeful environment for learning. Investigates issues such as group building, active listening, and major approaches to discipline. Uses case studies and problem solving methods.

**ECI 416 Teaching Exceptional Students in the Mainstreamed Classroom 3.**

**Prerequisite: Six hours in ED or PSY.**

Provides classroom teachers in all disciplines and grade levels with a knowledge of various handicapping conditions, as well as with techniques to assist exceptional students within the mainstreamed classroom. Required for MSL majors.
ECI 423 Methods and Materials in Teaching Modern Foreign Languages 4.
Prerequisite: Admission to Professional Semester, Corequisite: ECI 424.
Methods and materials of teaching French or Spanish grades K-12 with an emphasis on lesson and unit planning, second language acquisition, national standards, and demonstrations/practice teaching in micro-lessons. This course provides opportunities for prospective French and Spanish teachers to integrate knowledge of their language with effective materials, strategies, and methods of instruction to prepare students for K-12 French or Spanish teaching. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools.

ECI 424 Student Teaching in French or Spanish 12.
Prerequisite: Admission to Professional semester, Corequisite: ECI 423.
Teaching experience for prospective teachers of French or Spanish in a selected elementary, middle or high school under the supervision of a cooperating teacher and a university faculty supervisor. Additional school observations and on campus seminars are a part of this course. The course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools. Students are covered under the General Statute affording liability protection.

ECI 430 Methods and Materials for Teaching Language Arts in the Middle Grades 4.
Prerequisite: ECI 205, ELP 344, PSY 304 or EDP 304, ECI 309, ECI 306, ECI 307, Senior standing, candidacy in Middle Grades Teacher Education, Corequisite: ECI 435.
Inquiry, activity-oriented course provides opportunities for prospective language arts middle school teachers to integrate knowledge of English with effective materials, strategies, methods of instruction. Students observe middle school classes, plan lessons, and units, practice varied classroom strategies, technologies in micro-lessons. Prepared students for teaching language arts with other content areas in middle schools.

ECI 435 Methods and Materials for Teaching Social Studies in the Middle Grades 4.
Prerequisite: Admission to professional semester.
For preservice middle school social studies teachers. Focus on: teaching and evaluation skills, adaptation of instruction to individual learner differences, identification and creation of instructional materials appropriate for use in social studies teaching.

ECI 438 Medical Law and Ethics 3.
Ethical and legal issues involved in delivering health care, such as euthanasia, reproductive technology, organ transplants, patients’ rights, and confidentiality. Classical ethical theories and principles. Systematic review procedures and current medical law used to examine current case dilemmas in the health professions.

ECI 442 Field Experience in Business and Marketing Education 3.
Prerequisite: Junior standing.
Supervised off-campus work experience in an approved business and marketing content related job. The work experience relates on-the-job experiences to the technical competencies taught in the North Carolina Standard Course of Study for business and marketing education. Students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Teacher Education majors.

ECI 444 Administration of Business and Marketing Education 3.
Prerequisite: ED 204 and ECI 204 and MKE Business and Marketing Education Major.
Development of successful business and information technology, and marketing education programs. Program promotion, managing cooperative education experiences, managing DECA and FBLA chapters, and determining professional development strategies. Primary roles of the business and information technology and marketing education teachers’ classroom instruction. Program management, classroom management, management of career-technical student organizations, cooperative education, and program development.

Prerequisite: Senior Standing; Corequisite: ECI 430 and ECI 435.
Inquiry, activity-oriented course designed to engage students in theory and practice related to 21st century skills, new literacies, and emerging technologies, as well as focused support for developing the culminating electronic portfolio. Course provides opportunity for pre-service, English Language Arts/ Social Studies middle School teachers to integrate knowledge of English and Social Studies with emerging technologies and digital literacy applications.

ECI 446 Curriculum and Methods of Teaching Business and Marketing Education 4.
Prerequisite: Admission to Teacher Education Candidacy; MKE Business and Marketing Education Majors.
Study of the curriculum common to business and information technology and marketing education and the research behind its development. Methods common to instructional planning, implementation, and evaluation of effective business and information technology and marketing education programs are topics included in this course. Twenty hours of field work are required. Students are expected to provide their own transportation to and from assigned public schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details in acquiring the insurance and the current charge. MKE students only.

ECI 447 Student Teaching in Business and Marketing Education 9.
Prerequisite: Admission to Professional Semester; MKE Business and Marketing Education Majors, Corequisite: ECI 494.
Fifteen weeks full-time student teaching business and marketing subjects in the public schools under the supervision of a cooperating teacher and university supervisor. Students will develop skills in instruction, evaluation, advisement, administration, and observation. Students are expected to provide their own transportation to and from assigned public schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. MKE students only.

ECI 448 E-Business Applications in Business and Marketing Education 3.
Prerequisite: Junior standing.
Emphasis on design and construction of advanced web pages, business and marketing applications of electronic commerce, as well as economic, social, legal, and ethical issues that are related to conducting business in a virtual environment. Content prepares students to apply principles to the business and marketing education curriculum in the public schools. Credit for both ECI 448 and ECI 548 is not allowed.
ECI 450 Methods and Materials in Teaching English 4.
Prerequisite: ECI 204, ELP 344, S. standing and admission to professional semester with a major in English.
Methods and materials of teaching English in grades 9-12, with emphasis on lesson planning and demonstrations/practice in teaching literature, study skills, speaking, listening, and writing. Taught during first seven weeks of the semester.

ECI 451 Teaching Reading Across Disciplines 3.
Prerequisite: Six hours in ED or PSY.
Facilitates study of methods and materials for teaching literacy across disciplines. Develops instructional strategies in the use of print and digital texts and media to support disciplinary learning.

ECI 454 Student Teaching in English/Language Arts 1-12.
Prerequisite: Admission to Student Teaching Professional Semester; For MSL students: ECI 430, 416, 464.
Provides the prospective teacher with experience in the techniques and skills involved in teaching English in secondary schools or Language Arts in middle schools in a selected off-campus station. Student interns become familiar with the total school program, eventually carrying a full teaching load, and participate in relevant school and community activities. Students are required to provide their own transportation. TED and MSL majors only.

Prerequisite: ECI 205, ELP 344, Sr. standing and admission to professional semester with a major in either history, sociology, political science.
Teaching techniques, innovations, and development of teaching and evaluation skills in the area of secondary school social studies.
Adaptation of instruction to individual learner differences, and selection and design of instructional materials. Taught during the first six weeks of the semester. Taught during the first six weeks of the semester.

ECI 464 Student Teaching in Social Studies 1-8.
Prerequisite: Admission to professional semester, Corequisite: For LTH, LTP, LTS students: ECI 460. For MSL students: ECI 454, 430, 416.
Skills and techniques in teaching social studies in secondary and middle schools. Each student spends ten weeks in a selected off-campus center. The student demonstrates competencies essential for teaching social studies, becomes familiar with the total school program, and participates in a variety of school and community activities.

ECI 471 Educational Implications of Learning and Developmental Theory 3.
Prerequisite: NC TEACH Participants.
Topics related to human psychological development. Cognitive, social, physical changes, and their interaction among adolescence. Departmental Approval Required.

ECI 472 Interaction of Classroom Management and Instruction 3.
Prerequisite: ECI 471; NC TEACH Participants.
Topics related to teaching in the content area and classroom management. Lesson planning, principles applied to education, measurement and evaluation procedures, behavior therapy, and student motivation. Departmental Approval Required.

ECI 473 Subject Specific Methods 3.
Prerequisite: ECI 472; NC TEACH Participants, Corequisite: ECI 474.
Topics related to cultural factors and how they affect teachers and students in the classroom. Instructional techniques and development of instructional plans that enhance schooling experiences of culturally diverse students. Departmental Approval Required.

ECI 474 Curriculum and Instruction Practices 1-3.
Prerequisite: ECI 472; NC TEACH participants, Corequisite: ECI 473.
Topics related to essential skills and concepts needed by beginning teachers. The class focuses on questioning, test preparation, discussion skills, familiarity with national standards, multiple teaching strategies, and assessment evaluation of students. Departmental Approval Required.

ECI 475 Peer Mentoring in Alternative Licensure 3.
Prerequisite: ECI 474; NC TEACH Participants, Corequisite: ECI 476.
Topics related to observing and evaluating fellow teachers in relation to the national state teaching competencies. Classroom observations, videotaping, and group evaluations that are shared and discussed with fellow teachers. Departmental Approval Required.

ECI 476 Curriculum and Instruction Practices 2 3.
Prerequisite: ECE 474; NC TEACH Participants, Corequisite: ECI 475.
Topics related to inquiry, activity based instruction, and constructivist principles. Analysis of principles, strategies and application of new teaching approaches. Departmental Approval Required.

ECI 494 Senior Seminar in Business and Marketing Education 3.
Prerequisite: Admission to Professional Semester; MKE Business and Marketing Education Majors. Corequisite: ECI 447.
Discussion and analysis of problems, trends, and issues experienced while student teaching in the public schools.

ECI 496 Special Topics in Education 1-3.
Prerequisite: Junior standing or Senior standing.
Individual or group study of special topics in professional education. The topic and mode of study are determined by the faculty member after discussion with the student.

ECI 500 Theory and Practice in Teaching Diverse Populations 3.
Prerequisite: Graduate standing.
Analysis of literature and research in relation to impact of cultural factors on teaching and learning in contemporary schools. Exploration of teaching techniques and curricular directions designed to improve school experiences for diverse populations in K-12 settings.

Prerequisite: 12 sem. hrs. graduate ED and PSY.
Origin, development, and current status of elementary and secondary school curriculum and an evaluation of trends and issues likely to influence the curriculum in the future.

ECI 502 Continuous Improvement of School Technology Initiatives 3.
Introduction to the models, strategies, and tools for evaluating and making informed decisions about technology initiatives; examination of technology evaluation case studies, evaluation proposals, and stakeholder reports.

ECI 505 Issues and Trends in Foreign Language Education: Theory & Practice 3.
Prerequisite: Graduate standing.
An exploration of theory and practice issues related to foreign language teaching. Inquiry into proficiency-oriented instruction, innovative methodological approaches, the National Standards and learning scenarios, integrating culture, options for testing and assessment, content-based instruction, the role of grammar in second language acquisition, teaching foreign language students with learning disabilities, and Foreign Language in the Elementary School (FLES) in North Carolina. Students will examine case studies related to these topics and engage in a classroom action research project.

</table>
ECI 524 Theory and Research in Global Learning 3.
An examination of theoretical frameworks for global learning and comparative studies of various national approaches to K-12 education. This course provides students with multiple lenses through which to consider how we teach and learn given the demands and opportunities present in our interconnected world.

ECI 525 Contemporary Approaches in the Teaching Of Social Studies 3.
Prerequisite: Advanced Undergraduate standing or Graduate standing. Analysis of principles, strategies and application of new teaching approaches. Structured projects and practical experiences.

ECI 526 Theory and Research On Teaching and Learning Social Studies 3.
Prerequisite: ECI 530 or ECI 525.
A critical analysis of the literature relating to the teaching and learning of social studies and the drawing of implications for instructional practices.

ECI 528 Strategies for Teaching English in Secondary Schools 3.
Methods and materials of teaching English in grades 9-12, with an emphasis on lesson planning and demonstrations/practice in teaching literature, study skills, speaking, listening, media literacy, and writing. Some classes and assignments will be completed in a field setting.

ECI 530 Social Studies in the Elementary School 3.
Prerequisite: Six hrs. in ECI.
Advanced professional training in teaching of social studies for middle grades and elementary teachers, including an in-depth introduction to research-based teaching strategies, instructional resources and literature of the field.

ECI 531 Advanced Writing in Education 3.
Appropriate for any specialty area in Education. Focus on writing required in graduate courses, research reviews for educational reports and National Board Certification, writing for educational journals, theses, and dissertations. Opportunities to gain knowledge, tools, and strategies to meet the academic community's standards. Strategies to develop and/or enhance form, style, content, quality of academic writing, and on researching, composing, revising, and editing. Students will compose, self-evaluate and give feedback on the work of their peers.

ECI 535 Methods and Materials for Teaching Social Studies in the Middle Grades 3.
For preservice middle school social studies teachers. Focus on: teaching and evaluation skills, adaptation of instruction to individual learner differences, identification and creation of instructional materials appropriate for use in social studies teaching. Cannot earn credit for ECI 435 and ECI 535.

ECI 537 Teaching Children's Literature 3.
Instructions for educators in quality children's literature, specific needs of young reader, genres of children's literature, strategies for instructing children's literature, ways to target reader's interests, and design of literature units.

ECI 540 Reading in the Elementary School 3.
Prerequisite: Six hrs. ED or PSY.
Theoretical foundations of reading instruction and current methods and materials for teaching reading, with emphasis on planning and implementing reading programs for children in kindergarten through grade six.

ECI 541 Reading in the Content Areas 3.
Prerequisite: Six hours in ED or PSY.
Methods in instruction for applying reading to content areas, with emphasis on means of improving comprehension, vocabulary and learning strategies in subject matter classrooms.

ECI 543 Diagnosis of Reading Disabilities 3.
Prerequisite: ECI 540 or ECI 541.
Formal and informal instruments for diagnosing reading disabilities including completion of a diagnostic case study describing reading performance of a disabled reader.

ECI 544 Remediation of Reading Disabilities 3.
Prerequisite: ECI 543.
Advanced approaches to reading remediation including theory and research related to remedial instructional strategies, analyses of instructional designs and evaluations of effectiveness of intervention programs.

ECI 545 Theory and Research in Literacy 3.
Prerequisite: ECI 540.
Advanced study of theoretical models of reading, research issues in reading and in other language processes. In-depth theoretical models of reading. Emphasis on critical examination and analysis of research investigating reading acquisition, mature reading behavior and related language processes.

ECI 546 New Literacies & Media 3.
Critical analysis of new literacies that are prompted by emerging technologies and participatory media in K-12. Design and application of new literacies and media instructional practices to literacy curriculum and other discipline areas.

ECI 547 Knowledge Construction: Implications for Multicultural Education 3.
Prerequisite: ECI 500.
Exploration of sociopolitical factors involved in the construction of knowledge in education as well as the implications for practitioners and learners in schools and other educational settings. Particular emphasis on critiquing traditional epistemologies that limit the production, dissemination, and validation of progressive discourses in education in order to promote the production of knowledge that affirms the principles of social justice education.

ECI 548 E-Business Applications in Business and Marketing Education 3.
Emphasis on design and construction of advanced web pages, business and marketing applications of electronic commerce, as well as economic, social, legal, and ethical issues that are related to conducting business in a virtual environment. Content prepares students to apply principles to the business and marketing education curriculum in the public schools. Credit for both ECI 448 and ECI 548 is not allowed.

ECI 549 Special Problems in Reading 1-6.
Prerequisite: Six hours of ED or PSY.
In-depth study of topical problems in reading education selected from areas of current concern to practitioners in education.

ECI 550 Foundations of Middle Years Education 3.
Prerequisite: ECI 448 and ECI 548.
Advanced study of theoretical models of reading, research issues in reading and in other language processes. In-depth theoretical models of reading. Emphasis on critical examination and analysis of research investigating reading acquisition, mature reading behavior and related language processes.

ECI 551 Advanced Writing in Education 3.
Appropriate for any specialty area in Education. Focus on writing required in graduate courses, research reviews for educational reports and National Board Certification, writing for educational journals, theses, and dissertations. Opportunities to gain knowledge, tools, and strategies to meet the academic community's standards. Strategies to develop and/or enhance form, style, content, quality of academic writing, and on researching, composing, revising, and editing. Students will compose, self-evaluate and give feedback on the work of their peers.

Graduate status.

ECI 552 Theory and Research in Global Learning 3.
An examination of theoretical frameworks for global learning and comparative studies of various national approaches to K-12 education. This course provides students with multiple lenses through which to consider how we teach and learn given the demands and opportunities present in our interconnected world.

ECI 553 Methods and Materials for Teaching Social Studies in the Middle Grades 3.
For preservice middle school social studies teachers. Focus on: teaching and evaluation skills, adaptation of instruction to individual learner differences, identification and creation of instructional materials appropriate for use in social studies teaching. Cannot earn credit for ECI 435 and ECI 535.

ECI 557 Teaching Children's Literature 3.
Instructions for educators in quality children's literature, specific needs of young reader, genres of children's literature, strategies for instructing children's literature, ways to target reader's interests, and design of literature units.

ECI 550 Foundations of Middle Years Education 3.
Prerequisite: ECI 448 and ECI 548.
Advanced study of theoretical models of reading, research issues in reading and in other language processes. In-depth theoretical models of reading. Emphasis on critical examination and analysis of research investigating reading acquisition, mature reading behavior and related language processes.

ECI 551 Advanced Writing in Education 3.
Appropriate for any specialty area in Education. Focus on writing required in graduate courses, research reviews for educational reports and National Board Certification, writing for educational journals, theses, and dissertations. Opportunities to gain knowledge, tools, and strategies to meet the academic community's standards. Strategies to develop and/or enhance form, style, content, quality of academic writing, and on researching, composing, revising, and editing. Students will compose, self-evaluate and give feedback on the work of their peers.

Graduate status.

ECI 552 Theory and Research in Global Learning 3.
An examination of theoretical frameworks for global learning and comparative studies of various national approaches to K-12 education. This course provides students with multiple lenses through which to consider how we teach and learn given the demands and opportunities present in our interconnected world.

ECI 553 Methods and Materials for Teaching Social Studies in the Middle Grades 3.
For preservice middle school social studies teachers. Focus on: teaching and evaluation skills, adaptation of instruction to individual learner differences, identification and creation of instructional materials appropriate for use in social studies teaching. Cannot earn credit for ECI 435 and ECI 535.

ECI 557 Teaching Children's Literature 3.
Instructions for educators in quality children's literature, specific needs of young reader, genres of children's literature, strategies for instructing children's literature, ways to target reader's interests, and design of literature units.

ECI 550 Foundations of Middle Years Education 3.
Prerequisite: ECI 448 and ECI 548.
Advanced study of theoretical models of reading, research issues in reading and in other language processes. In-depth theoretical models of reading. Emphasis on critical examination and analysis of research investigating reading acquisition, mature reading behavior and related language processes.
ECI 551 Teaching/Learning Approaches For Emerging Adolescents 3.
Prerequisite: ECI 550; Graduate standing.
Exploration of teaching/learning approaches appropriate to emerging adolescents. Learning styles; interdisciplinary inquiry; community-based curriculum; simulations and games; learning centers; minicourses; design of physical space; all-school activities.

ECI 552 Program Development & Evaluation in Youth & Family Settings 3.
Historical and contemporary foundations of program development and evaluation in non-formal, community-based family life and youth development settings are examined including theory, research, and three holistic program development constructs: 1) planning; 2) design and implementation; 3) impact evaluation and accountability.

ECI 553 Applied Concepts in Child and Youth Development 3.
This course explores the fundamental concepts of child and youth development (including early childhood through adolescence) as applied to programmatic and organizational contexts. A special focus is placed upon the concepts as applied to Community Youth theories & practice.

ECI 554 Collaborations & Partnerships in Family & Youth Settings 3.
To prepare educators (formal and non-formal) to better establish, lead and manage collaborations and partnerships in family settings and those that support holistic community-based youth development organizational systems. Specific foci include: types and levels of partnerships; environmental scanning and socio-organizational linkage contextual factors affecting community collaborations; leadership factors affecting community collaborations; and human, financial and programmatic management in collaborations. Some on-campus requirements are required.

ECI 555 Organizational Systems in Youth and Family Settings 3.
Prerequisite: ECI 506.
Preparation for current and future community family and youth development professionals leading and managing community-based organizations. Course includes: fundamentals of management and leadership; institutional and organizational structures; administrative and strategic planning; working with advisory and governing groups; marketing and program delivery systems; information management systems; and human resource, financial, facilities and risk management systems.

ECI 557 Volunteerism in Youth and Family Settings 3.
Preparation for current and future community-based youth and family professionals to better manage volunteers in local program service delivery. Specific foci include: volunteerism as a social phenomenon; volunteer resource management; new forms of volunteerism; and future trends in volunteerism. Restricted to graduate and post-baccalaureate students only.

ECI 560 Professional Development in Business and Marketing Education 3.
Prerequisite: Graduate standing.
Designed to prepare business and marketing educators with the knowledge and skills necessary to design and implement strategies for organizational improvement that will benefit business and marketing education programs. Attendance and participation meaningful, organized professional development activity is an integral component of the course.

ECI 561 Curriculum and Instruction in Business and Marketing Education 3.
Prerequisite: Graduate standing.
Designed to develop competencies needed to be a successful Business and Marketing Education Teacher-Coordinator. Focus primarily on the activities involved in planning and managing the curriculum and instructional skills needed to effectively implement the curriculum and meet educational needs of middle and high school students. For ED & MKZ students. Requires instructor approval.

ECI 562 Program Management in Business and Marketing Education 3.
Prerequisite: ECI 561.
This course includes the administration of middle and secondary business and marketing education programs, including career guidance; the management of DECA or FBLA chapter; supervision of work-based learning strategies; and school program promotion and development. ED & MKZ students only. Requires permission of instructor.

ECI 563 is a course that involves teaching techniques, innovations, development of teaching and evaluation skills, and in-depth subject matter inquiry in the area of secondary school social studies. Adaptation of instruction to individual learner differences, and selection and design of instructional materials will be explored. Must be enrolled in Secondary Social Studies MAT Program.

ECI 566 Advanced Instructional Strategies in Business and Marketing 3.
Prerequisite: ECI 561.
Advanced strategies and techniques related to teaching and learning in the business and marketing education curricula, classrooms, work places, and technology environments in middle and secondary education. MKZ students only.

ECI 567 Career and Technical Education Fundamentals and Program Administration 3.
Emphasis on assisting various school district personnel in acquiring the knowledge and skills needed to effectively provide quality career and technical education (CTE) programming at the district level. Content includes federal CTE legislation, theory and research on educational reform, local and regional economic development, sources of funding for CTE programming and continuous improvement.

ECI 568 Designing College and Career Ready Programs 3.
Examination of current school system instructional practices to assist various school district personnel in aligning core academic and career and technical education programming to prepare students for successful post-secondary education, careers, and life-long learning. Content includes an examination of education reform initiatives with an emphasis on foundational theory and research, needed workplace knowledge and skills, innovative education programs/models, and research-based best practices for success in transitioning students to post-secondary success.

ECI 569 Special Problems in Business and Marketing Education 1-6.
In-depth study of topical problems in business and marketing education selected from areas of current concern to practitioners in education.

ECI 570 Learning Disabilities 3.
Prerequisite: ECI 585.
Field of learning disabilities, including definitions, prevalence, etiology, characteristics and current educational trends for educating students with learning disabilities.
ECI 571 Methods and Materials In Learning Disabilities 3.
Current methods and materials for the teaching students with learning disabilities in elementary and/or secondary schools, including curriculum and instructional techniques. Focus on examination of commercial materials and development of teacher-made materials for use with students with learning disabilities.

ECI 572 Resource Teaching In Special Education 3.
Prerequisite: ECI 585.
Resource teaching in area of special education, with emphasis on resource teaching with students with special needs. Types of resource programs, establishment and maintenance of a program, selection of students, curriculum and materials.

ECI 573 Applied Behavior Analysis for Teachers 3.
Concepts and procedures involved in design and implementation of techniques for managing the behavior of students in classroom setting. Focus on methods for defining, measuring, increasing, decreasing, maintaining, and generalizing classroom behaviors in all learners.

ECI 574 Intellectual Disabilities 3.
Prerequisite: ECI 585.
Content presented includes definitions, classifications, and assessment of person with intellectual disability from medical, sociological, and educational points of view. Issues related to labeling, etiology, characteristics, levels of severity, litigation, legislation, family and societal issues, history, and controversies are emphasized related to persons with intellectual disability.

ECI 575 Communication Disorders In the Classroom 3.
Prerequisite: ECI 570.
Occurrence of communication disorders in the school-age population, including types of disorders, prevalence, etiology, characteristics and corrective therapy. Focus on communication disorders among exceptional students and classroom teacher's role in working with communication disorders.

ECI 576 Teaching Functional and Life Skills to Students with Disabilities 3.
Prerequisite: ECI 585 and ED 574.
Methods of instruction and materials related to teaching children and persons with mild/moderate levels of disability are emphasized. Effective general pedagogical approaches are stressed, as well as the teaching of functional academic skills, curricula used in instructions, teaching social and adaptive behavior as well as daily living skills, and transition-related skills necessary for independent adult life.

ECI 577 Education Of Severely Handicapped 3.
Prerequisite: ECI 585 or ECI 574.
Severe and profound mental retardation and autism, including assessment procedures, educational and social/vocational programs, instructional strategies and evaluation. Legal and ethical issues involved in working with severely handicapped.

ECI 579 Organization and Behavioral Management of Inclusive Classrooms 3.
To increase students' knowledge of persons with high incidence disabilities (i.e., learning disability, mild intellectual disability, and serious emotional disability), and how to manage the behavior of all pupils in educational environments. Characteristics of students with high incidence disabilities will be emphasized, as well as strategies to reduce the likelihood of problem behavior of all pupils in the classroom.

ECI 580 Transition Program For Students With Mild Disabilities 3.
Prerequisite: ECI 585.
Educational and other procedures involved in providing transition programming to students with mild disabilities. Examination of secondary-level special education service delivery, as well as post-secondary interventions, from critical, practical, empirical and theoretical perspectives.

ECI 581 Educational Diagnosis and Prescription For Children With Exceptionalities 3.
Prerequisite: ECI 585.
Concept of educational diagnosis of students with exceptionalities, including examination of educational diagnostic procedures in current use in special education. Development of informal diagnostic techniques and procedures for adapting curriculum and instruction for learner with exceptionalities.

ECI 583 Behavior Disorders 3.
Prerequisite: ECI 585.
Definitions, etiology, characteristics, philosophies and approaches to educational programming for children and youth with behavior disorders, including emotionally handicapped, autistic and socially maladjusted.

ECI 584 Intervention for Behavior Problems of Students with Disabilities 3.
Prerequisite: ECI 583.
Curriculum materials, instructional strategies and behavior management techniques related to teaching children and youth with behavioral disorders including individualized instruction, group process, organization and evaluation of classroom programs, parent involvement, community resources and teachers' personal and professional growth and development.

ECI 585 Education Of Exceptional Children 3.
Prerequisite: 9 hrs. of ED or PSY.
Introduction to field of special education. Focus on historical overview, definitions and terminology in basic areas of exceptionality; etiological factors in exceptionality; developmental and learning characteristics of each area of exceptionality; and educational settings and strategies employed in special education. Review of current educational laws and policies affecting special education.

ECI 603 Advanced Seminar In Literacy Research 3-6.
Prerequisite: ECI 648.
Critical analyses of research and methodology in reading comprehension processes and strategies for comprehension and retention of written discourse. Opportunity for design and conduct of a research project in reading or related area.

ECI 606 Seminar on Teacher as Learner: Developmental Theory, Research and Practice 3.
Prerequisite: Graduate standing (6 hrs course work at 500-level).
Analysis of major contemporary theories and research of learning and development as a basis for individual and organizational change and development in educational settings.

ECI 607 Advanced Seminar in Multicultural Education 3.
Prerequisite: Graduate standing and ECI 500.
Application and analysis of research and scholarship in multicultural education and topics related to effective schools for contemporary culturally diverse student populations in K-12 settings.

ECI 620 Special Problems In Curriculum and Instruction 1-6.
Prerequisite: Six hrs. of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.
ECI 630 Independent Study in Curriculum and Instruction 1-6.
Independent curriculum or research project in curriculum and instruction.

ECI 640 Practicum in Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised practical experiences in schools and area agencies concerned with curriculum and instruction or educational supervision.

ECI 641 Practicum In Mentoring and Coaching 1-6.
Prerequisite: ECI 705, Graduate standing in College of ED and PSY.
Supervised practical experiences in which participants become mentor to a student teacher or a teacher in a school system.

ECI 645 Diagnostic-Prescriptive Practicum in Reading 3.
Prerequisite: ECI 540, ECI 541 and ECI 543; Graduate standing in College of ED and PSY.
Supervised teaching experience with students using diagnostic test data to prescribe remedial programs for reading-disabled individuals, implementing instructional prescriptions and evaluating success of remedial plans.

ECI 647 Practicum in Business and Marketing Education 3.
Prerequisite: ECI 569.
Supervised practical experiences in schools and area agencies concerned with business and marketing education.

ECI 648 Practicum in Special Education 1-6.
Prerequisite: Graduate standing in College of ED and PSY.
Supervised practical experiences in schools and area agencies concerned with teaching children and adolescents with disabilities.

ECI 650 Internship In Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with curriculum development and/or educational supervision.

ECI 652 Field-Based Applications of Digital Learning and Teaching 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities to design, test, and revise digital learning and teaching solutions in authentic, field-based settings.

ECI 654 Internship In Elementary Education 1-6.
Prerequisite: 3 hrs. grad.-level elementary education course work, Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with elementary grades education.

ECI 656 Internship In Middle Grades Education 1-6.
Prerequisite: ECI 550, ECI 551, Graduate standing in College of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with the education of young adolescents.

ECI 657 Internship in Business and Marketing Education 1-6.
Prerequisite: ECI 561.
Supervised opportunities for advance professional development in contexts concerned with business and marketing education. Requires instructor approval.

ECI 658 Internship In Special Education 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with special education.

ECI 661 Seminar in Special Education Literacy 3.
Prerequisite: ECI 540 or ECI 541 and ECI 581, ECI 585.
A case study approach is used in the seminar that requires the application of assessment techniques and instructional intervention methodologies in literacy for K-12 students with disabilities. Assigned activities require access to and experience in schools and/or related settings. This seminar is designed to be completed during the last half of the graduate program. It is restricted to graduate students in SPE, SPL, SPM, SPB or consent of instructor.

Prerequisite: ECI 585.
This seminar is designed to prepare special education teachers to provide empirically supported instruction in numerical concepts and skills to students with disabilities in special education and general education settings. Particular attention will be paid to student characteristics that impact learning in arithmetic and mathematics and to addressing state and national curriculum standards using instructional organization and strategies that have been shown through research to be effective for this population. Field work in schools and/or related settings is required. Restricted to students in SPE, SPB, SPL, SPM or by consent of instructor.

ECI 683 Seminar in Special Education Learning Strategies 3.
Prerequisite: ECI 585.
This seminar is designed to prepare special education teachers to evaluate and teach empirically supported learning strategies to students with disabilities in special education and collaborative settings. Particular attention will be paid to learning strategies shown to help students with disabilities organize, learn, and apply facts, skills and routines that provide access to and mastery of critical information across the curriculum. Field work in schools and/or related settings is required. Restricted to graduate students in SPE, SPB, SPL, SPM or consent of instructor.

ECI 685 Master's Supervised Teaching 1-3.
Prerequisite: Master’s student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ECI 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master’s student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

ECI 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master’s student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

ECI 690 Master’s Examination 1-9.
Prerequisite: Master’s student.
For students in non-thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.
ECI 692 Research Projects in Curriculum and Instruction 1-3.
Pre requisite: ELP 532.
Project or problem in research in education for graduate students, supervised by members of graduate faculty. Research chosen on basis of individual students’ interests and not to be part of thesis or dissertation research.

ECI 693 Master’s Supervised Research 1-9.
Pre requisite: Master’s student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

ECI 695 Master’s Thesis Research 1-9.
Pre requisite: Master’s student.
Thesis research.

ECI 696 Summer Thesis Research 1.
Pre requisite: Master’s student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Pre requisite: Master’s student.
For students who have completed all credit hour requirements and full-time enrollment for the master’s degree and are writing and defending their theses.

ECI 700 Curriculum Theory and Development 3.
Pre requisite: 9 sem. hrs. graduate PSY, ECI 502, ECI 514.
Theory and research in behavioral sciences and education designed to provide theoretical background for development of elementary and secondary curricula. Exploration of knowledge base and skills for critical review of curricula and instructional materials and provision of an application opportunity.

ECI 705 Instructional Coaching and Supervision of Teachers 3.
Theory, research and practice of the professional role of a supervisor in the development of the effective and self-analytic teacher: pre-service (student teacher) and in-service (beginning and experienced teacher). For persons with at least two years of teaching experience in K-12 schools.

ECI 709 Special Problems In Curriculum and Instruction 1-6.
Pre requisite: Six hrs. of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 710 Computer Applications and Curriculum Integration 3.
Pre requisite: Graduate standing.
Use and evaluation of existing educational software, research findings with respect to integration of computers and new technologies in instruction.

ECI 714 Multimedia Design and Applications in Instruction 3.
Pre requisite: Six hrs. ED or PSY.
Emphasis on use and evaluation of existing educational software and research findings with respect to use of computers in instruction.

ECI 715 Internet Applications and Web Page Design in Instruction 3.
Pre requisite: Six hrs. ED or PSY.
Instructional design principles underlying development of microcomputer-based instructional software and accompanying materials and programming principles and their implementation in courseware development. Additional topics include authoring languages, programming languages and graphics.

ECI 716 Design and Evaluation Of Instructional Materials 3.
Pre requisite: Graduate standing.
Characteristics and selection of various media for instruction and their use in educational settings. Design and production of instructional materials. Analysis of research in the field. Individualized projects and assignments. Application of grounded research and theory concerning learning to design of instructional materials. Structured projects and practical experiences used to transfer design principles and evaluate instructional products.

ECI 717 Advanced Multimedia Design and Applications in Instruction 3.
Pre requisite: ECI 511, ECI 514.
Advanced study and application of instructional design principles underlying development, evaluation, and integration of multimedia and hypermedia in K-12 settings.

ECI 718 Digital Learning Program and Staff Development 3.
Pre requisite: ECI 511, ECI 514, ECI 515, ECI 642.
Study and application of principles related to digital learning program planning, facilities and resource management, and staff development in K-12 settings.

ECI 719 Special Problems in Digital Learning and Teaching 1-6.
Pre requisite: Six hours of ED or PSY.
In-depth study of topical problems in digital learning and teaching selected from areas of current concern to practitioners in education.

ECI 720 The Teaching Of Composition 3.
Pre requisite: 9 hrs. of ED, PSY and/or ENG; to take this course in sum. as part of Capital Area Writing Project, student must apply and be selected.
For classroom teachers. Practical field-tested ideas to help students improve as writers by focusing on composition as a process as well as a product. Activities for teaching prewriting, drafting, revising, proofreading, grammar and evaluating with suggestions for individual and group learning. Writing in content areas and composition research/ theory.

ECI 727 Special Problems in Social Studies Education 1-6.
Pre requisite: Six hours of ED or PSY.
In-depth study of topical problems in social studies education selected from areas of current concern to practitioners in education.

ECI 729 Special Problems in English Education 1-6.
Pre requisite: Six hours of ED or PSY.
In-depth study of topical problems in English education selected from areas of current concern to practitioners in education.

ECI 745 Literacy Theory and Research 3.
Pre requisite: ECI 540.
Advanced study of theoretical models of reading, research issues in reading and in other language processes. In-depth theoretical models of reading. Emphasis on critical examination and analysis of research investigating reading acquisition, maturerading behavior and related language processes.

ECI 801 Seminar In Curriculum and Instruction 1-3.
Pre requisite: Doctoral student.
Consideration of contemporary issues, trends and recent research and development findings in curriculum and instruction.

ECI 803 Advanced Seminar In Literacy 3.
Pre requisite: ECI 545.
Critical analyses of research and methodology in reading comprehension processes and strategies for comprehension and retention of written discourse. Opportunity for design and conduct of a research project in reading or related area.
ECI 804 Seminar On Attention Deficit Hyperactivity Disorder, Research and Treatment 3-6.
Prerequisite: 9 hrs. grad. credit in PSY or SPE.
Critical analysis of theory, research and interventions in Attention-Deficit-Hyperactivity-Disorder. Reading and synthesis of literature and student-led class discussions of such topics as characteristics, diagnosis, etiology, long-term outcomes and management of ADHD.

ECI 806 Seminar on Teacher as Learner: Developmental Theory, Research and Practice 3-6.
Prerequisite: Graduate standing (6 hrs course work at 500-level).
Analysis of major contemporary theories and research of learning and development as a basis for individual and organizational change and development in educational settings.

ECI 807 Advanced Seminar in Multicultural Education 3.
Prerequisite: Graduate standing and ECI 500.
Application and analysis of research and scholarship in multicultural education and topics related to effective schools for contemporary culturally diverse student populations in K-12 settings.

ECI 820 Special Problems In Curriculum and Instruction 1-6.
Prerequisite: Six hrs. of ED or PSY.
In-depth study of topical problems in curriculum and instruction selected from areas of current concern to practitioners in education.

ECI 830 Independent Study in Curriculum and Instruction 1-3.
Independent curriculum or research project in curriculum and instruction.

ECI 840 Practicum in Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised practical experiences in schools and area agencies concerned with curriculum and instruction or educational supervision.

ECI 841 Practicum In Mentoring and Coaching 1-6.
Prerequisite: ECI 705, Graduate standing in College of ED and PSY.
Supervised practical experiences in which participants become mentor to a student teacher or a teacher in a school system.

ECI 847 Practicum in Business and Marketing Education 1-6.
Supervised practical experiences in schools and area agencies concerned with business and marketing education.

ECI 850 Internship In Curriculum and Instruction 1-6.
Prerequisite: Graduate standing in Col. of ED and PSY.
Supervised opportunities for advanced professional development in contexts concerned with curriculum development and/or educational supervision.

ECI 851 Internship In Mentoring 1-6.
Prerequisite: ECI 845 and ECI 705, Graduate standing in Col. of ED and PSY.
Supervised opportunities teaching educational personnel in local school systems to serve as mentors to their colleagues.

ECI 880 Directed Study in Curriculum and Instruction 1-6.
Curriculum or research project in curriculum and instruction under the direct supervision of a faculty member.

ECI 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ECI 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

ECI 892 Research Projects In Curriculum and Instruction 1-3.
Prerequisite: ELP 732.
Project or problem in research in education for graduate students, supervised by members of graduate faculty. Research chosen on basis of individual students' interests and not to be part of thesis or dissertation research.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

ECI 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Elementary Education Program (ELM)

The undergraduate Elementary Education program culminates with a recommendation for an Initial North Carolina K-6 teaching license. The program prepares elementary teachers in all curricular areas and as a means of directly addressing the competencies required by The NC Department of Public Instruction and to be at the leading edge of the professional field, the program also includes more specialized methods courses and supervised field experiences in science, technology, engineering and mathematics (STEM) than typical elementary education teacher preparation programs. Professional studies courses and experiences include innovative, rigorous pedagogical courses and diverse field experiences.

For information on graduate programs in Elementary Education, please go to https://ced.ncsu.edu/tels/graduate-programs/

ELM - Elementary Education Courses

ECI 250 Introduction to Elementary Education in a Global Society 3.
Prerequisite: Sophomore standing.
Introduction to the major conceptual and intellectual foundations of the teaching profession, the sociology and culture of elementary schools and classrooms, and the world of work of elementary teachers. Fieldwork in schools and related settings maybe required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.Students interested in Elementary Education.
ELM 310 Children’s Thinking and Additive Reasoning 3.
Prerequisite: ELM 250, Junior standing, Elementary Education Majors.
Examination of mathematical reasoning processes in primary grade children and the theory and practice of active teaching strategies designed to motivate and engage children in mathematics learning in grades K-3. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 320 Teaching Science in the Primary Grades 3.
Prerequisite: ELM 250, Junior standing, Elementary Education Majors.
Examination of science knowledge and thinking in primary-age children. Development and application of methods for teaching science in the primary grades that leads to active learning of science as a process of inquiry. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 330 Teaching Reading in Elementary School: K-2 3.
Prerequisite: ELM 250, Junior standing, Elementary Education Majors.
ELM 330 is designed to prepare preservice teachers to teach reading and to lead to licensure in the elementary grades. Specific topics that relate to the theory and practice of teaching reading for early and emergent readers, including literature and struggling readers, will be examined. Fieldwork in schools and related settings may be required in lieu of lecture in occasion. Students are responsible for transportation to and from their school based experiences.

ELM 335 Teaching Reading in the Elementary School: 3-5 3.
Prerequisite: ELM 330, Junior standing, Elementary Education Majors.
ELM 335 is designed to prepare preservice teachers to teach reading and to lead to licensure in the elementary grades. Specific topics that relate to the theory and practice of teaching reading for upper elementary grade readers, including information and media literacy and literature, will be examined. Fieldwork in schools and related settings may be required in lieu of lecture in occasion. Students are responsible for transportation to and from their school based experiences.

ELM 340 Children Design, Create and Invent 3.
Prerequisite: ELM 370, Junior standing, Elementary Education Majors.
An active hands-on class where prospective elementary school teachers develop learning activities that children can use to stimulate their imaginations and learn fundamental concepts in science, technology, engineering, and mathematics. Part of a program leading to licensure in Elementary Education.

ELM 350 Assessment of Learning and Behavior 3.
Prerequisite: ELM 250, Junior standing, Elementary Education Majors.
Application of knowledge of pedagogy and development to develop high-quality strategies for formative and summative assessment. Best practices using developmentally-appropriate assessment strategies including authentic assessment, portfolios and electronic portfolios, real-time feedback, open- and closed-ended formal assessments, and standardized testing. Particular attention to examining the rationale for assessment and the implications of assessment.

ELM 370 Connections Seminar I The Elementary Classroom and School Community 3.
Prerequisite: ELM 250, Junior standing, Elementary Education Majors.
The purpose of this course is to introduce preservice teachers to the world of public school classrooms and school communities and to the tasks of teaching. Particular emphasis is placed on building a positive classroom climate and implementing effective classroom management strategies and routines. Weekly fieldwork in schools and related settings is requires 3 hours a week. Students are responsible for transportation to and from their school based experiences.

ELM 375 Connections Seminar II Cultural Identity, Social Justice and Diverse Learners 3.
Prerequisite: ELM 370; Junior standing, Elementary Education majors.
The purpose of the course is to help prospective elementary grades teachers develop the competencies to provide equitable opportunities to all of their future students. To do this, students will investigate issues of systemic injustice and the role of the school in interrupting cycles of inequality, and develop the capacity to engage in culturally relevant pedagogy. Weekly fieldwork in schools and related settings is required 3 hours a week. Students are responsible for transportation to and from their school based experiences.

ELM 400 Connections Seminar III Instructional Design and Assessment 3.
Prerequisite: ELM 375, Senior standing, Elementary Education Majors.
In this course preservice elementary educators will examine research-verified practices in instructional design and assessment that are designed to meet the needs of diverse K-6 learners. This course will prepare candidates to plan appropriate units of study, learning experiences and assessment methods for use in the elementary classroom. Weekly fieldwork in schools and related settings is required. Students are responsible for transportation to and from their school based experiences.

ELM 410 Children’s Thinking and Multiplicative Reasoning 3.
Prerequisite: ELM 310, Junior standing, Elementary Education Majors.
This course is designed to prepare preservice teachers to teach math in the intermediate grades and to lead to licensure in the elementary grades. Specific methodologies that relate to the theory and practice of teaching of math will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 420 Teaching Science in the Intermediate Grades 3.
Prerequisite: ELM 320, Senior standing, Elementary Education Majors.
This course is designed to prepare preservice teachers to teach science in intermediate grades and to lead to licensure in the elementary grades. Specific methodologies that relate to the theory and practice of teaching science will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 430 Teaching Language Arts in the Elementary School 3.
Prerequisite: ELM 335, Senior standing, Elementary Education Majors.
This course is designed to prepare preservice teachers to teach language arts and to lead to licensure in the elementary grades. Specific methodologies that relate to the theory and practice of teaching language arts will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.
ELM 440 Teaching Children with Special Needs in the Elementary Classroom 3.
Prerequisite: ELM 350, ELM 375, Senior standing, Elementary Education Majors, Corequisite: ELM 420.
This course is designed to prepare preservice teachers to teach students with special needs and to lead to licensure in the elementary grades. Specific methodologies that relate to the theory and practice of teaching students with special needs will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 450 The Arts for Elementary Education 3.
Prerequisite: ELM 375, Senior standing, Elementary Education Majors. This course is designed to prepare preservice teachers to integrate the arts; visual music, dance and drama, into the content areas. Successful completion of this course leads to licensure in the elementary grades. Specific methodologies that relate to the theory and practice of teaching the arts will be examined.

ELM 460 Social Studies for the Young Learner 3.
Prerequisite: ELM 370, Junior standing, Elementary Education Majors. This course is designed to prepare preservice teachers to teach social studies and to lead to licensure in the elementary grades. The course is an examination of curriculum, instruction, and learning in K-6 social studies education. Emphases include development of the social studies; curricular principles and components; teaching strategies; and learner outcomes. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

Prerequisite: ELM 400, Elementary Education Majors, Admission to the Professional Semester, Corequisite: ELM 484.
ELM 480 Linking Theory and Practice is designed as the capstone course in the Elementary Education Program. Teacher candidates will meet regularly to analyze and discuss their student teaching experiences and connect new learning to previous university coursework. In addition, teacher candidates will complete their edTPA Tasks and other culminating activities required by the program.

ELM 484 Student Teaching in Elementary Education 9.
Prerequisite: ELM 480, ELM 400, Elementary Education Majors, Admission to the Professional Semester. Culminating experience for Elementary Education majors. A minimum of 10 weeks of supervised teaching in an elementary school classroom, demonstrating competent applications of standards-based practices and other required knowledge, skill, and dispositional outcomes. Taken concurrently with ELM 480. Students responsible for transportation to placement site.

ELM 515 Instructional Practice in Schools I 1.
Prepares pre-service teachers to develop competencies in assessment, instructional design, and tutoring and leads to initial licensure in the elementary grades. Includes 15-20 hours of fieldwork; transportation to schools is the responsibility of the students.

ELM 516 Instructional Practice in Schools II 2.
Corequisite: ELM 572, ELM 573, ELM 575.
Prepares pre-service teachers to develop competencies in assessment, instructional design, and teaching in whole class settings and leads to initial licensure in the elementary grades. Includes 30 hours of fieldwork; transportation to the schools is the responsibility of the students.

ELM 520 Methods of Teaching Elementary School Science 3.
Prerequisite: ELM 420, ELM 400, ELM 403, Admission to the Professional Semester, Corequisite: ELM 484.
ELM 520 Methods of Teaching Elementary School Science is intended for educators seeking to expand their knowledge and skills in teaching elementary school science. The course examines the purposes, scope, sequences, materials, and methodologies for teaching science in elementary schools to a diverse student body. It develops skills in planning, instructing, and assessing understanding of science content and processes. It links instruction and assessment and addresses relevant content topics in chemistry, biology, physics, and earth and space science.

ELM 530 Social Studies In the Elementary School 3.
Prerequisite: ELM 400, ELM 403, Admission to the Professional Semester, Corequisite: ELM 484.
ELM 530 Social Studies in the Elementary School is intended for teachers seeking to expand their knowledge and skills in teaching social studies in middle grades and elementary schools, including in-depth introduction to research-based teaching strategies, instructional resources and literature of the field.

ELM 533 Targeted Literacy Assessment and Instruction for Elementary School 3.
Prerequisite: ELM 480, ELM 400, Elementary Education Majors, Admission to the Professional Semester. Closely linked reading assessment and reading instruction and addresses relevant content topics in elementary reading development, assessment, and instruction.

ELM 537 Teaching Children’s Literature 3.
Prerequisite: ELM 375, Senior standing, Elementary Education Majors. This course is designed to prepare preservice teachers to teach students with special needs will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 540 Reading In the Elementary School 3.
Prerequisite: ELM 375, Senior standing, Elementary Education Majors. This course is designed to prepare preservice teachers to teach social studies and to lead to licensure in the elementary grades. The course is an examination of curriculum, instruction, and learning in K-6 social studies education. Emphases include development of the social studies; curricular principles and components; teaching strategies; and learner outcomes. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 544 Teaching Children with Special Needs 3.
Prerequisite: ELM 350, ELM 375, Senior standing, Elementary Education Majors, Corequisite: ELM 420.
This course is designed to prepare preservice teachers to teach students with special needs and to lead to licensure in the elementary grades. Specific methodologies that relate to the theory and practice of teaching students with special needs will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 550 Social Studies In the Elementary School 3.
Prerequisite: ELM 400, ELM 403, Admission to the Professional Semester, Corequisite: ELM 484.
ELM 550 Social Studies In the Elementary School is intended for teachers seeking to expand their knowledge and skills in teaching elementary school science. The course examines the purposes, scope, sequences, materials, and methodologies for teaching science in elementary schools to a diverse student body. It develops skills in planning, instructing, and assessing understanding of science content and processes. It links instruction and assessment and addresses relevant content topics in chemistry, biology, physics, and earth and space science.

ELM 553 Targeted Literacy Assessment and Instruction for Elementary School 3.
Prerequisite: ELM 480, ELM 400, Elementary Education Majors, Admission to the Professional Semester. Closely linked reading assessment and reading instruction and addresses relevant content topics in elementary reading development, assessment, and instruction.

ELM 557 Teaching Children’s Literature 3.
Prerequisite: ELM 375, Senior standing, Elementary Education Majors. This course is designed to prepare preservice teachers to teach students with special needs will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 560 Reading In the Elementary School 3.
Prerequisite: ELM 375, Senior standing, Elementary Education Majors. This course is designed to prepare preservice teachers to teach students with special needs will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 565 Number Systems and Operations: K-5 Mathematical Tasks 3.
Prerequisite: ELM 350, ELM 375, Senior standing, Elementary Education Majors. This course is designed to prepare preservice teachers to teach students with special needs will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

Prerequisite: ELM 350, ELM 375, Senior standing, Elementary Education Majors. This course is designed to prepare preservice teachers to teach students with special needs will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 567 Data Analysis and Measurement: K-5 Classroom Interactions 3.
Prerequisite: ELM 350, ELM 375, Senior standing, Elementary Education Majors. This course is designed to prepare preservice teachers to teach students with special needs will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.

ELM 568 Algebraic Reasoning: K-5 Discourse and Questioning 3.
Prerequisite: ELM 350, ELM 375, Senior standing, Elementary Education Majors. This course is designed to prepare preservice teachers to teach students with special needs will be examined. Fieldwork in schools and related settings may be required in lieu of lecture on occasion. Students are responsible for transportation to and from their school based experiences.
**ELM 559 Geometry and Spatial Visualization: K-5 Assessment 3.**
Formative and summative assessment strategies of students' geometric thinking in elementary grades; Concept development of 2- and 3-dimensional Geometry. Attention also given to diagnosis of student errors.

**ELM 560 Mathematical Modeling: K-5 Leadership 3.**
Generating mathematical representations and making explicit connections between concepts; Pedagogy designed to equip elementary teachers to become mathematics teacher-leaders in school settings; Focus given to topics integrated within mathematical strands.

**ELM 571 Language Arts, New Literacies and Media for Initial License 3.**
Examine research-based processes for writing instruction, effects of and approaches for use of technology on literacy development, and effects of media and new literacies (non-print literacies, e.g. digital, visual, film) on literacy learning and development in elementary schools. Restricted to ELM MAT students.

**ELM 572 Methods for Teaching Reading in the Elementary Classroom for Initial License 3.**
ELM 572 prepares pre-service teachers to teach reading and leads to licensure in the elementary grades. The course examines specific research-based methodology that relates to the theory and practice of teaching reading for elementary readers. Restricted to ELM, MAT students.

**ELM 573 Methods for Teaching Elementary School Science for Initial License 3.**
ELM 573 prepares preservice teachers to teach science and leads to licensure in the elementary grades. The course examines specific research verified methodologies that relate to the theory and practice of teaching science to elementary students. Restricted to ELM MAT students.

**ELM 574 Methods for Teaching Mathematics in the Elementary Classroom for Initial License 3.**
Prepares preservice teachers to teach mathematics and leads to licensure in the elementary grades. Examines specific research-based methodologies that relate to the theory and practice of teaching mathematics to elementary students. Limited to students enrolled in MAT Elementary Education program.

**ELM 575 Social Studies in the Elementary School for Initial License 3.**
Designed to prepare pre-service teachers to teach social studies and to lead to licensure in the elementary grades. The course is an examination of curriculum, instruction, and learning in K-6 social studies education. Emphasis include development of the social studies, curricular principles and components, research verified teaching strategies, and learner outcomes. Restricted to ELM MAT students.

**ELM 590 Special Problems in Elementary Education 1-6.**
In-depth study of topical problems in teaching and learning of current and special interest to elementary education practitioners.

**ELM 630 Independent Study in Elementary Education 1-3.**
Detailed investigation of topics of particular interest to graduate students under faculty direction on a tutorial basis. Determination of credits and content by faculty member in consultation with department head.

**ELM 644 Practicum in Elementary Education 1-6.**
Supervised practical experiences in schools and area agencies concerned with education of elementary-age students.

**ELM 654 Internship In Elementary Education 1-6.**
Supervised opportunities for advanced professional development in contexts concerned with elementary grades education.

---

**College of Engineering**

118 Page Hall
NCSU Box 7904
Raleigh, NC 27695-7904
Phone: (919) 515-3263
fax: (919) 515-8702
e-mail: engineering@ncsu.edu

Men and women who seek a challenging technical career in research and development, design, construction, production, maintenance, technical sales, management, teaching, or other careers requiring a methodical, creative approach to problem solving, should consider an engineering or computer science education. At NC State, the College of Engineering has a distinguished and internationally recognized faculty, and the College of Engineering offers the opportunity for ambitious men and women to become the leaders and prime movers of our increasingly technological world. Because of the great influence of science and technology on our everyday lives, today's engineers and computer scientists must be acutely aware of, and responsible for, the effects their creations may have on society. In addition to safety, aesthetics, economics, and energy, today's technologists must consider environmental, sociological, and other "human concern" costs.

College of Engineering graduates work in diverse careers around the world. Most are practicing engineers, but because their education has equipped them well to address problems in a wide variety of fields, many College of Engineering graduates have become corporate presidents, lawyers, medical doctors, and leaders in government. The College of Engineering has engineering degree programs in nine academic departments and three affiliated departments. These departments include: Biological and Agricultural Engineering; Biomedical Engineering; Chemical and Biomolecular Engineering; Civil, Construction, and Environmental Engineering; Computer Science; Electrical and Computer Engineering; Industrial and Systems Engineering; Materials Science and Engineering; Mechanical and Aerospace Engineering; Nuclear Engineering; Paper Science and Engineering within the Department of Forest Biomaterials; and Textile Engineering. Eighteen undergraduate degree programs are offered in these twelve departments. In addition, a degree program in Engineering is offered by special arrangement to the very few students who can clearly demonstrate the need for an individualized program of study. All departments also offer advanced studies leading to master's degrees and the Doctor of Philosophy degree. Consult the Graduate Catalog (http://www.ncsu.edu/grad/catalog) for graduate degrees.

Seventeen programs in the College of Engineering are accredited by the Engineering Accreditation Commission of ABET; http://www.abet.org and are: aerospace engineering; biological engineering; biomedical engineering; chemical engineering; civil engineering; computer engineering; construction engineering and management; electrical engineering; BS in engineering Mechatronics concentration joint; BS in engineering, Mechanical Engineering Systems concentration; environmental engineering; industrial engineering; materials science and engineering; mechanical engineering; nuclear engineering; paper science and engineering; and textile engineering. One program in the College of Engineering, computer science, is accredited by the Computing Accreditation Commission of ABET, http://www.abet.org. Accreditation
ensures that these programs satisfy requirements for acceptance by these nationally recognized agencies. All curricula and programs are designed to maintain the college’s national and international reputation while meeting the needs of the people and industries of the state and region through effective instruction, competent research, and the development of new and meaningful contributions to scientific knowledge.

The University Career Development Center is maintained by the university to assist continuing students and graduating students in achieving their career goals.

**Degrees**

Entering students receive assistance in planning an appropriate program of study and have available continued guidance from academic advisers throughout their academic careers. Beginning freshmen enroll in the Engineering First Year (EFY) for one to two years. After successfully completing college requirements, students may be admitted to a departmental degree program. In order to be eligible to apply for admission into a degree program, students must successfully complete the following courses:

- **CH 101** Chemistry - A Molecular Science (C or better) 3
- **CH 102** General Chemistry Laboratory (C or better) 1
- **MA 141** Calculus I (C or better) 4
- **MA 241** Calculus II (C or better) 4
- **PY 205** Physics for Engineers and Scientists I (C or better) 3
- **PY 206** Physics for Engineers and Scientists I Laboratory 1
- **ENG 101** Academic Writing and Research (pass) 4
- **E 101** Introduction to Engineering & Problem Solving (pass) 1
- **E 115** Introduction to Computing Environments (pass) 1

Note: Acceptance into a department must occur in a timely manner.

**Bachelor of Science**

The baccalaureate program provides preparation for entry into industry, government, business or private practice as well as graduate school. Graduates with a B.S. degree in engineering or computer science may be engaged in design development, production, construction, sales, maintenance, or the planning, operation or management of industrial units.

The undergraduate curricula offer programs of study leading to bachelor’s degrees in aerospace engineering, biological engineering, biomedical engineering, chemical engineering, civil engineering, construction engineering and management, computer engineering, computer science, electrical engineering, engineering-mechatronics, environmental engineering, industrial engineering, industrial engineering-furniture manufacturing option, materials science and engineering, mechanical engineering, nuclear engineering, paper science and engineering, and textile engineering. Graduation requirements include completion of one of the curricula with an overall grade point average of 2.0 and a grade point average of 2.0 in the major courses. The total number of required credits ranges from 120 to 128 semester hours.

**Double Degree Programs**

NC State students may wish to earn Bachelor of Science degrees in two fields from the College of Engineering. When the two courses of study are planned early and carefully, a number of courses can simultaneously satisfy requirements in both degrees. Humanities, social science, physics, mathematics, chemistry, English, and physical education sequences are common to most curricula. Students interested in such a program should consult the Office of Academic Affairs (118 Page Hall).

Other students may wish to combine a Bachelor of Science from the College of Engineering with a Bachelor of Science or Bachelor of Arts degree in another college at NC State University. A number of courses required for one degree may also satisfy requirements for a second degree. When the two courses of study are planned early and carefully, a double-degree program can be completed in as few as five years. Students interested in such a program should contact the Office of Academic Affairs (118 Page Hall).

**Student Activities**

Each department (http://www.engr.ncsu.edu/departments) in the College of Engineering (http://www.engr.ncsu.edu) has technical societies open to every student enrolled in the respective degree program(s). In most cases, these are student chapters of national professional organizations. Each curriculum also has one or more honor societies to give recognition to students who have earned superior academic records. In addition, there are college-wide honor, professional, and service societies that offer personally and educationally rewarding opportunities for students. Such societies include, for example, the Engineers’ Council, Society of Women Engineers (SWE), and National Society of Black Engineers (NSBE). The complete list of student organizations (http://students.engr.ncsu.edu/orgs) provides more details.

**High Impact Experiences**

The NC State College of Engineering is actively educating and preparing engineers that will impact our world. Student participation in High Impact experiences -- work, research, international, and service -- is highly encouraged. College of Engineering students are encouraged to differentiate themselves through High Impact experiences and can learn about these opportunities through primary resources such as the Career Development Center (work), the Undergraduate Research Office (research), the Center for Student Leadership, Ethics, and Public Service (service), and the Study Abroad Office (international).

NC State College of Engineering students may, for instance, choose High Impact experiences like the Prague Institute, Czech Republic (international [e.g., study abroad]); Munich, Germany (work [e.g., international internship]); San Juan de la Maguana, Dominican Republic (service [e.g., ASB's]); Rio de Janeiro, Brazil (research [e.g., REU's]); Zhejiang, China (international [e.g., engineering study abroad]); or many others. Students interested in these opportunities may learn more through the Office of Academic Affairs (118 Page Hall).

**Cooperative Education Program**

This optional program is structured so that the student will alternate semesters of study with semesters of practical work as sophomores and juniors. The freshman and senior years are spent on campus, while sophomore and junior academic work is spread over a three-year period to permit alternating academic semesters with work-experience semesters. Students earn a salary while they are in industry. This income can prove useful in offsetting college expenses. The Co-op plan can be completed in five years, during which time the student receives 12 to 18 months of industrial experience.

Students in all curricula in the College of Engineering may apply for the Co-op program if they have a grade point average of 2.5 or better.
Application for admission into the Co-op program should be made early in the spring semester of the freshman year. Students must be accepted into an engineering degree program prior to beginning the first Co-op assignment.

Further information may be obtained from:
Cooperative Education Program (https://cdc.dasa.ncsu.edu/students/learning-about-co-op)
Career Development Center
2100 Pullen Hall

Induction to the Profession

All graduating students in the College of Engineering are invited to participate in the Induction to the Profession ceremony, held during each graduating season. The event acknowledges the fellowship of engineers and computer scientists who are trained in science and technology and who are dedicated to the practice, teaching, or administration of their profession.

Initiation into the Profession includes commitment to the "Obligation" and acceptance of a stainless steel ring to be worn on the little finger of the working hand. Only those who have met the high standards of professional engineering and computer science training or experience are invited to accept the Obligation, which is voluntarily received for life. This commitment is not a trivial act but is, rather, like the Hippocratic Oath, a promise to practice the profession ethically, with integrity, tolerance and respect. The ring is worn as a visual symbol to attest to the wearer's calling and symbolizes the unity of the profession in its goal of benefiting humankind. The stainless steel from which the ring is made depicts the strength of the profession.

Benjamin Franklin Scholars Program

A limited number of freshmen in the College of Engineering apply and are selected to participate in the Benjamin Franklin Scholars Program. Students completing the program earn a Bachelor of Science in an engineering discipline or in computer science and a bachelor's degree in humanities or social sciences.

This double-degree program, a joint undertaking of the College of Engineering and the College of Humanities and Social Sciences, provides a unique opportunity to integrate a solid base of knowledge in technology or science with a broad humanistic and social perspective. The curriculum for the double-degree program has four main components: (1) a strong general education, (2) specially designed interdisciplinary courses, (3) all technical course requirements associated with the engineering or computer science degree, and (4) and a second major in the humanities and social sciences chosen from among the traditional majors or an interdisciplinary major. Students who have been accepted into a College of Engineering degree program, have declared a major in the College of Humanities and Social Sciences, and have at least a 3.0 GPA are generally eligible for scholarships from the program. With careful planning, the program can be completed in five years.

For more information, contact:
Dr. Ross Bassett, Program Director
ross_bassett@ncsu.edu, (ross_bassett@ncsu.edu)
or the Office of Academic Affairs (118 Page Hall).

Computers

The College of Engineering provides its students with a large number of workstation labs for the purpose of running high-end engineering applications. In addition, incoming freshmen are encouraged to own a laptop computer to use in classroom, lab, and mobile settings. The first-year computer lab course, E 115, Introduction to Computing Environments, instructs students in the use of their own computers to interface effectively with the vast resources of the college computing environment, named "Eos." The course emphasizes the student's responsibility for his or her own computer, including security and hands-on maintenance. Computers, both lab-based and student-owned, are central to central engineering education in the college.

Transfer Program

Students with non-engineering degrees or one or more years of academic work completed at other institutions may apply for transfer admission to the College of Engineering through the Office of Undergraduate Admissions. Students are admitted from four-year institutions as well as from junior and community colleges. Students currently attending or anticipating attendance at other institutions are advised to contact the Office of Academic Affairs for information on transfer requirements, transfer course credit and admission to NC State.

Golden LEAF Biomanufacturing Training and Education Center

Biomanufacturing is the production of useful products such as penicillin through the use of biological molecules and living organisms. The Golden LEAF Biomanufacturing Training and Education Center (BTEC) simulates a biomanufacturing pilot plant capable of producing biopharmaceutical products and packaging them in a sterile, current Good Manufacturing Practices (cGMP)-like environment, and is the only facility of its kind in the nation and one of only a few in the world.

The BTEC hands-on, laboratory-intensive academic program is provided using large-scale equipment, including bioreactors, downstream separation and purification processes, bioreactor control systems, and aseptic processing operations. In addition to undergraduate and graduate courses, the BTEC educational program includes an undergraduate Minor in Biomanufacturing, and a University Certificate in Biomanufacturing. A Post-baccalaureate Certificate in Biomanufacturing is available for students who have earned a bachelor's level degree. Undergraduate students majoring in chemical engineering may elect to complete a concentration in biomanufacturing sciences. The BTEC graduate program will include a Minor in Biomanufacturing, a Master of Science degree, and a Professional Science Masters in Biomanufacturing.

For additional information, please visit the BTEC website (http://www.btec.ncsu.edu).

Department of Biological and Agricultural Engineering

The Department of Biological and Agricultural Engineering applies engineering principles to biologically-based systems, primarily in agricultural and environment. The BAE department provides excellent educational opportunities at the undergraduate level with a Biological Engineering program that is well recognized as among the finest in the United States.

The BE curriculum includes concentrations in agricultural engineering, bioprocess engineering, and environmental engineering. All concentrations within the BE curriculum emphasize core courses in...
biology, mathematics, physics, chemistry, hydraulics, mechanics, materials, and thermodynamics, which collectively provide solid training in basic science and engineering. The curriculum is designed to prepare each graduate to master fundamentals of engineering and biology, develop the ability to solve engineering problems, improve self-confidence, and apply the creative process of engineering design. The educational experience is capped off with a two semester senior level course that immerses each graduate in the team approach to developing engineering solutions to complex problems. By the time of graduation, approximately 80% of BE graduates will have passed the Fundamentals in Engineering exam and thus be well on their way toward licensure as a Professional Engineer.

Opportunities

BE students learn to solve a wide variety of engineering problems and will have opportunities for specialization through selection of a specific concentration. Scientific and engineering principles are applied: to conserve and manage air, energy, soil and water resources; to manage, protect and restore natural ecosystems; to understand and utilize mechanical properties of biological materials; to design and develop machinery systems for all phases of agricultural and food production; to design and evaluate structures and environmental control systems for housing animals, plant growth, and biological product storage; to develop improved systems for processing and marketing food and agricultural products; and to design sensor-based instrumentation and control systems for biological and agricultural applications.

Graduates of the BE curriculum receive a "B.S. in Biological Engineering," qualifying them for positions in design, development, and research in industry, government and public institutions. The curriculum also prepares students for post-graduate work leading to advanced degrees. Typical positions filled by recent BE graduates include: stream and wetlands restoration project manager; product design; development and testing engineer; plant engineering and management; engineering analysis and inspection for federal and state agencies; engineering consultant and research engineer. Entry-level salary ranges for BE graduates are similar to those of Civil, Industrial, and Mechanical Engineering graduates.

Curricula

The BE curriculum is jointly administered by the College of Agriculture and Life Sciences and the College of Engineering and combines the fields of engineering, biology and agriculture. The BE curriculum is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. BE graduates are qualified to become registered professional engineers by passing the appropriate examinations and upon completing the engineering experience requirements. Specific curriculum requirements are available online.

The BAE faculty, in concert with program constituencies, has developed the following undergraduate program objectives. Within the first five years following graduation, NC State's Biological Engineering graduates will:

- Excel in their careers or in graduate school by applying their knowledge of engineering principles, processes, and procedures;
- Practice engineering professionally and ethically;
- Communicate effectively in a professional environment; and
- Be engaged in life-long learning and professional development.

BAE - Biological and Agricultural Engineering Courses

BAE 100 Introduction to Biological Engineering 1.
Technical topics and career options in Biological Engineering with concentrations in Agricultural, Bioprocess, and Environmental Engineering are introduced. Information is provided about career services, internships, and study abroad and co-op opportunities in these areas. Students develop a plan of work.

BAE 123 Light Equipment Technology 3.
Principles of operation and maintenance of powered turf, garden, and landscaping equipment. Small engines, power transmission systems, equipment maintenance, and operator safety.

BAE 133 Agricultural Tractors and Machinery 4.
Principles of tractor engines, power trains, and hydraulics. Tractor operation, service and testing. Machinery management involving tractor and implement selection based on power and field requirements and on economics of ownership and operation. Implements for crop production to include tillage, planting, chemicals and harvesting. Set-up, operation and maintenance of implements. Calibration of planting and chemical equipment. Tractor and machinery safety. VEAL.

BAE 200 Computer Methods in Biological Engineering 2.
Prerequisite: Grade of C or better in MA 141 and E 115.
Students develop computer-based problem solving techniques to solve introductory problems in Biological Engineering. Emphasis is on developing solution algorithms and implementing these with spreadsheets and computer programming.

BAE 202 Introduction to Biological and Agricultural Engineering Methods 4.
Prerequisite: E 115.
Introduction to experimental design methodology, basic engineering design and problem solving methodology for Biological Engineering. Visualization skills, computer-aided 3-D solid modeling of parts, 3-D assembly of solid part geometries, computation of mass properties, 2-D engineering drawings, engineering design process, safety, tools and fabrication processes and design, and hands-on shop fabrication of semester project.

BAE 203 Introduction to AutoCAD Civil 3D for Environmental & Ecological Engineers 2.
Prerequisite: BAE 200.
Introduction to the use of AutoCAD Civil 3D for Environmental & Ecological Engineering applications. Basic drawing, managing survey data, surfaces, alignments, profiles, grading, pipe networks, plan production, GIS interface, GIS data types and sources, importing data, creation and export of objects in GIS formats. BE majors will be given priority in enrollment.

BAE 204 Introduction to Environmental and Ecological Engineering 2.
Prerequisite: BAE 200 and (BIO 181 or BIO 183); Corequisite: BAE 203 and SSC 200.
Introduction to the principles and applications related to environmental and ecological engineering. Topics include watershed hydrology, nutrient cycling, sources of environmental pollution, and the impact to ecosystems. An overview of different methods employed in these two disciplines to remediate and protect natural resources. Special emphasis on how soil, water, microbial, and plant interactions occur in ecosystems and how they are used to develop treatment technologies.
BAE 302 Transport Phenomena 3.
Prerequisite: (BAE 200, CSC 112, CSC 114 or CSC 116), (CE 215 or MAE 208), MA 341 and MAE 301; Corequisite: CE 382 or MAE 308.
Theory and application of heat and mass transfer in biological, food, and agricultural systems. Topics include fluid flow, conduction, convection, radiation, psychrometrics, and refrigeration.

BAE 305 Biological Engineering Circuits 4.
Prerequisite: MA 242, PY 208.
Fundamentals of analog and digital circuit analysis and design as applied to biological engineering instrumentation systems. Analysis and design of AC and DC circuits using Ohms and Kirchhoff's laws, the node voltage method, Thévenin and Norton's theorem, Laplace Transforms, resistance, capacitance, inductance, operational amplifiers, and frequency response, analog filter design, diode, transistors, biological signal acquisition, binary math and logical operators, digital circuit design, circuit simulation tools and techniques. Laboratory exercises supplement the topics presented in class lectures.

BAE 315 Properties of Biological Engineering Materials 3.
Prerequisite: (BIO 181 or BIO 183), and either (BAE 200, CSC 112, CSC 114 or CSC 116) and (CE 215 or MAE 208) and Corequisites: (MAE 308 or CE 382), and (MAE 314 or CE 313).
Physical properties of biological and non-biological engineering materials, their uniqueness and variability within systems. Relationships between plant, animal, and human tissues, property measurement, and evaluation of dimensional, mechanical, rheological, thermal, electrical, and optical properties.

BAE 322 Introduction to Food Process Engineering 3.
Prerequisite: BAE 302; MAE 308 or CE 382; MAE 301 or CHE 315.
Introductory principles and practices of handling and preserving food products. Coverage includes the design and analysis of handling systems for discrete and continuous flow material handling systems, the selection and specification of automatic controls, food preservation principles and considerations relevant to the design of food handling systems, and the principles and practices of drying and storing grain.

BAE 325 Introductory Geomatics 3.
Prerequisite: Junior standing.
Theory and practice of plane and satellite-based surveying. Includes distance measurement, differential leveling, profile leveling, topographic surveying, and record keeping. Introduction to tapers, levels, total stations, surveying software, the global positioning system, GPS receivers and methods (stand-alone, DGPS, RTK), data collection, data processing, and applications.

BAE 361 Analytical Methods in Engineering Design 3.
Prerequisite: BAE 202, CE 215 or MAE 208, MA 341, Corequisite: MAE 314.
Engineering problem solving through studies of topics in engineering design. Kinematic analysis of linkages, analysis and design/selection of machine structures and power transmission components, including vibration modeling and control in lumped mass mechanical and biomechanical systems.

BAE 371 Fundamentals of Hydrology for Engineers 3.
Prerequisites: (BAE 200 or CSC 112 or CSC 114 or CSC 116) and (BAE 202 or BAE 203); Corequisites: SSC 200 and (CE 382 or MAE 308).
Hydrology and erosion principles. Designing structures and selecting practices to control land runoff, erosion, sediment pollution and flooding.

BAE 376 Watershed Assessment and Water Quality Protection 3.
Prerequisite: MAE 301 or CE 382. Application of methods to describe and protect quality. Identification of water quality problems based on physical, chemical, and biological species and intended use. Water quality sampling equipment, and sample collection strategies and methods. Macroinvertebrate sampling and interpretation. Presentation of water quality data and information. Identification of structural and non-structural best management practices (BMPs) to mitigate degradation of watersheds and ecological systems.

BAE 401 Instrumentation for Biological Systems 3.
Prerequisite: ECE 331.
Basic concepts of instrumentation for monitoring of biological systems. Study of transducers and circuits utilized in biological and agricultural engineering applications. Demonstration of concepts of error, accuracy and precision, linearity and other instrument characteristics by electronic models. Provision of hands-on experience for reinforcing lecture concepts in laboratories. Credit will not be given for both BAE 401 and BAE 501.

BAE 425 Industrial Microbiology and Bioprocessing 3.
Prerequisite: Junior or higher standing in CALS or COE; MB 351.
Introduction to the structure and functions of microbial cells and their cultivation and utilization in bioprocess engineering. Fermentation systems and downstream processing methods. Enzyme kinetics, production and application. Biomanufacturing of fuels, industrial chemicals, pharmaceuticals, food additives and food products such as beer, wine, cheese and yogurt. Microbial biomass production. Introduction to environmental biotechnology including waste water treatment, bioremediation and biomining. Biodeterioration and its control. Product development, regulations and safety. Field trip(s) are an essential educational component of the course and are required. Credit will not be given for both BAE (BBS) 425 and BAE 525.

BAE 435 Precision Agriculture Technology 3.
Prerequisite: Junior standing or Senior standing.
Overview of technology available for implementation of a comprehensive precision agriculture program. Topics include computers, GPS, sensors, mechanized soil sampling, variable rate control system, yield monitors, and postharvest processing controls. Applications of precision agriculture in crop planning, tillage, planting, chemical applications, harvesting and postharvest processing. Credit may not be received for BAE/SSC 435 and BAE/SSC 535.

BAE 442 Systems Approach to Agricultural and Environmental Issues 3.
Prerequisite: ENG 331 or ENG 332 or ENG 333; Senior standing.
Systems approach to complex agricultural and environmental issues and problematic situations including people’s views. Multiple stages of soft systems approach: open inquiry into and description of issues, conceptual modeling, feasibility and implementation of changes. Individual project using systems approach to a complex issue in agriculture or the environment.

BAE 451 Engineering Design I 2.
Prerequisite: (CE 313 or MAE 314), BAE 202, 302, 315, and either (BAE 322, 361, or 371).
Design Concepts of engineering problems; objectives, specifications, manufacturing, prior art and analysis. Oral and written exercises in reverse engineering, national and international standards, quality control, intellectual law and engineering ethics. Team projects from agricultural, bio-processing and environmental engineering. Must be within 36 credit hours of completing the BE degree. Field trips are required. Must be within 36 credit hours of completing the BE degree.
BAE 452 Engineering Design II 2.
Prerequisite: BAE 451.
Continuation of BAE 451; Project analysis, design, scheduling, construction, tests and reports. Teamwork and the function of engineering design in society. Field trips are required. Must be within 36 hours of completing the BE degree.

BAE 462 Machinery Design and Applications 3.
Prerequisite: BAE 361.
Machinery design for effective use of energy and labor in agricultural production. Engine cycles, power transmission, hydraulics, traction, combined stresses, finite element analysis, computer-aided-engineering, and engineering economics. Machinery design of agricultural field equipment and other agricultural machinery systems.

BAE 472 Irrigation and Drainage 3.
Prerequisite: BAE 471.
Design, management and evaluation of irrigation and drainage systems; concepts and processes of system design. Credit will not be given for both BAE 472 and BAE 572.

BAE 473 Introduction to Surface/Water Quality Modeling 3.
Prerequisite: BAE 471.
Concepts in basic hydrologic, erosion and chemical transport used in modeling. Evaluation of typical hydrologic/water quality models on watershed systems. Project examples using state-of-the-art models. Credit will not be given for both BAE 473 and BAE 573.

BAE 474 Principles and Applications of Ecological Engineering 3.
Prerequisites: (MB 351 or PB 321 or PB 360 or SSC 332) and BAE 371.
Governing principles of ecological engineering and the advanced biological, chemical, and physical conditions that determine the design of biological systems. Emphasis on 1) stream and wetland ecosystem restoration and 2) natural treatment systems for groundwater, stormwater, and wastewater such as riparian buffers, bioretention cells, and stormwater wetlands. A class field trip is required during non-scheduled time.

BAE 481 Structures & Environment 3.
Prerequisite: BAE 302; CE 313 or MAE 314.
Principles of environmental control and structural analysis are combined with biological principles for the design of structures. Topics include structural analysis, load estimation, material selection, fasteners, physiological reactions of animals/plants to their environment, applications of heat transfer and psychrometrics in calculating ventilation requirements, heating or cooling loads.

BAE 488 Postharvest Engineering 3.
Prerequisite: BAE 302 or MAE 310.
An introduction to the engineering aspects of the proper postharvest handling of fresh produce. Topics addressed include cleaning, grading, sorting, cooling, storing, packaging, transport, and marketing. Issues relating to food safety will be integrated throughout all the course content. A class field trip is required during non-scheduled time.

BAE 492 External Learning Experience 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes facilities and resources which are external to the campus. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

BAE 493 Special Problems in Biological and Agricultural Engineering 1-6.
Prerequisite: Sophomore standing.
A learning experience in agriculture and life sciences within an academic framework that utilizes campus facilities and resources. Contact and arrangements with prospective employers must be initiated by student and approved by a faculty adviser, the prospective employer, the departmental teaching coordinator and the academic dean prior to the experience.

BAE 495 Special Topics in Biological and Agricultural Engineering 1-3.
Offered as needed for presenting material not normally available in regular BAE departmental courses or for new BAE courses on a trial basis.

BAE 501 Instrumentation for Biological Systems 3.
Prerequisite: ECE 331.
Basic concepts of instrumentation for monitoring biological systems. Study of transducers and circuits utilized in biological and agricultural engineering applications. Demonstration of concepts of error, accuracy and precision, linearity and other instrument characteristics by electronic models. Provision of hands-on experience for reinforcing lecture concepts in laboratories. Credit will not be given for both BAE 401 and BAE 501.

BAE 502 Instrumentation for Hydrologic Applications 3.
Prerequisite: MA 341, BAE 401 or ECE 331, ST 370 or ST 511.
Basic theory of instruments and measurements. Physical parameters of interest, available methods and sensors for assessment. Sensor characteristics. Data loggers and sensor-data logger communications. Data transfer, management, and processing. Emphasis on hydrologic and water quality research applications. Course offered by Distance Education only.

BAE 525 Industrial Microbiology and Bioprocessing 3.
Prerequisite: MB 351.
Introduction to the structure and functions of microbial cells and their cultivation and utilization in bioprocess engineering. Fermentation systems and downstream processing methods. Enzyme kinetics, production and application. Biomanufacturing of fuels, industrial chemicals, pharmaceuticals, food additives and food products such as beer, wine, cheese, and yogurt. Microbial biomass production. Introduction to environmental biotechnology including waste water treatment, bioremediation and biomining. Biodeterioration and its control. Product development, regulations and safety. Graduate standing required. Students cannot obtain credit for both BAE(BBS) 425 and BAE 525.

Prerequisite: Introductory Organic Chemistry or Biochemistry.
This course will introduce fundamental principles and practical applications of biomass-to-renewable energy processes, including anaerobic digestion of organic wastes for biogas and hydrogen production, bioethanol production from starch and lignocellulosic materials, biodiesel production from plant oils, and thermoconversion of biomass and waste materials. Restricted to engineering seniors and graduate standing in COE, CALS, PAMS or CNR.
BAE 535 Precision Agriculture Technology 3.
Prerequisite: Junior standing or Senior standing.
Overview of technology available for implementation of a comprehensive precision agriculture program. Topics include computers, GPS, sensors, mechanized soil sampling, variable rate control system, yield monitors, and postharvest processing controls. Applications of precision agriculture in crop planning, tillage, planting, chemical applications, harvesting and postharvest processing. Credit may not be received for BAE/SSC 435 and BAE/SSC 535.

BAE 536 GIS Applications in Precision Agriculture 1.
Prerequisite: GIS 410 or GIS 510 or BAE 435 or BAE 535.
Exploration of geographic information systems (GIS) and its applications in precision agriculture. Topics will include file structure and formatting, interfacing with precision agriculture equipment, georeferencing maps, merging and clipping farm data, data field calculations, designing management zones, variable rate prescriptions, and basic data analysis.

BAE 560 Aerosol Science and Engineering 3.
Prerequisite: MA 341.
This course is designed for students who have a desire to work in the area of air quality. It will provide students with fundamental knowledge of aerosol properties, behavior and physical principles, and with hands-on experience in applying this knowledge to aerosol/PM measurements and control.

BAE 561 Agricultural Air Quality 3.
Prerequisite: MA 341.
This course will prepare students to identify agricultural air pollutants and their sources, understand the on-farm and off-farm impacts of these pollutants, measure these pollutants, characterize and model the fate of these pollutants, and select and/or design cost-effective remediation measures. This course is restricted to seniors in engineering and MEAS, and graduate students in CALS, PAMS, and CNR.

BAE 572 Irrigation and Drainage 3.
Prerequisite: BAE 471, SSC 200.
Design, management and evaluation of irrigation and drainage systems; concepts and processes of system design.

BAE 573 Introduction to Surface Hydrologic/Water Quality Modeling 3.
Prerequisite: Graduate standing, BAE 471, SSC 200.
Concepts in basic hydrologic, erosion and chemical transport used in modeling. Evaluation of typical hydrologic/water quality models on watersheds systems. Usage of state-of-the-art models in project examples.

BAE 574 DRAINMOD: Theory and Application 3.
Prerequisite: One of the following: BAE 471, BAE 472, BAE 573, BAE 771, or SSC 511.
This course presents the theory of water movement and storage in poorly drained soils and applies the drainage/water management model DRAINMOD to a wide range of problems. Technical issues related to evaluation, design and management of drained soils and to wetland hydrology are analyzed. A series of problem sets provides experience in using the model, and demonstrates how the model may be applied to describe the complex interactions of multiple processeses affecting hydrology of shallow water table soils.

Prerequisite: BAE 471 or CE 383.
The design of structural stormwater Best Management Practices (BMPs) used in the urban and suburban environments is reviewed, including stormwater wetlands, bio-retention areas, sand filters, innovative wet ponds, green roofs, permeable pavement, and reinforced grass swales. The course is application oriented and includes a pair of field trips.

BAE 576 Watershed Monitoring and Assessment 3.
Prerequisite: [AES323 (SSC323/BAE323) or BAE471 or FOR429 (NR420) or CE586, and ST311 or ST361 or ST511.
Water measurement and structure sizing. Identification of water quality problems and water quality variable selection. Monitoring design, water quality sampling equipment, and sample collection and analysis. Statistical analysis and presentation of water quality data.

BAE 578 Agricultural Waste Management 3.
Prerequisite: Biology or Engineering background.
This course covers principles of managing, handling, treating and applying animal and poultry manures and organic byproducts from an engineering perspective. Topics include waste characterization, descriptions of systems and technology, land application principles, preparation of waste management plans, biochemical/biological processes, and potential impacts to the environment. Assignments include homework, quizzes, projects, and discussions that emphasize problem solving and analysis.

BAE 579 Stream Channel Assessment and Restoration 3.
Prerequisite: BAE 471 or CE 383.
Applications of fluvial geomorphology principles for assessment and restoration of natural stream channels. Topics include stream processes related to channel formation, bankfull channel dimensions, stream classification, morphological assessments, stream stability, restoration options for unstable channels, natural channel design approaches, and stream morphology monitoring. Field exercises include channel surveying using total stations, stream classification, and stability assessment. Field trips to stream restoration projects are included.

BAE 580 Introduction to Land and Water Engineering 3.
Prerequisite: MA 241.
This distance course introduces students to concepts of the hydrologic cycle, water quality, precipitation, evapotranspiration, infiltration, watershed delineation, surface runoff and open channel flow. Students will apply these concepts to an engineering design problem. This course is designed for non-engineering distance graduate students and lifelong education students and students from engineering disciplines outside of BAE. It will not substitute for BAE 471. The course is only open to students with senior standing or higher.

BAE 581 Open Channel Hydraulics for Natural Systems 3.
Prerequisite: CE 382 or equivalent. CE 381 recommended.
Theory and applications of hydraulics to open channels with an emphasis on natural streams and rivers. Course will introduce and develop principles of flow regimes (subcritical/critical/supercritical), and types (uniform flow, gradually varied and rapidly varied flow). Application will include hydraulics of flow measuring devices, step-backwater analysis and rating curve development, and flood studies using hydraulic models. A lab-scale flume will be used to illustrate concepts. Laptops will be used in class to learn and apply HEC-RAS (water surface profiles model). CE 382 or equivalent required. CE 381 recommended.
BAE 582 Risk and Failure Assessment of Stream Restoration Structures 1.
Prerequisite: CE 382 or MAE 308 or equivalent.
This course defines uncertainty and risk pertaining to stream restoration structures and identifies and quantifies sources of such. Students will review various in-stream structures and, using an example study of the rock cross vane as a guide, will investigate a structure of their choice applying the concepts of risk and uncertainty. Modules include: Introduction to structures and definitions; Types and modes of failure; Uncertainty in Stream Restoration Design; Probability of failures, cost of failures; and Failure modes and effects.

BAE 583 Ecohydraulics and River Corridor Function 1.
Prerequisite: CE 382 or MAE 308 or equivalent.
This course provides an ecological perspective of lotic systems and introduces students to ecological processes that structure river corridors. This course defines hydraulic, hydrologic, chemical, sedimentary, and biotic influences on an aquatic ecosystem. The five modules define components of aquatic ecosystems and their interactions, and explore ecological implications of engineered designs and cause-effect relationships from the watershed scale down to individual organisms. This course assumes students have a working knowledge of general biological and physical principles related to fluvial ecosystems.

BAE 584 Introduction to Fluvial Geomorphology 3.
Prerequisite: BAE 471 or BAE 580.
This distance course provides an introduction to applied fluvial geomorphology as it relates to natural physical stream processes. Students will learn about watershed hydrology, stream gage data analysis, bankfull stage identification, hydraulic geometry relationships, stream channel assessment and classification, stream stability and channel evolution.

BAE 585 Integrating AutoCAD Civil 3D and GIS 1.
Basics of the AutoCAD Civil 3D user interface, drawing tools, importing and handling of survey data, generation of surfaces, GIS data sources and formats. Accessing and using GIS data for Civil 3D design purposes. Creation of GIS objects within Civil 3D and exporting to GIS formats.

BAE 590 Special Problems 1-6.
Prerequisite: Senior standing or Graduate standing in Biological and Agricultural Engineering.
Selection of a subject by each student on which to do research and write a technical report on the results. The individual may choose a subject pertaining to his or her particular interest in any area of study in biological and agricultural engineering.

BAE 591 Master's Research Methods I 1.
This is the first in a series of research methods courses for MS students majoring in Biological and Agricultural Engineering. Students will develop research questions to be answered by their thesis project and produce a literature review focusing on those questions. Students will also observe formal seminar presentations, providing critiques and participating in discussions of proper seminar delivery. This course is restricted to MS students majoring in BAE.

BAE 592 Master's Research Methods II 1.
Prerequisite: BAE 591.
This is the second in a series of research methods courses for MS students majoring in Biological and Agricultural Engineering. Students will develop a research proposal for their thesis work and will present the proposal in both a practice and a final seminar. This course is restricted to MS students majoring in BAE.

BAE 610 Special Topics 1-6.
Prerequisite: Graduate standing.
A study of topics in the special fields of interest of graduate students under the direction of the graduate faculty.

BAE 620 Special Problems 1-6.
Prerequisite: Senior standing or Graduate standing in Biological and Agricultural Engineering.
Selection of a subject by each student on which to do research and write a technical report on the results. The individual may choose a subject pertaining to his or her particular interest in any area of study in biological and agricultural engineering.

BAE 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

BAE 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

BAE 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

BAE 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their thesis.

BAE 771 Theory Of Drainage--Saturated Flow 3.
Prerequisite: MA 301.
Discussion of physical concepts and properties of fluids and porous media in relation to soil-water movement. Derivation and discussion of the fundamental laws and equations governing saturated flow in porous media. Analysis of mathematical solutions of steady-state and transient flow equations to determine their applicability to drainage problems. Consideration of analogs and models of particular drainage problems.

BAE 785 Food Rheology 3.
Prerequisite: FS 231 or MAE 314.
Principles and methods for measuring rheological properties. Theories of elastic, viscous, viscoelastic and viscoplastic behavior and relationships to food texture and commodity damage during harvest, handling and processing. Influence of time, composition and processing.

BAE 790 Special Topics 1-6.
Special topics in BAE.
BAE 791 Doctoral Research Methods I
This is the first in a series of research methods courses for PhD students majoring in Biological and Agricultural Engineering. Students will develop PhD level research questions to be answered in their dissertation project and will produce a PhD level literature review on those questions. Students will also observe seminars, providing critiques and discussions of proper seminar delivery. This course is restricted to PhD students majoring in BAE.

BAE 792 Doctoral Research Methods II
Prerequisite: BAE 791.
This is the second in a series of research methods for PhD students majoring in Biological and Agricultural Engineering. Students will develop a research proposal appropriate for their dissertation project and will present the proposal in both a practice and final seminar. The course is restricted to PhD students majoring in BAE.

BAE 801 Seminar
Prerequisite: Graduate standing in BAE.
Elaboration of subject areas, techniques and methods peculiar to professional interest through presentations of personal and published works; opportunity for students to present and critically defend ideas, concepts and inferences. Discussions to point up analytical solutions and analogies between problems in biological and agricultural engineering and other technologies, and to present relationship of biological and agricultural engineering to socio-economic enterprise.

BAE 810 Special Topics
A study of topics in the special fields of interest of graduate students under the direction of the graduate faculty.

BAE 820 Special Problems
Prerequisite: Senior standing or Graduate standing in Biological and Agricultural Engineering.
Selection of a subject by each student on which to do research and write a technical report on the results. The individual may choose a subject pertaining to his or her particular interest in any area of study in biological and agricultural engineering.

BAE 885 Doctoral Supervised Teaching
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

BAE 890 Doctoral Preliminary Examination
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

BAE 893 Doctoral Supervised Research
Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

BAE 895 Doctoral Dissertation Research
Prerequisite: Doctoral student.
Dissertation research.

BAE 896 Summer Dissertation Research
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

BAE 899 Doctoral Dissertation Preparation
Prerequisite: Doctoral student.
For students who have completed all credit hours, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertation.

Joint Department of Biomedical Engineering
Biomedical engineering is a profession that develops and applies engineering knowledge and experience to solve problems in biology and medicine and to enhance health care. Biomedical engineers are professionally trained to combine the rigor of medical and biological studies with the power of engineering analysis and design. People become biomedical engineers to be of service to others, to enjoy the excitement of understanding living systems, and to use state-of-the-art science and technology to solve the complex problems of medical care. The emphasis in biomedical engineering is on finding solutions by researching, testing, and applying medical, biological, chemical, electrical, and materials information. Biomedical engineers are unique individuals who make contributions to health care that are both satisfying to themselves and beneficial to others.

Opportunities
Biomedical engineers are employed by hospitals, pharmaceutical companies, medical device and testing companies, government agencies, universities, and medical schools. With so many areas of specialization within the field, graduates are encouraged to further their education by attending graduate or professional school after graduation from NC State. Graduates from this program have attended graduate programs in biomedical engineering, physical therapy, mechanical engineering, industrial engineering, microbiology, virology, public health, and sports physiology, among others, at many different institutions. Graduates who have taken additional courses to satisfy entrance requirements have also been accepted by medical, dental and pharmacy schools.

Program Educational Objectives
The Biomedical Engineering Program is preparing its graduates to:
- Pursue advanced studies in biomedical engineering or in other disciplines.
- Meet or exceed the expectations of their employers in the biomedical engineering workplace, or in other professional careers.
- Continue to learn and adapt to evolving technology and changing career opportunities.

Curriculum
The department offers the Bachelor of Science in Biomedical Engineering.

Novel aspects of the undergraduate program include capstone engineering design projects that use a design control process based on the FDA’s Quality System Regulations, opportunities to apply for industrial internships after completing junior-level engineering courses, continuous and caring faculty advising, student involvement in program evaluation and improvements, and engineering specialization in one of three areas: Biomechanics, Biomaterials or Bioinstrumentation. Computers are used throughout the program. Graduates will be prepared
for professional employment in research, design, engineering and the life sciences. First year students interested in this curriculum should enroll in the Engineering First Year program and select BME as their intention. The Biomedical Engineering Program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

Specific curriculum requirements are available on online (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php).

Scholarships

Students in this degree program are eligible for scholarships from the College of Engineering.

Facilities

Teaching facilities are located in Engineering Building III. These facilities include state-of-the-art classroom and laboratory facilities, study space, and convenient access to computing resources. Extensive Internet and video-conferencing capabilities are deployed to facilitate convenient faculty-student contact.

Research facilities include advanced materials testing instrumentation, imaging resources, rapid prototyping facilities, biomedical instrumentation, and clinical resources.

Minor in Tissue Engineering

The Minor in Tissue Engineering is intended to provide graduates with the knowledge base and practical skills that will prepare them to quickly contribute to research and manufacturing of devices designed for repair and replacement of tissues and organs. Interested students should contact the BME Student Services Coordinator for information and application materials.

BME - Biomedical Engineering Courses

BME 201 Computer Methods in Biomedical Engineering 3.
Prerequisite: BME matriculated students.
Students develop computer-based problem solving techniques using Excel and MATLAB to solve introductory problems in Biomedical Engineering. Emphasis is on developing solution algorithms, implementing these with spreadsheets and computer programming, and presenting results in a clear and concise manner. Students registered for BME 201 who fail to matriculate into BME will be dropped from the course.

BME 203 Introduction to the Materials Science of Biomaterials 3.
Prerequisite: C- or better in CH 101, CH 102 and PY 205.
This course introduces fundamental physical principles governing the structure, processing, properties and performance of metallic, ceramic and polymeric materials. Relationships are developed defining how mechanical, physical and chemical properties are controlled by microstructure and chemistry. Material failure modes are developed with an emphasis on biocompatibility and the applications/performance of materials in the human body. Basic aspects of material biocompatibility are presented, leading into studies of the current and future applications of biomaterials.

BME 204 Biomedical Measurements 3.
Prerequisite: BME Majors.
This course will introduce students to modern topics in biomedical engineering and areas of emphasis in the biomedical engineering curriculum through the study and use of biomedical measurement tools. The course will include a lecture and a laboratory component.

BME 210 Biomedical Electronics 4.
Prerequisite: MA 242, PY 208. For BME Majors only.
Fundamentals of analog and digital circuit analysis and design as applied to biomedical instrumentation and measurement of biological potentials. Passive circuit components, node and mesh analysis, transient behavior, operational amplifiers, frequency response, analog filter design, diode, transistors, biological signal acquisition, binary math and logical operators, digital circuit design, circuit simulation tools and techniques. Laboratory exercises supplement the topics presented in class lectures.

BME 252 Biomedical Engineering Design and Manufacturing I 3.
Prerequisite: BME Majors.
Students will learn the basic tools of design such as solid modeling by means of web-based tutorials and a series of small CAD project assignments. Students will learn to use current software for design, analysis, and computer-aided manufacturing (CAM). Students will also be introduced to modern manufacturing through the transition from CAD (Computer-Aided Design) to CAM using modern rapid manufacturing equipment to carry out one small, well-defined design and manufacturing project.

BME 301 Human Physiology for Engineers I 3.
Prerequisite: BME 201 and either ZO 160 or BIO 183, BME Majors, Corequisite: BME 311.
This course includes a quantitative approach to human physiology from the biomedical engineering perspective with an emphasis on neural, sensory, muscle, and cardiac physiology. Autonomic neural and somatic motor control will be discussed. Engineering applications, including neural stimulators, functional imaging, cochlear implants, artificial noses, vestibular implants, visual implants, artificial larynges, pacemakers and defibrillators will be discussed. Assignments include computer-based exercises using MATLAB.

BME 302 Human Physiology for Engineers II 3.
Prerequisite: BME 301. For BME Majors only.
This course explores a quantitative approach to human physiology from the biomedical engineering perspective with an emphasis on systems physiology described using mechanical properties. Topics include the physiological and mechanical behavior of the blood vessels, lungs, kidney muscles and larynx. In the course lab exercises, students investigate mechanical properties of fluids, electrolyte exchange in dialysis, spirometry and blood pressure measurement among other topics. The course culminates with the design of a novel laboratory experiment.

BME 311 Linear Systems in Biomedical Engineering 3.
Prerequisite: BME 201 and (ECE 331 or BME 210). Corequisite: BME 301 and MA 341. For BME Majors only.
BME 312 Analog and Digital Circuits Laboratory 1. 
Prerequisite: ECE 331, BME Majors.
Laboratory in analog and digital circuit analysis. Electrical safety; Exercises in resistor networks, capacitors and inductors, steady-state and dynamic circuit behavior, active circuits, amplifiers, logic gates, combinatorial and sequential circuits, elementary digital system design, A/D conversion, biomedical applications.

BME 342 Analytical and Experimental Methods for Biomedical Engineers 3.
Prerequisite: BME 201; MAE 208 or CE 215; MAE 314 or CE 313; MA 341.
Experimental and analytic tools are developed and used to solve problems in biomedical engineering. Techniques include kinematic analysis, closed form and finite element analysis of stresses and strains in a body, and failure analysis. Transducers necessary for experimental analysis and testing are introduced. Students learn advanced software packages such as the finite element program ANSYS and the dynamic analysis program ADAMS to assist in their analyses.

BME 352 Biomedical Engineering Design and Manufacturing II 2.
Prerequisite: BME 252; BME majors.
Students will be required to continue their use of the tools learned in Biomedical Design and Manufacturing I in the context of modern design practices and manufacturing processes. The organizational and project management tools of modern design will be introduced, and a technical discussion of a modern manufacturing technology will be introduced each week.

BME 362 Biomaterials Characterization 3.
Prerequisite: (CH 220 or 221 or 225) and (BME 203 or MSE 200 or MSE 201).
Introductory laboratory experience focused on integrating engineering and biological principles by exploring key topics in biomaterials. Topics include evaluation and interpretation of experimental results, modeling and testing of tissues and cells, and biomaterial/tissue, cell interactions. BME and MSE Majors only; Juniors and Seniors.

BME 412 Biomedical Signal Processing 3.
Prerequisite: BME 311, ST 370.
Fundamentals of continuous- and discrete-time signal processing as applied to problems in biomedical instrumentation. Properties of biomedical signals and instruments. Descriptions of random noise and signal processes. Interactions between random biomedical signals and systems. Wiener filtering. Sampling theory. Discrete-time signal analysis. Applications of Z-transform and discrete Fourier transform. Digital filter design methods for biomedical instruments. BME or MS or PHD; credit not allowed for both BME 412 and BME 512.

BME 422 Fundamentals of Biomedical Instrumentation 3.
Prerequisite: BME 210 or BME 312.
Fundamentals of biomedical instrument design and implementation. Sensing mechanisms, sensor microfabrication methods, sensor interfacing circuits, analog-to-digital conversion, biosignal capture and storage, embedded microprocessors, data compression methods, system integration and prototyping. Laboratory exercises using LabVIEW and MATLAB, supplement the topics presented in class lectures. Students build a sensor using cleanroom facilities in the BME department as part of a semester-long design project.

BME 425 Bioelectricity 3.
Prerequisite: BME 302 or (ZO 421 and a course in electrical circuits). Quantitative analysis of excitable membranes and their signals, including plasma membrane characteristics, origin of electrical membrane potentials, action potentials, voltage clamp experiments, the Hodgkin-Huxley equations, propagation, subthreshold stimuli, extracellular fields, membrane biophysics, and electrophysiology of the heart. Design and development of an electrocardiogram analysis system.

BME 441 Biomechanics 3.
Prerequisite: ZO 160 or BIO 183; BME 342; ST 370.
Students study human body kinematics, force analysis of joints, and the structure and composition of biological materials. Emphasis is placed on the measurement of mechanical properties and the development and understanding of models of biological material mechanical behavior.

BME 451 Biomedical Engineering Senior Design I 3.
Prerequisites: BME 302, BME 352, and completion of two of the suggested BME electives for their area of emphasis; BME majors; Corequisites: ENG 331 or ENG 333.
This course encompasses the project proposal and design concepts, including: individual pre-proposals, team proposals, project planning, scheduling, needs assessment, product requirements, competitive landscape and patent review, business risks, design concepts, and phase reviews. BME majors only.

BME 452 Biomedical Engineering Senior Design II 3.
Prerequisite: BME 451, BME Majors.
This course is a continuation of BME 451 moving from proposal and concepts into manufacturing, prototyping, and testing. The deliverables in this course include: detailed manufacturing specifications, biomaterials review, supplier identification, product feasibility, issues tracking, manufacturing planning, bill of materials, product risks, qualification protocol, IP disclosure, process validation planning, regulatory review, design history file audit, lessons learned, and phase reviews.

BME 466 Polymeric Biomaterials Engineering 3.
Prerequisite: PY 208 and (TE 200 or CH 220 or CH 221 or CH 225) and (MAE 206 or CE 214).
In-depth study of the engineering design of biomedical polymers and implants. Polymeric biomaterials, including polymer synthesis and structure, polymer properties as related to designing orthopedic and vascular grafts. Designing textile products as biomaterials including surface modification and characterization techniques. Biore sorbable polymers.

BME 467 Mechanics of Tissues & Implants Requirements 3.
Prerequisite: (ZO 160 or BIO 183) and (MAE 314 or CE 313).
Application of engineering and biological principles to understand the structure and performance of tendons, ligaments, skin, and bone; bone mechanics; viscoelasticity of soft biological tissues; models of soft biological tissues; mechanics of skeletal muscle; and tissue-derived devices as well as interfaces between native tissues and synthetic devices.

BME 480 Biomedical Microcontroller Applications 3.
Prerequisite: BME 422. BME Majors only.
Overview of microcontroller-based systems, including applications, architecture, number systems, and languages. Students gain experience using a PIC-based microcontroller to input information from a user and output information using LEDs and LCD displays. Student will learn capabilities of the PIC through in class exercises and weekly programming assignments. Both assembly language and PIC-based C are used. Students develop a PIC-based heart rate monitor and work in pairs on a BME-related project of their choice.
BME 481 Human Factors Engineering and Quality Management Systems for Engineers 3.
Prerequisite: BME 451.
This course is designed for biomedical engineering students who plan to work in industry. The course covers industry-related topics including teamwork, problem resolution, manufacturing and specifications, gap analysis, and root cause of analysis. Design topics including design of experiment, human factors, and standards and regulations relevant to the biomedical engineering profession are also covered. Lean and six sigma are taught with an option to test for a six sigma green belt. If a six sigma green belt is completed in the following semester.

BME 483 Tissue Engineering Technologies 2.
Prerequisite: BIT 466/566 or permission of instructor.
In this half-semester laboratory module, students will gain practical experience with two key elements of tissue engineering: tissue building and angiogenesis. Using advanced culture techniques, students will construct a complex living tissue that closely resembles its natural counterpart, then assess its ability to support ingrowth of capillaries (angiogenesis). The effects of different biomaterials and angiogenic factors will be evaluated. The engineered tissue will be embedded, sectioned, and stained for histological analysis.

BME 484 Tissue Engineering Fundamentals 3.
Prerequisite: (ZO 160 or BIO 183), CH 221, and (MAE 301 or MSE 301 or CHE 315 or TE 303).
This course covers essential concepts of organ and tissue design and engineering using living components, including cell-based systems and cells/tissues in combination with biomaterials, synthetic materials, and/or devices. Topics include: In vivo tissue structure and function; isolation and culture of primary cells and stem cells; Principles of cellular differentiation; Mass transport processes in cell culture systems; Design, production, and seeding of scaffolds for 3D culture; Design of bioreactors to support high-density cell growth; State-of-the-art engineered tissue systems; Clinical translation; and Ethics.

BME 495 Special Topics in Biomedical Engineering 1-4.
Offered as needed for presenting material not normally available in regular BME Department courses or for new BME courses on a trial basis.

BME 498 Undergraduate Research in Biomedical Engineering 3.
Opportunity for hands-on faculty mentored research project in biomedical engineering. Course may be a stand-alone project completed in one semester/summer or serve as part of a two-semester project. Approved plan of work required with significant independent research culminating in a final paper and presentation at the NC State Undergraduate Research Symposium or other appropriate venue. Students must identify an advisor from within the BME faculty with whom to work on a regular basis. The advisor must approve the student prior to the student registering for the course. The BME Undergraduate Coordinator must approve the use of the course as a restricted elective for the BME degree. Departmental Approval Required. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

BME 512 Biomedical Signal Processing 3.
Prerequisite: BME 412 and ST 370 or ST 371.
Fundamentals of continuous- and discrete-time signal processing as applied to problems in biomedical instrumentation. Properties of biomedical signals and instruments. Descriptions of random noise and signal processes. Interactions between random biomedical signals and systems. Wiener filtering. Sampling theory. Discrete-time signal analysis. Applications of Z-transform and discrete Fourier transform. Digital filter design methods for biomedical instruments. BME or graduate standing only; credit is not allowed for both BME 412 and BME 512.

BME 522 Medical Instrumentation 3.
Fundamentals of medical instrumentation systems, sensors, and biomedical signal processing. Example instruments for cardiovascular and respiratory assessment. Clinical laboratory measurements, therapeutic and prosthetic devices, and electrical safety requirements. Students should have background in electronics design using operational amplifiers.

BME 525 Bioelectricity 3.
Prerequisite: BME 302 or ZO 421 and a course in electrical circuits, Senior standing or Graduate standing.
Quantitative analysis of excitable membranes and their signals, including plasma membrane characteristics, origin of electrical membrane potentials, action potentials, voltage clamp experiments, and the Hodgkin-Huxley equations, propagation, subthreshold stimuli, extracellular fields, membrane biophysics, and electrophysiology of the heart. Design and development of an electrocardiogram analysis system. Credit not given for both BME 485 and BME 585.

BME 536 Digital Control Systems 3.
Prerequisite: ECE 435 and Graduate Standing in Engineering.
Discrete system dynamics, sampled-data systems, mathematical representations of analog/digital and digital/analog conversions, open- and -closed-loop systems, input-output relationships, state-space and stability analyses, time and frequency domain analysis with emphasis on time-domain. Design and implementation of digital controllers. Design project including hardware implementation.

BME 540 Nanobiotechnology Processing, Characterization, and Applications 3.
Prerequisite: BIO 183 and PY 212.
Topics at the interface of nanoscale science and biotechnology will be discussed. Chemical, physical, and biological properties of nanostructured biomaterials, devices, and systems. Lectures and problem-based learning will be used to present development of nanobiotechnology-enhanced materials and devices.

BME 541 Biomechanics 3.
Prerequisite: ZO 160 or BIO 183, BME 342, ST 370.
Students study human body kinematics, force analysis of joints, and the structure and composition of biological materials. Emphasis is placed on the measurement of mechanical properties and the development and understanding of models of biological material. Credit is not allowed for both BME 441 and BME 541.

BME 543 Cardiovascular Biomechanics 3.
Engineering principles are applied to the cardiovascular system. Anatomy of cardiovascular system; form and function of blood and blood vessels. Electric analogs; continuum mechanics with derivation of equations of motion; and constitutive models of soft tissue mechanics, with attention to normal, diseased, and adaptive processes. Programming project required.
Prerequisite: BME 412, ST 370 or ST 371, and PY 208.
Physical and mathematical foundations of ultrasonic, optical, and magnetic resonance imaging systems in application to medical diagnostics. Each imaging modality is examined on a case-by-case basis, highlighting the following critical system characteristics: (1) underlying physics of the imaging system, including the physical mechanisms of data generation and acquisition; (2) image creation, and (3) basic processing methods of high relevance, such as noise reduction.

BME 551 Medical Device Design 3.
Student multidisciplinary teams work with local medical professionals to define specific medical device concepts for implementation. Medical specialty immersion with clinical departments at local medical centers; design input based on stakeholder-needs assessment market analysis and intellectual property review; new medical devices with broad markets; design output and device specification; product feasibility and risk assessment; design for medical device manufacturing.

BME 552 Medical Device Design II 3.
Student groups build and test prototypes of devices designed in the first course of this series. Good manufacturing practices; process validation; FDA quality system regulations; design verification and validation; regulatory approval planning; and intellectual property protection. Students will work with local patent attorneys and/or agents to draft a patent application. The final prototypes will be evaluated by clinicians for potential use with patients.

BME 560 Medical Imaging: X-ray, CT, and Nuclear Medicine Systems 3.
Prerequisite: BME 311, ST 370 or ST 371, and PY 208.

BME 566 Polymeric Biomaterials Engineering 3.
Prerequisite: PY 208 and (TE 200 or CH 220 or CH 221 or CH 225) and (MAE 206 or CE 214).
In-depth study of the engineering design of biomedical polymers and implants. Polymeric biomaterials, including polymer synthesis and structure, polymer properties as related to designing orthopedic and vascular grafts. Designing textile products as biomaterials including surface modification and characterization techniques. Biodegradable polymers. Credit for TE 466 and TE 566 is not allowed.

BME 583 Tissue Engineering Technologies 2.
Prerequisite: BIT 466/566 or permission of instructor.
In this half-semester laboratory module, students will gain practical experience with two key elements of tissue engineering: the construction of a complex living tissue that closely resembles its natural counterpart, and the assessment of the angiogenic potential of the engineered tissue. The effects of different biomaterials and angiogenic factors will be evaluated.

BME 584 Tissue Engineering Fundamentals 3.
Prerequisite: BIO 183 and (CH 221 or CH 225) and (MAE 301 or MSE 301 or CHE 315 or TE 303).
Essential concepts of organ and tissue design and engineering using living components, including cell-based systems and cells/tissues in combination with biomaterials, synthetic materials and/or devices. In vivo tissue structure and function; isolation and culture of primary cells and stem cells; principles of cellular differentiation; mass transport processes in cell culture systems; design, production and seeding of scaffolds for 3D culture; design of bioreactors to support high-density cell growth; state-of-the-art engineered and tissue systems; clinical translation; and ethics.

BME 590 Special Topics in Biomedical Engineering 1-6.
Prerequisite: Senior or Graduate standing in Engineering or physical or biological sciences or textiles.
A study of topics in the special fields under the direction of the graduate faculty.

BME 620 Special Problems in Biomedical Engineering 1-6.
Prerequisite: Graduate standing in BME.
Selection of a subject by each student on which to do research and write a technical report on the results. Subject may pertain to the student's particular interest in any area of study in biomedical engineering.

BME 650 Internship in Biomedical Engineering 1.
Prerequisite: Graduate standing in BME.
Students obtain professional experience through advanced engineering work in industrial and commercial settings under joint supervision of a member of the graduate faculty and an outside professional.

BME 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

BME 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
The student will be supervised by the faculty. For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their thesis.

BME 790 Advanced Special Topics in Biomedical Engineering 1-6.
Prerequisite: Graduate standing in engineering, physical, or biological sciences or textiles.
A study of topics in advanced or emerging special areas under the direction of the graduate faculty. Experimental doctoral level courses.
Chemical engineers create, develop, and manage processes that effect molecular change, including changes in chemical composition, physical state, structure, and/or purity. The end goal is technologies and products that are useful to society.

Since in-depth knowledge of chemistry is an important tool most chemical engineers use in their work, in some situations there’s an overlap between the professional interests of chemical engineers and their nearest scientific relatives, chemists. An important difference between the two is that most chemists are concerned with how a molecule can be synthesized and what series of steps might achieve the highest yield of the compound, while most chemical engineers focus on applying chemistry, other sciences, and technical knowledge to solve “real-world” problems. Chemists usually work in a laboratory environment, while most chemical engineers work on “large-scale” projects outside the laboratory environment. It has been stated that chemists typically ask “why” questions and chemical engineers ask “how” and “what for” questions.

Example projects for chemical engineers are: preventing pollutants from entering the air and water; using fermentation to produce penicillin and many other pharmaceuticals; converting crude oil into fuel and valuable components that can be processed further into products such as cosmetics, synthetic fibers, dyes, and plastics; manufacturing microchips, paper, paints, textiles, and all manner of chemicals; and designing a process or plant to accomplish these tasks.

Opportunities

Careers in chemical engineering are sometimes exciting, always demanding, and ultimately provide a sense of accomplishment and achievement. Graduates find employment in sub-disciplines such as production, technical service, sales, management and administration; research and development; and consulting and teaching. Students desiring careers in teaching, research, or consulting are encouraged to continue their education and pursue a graduate degree (consult the Graduate Catalog). The undergraduate curriculum also provides strong preparation for graduate study in a wide range of professional specialties, and chemical engineering graduates often pursue careers in the medical sciences, business management, and law.

Curriculum

The successful practice of chemical engineering requires a broad, diversified preparation which promotes original and disciplined thought, enthusiastic inquiry and, ultimately, original and constructive accomplishment. The knowledge base chemical engineers develop in organic, physical, and inorganic chemistry is similar to the level of expertise that’s developed by chemistry majors. Mathematics, physical sciences, and distributed humanities courses are also valuable areas of study.

The undergraduate curriculum emphasizes the scientific, engineering, and economic principles involved in the design and operation of chemical processes. Design methodologies are practiced in all core chemical and biomolecular engineering courses, and this integrated design experience culminates with the senior design sequence, CHE 450 and CHE 451.

In order to gain in-depth understanding in a specialized technical area, students can elect to pursue studies in one of several chemical engineering curriculum concentrations. In all cases, the degree earned is the Bachelor of Science in Chemical Engineering, and graduates from all the concentrations are fully qualified to work in any chemical engineering environment. The curriculum concentrations are:

Biomanufacturing Sciences Concentration in Chemical Engineering

The Biomanufacturing Sciences Concentration provides students with the knowledge base and hands-on skills that prepare them to quickly contribute to a biomanufacturing operation. Pharmaceuticals, vaccines, enzymes, and bio-fuels are example products. Students completing this concentration also receive a Minor in Biomanufacturing.

Biomolecular Concentration in Chemical Engineering

The Biomolecular Concentration emphasizes hands-on laboratory molecular biology skills that are highly relevant to pharmaceutical,
medical, engineering, and agricultural fields. Students completing this concentration also receive a Minor in Biotechnology.

**Nanoscience Concentration in Chemical Engineering**

The Nanoscience Concentration develops students' understanding of the scientific and technological principles associated with the design and manufacture of patterns and devices with features and advanced functionality on the nanometer scale.

**Sustainable Engineering, Energy, and the Environment Concentration in Chemical Engineering**

The Sustainable Engineering, Energy, and Environment Concentration connects chemical engineering concepts with global grand challenges in the generation of clean and affordable energy, as well as sustainable and environmentally responsible engineering practices.

**Honors Program in Chemical Engineering**

The Honors Program allows students to gain a deeper understanding of chemical engineering principles than would be acquired by completing the standard CHE curriculum. Admission to the program requires students to have earned a minimum overall GPA of 3.5 and a minimum GPA of 3.5 in CHE 205 and CHE 225. An honors thesis based on a supervised research experience and completion of at least one semester of faculty-supervised research are required for completion of the Honors Program.

**Program Educational Objectives**

Given the foundation of knowledge, skills, experiences, and the discipline of hard work and critical thinking provided by the curriculum, our students are expected to achieve one or more of the following within five years of graduation:

1. Excel in engineering practice and/or entrepreneurship in various industries, including petrochemical, biochemical, pharmaceutical, fine chemical, environmental, semi-conductor, pulp and paper, advanced materials, and health care industries.

2. Advance professionally in positions of increasing leadership responsibilities in their chosen career fields.

3. Earn an advanced degree or certification leading to a career in academia, law, medicine, or research and development.

4. Exhibit professionalism, a habit of continual learning, interest in contemporary issues of importance to society, appreciation of the impact of engineering development in society, and ethical responsibility particularly in the context of environmental protection, process/product safety, financial accountability, and community well-being.

The Chemical Engineering Program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. Curriculum requirements are available on the Department of Chemical & Biomolecular Engineering website (http://www.che.ncsu.edu/academics/curriculum.html). Information for prospective students (http://www.che.ncsu.edu/information/prospective-undergrads.html) is also available on the site.

**CHE - Chemical Engineering Courses**

**CHE 205 Chemical Process Principles 4.**

Prerequisite: Grade of C or better in MA 241, PY 205, and (CH 201 or CH 221 or CH 225).

Engineering methods of treating material balances, stoichiometry, phase equilibrium calculations, thermophysics, thermochemistry and the first law of thermodynamics. Introduction to equation solving packages and spreadsheets for solving problems related to chemical engineering calculations.

**CHE 225 Introduction to Chemical Engineering Analysis 3.**

Prerequisite: C- or better in CHE 205 and MA 242; Corequisite: MA 341.

Introduction of mathematical and computational tools for analyzing chemical engineering problems. Sequential modular and equation-based simulation of steady-state chemical processes using advanced spreadsheet methods and multivariate root-finding algorithms. Material and energy balances on transient processes and their solution using analytical and numerical methods. Introduction to microscopic material and energy balances using the "shell balance" approach to develop the governing differential equations. Solutions to steady-state boundary value problems in heat conduction and Fickian diffusion.

**CHE 311 Transport Processes I 3.**

Prerequisite: Grade of C- or better in both CHE 225 and MA 341.

Fundamental aspects of momentum and heat transfer, and the use of these fundamentals in solving problems in transport operations.

**CHE 312 Transport Processes II 3.**

Prerequisite: Grade of C- or better in CHE 311.

Fundamental aspects of mass transfer and the use of these basic principles in solving problems in transport operations.

**CHE 315 Chemical Process Thermodynamics 3.**

Prerequisite: Grade of C- or better in CHE 225.

Laws of thermodynamics and their application to chemical engineering problems, both in theory and in practice. Criteria of equilibrium in physical and chemical changes. Behavior of real fluids, including mixtures.

**CHE 316 Thermodynamics of Chemical and Phase Equilibria 3.**

Prerequisite: Grade of C- or better in CHE 315.

Systematic study of chemical reaction equilibria and phase equilibria. Use of fugacity, activity and chemical potential concepts for predicting the effect of such variables as temperature, pressure on equilibrium compositions. Methods for measuring and estimating thermodynamic properties important to equilibrium calculation in real systems.

**CHE 330 Chemical Engineering Lab I 4.**

Prerequisite: CHE 311.

Laboratory experiments in unit operations of heat transfer and fluid flow. Laboratory safety, technical report writing, statistics, experimental design, error analysis and instrumentation.

**CHE 331 Chemical Engineering Lab II 2.**

Prerequisite: CHE 312, CHE 330.

Laboratory experiments in mass transfer and reaction kinetics. Experimental planning, technical report writing and oral presentations are emphasized.

**CHE 395 Professional Development Seminar 1.**

Professional development and topics of current interest in chemical engineering.
Prerequisite: (MA 341 and TE 205) or CHE 312.
Dynamic analysis and continuous control of chemical and material engineering processes. Process modeling; stability analysis, design and selection of control schemes. Solution of differential equations using Laplace transform techniques.

CHE 446 Design and Analysis of Chemical Reactors 3.
Prerequisite: CHE 316.
Characterization and measurement of the rates of homogeneous and heterogeneous reactions. Design and analysis of chemical reactors. Credit cannot be received for both CHE 446 and CHE 546.

CHE 447 Bioreactor Engineering 3.
Prerequisite: BCH 451, CHE 312, CHE 316.
Design and analysis of chemical reactors with emphasis on enzyme-catalyzed reactions, microbial fermentation, and animal cell culture. Empirical kinetics of enzymatic reactions and cell growth. Design and scale-up of suspension bioreactors. Immobilized-enzyme and immobilized-cell bioreactors, including the classical Thiele reaction-diffusion analysis.

CHE 450 Chemical Engineering Design I 3.
Prerequisite: CHE 312.

CHE 451 Chemical Engineering Design II 3.
Prerequisite: CHE 450, and (CHE 446 or CHE 447).
Chemical process design and optimization. The interplay of economic and technical factors in process development, site selection, project design, and production management. Comprehensive design problems.

CHE 460 Nano-Electronic Materials 3.
Prerequisite: CHE 311 and CHE 315.
Plasma and thermal inorganic chemical processes in semiconductor device fabrication. Thin films and electronic devices. Kinetics and chemical transport in electronic materials synthesis, modification and etching. Plasma physics and chemistry, reactors and process diagnostics. Credit for both CHE 460 and CHE 760 is not allowed.

CHE 461 Polymer Sciences and Technology 3.
Prerequisite: (CH 223 or CH 227) and CHE 316.
Concepts and techniques for polymerization of macromolecules. Structure, properties, and applications of commercially important polymers.

Prerequisite: MA 241 and PY 208 and (CH 223 or CH 227).
Concepts of nanotechnology are applied in the synthesis, characterization, recognition and application of biomaterials on the nanoscale. Emphasis will be given to hands-on experience with nanostructured biomaterials; students will also be familiarized with the potential impact of these materials on different aspects of society and potential hazards associated with their preparation and application.

CHE 463 Fermentation of Recombinant Microorganisms 2.
Prerequisite: CH 223 or CH 227; Corequisite: (BIT 410 or BCH 452 or MB 352 or BEC 363).
Introduction to fermentation and protein chemistry. Theory behind laboratory techniques and overview of industrial scale expression systems. Laboratory sessions involve use of microbial expression vectors, fermentation systems, and large-scale purification of recombinant protein. Half semester course, first part.

CHE 465 Colloidal and Nanoscale Engineering 3.
Prerequisite: C. or better in CHE 311 and CHE 315.
The first part of this course will present the fundamentals of nanoscale colloidal processes, including interactions and self-assembly of particles, surfactants and biomolecules. The applications of these fundamentals to the nanotechnology and engineering on the nanoscale will be discussed. The nanoscience has led to the development of many new technologies with relevance to chemical engineering, including microfluidics, lab-on-a-chip, bioarrays and bioassays. These emerging technologies will be presented and discussed in the second half of this course.

CHE 467 Polymer Rheology 3.
Prerequisite: CHE 311.
Theoretical principles and experimental techniques associated with flow and deformation of polymer systems. Systems include: meffs and solutions, suspension, gels, emulsions, and thixotropic materials.

CHE 468 Conventional and Emerging Nanomanufacturing Techniques and Their Applications in Nanosystems 3.
Prerequisite: E 304.
Conventional and emerging nano-manufacturing techniques and their applications in the fabrication of various structures and devices. Review of techniques for patterning, deposition, and etching of thin films including emerging techniques such as an imprint and soft lithography and other unconventional techniques. Electronic and mechanical properties of 0 to 3-D nanostructures and their applications in nano-electronics, MEMS/NEMS devices, sensing, energy harvesting, storage, flexible electronics and nano-medicine. Credit for both ECE/CHE 468 and ECE/CHE 568 is not allowed.

CHE 488 Animal Cell Culture Engineering 2.
Design and operation of animal cell culture bioreactors for therapeutic protein production. Topics include: batch, fed-batch and perfusion bioreactors. agitation and aeration for mixing and oxygen mass transfer, bioreactor monitoring and control, optimizing bioreactor performance, and single-use (disposal) bioreactors. This is a half-semester course.

CHE 495 Honors Thesis Preparation 1.
Prerequisite: CHE 497, Senior standing.
Development and presentation of Honors Thesis in Chemical Engineering and discussion of graduate school selection and preparation.

CHE 497 Chemical Engineering Projects I 3.
Prerequisite: Junior standing.
Introduction to chemical engineering research through experimental, theoretical and literature studies. Oral and written presentation of reports.

CHE 498 Chemical Engineering Projects II 1-3.
Prerequisite: Junior standing.
Projects in research, design or development in various areas of chemical engineering.
CHE 525 Process System Analysis and Control 3.
Prerequisite: CHE 312.
Dynamic analysis and continuous control of chemical engineering processes. Process modeling; stability analysis, design and selection of control schemes. Solution of differential equations using Laplace transform techniques. Credit for both CHE 425 and CHE 525 is not allowed.

CHE 543 Polymer Science and Technology 3.
Prerequisite: CHE 223, CHE 316.
Concepts and techniques for polymerization of macromolecules. Structure, properties, and applications of commercially important polymers.

CHE 546 Design and Analysis of Chemical Reactors 3.
Prerequisite: CHE 316.
Characterization and measurement of rates of homogeneous and heterogeneous reactions. Design and analysis of chemical reactors. Credit for both CHE 446 and CHE 546 is not allowed.

CHE 551 Biochemical Engineering 3.
Prerequisite: CHE 312 and (CHE 446 or CHE 447).
Enzyme and microbial kinetics and reactor designs for processes involving enzymes and single and mixed cultures. Samples drawn from full range of applications: food processing, single cell proteins, tissue culture and vaccines, monoclonal antibodies, recombinant DNA and hybridomas, artificial organs, biological waste treatment and environmental processes.

CHE 560 Chemical Processing Of Electronic Materials 3.
Prerequisite: CHE 312 and CHE 446.
Plasma and thermal inorganic chemical processes in semiconductor device fabrication. Thin films and electronic devices. Kinetics and chemical transport in electronic materials synthesis, modification and etching. Plasma physics and chemistry, reactors and process diagnostics. Credit for both CHE 460 and CHE 560 is not allowed.

CHE 563 Fermentation of Recombinant Microorganisms 2.
Introduction to fermentation and protein chemistry. Theory behind laboratory techniques and overview of industrial scale expression systems. Laboratory session involve use of microbial expression vectors, fermentation systems, and large-scale purification of recombinant protein. Half semester course, first part.

CHE 568 Conventional and Emerging Nanomanufacturing Techniques and Their Applications in Nanosystems 3.
Prerequisite: Graduate Standing or Permission of the Instructor.
Conventional and emerging nano-manufacturing techniques and their applications in the fabrication of various structures and devices. Review of techniques for patterning, deposition, and etching of thin films including emerging techniques such as an imprint and soft lithography and other unconventional techniques. Electronic and mechanical properties of 0 to 3-D nanostructures and their applications in nano-electronics, MEMS/ NEMS devices, sensing, energy harvesting, storage, flexible electronics and nano-medicine. Credit for both ECE/CHE 468 and ECE/CHE 568 is not allowed.

CHE 575 Advances in Pollution Prevention: Environmental Management 3.
Prerequisite: PY 208, MA 341.
Design of industrial processes which minimize or eliminate wastes. Regulations and the corporate organization of current pollution prevention efforts. Current pollution prevention research. Product life cycle analysis and the application to design of more efficient processes. Credit will not be given for CHE 475 and CHE 575.

CHE 577 Advanced Biomanufacturing and Biocatalysis 3.
Prerequisite: Graduate standing in engineering or life-science graduate program.
Overview of biomanufacturing using microorganisms (bacteria, yeast, fungi), eukaryotic cells (hybridomas, insect, plant, CHO) and recombinant enzymes focusing on methods used in industry. Course will emphasize process design for optimization of heterologous protein expression, metabolic/cell line engineering, metabolomics, protein engineering to alter enzymes and antibodies. Pathway engineering strategies include developing microbes to produce new therapeutic compounds or overproduce primary metabolites, antibiotics, biotherapeutics, therapeutic enzymes, diagnostics, recombinant vaccines, and biopharmaceuticals. Utilization of immobilized biocatalysts, and microbial kinetics are covered.

CHE 596 Special Topics in Chemical Engineering 1-3.
Prerequisite: Graduate standing.
Independent study of some phase of chemical engineering or related field.

CHE 601 Seminar 1.
Weekly seminars on topics of current interest given by resident faculty members, graduate students and visiting lecturers.

CHE 610 Special Topics 1-6.

CHE 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

CHE 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

CHE 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

CHE 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

CHE 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

CHE 697 Advanced Chemical Engineering Projects 1-12.
Prerequisite: Graduate standing in CHE.
Independent study of some phase of chemical engineering or related field.
CHE 699 Master’s Thesis Preparation 1-9.
Prerequisite: Master’s student.
For students who have completed all credit hour requirements and full-time enrollment for the master’s degree and are writing and defending their thesis.

CHE 701 Introduction to Chemical Engineering Research 2.
Introduction to graduate research guidelines and practices. Topics include research ethics, electronic literature searching, research proposal structure, technical writing styles, research problem identification, advisor expectations, intellectual property and patents, laboratory notebooks, proposal creation and oral presentation. Graduate standing in chemical engineering or permission of instructor.

CHE 702 Chemical Engineering Research Proposition 2.
Prerequisite: CHE 701.
Preparation of a professional quality chemical engineering research proposal. Includes selecting a novel research topic, drafting and finalizing the proposal according to NSF formats, and orally presenting and defending the proposal to a faculty advisory committee. Ethics in proposal preparation.

CHE 711 Chemical Engineering Process Modeling 3.
Prerequisite: (CHE 312, MA 301 or MA 341) or equivalent.
Applications of methods of mathematical analysis to formulation and solution of problems in transport phenomena, process dynamics and chemical reaction engineering.

CHE 713 Thermodynamics I 3.
Prerequisite: CHE 316 or equivalent.
In-depth coverage of chemical engineering thermodynamics principles. Applications of non-ideal fluid-phase chemical potentials to problems in phase and chemical reaction equilibria. Relations of molecular structure and intermolecular forces to macroscopic thermodynamic properties.

CHE 715 Transport Phenomena 3.
Prerequisite: CHE 311 or equivalent.
A theoretical unified study of transport of momentum, energy and matter. Introduction to diffusional operations including coupled heat and mass transfer in light of the theory.

CHE 717 Chemical Reaction Engineering 3.
Prerequisite: CHE 446 or CHE 447 or equivalent.
Rates and mechanisms of homogeneous and heterogeneous reactions. Design, analysis and scale-up of batch and continuous chemical reactors.

CHE 718 Advanced Chemical Reaction Engineering 3.
Prerequisite: CHE 717.
Topics relating to design, analysis and operation of homogeneous and heterogeneous chemical reactors.

CHE 719 Electrochemical Systems Analysis 3.
Prerequisite: CHE 715, 717.
Electrochemical thermodynamics, electrochemical kinetics and catalysis, coupled charge and material transport in an electric field and electrophoretic effects. Design and analysis of electrochemical reactors. Survey of electrochemical industry.

CHE 752 Separation Processes For Biological Materials 3.
Prerequisite: CHE 721 or CHE 551.
Definition and engineering analysis of major bioseparation techniques useful in product isolation and purification. Solid-liquid separation, crystallization, filtration, extraction, chromatography, membrane processes, distillation, drying, combined operations and process economics.

CHE 761 Polymer Blends and Alloys 3.
Prerequisite: CHE 316 or MAT 301.
Thermodynamics, morphological characteristics and properties of multiphase polymer systems composed of homopolymers or copolymers. Interfacial characteristics and modification of multicomponent polymer blends through emulsification and reactive blending. Microphase ordering in block copolymers, and emerging technologies employing these nanostructured materials. Conformational properties and dynamics of macromolecules constrained near an interface.

CHE 775 Multi-Scale Modeling of Matter 3.
Prerequisite: Graduate level thermodynamics, and differential and integral calculus.
Current methods for modeling liquids, soft matter (polymers, surfactant solutions, colloids, liquid crystals, etc), nano-structured materials (nanoparticles, nano-composites, nano-porous materials, etc.), biomolecular systems, and reacting systems at the electronic, atomistic, meso-scale and continuum levels. Graduate level thermodynamics and differential and integral calculus required.

CHE 796 Special Topics In Chemical Engineering 1-6.
Prerequisite: Graduate standing.
Directed reading of chemical engineering literature, introduction to research methodology, and lectures and seminar discussion on topics which vary from term to term.

CHE 797 Chemical Engineering Projects 1-3.
Prerequisite: Graduate standing.
Independent study of some phase of chemical engineering or related field.

CHE 798 Advanced Chemical Engineering Projects 1-3.
Prerequisite: Graduate standing in CHE.
Independent study of some phase of chemical engineering or related field.

CHE 801 Seminar 1.
Weekly seminars on topics of current interest given by resident faculty members, graduate students and visiting lecturers.

CHE 810 Special Topics 1-6.

CHE 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

CHE 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

CHE 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.
Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Department of Civil, Construction, and Environmental Engineering

The Department of Civil, Construction, and Environmental Engineering offers three undergraduate degree programs concerned with the improvement and care of both public and private infrastructure and natural environments. The degree programs address the planning, design, construction, operation, and maintenance of buildings, dams, bridges, harbors, power facilities, pollution control facilities, and water supply and transportation systems. The curricula provide academic preparation for students considering careers in civil, construction, or environmental engineering.

The department offers undergraduate degree programs leading to the Bachelor of Science in Civil Engineering, the Bachelor of Science in Construction Engineering, and the Bachelor of Science in Environmental Engineering. All three programs are accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. Graduation from an ABET accredited engineering degree program is the first step toward licensure as a Professional Engineer. All three programs also prepare students for graduate education.

Opportunities

Society will always need constructed facilities to live, work, and sustain their lives and environment, and civil, construction, and environmental engineers will always be needed to plan, design, and construct these facilities. Civil, construction, and environmental engineering comprise such diversified fields that graduates have a wide choice in types and locations of employment. Jobs range from federal, state, or municipal agencies to a variety of manufacturing and processing industries, consulting firms or construction companies. The work may be performed partially or wholly in an office or in the field and may be located in a small community, a big city, an industrial center, or even in a foreign country. Careers in either professional practice or teaching and research are common for many graduates who complete advanced degrees.

Facilities

The Department of Civil, Construction, and Environmental Engineering is well-equipped with computer laboratories that provide both individual computers and collaborative learning spaces. The College of Engineering at NC State maintains a state-of-the-art computing environment known as Project Eos, a large-scale distributed system that consists of hundreds of computers across the college on both main and Centennial Campuses. Eos is a client-server network running a location-independent file system that delivers a comprehensive suite of engineering applications to both Windows and Linux computers, and to student-owned computers through remote access and the Virtual Computing Lab. Project Eos is operated by a professional support group that provides consultation and basic system and software services.

The department’s other laboratories contain a variety of special equipment for instruction and research in structures, mechanics, soils, construction materials, construction engineering, hydraulics and environmental engineering. Environmental engineering research facilities include over 5000 sq. ft. of laboratory space devoted to environmental chemistry, microbiology, process engineering, and hydraulics. Students have the opportunity to conduct research on water and wastewater treatment, ground water contaminant transport and site remediation, refuse decomposition, anaerobic microbiology, analytical chemistry, and applied molecular microbial ecology.

The Constructed Facilities Laboratory (CFL) on Centennial Campus features unique facilities devoted to all aspects of constructed infrastructure research and assessment. Facilities include: specially designed reaction floors and walls for testing large-scale structural systems to failure, such as full scale bridge girders up to 100 feet long and beam-column systems subject to earthquake loading; and large pits up to 20 feet deep for testing granular and compacted soils for foundation strength. State-of-the-art facilities like these heighten students’ learning experiences by exposing them to the forefront of technological advances.

Curricula

The Department of Civil, Construction, and Environmental Engineering at NC State is home to the educational programs in Civil Engineering, Construction Engineering, and Environmental Engineering. A single department head and management structure direct the educational missions of these three related fields. Each curriculum is designed to prepare the graduate for a career in the respective field and for lifelong learning through graduate education, continuing education and/or self-study.

Civil Engineering Degree

The Civil Engineering curriculum provides academic discipline in mathematics, the physical sciences, the humanities and social sciences, and the technical aspects of civil engineering. After introductory exposure to several of the professional areas such as environmental and water resources, geotechnical, structures, transportation and construction engineering, the student builds additional depth in several of these specialties. Students learn to include principles of sustainability in civil infrastructure designs and understand basic concepts in project management, business, public policy, leadership, and professional ethics.

Specific curriculum requirements are available on the Office of Undergraduate Courses and Curricula website, https://oucc.dasa.ncsu.edu/engineering-COE

Educational Objectives in Civil Engineering

Within a few years of graduation alumni of the Civil Engineering program will:

1. Function successfully in a professional environment by utilizing and enhancing their problem-solving and communication skills;
2. Continue learning through graduate or other professional education and obtaining licensure where appropriate;
3. Function in team-oriented, multidisciplinary open-ended engineering activities considering the societal and economic impacts of engineering decisions, and the professional and ethical responsibilities of civil engineers.
4. Promote organizational success with consideration of cost and time management while practicing and promoting ethical behavior and stewardship of a sustainable environment.
Construction Engineering Degree

The Construction Engineering curriculum is designed for the student interested in the planning, design, direction, and management of construction projects. It includes the core course requirements in mathematics, the physical sciences, and the humanities and social sciences. After exposure to engineering fundamentals and engineering design of facilities, the curriculum provides a series of specialty courses in construction engineering related to the analysis, design, and management of the construction process. The General Construction Concentration is designed for students pursuing careers in the building, residential, highway, and heavy construction industry. The Mechanical Construction Concentration is designed for students pursuing a career emphasizing construction of mechanical systems for buildings, residences, and industrial facilities.

Specific curriculum requirements are available on the Office of Undergraduate Courses and Curriculums website, https://oucc.dasa.ncsu.edu/engineering-COE

Educational Objectives in Construction Engineering

Within a few years of graduation alumni of the Construction Engineering program will:

1. Function successfully in careers emphasizing application of construction engineering and management principles with the ability to solve a broad set of engineering problems in construction.
2. Practice construction engineering including the design and management of the construction process to achieve needed safety, quality, durability, sustainability, and economic objectives.
3. Function in team-oriented, multi-disciplinary, open-ended engineering activities considering the societal and economic impacts of construction, and the professional and ethical responsibilities of the construction engineer.
4. Engage in life-long learning through graduate study, self study, or continuing education; pursue licensure; provide mentoring to those under their supervision and influence; and provide leadership in their employment organizations, industry associations and professional societies.

Environmental Engineering Degree

The Environmental Engineering curriculum is designed for students interested in environmental sustainability. The curriculum provides students with the foundations in science, mathematics, and engineering required to observe, understand, model, and analyze environmental systems as well as to design critical components of society’s infrastructure. Upon graduation, students are prepared to work in such areas as water treatment, water resources engineering and management, air pollution control, solid waste management, and energy management. The curriculum emphasizes the interdisciplinary nature of environmental engineering with courses in both engineering and life sciences, including specialized courses on energy and climate, pollution control, and waste management.

Specific curriculum requirements are available on the Office of Undergraduate Courses and Curriculums website, https://oucc.dasa.ncsu.edu/engineering-COE

Educational Objectives in Environmental Engineering

The educational objectives of the environmental engineering program at North Carolina State University are to prepare its graduates to:

Within a few years of graduation alumni of the Environmental Engineering program will:

1. Function successfully in a professional environment by utilizing and enhancing their problem-solving and communication skills.
2. Continue learning through graduate or other professional education and obtaining licensure where appropriate.
3. Promote organizational success with consideration of cost and time management, and demonstrate global and societal awareness, while practicing and promoting ethical behavior and stewardship of a sustainable environment.

Post-Baccalaureate Study

If a student is interested in more specialization in one particular area, advanced level education is available leading to the Master of Civil Engineering, Master of Environmental Engineering, Master of Science in Civil Engineering, Master of Science in Environmental Engineering, or the Doctor of Philosophy in Civil Engineering. The MCE and MENE degrees are also available through the Engineering Online program. Specialization areas include coastal engineering, computing and systems, construction engineering, construction materials, environmental and water resources engineering, geotechnical engineering, structural engineering and mechanics, and transportation engineering. With judicious choices of electives during the B.S. program, a student may also prepare for additional studies in law, business administration, business management, or city and regional planning

Student Activities and Scholarships

Student chapters of the American Society of Civil Engineers, American Concrete Institute, Associated General Contractors, National Association of Home Builders, Institute of Transportation Engineers, and Air and Waste Management Association undertake projects to further student exposure to the profession. Guest speakers representing various aspects of engineering practice speak at regular lunch meetings. Students who accumulate outstanding academic records may be considered for membership in the Chi Epsilon Honorary Society. Through the generosity of industry and program alumni, many scholarships are available on a competitive basis to students in addition to university, college, and need-based financial aid.

CE - Civil Engineering Courses

Prerequisite: GPA greater than or equal to 2.5; Grade of C or better in BY 205; Grade of C or better in MA 241; Co-requisite: MA 242.
Basic force concepts and equilibrium analysis; distributed forces; centroids; moments of inertia; application to structural elements. Credit will not be given for both CE 214 and MAE 206.

Prerequisite: Minimum GPA => 2.5; Grade of C- or better in CE 214, and MA 242.
Kinematics and kinetics of particles; mass flow; vibrations; plane kinematics and kinetics of rigid bodies; selected topics from three-dimensional rigid body dynamics, and orbital motion.
CE 263 Introduction to Construction Engineering 3.
Co-requisite: CE 214.
Introduction to fundamental concepts in Construction Engineering and Management including principles of project management; profit, risk, and profitability; estimating, including WBS, productivities, costs, durations, and fundamentals of equipment selection and utilization; scheduling using both CPM and Linear scheduling techniques; contract methods and control principles; professional and legal aspects of construction; fundamentals of leadership; and basic construction safety.

CE 297 Current Topics in Civil Engineering 1-4.
Presentation of material not normally available in regular course offerings, or offering of new courses on a trial basis. Credits and content determined by faculty member in consultation with Department Head.

CE 301 Civil Engineering Surveying and Geomatics 3.
Prerequisite: CON, CE, or ENE Majors only.
Plane surveying, topographical surveying, horizontal and vertical curves, topographic surveys, construction surveys, earthwork, route surveying. Data collection using sight-based, laser-based, and global positioning system equipment. Methods for analysis and presentation of surveying and positioning data, including dealing with errors. Use and applications of GPS information. Limited to CEM, CE, ENE majors. Credit will not be given for both BAE 325 and CE 301.

CE 305 Traffic Engineering 3.
Prerequisite: CE or CON Majors and Corequisite: ST 370.
Integrated approach to planning, design, and operation of transportation systems with an emphasis on highway and street systems. Roadway design, traffic operations and performance, and control systems.

CE 313 Mechanics of Solids 3.
Prerequisite: Minimum GPA =/> 2.5, Grade of C- or better in CE 214, and MA 242.
Elementary analysis of deformable solids subjected to force systems. Concepts of stress and strain; one, two and three-dimensional stress-strain relationships for the linear elastic solid. Statically determinate and indeterminate axial force, torsion and bending members. Stress transformations, pressure vessels, combined loadings. Introduction to column buckling.

CE 324 Structural Behavior Measurement 1.
Prerequisite: Grade of C- or better in CE 313.

CE 325 Structural Analysis I 3.
Prerequisite: CSC 111; Grade of C- or better in CE 313.
Analysis of determinate and indeterminate bars, trusses, beams and frames using the matrix displacement method. Qualitative deflected shapes and shear and bending moment diagrams. Computer implementation of analysis procedures using MATLAB and commercial structural analysis software.

CE 327 Reinforced Concrete Design 3.
Prerequisite: Grade of C- or better in CE 313; CE 332.
Behavior, strength, and design of reinforced concrete members subjected to moment, shear, and axial forces. Introduction to the design of reinforced concrete structures.

CE 332 Materials of Construction 3.
Prerequisite: MSE 200 and Junior standing in CE or CON.
 Manufacture and properties of mineral and bituminous cements and mineral aggregates. Mechanical properties and durability of portland cement concrete, bituminous mixtures, masonry units, timber products, and miscellaneous construction materials. Materials testing.

CE 339 Civil Engineering Systems 3.
Prerequisite: CSC 111 and (MA 341 or MA 305).
A broad perspective, systematic approach to civil planning, analysis, evaluation and design for large scale projects in construction, structures, transportation, water resources and other civil engineering areas.

Prerequisite: C- or better in CE 313, Corequisite: CE 382.
Description, identification, and engineering classification of soils. The basic principles and mechanics of flow of water through soils, deformation and strength of soils, and the processes of consolidation and compaction. Effective stress concepts, stress and settlement analyses, and evaluation of shear strength. Methods of analysis and geotechnical engineering design concepts.

CE 356 Construction Equipment and Methods 3.
Prerequisite: CE 263 Co-requisite: ST 370.
Study of construction operations as dynamic production processes. Utilization of equipment and other resources to achieve highest levels of productivity, safety, and quality. Covers a wide range of traditional and state-of-the-art construction methods.

CE 367 Mechanical and Electrical Systems in Buildings 3.
Prerequisite: CE 382.
Introduction to mechanical and electrical systems in building construction. Includes HVAC, lighting and electrical systems, focusing on design concepts, equipment application and design of the construction process for modern building systems.

CE 373 Fundamentals of Environmental Engineering 3.
Corequisite: CHE 205 or CE 382.
Concepts of sustainability and green engineering; energy and climate; overview of contaminants in water, air and terrestrial environments; introduction to water and wastewater treatment, air pollution control, and solid waste management.

CE 378 Environmental Chemistry and Microbiology 4.
Prerequisite: Junior standing in Environmental Engineering, MEA 323, and C- or better in CE 373 and Corequisite: ST 370.
Principles of Environmental Chemistry and Microbiology, experimental techniques for assessing water and air quality; sampling; statistical interpretation of data.

CE 381 Hydraulics Systems Measurements Lab 1.
Corequisite: CE 382.
Introduction to experimental techniques for the analysis of hydraulic systems; measurement of viscosity, fluid pressures, velocity distributions, flow rates; investigations into the friction, momentum transfer, and turbulence on fluid flow.

CE 382 Hydraulics 3.
Prerequisite: CE 214; Corequisite: MA 341 or MAE 305 or ST 370.
Fluid properties; mass, energy and momentum conservation laws; dimensional analysis and modeling; laminar and turbulent flows; surface and form resistance; flow in pipes and open channels; elementary hydrodynamics; fluid measurements; characteristics of hydraulic machines. Credit will not be given for both CE 382 and MAE 308.
analyse and design simple, but complete concrete bridge structures. At the conclusion of the course, students will be able to design, and foundations. A series of three bridges will be designed of bridge analysis and design including conceptual design, superstructure, AASHTO-LRFD bridge specifications, flat slab bridge design, computational methods for assessing the feasibility and relative economic value of alternatives.

CE 400 Transportation Engineering Project 3.
Prerequisite: CE 390, C- or better in CE 305, and one of the following courses: CE 401, 402, 403, or 413. Integrated team approach to design of major transportation engineering projects. Professional topics in transportation engineering practice.

CE 401 Transportation Systems Engineering 3.
Prerequisite: C- or better in CE 305. Multi-modal transportation systems; railroads, airports, highways, and other modes. Planning, analysis, and design. Fundamental concepts; supply, demand, flows, impacts, and network optimization.

CE 402 Traffic Operations 3.
Prerequisite: C- or better in CE 305. Highway capacity; traffic control systems; intelligent vehicle/highway systems; and other advanced topics. Credit for both CE 402 and CE 502 is not allowed.

CE 403 Highway Design 3.
Prerequisite: C- or better in CE 305. Corridor selection; highway alignment; design of roadsides, intersections, and interchanges. Completion of research paper for students taking course for graduate credit. Credit will not be given for both CE 403 and CE 503.

CE 413 Principles of Pavement Design 3.
Prerequisite: CE 332, and Corequisite: CE 342. Basic principles of analysis, design and performance of highway and airport pavements with critical evaluation of current design and maintenance strategies.

CE 420 Structural Engineering Project 3.
Prerequisites: C or better in each of the following: CE 325, CE 327, and CE 426; Corequisite: CE 390. Planning, analysis and design of complete structural systems composed of steel and reinforced concrete. Professional topics in structural engineering practice.

CE 421 Structural Engineering Senior Project - Bridge Design 3.
Prerequisites: C or better in each of the following: CE 325, CE 327, and CE 426; Corequisite: CE 390. This structural engineering senior project course covers the fundamentals of bridge analysis and design including conceptual design, superstructure analysis, AASHTO-LRFD bridge specifications, flat slab bridge design, pre-stressed concrete bridge design, strut and tie modeling, column design, and foundations. A series of three bridges will be designed including a cable stay or suspension pedestrian bridge, flat slab bridge, and girder bridge. At the conclusion of the course, students will be able to analyze and design simple, but complete concrete bridge structures.
Prerequisites: CE 263 and CE 365.
Overview of the construction industry; life cycle of construction projects, work breakdown structure, activity cost and time estimation, computerized planning and scheduling methods, resource leveling, time-cost tradeoff; computerized cost estimating, bidding and negotiation strategies; and cost/schedule control systems.

CE 464 Legal Aspects of Contracting 3.
Prerequisite: CE 463; Corequisite: CE 365.
Legal aspects of contract documents, drawings and specifications; owner-engineer-constructor relationships and responsibilities; bids and contract performance; Labor laws; governmental administrative and regulatory agencies; torts; business organizations; ethics and professionalism.

CE 466 Building Construction Engineering 3.
Corequisite: CE 327.
Construction processes for buildings and other structures including codes and standards, structural and architectural components and systems, form work and bracing design, erection and assembly methods.

CE 468 Construction Engineering Laboratory 1.
Prerequisite: CE 332, Corequisite: CE 327 or CE 426.
Measurements with and calibration of measurement instruments used in construction engineering field tests for quality and safety of the construction process. Interpretation of ANSI, ASTM, ACI and AISC specifications and standards. Credit for both CE 468 and CE 568 is not allowed.

CE 469 Construction Engineering Project 3.
Prerequisite: CE 463 Co-requisite: CE 464.
Capstone course involving integrated team approach in the design of the construction process, utilizing computerized tools for cost estimation, planning, scheduling, process design, and management of two construction projects. Each student also selects an individual project. Lecture topics include: ethics, professionalism, marketing, bid presentations, business planning, finance, and other appropriate topics by guest speakers from industry.

CE 476 Air Pollution Control 3.
Prerequisite: CE 373, CE 390, MAE 301 and Corequisite: ST 370 or CHE 450 (CHE majors).
Introduction to air pollution control fundamentals and design. Fundamentals include the physics, chemistry and thermodynamics of pollutant formation, prevention and control. Design will include gas treatment, process modification, and feedstock modification. Pollutants to be addressed include sulfur dioxide, nitrogen oxides, particulate matter, volatile organic compounds, hydrocarbons, and air toxics. Credit for both CE 476 and CE 576 will not be given.

CE 477 Principles of Solid Waste Engineering 3.
Prerequisite: CE 373, CE 390, CE 382, Corequisite: CE 342.
Solid waste management including generation, storage, transportation, processing, land disposal and regulation. Processing alternatives including incineration and composting. Integration of policy alternatives with evaluation of engineering decisions.

CE 478 Energy and Climate 3.
Prerequisite: CE 390.
Interdisciplinary analysis of energy technology, natural resources, and the impact on anthropogenic climate change. Topics include basic climate science, energetics of natural and human systems, energy in fossil-fueled civilization, the impact of greenhouse gas emissions on climate, and technology and public policy options for addressing the climate challenge. The course is quantitative with a strong emphasis on engineering and science.

CE 479 Air Quality 3.
Prerequisite: CE 373, CE 382; or CHE 311(CHE Majors); or MEA 421 (MEA Majors). Co-requisite: ST 370; ST 380 (MEA Majors).
Introduction to: risk assessment, health effects, and regulation of air pollutants; air pollution statistics; estimation of emissions; air quality meteorology; dispersion modeling for non-reactive pollutants; chemistry and models for tropospheric ozone formation; aqueous-phase chemistry, including the "acid rain: problem; integrated assessment of air quality problems; and the fundamentals and practical aspects of commonly used air quality models. Credit is allowed only for one of CE/MEA 479 or CE/ MEA 579.

CE 480 Water Resources Engineering Project 3.
Corequisite: CE 390; Prerequisite: Grade of C- or better in CE 382 and CE 383.
Engineering design of selected projects in water resources engineering involving interactions with other scientific and engineering disciplines. Discussion of ethical conduct and professional engineering practice. Projects will include site work, storm drainage, water supply, water transmission and water-quality issues.

CE 481 Environmental Engineering Project 3.
Prerequisite: CE 378, 383, 390, Corequisite: CE 484 and two of: CE 476, 477, 479, 488.
Engineering design of selected projects in environmental engineering involving interactions with other scientific and engineering disciplines. Discussion of ethical conduct and professional engineering practice.

Prerequisite: CE 373, CE 382.
Elements of the design of water supply and wastewater disposal systems.

CE 487 Introduction to Coastal and Ocean Engineering 3.
Prerequisite: Senior standing and CE 382.
Introduction to the analysis of civil engineering projects in the ocean and along the coastline. Basic wave mechanics, tides, and ocean dynamics as applied to the understanding of coastal erosion control and other marine problems. An optional two-day field trip to the North Carolina Outer Banks at a nominal student expense is a regular feature of the course.

CE 488 Water Resources Engineering 3.
Prerequisite: CE 339 or equivalent, Corequisite: CE 383.
Extension of the concepts of fluid mechanics and hydraulics to applications in water supply, water transmission, water distribution networks and open channels to include water-supply reservoirs, pump and pipe selection, determinate and indeterminatepipe networks, and analysis of open channels with apportuences.

CE 493 Independent Study in Civil Engineering 1-4.
Independent study of a topic in Civil Engineering. Topic and mode of study determined by faculty member(s) and student(s). Individualized/Independent Study and Research courses require a "Course Agreement for Students Enrolled in Non-Standard Courses" be completed by the student and faculty member prior to registration by the department.
CE 497 Current Topics in Civil Engineering 1-4.
Presentation of material not normally available in regular course offerings or offering of new courses on a trial basis. Credits and content determined by faculty member in consultation with the Department Head.

CE 498 Special Problems in Civil Engineering 1-4.
Prerequisite: Senior standing.
Directed reading in the literature of civil engineering, introduction to research methodology, seminar discussion dealing with special civil engineering topics of current interest.

CE 501 Transportation Systems Engineering 3.
Prerequisite: CE 305. Credit for both CE 401 and CE 501 is not allowed.
Planning and analysis of multi-modal transportation systems including railroads, airports, highways and other modes. Supply, demand, flows, impacts and network optimization. Completion of term papers and projects for students taking course for graduate credit.

CE 502 Traffic Operations 3.
Prerequisite: C- or better in CE 305.
Highway capacity; traffic control systems; intelligent vehicle/highway systems; and other advanced topics. Credit for both CE 402 and CE 5042 is not allowed.

CE 503 Highway Design 3.
Prerequisite: C- or better in CE 305.
Corridor selection; highway alignment; design of roadsides, intersections and interchanges. Completion of research paper for students taking course for graduate credit. Credit will not be given for both CE 403 and CE 503.

CE 504 Airport Planning and Design 3.
Prerequisite: C- or better in CE 305.
Analysis, planning and design of air transportation facilities.

CE 506 Transportation Engineering Data Collection and Analysis 3.
Prerequisite: CE 305, ST 370.
Broad range of transportation engineering data collection and analysis applications encompassing the modes of highway, transit and pedestrian travel and the contexts of system planning, design and operation. Proposal preparation with primary focus on methodology and work plan development for addressing important research and practice questions.

CE 509 Highway Safety 3.
Prerequisite: CE 305, Corequisite: ST 370 or equivalent.
Methods to reduce collisions and injuries on highways. Identifying promising locations, choosing appropriate countermeasures, and evaluating past projects. Understanding the institutional context and establishing appropriate highway design standards.

CE 515 Advanced Strength of Materials 3.
Prerequisite: CE 313 or MAE 314.
Stresses and strains at a point; rosette analysis; torsion and unsymmetrical bending of open and closed sections; nonlinear and curved beams; stress concentration; beams on elastic foundations; shear deformation of beams; classical plasticity; fracture mechanics.

CE 522 Theory and Design Of Prestressed Concrete 3.
Prerequisite: CE 327.
Principles and concepts of design in prestressed concrete including elastic and ultimate strength analyses for flexure, shear, torsion, bond and deflection. Principles of concordancy and linear transformation for indeterminate prestressed structures. Application of pre-stressing to tanks and shells.

CE 523 Theory and Behavior Of Steel Structures 3.
Prerequisite: CE 426.
Theory and behavior of steel structures leading to the development of design requirements contained in current specifications; flexural, torsional and flexural-torsional buckling of columns; plastic analysis of beams and frames; lateral-torsional buckling of beams; stability and strength of flat plates; beam-columns.

CE 524 Analysis and Design Of Masonry Structures 3.
Prerequisite: CE 327.
Theory and design of masonry arches, culverts, dams, foundations and masonry walls subjected to lateral loads.

CE 525 Structural Analysis II 3.
Prerequisite: C- or better in CE 325.
Analysis of beam, 2D and 3D truss, 2D and 3D frame and plane strain structures using matrix displacement methods. Introduction to the finite element method of analysis by deriving the element stiffness matrices using virtual work. Beam and frame elements with shear deformation and geometric stiffness effects. Computer implementation of analysis procedures using MATLAB and commercial structural analysis software. Modeling issues including convergence, symmetry and antisymmetry. Introduction to structural dynamics. Advanced topics such as curved beam elements, contact elements and nonlinearities. Credit for both CE 425 and CE 525 is not allowed.

CE 526 Finite Element Method in Structural Engineering 3.
Prerequisite: CE 315.
Development of the finite element method with an emphasis on understanding the fundamental principles governing the analysis technique. Applications to two-dimensional solids with particular attention to applications in structural engineering. Typical modeling considerations are reviewed and applied to the analysis of a realistic structure.

CE 527 Structural Dynamics 3.
Prerequisite: CE 425 or CE 525.
Analysis of single and multi-degree-of-freedom structures subjected to various types of excitations and initial conditions. Computational aspects of dynamic analysis. Introduction to approximate methods of analysis.

CE 528 Structural Design in Wood 3.
Prerequisite: C- or better in CE 325.
Behavior, strength and design of wood structural members subjected to moment, shear and axial forces. Design of connections and introduction to design of wood structural systems.

CE 529 FRP Strengthening and Repair of Concrete Structures 3.
Prerequisite: CE 327 and CE 325.
Fundamental behavior of Fiber-Reinforced Polymer (FRP) strengthened/ repaired reinforced concrete structures. Creation of sustainable and resilient civil infrastructure by extending the useful life of existing structures using advances materials. Applications to practical strengthening design of realistic reinforced concrete structures.

CE 530 Properties of Concrete and Advanced Cement-Based Composites 3.
Prerequisite: CE 332 and CE 313.
This course consists of three parts. First part covers basic properties of cements, mineral/chemical admixtures, and concrete production. Second part covers mechanical properties including compressive and tensile strength, multi-axial loading, composite models, and fracture mechanics. Models of porosity and microstructures are also discussed. Third part covers durability and deterioration mechanisms including corrosion of steel in concrete, mass transport, service life prediction. Advanced laboratory techniques are discussed. This course also covers emerging topics such as geopolymers and aluminates cements.
CE 536 Introduction to Numerical Methods for Civil Engineers 3. 
Prerequisite: MA 302, MA 341, or MA 401.
Introduction to widely-used numerical methods through application to civil and environmental engineering problems. Emphasis will be on implementation and application rather than the mathematical theory behind the numerical methods.

CE 537 Computer Methods and Applications 3. 
Prerequisite: CSC 112 and (MA 341 or MA 305).
Computational approaches to support civil planning, analysis, evaluation and design. Applications to various areas of civil engineering, including construction, structures, transportation and water resources.

CE 538 Information Technology and Modeling 3. 
Prerequisite: CE 390.
Computing research and advanced technologies of interest to civil engineers. Issues in the design and development of engineering software systems and engineering modeling of structures, assemblies, processes and phenomena. Additional topics from the most predominant and recent developments and advances in civil engineering computing.

CE 548 Engineering Properties Of Soils I 3. 
Prerequisite: CE 342.
Significant soil properties in earthwork engineering, including soil elasticity and soil mineralogy, hydraulic conductivity, stress-strain relations and shear strength, compressibility and compaction. Laboratory work including plasticity, triaxial compression, permeability, consolidation and compaction tests.

CE 549 Soil and Site Improvement 3. 
Prerequisite: CE 342.
Principles and design methodologies for techniques related to densification, including dynamic compaction, vibro-compaction and compaction grouting; drainage, including wick drains, horizontal drains and dewatering; physical and chemical modification, including admixtures, chemical and cement grouting, soil mixing, jet grouting and soil freezing; and use of inclusions, including stone columns, soil nailing, and meta and geosynthetic reinforcement.

CE 561 Construction Project Management 3. 
Prerequisite: CE 463.
Construction project management and control using network based tools, time-money analysis and other quantitative and qualitative techniques. Planning and scheduling, critical path, lead-lag, resource allocation, uncertainty, cash flow and payment scheduling, change orders, project acceleration, coordination and communication, record keeping. Emphasis on computer-based techniques.

CE 562 Lean Construction Concepts and Methods 3. 
Prerequisite: CE 463.
Student teams apply concepts and methods in field studies of real project management processes and construction operations by using principles and methods in Lean Production, Construction, Design, Assembly, Supply, Production Control, and Work Process Design.

CE 564 Legal Aspects Of Contracting 3. 
Prerequisite: Graduate standing. Credit for both CE 464 and CE 564 is not allowed.
Legal aspects of contract documents, drawings and specifications; owner-engineer-constructor relationship and responsibilities; bids and contract performance; labor laws; governmental administrative and regulatory agencies; torts; business organizations; ethics and professionalism; analysis of current topics and issues. Investigation of recent statute and case implications.

CE 565 Construction Safety Management 3. 
Prerequisite: CE 465 or CE 466.
Fundamentals of safety management principles. Detailed review of OSHA regulations and standards critical to construction engineers and managers who expect to design and administer safety related systems in a construction project. Analysis and design of example minimum safety requirements for application in construction field operations. Review of OSHA Standards for the Construction Industry, a review of general principles of construction safety management.

Prerequisite: ACC 220, CE 463.
Fundamental concepts in financial and risk analysis in construction; accounting and financial metrics in construction; risk assessment and risk management in construction including the cost of risk, decision making strategies, the role of sureties, effects of risk in project delivery methods and contract types; risk effects in project financing including a review of financing sources, considerations for financing local and international projects; and the impact of financial and risk management in strategic planning in construction.

CE 568 Construction Engineering Laboratory 1. 
Prerequisite: CE 332, Corequisite: CE 327 or CE 426.
Measurements with and calibration of measurement instruments used in construction engineering field tests for quality and safety of the construction process. Interpretation of ANSI, ASTM, ACI and AISC specifications and standards. Credit for both CE 468 and CE 568 is not allowed.

CE 571 Physical Principles of Environmental Engineering 3. 
Prerequisite: CE 382, Graduate standing.
Mass balances, equation of motion for small particles, small particle interactions, particle collision/fast coagulation, partitioning, adsorption isotherms, fluid mechanics, diffusion, interphase mass transport and resistance models, elementary/non-elementary reactions, residence time distributions.

CE 573 Biological Principles of Environmental Engineering 3. 
Prerequisite: Graduate standing in CE, BAE, CHE, or SSC.
Concepts in environmental microbiology including cell structure and function, phylogeny, survey of environmentally relevant microbial groups, metabolism under different redox conditions, catabolism of macromolecules, methods in microbial ecology. Relationships to engineering processes and systems will be emphasized.

CE 574 Chemical Principles of Environmental Engineering 3. 
Prerequisite: Graduate standing in CE, CHE, BAE, NE, MEA, SSC.
Inorganic and organic environmental chemistry including acid-base equilibria, precipitation, complexation, redox reactions, and natural organic matter. The role of these factors in controlling the fate of contaminants in engineered treatment systems and natural environments.

CE 576 Engineering Principles Of Air Pollution Control 3. 
Prerequisite: CE 375, CE 470, CHE 315 or MAE 301, Corequisite: ST 511 or 515.
Introduction to air pollution control fundamentals and design. Fundamentals including physics, chemistry and thermodynamics of pollutant formation, prevention and control. Design including gas treatment and process and feedstock modification. Addressed pollutants including sulfur dioxide, nitrogen oxides, particulate matter, volatile organic compounds, hydrocarbons and air toxins. Investigation of current research. Credit for both CE 476 and CE 576 is not allowed.
CE 577 Engineering Principles Of Solid Waste Management 3.
Prerequisite: CE 373.
Solid waste management including generation, storage, transportation, processing, land disposal and regulation. Processing alternatives including incineration and composting. Integration of policy alternatives with evaluation of engineering decisions. Investigation of current research. Credit is only allowed for one of CE 477 and CE 577.

CE 578 Energy and Climate 3.
Prerequisite: CE 390 or permission of instructor.
Interdisciplinary analysis of energy technology, natural resources, and the impact on anthropogenic climate change. Topics include basic climate science, energetics of natural and human systems, energy in fossil-fueled civilization, the impact of greenhouse gas emissions on climate, and technology and public policy options for addressing the climate challenge. The course is quantitative with a strong emphasis on engineering and science. But is open to non-engineering students.

CE 579 Principles of Air Quality Engineering 3.
Prerequisite: CE 373, CE 382 or CHE 311(CHE Majors), or MEA 421(MEA Majors), Corequisite: ST 370, ST 380(MEA Majors).
Introduction to: risk assessment, health effects, and regulation of air pollutants; air pollution statistics; estimation of emissions; air quality meteorology; dispersion modeling for non-reactive pollutants; chemistry and models for tropospheric ozone formation; aqueous-phase chemistry, including the "acid rain" problem; integrated assessment of air quality problems; and the fundamentals and practical aspects of commonly used air quality models. Credit is allowed only for one of CE/ME 479 or CE/ MEA 579.

CE 581 Fluid Mechanics in Natural Environments 3.
Prerequisite: CE 382 or MEA 463 or permission of instructor.
Free surface flows of water and air occurring in natural fluid systems and influencing environmental transport and mixing. Review of fundamental principles of fluids, covering the scales relevant to both engineering and geo-physical applications. Topics and examples include waves, instability, stratification, turbulent boundary layers, jets and plumes, and open channel flows. Cannot receive credit for both CE 581 and MEA 581.

CE 583 Engineering Aspects Of Coastal Processes 3.
Prerequisite: CE 382.
Coastal environment, engineering aspects of mechanics of sediment movement, littoral drift, beach profiles, beach stability, meteorological effects, tidal inlets, inlet stability, shoaling, deltas, beach nourishment, mixing processes, pollution of coastal waters, interaction between shore processes and man-made structures, case studies.

CE 584 Hydraulics Of Ground Water 3.
Prerequisite: CE 382.
Introduction to ground water hydraulics and hydrology. Hydrologic cycle, basic ground water hydraulics, numerical solution of governing equations, ground water hydrology of North Carolina, well design and construction, flow net development, and ground water contamination sources.

CE 586 Engineering Hydrology 3.
Prerequisite: CE 383.
Hydrologic principles underlying procedures for surface water modeling; applications of common hydrologic models to actual watersheds.

CE 588 Water Resources Engineering 3.
Prerequisite: CE 382.
Extension of concepts of fluid mechanics and hydraulics to applications in water supply, water transmission, water distribution networks and open channels to include water-supply reservoirs, pump and pipe selection, determinate and indeterminate pipe networks, and analysis of open channels with appurtenances.

CE 590 Special Topics In Civil Engineering 1-6.
New or special course on recent developments in some phase of civil engineering. Specific topics and prerequisites identified for each section and varied from term to term.

CE 591 Special Topics In Civil Engineering Computing 1-6.
New or special course on recent developments in some phase of civil engineering. Specific topics and prerequisites identified for each section and varied from term to term.

CE 592 Special Topics In Construction Engineering 1-6.
New or special course on recent developments in some phase of civil engineering. Specific topics and prerequisites identified for each section and varied from term to term.

CE 593 Special Topics In Geotechnical Engineering 1-3.
New or special course on recent developments in some phase of civil engineering. Specific topics and prerequisites identified for each section and varied from term to term.

CE 594 Special Topics In Structures and Mechanics 1-6.
New or special course on recent developments in some phase of civil engineering. Specific topics and prerequisites identified for each section and varied from term to term.

CE 595 Special Topics In Transportation Engineering 1-6.
New or special course on recent developments in some phase of civil engineering. Specific topics and prerequisites identified for each section and varied from term to term.

CE 596 Special Topics In Water Resource and Environmental Engineering 1-6.
New or special course on recent developments in some phase of civil engineering. Specific topics and prerequisites identified for each section and varied from term to term.

CE 597 Principles of Air Quality Engineering 1.
Discussions and reports of subjects in civil engineering and allied fields.

CE 603 Construction Engineering Seminar 1.
Discussions and reports of subjects in civil engineering and allied fields.

CE 605 Structures and Mechanics Seminar 1.
Discussions and reports of subjects in civil engineering and allied fields.

Discussions and reports of subjects in civil engineering and allied fields.

CE 610 Special Topics CE 1.

CE 635 Advanced Reading In Civil Engineering 1-3.
Prerequisite: Graduate standing.
Directed reading of advanced topics in some phase of civil engineering.

CE 675 Civil Engineering Projects 1-6.
Research- or design-oriented independent study and investigation of a specific civil engineering topic, culminating in final written report.

CE 685 Master’s Supervised Teaching 1-3.
Prerequisite: Master’s student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

CE 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master’s student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.
CE 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

CE 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Theis research.

CE 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their thesis.

CE 701 Urban Transportation Planning 3.
Prerequisite: CE 501.
Planning and design of urban transportation systems as related to comprehensive urban planning; principles of land use planning, urban thoroughfare planning and regional planning.

CE 702 Traffic Flow Theory 3.
Prerequisite: CE 502, Corequisite: ST 370.
Stream flow, shock wave, queuing, and other macroscopic theories; car following, gap acceptance, and other microscopic theories; distributions of traffic stream parameters; building traffic simulation models.

CE 705 Intelligent Transportation Systems 3.
Prerequisite: CE 501 and CE 502.
Intelligent Transportation Systems (ITS) planning and human factor elements; application of monitoring, communications and information dissemination technologies to transportation systems; advanced traffic management for freeway and arterial systems; traveler information and public transportation systems; automated vehicle and highway systems. ITS evaluation methods and models.

CE 706 Advanced Traffic Control 3.
Prerequisite: CE 502.
Advanced signalized traffic control methods at intersections, arterials and networks. Applications of mathematical optimization techniques to signal timing and coordination. Use of traffic simulation and optimization models for signal evaluation and design. Roundabout analysis and design.

CE 707 Transportation Policy and Funding 3.
Prerequisite: CE 501 or graduating in Economics or Public Administration.
Understanding and debating important current transportation policy issues in the U.S. Raising and allocating funds for building and maintaining the transportation system. Highway, public transit, rail, air, and other modes.

CE 714 Stress Waves 3.
Prerequisite: MA 341; CE 313 or PY 411 or MA 401.
Theory of stress waves in solids. Origins and nature of longitudinal transverse and surface waves originating at an impact site or from other transient disturbances. Determination of stresses, particle velocities, wave velocities. Wave interaction with other waves and with boundaries and dissimilar materials. Modern instrumentation and seismic refraction exploration.

Prerequisite: CE 515 (old CE 715).
Stresses and strains (vectors, tensors and indicial notations), general theorems for elastic-plastic solids, constitutive modeling of metals and concrete, numerical implementations of plasticity models.

CE 721 Matrix and Finite Element Structural Analysis 3.
Prerequisite: CE 526.

CE 723 Advanced Structural Dynamics 3.
Prerequisite: CE 527.
Finite element formulation of equations of motion; advanced analysis techniques for discrete parameter systems; investigation of damping; analysis of continuous systems; applications to civil engineering structures.

CE 724 Probabilistic Methods Of Structural Engineering 3.
Prerequisite: MA 421.

CE 725 Earthquake Structural Engineering 3.
Prerequisite: CE 527.
Effects of earthquakes on structures and of design of structures to resist earthquake motions; earthquake mechanisms and ground motions; response of structures to earthquake motions; behavior of materials, structural elements and assemblages subjected to earthquakes; principles of earthquake-resistant design practice; soil-structure interaction; and special topics.

CE 726 Advanced Theory Of Concrete Structures 3.
Prerequisite: CE 522.
CE 730 Mechanics and Failure of Quasi-Brittle Materials 3.
Prerequisite: CE 515 and Corequisite: CE526.
This course is in three parts. Part one covers fundamentals of composites including estimating the mechanical and thermomechanical properties, failure of composites, laminate, and shear-lag model. Advanced topics including homogenization theories, Eigenstrain and Eigenstress, dilute, self-consistent and Mori-Tanaka methods are also covered. Part two covers fundamental of fracture mechanics including Griffith theory, stress field at crack tip, energy release rate, crack tip plasticity, and mixed mode fracture. Part three covers interface cracks, cracks approaching an interface, and fracture of composites.

CE 737 Computer-Aided Engineering Systems 3.
Prerequisite: CE 537 or 538.
Design and implementation issues for building real-world computer-aided engineering systems. Engineering data modeling; data definition, query and manipulation methodologies; application program interfaces; problem-oriented languages and software supervisors; and knowledge-based systems to support engineering design and decision making.

CE 741 Geomechanics of Stress Deformation 3.
Prerequisite: CE 440, or CE 443 or CE 548.
Concepts of volume change and effective stress, stress-strain behavior of clays and sands, stress path and failure conditions; mechanistic interaction between solids and water, problems in elasticity and plasticity pertaining to stress distribution, elastic, consolidation and secondary settlements, and tolerance limits to deformation levels.

CE 742 Deformation and Instability of Soils 3.
Prerequisite: CE 440, or CE 443 or CE 548.

CE 744 Foundation Engineering 3.
Prerequisite: CE 342.
Subsoil investigations; excavations; design of sheeting and bracing systems; control of water; footing, grillage and pile foundations; caisson and cofferdam methods of construction.

CE 746 Soil Dynamics and Earthquake Engineering 3.
Prerequisite: CE 440, or CE 443 or CE 548.
Dynamics of discrete and continuous systems with application to soil dynamics: dynamic soil properties, analysis of foundation vibration, construction-induced vibration, dynamic soil-structure interaction. Geotechnical earthquake engineering: ground motion characteristics, dynamic response of soil sites, effect of local site conditions on design ground motion, liquefaction of soils.

CE 747 Geosynthetics in Geotechnical Engineering 3.
Prerequisite: CE 548.
Introduction to use, manufacturing techniques, design and construction of geosynthetics in geotechnical engineering applications; design and analysis of geotextiles, geonets, geogrids and geomembranes in pavements base and subbase reinforcement, reinforced walls, slopes, moisture barriers, dams and hazardous impoundment, landfill liners and covers.

CE 751 Theory Of Concrete Mixtures 3.
Prerequisite: CE 332.
In-depth study of theory of portland cement concrete mixtures including types and properties of portland special cements; chemical reactions; brief examination of history of mixture design; detailed study of current design methods; properties of fresh and hardened concretes; strength-age-curing relationships; durability; admixtures; special concretes; production and quality control.

CE 755 Highway Pavement Design 3.
Prerequisite: CE 342.
Theoretical analysis and design of highway pavements with critical evaluation of current design practices. Pavement materials characterization; stresses and strains in pavements; traffic consideration; pavement performance models; and actual thickness design of pavements using different methodologies.

CE 757 Pavement Management Systems 3.
Prerequisite: CE 755.
Fundamental concepts in process of pavement management at both network level and project level. Distress identification and evaluation; concepts and methods for rehabilitation and maintenance techniques; nondestructive testing of pavements; performance prediction models; and principles of prioritization/optimization.

CE 759 Inelastic Behavior Of Construction Materials 3.
Prerequisite: CE 515.
Application of principles of linear and nonlinear viscoelasticity, fracture mechanics and damage mechanics to modeling inelastic behavior of construction materials. Mechanical analog of time-dependent response; linear and nonlinear elastic-viscoelastic correspondence principles; time-temperature superposition; stress intensity factor; energy release rate; J-integral; and continuum damage mechanics.

CE 761 Design Of Temporary Structures in Construction 3.
Prerequisite: CE 522 or CE 744 or CE 766.
Computer-based analysis of temporary structures in construction and their design, safety and control. Emphasis on concrete formwork, falsework, earth support, cofferdams, underpinning, lifting and rigging.

CE 762 Construction Productivity 3.
Prerequisite: CE 463.
Methods of collecting, assembling and analyzing construction productivity data in order to increase construction productivity. Applications of methods improvement techniques such as time-lapse photography, flow charts, process charts and time standards to improvement of construction productivity. Safety and human factors in construction and their relation to construction productivity.

CE 763 Materials Management In Construction 3.
Prerequisite: CE 463, CE 465.
Fundamental concepts and methods; construction specific models for integrated materials management; computer usage; vendor analysis and "best-buy;" materials requirement planning and control; management of material waste; automated materials tracking; materials handling; study of current issues; development of practical solution to a real-world problem.

CE 765 Construction Equipment Systems 3.
Prerequisite: CE 761 OR 762.
Analysis of heavy construction processes as systems in order to optimize the selection and employment of construction equipment. Considerations in system design, cost and productivity estimation, operational procedures, safety and maintenance. Computer applications utilizing analytical and simulation techniques.
CE 766 Building Construction Systems 3.
Prerequisite: CE 466 or CE 327 or Graduate standing in ARC.

CE 771 Physical-Chemical Water Treatment Processes 3.
Prerequisite: CE 574, Corequisite: CE 571.
Physical-chemical treatment processes for the treatment of water, including sedimentation, flotation, filtration, coagulation, oxidation, disinfection, precipitation, adsorption, and membrane treatment processes. Current issues in drinking water quality and treatment are discussed.

CE 772 Environmental Exposure and Risk Analysis 3.
Prerequisite: ST 511 or 515.
Course covers the identification, transport, and fate of hazardous substances in the environment; quantification of human exposures to such substances; dose-response analysis; and uncertainty and variability analysis. The general risk assessment framework, study design aspects for exposure assessment, and quantitative methods for estimating the consequences and probability of adverse health outcomes are emphasized.

CE 774 Environmental Bioprocess Technology 3.
Prerequisite: CE 573, CE 574.
Principles of microbiological, biochemical, and biophysical processes used in environmental waste treatment and remediation processes, with particular emphasis on water quality control processes.

CE 775 Modeling and Analysis Of Environmental Systems 3.
Prerequisite: CE 339 and CE 382.

CE 776 Advanced Water Management Systems 3.
Prerequisite: CE 339, CE 775.
Application of systems analysis methods to design, analysis and management of water resources and environmental treatment.

Prerequisite: CE 586 or ST 515.
Stochastic modeling, water resources and environmental data analysis. Dimension reduction, estimation and detection of periodicities in water resources and environmental data. Parametric and non-parametric methods in water and environmental modeling.

CE 779 Advanced Air Quality 3.
Prerequisite: (CH 201 or CH 203) and MEA(CE) 479.
Local, regional and global scale chemical interactions, transport and behavior of trace gases (sulfur carbon, nitrogen, hydrocarbon, and photo-chemical oxidants) in the atmosphere. covers three primary elements of air quality: anthropogenic and natural emissions of trace gases; interactions of the pollutants in the atmosphere; and monitoring and sampling of gaseous and particulate pollutants.

CE 784 Ground Water Contaminant Transport 3.
Prerequisite: CE 584 and 574.
Introduction to movement and attenuation of contaminants in the subsurface. Common contaminant sources; advection and dispersion; numerical modeling of contaminant transport; chemical and biological processes in the subsurface; and ground water restoration technology.

CE 786 Hydroclimatology 3.
Prerequisite: CE 586.
Hydroclimatology, El-Nino southern oscillation, climate and streamflow forecasting, forecast verification measures, downscaling, Budyko’s Framework, long-term water balance, data assimilation, ensemble Kalman Filter.

CE 790 Advanced Topics In Civil Engineering 1-3.
New or special course on advanced developments in some phase of civil engineering. Specific topics and prerequisites identified for each section and varied from term to term.

CE 791 Advanced Topics in Civil Engineering Computing 1-3.
CE 792 Advanced Topics in Construction Engineering 1-3.
CE 793 Advanced Topics in Geotechnical Engineering 1-3.
CE 794 Advanced Topics in Structures and Mechanics 1-3.
CE 795 Advanced Topics in Transportation Engineering 1-3.
CE 796 Advanced Topics in Water Resource and Environmental Engineering 1-3.

CE 803 Advanced Construction Engineering Seminar 1.
CE 805 Advanced Structures and Mechanics Seminar 1.

CE 839 Advanced Reading In Civil Engineering 1.
Prerequisite: Graduate standing.
Directed reading of advanced topics in some phase of civil engineering.

CE 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

CE 890 Advanced Topics In Civil Engineering 1-3.
Prerequisite: Graduate standing.
Directed reading of advanced topics in some phase of civil engineering.

Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

CE 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.
The Computer Science curriculum teaches students the skills necessary as degree-seeking students.

Like all freshmen in the College of Engineering, Computer Science freshmen take a core of courses in the humanities, chemistry, mathematics, physics, and computing. After successfully completing the required courses, students may apply to join the Department of Computer Science as degree-seeking students.

The Computer Science curriculum teaches students the skills necessary to understand, design, implement, test, and deploy computer systems and software of all kinds, in addition to exposing students to the application of computers to problem solving in diverse fields, and the mathematical methods needed to analyze and compare both computation problems themselves and alternative approaches to solving them.

Core courses provide a foundation for all students in programming languages, data structures, software engineering, computer architectures, numerical analysis, theory of computation, and the social and ethical dimensions of the practice of computer science.

Computer science electives are chosen in consultation with advisers, usually starting during the junior year. These electives allow exploration of more advanced areas: among them artificial intelligence, database management systems, computer graphics, human-computer interface design, multimedia technology, web technologies, networks, privacy and security, remote sensing, computer architecture, distributed computing, and operating systems. Electives can be chosen to provide coherent concentration in areas such as computer and network security, software engineering, and computer game design. A special focus is on skills that help our students be competitive in the global economy. These skills include technical communication, understanding of business principles in organizations that use information technology, an aptitude for innovation, an understanding of intellectual property issues, and an understanding of the latest technologies, such as web-services, security and sensors, as well as both open and closed source solutions and engineering issues.

All Computer Science majors must complete a team project, most often in an area such as networking, computer graphics, computer gaming, database technology, or web services. Projects under the auspices of the department’s Senior Design Center have industrial sponsors, so student teams gain experience working jointly with industry representatives to achieve project goals. The department’s location near the Research Triangle Park also means many opportunities for Co-ops and internships, part-time employment, and forging the industry contacts often vital in a successful job search.

The undergraduate curriculum leads to a Bachelor of Science in Computer Science. This program is nationally accredited by the Computing Accreditation Commission of ABET, http://www.abet.org.

**Game Development Concentration**

Computer games are some of the most complex software development projects and employ some of the most advanced technologies of any application area of computer science. The entertainment software sector is a multi-billion dollar industry with increasing demand for new employees trained in these technologies and methods. In addition to the more familiar entertainment sector, these technologies also have applications to such areas as training, education, visualization, and social interaction forums — so-called “serious games.” North Carolina is now among the top tier of US states with centers of game industry employment. As the game industry continues to grow, demand by North Carolina companies for new graduates with strong background in computer science with a focus on game development will also expand.

Many aspects of computer game development are unique to the game industry and the game development concentration provides specialized coursework in these areas. The game development concentration focuses on game development technologies while preserving the breadth and depth of the general computer science BS degree. The concentration requires that students take both the initial course on computer graphics (CSC 461) and the initial course on game development (CSC 481). They must choose as a concentration project either the graphics or game development advanced elective (CSC 462 or CSC 482, respectively). Two additional game restricted electives are chosen from a list of CSC courses.
with content highly relevant to game development. Of the nine credit hours required for other electives, students in the concentration must select three courses from a list that spans topics such as fiction writing, film, and music. These courses provide grounding in the creation of conventional media and provide the background in these disciplines needed to participate in the multidisciplinary aspects of the design of games.

Program Educational Objectives

The CSC undergraduate program at NCSU prepares its B.S. graduates to achieve the following career and professional goals:

1. To apply their knowledge of computer science problems encountered in their professional careers or in pursuit of advanced degrees.
2. To use evolving technologies, analytical thinking, and design to address contemporary issues.
3. To communicate well orally and in writing, interact professionally, and work effectively on multidisciplinary teams to achieve project objectives.
4. To uphold high ethical standards, including concern for the impact of computing on individuals, organizations, and society.
5. To engage in lifelong learning to enhance their professional capabilities.

Specific curriculum requirements are available on the Registration and Records website (https://registrar.ncsu.edu/academic-resources/advising-and-curricula).

Minor in Computer Programming

The Department of Computer Science offers a Minor in Computer Programming to undergraduate majors in any field except Computer Science and Computer Engineering. The objectives of this minor are to:

1. Encourage students to combine computing with their own disciplines.
2. Promote quality in programming techniques.
3. Give graduating seniors with a minor in computer programming an added advantage in the job market.

The minor requires completion of 21 credit hours from the Computer Science core.

Scholarships and Financial Aid

The College of Engineering and the Department of Computer Science have a number of endowed and other scholarships available to students. There is also opportunity for financial aid sponsored by industry and for Co-op and internship positions. Interested students are invited to apply through the College of Engineering. In addition, the department organizes job-fairs and maintains a job matching service for our industrial partners (ePartners) and others who wish to hire our students for the summer or part-time during the academic year.

Facilities

North Carolina State University boasts one of the most extensive and sophisticated advanced high-performance communications infrastructures available for student use today. It ranges from a 10 Gbps research network, to wireless computing, to sensor networks. NC State University High-Performance Computing operations provide NC State students and faculty with entry and medium level high-performance research and education computing facilities and consulting support. Another service, called the Virtual Computing Laboratory (VCL), provides on-demand and reservation-based utility computing services from NC State’s extensive library of Engineering, Design, and Scientific software applications, as well as support for research projects. It is intended to address the increasing needs of local and distance students, faculty and researchers for virtualized resources by providing 24x7 access to advanced computing laboratory facilities through a variety of computer systems they own.

In addition, the Department of Computer Science has over 30 general purpose and specialized teaching and research laboratories, centers and other facilities that support its educational and research mission. These facilities are located in four buildings: Daniels Hall, Engineering Building II, Engineering Building III, and Montieth Research Center. Facilities range from introductory programming laboratories, to networking laboratories, to a games center, to an advanced visualization center, to a senior design center. At different stages of their education undergraduates will have the opportunity to use many of these facilities.

CSC - Computer Science Courses

CSC 111 Intro to Computing: Python 3.
C: (E 115 or COS 100) and MA 141; R: Civil, Construction, and Environmental Engineering Majors Only.
Computation problem solving through writing Python programs. Particular elements include: careful development of Python programs from specifications; documentation and style; appropriate use of control structures, data types and subprograms; abstractions and verification; engineering applications.

CSC 112 Introduction to Computing-FORTRAN 3.
Corequisite: (E115 or PAMS 100) and (MA 121 or MA 131 or MA 141). Problem solving through writing FORTRAN programs. Particular elements include: careful development of FORTRAN programs from specifications; documentation and style; appropriate use of control structures, data types and subprograms; abstractions and verification; engineering applications.

CSC 113 Introduction to Computing - MATLAB 3.
Corequisite: (E 115 or COS 100) and (MA 121 or MA 131 or MA 141). Problem solving through writing MATLAB programs. Particular elements include: careful development of MATLAB programs from specifications; documentation and style; appropriate use of control structures, data types and subprograms; abstractions and verification; engineering applications.

CSC 116 Introduction to Computing - Java 3.
Corequisite: (E115 or PAMS 100) and (MA 121 or MA 131 or MA 141). An introductory course in computing in Java. Emphasis on algorithm development and problem solving. Careful and methodical development of Java applications and applets from specifications; documentation and style; appropriate use of control structures; classes and methods; data types and data abstraction; object-oriented programming and design; graphical user interface design.

CSC 200 Introduction to Computers and Their Uses 3.
Survey of basic principles of computer hardware, communications, operating systems, microcomputer issues, security, impact on society, system development, and use in organizations. Hands-on use of software, including operating system commands, wordprocessing, spreadsheets, and database managers. Demonstration and application of current end-user applications. May not be used by CSC major as a restricted elective.
Prerequisite: CSC 116 with a grade of C or better.
The second course in computing, intended for majors. Emphasis is placed on software system design and testing; encapsulation; polymorphism; composition; inheritance; linear data structures; specification and implementation of finite-state machines; interpretation of inductive definitions (functions and data types); and resource management.

CSC 226 Discrete Mathematics for Computer Scientists 3.  
Prerequisite: MA 101 or equivalent completed in high school; CSC, CSU Majors and minores; CPE, CPU Majors.

CSC 230 C and Software Tools 3.  
Prerequisite: CSC 216 with a C or better and CSC or CSU Majors and Minors.
Details of C programming as compared with Java; Lexical structure, syntax, semantics, and pragmatics (idioms, common uses) of C; Stages of compilation, linking and execution; Strings, arrays, structures, pointers, and memory management; C libraries; Tools for design, maintenance, and debugging of programs; Separate compilation, modular programming; Integrated development environments.

CSC 236 Computer Organization and Assembly Language for Computer Scientists 3.  
Prerequisite: CSC 216 with a C or better and CSC or CSU Majors and Minors.
Computer architecture topics required by professional software developers, including binary and hexadecimal numbers, hardware component organization, machine instruction sets, assembler language programming, linking assembler language with high-level languages, program testing, computer hardware design issues, computer software design issues, and trends in current computer design.

Prerequisite: CSC 230; Corequisite: CSC 236; CSC and CSU Majors and Minors.
Fundamental concepts of computer operating systems for computer scientists, including memory management, file systems, process management, distributed systems, deadlocks, and basic security and system accounting.

CSC 251 Web Page Development 1.  
Prerequisite: E 115 or equivalent knowledge of EOS/Unity system.
Syntax and semantics of HTML (HyperText Markup Language). Students will learn necessary skills to develop web pages on their EOS/Unity account. In addition to mechanics, design aspects and bandwidth conservancy are covered. Several pages will be created including a final project.

CSC 256 String Processing Languages 1.  
Prerequisite: Programming knowledge.
Syntax and semantics of a string manipulation language, currently SNOBOL 4. Application of the language to programming problems in non-numeric areas. Discussion of other string processing languages such as PERL.

CSC 281 Foundations of Interactive Game Design 3.  
Prerequisite: Grade of C or better in CSC 226, CSC Majors or 2.75 GPA.
Study of three classical formal models of computation--finite state machines, context-free grammars, and Turing machines--and the corresponding families of formal languages. Power and limitations of each model. Parsing. Non-determinism. The Halting Problem and undecidability. The classes P and NP, and NP-completeness.

CSC 295 Special Topics in Computer Science 1-3.  
Special topics in CSC at the early undergraduate level.

CSC 302 Introduction to Numerical Methods 3.  
Prerequisite: CSC 116 and MA 305, CSC Majors or 2.75 GPA.
Numerical computations with digital computers; floating point arithmetic and implications of round-off error. Algorithms and computer techniques for the numerical solution of problems in: function evaluation; zeros of functions; interpolation; numerical differentiation and integration; linear systems of equations; curve fitting; solutions of non-linear equations; numerical solutions of ordinary differential equations.

CSC 316 Data Structures for Computer Scientists 3.  
Prerequisite: CSC 216 and CSC 226 with a grade of C or better; CSC, CSU Majors and Minors.
Abstract data types; abstract and implementation-level views of data types. Linear and branching data structures, including stacks, queues, trees, heaps, hash tables, graphs, and others at discretion of instructor. Best, worst, and average case asymptotic time and space complexity as a means of formal analysis of iterative and recursive algorithms.

CSC 326 Software Engineering 3.  
Prerequisite: CSC 230 and either CSC 314 or CSC 316.
Application of product engineering methods to software: quality assurance, project management, requirements analysis, specifications, design, development, testing, production and maintenance.

CSC 333 Automata, Grammars, and Computability 3.  
Prerequisite: Grade of C or better in CSC 226, CSC Majors or 2.75 GPA.
Study of three classical formal models of computation--finite state machines, context-free grammars, and Turing machines--and the corresponding families of formal languages. Power and limitations of each model. Parsing. Non-determinism. The Halting Problem and undecidability. The classes P and NP, and NP-completeness.

CSC 342 Applied Web-based Client-Server Computing 3.  
Prerequisite: Grade of C or better in CSC 226, CSC Majors or 2.75 GPA.
This course explores client-server computing on the World Wide Web. The course focuses on the architecture of web-based client-server applications and accepted industry practices. Students work in teams to develop web applications with dynamic content delivery.

CSC 379 Ethics in Computing 1.  
Prerequisite: Junior standing, CSC Majors or 2.7 minimum GPA.

CSC 401 Data and Computer Communications Networks 3.  
Prerequisite: ST 370 and CSC 246.
Basic concepts of data communication networking and computer communications architectures, including packet/circuit/virtual-circuit switching, layered communication architecture and OSI layers, general description of DLC, network and transport layers, some detailed protocol study of Ethernet, ATM and TCP/IP. Credit is not allowed for both CSC 401 and ECE 407.
CSC 402 Network Projects 3.
Prerequisite: CSC 401.
Under the supervision of faculty members, students engage in projects that may include communication architecture implementation, networking technology assessment, network performance evaluation, and network administration. Comprehensive written and oral project report required. No auditing.

CSC 405 Introduction to Computer Security 3.
Prerequisite: CSC 246.
Basic concepts and techniques in information security and management such as risks and vulnerabilities, applied cryptography, program security, malicious software, authentication, access control, operating systems security, multilevel security, trusted operating systems, database security, inference control, physical security, and system assurance and evaluation. Coverage of high-level concepts such as confidentiality, integrity, and availability applied to hardware, software, and data.

CSC 411 Introduction to Artificial Intelligence 3.
Prerequisite: CSC 316.
Overview and definitions of Artificial Intelligence (AI). Search, including depth-first and breadth-first techniques with backtracking. Knowledge representation with emphasis on logical methods, Horn databases, resolution, quantification, unification, skolemization and control issues; non-monotonic reasoning; frames; semantic nets. AI systems, including planning, learning, natural language and expert systems. An AI programming language may be taught at the instructor's discretion.

CSC 416 Introduction to Combinatorics 3.
Prerequisite: MA 225 or CSC 226.
Basic principles of counting: addition and multiplication principles, generating functions, recursive methods, inclusion-exclusion, pigeonhole principle; basic concepts of graph theory: graphs, digraphs, connectedness, trees; additional topics from: Polya theory of counting, Ramsey theory; combinatorial optimization - matching and covering, minimum spanning trees, minimum distance, maximum flow; sieves; Mobius inversion; partitions; Gaussian numbers and q-analogues; bijections and involutions; partially ordered sets.

CSC 417 Theory of Programming Languages 3.
Prerequisite: CSC 316.
Theory of programming languages with emphasis on programming language semantics and implementation issues. Formal models of syntax and semantics. Static versus dynamic scoping. Parameter passing mechanisms. Garbage collection. Programming in alternate paradigms such as applicative, functional, logic, and object-oriented programming languages.

CSC 422 Automated Learning and Data Analysis 3.
Prerequisite: ST 370 and MA 305, and a grade of C- or better in either CSC 226 or LOG 201.
Introduction to the problems and techniques for automated discovery of knowledge in databases. Topics include representation, evaluation, and formalization of knowledge for discovery: classification, prediction, clustering, and association methods. Selected applications in commerce, security, and bioinformatics. Students cannot get credit for both CSC 422 and CSC 522.

CSC 427 Introduction to Numerical Analysis I 3.
Prerequisite: MA 301 and programming language proficiency.
Theory and practice of computational procedures including approximation of functions by interpolating polynomials, numerical differentiation and integration, and solution of ordinary differential equations including both initial value and boundary value problems. Computer applications and techniques.

CSC 428 Introduction to Numerical Analysis II 3.
Prerequisite: MA 405 and programming language proficiency; MA (CSC) 427 is not a prerequisite.
Computational procedures including direct and iterative solution of linear and nonlinear equations, matrices and eigenvalue calculations, function approximation by least squares, smoothing functions, and minimax approximations.

CSC 431 File Organization and Processing 3.
Prerequisite: CSC 230 and CSC 316.
Hardware characteristics of storage devices. Basic file organizations including sequential, direct, and indexed sequential; hashing and collision resolution; perfect hashing; signatures; bloom filters; sorting and other bit level structures. Tree structures including binary search trees, B-trees, and trees. Dynamic hashing techniques. Structures including grid files. Applying file structures to practical problems.

CSC 440 Database Management Systems 3.
Prerequisite: CSC 316, CSC Majors.
Introduction to database concepts. This course examines the logical organization of databases: the entity-relationship model; the relational data model and its languages. Functional dependencies and normal forms. Design, implementation, and optimization of query languages; security and integrity, concurrency control, transaction processing, and distributed database systems.

CSC 450 Web Services 3.
Prerequisite: CSC 316.
Concepts, theories, and techniques for Web services. This course examines architectures for Web applications based on the classical publish, find, and bind triangle. It considers the description, discovery, and engagement of Web services. It emphasizes Web service composition. Key topics include semantics, transactions, processes, agents, quality of service, and compliance.

Prerequisite: (CSC 246 or ECE 306) and CSC 230 and CSC 316.
Development of software for wireless computer systems. Software designs for applications and networking in this environment, including algorithms for ad hoc discovery, routing, and secure data transfer. Software interface to related sensors and subsystems including global positioning system. Algorithms for power management. Programming required.

CSC 454 Human-Computer Interaction 3.
Prerequisite: CSC 316.
A survey of concepts and techniques for user interface design and human computer interaction. Emphasizes user-centered design, interface development techniques, and usability evaluation.

CSC 456 Computer Architecture and Multiprocessors 3.
Prerequisite: CSC 236 and CSC 316.
Major components of digital computers and the organization of these components into systems. Begins with single processor systems and extends to parallel systems for multiprocessing. Topics include computer organization, instruction set design, cache memory, pipelined processors, and multiprocessors. Recent developments in PC and desktop architectures are also studied.

Prerequisite: MA 305, CSC 230 and CSC 316.
Principles of computer graphics with emphasis on two-dimensional and aspects of three-dimensional raster graphics. Topics include: graphics hardware devices, lines and polygons, clipping lines and polygons to windows, graphical user interface, vectors, projections, transformations, polygon fill. Programming projects in C or C++.
Prerequisite: CSC 461, CSC Majors.
Principles of computer graphics with emphasis on three-dimensional graphics. Topics include: 3-D projections and transformations, curves and surfaces, color and texture, animation, visualization, and global illumination techniques. Programming project required.

CSC 467 Multimedia Technology 3.
Prerequisite: CSC 246.
Methods of creating, recording, compressing, parsing, editing and playing back on a computer the following media: sound, music, voice, graphics, images, video, and motion. Introduction to basic principles: signal processing, information theory, real-time scheduling. Also includes discussion of standards, programming tools and languages, storage and I/O devices, networking support, legal issues, user interfaces, and applications. Includes significant hands-on experience.

CSC 474 Network Security 3.
Prerequisite: CSC 230.
Basic concepts and techniques in information security and management such as risks and vulnerabilities, applied cryptography, authentication, access control, multilevel security, multilateral security, network attacks and defense, intrusion detection, physical security, copyright protection, privacy mechanisms, security management, system assurance and evaluation, and information warfare. Coverage of high-level concepts such as confidentiality, integrity, and availability applied to hardware, software, and data. Credit not allowed for both CSC 474 and CSC 574.

CSC 481 Game Engine Foundations 3.
Prerequisite: CSC 316.
An introduction to game engines, the technologies underlying computer and console game development. This course will cover engine components, architectures, and designs. Topics include asset management, resource management, event management, memory management, timelines, multithreading, network architectures, and game object models. A sequence of programming assignments will lead students through the implementation of their own game engine, which they will use to design their own game.

CSC 482 Advanced Computer Game Projects 3.
Prerequisite: CSC 481.
Principles of computer game development with emphasis on 3D first-person game engines. Topics include: advanced character behavior control, procedural content generation, large scale multi-player game design and infrastructure, serious games for education, training and other applications, the game production pipeline and project built on top of a commercial game engine. Consideration of the game production pipeline, including project pitches, requirements and design detail. Programming project with written and oral reporting is required. Enrollment open to CSC majors only.

CSC 484 Building Game AI 3.
Prerequisite: CSC 316.
In this course we will examine Artificial Intelligence (AI) techniques that are used in the design of computer games. We will look at techniques for game playing as well as the design of AI opponents tasked with creating “good experiences” for players. The course will begin with a discussion of general AI, common algorithms, data structures, and representations. From there, we will cover topics in character movement, pathfinding, decision making, strategy, tactics, and learning. In a sequence of programming assignments students will create increasingly sophisticated AI implementations. Students will also critically review the projects conducted by graduate students enrolled in CSC584. CSC majors only. Students cannot get credit for both CSC 484 and CSC 584.

CSC 492 Senior Design Project 3.
Prerequisite: CSC 326 ; CSC Majors.
Application of software engineering principles and basic computer science to the total development of a software system. Consideration of the software system design process, including requirements and design detail. Development and evaluation of a prototype accomplished through design team activity. Comprehensive written and oral project report is required. Open to CSC majors.

CSC 495 Special Topics in Computer Science 1-6.
Used for the following types of study: readings in the literature of computer science, introductory research projects, major computer programming projects, seminars, or new course development. Work may be done in any CSC area such as software, hardware utilization, programming languages, numerical methods or telecommunications. Departmental Approval Required.

CSC 499 Independent Research in Computer Science 1-6.
Independent investigation of a research problem under faculty supervision. Departmental Approval Required. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

CSC 501 Operating Systems Principles 3.
Prerequisite: CSC 246, CSC 316 and MA 421.
Fundamental issues related to the design of operating systems. Process scheduling and coordination, deadlock, memory management and elements of distributed systems.

CSC 503 Computational Applied Logic 3.
Prerequisite: CSC 333 or LOG 335 or LOG 435.
Introduction to the conceptual and formal apparatus of mathematical logic, to mathematical concepts underlying the process of logical formalization, and to the applications of various logics across a broad spectrum of problems in computer science and artificial intelligence.

CSC 505 Design and Analysis Of Algorithms 3.
Prerequisite: CSC 246 and CSC 226.
Algorithm design techniques: use of data structures, divide and conquer, dynamic programming, greedy techniques, local and global search. Complexity and analysis of algorithms: asymptotic analysis, worst case and average case, recurrences, lower bounds, NP-completeness. Algorithms for classical problems including sorting, searching and graph problems (connectivity, shortest paths, minimum spanning trees).

CSC 506 Architecture Of Parallel Computers 3.
Prerequisite: CSC 312, or CSC 456, or ECE 406.

CSC 510 Software Engineering 3.
Prerequisite: CSC 316 and CSC 226.
An introduction to software life cycle models; size estimation; cost and schedule estimation; project management; risk management; formal technical reviews; analysis, design, coding and testing methods; configuration management and change control; and software reliability estimation. Emphasis on large development projects. An individual project required following good software engineering practices throughout the semester.
CSC 512 Compiler Construction 3.
Prerequisite: CSC 316 and 333.
Theory and practice of compiler writing. Lexical analysis, table driven LL(1), LR(1) and LALR(1) parsers, code generation, flow analysis, runtime storage organization and optimization. Writing a compiler using software tools a significant part of course.

CSC 513 Electronic Commerce Technology 3.
Prerequisite: CSC 501.
Exploration of technological issues and challenges underlying electronic commerce. Distributed systems; network infrastructures; security, trust, and payment solutions; transaction and database systems; and presentation issues. Project required. No Audits.

CSC 515 Software Security 3.
Prerequisite: CSC 510.
Introduces students to the discipline of designing, developing, and testing secure and dependable software-based systems. Students will learn about risks and vulnerabilities, and effective software security techniques. Topics include common vulnerabilities, access control, information leakage, logging, usability, risk analysis, testing, design principles, security policies, and privacy. Project required.

CSC 517 Object-Oriented Design and Development 3.
Prerequisite: CSC 326 or ECE 309.
The design of object-oriented systems, using principles such as the GRASP principles, and methodologies such as CRC cards and the Unified Modeling Language (UML). Requirements analysis. Design patterns Agile Methods. Static vs. dynamic typing. Metaprogramming. Open-source development practices and tools. Test-first development. Project required, involving contributions to an open-source software project.

Prerequisite: CSC 510 or (graduate or senior standing with at least a 3.0 GPA) and good knowledge of at least one high level programming language.
Modern software development organizations require entire teams of DevOps to automate and maintain software engineering processes and infrastructure vital to the organization. In this course, you will gain practical exposure to the skills, tools, and knowledge needed in automating software engineering processes and infrastructure. Students will have the chance to build new or extend existing software engineering tools and design a DevOps pipeline.

CSC 520 Artificial Intelligence I 3.
Prerequisite: CSC 316 and either CSC 226 or LOG 201 or LOG 335 or background in symbolic logic.
Introduction to and overview of artificial intelligence. Study of AI programming language such as LISP or PROLOG. Elements of AI problem-solving technique. State spaces and search techniques. Logic, theorem proving and associative databases. Introduction to knowledge representation, expert systems and selected topics including natural language processing, vision and robotics.

CSC 522 Automated Learning and Data Analysis 3.
Prerequisite: CSC 226 or LOG 201, ST 370, MA 305.
Introduction to the problems and techniques for automated discovery of knowledge in databases. Topics include representation, evaluation, and formalization of knowledge for discovery; classification, prediction, clustering, and association methods. Selected applications in commerce, security, and bioinformatics. Students cannot get credit for both CSC 422 and CSC 522.
CSC 555 Social Computing 3.
This course surveys the field of social computing, introducing its key concepts, paradigms, and techniques. Specific topics are selected from the following list: social media and social network analytics, sociological underpinnings, crowdsourcing and surveys, human computation, social mobilization, human decision making, voting theory, judgment aggregation, prediction markets, economic mechanisms, incentives, organizational modeling, argumentation, contracts, norms, mobility and social context, sociotechnical systems, and software engineering with and for social computing. This course incorporates ideas from diverse disciplines (including sociology, psychology, law, economics, political science, logic, statistics, philosophy, business) to provide essential background for future computer science careers in industry and research.

Prerequisite: CSC Majors.
Fundamentals of the OpenGL API, 2D and 3D transformations, perspective and orthographic projection, and the mathematical foundations that underlie these concepts. Geometric primitives, clipping, depth buffering, scan conversion, and rasterization. Lighting, shadows, and texture mapping. Curves and surfaces.

CSC 562 Introduction to Game Engine Design 3.
Prerequisites: CSC 561 or CSC 461 or equivalent course from a previous university.
This course offers an advanced discussion of topics in computer graphics, with an emphasis on rendering techniques and GPU shader programming used in computer game engine design. Students are required to implement a medium-size game program that includes modeling and rendering, 2D physics, and animation of dynamic objects. Students will learn about GPU basics, mathematics of transformations, visual appearance properties, texturing, global illumination, and toon shading in computer games.

Prerequisite: CSC 554 or CSC 561.
The conception and creation of effective visual interfaces for mobile devices, including ideation and prototyping for useful mobile applications, the industry and architecture of mobile devices, mobile usage context, computer graphics and interfaces for mobiles, and mobile programming.

CSC 565 Graph Theory 3.
Prerequisite: CSC 226 or MA 351.

CSC 566 Enterprise Storage Architecture 3.
Prerequisite: CSC 246 and CSC 401 and CSC 316.
An introduction to storage systems architecture in an enterprise. Begins with a review of the individual components of a system (e.g., hard disk drives, network interfaces), and shows how to aggregate those into storage systems. Tradeoffs involving factors such as cost, complexity, availability, power and performance. Discussion of information management strategies, including data migration. Guest lectures by representatives from local industry. Students work in teams on a semester-long project.

CSC 570 Computer Networks 3.
Prerequisite: ECE 206 or CSC 312, ST 371, CSC 258 and Senior standing or Graduate standing.
General introduction to computer networks. Discussion of protocol principles, local area and wide area networking, OSI stack, TCP/IP and quality of service principles. Detailed discussion of topics in medium access control, error control coding, and flow control mechanisms. Introduction to networking simulation, security, wireless and optical networking.

CSC 573 Internet Protocols 3.
Prerequisite: CSC/ECE 570.
Principles and issues underlying provision of wide area connectivity through interconnection of autonomous networks. Internet architecture and protocols today and likely evolution in future. Case studies of particular protocols to demonstrate how fundamental principles applied in practice. Selected examples of networked client/server applications to motivate the functional requirements of internetworking. Project required.

CSC 574 Computer and Network Security 3.
Prerequisite: (CSC 316) and (CSC 401 or CSC/ECE 570).
Security policies, models, and mechanisms for secrecy, integrity, and availability. Basic cryptography and its applications; operating system models and mechanisms for mandatory and discretionary controls; introduction to database security; security in distributed systems; network security (firewalls, IPsec, and SSL); and control and prevention of viruses and other rogue programs.

CSC 575 Introduction to Wireless Networking 3.
Prerequisite: ECE/CSC 570.
Introduction to cellular communications, wireless local area networks, ad-hoc and IP infrastructures. Topics include: cellular networks, mobility management, connection admission control algorithms, mobility models, wireless IP networks, ad-hoc routing, sensor networks, quality of service, and wireless security.

Prerequisite: CSC/ECE 570.
Topics related to networking services, signaling for setting up networking services, such as SIP and IMS, networking architectures for providing QoS for networking services, such as MPLS, DiffServ and RAC, signaling protocols for setting up QoS connections in the transport stratum, such as LDP and RSVP-TE, video-based communications, and capacity planning models for dimensioning services.

CSC 577 Switched Network Management 3.
Topics related to design and management of campus enterprise networks, including VLAN design; virtualization and automation methodologies for management; laboratory use of open space source and commercial tools for managing such networks.

CSC 579 Introduction to Computer Performance Modeling 3.
Prerequisite: CSC 312 or ECE 206 and MA 421.
Workload characterization, collection and analysis of performance data, instrumentation, tuning, analytic models including queueing network models and operational analysis, economic considerations.

CSC 580 Numerical Analysis I 3.
Prerequisite: MA 405; MA 425 or MA 511; high-level computer language. Algorithm behavior and applicability. Effect of roundoff errors, systems of linear equations and direct methods, least squares via Givens and Householder transformations, stationary and Krylov iterative methods, the conjugate gradient and GMRES methods, convergence of method.
CSC 582 Computer Models of Interactive Narrative 3.
A theoretical and practical study of the computational models supporting the creation of interactive narrative systems. Topics include basic introductions to cognitive, linguistic and film theoretic models of narrative; representations and reasoning techniques from artificial intelligence related to the creation of storylines, dialog, camera control and other features of narrative in text-based and/or 3D virtual worlds; mechanisms for controlling character behavior in multi-agent multi-user stories; and applications of these techniques ranging from interactive entertainment to educational software to training simulations.

CSC 583 Introduction to Parallel Computing 3.
Prerequisite: CSC 302 or MA 402 or MA/CSC 428 or MA/CSC 580.
Introduction to basic parallel architectures, algorithms and programming paradigms; message passing collectives and communicators; parallel matrix products, domain decomposition with direct and iterative methods for linear systems; analysis of efficiency, complexity and errors; applications such as 2D heat and mass transfer.

CSC 584 Building Game AI 3.
Prerequisite: CSC 316.
In this course we will examine Artificial Intelligence (AI) techniques that are used in the design of computer games. We will look at techniques for game playing as well as the design of AI opponents tasked with creating "good experiences" for players. The course will begin with a discussion of general AI, common algorithms, data structures, and representations. From there, we will cover topics in character movement, pathfinding, decision making, strategy, tactics, and learning. In a sequence of programming assignments students will create increasingly sophisticated AI implementations. Students will also critically review the projects conducted by graduate students enrolled in CSC584. CSC majors only. Students cannot get credit for both CSC 484 and CSC 584.

CSC 591 Special Topics In Computer Science 1-6.
Prerequisite: B average in technical subjects.
Topics of current interest in computer science not covered in existing courses.

CSC 600 Computer Science Graduate Orientation 1.
Introduction for new graduate students to (a) information about graduate program, department, and university resources, and (b) research projects conducted by CSC faculty.

CSC 630 Master's Independent Study 1-3.
Individual investigation of topics under the direction of member(s) of the graduate faculty.

CSC 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

CSC 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

CSC 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

CSC 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

CSC 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their thesis.

Prerequisite: CSC 501.
Fundamentals and advanced topics in operating system (OS) security. Study OS level mechanisms and policies in investigating and defending against real-world attacks on computer systems, such as self-propagating worms, stealthy rootkits and large-scale botnets. OS security techniques such as authentication, system call monitoring, as well as memory protection. Introduce recent advanced techniques such as system-level randomization and hardware virtualization.

CSC 707 Automata, Languages and Computability Theory 3.
Prerequisite: CSC 226 required. CSC 333 recommended.
Formal models of language and computation; finite automata and regular languages, pushdown automata and context-free languages, Turing machines. Relative power of models, Chomsky hierarchy. Inherent complexity of problems: undecidability, computational complexity, intractable problems.

CSC 710 Software Engineering as a Human Activity 3.
Prerequisite: CSC 510.
This course addresses the human aspect of software engineering, by studying the people who practice it. Students will explore software engineering as traditionally defined, and also consider techniques that transform how we understand software engineering, such as methods from psychology and sociology. Students will study the usability of software engineering tools, the psychology of programming, performance of software developers, experimental methods in observing software engineers, distributed development and coordination, and cultural differences between software developers.
CSC 712 Software Testing and Reliability 3.
Prerequisite: CSC 510.
An advanced introduction to software testing and reliability. The course is a balanced mixture of theory, practice, and application. Methods, techniques, and tools for testing software and producing reliable and secure software are used and analyzed. Software reliability growth models and techniques for improving and predicting software reliability are examined, and their practical use is demonstrated. Good knowledge of C++ or Java. Knowledge of the basics of statistics, calculus, and linear algebra.

CSC 714 Real Time Computer Systems 3.
Prerequisite: CSC 451 or CSC 501.
Design and implementation of computer systems required to provide specific response times. Structure of a real-time kernel, fixed and dynamic priority scheduling algorithms, rate monotonic scheduling theory, priority inheritance protocols, real-time benchmarks, case study of a real-time kernel.

CSC 720 Artificial Intelligence II 3.
Prerequisite: CSC 520.
A second course in artificial intelligence emphasizing advanced concepts of AI including logic programming, automatic programming, natural language understanding, visual perception by machine, learning and inference, intelligent computer-aided instruction, knowledge representation, robotics and other topics to be chosen by instructor. Students asked to write programs in AI programming language such as LISP and PROLOG.

CSC 722 Advanced Topics in Machine Learning 3.
Prerequisite: CSC 520.
A broad range of advanced topics in machine learning, the building of computer-based systems that can adapt to their environment and learn from their own experience. Theory of learnability, technical details of various learning methods, combination of multiple methods, evaluation of methods, and related topics (at the discretion of the instructor).

CSC 724 Advanced Distributed Systems 3.
Prerequisite: CSC 501 or equivalent. Programming in C++ or Java in Unix environments.
Principles in the design and implementation of modern distributed systems; recent techniques used by real-world distributed systems such as peer-to-peer file sharing, enterprise data center, and internet search engines; state-of-the-art architectures, algorithms, and performance evaluation methodologies in distributed systems.

CSC 742 Database Management Systems 3.
Prerequisite: CSC 431 or 541.

CSC 743 Secure Data Management 3.
Prerequisite: CSC/ECE 574 and (CSC 440 or CSC 540). Background in databases and basic security concepts required.
Advanced topics in secure data management with techniques in traditional database management systems as well as in recent advances in emerging areas. Emphasis on new security issues and challenges imposed by the Internet and the Web on cross-organization data sharing and management. Example topics include XML, data management in P2P, trust management, data authorship, and the integration of security and privacy policies with information systems.

CSC 750 Service-Oriented Computing 3.
Prerequisite: CSC 540: Database Management Concepts and Systems.
Concepts, theories, and techniques for computing with services. This course examines architectures for Web applications based on the classical publish, find, and bind triangle, but formulates it at a higher level. It considers sophisticated approaches for the description, discovery, and engagement of services, especially over the Web and the Grid. This course emphasizes service composition. Key topics include semantics, transactions, processes, agents, quality of service, compliance, and trust.

CSC 761 Advanced Topics in Computer Graphics 3.
Prerequisite: Graduate standing in Computer Science.
Understanding and discussing current advances and research topics in computer graphics. Possible topics include nonphotorealistic rendering, modeling natural phenomena, illumination and rendering techniques, model simplification, animation, visualization, graphics hardware. Learning to critique research papers from important venues in the computer graphics field. Learning to read, interpret, and present computer graphics research papers in a conference-type environment.

CSC 762 Computer Simulation Techniques 3.
Prerequisite: ST 512 and a scientific programming language.
Basic discrete event simulation methodology: random number generators, simulation designs, validation, analysis of simulation output. Applications to various areas of scientific modeling. Simulation language such as SLAM and GPSS. Computer assignments and projects.

CSC 766 Code Optimization for Scalar and Parallel Programs 3.
Prerequisite: CSC 512, or CSC 548, or CSC 501.
Advanced research issues in code optimization for scalar and parallel programs; program analysis, scalar and parallel optimizations as well as various related advanced topics.

CSC 772 Survivable Networks 3.
Principles of network and service continuity and related metrics; the theory of network availability, survivability, and restoration; a comprehensive coverage of network architectures, protocols, algorithms, and related technology for survivability; advanced topics in network survivability; hands-on experience in the implementation of protocols and software for survivable systems and the operation of survivable networks.

CSC 773 Advanced Topics in Internet Protocols 3.
Prerequisite: CSC/ECE 573.
Cutting-edge concepts and technologies to support internetworking in general and to optimize the performance of the TCP/IP protocol suite in particular. Challenges facing and likely evolution for next generation internetworking technologies. This course investigates topics that include, but may be not limited to: Internet traffic measurement, characterization and modeling, traffic engineering, network-aware applications, quality of service, peer-to-peer systems, content-distribution networks, sensor networks, reliable multicast, and congestion control.

CSC 774 Advanced Network Security 3.
Prerequisite: CSC/ECE 570, CSC/ECE 574.
A study of network security policies, models, and mechanisms. Topics include: network security models; review of cryptographic techniques; internet key management protocols; electronic payments protocols and systems; intrusion detection and correlation; broadcast authentication; group key management; security in mobile ad-hoc networks; security in sensor networks.
CSC 775 Advanced Topics in Wireless Networking 3.
Prerequisite: ECE/CSC 575.
Reviews the current state of research in wireless networks, network architectures, and applications of wireless technologies; students will design, organize, and implement or simulate systems in a full-semester research project. For students with background in networking and communications who wish to explore research and development topics.

CSC 776 Design and Performance Evaluation of Network Systems and Services 3.
Prerequisite: CSC(ECE) 570 and CSC(ECE) 579.
Introduction to the design and performance evaluation of network services. Topics include top-down network design based on requirements, end-to-end services and network system architecture, service level agreements, quantitative performance evaluation techniques. Provides quantitative skills on network service traffic and workload modeling, as well as, service applications such as triple play, internet (IPTV), Peer-to-peer (P2P), voice over IP (VoIP), storage, network management, and access services.

CSC 777 Telecommunications Network Design 3.
Prerequisite: CSC(ECE) 570.
Analytic modeling and topological design of telecommunications networks, including centralized polling networks, packet switched networks, T1 networks, concentrator location problems, routing strategies, teletraffic engineering and network reliability.

CSC 780 Numerical Analysis II 3.
Prerequisite: MA 580.
Approximation and interpolation, Fast Fourier Transform, numerical differentiation and integration, numerical solution of initial value problems for ordinary differential equations.

CSC 791 Advanced Topics In Computer Science 1-6.
Advanced topics of current interest in computer science not covered by existing courses.

CSC 801 Seminar in Computer Science 1-3.
Prerequisite: Graduate standing.
Faculty and graduate student research presentations and discussions centered around current research problems in Computer Science and advanced theories in these areas. Students are expected to make presentations of published works and, depending on the course credit received and their academic degree progress, present their own research results. Critical discussions of the various research approaches and results and their relationships based on the presentations and additional readings and research. Departmental Approval Required.

CSC 830 Doctoral Independent Study 1-3.
Individual investigation of advanced topics under the direction of member(s) of the graduate faculty.

CSC 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

CSC 890 Doctoral Preliminary Exam 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

CSC 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Department of Electrical and Computer Engineering
Box 7911, Engineering Building II
NC State University, Raleigh, NC 27606
Phone: (919) 515-2336

The professions of electrical engineering and computer engineering are concerned with the analysis, design, construction and testing of systems based on electrical phenomena. In contemporary society, electrical methods are used to communicate and store information, control equipment and systems, perform mathematical operations, and convert energy from one form to another. Frequently, two or more of these functions are important in the design of systems such as television, radio, telecommunications, computer, robots and intelligent machines, telemetry systems, solid-state electronics, vehicle safety systems, biomedical devices, environmental controls, electric machinery, and electric power generation and transmission facilities.

Computer engineering is a field in which digital techniques are used in system design. Low-cost solid-state microprocessors and memories permit computers to be widely incorporated in many different types of devices from toys to traffic control systems. To work effectively in this rapidly growing field, the computer engineer must understand both hardware and software techniques and must effectively use both in order to design, build and test complex digital systems. Both the electrical engineering and the computer engineering programs, which lead respectively to the degrees, Bachelor of Science in Electrical Engineering and Bachelor of Science in Computer Engineering, are accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

Program Educational Objectives
The Electrical/Computer Engineering Program graduates will be competent in the following areas:

1. Engineering problem definition and solution using engineering analysis, experimentation, and creativity based on sound mathematical and scientific principles.

2. Electrical/computer systems, components, processes, design requiring knowledge of the discipline, teamwork, communication, skills and an ability to work with a diverse set of constraints.
3. Productive engineering practice, research or management using technical, hands-on and professional knowledge, skills and initiatives required for success in the public, private or academic sectors.

4. Continuing education and learning on the job, experiential learning, leading and mentoring others and the ability to apply lessons learned to new situations.

Scholarships and Awards

Superior academic performance is recognized within this department in three ways: election of students to membership in the electrical engineering honor society, Eta Kappa Nu; awarding of merit scholarships; and presentation of awards to outstanding seniors. The department has one endowed merit scholarship for rising sophomores, the Eugene C. and Winifred Sakshaug Scholarship, and twenty-seven endowed scholarships which are usually awarded to juniors and seniors: William E. Clark, Elizabeth P. Cockrell, Eugene C. Denton, Virginia Stewart Easter Memorial, Ferrell Family, William and Tipton Gray, John and Ann Hauser, Llewellyn Hewett, William and Carol Highfill, Jessie Reid Holshouser, Jr., Charles Kenneth Little, L. A. Mahler, Robin & Susan Manning, Amelia N. Mitta, Dewey Carr Ogburn Memorial Scholarship, Frank T. Pankotay, Ronald G. Pendred, Pratt Family, William DeRosset Scott III, E. Chester Seewald, Shruthi Sorra, Oracle, Fredrick J. Tischer, Herbert B. Walker, Robert S. Wolf, Simon B. Woolard, North Carolina Electric Membership Corporation, and William D. Stevenson, Jr., the latter two of which are for students studying electric power systems. The department also from time to time has scholarships provided by industrial organizations such as Duke Power, Progress Energy, Northrup Grumman, Cisco, Lockheed and ABB. Academic merit is generally the primary requirement for these awards, but other characteristics, such as demonstrated leadership, may also be specified. In addition, the endowed William M. Cates Scholarship Program provides multiple scholarships for students having documented financial need and high academic performance. These are awarded each fall to juniors, with provision for continuation in the senior year.

Facilities

Many courses are accompanied by coordinated laboratory work and projects. These assignments typically focus on real-world systems and problems and involve computer simulation and analysis, design, development and testing of hardware and software associated with electrical, electronic, and electromechanical systems, circuits, and devices.

Extensive facilities are provided for experimental study of analog and digital circuits, microprocessors, computers, VLSI devices, photonics, robots and intelligent machines, power systems, and telecommunications. The Department of Electrical and Computer Engineering maintains 14 teaching labs, all located in Engineering Building II on Centennial Campus. These labs provide students with state-of-the-art equipment designed to teach the students many practical, industry sought skills. Approximately 250 computers and a variety of other equipment—oscilloscopes, multimeters, power supplies, and function generators—are in use by the students on a daily basis. The William F. Troxler Design Center, 2,600 square feet senior design laboratory, provides resources for industry-sponsored, semester-long design projects. The departmental electronic and machine shops provide students with electronic components, hardware and tools.

In addition, Engineering Building III houses a 24/7 public lab of over 70 computers running a variety of operating systems and industry standard software. This lab is available to all engineering students and is staffed by trained student operators. A student-owned laptop platform has been developed in the College of Engineering; combined with a comprehensive wireless network and many remote computer services, this program allows education to expand outside of traditional classroom and laboratory facilities.

Nearby, the state-of-the-art James B. Hunt, Jr. Library gives students an innovative environment filled with technology-abled furniture, high-definition video walls, 3D computing and visualization space, videoconferencing and telepresence facilities, and over 100 meeting areas for group work and study. Inspiring a spirit of discovery, the Hunt Library will help to produce the next generations of technology-savvy citizens, employees, researchers, and scholars.

Core Courses

The electrical and computer engineering curricula share core courses comprising a substantial portion of the first three years of study. Many of the core courses are offered three times a year in fall, spring, and summer. A strong emphasis is placed on fundamental concepts in core courses so that graduates are prepared for rapid technological changes common in the electrical and computer engineering professions. A comprehensive foundation in mathematics and the physical sciences in the freshman year is followed in subsequent years by additional core courses in mathematics, physics, electric circuit theory, digital logic, computer systems, electronics, electromagnetics, and linear systems. Laboratory work is designed to demonstrate fundamental principles and to provide experience in designing and testing electronic hardware and computer software. Both curricula have a required two semester senior design project which gives students comprehensive experience in designing, building, and testing physical systems.

Curricula

In addition to the core courses described above, students in the electrical engineering curriculum take two foundational electives and four specialization electives in areas of their choice within the discipline and two technical electives that can be in either electrical engineering or selected engineering courses offered by other departments. Beyond the core, students in the computer engineering curriculum take courses in discrete mathematics, data structures, embedded systems, and complex digital systems, in addition to four specialization electives in areas of their choice and one technical elective. For both curricula, a variety of elective courses are offered in communications, computational intelligence, controls, digital signal processing, digital systems, nanotechnology, mechatronics, microelectronics, networking, robotics, and VLSI design. There are typically a dozen or more of these courses offered each fall and spring semester and two or three available each summer.

Specific curriculum requirements are available on the Registration and Records website (https://registrar.ncsu.edu/academic-resources/advising-and-curricula).

ECE - Electrical and Computer Engineering Courses

ECE 109 Introduction to Computer Systems

Introduction to key concepts in computer systems. Number representations, switching circuits, logic design, microprocessor design, assembly language programming, input/output, interrupts and traps.
ECE 200 Introduction to Signals, Circuits and Systems 4.
Prerequisite: Cum GPA 2.5 or above (or NTR), C or better in MA 241 and PY 205.

Prerequisite: A grade of C- or better in ECE 109.

Prerequisite: C- or better in ECE 211 Electric Circuits 4.

Introduction to theory, analysis and design of electric circuits. Voltage, current, power, energy, resistance, capacitance, inductance. Kirchhoff's laws node analysis, mesh analysis, Thévenin's theorem, Norton's theorem, steady state and transient analysis, AC, DC, phasors, operational amplifiers, transfer functions.

ECE 212 Fundamentals of Logic Design 3.
Prerequisite: C- or better in ECE 109.

Introduction to digital logic design. Boolean algebra, switching functions, Karnaugh maps, modular combinational circuit design, latches, flip-flops, finite state machines, synchronous sequential circuit design, datapaths, memory technologies, caches, and memory hierarchies. Use of several CAD tools for simulation, logic minimization, synthesis, state assignment, and technology mapping.

ECE 220 Analytical Foundations of Electrical and Computer Engineering 3.
Prerequisite: C- or better in ECE 200.

This course is designed to acquaint you with the basic mathematical tools used in electrical and computer engineering. The concepts covered in this course will be used in higher level courses and, more importantly, throughout your career as an engineer. Major topics of the course include complex numbers, real and complex functions, signal representation, elementary matrix algebra, solutions to linear systems of equations, linear differential equations, Laplace transforms used for solving linear differential equations, Fourier series and transforms and their uses in solving ECE problems. EE and CPE Majors Only.

ECE 301 Linear Systems 3.
Prerequisite: C- or better in ECE 211 and ECE 220.

ECE 302 Microelectronics 4.
Prerequisite: A grade of C- or better in ECE 211.

Introduction to the physics of semiconductors, PN junctions, BJT and MOS field Effect Transistors: Physics of operation, IV characteristics, load line, quiescent point of operation, PSPICE analysis; diode circuit analysis; voltage regulation; Single Stage Transistor Amplifiers: Common Emitter and Common Source configurations, biasing, inverting and non-inverting amplifiers; follower circuits; calculation of small signal voltage gain, current gain, coupling and bypass capacitors; Multistage ac-coupled amplifiers; small signal modeling; input resistance and output resistance; logic inverters.

ECE 303 Electromagnetic Fields 3.
Prerequisite: A grade of C- or better in ECE 211 and ECE 220.

This course prepared the students to formulate and solve electromagnetic problems relevant to all fields of electrical and computer engineering and that will find application in subsequent courses in RF circuits, photonics, microwaves, wireless networks, computers, bioengineering, and nanoelectronics. Primary topics include static electric and magnetic fields, Maxwell's equations and force laws, wave propagation, reflection and refraction of plane waves, transient and steady-state behavior of waves on transmission lines. Restriction: EE and CPE Majors Only.

ECE 305 Principles of Electromechanical Energy Conversion 3.
Prerequisite: C- or better in ECE 211 or ECE 331.

Three-phase circuits and power flow, analysis of magnetic circuits, performance of single-phase and three-phase transformers, principles of electromechanical energy conversion, steady-state characteristics and performance of alternating current and direct current machinery.

ECE 306 Introduction to Embedded Systems 3.
Prerequisite: C- or better in ECE 209 and ECE 212.

Introduction to designing microcontroller-based embedded computer systems using assembly and C programs to control input/output peripherals. Use of embedded operating system.

ECE 308 Elements of Control Systems 3.
Prerequisite: (ECE 220 and ECE 211) or BME 311; Co-requisite: ECE 301.

Analog system dynamics, open and closed loop control, block diagrams and signal flow graphs, input-output relationships, stability analyses using Routh-Hurwitz, root-locus and Nyquist, time and frequency domain analysis and design of analog control systems. Use of computer-aided analysis and design tools. Class project. EE, CPE, BME majors only.

ECE 309 Object-Oriented Programming for Electrical and Computer Engineers 3.
Prerequisite: C- or better in ECE 209.

ECE 310 Design of Complex Digital Systems 3.
Prerequisite: A grade of C- or better in ECE 212.

ECE 331 Principles of Electrical Engineering 3.
Prerequisite: PY 208 and a C or better in MA 241.
Concepts, units and methods of analysis in electrical engineering. Analysis of d-c and a-c circuits, characteristics of linear and non-linear electrical devices; principles of operational amplifiers; transformers; motors; and filters.

ECE 380 Engineering Profession for Electrical Engineers 1.
Prerequisites: C- or better in ECE 211 and ECE 212 and ECE 220.
Introduction to engineering as a profession including issues surrounding electrical engineering. Topics include professional and ethical responsibilities, risks and liabilities, intellectual property, and privacy. Economic issues including entrepreneurship and globalization.

ECE 381 Engineering Profession for Computer Engineers 1.
Prerequisites: C- or better in ECE 211 and ECE 212 and ECE 220.
Introduction to engineering as a profession including issues surrounding computer engineering. Topics include professional and ethical responsibilities, risks and liabilities, intellectual property, and privacy. Economic issues including entrepreneurship and globalization.

ECE 383 Introduction to Entrepreneurship and New Product Development 1.
This course is part of the Engineering Entrepreneurs Program. Students work as team members on projects being led by seniors completing their senior capstone design. Students will be exposed to many areas of product development and will assist in the design and implementation of the prototype product.

ECE 402 Communications Engineering 3.
P: ECE 301 and ST 371; R: EE and CPE Majors Only.
An overview of digital communications for wireline and wireless channels which focuses on reliable data transmission in the presence of bandwidth constraints and noise. The emphasis is on the unifying principles common to all communications systems, examples include digital telephony, compact discs, high-speed modems and satellite communications.

ECE 403 Electronics Engineering 3.
Prerequisite: ECE 301, ECE 302.
Design and analysis of CMOS integrated circuits, from single transistor stages to operational amplifiers. Feedback in operational amplifier circuits, compensation and stability. ECE majors only.

ECE 404 Introduction to Solid-State Devices 3.
P: ECE 302 or E 304; C: EE, CPE, NanoScience and Technology Majors Only.
Basic principles required to understand the operation of solid-state devices. Semiconductor device equations developed from fundamental concepts. P-N junction theory developed and applied to the analysis of devices such as varactors, detectors, solar cells, bipolar transistors, field-effect transistors. Emphasis on device physics rather than circuit applications.

ECE 407 Introduction to Computer Networking 3.
Prerequisite: ECE 301.
This course focuses on engineering principles of computer communications and networking, including layering concepts, overview of protocols, architectures for local, metropolitan, and wide-area networks, routing protocols, internet operations, transport control and applications, emerging issues in computer networks. EE and CPE majors only.

ECE 420 Wireless Communication Systems 3.
Prerequisite: ECE 402.
A study of applications of communication theory and signal processing to wireless systems. Topics include an introduction to information theory and coding, basics and channel models for wireless communications, and some important wireless communication techniques including spread-spectrum and OFDM. MATLAB exercises expose students to engineering considerations.

ECE 421 Introduction to Signal Processing 3.
Prerequisite: ECE 301.

ECE 422 Transmission Lines and Antennas for Wireless 3.
Prerequisite: ECE 303.
Review of time-varying electromagnetic theory. A study of the analytical techniques and the characteristics of several useful transmission lines and antennas. Examples are coaxial lines, waveguides, microstrip, optical fibers and dipole, monopole and array antennas.

ECE 423 Introduction to Photonics and Optical Communications 3.
Prerequisite: ECE 303 or Permission of the Instructor.
This course investigates photonic devices at the component level and examines the generation, propagation, and detection of light in the context of optical communication systems. Topics include the design of simple optical systems and focuses on the use of lasers, fiber optics, and photodetectors. The labs include building a Michelson interferometer, preparing and coupling light to an optical fiber, characterizing LEDs and laser diodes and making a fiber optical link.

ECE 434 Fundamentals of Power Electronics 3.
Prerequisites: ECE 302 or equivalent.
Design, analysis, modeling and control of DC-DC converters, DC-AC inverters, AC-DC rectifiers/converters, and AC-to-AC converters. Power conversion using switched high-voltage high-current semiconductors in combination with inductors and capacitors. Design of DC-DC, DC-AC, AC-DC, and AC-AC power converters as well as an introductions to design of magnetic components for use in power converters, applications to fuel cells, photovoltaics, motor drives, and uninterruptable power supplies.

ECE 436 Digital Control Systems 3.
Prerequisite: ECE 435.
Discrete systems dynamics, sampled-data systems, mathematical representations of analog/digital and digital/analog conversions, open- and closed-loop systems, input-output relationships, state-space and stability analyses, time- and frequency-domain analyses. Design and implementation of digital controllers.

ECE 442 Integrated Circuit Technology and Fabrication 3.
Prerequisite: ECE 404.
Semiconductor device and integrated-circuit processing and technology. Wafer specification and preparation, oxidation, diffusion, ion implantation, photolithography, design rules and measurement techniques.

ECE 451 Power System Analysis 3.
Prerequisite: ECE 305.
Long-distance transmission of electric power with emphasis on load flow, economic dispatch, fault calculations and system stability. Applications of digital computers to power-system problems. Major design project.
Prerequisite: ECE 305 or ECE 331.
Principles and characteristics of renewable energy based electric power
generation technologies such as photovoltaic systems, wind turbines, and
fuel cells. Main system design issues. Integration of these energy sources
into the power grid. Economics of distributed generation. Credit is not
allowed for both ECE 452 and ECE 552.

ECE 453 Electric Motor Drives 3.
Prerequisite: A grade of C or better in ECE 305.
Principles of electromechanical energy conversion; analysis,
modeling, and control of electric machinery; steady state performance
characteristics of direct-current, induction, synchronous and reluctance
machines; scalar control of induction machines; introduction to direct- and
quadrature-axis theory; dynamic models of induction and synchronous
motors; vector control of induction and synchronous motors.

ECE 455 Industrial Robotic Systems 3.
Prerequisite: ECE 308.
Techniques of computer control of industrial robots: interfacing with
synchronous hardware including analog/digital and digital/analog
converters, interfacing noise problems, control of electric and hydraulic
actuators, kinematics and kinetics of robots, path control, force control,
sensing including vision. Major design project. EE, CPE, BME, JEM
majors only.

ECE 456 Mechatronics 3.
Prerequisite: ECE 435.
The study of electro-mechanical systems controlled by microcomputer
technology. The theory, design and construction of smart systems;
closely coupled and fully integrated products and systems. The
synergistic integration of mechanisms, materials, sensors, interfaces,
actuators, microcomputers, controllers, and information technology.

ECE 461 Embedded System Design 3.
Prerequisite: Grade of C- or better in ECE 306.
Design and implementation of software for embedded computer systems.
The students will learn to design systems using microcontrollers, C
and assembly programming, real-time methods, computer architecture,
interfacing system development and communication networks. System
performance is measured in terms of power consumption, speed and
reliability. Efficient methods for project development and testing are
emphasized. Credit will not be awarded for both ECE 461 and ECE 561.
Restricted to CPE and EE Majors.

ECE 463 Advanced Microprocessor Systems Design 3.
Prerequisite: ECE 406.
Advanced topics in microprocessor systems design, including processor
architectures, virtual-memory systems, multiprocessor systems, and
single-chip microcomputers. Architectural examples include a variety of
processors of current interest, both commercial and experimental. Major
design project.

ECE 464 ASIC Design 3.
Prerequisite: ECE 406, ECE 302.
Design of digital application specific integrated circuits (ASICs) based
on hardware description languages (Verilog, VHDL) and CAD tools.
Emphasis on design practices and underlying algorithms. Introduction
to deep sub-micron design issues like interconnections and low
power and to modern applications including multi-media, wireless,
Telecommunications and computing. Required design project.

ECE 466 Compiler Optimization and Scheduling 3.
Prerequisite: ECE 306 and either ECE 309 or CSC 316.
Provide insight into current compiler designs dealing with present and
future generations of high performance processors and embedded
systems. Investigate dataflow analysis and memory disambiguation,
classical and parallelism enhancing optimizations, scheduling and
speculative execution, and register allocation. Review of techniques used
in current research compilers.

ECE 468 Conventional and Emerging Nanomanufacturing
Techniques and Their Applications in Nanosystems 3.
Prerequisite: E 304.
Conventional and emerging nano-manufacturing techniques and their
applications in the fabrication of various structures and devices. Review
of techniques for patterning, deposition, and etching of thin films including
emerging techniques such as an imprint and soft lithography and other
unconventional techniques. Electronic and mechanical properties of 0
to 3-D nanostructures and their applications in nano-electronics, MEMS/
NEMS devices, sensing, energy harvesting, storage, flexible electronics
and nano-medicine. Credit for both ECE/CHE 468 and ECE/CHE 568 is
not allowed.

ECE 470 Internetworking 3.
Prerequisite: ECE 407 or CSC 401.
Introduction, Planning and Managing networking projects, networking
elements-hardware, software, protocols, applications; TCP/IP, ATM,
LAN emulation. Design and implementation of networks, measuring and
assuring network and application performance;metrics, tools, quality of
service. Network-based applications, Network management and security.

ECE 480 Senior Design Project in Electrical Engineering 3.
Prerequisite: ECE 381, ECE 302, ECE 303, ECE 380, and any two ECE
specialization Courses.
Applications of engineering and basic sciences to the total design
electrical engineering circuits and systems. Consideration of the
design process including feasibility study, preliminary design detail, cost
effectiveness, along with development and evaluation of a prototype
accomplished through design-team project activity. Complete written and
oral engineering report required.

ECE 481 Senior Design Project in Computer Engineering 3.
Prerequisite: ECE 381, ECE 301, ECE 302, ECE 303, ECE 406 and an
ECE specialization elective.
Application of engineering and basic sciences to the total design
computer engineering circuits and systems. Consideration of the
design process including feasibility study, preliminary design detail, cost
effectiveness, along with development and evaluation of a prototype
accomplished through design-team project activity. Complete written and
oral engineering report required.

ECE 482 Engineering Entrepreneurship and New Product
Development I 3.
Applications of engineering, mathematics, basic sciences, finance,
and business to the design and development of prototype engineering
products. This course requires a complete written report and an end-of-
course presentation. This is the first course in a two semester sequence.
Students taking this course will implement their designed prototype in
ECE 483: Senior Design Project in Electrical Engineering and Computer
Engineering II-Engineering Entrepreneurs. Departmental approval
required.
ECE 483 Engineering Entrepreneurship and New Product Development II 3. 
Prerequisite: ECE 301, ECE 302, ECE 303, and any two ECE specialization courses.
Applications of engineering, science, management and entrepreneurship to the design, development and prototyping of new product ideas. Based on their own new product ideas, or those of others, students form and lead entrepreneurship teams (eTeams) to prototype these ideas. The seniors run their eTeams as 'virtual' startup companies where the seniors take on the executive roles. Joining them are students from other grade levels and disciplines throughout the university that agree to participate as eTeam members. Departmental approval required.

ECE 484 Electrical and Computer Engineering Senior Design Project I 3. 
Prerequisite: ECE 380 and ECE 301 and ECE 302 and ENG 331; Coreq: One 400-level ECE Elective.
Applications of engineering and basic sciences to the total design of electrical and/or computer engineering circuits and systems. Consideration of the design process including concept and feasibility study, systems design, detailed design, project management, cost effectiveness, along with development and evaluation of a prototype accomplished through design-team project activity. Supported with introduction to a parallel functions impacting engineering design process to including: industrial design, finance, operations, etc. EE and CPE Majors only.

ECE 485 Electrical and Computer Engineering Senior Design Project II 3. 
Prerequisite: ECE 484.
Applications of engineering and basic sciences to the total design of electrical engineering circuits and systems. Consideration of the design process including feasibility study, preliminary design detail, cost effectiveness, along with development and evaluation of a prototype accomplished through design-team project activity. Complete written and oral engineering report required. EE and CPE majors only.

ECE 492 Special Topics in Electrical and Computer Engineering 1-4. 
Offered as needed for development of new courses in electrical and computer engineering.

ECE 495 Individual Study in ECE 1-3. 
P: Appropriate 300-level Course; R: EE and CPE Majors Only. 
Department Approval Required.
Independent investigation of a topic or research problem under faculty supervision. Individualized/Independent Study and Research courses require a "Course Agreement for Students Enrolled in Non-Standard Courses" be completed by the student and faculty member prior to registration by the department.

ECE 498 Special Projects in ECE 1-3. 
Prerequisite: At least one 300-level ECE course, 3.0 GPA; Restricted to: EE or CPE majors.
Faculty-supervised special projects in electrical and/or computer engineering. Projects involve small groups of students, working collaboratively or independently, focused on a single theme, such as the design of a component or system. Requires a "Course Agreement for Students Enrolled in Non-Standard Courses," completed by the student and faculty member prior to registration by the department.

ECE 506 Architecture Of Parallel Computers 3. 
Prerequisite: ECE 406.

ECE 511 Analog Electronics 3. 
Prerequisite: ECE403.
Analog integrated circuits and analog integrated circuit design techniques. Review of basic device and technology issues Comprehensive coverage of MOS and Bipolar operational amplifiers. Brief coverage of analog-to-digital conversion techniques and switched-capacitor filters. Strong emphasis on use of computer modeling and simulation as design tool. Students required to complete an independent design project.

ECE 513 Digital Signal Processing 3. 
Prerequisite: ECE 421, B average in ECE and MA; Signals and Linear Systems.
Digital processing of analog signals. Offline and real-time processing for parameter, waveshape and spectrum estimation. Digital filtering and applications in speech, sonar, radar, data processing and two-dimensional filtering and image processing.

ECE 514 Random Processes 3. 
Prerequisite: Statistics 371; Signals and Linear Systems; Linear Algebra; Calculus.
Probabilistic descriptions of signals and noise, including joint, marginal and conditional densities, autocorrelation, cross-correlation and power spectral density. Linear and nonlinear transformations. Linear least-squares estimation, Signal detection.

ECE 515 Digital Communications 3. 
Prerequisite: ECE 514, ST 371, Signals and Linear Systems; Linear Algebra.
This course is a first graduate-level course in digital communications. Functions and interdependence of various components of digital communication systems will be discussed. Statistical channel modeling, modulation and demodulation techniques, optimal receiver design, performance analysis methods, source coding, quantization, and fundamentals of information theory will be covered in this course.

ECE 516 System Control Engineering 3. 
Prerequisite: ECE 435 or ECE 301.
Introduction to analysis and design of continuous and discrete-time dynamical control systems. Emphasis on linear, single-input, single-output systems using state variable and transfer function methods. Open and closed-loop representation; analog and digital simulation; time and frequency response; stability by Routh-Hurwitz, Nyquist and Liapunov methods; performance specifications; cascade and state variable compensation. Assignments utilize computer-aided analysis and design programs.
ECE 517 Object-Oriented Design and Development 3.
Prerequisite: CSC 326 or ECE 309.
The design of object-oriented systems, using principles such as the
GRASP principles, and methodologies such as CRC cards and the
Unified Modeling Language (UML). Requirements analysis. Design
patterns Agile Methods. Static vs. dynamic typing. Metaprogramming.
Open-source development practices and tools. Test-first development.
Project required, involving contributions to an open-source software
project.

ECE 520 Digital Asic Design 3.
Prerequisite: ECE 212 and Senior or Graduate standing.
Design of digital Application Specific Integrated Circuits (ASICs) based
on Hardware Description Languages (Verilog, VHDL) and CAD tools,
particularly login synthesis. Emphasis on design practices and underlying
algorithms. Introduction to timing-driven design, low-power design,
design-for-test and ASIC applications. Project.

ECE 521 Computer Design and Technology 3.
Prerequisite: ECE 306.
Design of general-purpose computers through cost-performance analysis.
Emphasis on making design decisions regarding the instruction set
architecture and organization of single-processor computer. Discussion
of design choices, role of compiler and techniques for analysis, simulation
and implementation. Consideration of relationships between architecture,
organization and technology.

ECE 522 Medical Instrumentation 3.
Fundamentals of medical instrumentation systems, sensors, and
biomedical signal processing. Example instruments for cardiovascular
and respiratory assessment. Clinical laboratory measurements, therapeutic
and prosthetic devices, and electrical safety requirements. Students
should have background in electronics design using operational
amplifiers.

ECE 523 Photonics and Optical Communications 3.
Prerequisite: Graduate standing or Senior standing; Engineering Majors
or Physics Majors.
This course investigates photonic devices at the component level and
examines the generation, propagation and detection of light in the context
of optical communication systems. Topics include planar and cylindrical
optical waveguides, LEDs, lasers, optical amplifiers, integrated optical
and photodetectors, design tradeoffs for optical systems, passive optical
networks, and wavelength division multiplexed systems.

ECE 530 Physical Electronics 3.
Prerequisite: ECE 303, B average in ECE and MA.
Properties of charged particles under influence of fields and in solid
materials. Quantum mechanics, particle statistics, semiconductor
properties, fundamental particle transport properties, p-n junctions.

ECE 531 Principles Of Transistor Devices 3.
Prerequisite: ECE 404.
Analysis of operating principles of transistor structures. Basic semi-
conductor physics reviewed and used to provide explanation of transistor
characteristics. Development and usage of device-equivalent circuits
to interpret semi-conductor-imposed limitations on device performance.
Devices analyzed include MISFET's, HEMT's, Bipolar transistors, PBT's,
Heterojunction BJT's and SiT's.

ECE 532 Principles Of Microwave Circuits 3.
Prerequisite: ECE 422.
Principles required to understand behavior of electronic circuits operating
at microwave frequencies. Review of electric-magnetic theory and
establishing an understanding of techniques required for working with
electronic circuits at microwave and millimeter-wave frequencies.
Discussion of circuit components operating at these frequencies.

ECE 534 Power Electronics 3.
Prerequisite: ECE 302.
DC and AC analysis of isolated and non-isolated switch mode power
supply. Basic converter topologies covered include: buck, boost and
buck-boost and their transformer-couples derivatives. Design of close
loop of these DC/DC converters. Power devices and their applications in
DC/DC converters. Inductor and transformer design.

Prerequisite: MA 341.
A practical introduction to electromechanical systems with emphasis
on modeling, analysis, design, and control techniques. Provides theory
and practical tools for the design of electric machines (standard motors,
linear actuators, magnetic bearings, etc). Involves some self-directed
laboratory work and culminates in an industrial design project. Topics
include Maxwell's equations, electromagnetic energy conversion, finite
element analysis, design and control techniques.

ECE 536 Digital Control Systems 3.
Prerequisite: ECE 435 and Graduate Standing in Engineering.
Discrete system dynamics, sampled-data systems, mathematical
representations of analog/digital and digital/analog conversions, open-
and -closed-loop systems, input-output relationships, state-space and
stability analyses, time and frequency domain analysis with emphasis
on time domain. Design and implementation of digital controllers. Design
project including hardware implementation.

ECE 538 Integrated Circuits Technology and Fabrication 3.
Prerequisite: ECE 404.
Processes used in fabrication of modern integrated circuits. Process
steps for crystal growth, oxidation, diffusion, ion implantation, lithography,
chemical vapor deposition, etching, metallization, layout and packaging.
Process integration for MOS and bipolar processes. Characterization
techniques, simulation, yield and reliability.

ECE 540 Electromagnetic Fields 3.
Prerequisite: ECE 422.
Brief review of Maxwell's Equations, constitutive relations and boundary
conditions. Reflection and refraction of plane waves; power and energy
relations in isotropic media. Potential functions, Green's functions and
their applications to radiation and scattering. Antenna fundamentals:
linear antennas, uniform linear arrays and aperture antennas, microstrip
antennas. Fundamentals of numerical methods for electromagnetic
simulation and antenna design.

ECE 542 Neural Networks 3.
Introduction to neural networks and other basic machine learning
methods including radial basis functions, kernel methods, support vector
machines. The course introduces regularization theory and principle
component analysis. The relationships to filtering, pattern recognition and
estimation theory are emphasized.
ECE 544 Design Of Electronic Packaging and Interconnects 3.
Prerequisite: ECE 302.
A study of the design of digital and mixed signal interconnect and packaging. Topics covered include: Single chip (surface mount and through-hole) and multi-chip module packaging technology; packaging technology selection; thermal design; electrical design of printed circuit board, backplane and multi-chip module interconnect; receiver and driver selection; EMI control; CAD tools; and measurement issues.

ECE 546 VLSI Systems Design 3.
Prerequisite: ECE 302.
Digital systems design in CMOS VLSI technology: CMOS device physics, fabrication, primitive components, design and layout methodology, integrated system architectures, timing, testing future trends of VLSI technology.

ECE 547 Cloud Computing Technology 3.
Prerequisites: CSC 501 and ECE/CSC 570.
Study of cloud computing principles, architectures, and actual implementations. Students will learn how to critically evaluate cloud solutions, how to construct and secure a private cloud computing environment based on open source solutions, and how to federate it with external clouds. Performance, security, cost, usability, and utility of cloud computing solutions will be studied both theoretically and in hands-on exercises. Hardware-, infrastructure-, platform-, software-, security-, and high-performance computing - "as-a-service".

ECE 549 RF Design for Wireless 3.
Prerequisite: ECE 303, ECE 302.
Design of the hardware aspects of wireless systems with principle emphasis on design of radio frequency (RF) and microwave circuitry. Introduction of system concepts and functional block design of a wireless system. RF and microwave transistors, noise, power amplifiers, CAE, linearization and antennas.

ECE 550 Power System Operation and Control 3.
Prerequisite: ECE 305, ECE 435.
Fundamental concepts of economic operation and control of power systems. Real and reactive power balance. System components, characteristics and operation. Steady state and dynamic analysis of interconnected systems. Tieline power and load-frequency control with integrated economic dispatch.

ECE 551 Smart Electric Power Distribution Systems 3.
Prerequisite: ECE 451.
Features and components of electric power distribution systems, power flow, short circuit and reliability analysis, basic control and protection, communications and SCADA, new "smart" functionality such as integrated volt/var control, automated fault location isolation and restoration, demand response and advanced metering infrastructure, integration of distributed generation and energy storage.

Prerequisite: ECE 305 or ECE 331.
Principles and characteristics of renewable energy based electric power generation technologies such as photovoltaic systems, wind turbines, and fuel cells. Main system design issues. Integration of these energy sources into the power grid. Economics of distributed generation. Credit is not allowed for both ECE 452 and ECE 552.

ECE 553 Semiconductor Power Devices 3.
Prerequisite: ECE 404.
The operational physics and design concepts for power semiconductor devices. Relevant transport properties of semiconductors. Design of breakdown voltage and edge terminations. Analysis of Schottky rectifiers, P-i-N rectifiers, Power MOSFETs, Bipolar Transistors, Thyristors and Insulated Gate Bipolar Transistors.

ECE 555 Computer Control of Robots 3.
Prerequisite: ECE 435; ECE 436; ECE 456.
An introduction to robotics: history and background, design, industrial applications and usage. Manipulator sensors, actuators and control, linear, non-linear, and force control. Manipulator kinematics: position and orientation, frame assignment, transformations, forward and inverse kinematics. Jacobian: velocities and static forces. Manipulator Kinetics: velocity, acceleration, force. Trajectory generation. Programming languages: manipulator level, task level, and object level. Introduction to advanced robotics. Credit not allowed for both ECE 455 and 555.

ECE 556 Agent-based Mechatronics Systems 3.
Prerequisite: ECE 301.
Agent and systems concepts to study sensors, actuators, controllers and communication networks, as well as their interactions. Theory, design and control of the integration of sensors, interfaces, actuators, microcontrollers. Use of computer networks as communication media in the mechatronics systems integration and control. Use of unmanned vehicle path tracking and teleoperation to illustrate the mechatronics agent and system concept and integration. Students can either take ECE 456 or ECE 556, but not both. These two courses are piggy-backed and cover similar material, yet ECE 556 has more demanding homeworks, project, and an exam that are at the graduate level.

ECE 557 Principles Of MOS Transistors 3.
Prerequisite: ECE 404.
MOS capacitor and transistor regions of operation. Depletion and enhancement mode MOSFETs. MOSFET scaling, short and narrow channel effects. MOSFETs with ion-implanted channels. High field effects in MOSFETs with emphasis on recent advances in design of hit carrier suppressed structures. Small and large signal MOSFET models. State of the art in MOS process integration.

ECE 558 Digital Imaging Systems 3.
Prerequisites: ECE 301 and ST 372.
Foundation for designing and using digital devices to accurately capture and display color images, spatial sampling, frequency analysis, quantization and noise characterization of images. Basics of color science are presented and applied to image capture and output devices.

ECE 561 Embedded System Design 3.
Prerequisite: ECE 306.
Design and implementation of embedded computer systems. The student will extend previous knowledge of the use of microcontrollers, C and assembly programming, real-time methods, computer architecture, simulation, interfacing, system development and communication networks. System performance is measured in terms of power consumption, speed and reliability. Efficient methods for project development and testing are emphasized.
ECE 566 Code Generation and Optimization 3.
Prerequisite: ECE 306 and CSC 316.
Provide insight into current compiler designs dealing with present and future generations of high performance processors and embedded systems. Investigate dataflow analysis and memory disambiguation, classical and parallelism enhancing optimizations, scheduling and speculative execution, and register allocation. Review of techniques used in current research compilers. Students may not take both 466 and 566 for credit.

ECE 568 Conventional and Emerging Nanomanufacturing Techniques and Their Applications in Nanosystems 3.
Prerequisite: Graduate Standing or Permission of the Instructor.
Conventional and emerging nano-manufacturing techniques and their applications in the fabrication of various structures and devices. Review of techniques for patterning, deposition, and etching of thin films including emerging techniques such as an imprint and soft lithography and other unconventional techniques. Electronic and mechanical properties of 0 to 3-D nanostructures and their applications in nano-electronics, MEMS/ NEMS devices, sensing, energy harvesting, storage, flexible electronics and nano-medicine. Credit for both ECE/CHE 468 and ECE/CHE 568 is not allowed.

ECE 570 Computer Networks 3.
Prerequisite: ECE 206 or CSC 312, ST 371, CSC 258 and Senior standing or Graduate standing.
General introduction to computer networks. Discussion of protocol principles, local area and wide area networking, OSI stack, TCP/IP and quality of service principles. Detailed discussion of topics in medium access control, error control coding, and flow control mechanisms. Introduction to networking simulation, security, wireless and optical networking.

ECE 573 Internet Protocols 3.
Prerequisite: CSC/ECE 570.
Principles and issues underlying provision of wide area connectivity through interconnection of autonomous networks. Internet architecture and protocols today and likely evolution in future. Case studies of particular protocols to demonstrate how fundamental principles applied in practice. Selected examples of networked client/server applications to motivate the functional requirements of internetworking. Project required.

ECE 574 Computer and Network Security 3.
Prerequisite: (CSC 316) and (CSC 401 or CSC/ECE 570).
Security policies, models, and mechanisms for secrecy, integrity, and availability. Basic cryptography and its applications; operating system models and mechanisms for mandatory and discretionary controls; introduction to database security; security in distributed systems; network security (firewalls, IPsec, and SSL); and control and prevention of viruses and other rogue programs.

ECE 575 Introduction to Wireless Networking 3.
Prerequisite: ECE/CSC 570.
Introduction to cellular communications, wireless local area networks, ad-hoc and IP infrastructures. Topics include: cellular networks, mobility management, connection admission control algorithms, mobility models, wireless IP networks, ad-hoc routing, sensor networks, quality of service, and wireless security.

Prerequisite: CSC/ECE 570.
Topics related to networking services, signaling for setting up networking services, such as SIP and IMS, networking architectures for providing QoS for networking services, such as MPLS, DiffServ and RAC, signaling protocols for setting up QoS connections in the transport stratum, such as LDP and RSVP-TE, video-based communications, and capacity planning models for dimensioning services.

ECE 577 Switched Network Management 3.
Topics related to design and management of campus enterprise networks, including VLAN design; virtualization and automation methodologies for management; laboratory use of open space source and commercial tools for managing such networks.

ECE 579 Introduction to Computer Performance Modeling 3.
Prerequisite: CSC 312 and MA 421.
Workload characterization, collection and analysis of performance data, instrumentation, tuning, analytic models including queueing network models and operational analysis, economic considerations.

ECE 581 Electric Power System Protection 3.
Prerequisite: ECE 451.
Protection systems used to protect the equipment in an electric power system against faults, fault analysis methods, basic switchgear used for protection, basic protection schemes, such as overcurrent, differential, and distance protection and their application.

ECE 582 Wireless Communication Systems 3.
Prerequisite: Senior level digital communications course, e.g., ECE 402, Corequisite: ECE 714.
Theory and analysis of wireless portable communication systems. Provides a fundamental understanding of the unique characteristics of these systems. Topics include: Code Division Multiple Access (CDMA), mobile radio propagation, characterization of a Rayleigh fading multipath channel, diversity techniques, adaptive equalization, channel coding, and modulation/demodulation techniques. Although contemporary cellular and personal communication services (PCS) standards are covered, the course stresses fundamental theoretical concepts that are not tied to a particular standard.

ECE 583 Electric Power Engineering Practicum I 3.
Prerequisite: ECE 451.
This course introduces fundamentals of project management and system engineering principles in a wide range of electric power applications from concept through termination. The course also provides opportunities for students to adapt technical content to both expert and novice audiences in project management reports and presentations. Restricted to Master of Science in Electric Power Systems Engineering.

ECE 584 Electric Power Engineering Practicum II 3.
Prerequisite: ECE 583.
In this capstone course students will apply electric engineering and science knowledge to an electrical power engineering project. Consideration of the design process including feasibility study, preliminary design detail, cost effectiveness, along with development and evaluation of a prototype accomplished through design-team project activity. Complete written and oral engineering report required. Restricted to Master of Science in Electric Power Systems Engineering.
Prerequisite: ECE 451.
Evolution of the electric utility industry, the structure and business models of the industry, the regulatory factors within which the utilities operate, the operations of the utility industry and the current policy and emerging technology issues facing the business. The course includes significant interaction with industry officials and utility business operations.

ECE 586 Communication and SCADA Systems for Smart Grid 3.
R: Graduate Students Only.
This is an introductory course on communication technologies and SCADA (supervisory control and data acquisition) systems for smart electric power applications. The fundamental concepts, principles, and practice of how communication systems operate are introduced and the function of main components reviewed. Application of communication systems for electric power, in particular SCADA architecture and protocols are also introduced. The course includes hands-on experience with typical intelligent electronic devices interconnected by a communication system.

ECE 591 Special Topics In Electrical Engineering 1-6.
Prerequisite: B average in technical subjects.
Two-semester sequence to develop new courses and to allow qualified students to explore areas of special interest.

ECE 592 Special Topics In Electrical Engineering 1-6.
Prerequisite: B average in technical subjects.
Two-semester sequence to develop new courses and to allow qualified students to explore areas of special interest.

ECE 600 ECE Graduate Orientation 1.
Introduction of the Electrical and Computer Engineering Department graduate program. Introduction to computing and library facilities; Review of NC State student code of conduct and ethics. Structure of the ECE department. General information for starting graduate studies. Overview of on-going research projects by faculty members. Must hold graduate standing.

ECE 633 Individual Topics In Electrical Engineering 1-3.
Prerequisite: B average in technical subjects.
Provision of opportunity for individual students to explore topics of special interest under direction of a member of faculty.

ECE 634 Individual Studies In Electrical Engineering 1-3.
Prerequisite: Graduate standing.
The study of advanced topics of special interest to individual students under direction of faculty members.

ECE 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ECE 690 Master's Exam 1-9.

ECE 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

ECE 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their thesis.

ECE 705 Memory Systems 3.
Prerequisite: ECE 521, Computer Design and Technology.
Covers recent research on overcoming the problem of memory access and memory speed, two major limitations on the speed of computers. Overview of the current state of memory technologies, novel cache structures and management techniques, prefetching, memory compression, and parallelism at the instruction and thread levels. Research papers required.

ECE 706 Advanced Parallel Computer Architecture 3.
Prerequisite: ECE/CSC 506, ECE 521.
Advanced topics in parallel computer architecture. Hardware mechanisms for scalable cache coherence, synchronization, and speculation. Scalable systems and interconnection networks. Design or research project required.

ECE 712 Integrated Circuit Design for Wireless Communications 3.
Prerequisite: ECE 511.
Analysis, simulation, and design of the key building blocks of an integrated radio: amplifiers, mixers, and oscillators. Topics include detailed noise optimization and linearity performance of high frequency integrated circuits for receivers and transmitters. Introduction to several important topics of radio design such as phase-locked loops, filters and large-signal amplifiers. Use of advanced RF integrated circuit simulation tools such as SpectreRF or ADS for class assignments.

ECE 718 Computer-Aided Circuit Analysis 3.
Prerequisite: ECE 511.
Steady state and transient analysis of circuits with emphasis on circuit theory and computer methods. Consideration of many analysis techniques, including linear nodal, signal flow graph, state equation, time-domain and functional simulation and analysis of sampled data systems. Sensitivity and tolerance analysis, macromodeling of large circuits and nonlinear circuit theory.

ECE 719 Advanced Microwave Design 3.
Prerequisite: ECE 549.
Development and examination of techniques used in the design of microwave and millimeter wave components and systems. Specific topics include frequency planning, system design using modules, and design of microwave amplifiers and oscillators. Design for specified frequency, noise, power, mixer or oscillator performance will be covered. There are three design projects: system planning, amplifier design, and oscillator design all using commercial microwave computer aided design tools.
ECE 720 Electronic System Level and Physical Design 3.
Prerequisite: ECE 520.
Study of transaction-level modeling of digital systems-on-chip using SystemC. Simulation and analysis of performance in systems with distributed control. Synthesis of digital hardware from high-level descriptions. Physical design methodologies, including placement, routing, clock-tree insertion, timing, and power analysis. Significant project to design a core at system and physical levels. Knowledge of object-oriented programming with C and register-transfer-level design with verilog or VHDL is required.

ECE 721 Advanced Microarchitecture 3.
Prerequisite: ECE 521.
Survey of advanced computer microarchitecture concepts. Modern superscalar microarchitecture, complexity-effective processors, multithreading, advanced speculation techniques, fault-tolerant microarchitectures, power and energy management, impact of new technology on microarchitecture. Students build on a complex simulator which is the basis for independent research projects.

ECE 722 Electronic Properties of Solid-State Materials 3.
Prerequisite: ECE 530.
Materials and device-related electronic properties of semiconductors. Included topics: energy band structure, electrical and thermal transport phenomena, scattering processes, localized energy states, equilibrium and non-equilibrium semiconductor statistics.

ECE 723 Optical Properties Of Semiconductors 3.
Prerequisite: ECE 530.
Materials and device-related properties of compound optical semiconductors. Included topics: band structure, heterojunctions and quantum wells, optical constants, waveguides and optical cavities, absorption and emission processes in semiconductors, photodetectors, light emitting diodes, semiconductor lasers.

Prerequisite: ECE 530.
Basic physical phenomena responsible for operation of solids-state devices. Examination and utilization of semiconductor transport equations to explain principles of device operation. Various solid-state electronics devices studied in detail.

ECE 725 Quantum Engineering 3.
Prerequisite: ECE 530, and PY 401.
Development of advanced engineering concepts at the quantum level relevant to nanoscience, nanoelectronics, and quantum photonics. Topics include tunneling phenomena, specific of time dependent and time independent perturbation methodology for addressing applications under consideration, including the WK approach, and an introduction to second quantization for engineers. Applications include, but are not limited to, tunneling in a two-level system, molecular rotation through excitation, field emission, van der Waal interactions, optical absorption in quantum wells, and electron transport through model molecules.

ECE 726 Advanced Feedback Control 3.
Prerequisite: ECE 516.
Advanced topics in dynamical systems and multivariable control. Current research and recent developments in the field.

ECE 732 Dynamics and Control of Electric Machines 3.
Prerequisite: ECE 453 or ECE 592.
Dynamic behavior of AC electric machines and drive systems; theory of field orientation and vector control for high performance induction and synchronous machines; permanent magnet and reluctance machines and their control; principles of voltage source and current source inverters, and voltage and current regulation methods.

ECE 733 Digital Electronics 3.
Prerequisite: ECE 546.
In-depth study of digital circuits at the transistor level. Topics include fundamentals; high speed circuit design; low-power design; RAM; digital transceivers; clock distribution; clock and data recovery; circuits based on emerging devices. Project.

ECE 734 Power Management Integrated Circuits 3.
Prerequisite: ECE 511 and ECE 534.
Review of modern power management converters and circuits; Review modeling and control of converters; Detail discussion of voltage and current mode controllers; Understanding of power converter losses and optimization method, as well as management of power; Integrated circuit design of various power management chips.

ECE 736 Power System Stability and Control 3.
Prerequisite: ECE 451 and ECE 750.

ECE 739 Integrated Circuits Technology and Fabrication Laboratory 3.
Prerequisite: ECE 538.
An integrated circuit laboratory to serve as a companion to ECE 538. Hands-on experience in semiconductor fabrication laboratory. Topics include: techniques used to fabricate and electrically test discrete semiconductor devices, the effects of process variations on measurable parameters.

ECE 745 ASIC Verification 3.
Prerequisite: ECE 520.
This course covers the verification process used in validating the functional correctness in today’s complex ASICs (application specific integrated circuits). Topics include the fundamentals of simulation based functional verification, stimulus generation, results checking, coverage, debug, and formal verification. Provides the students with real world verification problems to allow them to apply what they learn.

ECE 751 Detection and Estimation Theory 3.
Prerequisite: ECE 514, ECE 421.
Methods of detection and estimation theory as applied to communications, speech and image processing. Statistical description of signals and representation in time, spatial and frequency domains; Bayesinan methods, including Wiener, Kalman and MAP filters; performance measures; applications to both continuous and discrete systems.

ECE 752 Information Theory 3.
Prerequisite: ECE 514: Random Processes.
An overview of Shannon’s theory of information, which establishes fundamental limits on the performance of data compression and quantization algorithms, communication systems, and detection and estimation algorithms. Topics include information measures and their properties, information source models, lossless data compression, channel coding and capacity, information theory and statistics, and rate-distortion theory. Applications of information theory will also be discussed, including Lempel-Ziv data compression, vector quantization, error-correcting codes, satellite communications and high-speed modems.
ECE 755 Advanced Robotics 3.
Prerequisite: ECE 555; MAE 544.
Advanced robotics at its highest level of abstraction; the level of synthesizing human reasoning and behavior. Advanced robotics deals with the intelligent connection of perception to action. At this level the subject requires knowledge of sensing (computer vision, tactile, sonar), and reasoning (artificial intelligence: machine learning, planning, world modeling). The advanced robotics course will be valuable for students who wish to work in the area.

ECE 756 Advanced Mechatronics 3.
Prerequisite: ECE 456 or ECE 556 with a Grade B+ and above.
A project-oriented course focusing on the design, analysis, and implementation of advanced mechatronics technologies, including large-scale distributed sensors, distributed-actuators, and distributed-controllers connected via communication networks. Will use unmanned vehicles as the project platform, with applications from sensors, actuators, network-based controllers, cameras, and microcontrollers. ECE 516 is recommended.

ECE 759 Pattern Recognition 3.
Prerequisite: ECE(CSC) 514, ST 371, B average in ECE and MA.
Image pattern recognition techniques and computer-based methods for scene analysis, including discriminant functions, fixture extraction, classification strategies, clustering and discriminant analysis. Coverage of applications and current research results.

ECE 762 Advanced Digital Communications Systems 3.
Prerequisite: ECE 515.
An advanced graduate-level course in digital communications. Topics include signal design, equalization methods and synchronization techniques for realistic communication channels. Projects concentrate on literature review and computer simulations.

ECE 763 Computer Vision 3.
Prerequisite: ECE 558 and ECE 514.
Analysis of images by computers. Specific attention given to analysis of the geometric features of objects in images, such as region size, connectedness and topology. Topics include: segmentation, template matching, motion analysis, boundary detection, region growing, shape representation, 3-D object recognition including graph matching.

ECE 766 Signal Processing for Communications & Networking 3.
Prerequisite: Graduate standing.
This course deals with the signal processing principles underlying recent advances in communications and networking. Topics include: smart-antenna and multi-input multi-output (MIMO) techniques; multiuser communication techniques (multiple access, power control, multiuser detection, and interference management); signal processing in current and emerging network applications such as cognitive radio and social networks. Knowledge of linear algebra and stochastic analysis is required.

ECE 767 Error-Control Coding 3.
Prerequisite: ECE 514 Random Processes; linear algebra at the undergraduate level is strongly recommended.
An introduction to the theory and practice of codes for detecting and correcting errors in digital data communication and storage systems. Topics include linear block codes, cyclic codes, cyclic redundancy checksums, BCH and Reed-Solomon codes, convolutional codes, trellis-coded modulation, LDPC and turbo codes, Viterbi and sequential decoding, and encoder and decoder architecture. Applications include the design of computer memories, local-area networks, compact disc digital audio, NASA’s deepspace network, high-speed modems, communication satellites, and cellular telephony.

ECE 773 Advanced Topics in Internet Protocols 3.
Prerequisite: CSC/ECE 573.
Cutting-edge concepts and technologies to support internetworking in general and to optimize the performance of the TCP/IP protocol suite in particular. Challenges facing and likely evolution for next generation internetworking technologies. This course investigates topics that include, but may be not limited to: Internet traffic measurement, characterization and modeling, traffic engineering, network-aware applications, quality of service, peer-to-peer systems, content-distribution networks, sensor networks, reliable multicast, and congestion control.

ECE 774 Advanced Network Security 3.
Prerequisite: CSC/ECE 570, CSC/ECE 574.
A study of network security policies, models, and mechanisms. Topics include: network security models; review of cryptographic techniques; internet key management protocols; electronic payments protocols and systems; intrusion detection and correlation; broadcast authentication; group key management; security in mobile ad-hoc networks; security in sensor networks.

ECE 775 Advanced Topics in Wireless Networking 3.
Prerequisite: ECE/CSC 575.
Reviews the current state of research in wireless networks, network architectures, and applications of wireless technologies; students will design, organize, and implement or simulate systems in a full-semester research project. For students with background in networking and communications who wish to explore research and development topics.

ECE 776 Design and Performance Evaluation of Network Systems and Services 3.
Prerequisite: CSC(ECE) 570 and CSC(ECE) 579.
Introduction to the design and performance evaluation of network services. Topics include top-down network design based on requirements, end-to-end services and network system architecture, service level agreements, quantitative performance evaluation techniques. Provides quantitative skills on network service traffic and workload modeling, as well as, service applications such as triple play, internet (IPTV), Peer-to-peer (P2P), voice over IP (VoIP), storage, network management, and access services.

ECE 777 Telecommunications Network Design 3.
Prerequisite: ECE 570, ECE 579.
Analytic modeling and topological design of telecommunications networks, including centralized polling networks, packet switched networks, T1 networks, concentrator location problems, routing strategies, teletraffic engineering and network reliability.

ECE 785 Topics in Advanced Computer Design 3.
Prerequisite: ECE 520, ECE 521.
In depth study of topics in computer design; advantages and disadvantages of various designs and design methodologies; technology shifts, trends, and constraints; hardware/software tradeoffs and co-design methodologies.

ECE 786 Topics in Advanced Computer Architecture 3.
Prerequisite: ECE 521, ECE/CSC 506.
In-depth study of research topics in computer architecture; mechanisms and their implementations; advantages and disadvantages of various mechanisms; technology shifts, trends, and constraints.

ECE 791 Special Topics In Electrical Engineering 3-6.
Prerequisite: B average in technical subjects.
Two-semester sequence to develop new courses and to allow qualified students to explore areas of special interest.
ECE 792 Special Topics In Electrical Engineering 3-6.
Prerequisite: B average in technical subjects.
Two-semester sequence to develop new courses and to allow qualified students to explore areas of special interest.

ECE 801 Seminar in Electrical and Computer Engineering 1-3.

ECE 804 Seminar in Comm/Sig PR 1-3.

ECE 833 Individual Topics In Electrical Engineering 1-3.
Prerequisite: B average in technical subjects.
Provision of opportunity for individual students to explore topics of special interest under direction of a member of faculty.

ECE 834 Individual Studies In Electrical Engineering 1-3.
Prerequisite: Graduate standing.
The study of advanced topics of special interest to individual students under direction of faculty members.

ECE 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ECE 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

ECE 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

**Individualized Degree Program in Engineering**

Page Hall, Room 118
Phone: (919) 515-3263

The B.S. in Engineering degree offers an individualized academic program for those exceptional students who have academic and career goals that cannot be accommodated by the other engineering degree programs. Before being admitted into the program, students must complete the freshman year, have at least a 2.5 grade point average, have completed the requirements for admission into an engineering degree program and have a plan of study approved. For more information, contact the Assistant Dean for Academic Affairs at (919) 515-3263.

Specific curriculum requirements are available on the Registration and Records website (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php).

**Bachelor of Science in Engineering - Mechatronics Concentration**

Joint Engineering Degree with University of North Carolina at Asheville (http://www.unca.edu/nscu_engr)

Phone: (828) 251-6640

The Joint Mechatronics Engineering curriculum (JEM) combines the best that two nationally recognized universities have to offer. From NC State University comes the engineering component comprising course work from the Departments of Mechanical and Aerospace Engineering (MAE), Electrical and Computer Engineering (ECE), and mechatronics courses taught by NC State University faculty on the campus of the University of North Carolina at Asheville. Hands-on laboratories are integral to the engineering course work. From the University of North Carolina at Asheville comes a Humanities and Social Science component with a rich liberal arts foundation. As an NC State site-based engineering program, students must attend classes on the campus of UNC Asheville. Transfer students should contact the program office for information about the transfer of courses from other educational institutions.

Mechatronics engineering focuses on the precision control of mechanical and machine systems. In today’s modern engineering systems, control is achieved electronically through sensors, actuators and microprocessors. The marriage of modern control systems with mechanical devices is key to the design and development of high-performance engineering systems. Just a few examples of computer-controlled mechanical systems are robots, engine-fuel systems, hybrid automobiles, autonomous aerospace vehicles, stair-climbing wheelchairs, garage door openers and alternative power generation systems. Through modern mechatronics engineering, new avenues of thinking and design can greatly enhance the utility, performance, and efficiency of modern machinery.

**Program Educational Objectives**

Within a few years of graduation, successful alumni of the Joint NC State - UNC Asheville BSE - Mechatronics Concentration degree should:

1. Attain productive professional careers in mechatronics engineering or related fields.
2. Function in the workplace with appropriate professional and ethical responsibilities.
3. Make decisions with accountability for the social and environmental impact of their engineering practices.
4. Interact effectively with a diversity of individuals while viewing their own work in the broader context of our global society.
5. Attain technical excellence by engaging in life-long learning.

Specific curriculum requirements are available on the Mechatronics webpage (http://www.engr.ncsu.edu/mechatronics/joint.php).
Edward P. Fitts Department of Industrial and Systems Engineering

Daniels Hall, Room 400
Phone: (919) 515-2362
Visit the ISE website (http://www.ise.ncsu.edu)

Ranked in the top 10, the Edward P. Fitts Department of Industrial and Systems Engineering (ISE) offers an ABET accredited undergraduate B.S. program in Industrial Engineering.

What is Industrial & System Engineering?

Industrial engineers are problem solvers! We analyze processes and ask “how can we make these processes faster, better, and cheaper?” ISEs play a pivotal role in end to end business operations from product development to product and service delivery. It is this holistic view that makes ISE unique. We rely heavily on gathering and evaluating data to help make decisions that are based on statistical and engineering methods. Here are some of the tasks that ISEs lead in industry today:

- Assess the feasibility of manufacturing a new product with existing technologies, resources, and capacity or develop new ways to make products including automation
- Create and monitor quality plans that ensure that faulty products will not be shipped to the customer.
- Determine improved methods of scheduling patients for surgery that decreases patient wait time and surgeon’s overtime.
- Model a retail chain’s inventory and supply chain methods to improve on-time deliveries.
- Develop computer simulation models to design and control large complex manufacturing, supply chain, or service delivery systems.
- Design controls in an airplane cockpit that are Human-centered.

As you can see ISEs enjoy the freedom to explore almost any industry. The career paths that you can take with ISE are virtually limitless! Watch these videos to hear about ISE careers: ISEs in action! (http://www.ise.ncsu.edu/undergraduate)

Program Educational Objectives

The program educational objectives of the ISE department are to produce graduates capable of world-class performance in the following areas:

1. Applying the discipline's body of knowledge to the design and management of systems, products and processes by working effectively with multiple constraints, understanding the importance of time and cost;
2. Contributing meaningfully to team efforts in the workplace, understanding the economic, societal, and ethical impacts of their decisions, and communication effectively with all stakeholders in the decisions; and
3. Adapting to changes in technology and our global society over the course of their professional lives by continuous learning through varied work assignments, advanced degrees, professional training programs and independent study.

The Bachelor of Science in Industrial Engineering is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

Specific curriculum requirements are available online (https://www.ncsu.edu/php/coursecat/degree_requirements.php).

Curriculum

Throughout the curriculum students will develop a breadth of knowledge in all of the ISE focus areas resulting in a broad base of knowledge and skills. There is a pervasive thread throughout the curriculum on the measurement, design, and continuous improvement of production and service systems. The result is a data-driven, efficiency-focused engineer that is highly attractive in many industry segments. Our courses are designed to be hands-on whether that is in our state-of-the-art laboratories or using the latest software applications to solve real problems. The senior design capstone course is designed to give students an opportunity to apply what they have learned in the classroom to solve an industry-sponsored project. In addition to ISE courses, students take a wide variety of science, engineering, math, and statistics courses to form a well-rounded education.

Opportunities

Industrial and Systems engineers can be found everywhere! According to the Bureau of Labor Statistics, ISEs will be highly sought after in the coming decade. This is not surprising given the cost and efficiency pressure on both manufacturing and service sectors. Industrial engineers are hired by virtually all segments of industry. They may work in hospitals and healthcare consulting firms to make healthcare delivery more cost effective as well as in high tech manufacturing industries. Another area in which ISEs play a pivotal role, is in successful integration of global business partners. As companies continue to seek a global presence, industrial engineers will be involved in the design of new supply chain networks or qualification of manufacturing processes/facilities. Given the level of impact made by ISEs in industry today it is not surprising that our current job placement rate is among the highest in the College of Engineering, above 90% within 3 months of graduation. Many ISEs rise to the management ranks throughout the career and there have been several ISEs who have become CEOs: Tim Cook (Apple Inc.), Mike Duke (Walmart) & Charles Holliday (Dupont) to name a few.

Minor in Industrial Engineering

The minor in Industrial Engineering is designed to provide undergraduate engineering students and other science majors in curricula other than Industrial Engineering with the fundamentals of industrial engineering necessary for advanced study in the discipline and/or employment in industrial engineering. Students minoring in Industrial Engineering will learn basic principles of ISE as well as more advanced principles in at least one specific area of interest.

Admissions and Certification of Minor

The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification can be found in 410 Daniels Hall and should be completed no later than during the registration period for the student’s final semester at NC State.

For more information contact Dr. Vila-Parrish: arvila@ncsu.edu or (919) 515-0605.

Admissions and Certification of Minor

The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification can be found in 410 Daniels Hall and should
be completed no later than during the registration period for the student’s final semester at NC State.

For more information contact Dr. Vila-Parrish: avila@ncsu.edu or (919) 515-0605.

Accelerated Baccalaureate/Masters (ABM) Program

This program will allow exceptional undergraduate students to complete both undergraduate and graduate degrees at an accelerated pace. The student is allowed up to 12 credit hours to be counted towards both the undergraduate and graduate degrees.

Requirements

• Students must have completed a minimum of 75 credit hours and up to a maximum of 96 credit hours by the end of the current semester (includes transfer credits).
• Students must have earned a GPA of at least 3.5 for all courses and 3.5 for all Industrial Engineering courses.
• Students must have satisfied all prerequisite requirements for 400 level courses.
• A letter of recommendation from the undergraduate teaching adviser identifying the applicant as a participant in the ABM program should accompany the application as well as the course numbers and titles of the 12 credit hours to be used for both the bachelor’s and master’s degree programs.

ISE - Industrial and Systems Engineering Courses

ISE 110 Computer-Based Modeling for Engineers 3.
Prerequisite: E 115, Corequisite: MA 141.
Introductory course in computer-based modeling and programming using Visual Basic for Applications. Emphasis on algorithm development and engineering problem solving. Methodical development of VBA within applications like Microsoft Excel and Access from specifications; documentation, style; control structures; classes and methods; data types and data abstraction; object-oriented programming and design; graphical user interface design. Projects: design problems from electrical, industrial, textile, and financial systems. Functional relationships will be given and programs will be designed and developed from a list of specifications.

Prerequisite: E115 and Corequisite: ISE 216.
This is an 8 week course. An introductory engineering graphics course which builds on the foundations of computer-aided 2D sketching and 3D modeling for industrial engineers. Students will develop and refine their ability to communicate designs via modeling techniques prolific in industry. The concurrent nature of ideation, engineering analysis and manufacturing will be emphasized as students review case studies and develop their own models. Constraint-based design will drive strategies that accurately reflect design intent and promote part family relationships and automation. Students will work in small teams to create a mechanism that must achieve certain functional criteria. ISE majors have priority registration for this course.

ISE 216 Product Development and Rapid Prototyping 3.
Prerequisite: ISE 215.
Introduction to product development and prototyping. Team-based development of a new product during the semester. Specific topics are voice of the customer, product specification and parameter specification, Quality Function Deployment and the House of Quality, concept generation, concept selection, detailed design using SolidWorks, prototyping, design for assembly, design for the environment, and intellectual properties and patents. Team presentations of a functional prototype of their product at the end of the semester.

ISE 311 Engineering Economic Analysis 3.
Prerequisite: Grade of C or better in MA 141.

ISE 315 Introduction to Computer-Aided Manufacturing 1.
Prerequisite: ISE 215 and Co-requisite: ISE 316.
This is an 8 week course. Introduction to the principles of modern-day multi-axis machine tool control, using computer-aided manufacturing (CAM) software tools. Emphasis is placed on transferring part geometry from CAD to CAM, for the development of CNC-ready programs. Industry file formats, machining strategies, G & M-code generation, optimization and verification techniques will also be investigated. Upon successful completion of this course, students will be able to demonstrate proficiency in the use of industry-relevant CAD/CAM software and will be able to extend that knowledge to practice through exercises and projects. Use of CNC machine tools will be introduced and demonstrated in the department's physical lab spaces. ISE majors have priority registration for this course.

ISE 316 Manufacturing Engineering I - Processes 3.
Prerequisite: MSE 200 and ISE 216; Co-requisite: ISE 315.
Analytical study and design of manufacturing engineering with emphasis on mfg. and processes. Addresses the interaction of design, materials, and processing. Laboratory instruction and hands-on experience in metrology, machining, process planning, economic justification, and current mfg. methodologies.

Prerequisite: C or better in ST 371; C or better in ISE 110.
Introduction to work methods and ergonomics. Coverage of methods to improve operator performance and production process efficiency. Techniques include project evaluation and review, operator-machine ratios, line balancing, work sampling, time study, learning curve analysis and pre-determined time systems. Ergonomics component includes job screening methods, anthropometry, workstation and hand-tool design, and methods for reducing hazard exposure and controlling cumulative trauma disorders.

ISE 361 Deterministic Models in Industrial Engineering 3.
Prerequisite: (MA 303 or MA 341 or MA 405) and C or better in ISE 110.
Introduction to mathematical modeling, analysis techniques, and solution procedures applicable to decision-making problems in a deterministic environment. Linear programming models and algorithms and associated computer codes are emphasized.
ISE 362 Stochastic Models in Industrial Engineering 3.
Prerequisite: C or better in ISE/TE 110 and (MA 303 or MA 341 or
MA 405) and C- or better in ST 371 or ST 370.
Introduction to mathematical modeling, analysis, and solution procedures
applicable to uncertain (stochastic) production systems. Methodologies
covered include probability theory and stochastic processes. Applications
relate to design and analysis of problems, capacity planning, inventory
control, waiting lines, and system reliability and maintainability.

ISE 408 Control of Production and Service Systems 3.
Prerequisite: ISE 361; C- or better in ST 371.
Planning and control of production and service systems. Production
organization flow and inventory control methods: Systems approach.

ISE 416 Manufacturing Engineering II - Automation 3.
Prerequisite: ISE 316.
Integration of design and mfg. through computer aided/automated
process planning, concurrent engineering, and rapid prototyping. Fixed
and programmable automation in mfg. and service. Autonomous mfg.
systems such as computer numerical control (CNC), industrial robotics,
automated inspection, electronics manufacturing and assembly.

ISE 417 Database Applications in Industrial & Systems Engineering
3.
Prerequisite: C or better in ISE 110.
Rapid applications development (RAD) tools to design and implement
database-based applications. The SQL database query language, a
standard RAD environment and how to access information in a database
from it, use of Visual Basic for Applications, and how to integrate these
tools together to design and build engineering applications. Examples will
be from manufacturing and production systems.

ISE 441 Introduction to Simulation 3.
Prerequisite: MA 242, ST 372, C or better in ISE 110.
Discrete-event stochastic simulation for the modeling and analysis of
systems. Programming of simulation models in a simulation language.
Input data analysis, variance reduction techniques, validation and
verification, and analysis of simulation output. Random number
generators and random variate generation.

ISE 443 Quality Design and Control 3.
Prerequisite: ST 372.
Statistical methods in quality control. Control charts for variables and
attributes. Process capability assessment. Role of experimentation in
designing for quality. Total Quality Management. Tools for continuous
quality improvement. Quality Function Deployment.

ISE 452 Advanced Human-Machine Systems Design 3.
Prerequisite: CE 214 and ISE 352.
Advanced concepts in human-machine systems design. Consideration
of anatomical and physiological bases for design of work systems.
Advanced biomechanical analysis and modeling for manual material
handling design. Physiological and psychological capabilities and
limitations as related to work systems design and human performance.
Coverage of human information processing and performance theories
and models, including pipe-line, signal detection theory, information
theory, and motor control theory. Additional topics include human factors
experimentation and neuroergonomics (brain and behavior).

ISE 453 Design of Production, Logistics, and Service Systems 3.
Prerequisite: ISE 361 and ST 372; Corequisite: ISE 311.
Principles and practice in design of facilities and logistics networks.
Integration of supply chain design, capacity planning, facility layout,
material handling, and storage and warehousing issues into overall
production system design. Emphasis on economic justification of
alternative designs and use of computer software to aid design process.
Group projects.

ISE 462 Advanced Stochastic Models in Industrial Engineering 3.
Prerequisite: ISE 362.
Advanced topics related to mathematical modeling, analysis, and solution
procedures applicable to uncertain (stochastic) production systems.
Methodologies covered include economic analysis under uncertainty,
discrete and continuous time stochastic processes. Applications relate
to design, analysis and control relating to capacity planning, inventory
control, waiting lines, and system reliability and maintainability.

ISE 495 Project Work in Industrial Engineering 1-6.
Prerequisite: Junior standing.
Special investigations, study or research related to the field of industrial
engineering. In a given semester several students and/or student groups
may be working in widely divergent areas under the direction of several
members of the faculty.

ISE 498 Senior Design Project 3.
Prerequisite: 3 of the following 5 (ISE 311, ISE 452, ISE 408, ISE 441,
ISE 453).
Individual or group design projects requiring problem definition and
analysis, synthesis, specification and presentation of a designed solution.
Students work under faculty supervision either on actual industrial
engineering problems posed by local industrial, service and governmental
organization or on emerging research issues.

ISE 501 Introduction to Operations Research 3.
Prerequisite: MA 421 or ST 421 or ST 371 and ST 372.
OR Approach: modeling, constraints, objective and criterion. Problems of
multiple criteria, optimization, model validation and systems design. OR
Methodology: mathematical programming; optimum seeking; simulation,
gaming; heuristic programming. Examples, OR Applications: theory of
inventory; economic ordering under deterministic and stochastic demand.
Production smoothing problem; linear and quadratic cost functions.
Waiting line problems: single and multiple servers with Poisson input and
output. Theory of games for two-person competitive situations. Project
management through PERT-CPM.

ISE 505 Linear Programming 3.
Prerequisite: MA 405.
Introduction including: applications to economics and engineering; the
simplex and interior-point methods; parametric programming and post-
optimality analysis; duality matrix games, linear systems solvability theory
and linear systems duality theory; polyhedral sets and cones, including
their convexity and separation properties and dual representations;
equilibrium prices, Lagrange multipliers, subgradients and sensitivity
analysis.

ISE 510 Applied Engineering Economy 3.
Prerequisite: Undergrad. courses in engineering economics and ST.
Engineering economy analysis of alternative projects including tax and
inflation aspects, sensitivity analysis, risk assessment, decision criteria.
Emphasis on applications.
ISE 515 Manufacturing Process Engineering 3.
Manufacturing process engineering, primary, secondary, finishing and assembly processes. Traditional and non-traditional manufacturing processes, group technology, manufacturing analyses and application of economic analyses. Graduate standing in Engineering.

ISE 519 Database Applications in Industrial and Systems Engineering 3.
Prerequisite: ISE 110.
Rapid application development (RAD) tools to design and implement database-based applications. This includes: SQL query language, Visual Basic for Applications in database application construction, a standard RAD environment and how to access information in a database, entity/attribute modeling of the database structure, anomalies of database structures that create problems for applications, modeling of application system's functionality, and integrating these tools together to design and implement engineering applications. Examples from manufacturing and production systems. Restricted to advanced undergraduates and graduate students.

ISE 520 Healthcare Systems Performance Improvement I 3.
Prerequisite: ST 372, ISE 352, ISE 361, and ISE 441.
Methods used to improve the performance of health care delivery systems with emphasis on patient care cost, access, and quality. Adaptation of lean and six-sigma to rapid and continuous health care systems improvement through organizational and process transformation. Fundamentals of scheduling, staffing, and productivity in health systems employing simulation and optimization. Health care policy and management.

ISE 521 Healthcare Systems Performance Improvement II 3.
Prerequisite: ISE 520.
Continuation of ISE 520 with a concentration on the completion of a healthcare systems process improvement project at the sponsoring health care institution. Project must employ the tools and techniques of healthcare systems process improvement. The project is done in conjunction with a diverse and multi-disciplinary team from the healthcare institution. The student must serve as a facilitator and coach, resulting in a project with measured success. Success will be determined by the improvement in patient care as quantified in cost, quality, and access.

ISE 540 Human Factors In Systems Design 3.
Prerequisite: IE 452 or PSY 340, Corequisite: ST 507 or 515.
Introduction to problems of the systems development cycle, including human-machine function allocation, military specifications, display-control compatibility, the personnel sub-system concept and maintainability design. Detailed treatment given to people as information processing mechanisms.

ISE 541 Occupational Safety Engrg 3.

ISE 543 Musculoskeletal Mechanics 3.
Prerequisite: BIO 125 or BAE(BIO) 235 or Graduate standing.
Anatomy, physiology and biomechanics of musculoskeletal system including muscle bone, tendon, ligament, cartilage, nerve. Modeling of tissue and joints with special emphasis on spine and upper extremity. Physical, mathematical, optimization and finite element modeling techniques as applied in biomechanics research.

ISE 544 Occupational Biomechanics 3.
Prerequisite: Graduate standing.

ISE 546 Management Decision and Control Systems 3.
Prerequisite: CSC 423 or BUS 541.
Planning, design, and development and implementation of comprehensive computer-based information systems to support management decisions. Formal information systems principles; information requirements analysis; knowledge acquisition techniques; information modeling. Information resource management for quality operational control and decision support; system evaluation, process improvement and cost effectiveness.

ISE 552 Design and Control of Production and Service Systems 3.
Prerequisite: ST 371 or ST 372.
Basic terminology and techniques for the control of production and service systems including economic order quantity models; stochastic inventory models; material requirements planning; Theory of Constraints; single and mixed model assembly lines; and lean manufacturing. Emphasis on mathematical models of the interaction between limited capacity and stochastic variability through the use of queuing models to describe system behavior.

ISE 553 Modeling and Analysis of Supply Chains 3.
Prerequisite: ISE 361 and ST 372.
Basic issues in operating supply chains, using state of the art modeling tools available for their analysis. Emphasis on using engineering models to develop insights into the behavior of these systems.

ISE 560 Stochastic Models in Industrial Engineering 3.
ISE/OR 560 will introduce mathematical modeling, analysis, and solution procedures applicable to uncertain (stochastic) production and service systems. Methodologies covered include probability theory and stochastic processes including discrete and continuous Markov processes. Applications relate to design and analysis of problems, capacity planning, inventory control, waiting lines, and service systems.

ISE 589 Special Topics In Industrial Engineering 3.
Special developments in some phase of industrial engineering using traditional course format. Identification of various specific topics and prerequisites for each section from term to term.

ISE 601 Seminar 1.
Seminar discussion of industrial engineering problems for graduate students. Case analyses and reports.

ISE 610 Special Topics in Industrial Engineering 3-6.
Special developments in some phase of industrial engineering using traditional course format. Identification of various specific topics and prerequisites for each section from term to term.
ISE 637 Directed Study in Industrial Engineering 1-3.
Independent study providing opportunity for individual students to explore topics of special interest under direction of a member of faculty.

ISE 639 Advanced Directed Study in Industrial Engineering 1-3.
Independent study providing an opportunity for individual graduate students to explore advanced topics of special interest under the direction of a member of the faculty.

ISE 677 Industrial Engineering Projects 1-6.
Prerequisite: MIE candidates.
Investigation and written report on assigned problems germane to industrial engineering. Maximum of six credits to be earned for MIE degree.

ISE 685 Master’s Supervised Teaching 1-3.
Prerequisite: Master’s student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ISE 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master’s student.
For students in non-thesis master’s programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master’s exam, etc.

ISE 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master’s student.
For students in non-thesis master’s programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master’s exam, etc. Students may register for this course a maximum of one semester.

ISE 693 Master’s Supervised Research 1-9.
Prerequisite: Master’s student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

ISE 695 Master’s Thesis Research 1-9.
Thesis research.

ISE 696 Summer Thesis Research 1.
Prerequisite: Master’s student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

ISE 699 Master’s Thesis Preparation 1-9.
Prerequisite: Master’s student.
For student who have completed all credit hour requirements and full-time enrollment for the master’s degree and are writing and defending their theses.

ISE 707 Real-Time Control of Automated Manufacturing 3.
Concepts and application of real-time control of automated manufacturing systems. Development of prototype manufacturing control applications involving introductions to following topics: computer architecture; real-time, multi-tasking operating systems; data modeling; multi-processing systems; local area networks; inter-task communication; and development of multi-tasking control systems. Design development of control system.

ISE 708 Integer Programming 3.
Prerequisite: MA 405, OR (MA,IE) 505, Corequisite: Some familiarity with computers (e.g., CSC 112).
General integer programming problems and principal methods of solving them. Emphasis on intuitive presentation of ideas underlying various algorithms rather than detailed description of computer codes. Students have some "hands on" computing experience that should enable them to adapt ideas presented in course to integer programming problems they may encounter.

ISE 709 Dynamic Programming 3.
Prerequisite: MA 405, ST 421.
Introduction to theory and computational aspects of dynamic programming and its application to sequential decision problems.

ISE 711 Capital Investment Economic Analysis 3.
Prerequisites: ISE 311 and ST 371.
Analysis of economic merits of alternatives including interest and income tax considerations. Risk and sensitivity exploration techniques. Introduction to analytical techniques for multiple objectives or criteria. Use of mathematical programming and computers for capital budgeting.

ISE 712 Bayesian Decision Analysis For Engineers and Managers 3.
Prerequisite: ST 371 or ST 421.
The Bayesian approach to decision making, with numerous applications in engineering and business. Expected value maximization, decision trees, Bayes’ theorem, value of information, sequential procedures and optimal strategies. Axiomatic utility theory and controversies, utility of money, theoretical and empirical determination of utility functions and relationship to mean-variance analysis. Brief introduction to multi-attribute problems, time streams and group decisions.

ISE 714 Product Manufacturing Engineering for the Medical Device Industry 3.
Prerequisite: ISE 515.
Product development course targeted toward the medical device industry. Product design and development, concept generation and selection, parametric feature-based CAD, design for manufacturability (DFM) and assembly (DFA), tolerancing, rapid prototyping, tool design, tool fabrication, and medical device fabrication.

ISE 715 Manufacturing Process Engineering 3.
Manufacturing process engineering, primary, secondary, finishing and assembly processes. Concurrent engineering, process planning, group technology, manufacturing analyses and application of economic analyses.

ISE 716 Automated Systems Engineering 3.
General principles of operation and programming of automated systems. Automated assembly, automated manufacturing, and inspection systems. Control of automated manufacturing. Industrial logic systems and programmable logic controllers. Computer numerical control, industrial robotics, and computer integrated manufacturing.

ISE 718 Micro/Nano-Scale Fabrication and Manufacturing 3.
Prerequisite: ISE 316 or graduate standing in the college of engineering.
Introduction to physical theory, process design, analysis, and characterization of micro/nano scale fabrication and manufacturing. The main focus of the course is on the fabrication/manufacturing of important types of microstructures used in micro/nano devices and the techniques and tools used to fabricate and characterize them.
ISE 723 Production Planning, Scheduling and Inventory Control 3.
Prerequisite: OR 501 and ST 511.
An analysis of Production-Inventory systems. Discussion of commonly used planning and scheduling techniques. Introduction to use of math modeling for solution of planning and scheduling problems. Interface with quality control and information systems.

ISE 726 Theory of Activity Networks 3.
Prerequisite: OR 501, OR(E,MA) 505.
Introduction to graph theory and network theory. In-depth discussion of theory underlying (1) deterministic activity networks (CPM): optimal time-cost trade offs; the problem of scarce resources; (2) probabilistic activity networks (PERT): critical evaluation of underlying assumptions; (3) generalized activity networks (GERT, GAN); applications of signal flow graphs and semi-Markov process to probabilistic branching; relation to the theory of scheduling.

ISE 731 Multi-Attribute Decision Analysis 3.

ISE 740 Engineering Psychology of Human-computer Interaction 3.
Prerequisite: IE/PSY 540 or CSC 554.
Exploration of usability of computer technology. Theory and practice of user-centered design for HCI applications. Course focuses on current usability paradigms and principles, psychology of users, iterative and participatory design processes, system requirements specification, prototyping, user support systems, usability evaluation and engineering, interface design guidelines and standards. Application domains include, universal design, virtual reality, and scientific data visualization.

ISE 741 Systems Safety Engineering 3.
Systems safety engineering. Course familiarizes students with techniques for identifying and recognizing potential safety hazards and the concept of risk assessment. Preliminary Hazard Analysis, Failure Modes and Effects Analysis, System and Subsystem Hazard Analysis, Fault Tree Analysis, Process Safety Management (29CFR1910.119) are explored together with applications to hazard analysis and control. Industrial situations and case studies are employed to illustrate usefulness of various system safety techniques.

ISE 742 Environmental Stress, Physiology and Performance 3.
Human skilled performance as affected by environmental stressors, including noise, vibration, heat, cold, accelerator, pressure altitude, toxic agents and illumination. Physiological effects of stressors and their relationship to health, performance, and, ultimately, to safety. Impact biomechanics and crash survival. Human survival in adverse environments. Combined stressor effects, physiological arousal, fatigue and performance decrement.

ISE 743 Ergonomic Performance Assessment 3.
Prerequisite: PSY 200, ST 507 and 508.
Fundamentals of ergonomic performance measurement used to assess the effects of environment and system design on human performance. Treatment of topics such as workload measurement, measurement of complex performance, simulator studies, measurement of change, task taxonomies, criterion task sets and statistical methods of task analysis. Problems of laboratory and field research, measurement of change and generalizability of findings.

ISE 744 Human Information Processing 3.
Prerequisite: PSY 200, ST 507 and 508.
Fundamentals of human information processing basic to skilled operator performance and the design of displays, controls and complex systems. Treatment of topics such as channel capacity, working memory, long-term memory, decision making, attention and process monitoring. Problems of display and control design and evaluation, evaluation of textual material, and human-computer interaction.

ISE 745 Human Performance Modeling 3.
Prerequisite: ST 507 or 515 or equivalent; IE (PSY) 540, CSC 554 or IE (PSY) 744.

ISE 747 Reliability Engineering 3.
Prerequisite: ST 511.
Introduction to basic concepts of reliability engineering. Application of probability and statistics to estimate reliability of industrial systems; development of reliability measures; analysis of static and dynamic reliability models; development and analysis of fault trees; analysis of Markovian and non-Markovian models; and optimization of reliability models.

ISE 748 Quality Engineering 3.
Prerequisite: OR 501, ST 511.
Introduction to basic concepts of quality engineering. Statistical process control (SPC) methods, acceptance sampling techniques, concept of parameter design and statistical as well as analytical techniques for its implementation, tolerance analysis, and design, components of cost of poor quality and an introduction to quality management.

ISE 754 Logistics Engineering 3.
Prerequisite: ISE 453.
Elements of logistics networks. Supply chain design: facility location and allocation; great-circle distances; geocoding. Multi-echelon production and inventory systems; sourcing decision systems. Vehicle routing: exact, approximation, and heuristic procedures; traveling salesman problem; basic vehicle routing problem and extensions; backhauling; mixed-mode transportation system design.

Prerequisite: MA 303, ST 371.
Formulation and analysis of stochastic models with particular emphasis on applications in industrial engineering; univariate, multivariate and conditional probability distributions; unconditional and conditional expectations; elements of stochastic processes; moment-generating functions; concepts of stochastic convergence; limit theorems; homogeneous, nonhomogeneous and compound Poisson processes; basic renewal theory; transient and steady-state properties of Markov processes in discrete and continuous time.

ISE 761 Queues and Stochastic Service Systems 3.
Prerequisite: MA 421.
Introduction of general concepts of stochastic processes. Poisson processes, Markov processes and renewal theory. Usage of these in analysis of queues, from with a completely memoryless queue to one with general parameters. Applications to many engineering problems.
ISE 762 Computer Simulation Techniques 3.
Prerequisite: ST 512 and a scientific programming language.
Basic discrete event simulation methodology; random number generators, simulation designs, validation, analysis of simulation output. Applications to various areas of scientific modeling. Simulation language such as SLAM and GPSS. Computer assignments and projects.

ISE 766 Network Flows 3.
Study of problems of flows in networks. These problems include the determination of shortest chain, maximal flow and minimal cost flow in networks. Relationship between network flows and linear programming developed as well as problems with nonlinear cost functions, multi-commodity flows and problem of network synthesis.

ISE 767 Upper Extremity Biomechanics 3.
Gross and functional anatomy of upper extremity; properties of tendons and synovial fluid; epidemiology; disorders of shoulder, elbow, wrist, hands, fingers; biomechanical modeling; personal factors affecting cumulative trauma disorder (CTD) risk, diagnosis and treatment of upper extremity CTDs; wrist splints; workplace ergonomics to alleviate upper extremity CTDs.

ISE 768 Spine Biomechanics 3.
Gross and fine anatomy of spine, mechanism of pain, epidemiology, in vitro testing, psychophysical studies, spine stability models, bioinstrumentation: intradiscal pressure, intra-abdominal pressure and electromyography. Biomechanics of lifting and twisting, effects of vibration, effects of posture/lifting style, lifting belts, physical models, optimization models, mathematical models, muscle models, finite element models, current trends in medical management and rehabilitation, chiropractic.

ISE 772 Stochastic Simulation Design and Analysis 3.
Prerequisite: (CSC,ECE,IE,OR) 762 and ST 516.
Advanced topics in stochastic system simulation, including random variate generation, output estimation for stationary and non-stationary models, performance optimization techniques, variance reduction approaches. Student application of these techniques to actual simulations. A current topic research paper required.

ISE 789 Advanced Special Topics In Industrial Engineering 3-6.
Advanced topics in some phase of industrial engineering using traditional course format. Identification of various specific topics and prerequisites for each section from term to term.

ISE 790 Advanced Special Topics System Optimization 1-6.
Advanced topics in some phase of system optimization using traditional course format. Identification of various specific topics and prerequisites for each section from term to term.

ISE 794 Advanced Problems in Ergonomics 3.
Exploration in depth of a problem area of contemporary interest involving man-machine-environment interface. Class discussion and analysis of research and theory, with special focus on human factors aspects of systems design and operation.

ISE 796 Research Practicum in Occupational Biomechanics 3.
Biomechanics research topic development, literature evaluation, experimental design, use of bioinstrumentation, data collection, basic data interpretation, statistical analysis, manuscript preparation.

ISE 801 Seminar 1.
Seminar discussion of industrial engineering problems for graduate students. Case analyses and reports.

ISE 812 Special Topics in Mathematical Programming 1-6.
Prerequisite: IE(MA,OR) 505.
Study of special advanced topics in area of mathematical programming. Discussion of new techniques and current research in this area. The faculty responsible for this course select areas to be covered during semester according to their preference and interest. This course not necessarily taught by an individual faculty member but can, on occasion, be joint effort of several faculty members from this university as well as visiting faculty from other institutions. To date, a course of Theory of Networks and another on Integer Programming offered under the umbrella of this course. Anticipation that these two topics will be repeated in future together with other topics.

ISE 816 Advanced Special Topics Sys Opt 1-6.
Advanced topics in some phase of system optimization. Identification of various specific topics and prerequisite for each section from term to term.

ISE 837 Directed Study in Industrial Engineering 1-6.
Independent study providing opportunity for individual students to explore topics of special interest under direction of a member of faculty.

ISE 839 Advanced Directed Study in Industrial Engineering 1-3.
Independent study providing an opportunity for individual graduate students to explore advanced topics of special interest under the direction of a member of the faculty.

ISE 861 The Design of Production Systems 3.
The structure and operation of production planning, scheduling and control systems; emphasis on system structure, capacity planning, master production scheduling, shop loading and supply chain; investigation of current trends.

ISE 877 Industrial Engineering Projects 1-6.
Prerequisite: MIE candidates.
Investigation and written report on assigned problems germane to industrial engineering. Maximum of six credits to be earned for MIE degree.

ISE 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ISE 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation Research.

ISE 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.
Prerequisite: Doctoral student.
For students who have completed all credit hour requirements, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Department of Materials Science and Engineering

Engineering Building I, Room 3002
Phone: (919) 515-2377
Visit the Materials Science and Engineering website (http://www.mse.ncsu.edu)

Our world is driven by the materials that are currently available. Millions of everyday objects and technologies are made better because of a new and improved material. The automobile industry has lighter, impact-resistant car bodies. Textile companies have stronger, brighter fibers. Of course, we have all benefited from the versatile, inexpensive polymeric materials commonly known as plastics. In fact, many of today’s industrial problems await materials solutions: electrical engineers ask for better semiconductors, and computer technology demands material systems that store more and more information. Even parts of the human body are being replaced by specially designed biologically compatible materials. Materials Science and Engineering faculty and students at NC State are working on these and related problems right now. The Department of Materials Science and Engineering at NC State has 5 research focus areas, which include Structural Materials, Electronic/Optical/Magnetic Materials, Soft Materials and Biomaterials, Structural Characterization, and Computational Materials Science.

What is Materials Science and Engineering?

Materials science and engineering deals with the behavior of any material and its relationship to structure on all levels: atomic structure, nanostructure, microstructure, and macrostructure. Structure determines the properties of matter: how materials act, how materials react, and how materials perform in different environments. Through an understanding of these structure-property relationships, materials engineers can develop new materials or adapt existing ones to meet the design and economic requirements that ultimately advance industry, technology, and society.

Materials scientists and engineers are often asked to:
• develop new materials and/or improve existing materials;
• develop new processing and manufacturing procedures for materials;
• assist with materials selection for parts or systems;
• conduct failure analysis to determine what went wrong and why;
• conduct structural analysis of new materials to determine their properties;
• determine how a material performs in a specific environment.

What is the Curriculum Like?

The materials engineer must understand the wide range of phenomena that occur in all classes of materials: metals, polymers, ceramics, and composites. The MSE curriculum includes fundamental courses in thermodynamics, kinetics and structure, followed by more applied courses that cover mechanical, thermal, electrical, magnetic and optical properties of materials. Two laboratory courses introduce students to analytical methods used to characterize the structure of materials at all length scales and to measure properties of all classes of materials. Cutting-edge technologies in materials science and engineering such as nanotechnology, biomaterials, computer modeling and forensics (materials degradation and failure analysis) are covered. Five technical electives are included, which allow students to select from a broad range of courses in materials processing, engineering, chemistry, physics, mathematics and other disciplines. The flexibility afforded by these technical electives allows students to customize their education to prepare them for careers in industry or for graduate school.

The two-semester capstone senior design sequence provides a bridge between concepts learned in the classroom and practical application of these concepts in an industrial setting. Teams of students work on real-world materials problems submitted by local industrial sponsors.

The materials science and engineering program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org, and leads to the degree Bachelor of Science in Materials Science and Engineering. In addition the the base curriculum in Materials Science and Engineering, the department also offers curriculum concentrations in biomaterials and nanomaterials.

An accelerated 5-year BS/MS program is available for advanced study and further specialization. Graduate degrees are also offered (consult the Graduate Catalog (http://www.ncsu.edu/grad/catalog)).

How Does MSE at NC State Compare to Other Departments?

The mission of the NC State Department of Materials Science and Engineering is to provide students with a sound materials science and engineering education, advance the understanding and application of scientific principles, enhance economic development, and improve the quality of life of our citizens through teaching, research, and outreach programs.

Materials Science and Engineering at NCSU is a small and friendly department, and we are consistently ranked in the top 20 nationally by US News and World Report. Students, professors and professional staff all get to know each other. There is plenty of opportunity for personal attention, for learning, for professional growth and for social gathering.

Program Educational Objectives

With the background knowledge in science, engineering, critical thinking and teamwork provided by the MSE curriculum, our alumni are fully prepared to achieve one or more of the following within five years of graduation:
• Practice materials engineering in academic, industrial, government or entrepreneurial organizations.
• Earn an advanced degree such as MS, PhD or MBA, leading to a career in academia, research and development, or technical management.
• Be promoted into leadership roles in their chosen career.
• Demonstrate by their participation in technical societies, community service, and professional activities, a high degree of service and ethical responsibility to their professional field and the community.

Minor in Materials Science and Engineering

The Materials Science and Engineering minor is designed to provide undergraduate engineering and science majors, in curricula other than MSE, with the fundamentals of modern materials science and engineering. Completion of the MSE minor requires a minimum of 15 credit hours, which include 9 hours of required courses and at least 6 hours of elective courses. Further information regarding a Minor in Materials Science and Engineering is available from the MSE Director of Undergraduate Programs (http://www.mse.ncsu.edu/profile/caparzel).

MSE - Materials Science and Engineering Courses

MSE 200 Mechanical Properties of Structural Materials 3.
Prerequisite: Grade of C or better in CH 101.
An introduction to the atomic and grain structure of structural materials emphasizing the mechanical properties. Effects of mechanical and heat treatments on structure and properties. Fatigue and creep of materials, fracture toughness, mechanical and non-destructive evaluation, effects of environment. Design considerations, characteristics of metals, ceramics, polymers and composites. Not for Materials majors.

Prerequisite: Grade of C or better in CH 101.
Introduction to the fundamental physical principles governing the structure and constitution of metallic and nonmetallic materials and the relationships among these principles and the mechanical, physical and chemical properties of engineering materials.

MSE 203 Introduction to the Materials Science of Biomaterials 3.
Prerequisite: C- or better in CH 101, CH 102 and PY 205.
This course introduces fundamental physical principles governing the structure, processing, properties and performance of metallic, ceramic and polymeric materials. Relationships are developed defining how mechanical, physical and chemical properties are controlled by microstructure and chemistry. Material failure modes are developed with an emphasis on biocompatibility and the applications/performance of materials in the human body. Basic aspects of material biocompatibility are presented, leading into studies of the current and future applications of biomaterials.

Corequisite: MSE 201.
Principles and application of basic techniques for characterizing the structure of materials at different length scales. Optical microscopy, electron microscopy, scanning probe microscopy, X-ray diffraction and spectroscopic methods applied to metals, ceramics, polymers and semiconducting materials.

MSE 260 Mathematical Methods for Materials Engineers 3.
Corequisite: MA 242.
Use of MATLAB programming environment to illustrate and discuss principles and applications of analytical and numerical mathematical methods that are central to materials science and engineering. Data plotting, curve fitting, complex numbers and series, Fourier series and transforms, numerical integration and differentiation, linear algebra and matrix manipulation, initial and boundary value problems, numerical solution to ordinary differential equations and transport simulation through the use of partial differential equations.

MSE 270 Materials Science and Engineering Seminar 1.
Corequisite: MSE 201.
This course surveys the field of materials science and engineering and introduces students to contemporary issues. Job and career opportunities at the BS and graduate degree levels are presented. Students are introduced to opportunities for laboratory assistant jobs in the MSE department, summer internships, co-ops and summer research experiences at NCSU and other institutions. Students will learn to prepare effective resumes, technical reports and oral presentations.

MSE 300 Structure of Materials at the Nanoscale 3.
Prerequisite: C- or better in MSE 201.
This course covers the structure of materials at the nanometer scale. Structure includes the periodic arrangements of atoms and ions in crystalline solids, the amorphous networks of atoms, ions, and molecules in glassy materials, and the molecular structure of polymeric and biological materials. The typical means of characterizing nanostructure are also reviewed. Finally, the course will introduce the structure of novel nanomaterials like nanotubes, buckyballs and self assembled monolayers.

MSE 301 Introduction to Thermodynamics of Materials 3.
Prerequisite: MSE 201 or MSE 203; MSE majors must have a C- or better in MSE 201.

MSE 320 Introduction to Defects in Solids 3.
Prerequisite: C- or better in MSE 201.
Classification of defects as point, line, surface or volume types. Geometrical and crystallographic aspects of defects. Defects in metallic, ionic and covalently bonded crystal structures. Physical, chemical, electronic and magnetic aspects of defects. Field quantities and forces associated with defects. Novel defects in nanostructured materials and semicrystalline materials.

MSE 335 Experimental Methods for Analysis of Material Properties 2.
Prerequisite: C- or better in MSE 201.
Principles and application of basic techniques for characterizing the properties of materials. Mechanical, thermal, electrical, optical and magnetic property measurements applied to metals, ceramics, polymers and semiconducting materials.

MSE 350 Mechanics of Materials 3.
Prerequisite: MA 341.
Covers fundamental topics in stress analysis and mechanics of materials including statics and structures, elasticity, plasticity, fracture, fatigue, testing methods, and engineering applications.

MSE 355 Electrical, Magnetic and Optical Properties of Materials 3.
Prerequisite: PY 208 and MA 341.
Fundamental treatment of the electronic properties of materials, including the electrical, magnetic and optical characteristics. The role of electrons, band structure, and Brillouin zones on the various classes of materials is discussed from the semiclassical and quantum mechanical viewpoints. Applications of these principles to specific technological devices is also covered.
MSE 360 Kinetic Processes in Materials 3.
Prerequisite: MA 341 and MSE 301.
Types, mechanisms, and kinetics of solid state phase transformations are covered with selected applications to all classes of materials. Mechanisms of diffusion and techniques for diffusion calculations are presented. The role of surface energy and strain in the evolution of structure during transformation is presented. Phenomena at different size scales (atomic, nano, micro) are described relative to the evolution of structure during transformation.

MSE 362 Biomaterials Characterization 3.
Prerequisite: (CH 220 or 221 or 225) and (BME 203 or MSE 200 or MSE 201).
Introductory laboratory experience focused on integrating engineering and biological principles by exploring key topics in biomaterials. Topics include evaluation and interpretation of experimental results, modeling and testing of tissues and cells, and biomaterial/tissue, cell interactions. BME and MSE Majors only; Juniors and Seniors.

MSE 370 Microstructure of Inorganic Materials 3.
Prerequisites: MSE 300, MSE 301, and MSE 320.
Structure-property relationships in metallic and ceramic materials. Crystal structures of important metallic and ceramic elements, alloys, and compounds. Binary and ternary phase diagrams for notable systems will be presented. Microstructural features to be covered include grain size and distribution, multiphase microstructures, and defects. Examples of important metallic and ceramic systems for structural, electrical, optical and magnetic applications will be given.

Prerequisite: CH 220 and MSE 300.
Covers microstructure and properties of soft materials including polymer molecular weight distributions, amorphous polymers, semicrystalline polymers, copolymers, elastomers, biopolymers, soft tissue, bone and cellular structure. The design and function of implantable biomaterials are also covered.

MSE 409 Nuclear Materials 3.
Introduces students to properties and selection of materials for nuclear steam supply systems and to radiation effects on materials. Implications of radiation damage to reactor materials and materials problems in nuclear engineering are discussed. Topics include an overview of nuclear steam supply systems, crystal structure and defects, dislocation theory, mechanical properties, radiation damage, hardening and embrittlement due to radiation exposure and problems concerned with fission and fusion materials. Students cannot receive credit for both 409 and 509.

MSE 420 Mechanical Properties of Materials 3.
Prerequisite: MSE 370 and MSE 380.
Basic concepts for mechanical properties of materials, elasticity, plasticity, viscoelasticity, rubber elasticity, strengthening mechanisms, creep, fracture and fatigue. Includes metals, ceramics, polymers and composites. Describes mechanical properties for nanostructured materials and biomaterials.

MSE 423 Introduction to Materials Engineering Design 1.
Prerequisite: Senior standing in MSE.
Materials selection in engineering design involving lecture, cooperative and problem-based learning techniques. Course stresses creative thinking, problem solving methodology, interdependence of design with analysis and evaluation, teamwork and sharpening of communication skills. Real industrial problems are introduced which are analyzed by student teams. This a half-semester course. The classroom lectures end at mid-semester. In the second half of the semester, student teams develop a proposal which is submitted to the industrial sponsors at the end of the semester. The proposal defines future work to be conducted under MSE 470. Senior standing in MSE.

MSE 440 Processing of Metallic Materials 3.
Prerequisite: MSE 360 and MSE 370. Corequisite: MSE 420.
Fundamental concepts of solidification and their application to foundry and welding practices; metal forming concepts applied to forging, rolling, extrusion, drawing, and sheet forming operations; machining mechanisms and methods; powder metallurgy: advanced processing methods including rapid solidification and mechanical alloying. Credit for both MSE 440 and MSE 540 is not allowed.

MSE 445 Ceramic Processing 3.
Prerequisite: MSE 370.
Ceramic processing of powders includes powder synthesis, characterization, mixing, and size reduction. Theoretical aspects include particle packing, particles in suspension, and some aspects of surface chemistry. Forming methods include compaction, casting, and extrusion. Firing and sintering are examined. Credit for both MSE 445 and MSE 545 is not allowed.

MSE 455 Polymer Technology and Engineering 3.
Prerequisite: MSE 380.
This course will cover commercial polymers, polymer blends and miscibility, dynamic mechanical behavior, Boltzmann superposition principle, ultimate properties of polymers, polymer rheology and processing, recycling and design and selection of polymeric materials. Guest instructors from industry will give presentations on contemporary topics in polymer technology and engineering. Field trips are required.

MSE 456 Composite Materials 3.
Prerequisite: MSE 420.
The course covers the basic principles underlying properties of composite materials as related to the properties of individual constituents and their interactions. Polymer, metal and ceramic matrix composites are included. Property averaging and micromechanics of composites are covered at an introductory level. Emphasis is placed on design and processing of composite systems to yield desired combinations of properties. Credit for both MSE 456 and MSE 556 is not allowed.

MSE 460 Microelectronic Materials 3.
Prerequisite: MSE 355.
Processes and characterization techniques relevant to microelectronic materials science and technology. Boule growth, wafer preparation, oxidation, epitaxial growth, doping techniques, metallization, and device applications of elemental and compound semiconductors. Electrical, structural and chemical characterization of semiconductors is included as well as materials considerations relevant to device fabrication. Credit for both MSE 460 and MSE 560 is not allowed.
MSE 465 Introduction to Nanomaterials 3.
Prerequisite: MSE 201.
Introduction to nanoparticles, nanotubes, nanowires, and nanostructured films, emphasizing their synthesis, structural and property characterization, novel physical and chemical properties, applications and contemporary literature.

MSE 470 Materials Science and Engineering Senior Design Project 3.
Prerequisite: MSE 423.
Design project in materials science and engineering requiring problem definition and analysis, synthesis, and presentation of a designed solution. Students work in groups with a faculty adviser on problems submitted by local industrial sponsors or emerging research issues that represent the major specialty areas including ceramics, metals, polymers, or electronic materials.

MSE 480 Materials Forensics and Degradation 3.
Prerequisite: MSE 370 and MSE 380.
Covers principles and prevention of the degradation of materials. The topics will include dissolution of polymer and ceramic materials, electrochemical corrosion, oxidation of metals and polymers, degradation of polymers, friction and wear, degradation of electrical device components, bio-deterioration of materials, and failure analysis. The general practice in failure analysis will be applied to a variety of case studies to illustrate important failure mechanisms. Credit will not be given for both MSE 480 and MSE 580.

MSE 485 Biomaterials 3.
Prerequisite: BME 203 and BIO 183.
Introduction to materials of natural and synthetic origin and brief survey of historic, current, and future applications of materials in medicine. Examination of the classes and properties of degradable and non-degradable materials, interactions of materials with cells and tissues, and fundamentals of biocompatibility including inflammation, encapsulation, and infection. Discussion of biomaterial failure mechanisms, regulation, and related ethical concerns.

MSE 490 Special Topics in Materials Engineering 1-4.
Offered as needed for the development of new courses in materials engineering, including areas such as metals, ceramics, polymers, or microelectronic materials.

MSE 495 Materials Engineering Projects 1-6.
Prerequisite: Junior standing or Senior standing.
Application of engineering principles to a specific materials engineering project by a student or small group of students under supervision of a faculty member. A written report required.

MSE 500 Modern Concepts in Materials Science 3.
Prerequisite: Graduate standing.
Fundamentals of structure, structure modification and properties of materials with emphasis on structure-property relationships and modern theory of solids.

MSE 509 Nuclear Materials 3.
Prerequisite: MSE 201.
Introduces students to properties and selection of materials for nuclear steam supply systems and to radiation effects on materials. Implications of radiation damage to reactor materials and materials problems in nuclear engineering are discussed. Topics include an overview of nuclear steam supply systems, crystal structure and defects, dislocation theory, mechanical properties, radiation damage, hardening and embrittlement due to radiation exposure and problems concerned with fission and fusion materials. Students cannot receive credit for both 409 and 509.

MSE 511 Physical Metallurgy 3.
Prerequisite: MAT 321, MAT 450, Corequisite: MAT 430.
Application and design of selected metals and alloys in a theoretical and practical context. Relationships between mechanical behavior, and alloy chemistry, microstructure, and processing. Corrosion resistance; fatigue failure; creep; brittle fracture. Design of specific microstructures. Credit for both MAT 431 and MSE 511 is not allowed.

MSE 539 Advanced Materials 3.
Prerequisite: MSE 201 and MAE 314.
Introduces production/structure/property/function relation and application of a number of materials mainly for biomedical, mechanical and aerospace applications. Topics include ultra light materials (production, processing and applications of cellular solids), biomaterials (classes and application of materials in medicine and dentistry), composites (classes and application), refractory materials and coatings for high temperature applications, thin film shape memory alloys for micro-electro mechanical systems (MEMS).

MSE 540 Processing of Metallic Materials 3.
Prerequisite: MAT 321, MAT 450, Corequisite: MAT 431.
Fundamental concepts of solidification and their application to foundry and welding practices; metal forming concepts applied to forging, rolling, drawing, and sheet forming operations; machining mechanisms and methods; powder metallurgy; advanced processing methods including rapid solidification and mechanical alloying. Credit for both MAT 445 and MSE 540 is not allowed.

MSE 545 Ceramic Processing 3.
Prerequisite: MAT 434, MAT 435.
Powder synthesis, characterization, colloidal processing, forming method, theory of sintering, aspects of microstructural control. Credit for both MAT 445 and MSE 545 is not allowed.

MSE 555 Polymer Technology and Engineering 3.
Prerequisite: MSE 424 or equivalent.
Classes of commercially important polymers, advanced topics in phase behavior, viscoelasticity, fracture and ultimate properties of polymers; polymer rheology, and processing; design of polymeric materials. Credit for both MSE 455 and MSE 555 is not allowed.

MSE 556 Composite Materials 3.
Prerequisite: MAT 450.
Basic principles underlying properties of composite materials as related to properties of individual constituents and their interactions. Emphasis on design of composite systems to yield desired combinations of properties.

MSE 560 Microelectronic Materials Science and Technology 3.
Prerequisite: MAT 331, Corequisite: MAT 431.
Processes and characterization techniques relevant to microelectronic materials science and technology. Boule growth, water preparation, oxidation, epitaxial growth, doping techniques, metallization, and device applications of elemental and compound semiconductors. Electrical, structural and chemical characterization of semiconductors as well as materials considerations relevant to device fabrication. Credit for both MAT 460 and MSE 560 is not allowed.

MSE 561 Organic Chemistry Of Polymers 3.
Principles of step reaction and addition polymerizations; copolymerization; emulsion polymerization; ionic polymerization; characterization of polymers; molecular structure and properties.
MSE 565 Introduction to Nanomaterials 3.
Prerequisite: MSE 500.
Introduction to nanoparticles, nanotubes, nanowires, and nanostructured thin films, emphasizing their synthesis, structural and property characterization, novel physical and chemical properties, applications and contemporary literature.

MSE 566 Mechanical Properties of Nanostructured Materials 3.
Prerequisite: MSE 500 or an instructor approved equivalent.
The course covers mechanical behavior that is unique to nanostructured materials. Typical nanocrystalline metals and alloys. The various methods for processing nanocrystalline materials will be presented, emphasizing those that are suitable for geometric studies. The thermal stability of nanocrystalline microstructures will be covered and strategies for inhibiting grain growth described. Mechanical testing methods for uniaxial loading, creep, fracture and fatigue will be covered. Testing methods will also be discussed in context with structure-property relations, deformation mechanisms and failure modes.

MSE 575 Polymer Technology and Engineering 3.
Prerequisite: MAT 424.
Classes of commercially important polymers, advanced topics in phase behavior, viscoelasticity, fracture and ultimate properties of polymers; polymer rheology, processing and permeability; design of polymeric materials. Credit for both MAT 475 and MSE 575 is not allowed.

Prerequisite: Graduate standing.
Commercialization potential of new technologies, products and processes. Marketing, organizational, financial, operational and manufacturing issues. Strategic assessment and planning. Innovation management. Entrepreneurial transfer mechanisms including spinoffs, licensing and high-technology start-ups. Practical application with project and team management skills development.

Prerequisite: MBA/MSE 576.
Theoretical and practical team-based application of systematic evaluation techniques for assessing commercial potential of technologies, products and processes. Prioritization and selection based on technology strategy.

MSE 580 Materials Forensics and Degradation 3.
Prerequisite: MSE 370 and MSE 380.
Covers principles and prevention of the degradation of materials. The topics will include dissolution of polymer and ceramic materials, electrochemical corrosion, oxidation of metals and polymers, degradation of polymers, friction and wear, degradation of electrical device components, bio-deterioration of materials, and failure analysis. The general practice in failure analysis will be applied to a variety of case studies to illustrate important failure mechanisms. Credit will not be given for both MSE 480 and MSE 580.

MSE 601 Seminar 1.
Reports and discussion of special topics in materials science and engineering and allied fields.

MSE 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

MSE 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

MSE 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their thesis.

MSE 702 Defects In Solids 3.
Prerequisite: MSE 500.
MSE 703 Interaction of Electrons with Materials 3.
Prerequisite: MSE 500.
This course reviews basic interaction of electrons with solids through the free electron theory, quantum mechanics and quantum phenomena, and band theory. The course provides a practical foundation for understanding of electrical behavior of metals, semiconductors, dielectrics and non-crystalline materials and how this behavior relates to structure and materials processing. Graduate standing in MSE, CBME, ECE, PY, CH, or consent of the instructor required.

MSE 704 Interaction of Photons with Materials 3.
Prerequisite: MSE 703.
This course will answer basic questions on photon-matter interaction: Why do materials appear the way we see them? How can we change and control that? How can we apply their optical properties in various optical elements and optoelectronic devices? The course provides a practical foundation for working with and developing of materials for modern optoelectronic and photonic technologies. Graduate standing in MSE, CBME, ECE, PY, CH, or consent of the instructor required.

MSE 705 Mechanical Behavior Of Engineering Materials 3.
Prerequisite: MAT 450, MAT 702.
Coverage of both fundamental and engineering aspects of mechanical behavior of materials. Elasticity, plasticity and dislocation theory concepts used to describe phenomenological behavior and micro-mechanical mechanisms. Strengthening mechanisms in crystals, high-temperature deformation, fracture mechanics, fracture toughening mechanisms and cyclic deformation.

MSE 706 Phase Transformations and Kinetics 3.
Prerequisite: MAT 700, MAT 710, and MSE 500.
Homogeneous and heterogeneous nucleation, spinodal decomposition, interface and diffusion-controlled growth, formal theory of transformation kinetics, precipitation, coarsening, order-disorder, and martensitic transformations.
MSE 708 Thermodynamics Of Materials 3.
Prerequisite: MAT 301 and MSE 500.
Review of first and second laws of thermodynamics, equilibrium and irreversible processes, open and closed systems, partition functions and particle distribution functions. Applications include extension of thermodynamic potentials to situations where electrical, magnetic and stress fields present, heat capacity of crystals, electron gas in metals, solution models, binary phase diagrams and rubber elasticity in polymers.

MSE 710 Elements Of Crystallography and Diffraction 3.
Crystal symmetry, lattices and space groups; elementary diffraction by crystalline matter; experimental methods of x-ray diffraction.

MSE 712 Scanning Electron Microscopy 3.
Electron optics, sources and detectors. Beam specimen interactions, secondary and backscattered electrons, and EDS. Resolution limits, experimental conditions, related techniques, beam-induced damage and materials modifications.

Prerequisite: MAT 710.
Electron optics, electron-solid interactions, electron diffraction, image contrast, defect characterization, analytical and high resolution microscopy. Parallel laboratory demonstrations and exercises. Laboratory enrollment limited to twelve, but laboratory may be waived with consent of instructor.

Prerequisite: MSE 715.
This course provides the advanced graduate student with a detailed knowledge of transmission electron microscopy covering: advanced topics in electron sources, details of electron optics and aberrations, aberration corrected electron microscopy, modeling and simulating interactions of electrons with the specimen, image processing and analysis, and analytical techniques (EELS and EDX). Graduate standing in MSE, CHE, ECE, PHY, CH required or consent of the instructor.

MSE 731 Materials Processing by Deformation 3.
Prerequisite: Six hrs. of solid mechanics and/or materials. Presentation of mechanical and metallurgical fundamentals of materials processing by deformation. Principles of metal working, friction, forging, rolling, extrusion, drawing, high energy rate forming, chipless forming techniques, manufacturing system concept in production.

MSE 741 Principles of Corrosion 3.
Prerequisite: MAT 201 and CH 431 or MAT 301. Fundamentals of metallic corrosion and passivity. Electro-chemical nature of corrosive attack, basic forms of corrosion, corrosion rate factors, methods of corrosion protection. Laboratory work included.

MSE 751 Thin Film and Coating Science and Technology I 3.
Prerequisite: MAT 700.
Vacuum science and technology including gas kinetics, gas flow calculations, system design and use of various pumps, materials and components. Atomistics of solid surfaces. Nucleation and growth of thin films, secondary and backscattered electrons, and EDS. Resolution limits, experimental conditions, related techniques, beam-induced damage and materials modifications.

MSE 752 Thin Film and Coating Science and Technology II 3.
Prerequisite: MSE 751.

MSE 757 Radiation Effects on Materials 3.
Interaction of radiation with matter with emphasis on microstructural modification, physical and mechanical effects. Defects generation and annealing, void swelling, irradiation growth and creep, and irradiation induced effects in reactor materials are discussed. Current theories and experimental techniques are discussed.

MSE 760 Materials Science in Processing of Semiconductor Devices 3.
Prerequisite: MAT 460 and MSE 500. Ion implantation and doping for advanced semiconductor devices, thin films and epitaxy, silicides, ohmic contacts and interconnection metallurgy, oxidation and nitridation, gettering of impurities and dopant segregation phenomena, electromigration, electronic packaging materials science and advanced device concepts.

MSE 761 Polymer Blends and Alloys 3.
Prerequisite: CHE 316 or MAT 301. Thermodynamics, morphological characteristics and properties of multiphase polymer systems composed of homopolymers or copolymers. Interfacial characteristics and modification of multicomponent polymer blends through emulsification and reactive blending. Microphase ordering in block copolymers, and emerging technologies employing these nanostructured materials. Conformational properties and dynamics of macromolecules constrained near an interface.

MSE 763 Characterization Of Structure Of Fiber Forming Polymers 3.
Prerequisite: MA 301, PY 208. Theories, experimental evidence and characterization methods of the molecular fine structure of fiber forming polymers in the solid state. Characterization methods include X-ray diffraction, microscopy, infrared, thermal and magnetic resonance.

MSE 765 Defects, Diffusion and Ion Implantation In Semiconductors 3.
Prerequisite: MAT 701. Thermodynamics of vacancies and interstitials, defect complexes, electronic defects, defect annealing processes, self diffusion, dopant and impurity diffusion, substitutional/interstitial diffusion, diffusion in amorphous solids, electro transport, fundamentals of ion-solid interactions, semiconductor doping atomic structure of defects, damage annealing processes, supersaturated alloys, laser annealing, ion beam mixing phenomena, ion implantation and rapid thermal annealing processes, shallow junctions and devices.

MSE 770 Materials Science of Nanoelectronics 3.
Prerequisite: MSE 500. Effects of scale less than 100 nm on the electrical properties & processing of all materials (metals, semiconductors, ceramics, polymers and biomaterials). Current status and future prospects for the semiconductor industry summarized by invited scientists and by review and discussion of selected current literature. Student presentations and research proposals are required.

MSE 775 Structure of Semicrystalline Polymers 3.
Prerequisite: MAT 425. Structure and organization of semicrystalline polymers, from molecular scale to bulk state, including chain configuration, unit cell geometries, polymer crystallography, single crystals, spherulites, epitaxial crystallization, morphology, crystal defects, annealing and deformation mechanisms. Emphasis on analysis of x-ray diffraction, electron diffraction and electron microscopy data for structural characterization.

MSE 791 Advanced Topics in Materials Science and Engineering 1-3.
Prerequisite: Graduate standing.
Special studies of advanced topics in materials science and engineering.
MSE 795 Advanced Materials Experiments 1-3.
Prerequisite: Senior standing or Graduate standing.
Advanced engineering principles applied to a specific experimental project dealing with materials. A seminar period provided; required written report.

MSE 801 Seminar 1.
Reports and discussion of special topics in materials science and engineering and allied fields.

MSE 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

MSE 890 Doctoral Preliminary Exam 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation Research.

MSE 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour requirements, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Department of Mechanical and Aerospace Engineering

Engineering Building 3, Room 3002
Phone: (919) 515-2365
Visit the Mechanical and Aerospace Engineering website (http://www.mae.ncsu.edu/)

The Department of Mechanical and Aerospace Engineering is the largest engineering department at NC State, among the largest in the nation, and offers doctor of philosophy, masters, and undergraduate degrees, and on-line delivery of graduate courses for remote students.

The undergraduate curricula in mechanical engineering and in aerospace engineering are nearly the same for freshmen and sophomores but then differ for juniors and seniors. The freshman and sophomore courses provide the student with an understanding of the basic principles of engineering - statics, dynamics, solid mechanics, and thermodynamics. In the junior and senior years, the courses become more specialized and end with a capstone design course in which student teams develop an engineering system in response to industry-sponsored requirements. Detailed information is available online.

Aerospace

Aerospace engineering applies science and engineering principles to design, development, manufacture, and operation of aerospace systems and vehicles. Aerospace vehicles include aircraft such as low-speed propeller-powered aircraft, remotely autonomously piloted vehicles, micro air vehicles, hovercraft, and helicopters and spacecrafts such as rockets, space stations, and planetary rovers. Aerospace engineering not only involves design, development, manufacture, and operation but also considers environmental, economical, ethical, and social issues.

The undergraduate curriculum provides the student with knowledge of aerodynamics, aerospace materials, structures, propulsion, flight mechanics, and vehicle stability and control plus knowledge of selected topics in orbital mechanics, space environment, altitude determination and control, telecommunications, and space structures. The program educates students to define, formulate, and solve aerospace engineering problems, to function in multi-disciplinary teams, and to communicate effectively.

Aerospace engineering students gain experience with low-speed and high-speed wind tunnels and structural and material facilities for testing prototype models. A prominent feature of the program is the year-long senior design experience in which students choose from two possibilities: (1) design, construct, and flight-test a fly-by-wire aircraft; a unique 40-year tradition of the aerospace engineering program, or (2) design a prototype spacecraft, like a rocket, satellite or a planetary rover. Many of the students are involved in the department's student clubs, such as the Aerial Robotics and Rocketry clubs that compete regionally and regularly place in the top 3.

Aerospace engineering undergraduates are employed by the aerospace industries and other industries with similar technical problems. Many of our students enter graduate school after which they are employed by these same industries and by government laboratories such as NASA, NAVAIR, and the Air Force.

Mechanical

Mechanical engineering applies mechanical, thermal, and fluid principles to research, design, development, testing, manufacture, and operation of products and systems. Mechanical engineering is the broadest of the engineering programs, providing a technological foundation that serves societal needs in energy, health, safety, and all walks of life. Mechanical engineers solve problems dealing with energy and environmental systems (alternative fuels and renewable technologies), advanced materials and manufacturing (precision metrology, smart materials, and auto-adaptive materials), robotics and sensor technologies (opto-mechanical systems, MEMS, energy harvesting, human-centric and bio-inspired intelligent systems), and transportation (automotive and high speed rail).

In addition to taking strong foundational courses, mechanical engineering students gain experience in experimental laboratories for measurement and data analysis, performance evaluation of thermal systems, and testing and analysis of mechanical components. The senior design experience is a distinctive joint departmental-industry effort in which students solve industry-sponsored problems by designing, building, and testing prototype machines with the support of facilities for machining and electronics. Many of the students are involved in the department's student clubs, such as its Eco car and SAE car clubs that compete internationally and regularly place in the top 10.
Because of the discipline’s wide breadth, mechanical engineering students have a wide variety of employment opportunities. Undergraduate students enter engineering fields that deal with, to varying levels, design, development, manufacturing, plant operation, testing and experimentation, consulting, sales and service. The employers come from industry, government and service organizations. Many of the undergraduate students go on to graduate school to pursue advanced degrees in engineering, science or business, as well as professional degree programs such as medicine, accounting and law.

Honors Program in Mechanical and Aerospace Engineering

Students enter the mechanical and aerospace honors program by invitation. Students in these programs participate in special educational experiences involving deeper investigations into subjects and research projects.

MAE - Mechanical Aerospace Engr Courses

MAE 200 Introduction to Mechanical Engineering Design 1.
Introduction to mechanical engineering and its application in professional practice. Includes mechanical engineering vocabulary, measurement concepts, safety training, demonstration of basic machine components and systems, dissection of mechanical engineering devices, simple drawing and sketching, 3d printing, technical communication, design, creation of Online Portfolio. (5-week course).

MAE 201 Engineering Thermodynamics I 3.
Prerequisite: MA 242, PY 208 or 202.
Introduction to the concept of energy and the laws governing the transfers and transformations of energy. Emphasis on thermodynamic properties and the First and Second Law analysis of systems and control volumes. Integration of these concepts into the analysis of basic power cycles is introduced.

MAE 206 Engineering Statics 3.
Prerequisite: Cumulative GPA 2.5 or higher and a grade of C or better in both MA 241 and PY 205.
Basic concepts of forces in equilibrium. Distributed forces, frictional forces. Inertial properties. Application to machines, structures, and systems. Credit is not allowed for both MAE 206 and CE 214.

MAE 208 Engineering Dynamics 3.
Prerequisite: 2.5 GPA or higher, MA 242, C- or better in MAE 206 or CE 214.
Kinematics and kinetics of particles in rectangular, cylindrical, and curvilinear coordinate systems; energy and momentum methods for particles; kinetics of systems of particles; kinematics and kinetics of rigid bodies in two and three dimensions; motion relative to rotating coordinate systems.

MAE 214 Solid Mechanics 3.
Prerequisites: MA 242 and C- or better in (MAE 206 or CE 214).

MAE 250 Introduction to Aerospace Engineering 1.
The objective of this course is to introduce students to the fundamental concepts associated with aerospace engineering. This will be done through lectures focused on fluid flow, structures, dynamics, and complex system design. Students will also engage in hands-on mini-projects that will provide a design experience. Final efforts will culminate in a design portfolio project. 14AE BS Majors only.

MAE 251 Aerospace Vehicle Performance 3.
Prerequisite: Cumulative GPA 2.5 or higher and a grade of C or better in both MA 241 and PY 205.

MAE 252 Aerodynamics I 3.
Prerequisites: MA 301 and C- or better in MAE 251 Corequisite: MA 341.
Fundamentals of perfect fluid theory with applications to incompressible flows over airfoils, wings, and flight vehicle configurations.

MAE 253 Experimental Aerodynamics I 1.
Prerequisites: MA 301 and C- or better in MAE 251; Corequisites: MA 341 and C- or better in MAE 252.
Subsonic wind tunnel, instrumentation, data acquisition techniques, technical report preparation. Experiments involve pressure and force/moment measurements of various aerospace vehicle components with supplemental flow visualization.

MAE 302 Engineering Thermodynamics II 3.
Prerequisites: (CSC 112 or CSC 113 or CSC 114) and C- or better in MAE 301.
Continuation of Engineering Thermodynamics I with emphasis on the analysis of power and refrigeration cycles and the application of basic principles to engineering problems with systems involving mixtures of ideal gases, psychrometrics, nonideal gases, chemical reactions, combustion, chemical equilibrium cycle analysis, and one-dimensional compressible flow.

MAE 305 Mechanical Engineering Laboratory I 1.
Corequisite: C- or better in (MAE 208 or CE 215).
Theory and practice of measurement and experimental data collection. Laboratory evaluation and demonstration of components of the generalized measurement system and their effects on the final result. Applications of basic methods of data analysis as well as basic instrumentation for sensing, conditioning and displaying experimental qualities. (Instruction and practice in technical report writing.).

MAE 306 Mechanical Engineering Laboratory II 1.
Prerequisite: MAE 305, Corequisite: MAE 310.
Continuation of MAE 305 into specific types of measurements. Students evaluate and compare different types of instrumentation for measuring the same physical quantity on the basis of cost, time required, accuracy, etc. (Oral and written presentation of technical material).

MAE 308 Fluid Mechanics 3.
Prerequisite: MA 242, (C- or better in MAE 208 or CE 215). Corequisite: (MA 341 or MA 301) and (MAE 301 or MSE 301).
Development of the basic equations of fluid mechanics in general and specialized form. Application to a variety of topics including fluid statics; inviscid, incompressible fluid flow; design of Fluid dynamic system.
MAE 310 Heat Transfer Fundamentals 3.
Prerequisite: (MA 341 or MA 301), C- or better in MAE 301. Corequisite: MAE 308.
Analysis of steady state and transient one and multidimensional heat conduction employing both analytical methods and numerical techniques. Integration of principles and concepts of thermodynamics and fluid mechanics to the development of practical convective heat transfer relations relevant to mechanical engineers. Heat transfer by the mechanism of radiation heat transfer.

MAE 315 Dynamics of Machines 3.
Prerequisite: MA 341, C- or better in MAE 208 or CE 215.
Application of dynamics to the analysis and design of machine and mechanical components. Motions resulting from applied loads, and the forces required to produce specified motions. Introduction to mechanical vibration, free and forced response of discrete and continuous systems.

MAE 316 Strength of Mechanical Components 3.
Prerequisite: ME, AE, or NE Majors, C- or better in MAE 314 or CE 313.
Analysis and design of mechanical components based on deflection, material, static strength and fatigue requirements. Typical components include beams, shafts, pressure vessels and bolted and welded joints. Classical and modern analysis and design techniques. Computer analysis using the finite element method. Material and manufacturing considerations in design.

MAE 351 Aerodynamics II 3.
Prerequisites: C- or better in both MAE 252 and MAE 301.
Concepts of thermodynamics, compressible fluid flow, and shock waves with application to computing the aerodynamic characteristics of airfoils, wings and flight configurations at high speed.

MAE 352 Experimental Aerodynamics II 1.
Prerequisite: MAE 253, Corequisite: MAE 351.
Advanced stability and control experiments in the subsonic wind tunnel and external compressible flow experiments in the supersonic wind tunnel.

MAE 361 Dynamics & Controls 3.
Prerequisite: (MA 341 or MA 301), and C- or better in (MAE 208 or CE 215).
Dynamics and linear feedback control of aerospace and mechanical systems. Concepts from linear system theory, kinematics, particle dynamics, first- and second-order systems, system dynamics, vibrations, and computational techniques. Feedback control by root-locus, Nyquist, Bode plots, servo-mechanisms, gain and phase margin, and compensation. Control system design emphasized.

MAE 371 Aerospace Structures I 3.
Prerequisite: C- or better in MAE 251 and (MAE 314 or CE 313).
Determination of appropriate analysis techniques for Aerospace Structures. Introduction of governing equations and selected solutions for typical structures. Use of these concepts in the design of a representative structural component.

MAE 372 Aerospace Vehicle Structures Lab 1.
Corequisite: MAE 371.
Demonstration and application of the concepts that have been presented in MAE 371 and MAE 472. Fabrication techniques and the design and construction of a structural component will be emphasized.

MAE 374 Advanced Stability and Control 3.
Prerequisite: (MAE 306 or C- or better in MAE 261); Corequisite: (MAE 461 or MAE 435).
Laboratory experiments demonstrate the essential features of classical and modern control theory for single-input and single-output systems.

MAE 375 Energy Conservation in Industry 3.
Prerequisite: MAE 302, MAE 310.
Application of energy conservation principles to a broad range of industrial situations with emphasis on typical equipment encountered as well as the effect of recent environmental regulations. Topics covered include: steam generators, pollution control, work minimization, heat recovery, steam traps, industrial ventilation, electrical energy management, and economics. Field trip to conduct tests and evaluate operation at three NCSU steam plants.

MAE 387 Steam and Gas Turbines 3.
Prerequisite: MAE 302 and (MAE 309 or MAE 252).
Fundamental analysis of the theory and design of turbomachinery flow passages; control and performance of turbomachinery; gas-turbine engine processes.

MAE 403 Air Conditioning 3.
Prerequisite: MAE 302, MAE 310, MAE 308.

MAE 405 Controls Lab 1.
Prerequisite: (MA 306 or C- or better in MAE 261); Corequisite: (MAE 461 or MAE 435).
Applications of thermodynamics, fluid mechanics, and heat transfer to thermal systems with an emphasis on system design and optimization. Design of heat exchangers. Analysis of engineering economics, including time value of money, present and future worth, payback period, internal rates of return, and cost benefit analysis. Review of component model for pipes, pumps, fans, compressors, turbines, evaporators, condensers and refrigerators. Simulation methods for finding the operating point for thermal systems. Design of thermal systems through methods of optimization.
MAE 415 Analysis for Mechanical Engineering Design 3.
Prerequisite: MAE 315 and (MAE 316 or MAE 371).
Integration of the physical sciences, mathematics, and engineering to solve real-world design problems. Emphasis on open-ended problems which contain superfluous information and/or insufficient data. Solution techniques focus on problem definition, reduction to a solvable system, and development of a design response. Formal written communication of results.

MAE 416 Mechanical Engineering Design 4.
Prerequisite: MAE 415.
Teamwork, independent learning and communication skills are emphasized in this capstone course. Teams of students experience mechanical engineering design through; problem definition, investigation, brainstorming, focus, critical review, design, analysis, prototype construction and testing. Design for manufacture is encouraged throughout the process by having students build their own prototypes. Communication skills are developed through reports and presentations.

MAE 421 Design of Solar Thermal Systems 3.
Prerequisite: MAE 302, MAE 310.

MAE 430 Applied Finite Element Analysis 3.
Prerequisite: MAE 301 and (MAE 316 or MAE 371).
Finite element modeling techniques for solving real-world engineering problems are discussed. Theory of finite element discretization is highlighted follow by software implementation, emphasis is given on accurate prescription of boundary conditions that represent actual physical systems, modeling exercises and projects include solid structural problems, heat transfer, structural vibrations, fluid dynamics and contact problems, modeling is carried out using commercial software packages.

MAE 435 Principles of Automatic Control 3.
Prerequisites: (MA 301 or MA 341) and (MAE 315 or MAE 361).
Study of linear feedback control systems using transfer functions. Transient and steady state responses. Stability and dynamic analyses using time response and frequency response techniques. Compensation methods. Classical control theory techniques for determination and modification of the dynamic response of a system. Synthesis and design applications to typical mechanical engineering control systems. Introduction to modern control theory.

MAE 440 Non-Destructive Testing and Evaluation 3.
Junior or Senior standing in the College of Engineering.
NDT/NDE is a 3-credit elective course covering the general defect and damage types in materials and structures, principles of NDT/NDE techniques, and NDT/NDE applications. Associated lab modules (3 weeks) provide hands-on opportunities to students on often used NDT/NDE methods including magnetic particle, ultrasonics, and eddy current methods. A final project team will work on research and industrial NDT/NDE solutions.

MAE 442 Automotive Engineering 3.
Prerequisite: MAE 302, MAE 308, MAE 315, MAE 316.
Fundamental aspects of automotive engineering. Examines various automotive systems (engine, brakes, etc.) as well as their interactions in such areas as safety and performance. Current practices and development for the future.

MAE 451 Experimental Aerodynamics III 1.
Prerequisite: MAE 352, Corequisite: MAE 455, MAE 458.
Laboratory experiments in internal compressible flow and boundary layers in conjunction with MAE 455 and MAE 475. Topics include nozzle flows, constant area duct flows, component/overall performance of a gas turbine, and boundary layer analysis.

MAE 452 Aerodynamics of V/STOL Vehicles 3.

MAE 455 Boundary Layer Theory 3.
Prerequisite: MAE 351.
Introduction to the Navier-Stokes Equations and boundary layer approximations for incompressible flow. Calculation techniques for laminar and turbulent boundary layer parameters which affect lift, drag, and heat transfer on aerospace vehicles. Discussions of compressible flows.

MAE 456 Computational Methods in Aerodynamics 3.
Prerequisite: MAE 351, Corequisite: MAE 455.
Introduction to computational methods for solving exact fluid equations. Emphasis on development of the fundamentals of finite difference methods and their application to viscous and inviscid flows.

MAE 457 Flight Vehicle Stability and Control 3.
Prerequisite: (MAE 461 or MAE 435) and C- or better in MAE 261.
Longitudinal, directional and lateral static stability and control of aerospace vehicles. Lineralized dynamic analysis of the motion of a six degree-of-freedom flight vehicle in response to control inputs and disturbance through use of the transfer function concept. Control of static and dynamic behavior by vehicle design (stability derivatives) and/or flight control systems.

MAE 458 Propulsion 3.
Prerequisite: MAE 351, C- or better in MAE 301.
One-dimensional, internal, compressible flow including: isentropic flow, normal shocks, flow with friction and simple heat addition. Applications to air-breathing aircraft propulsion systems. Performance, analysis and design of components and overall performance of air-breathing engines.

MAE 459 Rocket Propulsion 3.
Prerequisite: MAE 351 or MAE 302.
Study of chemical rockets. This includes nozzle theory, flight performance, thermochemical calculations, and component and system analysis and design.

MAE 467 Introduction to Space Flight 3.
Prerequisites: (MA 301 or MA 341) and (CSC 112, CSC 113, or CSC 114) and C- or better in PY 205.
Fundamental aspects of space flight including launch vehicle performance and design, spacecraft characteristics, two-body orbital mechanics, earth satellites, interplanetary trajectories, atmospheric entry, and atmospheric heating.

MAE 472 Aerospace Structures II 3.
Prerequisite: MAE 371.
A continuation of MAE 371; deflection of structures, indeterminate structures, minimum weight design fatigue analysis and use of matrix methods in structural analysis. Selection of materials for aircraft construction based on mechanical, physical, and chemical properties.
MAE 480 Aerospace Vehicle Design I 3.
Prerequisite: Senior standing, Aerospace Engineering Majors, MAE 356, 472, 462.
A synthesis of previously acquired theoretical and empirical knowledge and application to the design of practical aerospace vehicle systems.

MAE 481 Aerospace Vehicle Design II 3.
Prerequisite: MAE 480.
A continuation of MAE 480. Designs are refined and vehicles constructed and instrumented by students. A flight test program is designed and carried out in cooperation with MAE 525 students.

MAE 482 Engineering Entrepreneurship and New Product Development I 3.
Applications of engineering, mathematics, basic sciences, finance, and business to the design and development of prototype engineering products. This course requires a complete written report and an end-of-course presentation. This is the first course in a two semester sequence. Students taking this course will implement their designed prototype in ECE 483: Senior Design Project in Electrical Engineering and Computer Engineering II-Engineering Entrepreneurs. Departmental approval required.

MAE 483 Engineering Entrepreneurship and New Product Development II 3.
Prerequisite: ECE 301, ECE 302, ECE 303, and any two ECE specialization courses. Applications of engineering, science, management and entrepreneurship to the design, development and prototyping of new product ideas. Based on their own new product ideas, or those of others, students form and lead entrepreneurship teams (eTeams) to prototype these ideas. The students run their eTeams as ‘virtual’ startup companies where the seniors take on the executive roles. Joining them are students from other grade levels and disciplines throughout the university that agree to participate as eTeam members. Departmental approval required.

MAE 484 Engineering Entrepreneurship Senior Design Lab 1.
Prerequisite: MAE/EE 482; C: MAE/ECE 483.
This is the lab for MAE 483. Applications of engineering, science, management, and entrepreneurship to the design, development, and prototyping of new product ideas. Based on their own new product ideas, or those of others, students form and lead entrepreneurship teams (eTeams) to prototype these ideas. The students run their eTeams as ‘virtual’ startup companies where the seniors take on the executive roles. Joining them are students from other grade levels and disciplines throughout the University that agree to participate as eTeam members. Departmental approval required.

MAE 495 Special Topics in Mechanical and Aerospace Engineering 1-3.
Offered as needed to present new or special MAE subject matter.

MAE 496 Undergraduate Project Work in Mechanical and Aerospace Engineering 1-6.
Prerequisite: Completion of all required MAE-300 level courses, Corequisite: MAE 415 or MAE 478.
Individual or small group project in engineering, comprising the design of an equipment or system stemming from a mutual student-faculty interest; a substantial final report (project) containing calculations, drawings and specifications must be produced. Alternatively, individual or small group undergraduate research evolving from a mutual student-faculty interest; a conference or scientific journal paper must be submitted for publication. Departmental approval required.

MAE 501 Advanced Engineering Thermodynamics 3.
Prerequisite: MAE 302; MA 401 or MA 511.
Classical thermodynamics of a general reactive system; conservation of energy and principles of increase of entropy; fundamental relation of thermodynamics; Legendre transformations; phase transitions and critical phenomena; equilibrium and stability criteria in different representation; irreversible thermodynamics. Introduction to statistical thermodynamics.

MAE 504 Fluid Dynamics Of Combustion I 3.
Prerequisite: MAE 301 or MAE 252 or MAE 308.

MAE 505 Heat Transfer Theory and Applications 3.
Prerequisite: MAE 310.
Development of basic equations for steady and transient heat and mass transfer processes. Emphasis on application of basic equations to engineering problems in areas of conduction, convection, mass transfer and thermal radiation.

MAE 511 Advanced Dynamics with Applications to Aerospace Systems 3.
Prerequisite: (MAE 208 or PY 205) and MA 242 and (MA 301 or MA 341).
Basic topics in advanced dynamics and with applications to aerospace systems. Rotating coordinate systems, Euler angles, three-dimensional kinematics and kinetics, angular momentum methods and an introduction to analytical mechanics. Examples are concentrated in the area of aerospace vehicles, but the methods learned will be applicable to land-based vehicles and any engineering system undergoing rigid body rotation, e.g. wind turbines, biomechanical systems, machine tools, robotic systems, etc.

MAE 513 Principles of Structural Vibration 3.
Prerequisite: MAE 315.
Principles of structural vibration beginning from single and multi-degree of freedom systems and extending to distributed systems. Forced system response, vibration of strings, bars, shafts and beams and an introduction to approximate methods.

MAE 515 Advanced Automotive Vehicle Dynamics 3.
Prerequisite: MAE 208 or MAE 315 or MAE 472 or equivalent; or consent of the instructor.
This course covers advanced materials related to mathematical models and designs in automotive vehicles as multiple degrees of freedom systems for dynamic behaviors in acceleration, braking, rollover, aerodynamics, suspensions, tire, and drive train.

MAE 518 Acoustic Radiation I 3.
Prerequisite: MA 301 and MA 308 or MAE 356.
Introduction to principles of acoustic radiation from vibrating bodies and their related fields. The radiation of simple sources, propagation of sound waves in confined spaces and transmission through different media.

MAE 521 Linear Control and Design For Mimo Systems 3.
Prerequisite: MAE 435, MA 341.
Linear Multivariable control and design for multibody engineering systems (robotics) and aircraft controls and navigation. Emphasis on multi-input and multi-output (MIMO) system analysis and design using frequency-based approach. Controllability and observability, transmission zeros and pole-zero cancellation, eigenstructures, singular value decomposition in frequency domain, stability and performance robustness of MIMO systems.
MAE 522 Non Linear System Analysis and Control 3.  
Prerequisite: MAE 521 or equivalent.  
Nonlinear system analysis, Lyapunov stability theory, absolute stability,  
feedback linearization, sliding mode control, backstepping control  
technique, as well as various advanced nonlinear control methods.

MAE 525 Advanced Flight Vehicle Stability and Control 3.  
Prerequisite: MAE 457.  
Preliminary analysis and design of flight control systems to include  
autopilots and stability augmentation systems. Study of effects of inertial  
cross-coupling and nonrigid bodies on vehicle dynamics.

MAE 528 Experimental Flight Testing 3.  
Prerequisite: Graduate standing, Aerospace Engineering Majors,  
MAE 525.  
Application of engineering methods to experimental flight testing of fixed-  
wing aircraft for determination of performance and handling qualities of  
air vehicles. Risk minimization techniques are included in the formulation  
of a flight test plan. Collected flight test data is corrected for standard day  
and analyzed.

MAE 531 Engineering Design Optimization 3.  
Prerequisite: Graduate standing in Engineering is recommended.  
Nonlinear optimization techniques with applications in various aspects  
of engineering design. Terminology, problem formulation, single and  
multiple design variables, constraints, classical and heuristic approaches,  
single and multiobjective problems, response surface modeling, and  
tradeoffs in complex engineering systems. Numerical optimization  
algorithms and implementation of these optimization techniques.  
Graduate standing in engineering recommended.

MAE 532 Smart Structures and Micro-Transducers 3.  
Prerequisite: MAE 314, MAE 315, or equivalent.  
This course is designed for graduate students who wish to learn  
fundamentals and applications of smart structures and micro transducers.  
The course focuses on materials, structures, design, fabrication, and  
characterization of micro transducers. It also covers the recent progress  
in applications of micro transducers in aerospace, biomedical, civil,  
electrical and mechanical engineering.

MAE 533 Finite Element Analysis I 3.  
Prerequisite: MAE 316 or MAE 472.  
Fundamental concepts of the finite element method for linear stress  
and deformation analysis of mechanical components. Development of  
truss, beam, frame, plane stress, plane strain, axisymmetric and solid  
elements. Isoparametric formulations. Introduction to structural dynamics.  
Practical modeling techniques and use of general-purpose codes for  
solving practical stress analysis problems.

MAE 534 Mechatronics Design 3.  
Prerequisite: Structured Programming Experience, Senior/Graduate  
Standing in WPS/MAE.  
Principles of Mechatronics Design, review of logic gates, microprocessor  
architecture, sensors and actuators, A/D and D/A conversion techniques,  
real-time multi-tasking programming concepts, direct digital control  
implementation. "Hands-on" experience through several laboratory  
assignments and final team project.

MAE 535 Design of Electromechanical Systems 3.  
Prerequisite: MA 341.  
A practical introduction to electromechanical systems with emphasis  
on modeling, analysis, design, and control techniques. Provides theory  
and practical tools for the design of electric machines (standard motors,  
linear actuators, magnetic bearings, etc). Involves some self-directed  
laboratory work and culminates in an industrial design project. Topics  
include Maxwell's equations, electromechanical energy conversion, finite  
element analysis, design and control techniques.

MAE 536 Micro/Nano Electromechanical Systems 3.  
Fundamentals and applications of micro/nano sensors and actuators.  
Emphasis upon MEMS/NEMS design, microfabrication techniques,  
and case studies of MEMS devices. Nanomaterials and NEMS devices  
also covered. Students have opportunity to learn commercial software  
packages on design and simulation of MEMS and hear from experts from  
leading MEMS companies through guest lectures. Previous knowledge  
of MEMS and nanotechnology is not required. The course is restricted to  
advanced undergrads and graduate students in engineering, materials  
science, physics and biomedical fields.

MAE 537 Mechanics Of Composite Structures 3.  
Prerequisite: MAE 316 or MAE 472.  
Manufacturing techniques with emphasis on selection of those producing  
most favorable end result. Classical plate theory, materials properties  
and failure theories. Micromechanics, repair, plate solutions and elasticity  
solutions covered as required to meet special interests of students.

MAE 538 Smart Structures and Materials 3.  
Prerequisite: MAE 415 or MAE 472.  
An application-oriented introduction to smart structures and materials  
with examples from mechanical, aerospace and biomedical engineering.  
Experimentally observed phenomena, micromechanisms, and models  
for material behavior. Team work developing simulation tools for typical  
applications. Validating results experimentally using PC-based data  
acquisition systems.

MAE 539 Advanced Materials 3.  
Prerequisite: MSE 201 and MAE 314.  
Introduces production/structure/property/function relation and application  
of a number of materials mainly for biomedical, mechanical and  
aerospace applications. Topics include ultra light materials (production,  
processing and application of cellular solids), biomaterials (classes  
and application of materials in medicine and dentistry), composites (classes  
and application), refractory materials and coatings for high temperature  
applications, thin film shape memory alloys for micro-electro mechanical  
systems (MEMS).

MAE 540 Advanced Air Conditioning Design 3.  
Prerequisite: MAE 403, 404.  
Psychrometric process representations. Heating and cooling coil design.  
Heat pump design. Air washer design. Direct contact heat and mass  
transfer systems. Ventilation requirements, air dilution calculations.  
Cooling load calculations; CLTD, CLF and transfer functions methods.  
Room air distribution.
MAE 541 Advanced Solid Mechanics I 3.
Prerequisite: MAE 316.
Development of principles of advanced strength of materials and elasticity theory leading to solution of practical engineering problems concerned with stress and deformation analysis. Tensor analysis, coordinate transformations, alternative measures of strain, elastic constitutive equations, stress measures, formulation and solution of two and three dimensional elasticity problems. Examples include advanced beam theory for shear deformation and large deformation, contact mechanics, stress concentration, pressure vessels and compound cylinders, thermal stress analysis, and stresses in layered microelectronic devices.

MAE 543 Fracture Mechanics 3.
Prerequisite: MAE 316.
Concept of elastic stress intensity factor, Griffith energy balance, determination of the elastic field at a sharp crack tip via eigenfunction expansion methods, J integrals analysis, experimental determination of fracture toughness, fatigue crack growth, elastic-plastic crack tip fields. Emphasis on modern numerical methods for determination of stress intensity factors, critical crack sizes and fatigue crack propagation rate predictions.

MAE 544 Real Time Robotics 3.
Prerequisite: Pascal, C, FORTRAN or Assembly language experience.
Real-time programming for servo control using an embedded controller. Software and hardware interfacing for control of a D.C. servo device. Introduction of multi-tasking to establish concurrent control of several processes, transforming servo loop into a process executing concurrently on single board computer. Provision for hands-on development systems and software emulators.

MAE 545 Metrology For Precision Manufacturing 3.
Prerequisite: Senior standing in MAE or BS in other curriculum.
Foundations of dimensional metrology and error analysis as applied to accuracy and repeatability in machine design. Plane, length, angle, and roundness metrology. Design of precision systems, Abbe' principle, error analysis, measurement, and compensation. Precision instruments and operating principles. Hands-on experience with measurement instruments and techniques.

MAE 546 Photonic Sensor Applications in Structure 3.
Prerequisite: MAE 371 or MAE 316.
Use of optical fiber and other photonic device based sensors to measure strain, temperature and other measurands in aerospace, mechanical, civil and biomedical applications. An introduction to optical waveguide analysis will be provided at the beginning of the course.

MAE 550 Foundations Of Fluid Dynamics 3.
Prerequisite: MAE 301 or MAE 252 or MAE 308.
Review of basic thermodynamics pertinent to gas dynamics. Detailed development of general equations governing fluid motion in both differential and integral forms. Simplification of the equations to those for specialized flow regimes. Similarity parameters. Applications to simple problems in various flow regimes.

MAE 551 Airfoil Theory 3.
Prerequisite: MAE 252.
Development of fundamental aerodynamic theory. Emphasis upon mathematical analysis and derivation of equations of motion, airfoil theory and comparison with experimental results. Introduction to super sonic flow theory.

MAE 553 Compressible Fluid Flow 3.
Prerequisite: MAE 351 or MAE 550.
Equations of motion in supersonic flow; unsteady wave motion, velocity potential equation; linearized flow; conical flow. Slender body theory. Methods of characteristics. Shockwave/ boundary layer interactions.

MAE 554 Hypersonic Aerodynamics 3.
Prerequisite: MAE 553.
Fundamentals of inviscid and viscous hypersonic flowfields. Classical and modern techniques for calculating shock wave shapes, expansions, surface pressures, heat transfer and skin friction. Applications to high speed aircraft, rockets and spacecraft.

MAE 558 Microfluidics and Nanofluidics 3.
Prerequisite: MAE 310 and MA 427.
Macroscale fluid mechanics, heat and mass transfer. Theories of microfluidics and nanofluidics. Applications in mechanical, biomedical, and chemical engineering. Discussions of journal articles and modern fluid dynamics projects. Expert guest lectures on advanced micro/ nanotechnology topics.

MAE 560 Computational Fluid Mechanics and Heat Transfer 3.
Prerequisite: MA 501 or MA 512, MAE 550 or MAE 557, proficiency in the FORTRAN programming language is required.
Introduction to integration of the governing partial differential equations of fluid flow and heat transfer by numerical finite difference and finite volume means. Methods for parabolic, hyper-bolic and elliptical equations and application to model equations. Error analysis and physical considerations.

MAE 561 Wing Theory 3.
Prerequisite: MAE 551.
Discussion of inviscid flow fields over wings in subsonic flow. Vortex lattice methods, lifting surface theories and panel methods developed for wings with attached flow and leading-edge separation. Calculation of aerodynamic characteristics and determination of effects of planform and airfoil shapes.

MAE 562 Physical Gas Dynamics 3.
Prerequisite: MAE 550.

MAE 573 Hydrodynamic Stability and Transition 3.
Prerequisite: MAE 550.
Conceptual framework and development of hydrodynamic stability theory. Application of the theory to two-dimensional incompressible and compressible subsonic, transonic, supersonic and hypersonic flows. Results for three-dimensional flows. Introduction of mechanisms of transition and discussion of transition models in numerical methods.

MAE 575 Advanced Propulsion Systems 3.
Prerequisite: Both MAE 458 and MAE 459 or both MAE 302 and MAE 308.
The course will focus on non-turbomachinery, air-breathing hypersonic aeropropulsion applications. Specific propulsion systems to be covered include ramjets and scramjets, pulsed detonation engines, and combined cycle engines, with historical perspective.
MAE 577 Multiscale Two-phase Flow Simulations 3.
Modeling and simulation of two-phase flows using interface tracking approach and ensemble averaging approaches. Model validation and verification based on interface-tracking data, boiling models. Nuclear reactor applications. The course focuses on interface tracking methods understanding as applied to bubbly flow simulations. Students will develop a simplified solver to track 2D bubbles/droplets throughout the course homework assignments and will learn how to apply this approach for better understanding of multi-phase flow as part of the course project.

MAE 586 Project Work In Mechanical Engineering 1-6.
Individual or small group investigation of a problem stemming from a mutual student-faculty interest. Emphasis on providing a situation for exploiting student curiosity.

MAE 589 Special Topics In Mechanical Engineering 1-3.
Prerequisite: Advanced Undergraduate standing or Graduate standing.
Faculty and student discussions of special topics in mechanical engineering.

MAE 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

MAE 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

MAE 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master's exam, etc. Students may register for this course a maximum of one semester.

MAE 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

MAE 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis Research.

MAE 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Graduate standing in Mechanical Engineering, Consent of Adviser.
Individual research in the field of mechanical engineering.

MAE 702 Statistical Thermodynamics 3.
Prerequisite: MAE 501.
Analysis and establishment of conclusions of classical thermodynamics from the microscopic viewpoint. Topics include: ensemble methods, partition functions, translational, rotational and vibrational energy modes of an ideal gas, chemical equilibrium, imperfect gases, dense fluids, critical-point theories, mean free path concepts, Boltzmann equation, hydrodynamic equations from kinetic theory and properties of disordered composite media.

MAE 704 Fluid Dynamics of Combustion II 3.
Prerequisite: MAE 504.

MAE 707 Advanced Conductive Heat Transfer 3.
Prerequisite: MAE 505 or MA 501.

MAE 708 Advanced Convective Heat Transfer 3.
Prerequisite: MAE 550.
Advanced topics in steady and transient, natural and forced convective heat transfer for laminar and turbulent flow through conduits and over surfaces. Mass transfer in laminar and turbulent flow. Inclusion of topics on compressible flow with heat and mass transfer.

MAE 709 Advanced Radiative Heat Transfer 3.
Prerequisite: MAE 505.
Comprehensive and unified treatment of basic theories; exact and approximate methods of solution of radiative heat transfer and the interaction of radiation with conductive and convective modes of heat transfer in participating and non-participating media.

MAE 718 Acoustic Radiation II 3.
Prerequisite: MAE 518.
Advanced treatment of the theory of sound generation and transmission. Topics include: techniques for solution of the wave equation, radiation from spheres, cylinders and plates, sound propagation in ducts, scattering.

MAE 721 Robust Control with Convex Methods 3.
Prerequisite: Graduate standing in Engineering and Applied Mathematics, MAE 521 or ECE 716.
This course emphasizes on control design techniques which result in closed-loop systems that are insensitive to modeling errors and which achieve a prespecified level of performance. Robustness margins against model uncertainty. Robust control design techniques based on linear matrix inequalities. Topics include uncertainty modeling, robust stability and performance, H_infinity control, convex optimization technique (LMI), mu-analysis and synthesis, computer-aided analysis and control design.
MAE 725 Geophysical Fluid Mechanics 3.
Prerequisite: MAE 501.
The principles of fluid mechanics applied to geophysical systems. Special emphasis placed on those features of these systems, such as almost rigid rotation and stable stratification, which produce unique and important effects. The effects of almost rigid rotations on homogeneous and stratified flows examined in detail.

MAE 726 Advanced Geophysical Fluid Mechanics 3.
Prerequisite: MAE 725 or equivalent.
Principles of fluid mechanics applied to geophysical systems. Special emphasis on role of stable stratification on the flows in these systems. Detailed study of generation, interaction, propagation and dissipation of internal gravity waves. Study of other geophysically important flows.

MAE 730 Modern Plasticity 3.
Prerequisite: Grad. course in elasticity or strength of materials.
Classical theories of plasticity and solutions pertaining to rate-independent and -dependent deformations modes in metals, geomaterials and concrete. Ductile failure modes, i.e., shear-strain localization and other failure modes associated with large deformation modes. Inelastic wave propagation, crystalline constitutive formulations and computational aspects of quasi-static and dynamic plasticity.

MAE 731 Materials Processing by Deformation 3.
Prerequisite: Six hrs. of solid mechanics and/ or materials.
Presentation of mechanical and metallurgical fundamentals of materials processing by deformation. Principles of metal working, friction, forging, rolling, extrusion, drawing, high energy rate forming, chipless forming techniques, manufacturing system concept in production.

MAE 734 Finite Element Analysis II 3.
Prerequisite: MAE 533.
Advanced treatment of finite element analysis for non-linear mechanics problems, including most recent developments in efficient solution procedures. Plate bending and shell elements, computational plasticity and viscoplastic materials, large deformation formulations, initial stability and buckling, structural vibrations, incompressible elasticity, contact problems, flow in incompressible media, weighted residuals and field problems. Development of efficient algorithms for practical application.

MAE 742 Mechanical Design for Automated Assembly 3.
Prerequisite: Graduate standing or PBS status in Engineering.
Mechanical design principles important in high volume production using modern automated assembly technology. Production and component design for ease of assembly as dictated by part handling, feeding, orientation, insertion and fastening requirements. Existing product evaluation and redesign for improved assemblage.

MAE 766 Computational Fluid Dynamics 3.
Prerequisite: MAE 560; proficiency in the FORTRAN programming language is required.
Advanced computational methods for integrating, by use of finite differences, and finite volume discretizations, non-linear governing equations of fluid flow; the Euler equations and the Navier-Stokes equations. Topics from current literature.

MAE 770 Computation of Reacting Flows 3.
Prerequisite: MAE 560, MAE 766.

MAE 776 Turbulence 3.
Prerequisite: MAE 550.
Development of basic concepts and governing equations for turbulence and turbulent field motion. Formulations of various correlation tensors and energy spectra for isotropic and nonisotropic turbulence. Introduction to turbulent transport processes, free turbulence, and wall turbulence.

MAE 787 Structural Health Monitoring 3.
Prerequisite: MAE 541 or MAE 513 or equivalent.
The course will provide the students with in-depth knowledge of technologies in structural health monitoring using smart materials as sensing and actuating elements to interrogate the structures. Damage detection techniques such as wave, impedance, and vibration-based damage detection techniques will be discussed and applied to different types of structures. Advanced signal processing techniques such as wavelet, neural network, principal component analysis will be used to make the damage more quantifiable.

MAE 789 Advanced Topics In Mechanical Engineering 1-3.
Prerequisite: Graduate standing.
Faculty and graduate student discussions of advanced topics in contemporary mechanical engineering.

MAE 801 Mechanical Engineering Seminar 1.
Faculty and graduate student discussions centered around current research problems and advanced engineering theories.

MAE 830 Doctoral Independent Study 1-9.
Prerequisite: Doctoral student.
Individual investigation of advanced topics under the direction of member(s) of the graduate faculty.

MAE 855 Doctoral Supervised Teaching 1-9.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

MAE 860 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation Research.

MAE 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.
Bachelor of Science in Engineering - Concentration in Mechanical Engineering Systems

The NC State Mechanical Engineering Systems (MES) BSE program is a site-based program located on the campus of Craven Community College in Havelock, North Carolina. Students in the program earn a Bachelor of Science in Engineering with a concentration in Mechanical Engineering Systems. Upon graduation from the MES program, students have the qualifications to apply for any job seeking mechanical engineering applicants.

Opportunities
In the MES program, you will receive a solid foundation in mechanical engineering principles including structural mechanics, materials, fluid mechanics, dynamics, vibrations, controls, thermal sciences, mechanical design, and thermal design. You will also receive training in the formal systems engineering approach to the design and realization of integrated systems. Your training in formal systems engineering gives you the ability to understand and work through the broad complex issues involved with integrated systems. Your training in mechanical engineering principles gives you the skill and confidence required to understand and solve detailed technical problems. The unique combination of these skills allows you to be well prepared to meet the technical and non-technical challenges of today's engineering workplace.

Curriculum
MES students are drawn from a diverse population that includes not only the traditional college student, but also military personnel and civilian staff of FRC-East.

The 10 mechanical engineering courses in the MES program are taught by the nationally recognized NC State MAE faculty in Raleigh and delivered to the MES students in Havelock via interactive high-definition video teleconference.

Local NC State faculty teach the Systems Engineering content, conduct all laboratory experiences, and direct students in the two-semester capstone design experience where they are partnered with an industry sponsor to design and build a solution to a real-world problem. Hands-on laboratory exercises allow students to explore and experience theoretical concepts learned in their courses and practice important modern skills such as manual and computerized measurement techniques, data analysis, design of experiments and technical communications.

The MES program is located within a short distance of the Naval Air Systems Command's Fleet Readiness Center- East, Cherry Point (FRC-East). FRC-East is North Carolina's largest industrial employer east of interstate highway I-95 and the MES program takes advantage of the synergies afforded by its close location and relationship with the more than 500 engineers working at FRC-East.

The MES program was evaluated under the criteria for Mechanical Engineering Programs and is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

Admissions
Students in the MES program typically begin by taking their general education courses such as physics, chemistry, calculus, and the humanities at one of North Carolina’s Community Colleges or from another approved university program. Once students satisfy all transfer requirements, they apply for acceptance into the College of Engineering at NC State as a transfer student majoring in the MES program. Current NC State mechanical engineering programs can pursue the MES program if they are willing to relocate to the Havelock area. For more information on admissions, click here (http://www.engr.ncsu.edu/mes/enroll-bse.php) or go to www.engr.ncsu.edu/mes.

Program Educational Objectives
Alumni of the BSE with concentration in mechanical engineering systems will attain the following objectives within 3-5 years of graduating:

1. Be engaged in the professional practice of engineering or be enrolled in graduate school.
2. Establish themselves as problem solvers in the workplace through the practical application of engineering and systems knowledge and skills.
3. Function effectively in a professional environment by utilizing written and oral communication, teamwork, project management and leadership skills and their ability to view their own work in a broader context.
4. Continuously improve and expand their technical and professional skills through formal study, as well as through informal means.

Click here (http://www.engr.ncsu.edu/mes) for more information on the MES Program or go to www.engr.ncsu.edu/mes.

Department of Nuclear Engineering

Burlington Engineering Laboratories, Room 3140 Phone: (919) 515-2301
Visit the Nuclear Engineering website (http://www.ne.ncsu.edu/)

Nuclear engineering is concerned with the engineering aspects of the control, release, and utilization of nuclear energy from both fission and fusion nuclear reactors. Nuclear reactors serve many functions: they serve as heat sources for electric power plants and are used in the production of radioactive isotopes for a variety of peaceful applications. Nuclear methods are applied in medical diagnosis and treatment, scientific research, and the search for new resources. The nuclear engineering program educates individuals in scientific and engineering principles essential for effective and productive contributions in industrial, university and government service. The Department of Nuclear Engineering maintains its national graduate rankings in the top 10 among all nuclear engineering programs. The undergraduate program continues to be highly respected by the nuclear industry.

Opportunities
Nuclear power reactor operation continues with over one hundred reactors operating in the nation, increasing our reliance upon nuclear energy as a substitute for energy from fossil fuels. Development of advanced fission and fusion reactors offers the potential of vast new energy sources. Industrial and medical applications of radiation continue to increase in diverse industries. Demand for nuclear engineers is on the rise within the electric power industry and national laboratories, naval reactors, and other industries. According to the National Society of Professional Engineers, nuclear engineers are among the top five best compensated of the engineering disciplines.

Scholarships and Awards
Several special scholarships exist for NC State nuclear engineering students, including the Duke Energy, Institute for Nuclear Power...
Operations, American Nuclear Society - national, U.S. Department of Energy and the U.S. Nuclear Regulatory Commission scholarships. A special department fund supports scholarships for exceptional upperclassmen. NC State nuclear engineering students have received special recognition awards at the Undergraduate Research Symposium and have gained national recognition by several times receiving the Student Design Award of the American Nuclear Society. NC State nuclear engineering students are also frequent recipients of nationally awarded fellowships.

**Facilities**

Facilities for nuclear education include a nuclear research reactor (PULSTAR), which can be operated at a steady state power of 1 MW; radiation detection laboratories; nuclear materials laboratory; thermal hydraulic laboratory; prompt gamma facility; neutron activation analysis laboratory; radio-chemistry laboratories; neutron radiography unit; positron facility; ultra cold neutron source; neutron diffractometer; numerous computer facilities including, departmental computer workstations, College of Engineering EOS engineering workstations, microcomputers; reactor simulation laboratory; plasma generation and diagnostics laboratory, atmospheric plasma science laboratory, and plasma launchers laboratory.

**Mission**

The Department of Nuclear Engineering has four primary missions:

1. Provide a quality education at both the undergraduate and graduate levels to students who desire to pursue careers in nuclear science and engineering.
2. Develop research programs in areas of emphasis related to applications of nuclear science and engineering.
3. Assist industries and government in North Carolina, nationally and internationally in their efforts to apply these nuclear technologies to the betterment of the economy and the environment - in a safe, effective, and innovative manner.
4. Enhance, promote, and utilize the PULSTAR reactor research and associated facilities in an exemplary manner, leading to national recognition as a premier 1 MW Nuclear Reactor Program dedicated to research, teaching, and extension.

**Program Educational Objectives**

Consistent with the Department of Nuclear Engineering's mission, the department has developed the following objectives for undergraduate education.

The Nuclear Engineering program is preparing its graduates for:

1. A track record of solving technical challenges facing the field of nuclear engineering through the detailed process of engineering design and the advance of nuclear engineering practice and research;
2. A reputation of adhering to the highest professional standards in the field, holding both the societal and environmental impact of their field's practices in the highest regard;
3. Written and oral communication skills that are highly effective in a diverse, cross-disciplinary, and global community of colleagues and stakeholders; and
4. The professional responsibility of continued self-improvement and education through professional licensing, graduate and professional education, and continued lifelong learning.

**Curriculum**

Nuclear engineers work in nuclear systems research, design, development, testing, operation, environmental protection, and marketing. The Bachelor of Science program prepares graduates for positions in industry, national laboratories, or for graduate study (consult the Graduate Catalog [http://www.ncsu.edu/grad/catalog]). The curriculum incorporates basic sciences and engineering, with emphasis on mathematics and physics, followed by course work in nuclear science and technology. Design concepts are introduced in numerous nuclear engineering courses throughout the curriculum to provide an integrated educational experience, cap-stoned by senior nuclear projects involving reactors and radiation systems. Attention is also given to the efficient utilization of energy resources and to the environmental aspects of nuclear energy. Computers are widely used throughout the curriculum.

The nuclear engineering program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org, and leads to the degree of Bachelor of Science in Nuclear Engineering. Advanced undergraduates who desire to attend graduate school at NC State may enter a combined 5-year B.S./MNE professional program or B.S./M.S. bachelor/master degree program during their senior year which will culminate at the end of their fifth year with both the Bachelor of Science in Nuclear Engineering and the Master of Nuclear Engineering or the Master of Science degrees, respectively.

**NE - Nuclear Engineering Courses**

**NE 201 Introduction to Nuclear Engineering.**

Prerequisite: Grade of C or better in MA 241, PY 205.

An introduction to the concepts, systems and application of nuclear processes. Topics include radioactivity, fission, fusion, reactor concepts, biological effects of radiation, nuclear propulsion, and radioactive waste disposal. Designed to give students a broad perspective of nuclear engineering and an introduction to fundamentals and applications of nuclear energy.

**NE 202 Radiation Sources, Interaction and Detection.**

Prerequisite: PY 208 and CSC 112.

Introduction to nuclear energy. Topics include radioactivity, radiation detection, interaction of radiation with matter, nuclear reactions, fission, fusion, nuclear reactors, radiation safety and protection, and laboratory measurement of nuclear radiation.

**NE 235 Nuclear Reactor Operations Training.**

Principles of nuclear reactor operations. Lectures to cover basic nuclear engineering theory pertaining to fission reactor operations; laboratory sessions to provide hands on training with the PULSTAR nuclear reactor including facility pre-startup checks, approach to criticality, steady state operations, and measurement of various operating parameters. Qualified students may opt to enter training and study for the U.S. Nuclear Regulatory Commission exam to become federally licensed nuclear Reactor Operators. Does not count towards NE graduation requirements.
NE 301 Fundamentals of Nuclear Engineering 4.
Prerequisite: MA 341, CSC 112, C- or better in NE 202.
Introductory course in nuclear engineering. Neutron physics, reactor operation, and reactor dynamics. Basic principles underlying the design and operation of nuclear systems, facilities and applications. Laboratory sessions include neutron detection and measurement, reactor instrumentation, and reactivity measurements.

NE 400 Nuclear Reactor Energy Conversion 4.
Prerequisite: MAE 301 and a C- or better in NE 301.
Introduction to the concepts and principles of heat generation and removal in reactor systems. Power cycles, reactor heat sources, analytic and numerical solutions to conduction problems in reactor components and fuel elements, heat transfer in reactor fuel bundles and heat exchangers. Problem sets emphasize design principles. Heat transfer lab included. Credit will not be given for both NE 400 and NE 500.

NE 401 Reactor Analysis and Design 4.
Prerequisite: C- or better in NE 301, Corequisite: MA 401.
Elements of nuclear reactor theory for reactor core design and operation. Includes one-group neutron transport and multigroup diffusion models, analytical and numerical criticality search, and flux distribution and calculations for homogeneous and heterogeneous reactors, slowing down and thermalization models and transient isotropics. Laboratory observations and correlation of reactor measurements with theory.

NE 402 Reactor Engineering 4.
Prerequisite: MAE 308 and either NE 400 or MAE 310.
A course in thermal-hydraulic design and analysis of nuclear systems. Single and two-phase flow, boiling heat transfer, modeling of fluid systems. Design constraints imposed by thermal-hydraulic considerations are discussed. A thermal-hydraulics laboratory included. Credit will not be given for both NE 402 and NE 502.

NE 404 Radiation Safety and Shielding 3.
Prerequisite: NE 301 with a grade of C- or better or NE 419.
Radiation safety and environmental aspects of nuclear power generation. Radiation interaction, photon attenuation, shielding theory and design project, external and internal dose evaluation, reactor effluents and release of radioactivity into the environment, transportation and disposal of radioactive waste; and environmental impact of nuclear power plants.

NE 405 Reactor Systems 3.
Prerequisite: NE 401, NE 402.
Nuclear power plant systems: design criteria, design parameters, and economics. Topics covered include: PWR, BWR, core design, primary loops, auxiliary and emergency systems; containment, reactor control and protection systems, accident and transient behaviors.

NE 406 Nuclear Engineering Senior Design Preparation 1.
Prerequisite: NE 401, Corequisite: NE 402.
Preliminary design phase in nuclear engineering systems to prepare for the final phase design. Preliminary designs developed by teams with advice of faculty, with reports presented in oral and written form. Current and future systems emphasized, and use of computers encouraged.

NE 408 Nuclear Engineering Design Project 3.
Prerequisite: NE 406.
Projects in design of practical nuclear engineering systems. Preliminary designs developed by teams with advice by faculty as needed, with reports presented in oral and written form. Current and future systems emphasized, and use of computers encouraged.

NE 409 Nuclear Materials 3.
Prerequisite: MSE 201.
Introduces students to properties and selection of materials for nuclear steam supply systems and to radiation effects on materials. Implications of radiation damage to reactor materials and materials problems in nuclear engineering are discussed. Topics include an overview of nuclear steam supply systems, crystal structure and defects, dislocation theory, mechanical properties, radiation damage, hardening and embrittlement due to radiation exposure and problems concerned with fission and fusion materials. Students cannot receive credit for both 409 and 509.

NE 412 Nuclear Fuel Cycles 3.
Prerequisite: NE 401.
Processing of nuclear fuel with descriptions of mining, milling, conversion, enrichment, fabrication, irradiation, reprocessing, and waste disposal. In-core and out-of-core nuclear fuel management design, including objectives, constraints, decision and methodologies. Nuclear power plant and fuel cycle economics.

NE 418 Nuclear Power Plant Instrumentation 3.
Prerequisite: ECE 221 or ECE 331.
Instrumentation and supporting systems required for control and protection of a nuclear power plant. Radiation measurement, process measurement, and reactor operating principles used to develop instrumentation requirements and characteristics. Requirements and implementations of instrumentation, control and protection systems for pressurized and boiling water reactors. Design and implementation issues include power supplies, signal transmission, redundancy and diversity, response time, and reliability.

NE 419 Introduction to Nuclear Energy 3.
Prerequisite: PY 202 or PY 208.
Electrical power generation from nuclear fission, fundamental aspects of fission chain reaction, and reactor design. Reactor types, their static and dynamic characteristics and instrumentation. Reactor operation and safety. Nuclear fusion and fusion reactor development. Not open to majors in Nuclear Engineering.

NE 491 Special Topics in Nuclear Engineering 1-4.
Detailed coverage of special topics.

NE 500 Nuclear Reactor Energy Conversion 3.
Prerequisite: MAE 301.
Introduction to the concepts and principles of heat generation and removal in reactor systems. Power cycles, reactor heat sources, analytic and numerical solutions to conduction problems in reactor components and fuel elements, heat transfer in reactor fuel bundles and heat exchangers. Problem sets emphasize design principles. Credit will not be given for both NE 400 and NE 500.

NE 501 Reactor Analysis and Design 3.
Prerequisites: NE 520, MA 401, and CSC 112.
Elements of nuclear reactor theory for reactor core design and operation. Includes one-group neutron transport and multigroup diffusion models, analytical and numerical criticality search, and flux distribution and calculations for homogeneous and heterogeneous reactors, slowing down models, introduction to perturbation theory. Credit for both NE 401 and NE 501 is not allowed.

NE 502 Reactor Engineering 3.
Prerequisite: MAE 308.
Thermal-hydraulic design and analysis of nuclear systems. Single and two-phase flow, boiling heat transfer, modeling of fluid systems. Design constraints imposed by thermal-hydraulic considerations are discussed. Credit will not be given for both NE 402 and NE 502.
NE 504 Radiation Safety and Shielding 3.
Prerequisite: NE 401 or NE 520.
A basic course in radiation safety and environmental aspects of nuclear power generation. Topics include radiation interaction, photon attenuation, shielding, internal and external dose evaluation, reactor effluents and release of radioactivity into the environment, transportation and disposal of radioactive waste; and environmental impact of nuclear power plants. Term-long project.

NE 505 Reactor Systems 3.
Prerequisite: NE 401, NE 402.
Nuclear power plant systems: PWR, BWR and advanced concepts. Design criteria, design parameters, economics, primary and secondary loops, safety systems, reactor control and protection systems, containment, accident and transient behaviors, core design, and reactivity control mechanisms. Term-long project. Credit for both NE 405 and NE 505 is not allowed.

NE 509 Nuclear Materials 3.
Prerequisite: MSE 201.
Introduces students to properties and selection of materials for nuclear steam supply systems and to radiation effects on materials. Implications of radiation damage to reactor materials and materials problems in nuclear engineering are discussed. Topics include an overview of nuclear steam supply systems, crystal structure and defects, dislocation theory, mechanical properties, radiation damage, hardening and embrittlement due to radiation exposure and problems concerned with fission and fusion materials. Students cannot receive credit for both 409 and 509.

NE 512 Nuclear Fuel Cycles 3.
Prerequisite: NE 401.
Processing of nuclear fuel with description of mining, milling, conversion, enrichment, fabrication, irradiation, shipping, reprocessing and waste disposal. Fuel cycle economics and fuel cost calculation. In-core and out-of-core nuclear fuel management, engineering concepts and methodology. Term-long project. Credit for both NE 412 and NE 512 is not allowed.

NE 520 Radiation and Reactor Fundamentals 3.
Prerequisite: MA 341 and PY 208.
Basics of nuclear physics and reactor physics that are needed for graduate studies in nuclear engineering. Concepts covered include, atomic and nuclear models, nuclear reactions, nuclear fission, radioactive decay, neutron interactions, nuclear reactors, neutron diffusion in non-multiplying and multiplying systems, and basic nuclear reactor kinetics.

NE 521 Principles of Radiation Measurement 3.
Prerequisites: Graduate standing in Nuclear Engineering or instructor permission.
Radiation detection measurement methods employed in nuclear engineering. Topics include: physics of nuclear decay and nuclear reactions, interaction of charged particles, photons, and neutrons with matter, fundamental properties of radiation measurement systems, statistical analysis of radiation measurements, common radiation detectors (gas-filled detectors, scintillators, and semiconductor detectors), data acquisition and processing methods, and radiation measurement applications.

NE 528 Introduction to Plasma Physics and Fusion Energy 3.
Prerequisite: MA 401 and PY 208.
Concepts in plasma physics, basics of thermonuclear reactions; charged particle collisions, single particle motions and drifts, radiation from plasmas and plasma waves, fluid theory of plasmas, formation and heating of plasmas, plasma confinement, fusion devices and other plasma applications.

NE 531 Nuclear Waste Management 3.
Prerequisite: MA 341.

NE 541 Nuclear Nonproliferation Technology and Policy 3.
Technology and policy challenges and solutions to prevent the spread of nuclear weapons. Topics include: issues of nuclear proliferation inherent to civilian nuclear power development; technologies, processes, and policies for safeguarding nuclear materials and technology; integrating the preceding subjects to strengthen the global nuclear nonproliferation regime. Includes a field trip to Oak Ridge National Laboratory during Spring Break to gain hands-on experience with safeguards measurements of nuclear material. The field trip is required; there is no cost to the student.

NE 577 Multiscale Two-phase Flow Simulations 3.
Modeling and simulation of two-phase flows using interface tracking approach and ensemble averaging approaches. Model validation and verification based on interface-tracking data, boiling models. Nuclear reactor applications. The course focuses on interface tracking methods understanding as applied to bubbly flow simulations. Students will develop a simplified solver to track 2D bubbles/droplets throughout the course homework assignments and will learn how to apply this approach for better understanding of multi-phase flow as part of the course project.

NE 591 Special Topics In Nuclear Engineering I 1-6.
Credits Arranged.

NE 592 Special Topics In Nuclear Engineering II 1-6.
Credits Arranged.

NE 601 Seminar 1.
Discussion of selected topics in nuclear engineering.

NE 685 Master’s Supervised Teaching 1-3.
Prerequisite: Master’s student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

NE 690 Master’s Examination 1-9.
Prerequisite: Master’s student.
For students in non thesis master’s programs who have completed all other requirements of the degree except preparing for and taking the final master’s exam.

NE 693 Master’s Supervised Research 1-9.
Prerequisite: Master’s student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

NE 695 Master’s Thesis Research 1-9.
Prerequisite: Master’s student.
Thesis research.

NE 696 Summer Thesis Research 1.
Prerequisite: Master’s student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.
Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their theses.

NE 721 Nuclear Laboratory Fundamentals 3.
Prerequisite: MA 401 and NE 401.
Laboratory experiments and techniques that are useful and instructive to a Nuclear Engineer. The labs include experiments on radiation detectors and detection techniques, Gamma-and X-ray spectroscopy, and use of the thermal neutron beam of the nuclear reactor for neutron imaging. All state-of-the art radiation detectors are taught and used. Restricted to Nuclear Engineering Graduate Students.

NE 722 Reactor Dynamics and Control 3.
Prerequisite: NE 401 or NE 520.
Methods of describing and analyzing dynamic behavior of systems. These methods applied to reactor systems and the effects of feedbacks studies. Methods of measuring the behavior of reactor systems and development of logic systems for control and safety.

NE 723 Neutron Transport Theory 3.
P:NE 520 or NE 401/501.
Advanced theory of neutron transport and computational methods of solving particle transport (linear Boltzmann) equation for reactor physics problems. Principle topics: models of neutron transport; analytic methods for solving transport equation; asymptotic diffusion limit; PN and SPN methods, homogenization methodology; numerical methods for multidimensional problems; computational methods for multiphysics problems. Objective is to enable students to read literature and perform relevant analysis of neutron transport and reactor-physics problems.

NE 724 Reactor Heat Transfer 3.
Prerequisite: NE 402 and NE 401 or NE 520.
Consideration of heat generation and transfer in nuclear power reactors. Topics include reactor heat generation, steady-state and transient heat combustion in reactor fuel elements, boiling heat transfer and single and two-phase flow.

NE 726 Radioisotopes Measurement Applications 3.
Prerequisite: NE 401 or NE 520.
Introduction of the student to measurement applications using radioisotopes and radiation. Discussion of all major tracing, gauging and analyzer principles and treatment of several specific applications in detail. Objective is to familiarize student with design and analysis of industrial measurement systems using radioisotopes and/or radiation.

NE 727 Nuclear Engineering Analysis 3.
Prerequisite: NE 401 or NE 520.
Fundamental material on: (1) numerical methods for solving the partial differential equations pertinent to nuclear engineering problems, (2) Monte Carlo simulation of radiation transport and (3) data and error analysis techniques including estimation of linear and nonlinear model parameters from experimental data.

NE 729 Reactor Theory and Analysis 3.
Prerequisite: NE 723, NE 727.
Theoretical aspects of neutron diffusion and transport related to the design computation and performance analysis of nuclear reactors. Principal topics: a unified view of the neutron cycle including slowing down, resonance capture and thermalization; reactor dynamics and control; fuel cycle studies; and neutron transport methods. Background provided for research in power and test reactor analysis.

NE 730 Radiological Assessment 3.
Prerequisite: NE 404 or NE 504.
Principles of analyzing environmental radiation transport and resulting human exposure and dose and dose management. Sources term of radiation exposure, the radon problem, transport of radionuclides in the atmosphere, surface water, and groundwater, pathways modeling, radiation dosimetry, probabilistic models for environmental assessment, uncertainty analysis, and radiation risk management. A package of computer codes is developed as a class project.

NE 732 Principles of Industrial Plasmas 3.
Prerequisite: NE/PY 528.
Theory and fundamental physical principles of industrial plasmas. Applications in plasma processing, plasma manufacturing technology, arcs and torches, plasma sprayers, high-voltage high-current switching devices, plasma-driven devices and plasma-aided technology. Emphasis on particle transport and plasma flow.

NE 740 Laboratory Projects In Nuclear Engineering 3.
Prerequisite: NE 721.
Enhancement of laboratory skills pertinent to nuclear engineering research through projects that requiring student to design the experiment, assemble equipment, carry out the measurements and analyze and interpret data. Students work in groups of two and perform to completion two laboratory projects.

NE 745 Plasma Laboratory 3.
Prerequisite: NE 528 or PY 508 or PY 509.
Experimental plasma generation and plasma diagnostic techniques. Lecture topics include high vacuum techniques, perturbing and non-perturbing probe techniques, and laser and emission spectroscopy. Laboratories utilize various methods of measuring plasma parameters discussed in lectures.

NE 746 Fusion Energy Engineering 3.
Prerequisite: NE 528.
Description and analysis of the technologies of devices necessary to produce fusion energy including vacuum technology, plasma heating and fueling, magnetics, special energy conversion, neutronics, materials, environment and safety. Stress upon design integration and ensuing technological constraints.

NE 751 Nuclear Reactor Design Calculations 3.
Prerequisite: NE 723.
Application of digital computer to problems in reactor core nuclear design. Study and exercise of available reactor core physics computer modules. Description of systems and programs used by industry for power reactor core design and core follow. A review of relevant analytic and numerical methods facilitates computer program development by students.

NE 752 Thermal Hydraulic Design Calculations 3.
Prerequisite: NE 724.
Advanced presentation of thermal-hydraulic analysis of nuclear power systems. Topics including development of single phase and two-phase fluid flow equations, subchannel analysis, interphase phenomena and numerical solution methods relevant to design and safety analysis codes.

NE 753 Reactor Kinetics and Control 3.
Prerequisite: NE 722.
The control of nuclear reactor systems. Development of basic control theory including the use of Bode, Nyquist and S-plane diagrams and state-variable methods. Analysis of reactor and reactor systems by these methods and development of control methods and optimum-control methods. Discussion of models of reactors and reactor-associated units, such as heat exchangers. Presentation of effects of nonlinearities.
NE 757 Radiation Effects On Materials 3.
Interaction of radiation with matter with emphasis on microstructural modification, physical and mechanical effects. Defects generation and annealing, void swelling, irradiation growth and creep, and irradiation induced effects in reactor materials are discussed. Current theories and experimental techniques are discussed.

NE 761 Radiation Detection 3.
Prerequisite: NE 726.
Advanced aspects of radiation detection such as computer methods applied to gamma-ray spectroscopy, absolute detector efficiencies by experimental and Monte Carlo techniques, the use and theory of solid state detectors, time-of-flight detection experiments and $M_1s$, $sbauer$ and other resonance phenomena.

NE 762 Radioisotope Applications 3.
Prerequisite: NE 726.
Presentation of advanced principles and techniques of radioisotope applications. Topics include radiotracer principles; radiotracer applications to engineering processes; radioisotope gauging principles; charged particle, gamma ray and neutron radioisotope gauges.

NE 770 Nuclear Radiation Attenuation 3.
Prerequisite: NE 727.
Physical theory and mathematical analysis of the penetration of neutrons, gamma-rays and charged particles. Analytical techniques including point kernels, transport theory, Monte Carlo and numerical methods. Digital computers employed in the solution of practical problems.

NE 772 Environmental Exposure and Risk Analysis 3.
Prerequisite: ST 511 or ST 515.
Course covers the identification, transport, and fate of hazardous substances in the environment; quantification of human exposures to such substances; dose-response analysis; and uncertainty and variability analysis. The general risk assessment framework, study design aspects for exposure assessment, and quantitative methods for estimating the consequences and probability of adverse health outcomes are emphasized.

NE 780 Magnetohydrodynamics & Transport in Plasmas 3.
Prerequisite: NE 528, NE/PY 414 and 415.
Advanced fluid description of plasmas for magnetic fusion, space and industrial plasmas, and other applications. Emphasis on a first principles approach to transport, equilibrium, and stability.

Prerequisite: NE 528, NE/PY 414 and 415, Corequisite: MA 775.
Kinetic theory, waves, and non-linear phenomena in magnetized plasmas. First principles approach to the treatment of instabilities and other collective effects.

NE 795 Advanced Topics In Nuclear Engineering I 1-3.
A study of recent developments in nuclear engineering theory and practice.

NE 796 Advanced Topics In Nuclear Engineering II 3.
A study of recent developments in nuclear engineering theory and practice.

NE 801 Seminar 1.
Discussion of selected topics in nuclear engineering.

NE 885 Doctoral Supervised Teaching 1-3.
Prerequisite: Doctoral student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

NE 890 Doctoral Preliminary Examination 1-9.
Prerequisite: Doctoral student.
For students who are preparing for and taking written and/or oral preliminary exams.

NE 893 Doctoral Supervised Research 1-9.
Prerequisite: Doctoral student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Doctoral student.
Dissertation research.

NE 896 Summer Dissertation Research 1.
Prerequisite: Doctoral student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Doctoral student.
For students who have completed all credit hour, full-time enrollment, preliminary examination, and residency requirements for the doctoral degree, and are writing and defending their dissertations.

Textile Engineering Program

Textile Building/Centennial Campus, Room 3250

The Textile Engineering (TE) Program at North Carolina State University is administered jointly by the College of Textiles and the College of Engineering and is an interdisciplinary curriculum drawing on diverse science and engineering principles. Textile engineering students develop a unique background, through undergraduate research, summer intern experiences, and design projects ranging from artificial blood vessel development to the design of novel high-tech sporting equipment. Textile engineers also design computer information systems that can integrate a worldwide distribution program eliminating a company's reliance on regional stockpiles or streamline an industrial process using Six Sigma quality saving a company millions of dollars. The program offers small class sizes with personal attention from faculty. With the focus on interdisciplinary research, the opportunities for textile engineers have never been brighter.

Opportunities

Textile engineers, teaming with chemists, physicists, materials scientists, and other engineers are designing new polymers, fibers, and textile structures to revolutionize the future of materials. Whether it be for personal protective garments such as bullet proof vests and Gore-tex® or materials used in the next generation space shuttle and the stealth bomber, textile engineers are developing products that are stronger, lighter, and more durable than current materials. Textile engineers are employed in a wide variety of industries that include aerospace, automotive, chemical, composites, management consulting, fiber
processing, medical devices, manufacturing and retail, and textile processing.

The TE Program provides a fundamental engineering degree with a working knowledge of the very large textile industry as well as its allied industries. We have our own career planning and placement center to assist students in identifying and selecting internships and permanent careers. Historically, TE graduates have had nearly 100% placement into graduate school or full time employment with starting salaries among the highest at N.C. State University. Compared to the rest of North Carolina State University, the College of Textiles has the highest percentage of students participating in scholarship programs. Indeed, over 50% of all Textile Engineering students receive scholarship support! Owing to the size of the program, many of our undergraduate students participate in research with our world renowned faculty further providing financial assistance as well as professional growth. Almost all of our textile engineering students participate in summer internships. Most of our graduates select jobs that are located in the Southeast, but others who desire to work in other regions of the country have opportunities to do so. Our graduates work in the biomedical industries on the east and west coasts and in Chicago, the automotive industry in Michigan, the aerospace industry in Texas, as well as large apparel and retail companies in Oregon, Maryland, California, Utah, Ohio and North Carolina.

Curriculum

The TE program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. The TE program has three concentrations allowing a customized curriculum that fits your specific educational goals. The concentrations emphasize Information Systems Design, Chemical Processing and Product Engineering. Minors in associated engineering fields (e.g., Computer Science, Industrial Engineering, and Materials Science) as well as foreign language minors are strongly encouraged as part of the academic plan. For exceptional students, dual degree programs with Chemical and Biomolecular Engineering, Biomedical Engineering, and Materials Science and Engineering provide a bachelor degree in two engineering majors with one additional semester of course work.

Educational Objectives

The Textile Engineering Program of the Department of Textile Engineering, Chemistry and Science is committed to instill a strong academic program whereby graduates, within the first few years after graduation are prepared for the following accomplishments:

1. Recognized contributions in the workplace that involve creative and critical thinking in applying the discipline’s body of knowledge and for tackling contemporary issues and engineering challenges that face our global society;

2. A reputation of problem solving in a professional, ethical and safe manner;

3. Established communication and teaming skills in a professional environment; and

4. Evidence of continuous learning through seeking educational and developmental opportunities and by adapting to ever-changing economic, social, and technological environments.

Specific curriculum requirements are available online (https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=1&cad=rja&uact=8&ved=0ahUKEwipznZH564zPAhULbT4KH)eJGDY0QFgeMAA&url=https%3A%2F%2Fwww.nccsu.edu%2Fhp%2Fcoursecat%2Fdegree_requirements.php&usg=AFQjCNEmZUndcIfaVhBJLXApKbuZSB6FHvQ&sig2=Jib6nsptLXJquNSL8zWfJQ)

TE - Textile Engineering Courses

TE 105 Textile Engineering: Materials and Systems 2.
Corequisite: CH 101.
Introduction to textile engineering, polymers and fibers with emphasis on applications. Discussions of what makes macromolecules unique and pairing of material properties to a given application. Other discussions by various TE faculty giving students a picture of the breadth of the program. This course will also help develop leadership/team work skills and oral/written communications.

TE 110 Computer-Based Modeling for Engineers 3.
Prerequisite: E 115, Corequisite: MA 141.
Introductory course in computer-based modeling and programming using Visual Basic for Applications. Emphasis on algorithm development and engineering problem solving. Methodical development of VBA within applications like Microsoft Excel and Access from specifications; documentation, style; control structures; classes and methods; data types and data abstraction; object-oriented programming and design; graphical user interface design. Projects: design problems from electrical, industrial, textile, and financial systems. Functional relationships will be given and programs will be designed and developed from a list of specifications.

TE 200 Introduction to Polymer Science and Engineering 3.
Prerequisite: Grade of C or better CH 101.
Science and engineering of large molecules. Correlation of molecular structure and properties of polymers in solution and in bulk. Introductory polymer synthesis and kinetics. Analysis of physical methods for characterization of molecular weight, morphology, rheology, and mechanical behavior. The content will be focused on polymer synthesis, structure, and properties. The course will focus on a thorough understanding of polymer concepts and definitions, equations to calculate properties, and equipment used to measure properties.

TE 201 Textile Engineering Science 4.
Prerequisite: Grade of C or better in MA 241, PY 205; and Corequisite: TE/ISE 110.
Structure, physical and mechanical properties of fibers; structure of assemblies. Structure/property relations. Laboratory exercises in characterization of fiber properties.

TE 205 Analog and Digital Circuits 4.
Prerequisite: C- or better in TE 110, PY 208, Corequisite: MA 341.
Fundamentals of analog and digital circuit analysis and design. The course will present the systematic analysis and design of AC and DC circuits using Ohms and Kirchhoff's laws, the node voltage method, Thvenin and Norton's theorem, Laplace Transforms, resistance, capacitance, inductance, operational amplifiers, and frequency response. Next, the design of combinatorial and synchronous sequential circuit design will be covered using Karnaugh maps, laws of Boolean algebra, flip-flops, state machines, and latches. Laboratory exercises will supplement the topics presented in class.

TE 301 Engineering Textile Structures I: Linear Assemblies 3.
Prerequisite: (MAE 206 or CE 214) and MA 242.
Engineering analysis of textile structures, especially yarns. Unit processes of production, handling and packaging. Production sequences, intermachine effects, machine design and their consequences on the textile product.
**TE 302 Textile Manufacturing Processes and Systems II 4.**
**Prerequisite:** TE 301 and C- or better in TE/ISE 110.

**TE 303 Thermodynamics for Textile Engineers 3.**
**Prerequisite:** MA 242, PY 208.
Introduction to the concept of energy and the laws governing the transfer and transformation of energy with an emphasis on thermodynamic properties and the First and Second Laws of Thermodynamics. The fundamentals of thermodynamics will be emphasized, although more applied examples and problems will be heavily utilized.

**TE 401 Textile Engineering Design I 4.**
**Prerequisite:** TE 302.
The design process including initial specification, design constraints, sources of information and design strategy. Development of fact-finding ability in areas unfamiliar to the student. Analysis of existing designs and the development of improved or new designs.

**TE 402 Textile Engineering Design II 4.**
**Prerequisite:** TE 401.
Application of textile engineering principles using team approach to design, construct and analyze novel engineering solutions to textile industry problems. Evaluation of design to assess the impact on worker, industry and society.

**TE 404 Textile Engineering Quality Improvement 3.**
**Prerequisite:** ST 370 and C- or better in TE/ISE 110.
Defining and quantifying quality of textile products; quality improvement using statistical process control (SPC) and design of experiment (DOE) techniques.

**TE 424 Textile Engineering Quality Improvement Laboratory 1.**
**Corequisite:** TE 404.
Application of process improvement methods to textile systems using statistical software. Laboratory supplements lecture material presented in TE 404.

**TE 435 Process Systems Analysis and Control 3.**
**Prerequisite:** (MA 341 and TE 205) or CHE 312.
Dynamic analysis and continuous control of chemical and material engineering processes. Process modeling; stability analysis, design and selection of control schemes. Solution of differential equations using Laplace transform techniques.

**TE 440 Textile Information Systems Design 4.**
**Prerequisite:** C- or better in TE/ISE 110 and JR standing.
Textile information system design, real-world constraints. Principles of hardware, software, security and ethics issues. Emphasis on solving a real world problem. Credit will not be given for both TE 440 and TE 540.

**TE 463 Polymer Engineering 3.**
**Prerequisite:** MSE 201 or BME 203; and Corequisite: TE 303, MAE 301, or MSE 301.
Chemical and physical properties of polymers and fibers; thermodynamics of crystallization, time dependent phenomena, fracture mechanics and rheology. Advanced topics in extrusion.

**TE 466 Polymeric Biomaterials Engineering 3.**
**Prerequisite:** PY 208 and (TE 200 or CH 220 or CH 221 or CH 225) and (MAE 206 or CE 214).
In-depth study of the engineering design of biomedical polymers and implants. Polymeric biomaterials, including polymer synthesis and structure, polymer properties as related to designing orthopedic and vascular grafts. Designing textile products as biomaterials including surface modification and characterization techniques. Biodegradable polymers.

**TE 467 Mechanics of Tissues & Implants Requirements 3.**
**Prerequisite:** (ZO 160 or BIO 183) and (MAE 314 or CE 313).
Application of engineering and biological principles to understand the structure and performance of tendons, ligaments, skin, and bone; bone mechanics; viscoelasticity of soft biological tissues; models of soft biological tissues; mechanics of skeletal muscle; and tissue-derived devices as well as interfaces between native tissues and synthetic devices.

**TE 492 Special Topics in Textile Engineering 1-3.**
Presentation of material not normally available in regular course offerings or offering of new courses on a trial basis. Credits and content determined by faculty member in consultation with the Department Head.

**TE 505 Textile Systems and Control 3.**
**Prerequisite:** TE 305, CSC 114.
Theory and application of instruments and control systems used in modern textile plants. Description of basic instruments and computer systems along with their use in process control, production control, research and development.

**TE 533 Lean Six Sigma Quality 3.**
**Prerequisite:** ST 361 and ST 371, or equivalent.
Systematic approach (Lean Six Sigma philosophy) for improving products and processes. Defining the improvement opportunity, measurement system analysis, data collection, statistical analysis, design of experiment (DOE) methods, and statistical process control (SPC) methods. Application of Lean Six sigma methods to improve product or process.

**TE 540 Textile Information Systems Design 3.**
**Prerequisite:** Introductory Programming Course.
The course will focus on using rapid application development (RAD) tools to design and implement database-based driven applications in a client/server architecture. This includes the SQL database query language, utilizing VB.Net as the RAD environment to build decision support systems and how to integrate these tools together to design and build information systems. Credit will not be given for both TE 440 and TE 540.

**TE 550 Clothing Comfort and Personal Protection Science 3.**
**R:** Graduate Standing or Permission of Instructor.
The course presents scientific principles for characterization and development of comfortable and/or protective textiles and clothing. Properties associated with human tactile response, thermal comfort and heat stress are emphasized. Inherent issues of balancing comfort versus protection are illustrated by research studies on performance garments or protective clothing systems. Methods and standards for evaluating comfort and protective performance range from bench level instruments to system level tests for ensembles using instrumented manikins, human clothing wear trials, and physiological tests.
TE 551 Human Physiology for Clothing and Wearables 3.
R: Graduate Standing or Permission of Instructor.
This course addresses key principles involved in the interaction between textiles and the human being: basic anatomy and physiology, individual differences, heat balance and ergonomics. Effects of climate and clothing systems on physiology and ability to perform work, and thermal strain of active, clothed humans will be the focus. Students will conduct thermal analysis of human heat balance, including the influence of clothing. Measurements techniques related to exercise physiology, and application of sensors and instruments systems will be discussed.

TE 565 Textile Composites 3.
Prerequisite: MA 341, MAE 206.
Fiber architecture of textiles used for composites. Manufacturing processes and geometric quantification. Basic analysis for predicting elastic properties. Interrelationship of elastic properties and geometric quantities. Failure criteria for these materials.

TE 566 Polymeric Biomaterials Engineering 3.
Prerequisite: PY 208 and (TE 200 or CH 220 or CH 221 or CH 225) and (MAE 206 or CE 214).
In-depth study of the engineering design of bioclnical polymers and implants. Polymeric biomaterials, including polymer synthesis and structure, polymer properties as related to designing orthopedic and vascular grafts. Designing textile products as biomaterials including surface modification and characterization techniques. Biorecorable polymers. Credit for TE 466 and TE 566 is not allowed.

TE 570 Polymer Physics 3.
Polymer microstructures, polymer solutions, polymer physical states (including amorphous polymers, crystalline polymers, polymer melts, melting of polymers, glass-transition, and other transitions), polymer blends, polymer mechanical properties, polymer viscoelasticity and flow, multicomponent polymer systems, and modern polymer topics. The physics of polymer fibers. Graduate standing or permission of instructor.

TE 589 Special Studies In Textile Engineering and Science 1-4.
Prerequisite: Senior standing or Graduate standing.
New or special course on developments in textile engineering and science. Specific topics and prerequisites identified vary. Generally used for first offering of a new course.

TE 601 Seminar 1.

TE 630 Independent Study 1-3.

TE 676 Special Projects 1-3.

TE 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

TE 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

TE 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis Research.

TE 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their thesis. Credits arranged.

College of Humanities and Social Sciences

Box 8101 Raleigh, NC 27695-8101

The College of Humanities and Social Sciences offers programs of study that lead to baccalaureate and advanced degrees in the disciplines of the humanities and social sciences. The college also offers courses in these disciplines that are required in all undergraduate programs. In this way the university provides its students the opportunity to prepare for a full life in the professions and occupations that require intellectual flexibility, broad knowledge, and a basic comprehension of human beings and their problems.

The college is comprised of nine departments or schools: Communication, English, Foreign Languages and Literatures, History, Philosophy and Religious Studies, School of Public and International Affairs, Psychology, Social Work, and Sociology and Anthropology. Interdisciplinary programs are administered through Academic Affairs in the college Dean’s Office.

The college offers undergraduate majors in: Anthropology; Arts Studies; Communication; Criminology; English; French; German Studies; History; Interdisciplinary Studies; International Studies; Philosophy; Political Science; Psychology; Religious Studies; Science, Technology and Society; Social Work; Sociology; and Spanish. In addition, special options or concentrations are available within some of the major programs:

• Africana Studies
• American Politics
• Communication Media
• Creative Writing
• Film
• International Politics
• Interpersonal, Organizational & Rhetorical Communication
• Language, Writing and Rhetoric
• Law and Justice
• Literature
• Logic, Representation & Reasoning
• Philosophy of Ethics
• Philosophy of Law
• Public Policy
• Public Relations & Organizational Communication
• Teacher Education – option available in English, French, Spanish, and social studies (history)
• Women’s and Gender Studies

Degrees granted include the Bachelor of Arts, Bachelor of Science, Bachelor of Social Work, Master of Arts, Master of Fine Arts, Master of Science, and Doctor of Philosophy, as well as professional degrees in political science and sociology.

**Academic Minors**

The College of Humanities and Social Sciences offers 41 minors:

• Africana Studies
• American Literature
• Anthropology
• Arts Studies
• Chinese Studies
• Classical Studies
• Cognitive Science
• Creative Writing
• Criminology
• English
• Ethics
• Film Studies
• Forensic Science
• French
• German
• Health, Medicine & Human Values
• Hindi-Urdu
• History
• International Studies
• Italian Studies
• Japanese
• Japan Studies
• Journalism
• Law and Justice
• Linguistics
• Logic and Methodology
• Middle East Studies
• Native American Studies
• Nonprofit Studies
• Philosophy
• Political Science
• Portuguese Studies
• Psychology
• Religious Studies
• Russian Studies
• Science, Technology and Society
• Social Work
• Sociology
• Spanish
• Technical and Scientific Communication
• Women’s and Gender Studies
• World Literature

**Dual Degree Programs**

**Benjamin Franklin Scholars Program**

The Benjamin Franklin Scholars program, sponsored jointly by the College of Engineering and the College of Humanities and Social Sciences, allows a select group of highly motivated students to simultaneously pursue bachelor’s degrees in both engineering and humanities or social sciences, producing students with a broad training uniquely equipping them for the challenges of today’s world. Students in this program can combine any major in the College of Humanities and Social Sciences (plus economics) with any major in the College of Engineering. This program, now entering its twenty-sixth year, has produced men and women who use their engineering training in a broad range of settings and jobs: in industry, in academia, in government, working as engineers, lawyers, physicians, and policy analysts, among others.

There are three entry points into the program. A limited number of newly admitted freshmen are invited to apply to join the program in the April of their senior year of high school, based on SAT scores. During New Student Orientation the summer before the freshmen year, all new entering freshmen are invited to attend an information session about the program and apply to join. Thereafter interested students can seek admission through an individual consultation with the director.

The program has dedicated scholarship money associated with it, and students who have completed the Franklin intro course, have officially declared their Engineering and Humanities and Social Sciences majors and who have a 3.0 or above GPA are generally eligible for scholarship support. The time required to complete both degrees depends on a variety of factors, including incoming AP credit, semester course load, use of summer school, and Humanities and Social Sciences degree sought. The program can be completed in 4-5 years, with five years being typical.

The student led section of the program, the Franklin Council, arranges a wide variety of social, service, and academic events throughout the year.

For more information, contact the director of the program, Dr. Ross Bassett, Department of History, College of Humanities and Social Sciences, ross@ncsu.edu, 919-515-2231, 478 Withers Hall, or visit the Franklin Scholars Program homepage (http://ids.chass.ncsu.edu/bfs).

**Thomas Jefferson Scholars Program**

The Thomas Jefferson Scholars Program is a joint program of the College of Agriculture and Life Sciences and the College of Humanities and Social Sciences. It is a program that leads participants to two degrees: one concentrating in an area of agriculture or life science and one in an area of humanities or social science. All majors in each college are available, to meet each student’s particular interests and career goals. The purpose of the program is to produce potential leaders in agriculture and the life sciences who have not only technical expertise but also an appreciation for the social, political, and cultural issues that affect decision-making. The program includes special classes and guest lecturers for Jefferson Scholars, travel and other enrichment experiences, and a variety of social and service activities.

Once a student applying for admission to NC State has been accepted, the Program invites students of high achievement to apply for the Jefferson Scholars. The application is online, and due by mid-February.
Applicants come for an interview in March, and a limited number of entering freshmen are chosen to participate in the Jefferson Scholars Program. Successful participants receive scholarship support after the sophomore year.

For more information, contact either faculty mentor, Dr. Chad Jordan, Plant Biology, College of Agriculture and Life Sciences, 919-515-2222, chad_jordan@ncsu.edu; or Dr William Kimler, History, College of Humanities and Social Sciences, 919-513-2238, kimler@ncsu.edu. Visit the Jefferson Scholars website (http://www.cals.ncsu.edu/student_orgs/jeffer) for details about our activities, students, and courses.

Alexander Hamilton Scholars Program

The Alexander Hamilton Scholars Program permits students to simultaneously earn a B.A. in International Studies and either a B.S. in Accounting, a B.S. in Business Management, or a B.S or B.A. in Economics.

Key elements of the Alexander Hamilton Program include foreign language study to at least the 300-level, a Management capstone course (economics seminar or business policy and strategy) with a strong global orientation, a senior thesis in International Studies, and several additional courses on topics such as international economics or marketing, global politics, and intercultural communication. Each Hamilton scholar is required to complete at least one study abroad program.

Hamilton scholars participate in special programs throughout their enrollment that are designed to increase their exposure to leading-edge management practices, international businesses, and foreign cultures. These programs will include activities such as special lectures and networking events with international corporate partners, field trips to international companies with a local presence, charity fund-raising and community service projects, mentoring of foreign business students, and Scholars banquets. For additional information about the Alexander Hamilton Scholars Program, contact Mr. Robert Sandruck, rlsandruck@ncsu.edu, 515-5565 in the Office of Undergraduate Programs, Poole College of Management, 2150 Nelson Hall, or Dr. Seth Murray, seth_murray@ncsu.edu, 515-0450, International Studies, College of Humanities and Social Sciences, Room 106 in the 1911 Building. Visit the Hamilton Scholars Homepage (http://www.mgt.ncsu.edu/undergraduate/global/alexander-hamilton-scholars) for more information.

Cooperative Education

Cooperative Education in humanities and social sciences seeks to broaden the student’s intellectual horizons and at the same time to provide an introduction to the world of business, industry, government, or finance in preparation for a career after graduation. In this program, the freshman and senior years are usually spent on campus while the sophomore and junior years are devoted either to alternate periods of on-campus study and full-time work experience or part-time work and study on a continuous basis. The student is paid for work experiences by the employer. Ordinarily the program takes five years to complete, but those who are willing to attend summer school or take on a summer co-op assignment can finish in four years. Transfer students are eligible, and all interested students are urged to apply early in the academic year. The program is also open to graduate students although less time is required on work assignments.

Further information may be obtained from Cooperative Education, 2100 Pullen Hall, or at (919) 515-2300.

Honors Program

Each department in the college offers an honors program designed to encourage outstanding students to develop their intellectual potential to the fullest extent possible through individualized study, special seminars, and close association with faculty members in their major field.

Scholarships

In addition to the university-wide awards available, the College of Humanities and Social Sciences offers a limited number of merit and need-based scholarships. For further information contact Dara Leeder, Director of Student Recruitment and Retention, College of Humanities and Social Sciences, (919) 515-3638.

Folger Institute

North Carolina State University is a member of the Folger Institute of Renaissance and Eighteenth-Century Studies, a unique collaborative enterprise sponsored by the Folger Shakespeare Library in Washington, D.C., and 20 universities in the Middle Atlantic region. Each year the institute offers an interdisciplinary program in the humanities—seminars, workshops, symposia, colloquia, and lectures. Admission is open to faculty and students of North Carolina State University, and a limited number of fellowships are available through the campus Folger Institute Committee.

Department of Communication

The Bachelor of Arts in Communication program provides opportunities for study and training in human communication for professionals entering business, industry, media, non-profit organizations, or government service. Today, many organizations are seeking graduates with demonstrated competencies in human communication to fill positions that require constant and skillful contact with a wide variety of internal and external publics. Depending on their area of specialization, graduates may find employment opportunities such as communication consultants, media specialists, trainers, public relations or corporate communication specialists. Many graduates choose to enter graduate or law school.

Students who successfully complete the undergraduate Major in Communication will gain expertise in the following six curricular areas:

1. Communication as a Field: Communication as a phenomenon, as an academic discipline, as a system of processes and practices, and as a profession.
2. Theory: Theoretical analysis of communication processes and practices.
3. Research Methods: Research methods as they relate to and inform communication processes and practices.
4. Diversity & Globalization: Multiple cultural contexts and global processes and their implications for communication processes and practices.
5. Ethics: Critical thinking about ethical problems in communication.
6. Communication Competencies: Targeted communication skill areas and competencies.
Programs of Study

The Communication major calls for the successful completion of at least 36 semester credit hours of Communication (COM) courses. All majors must take:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>COM 230</td>
<td>Introduction to Communication Theory</td>
<td>3</td>
</tr>
<tr>
<td>COM 240</td>
<td>Communication Inquiry</td>
<td>3</td>
</tr>
<tr>
<td>COM 250</td>
<td>Communication and Technology</td>
<td>3</td>
</tr>
</tbody>
</table>

Preferably one-at-a-time and in sequence, and earn a “C-” or better in each course. In addition, all majors must take COM 110 Public Speaking and/or COM 112 Interpersonal Communication

(depending upon their concentration). Students select one of the three departmental concentrations in which they take the remaining credit hours in the major. The concentrations are:

Communication Media

This concentration engages students in the analysis and production of technologically-mediated messages through coursework in media writing and production, media history and criticism, and the study of emerging technologies.

Interpersonal, Organizational, and Rhetorical Communication

This concentration addresses theoretical, rhetorical, and applied approaches to the study of human communication processes and problems within interpersonal relationships, groups and teams, organizations, and public and political discourse.

Public Relations

This concentration engages students in the study of communication theories and methods that establish and maintain organizational identity and mutually beneficial relationships with employees, consumers, and other target audiences.

Honors Program

The Communication Honors program allows exceptional undergraduate Communication majors the opportunity to take challenging graduate-level coursework in the Department of Communication. The Communication Department Honors Program requires the completion of three academically challenging courses during a student’s senior year. At least one of the three courses must be at the 500-level (graduate course). Other courses may include a 400-level class taken with an honors option (initiated by the student or faculty) or an Independent Study (COM 499) with an Honors option. These three courses will all count toward the 39 hour BA degree in Communication.* Students who satisfy all of the requirements of the Honors Program will have this accomplishment noted on their transcript and be recognized at the departmental graduation ceremony.

In most cases, application to the Departmental Honors Program is submitted during the junior year. All eligible students will be notified and are encouraged to apply. The following criteria must be met by the time the candidate begins honors coursework:

1) completion of the departmental core courses
2) completion of COM 110 Public Speaking or COM 112 Interpersonal Communication
3) completion of an additional 9 hours of Communication courses, including a 300- or 400-level course that involves considerable writing and/or discussion of communication theory
4) completion of at least 75 hours of university coursework (at least 24 at NCSU)
5) an overall GPA of at least 3.50
6) a major GPA of at least 3.50

To apply for admission to the Honors Program, students must submit a copy of their transcript, a letter of intent that discusses their academic goals and interest in the honors program, and a letter of recommendation from either the professor who taught the 300/400 level course mentioned in (3) above or a tenured / tenure-line faculty member who is familiar with the individual's academic potential.

For more information, contact the Communication Honors Program Director, Dr. Dan DeJoy, ddejoy@ncsu.edu.

Please Note: Students who are eligible for the Honors Program may also be eligible for the Accelerated Bachelor/s/Master’s (ABM) Degree in Communication. Students interested in the ABM must complete the standard application for admission to the Graduate School. Students who complete the honors program in conjunction with the ABM must take three 500-level courses to complete the Honors Program.

Curriculum Notes

Students must enroll in COM 230 Introduction to Communication Theory during their first semester as a Communication major. Admission to the Department of Communication is based upon academic record. Courses in progress at the time of the application deadline will not be considered.

Intra-campus Transfer

Students who wish to change to another major in Humanities and Social Sciences or to add a second major in Humanities and Social Sciences will be eligible to submit an electronic application through CODA (https://go.ncsu.edu/coda) once they have completed at least 12 letter-graded hours and have a GPA of at least 2.0. Departments will review all applicants on a competitive basis. Candidates who meet the preferred requirements outlined below have a higher probability of being accepted for admission. However, meeting the preferred requirements does not guarantee admission to the desired major.

Preference is given to applicants with a TGPA of 3.0 or higher and to those who have completed ENG 101 with a “B-” or better and COM 200 plus 3 additional hours in COM establishing a COM GPA of at least 2.5. No applications are acceptable from students whose TGPA is below 2.0.

No final grades below “C-” are permitted for courses used to satisfy Departmental graduation requirements. No grades in COM courses below “C-” may be used to satisfy any University graduation requirements.
**Internships**

COM 496 Communication Internship, the Department of Communication internship course, is open to seniors majoring in Communication who have earned a GPA of at least 3.0 for all COM courses attempted. COM 496 is available for qualified seniors in all three Communication Department concentrations, but it is required of all students enrolled in the Public Relations and Organizational Communication (PR) concentration. If a student in the PR curriculum does not qualify for COM 496 (that is, does not have a minimum 3.0 GPA for all COM courses), he/she cannot graduate in the LCP curriculum. To obtain additional information concerning COM 496, the student should schedule a conference with the Internship Director, Mr. Dean Phillips, deanworks@nc.rr.com.

**Graduate Programs**

The Department of Communication offers a Masters Degree in Communication. In conjunction with the Department of English, the Department of Communication also offers an interdisciplinary Ph.D. program in Communication, Rhetoric, and Digital Media. For more information, please visit the Graduate School website (http://www.ncsu.edu/grad).

**COM - Communication Courses**

**COM 110 Public Speaking 3.**
Research skills, topic selection, speech organization, skills in speech delivery. Listening for analysis and evaluation of in-class speech presentation.

**COM 112 Interpersonal Communication 3.**
Interpersonal communication competence: self-concept, self-disclosure, active listening, verbal and nonverbal communication, and conflict management.

**COM 200 Communication Media in a Changing World 3.**
Credit is not allowed for both COM 200 and COM 250 if COM 250 is completed first.
Traces ongoing evolution of communication media. Examines the place and influence of the major media companies that control access to and the content of the contemporary mediascape. Challenges students to examine their use of media from cellphone, to computer, to music and gaming platforms. Students who have already take COM 250 cannot get credit for COM 200. For communication majors this course may only be used as a free elective.

**COM 201 Introduction to Persuasion Theory 3.**
Impacts of persuasive communication on attitudes and behavior. Uses humanistic and social scientific theories to explain the persuasive process.

**COM 202 Small Group Communication 3.**
Theory and practice of effective communication in small groups, including: stages of group development, role emergence, leadership functions, decision making strategies, conflict management, and the significance of power.

**COM 211 Argumentation and Advocacy 3.**
Theory-based analysis of public argument in specialized settings of law, politics, academic debate, business and organizations, and interpersonal relations.

**COM 226 Introduction to Public Relations 3.**
Public relations as a communication function of organizations. Public relations process, principles, history, and practice. Analysis of environmental, organizational, communication, and audience influences on public relations practice; career opportunities.

**COM 230 Introduction to Communication Theory 3.**
P: Communication Majors.
Micro- and macro-analytic theories used in the study of human communication: perspectives and assumptions of major theories; utility and application of major theories; contexts, cultures, and media.

**COM 240 Communication Inquiry 3.**
Prerequisite: Communication Majors.
Qualitative and quantitative methods of inquiry in communication: types of questions; strategies for answering questions; nature of evidence; advantages and disadvantages of different methods; reference tools in the field; and channels of distribution for research-based information.

**COM 250 Communication and Technology 3.**
Prerequisite: Communication Majors. Credit is not allowed for both COM 250 and COM 200.
Examination of past, current, and future intersections of technology, culture, and communication in everyday life. Impact of communication technology policies. Analysis of communication technologies in interpersonal, organizational, societal, and global contexts. Development of technology skills for the competent communicator.

**COM 257 Media History and Theory 3.**
Prerequisite: COM 230.
Historical development and social implications of telecommunications, print, photography, film, broadcasting, and computer-mediated communication. Theoretical and methodological approaches to the field of communication media: media history; media economics and policy; media effects and power; media as producers of meaning; media audiences; media technologies; and roles of the media in social, cultural, and political change.

**COM 267 Electronic Media Writing: Theory and Practice 3.**
Prerequisite: COM 230.
Media writing as a social practice. Roles of writing and writers in media production processes. Social, political, economic, and professional conditions that enable or constrain writing and the writer. Specific media writing genres and formats. Research and preparation for media writing. Students write research-based scripts for news, commentary, and fictional genres in radio, television, film, and emerging media.

**COM 269 Communication Internship-Non-Local 1.**
P: Communication Majors.
Non-local directed work experience for Communication majors with supervision from the work site and the University. COM 269 may be taken more than once only with the permission of the Internship Director and the Assoc. Dept. Head. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

**COM 298 Special Projects in Communication 1-3.**
A special projects course to be utilized for guided research or experimental classes at the sophomore level, topic determined by instructor.

**COM 301 Presentational Speaking 3.**
Prerequisite: COM 110.
Design, organization and delivery of oral presentations for policy determination, policy implementation, and sales.
COM 307 Digital Audio Production 3.
Prerequisite: COM 267.
Basic principles of digital audio production, including studio operation, performing, writing and producing.

COM 315 Phonetics 3.
Articulatory and acoustic phonetics; application of the International Phonetic Alphabet with vocal and ear training.

COM 316 Public Relations Writing 3.
Prerequisite: COM 226 and ENG 316.
Communication processes and procedures of public relations programs. Media techniques, preparation of materials, channels of distribution.

COM 317 Television Production 3.
Prerequisite: COM 267.
Basic techniques of television studio production, including producing, writing, directing and electronic graphics production.

COM 321 Survey of Rhetorical Theory 3.
Prerequisite: Sophomore standing and above.
Principles of rhetorical theory from its classical origins through the modern period to the present time. Key concepts and theories that provide a critical understanding of the processes of persuasive symbol use.

COM 322 Nonverbal Communication 3.
Prerequisite: COM 112.
Theory and research in nonverbal communication, including: environment; space; physical appearance, movement; eyes and facial expressions; and vocal cues. Nonverbal communication in personal, workplace and cross-cultural setting.

COM 325 Anatomy and Physiology of Speech 3.
Anatomy and physiology of the speech mechanism including the muscular, skeletal, and nervous system structures involved in respiration, phonation, and articulation.

COM 327 Critical Analysis of Communication Media 3.
Prerequisite: COM 240 and COM 257, Corequisite: COM 240.
Theoretical frameworks, methods, and aims of various approaches to critical analysis of the media. Critiques of power over media production; social biases of informational, fictional, and hybrid media content; and historical forms of audiences and the public. Critical awareness of the media's effects in politics, public culture, and everyday life.

COM 332 Relational Communication 3.
Prerequisite: COM 112.
Communication patterns in the development and deterioration of interpersonal relationships. Functional and dysfunctional communication behaviors in family relationships.

COM 335 Language Development 3.
Syntactic, semantic, morphologic, and pragmatic development from birth through adolescence. The influence of cognitive and social development on language development. First language acquisition versus second language learning.

COM 336 Newsletter Writing and Production 3.
Newsletters are an important part of the corporate, non-profit, government, and small business portfolio of communication tools. Just about all organizations use newsletters - print or electronic - to reach their audiences with their key messages. Many young public relations practitioners start their careers working on newsletters for their organization or their clients. Students in this course will work collaboratively to write and produce a newsletter as well as other public relations publications.

COM 342 Qualitative Research Methods in Communication 3.
Prerequisite: COM 240.
Introduction to qualitative methods in communication research. Research paradigms, research ethics, research design, qualitative data collection, data analysis and interpretation, written and multimedia reporting of research results. Students are responsible for providing their own transportation to research sites for fieldwork.

COM 346 Case Studies in Public Relations 3.
Prerequisite: COM 226 and COM 230.
Application of theory, principles, and problem-solving techniques used in public relations to organizational case studies.

COM 357 Digital Video Production 3.
Prerequisite: COM 267.
Principles of producing, directing, and editing techniques for digital video. Students script, storyboard, shoot, and edit short video projects.

COM 362 Communication and Gender 3.
Prerequisite: Junior standing, COM 112.
Effects of gender on the interpersonal communication process. Construction of gendered identities via communication practices. Examination of theories of gender and the role of gender in organizational, institutional, and media communication practices.

COM 364 History of Film to 1940 3.
Prerequisite: Sophomore standing and above.
Technological developments and aesthetic movements that shaped international cinema production from the beginning of the industry to 1940. Formal evolution in camera movement, editing, sound, narrative form, and the documentary. The rise to prominence of Hollywood and international cinemas in historical, economic, and cultural contexts.

COM 367 Multimedia Production and Digital Culture 3.
Prerequisite: COM 267.
Production lab and seminar combined. Digital production of visual images, audio, and video for the web. Readings in theories of visual communication and electronic culture. Critical analysis of assumptions underlying development and deployment of electronic media, and their social, economic and political impact. Development of practical skills and critical thinking.

COM 374 History of Film From 1940 3.
Prerequisite: Sophomore standing and above.
Technological developments and aesthetic movements that have shaped international cinema production from 1940 to the present. Evolution in camera movement, editing, sound, narrative form, and the documentary. Post-war Hollywood cinema and international film industries (both established and emerging) in historical, economic and cultural context.

COM 385 Speech Science 3.
Prerequisite: COM 325.
Acoustic properties of speech sounds and the dynamics of speech sound production. Initial experience with basic clinical instrumentation used to measure respiratory, phonatory, and articulatory movements and the acoustic events that result from these movements. Lab assignments using basic instrumentation and computer software are completed outside of class.

COM 386 Quantitative Communication Research Methods 3.
Prerequisite: COM 240.
Design and implementation of communication research methods, including experimental and survey research procedures. Use of computer software for statistical analysis.
COM 392 International and Crosscultural Communication 3.
Patterns and problems of verbal and non-verbal forms of crosscultural communication. Avoidance and management of cultural conflict arising from awareness of characteristics and crosscultural communication. Impact on communication of differing cultural perspectives.

COM 395 Studies in Rhetoric and Digital Media 3.
Prerequisite: ENG 101.
Study of the influence of emerging technologies on rhetorical theory and practice. Rhetorical analysis of texts, including visual and audio texts. Invention and construction of digital media texts as a means of engaging rhetorical theory and analysis. Topics vary to adapt to emerging technologies and changing vernacular practices.

COM 402 Advanced Group Communication 3.
Prerequisite: COM 202.
Communication processes and outcomes in groups with complex, strategic, and critical public or corporate functions. Focus on participating in, intervening in, leading, and constructing group processes. Advanced theory with application.

COM 407 Advanced Digital Audio 3.
Prerequisite: COM 307.
Advanced multichannel techniques for audio production. Studio acoustics, audio signal processing, and advanced microphone techniques, writing, and performing.

COM 411 Rhetorical Criticism 3.
Prerequisite: Junior standing.
Rhetorical analysis of public speeches, social movements, political campaigns, popular music, advertising, and religious communication. Neo-Aristotelian criticism, movement studies, genre criticism, dramatistic analysis, content analysis, fantasy theme analysis.

COM 417 Advanced Topics in Communication and Race 3.
Prerequisite: COM 257, Corequisite: COM 250.
Advanced topics seminar examining construction of racial and ethnic identities through communication practices. Exploration of theories of race and identity and the ways communication works to construct, undermine, and reinforce understanding across social groups.

COM 421 Communication Law 3.
Prerequisite: Junior standing.
Explores the historical, philosophical, and legal foundations of communication rights and responsibilities. Philosophies and regulations affecting sources, messages, channels, receivers, and situations provide the central focus of the course.

COM 427 Game Studies 3.
Prerequisite: COM 250 or STS 214.
Exploration of inter-relations among mobile technologies (cell phones, PDAs), location-based activities, and playful/social spaces. Investigates three main areas: (1) the definition of basic gaming concepts (community, narrative, play, and space); (2) the history of games as social events, with particular emphasis on multi-user domains (MUDs); and (3) the definition of games, which use the physical space as the game environment, such as pervasive games, location-based games, and hybrid reality games. Discussion of inter-connections among games, education, and art. Jr/Sr Standing.

COM 431 Communication in Political Campaigns 3.
Prerequisite: COM 110 or COM 201.
Roles of analysis and criticism of oral communication in political campaigns; analysis of special political communication situations; ghostwriting, news conferences, negative advertising.

COM 436 Environmental Communication 3.
Prerequisite: COM 230 or STS 214.
Critical analysis of environmental discourse in organizational, mass media, political, cultural, and international contexts. Investigates public participation in environmental advocacy and deliberation; environmental conflict management; rhetorical constructions of nature and human relationships with nature; environmental justice; environmental risk communication; and competing ecological paradigms. Must hold Junior/Senior standing.

COM 437 Advanced Digital Video 3.
Prerequisite: COM 357.
Hands-on experience in digital video production. Production of instructional videotapes. Practical experience in all phases of production process, including pre-production organization and critical analysis of final product.

COM 441 Ethical Issues in Communication 3.
Prerequisite: COM 110, 112.
Critical analysis of ethical problems in interpersonal and public communication practices.

COM 442 Communication and Conflict Management 3.
Prerequisite: COM 112.
Examination of conflict styles and theories; conflict management strategies such as negotiation and third party intervention; and relevant contexts for conflict such as workplace, families, and interpersonal relationships. Practical, theoretical and critical analyses of conflict and negotiation in variety of contexts.

COM 444 Film Production 3.
Prerequisite: COM 267 or ENG 330.

COM 447 Communication and Globalization 3.
Corequisite: COM 327.
History and current trends in globalization of media, information, and telecommunications technologies, organizations, policies, and contents. Political cultural implications of globalization, including debates over corporate vs. public control of global communication, U.S. dominance vs. international cooperation, and the global influence of American culture. Internet-based group research projects on globalization in collaboration with students in other countries.

Prerequisite: COM 201 or COM 321.
Examine the rhetorical strategies employed in various primarily visual forms of communication including advertising, photography, digital images, visual art, and public commemorative artifacts and sites. Explore the concepts and methods used to rhetorically analyze and interpret visual images and artifacts. Includes one or more required field trips to which students will provide own transportation.

COM 456 Organizational Communication 3.
Prerequisite: COM 230.
Role of human communication in organizations, the assumptions inherent in management philosophies about effective communication, and an investigation of the relationships among communication, job satisfaction, productivity, development, and employee motivation.
COM 457 Media and the Family \textsuperscript{3}.

\textit{Corequisite: COM 327.}

Impact of mediated messages upon children and the family unit. Origins of the empirical literature and continuing research. Assessment of the qualitative literature. Implications of commercial structure of the media industries on the structure and distribution of media messages designed for children and families. Consideration of both pro- and anti-social impacts.

COM 466 Nonprofit Leadership & Development \textsuperscript{3}.

Nonprofit Leadership and Development is a service-learning course in which students will be expected to make a 20-hour commitment to service in a local nonprofit organization. Students will critically examine theories of communication and leadership with concentration on issues pertaining to nonprofits such as working with executive boards, volunteer management, and resource development. Students are responsible for transportation and purchase of internship insurance.

COM 467 Advanced Topics in Gender and Communication \textsuperscript{3}.

\textit{Prerequisite: COM 327 or COM 362.}

Advanced Topics seminar examining construction of gender identities through communication practices. History and analysis of gender representations. Theoretical and critical approaches to social, political, and economic impact of gender constructions.

COM 476 Public Relations Campaigns \textsuperscript{3}.

\textit{Prerequisite: COM 226, COM 316, COM 386 and Corequisite: COM 346 (Note: COM 346 may be taken as a prerequisite or co-requisite).}

Management of the public relations functions in organizations and public relations counseling; communication theory and nature of materials emanating from public relations departments and counseling firms, practical analysis and development of public relations publicity and campaigns.

COM 477 Mobile Communication \textsuperscript{3}.

\textit{Prerequisite: COM 250 or STS 214.}

Mobile communication technologies and their influence on communication patterns and social behavior. Conceptualization of cell phones beyond mobile telephones, as internet access points and gaming devices. History, current uses and future perspectives for the social use of mobile interfaces. The creation of new mobile communities. The influence of mobile images on communication and the creation of mobile networks. Use of mobile phones across cultures and places, such as Asia, Scandinavia, Africa, and Latin America.

COM 484 Advanced Television Production \textsuperscript{3}.

\textit{Prerequisite: COM 317.}

Television program production utilizing advanced production techniques. Emphasis on refinement of writing, producing, and directing skills through work in TV studio on production of sophisticated program formats.

COM 487 Internet and Society \textsuperscript{3}.

\textit{Prerequisite: COM 250 or COM 257 or STS 214.}

Exploration of major issues involved in the growth of computer-mediated communication and information technologies. Construction of self and body; relation of information technology to social, civic, and political life; gender, race, and class as continuing critical points; knowledge and intellectual property; the implications of software and design on the nature of communication, knowledge, and information.

COM 493 Advanced Topics in Public Relations \textsuperscript{3}.

\textit{Corequisite: COM 327 or COM 362.}

This course addresses current trends and recent development in the public relations profession through extensive analysis of industry practices. Course content will change each semester subject to faculty availability, but may include topics such as social media, media relations, crisis communication, international public relations, and other public relations specializations. Juniors and Seniors only.

COM 496 Communication Internship \textsuperscript{3}.

\textit{Prerequisite: Junior standing, Communication Majors.}

Directed work experience for Communication majors with supervision from the work site and the University. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

COM 498 Advanced Topic in Communication \textsuperscript{1-3}.

\textit{Prerequisite: Junior or senior standing.}

Advanced study of contemporary theories, methods, practices, processes, or issues related to the field of communication. Topic varies.

COM 499 Advanced Independent Research \textsuperscript{1-3}.

\textit{Prerequisite: Nine credits in Communication courses. Junior standing or Senior standing in Communication.}

Special projects in communication developed under the direction of a faculty member on a tutorial basis. Must have permission of department to enroll. May enroll only twice. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

COM 506 Verbal Data Analysis \textsuperscript{3}.

\textit{Prerequisite: ENG 513 or ENG 527 or COM 541 or COM 542.}

Research strategies for understanding how spoken and written language shapes activities (e.g., design, instruction, counseling, gaming interactions, e-commerce, etc.). Tracking patterned uses of language as verbal data (e.g., grammatically topically, thematically), formulating research questions, and designing studies to answer those questions through quantitative descriptive means. Sampling, collecting and managing data, developing coding schemes, achieving reliability, using descriptive statistical measures, and reporting the results.

COM 508 Emerging Technologies and Society \textsuperscript{3}.

Provides frameworks for understanding emerging technologies and their social, political, and cultural contexts. Presents historical case studies, ethnographic accounts, and theoretical perspectives that introduce students to ways of thinking about science and technology, nature and culture, and democracy and expertise. Graduate standing is required.

COM 514 History Of Rhetoric \textsuperscript{3}.

Historical development of rhetorical theory with attention to contemporaneous rhetorical practice and philosophical trends. Major focus on the classical period with briefer coverage of medieval, Renaissance, 18th-century, and 19th-century developments. Implications for contemporary theory and practice, including pedagogical practice.

COM 516 Rhetorical Criticism: Theory and Practice \textsuperscript{3}.

\textit{Prerequisite: Graduate Standing or the equivalent of COM/ENG 321 or COM/ENG 411.}

Development, achievements, limitation of major critical methods in the 20th century, including neo-Aristotelian, generic, metaphorical, dramatic, feminist, social-movement, fantasy-theme and postmodern approaches. Criticism of political discourse, institutional discourse, discourses of law, medicine, religion, education, science, the media. Relations between rhetorical and literary criticism and other forms of cultural analysis.
COM 521 Communication and Globalization 3.
Prerequisite: Graduate standing.
Economic, political, cultural dimensions of globalization. Role of information and communication technologies, networks, institutions, and practices in human social organization.

COM 522 Critical Approaches to Organizational Communication 3.
Prerequisite: Graduate standing.
Overview of critical and interpretive organizational communication research studies. Application of insights to enriching and transforming working lives.

COM 523 International and Intercultural Communication 3.
Prerequisite: Graduate standing.
Survey of intercultural, cross-cultural, and international communication theories and issues.

COM 525 Group/Team Communication 3.
Prerequisite: Graduate standing.
Comprehensive review of principles, theory, research, and practices involving group/team communication; associated with decision making, conflict management, relationship building, and evaluation of group/team effectiveness. Emphasis on guidelines for effective communication in groups and teams. Graduate standing required.

COM 526 Media Ownership 3.
Prerequisite: Graduate standing.
Identify major media companies worldwide areas of dominance. Examine commercial, cultural, social, political implications of contemporary media ownership patterns.

COM 527 Seminar in Organizational Conflict Management 3.
Prerequisite: Graduate standing.
Examination of conflict antecedents, interventions, outcomes through multiple texts, journal articles. Emphasis on workplace conflict, organizational outcomes, dispute system design. Evaluation through participation in class discussion, independent papers, research project, presentation.

COM 528 Communication Culture and Technology 3.
Prerequisite: Graduate standing.

COM 529 Communication Campaigns 3.
Prerequisite: Graduate standing.
Prepares students to design, implement, monitor, and evaluate a successful communication campaign for a health, public relations, or political organization that is grounded in sound theoretical approaches. The students conduct focus groups for audience research and professionally present a campaign plan to a real client for any of the mentioned types of organizations. The course emphasizes theoretical and hands on practical skills to developing successful communication campaigns.

COM 530 Interpersonal Communication in Science and Technology Organizations 3.
Prerequisite: Graduate standing.
Blends theory and research to understand and analyze interpersonal communication practices and issues within organizations, including managing impressions and conversations, engaging in active listening, managing conflict, influencing others, and communicating in teams. Focus on developing and maintaining effective interpersonal at work and improving student's communication competence.

COM 532 Communication Consulting 3.
Prerequisite: Graduate standing.
This course provides an introduction to the art and methods of consulting particularly as applied to communication problems in organizational settings. It also provides students the opportunity to develop and/or refine training and facilitation skills and to link communication theory and research to organizational practice. Graduate standing required.

COM 533 Environmental Communication 3.
Prerequisite: Graduate standing.
Research and critical analysis of environmental discourse in organizational, media, political, cultural, and international contexts. Investigates public participation in environmental advocacy and deliberation; environmental conflict management; rhetorical constructions of nature, human relationships with nature; environmental justice, environmental risk communication; and competing ecological paradigms. Graduate standing required.

COM 536 Environmental Communication 3.
Prerequisite: Graduate standing.
Identify major media companies worldwide areas of dominance. Examine commercial, cultural, social, political implications of contemporary media ownership patterns.

COM 537 Gaming and Social Networks 3.
Prerequisite: Graduate standing.
Exploration of inter-relations among mobile technologies (cell phones, PDAs), location-based activities, and playful/social spaces. Investigates: (1) the definition of basic gaming concepts (community, narrative, play, and space); (2) the history of games as social environments, with particular emphasis on multi-user domains (MUDs); and (3) the definition of games, which use the physical space as the game environment, such as pervasive games, location-based games, and hybrid reality games. Discussion of inter-connections among games, education, and art. By permission of department.

COM 538 Risk Communication 3.
Prerequisite: Graduate standing.
Identifies and assesses techniques and best practices of fund development, annual giving, capital campaigns, endowments. Topics include setting achievable goals, organizing and staffing a fund development campaign, and identifying donors. Discusses links between fund development and organization mission and governance, ethical issues, and government regulations. PBS status or Graduate standing.

COM 540 Critical and Interpretive Inquiry in Communication 3.
Prerequisite: Graduate standing.
Theoretical foundations and analytical techniques in critical and interpretive communication research. Analysis of culture and power in communicative practices, texts, technologies, production, and reception. Historical, political economic, archival, contextual, interpretive, rhetorical, and cultural modes of analysis and critique are highlighted. Graduate standing required.

COM 541 Quantitative Research Methods in Applied Communication 3.
Prerequisite: Graduate standing.
Introduction to research methods in applied communication. Knowledge of design, implementation, and analysis of various quantitative research methods.

COM 542 Qualitative Research Methods in Applied Communication 3.
Prerequisite: Graduate standing.
Theoretical and practical dimensions of conducting qualitative research. Issues include asking good questions, field observation, ethics, focus groups, interviews, representation of data, analyzing texts and discourse, writing qualitative reports.
COM 543 Visual Content Analysis 3.
Research methods class in social science-orientated quantitative or qualitative analysis. Students will advance visual research by developing and/or testing theoretical concepts for visual media. Readings will focus on analytic techniques and concepts for still or moving images in digital or traditional media. Contexts include social media, organizational websites, blogs, online news sites, films, games, mobile media, and more. Students use qualitative and quantitative analysis software. Graduate standing required.

COM 546 Nonprofit Marketing and Public Relations 3.
Survey of the marketing and public relations principles and practices applicable to nonprofit organizations.

COM 547 Mobile Technologies and Social Practices 3.
Mobile communication technologies and their influence on communication patterns and social behavior. Conceptualization of cell phones beyond mobile telephones, as Internet access points and gaming devices. History, current uses and future perspectives for the social use of mobile interfaces. The creation of new mobile communities. The influence of mobile images on communication and the creation of mobile networks. Use of mobile phones across cultures and places, such as Asia, Scandinavia, Africa, and Latin America. Permission of department.

COM 554 Contemporary Rhetorical Theory 3.
Contemporary rhetorical theory covering the 20th and 21st centuries. Conceptual connections with and disruptions of the classical tradition and its, successors; relationship between rhetorical theory and philosophical trends, institutional histories, socioeconomic circumstances, and pedagogical needs. Attention to current issues such as the revival of invention, rhetorical agency, and ethics.

COM 556 Seminar In Organizational Communication 3.
Prerequisite: Advanced Undergraduate standing or Graduate standing. Theoretic and applied approaches for studying communication perspectives of organizational behavior. Topics relate communication with organizational theories, research methods, leadership, power, attraction, conflict and theory development.

COM 561 Human Communication Theory 3.
Prerequisite: Graduate standing or PBS status. The role of theory in study of human communication. General social scientific theories as well as context-based theories including interpersonal, public, group, organizational and mass communication contexts.

COM 562 Communication and Social Change 3.
Prerequisite: Graduate standing. Examine persuasive theories and methods including compliance gaining techniques. Evaluate effectiveness of public communication campaigns directed at social change.

COM 563 Public Relations Theory 3.
Study the theoretical body of knowledge in public relations and its application to practice. Graduate Standing required.

COM 566 Seminar In Crisis Communication 3.
Working within theoretical perspectives of communication, conflict management and organizational designs, a theoretical understanding for crisis communication, including thorough guidelines for strategic communication planning for, managing and evaluating crises.

Prerequisite: Graduate Students Only. Application of visual theory to rhetoric and of rhetorical theory to visual forms of communication. Discussion and analysis may include advertising, photography, news and informational media, political communication, instructional material, scientific visualization, visual arts, public commemorative artifacts, internet and other digital media.

COM 585 Teaching College Communication 3.
Prerequisite: Graduate standing. Introduction to communication education theory and research. Course divided into primary parts: 1) education theory and philosophy and 2) instructional design theory and practice.

COM 587 Internet & Society 3.
Overview of the development of the internet and its social uses, including the historical context that led to the development of the ARPANET and the World Wide Web. Analysis of the transition from mainframes to personal computers, to the internet of things. Treatment of principal social and communication issues related to the use of the internet, such as digital privacy, digital divide, net neutrality, and civic engagement. Development of mobile internet, social networking sites and location-based social networks.

COM 589 Special Topics In Communication 1-6.
Detailed investigation of a special topic in communication. No more than 6 hrs. may be used as credit toward graduation with master’s degree.

COM 630 Independent Study in Communication 1-3.
Prerequisite: Graduate standing. Special projects course to be utilized for guided research at graduate level. Topic determined by instructor. No more than 6 hrs. may be used as credit toward graduation with master’s degree.

COM 650 Communication Internship 1-6.
Prerequisite: Acceptance into MS in Communication Program. The internship experience provides the students the opportunity to practice professional communication skills in a workplace setting under the supervision of a communication practitioner. Restricted to MS in Communication students.

COM 685 Master’s Supervised Teaching 1-3.
Prerequisite: Master’s student. Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

COM 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master’s student. For students in non-thesis master’s programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master’s exam, etc.

COM 689 Non-Thesis Master Continuous Registration - Full Time Registration 3.
Prerequisite: Master’s student. For students in non-thesis master’s programs who have completed all credit hour requirements for their degree but need to maintain full-time continuous registration to complete incomplete grades, projects, final master’s exam, etc. Students may register for this course a maximum of one semester.
for leadership and service.

Sigma Tau Delta The NCSU Chapter of Sigma Tau Delta, Alpha Pi Theta, recognizes high scholastic achievement and offers opportunities for leadership and service.

Bachelor of Arts in English

Core Curriculum The undergraduate major in English is built around an 18-hour core that includes one course from each of the following six categories: American Literature, British Literature, World Literature, Film, Linguistics, and Rhetoric. In addition to the 18-hour core, students take 21 hours of course work in one of the five following concentrations.

Specific curriculum requirements are available on the Registration and Records website (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php).

Creative Writing

The concentration in creative writing (CRW) offers a background in literature and language with an emphasis on writing fiction, poetry, screenplays, and/or non-fiction. The 21-hour Creative Writing concentration includes four creative writing courses, two literature courses, and one English elective. Creative Writing graduates often go on to graduate school for an advanced degree in creative writing, such as the M.F.A. They also often pursue careers in writing, teaching, editing, business, and other fields.

Film

The concentration in film (FLM) trains students in the history, analysis, and interpretation of film. The 21-hour FLM concentration includes four film courses and three English electives. Through coursework in film studies, students acquire skills in interpretation, analysis, and criticism; situate films within historical periods; consider the relation of film to literary texts; and study important film genres, directors, and national traditions. They may also become involved in the creative work of screenwriting.
Language, Writing and Rhetoric

The concentration in Language, Writing, and Rhetoric (LWR) emphasizes the study of written English in its theoretical, cultural, and practical applications. The 21-hour concentration includes one course in effective communication, one course in digital technology, three Language, Writing and Rhetoric electives, and two English electives. This curriculum can lead to a broad range of professions, with a special focus on careers that involve creating, designing, and producing documents: the news media, business and technical communication, the writing and publishing professions. Students may also focus their studies upon rhetoric, composition, and linguistics and prepare for graduate study in these areas or for law school, teaching, and other professions.

Literature

The Literature (LLT) concentration allows students to combine the study of American, British, and foreign-language literatures (in the original language and/or in English translation). The 21-hour Literature concentration includes five literature courses and two English electives. The curriculum prepares students for a broad range of careers in education, law, business, government, non-profit organizations, etc.

Teacher Education

Students in the Teacher Education program (TED) take 31 hours of professional coursework in addition to the 18-hour core curriculum in English and the 21-hour TED concentration. The concentration includes five literature courses and two English electives. Admission to the program requires the joint permission of the Department of English and the College of Education. Formal applications are required for admission to Teacher Education candidacy and for admission to the Professional Semester. Students who complete the program are eligible to apply for certification to teach English in secondary schools in North Carolina.

Minor in English

The Department of English offers a minor in English to majors in any field except English. This flexible minor allows students to pursue general interests in writing, literature, and language.

Minor in American Literature

The Department of English offers a minor in American Literature to NC State students, except for English LLT majors. The minor consists of five courses focusing on the English language literature of the United States and of the British colonies out of which the United States emerged.

Minor in Creative Writing

A minor in Creative Writing is available from the Department of English for NC State students, except for English CRW majors.

Minor in Film Studies

The film minor provides a comprehensive introduction to the art and industry of the cinema through courses in film analysis, history, theory, criticism, screen writing, and production. The minor is open to all students except for English FLM majors or majors in Arts Studies-Film.

Minor in Journalism

The Department of English and the Department of Communication offer a minor in Journalism to NC State students, except English LWR majors. The minor provides course work in writing and editing news and features for print and non-media as well as an introduction to the profession of journalism.

Minor in Linguistics

The linguistics minor, available to all students except for English LWR majors, is designed to investigate the structure and function of language as a cognitive and behavioral science. Five courses in designated areas of linguistics are required in the minor. Among students likely to be attracted to this minor are those who expect to pursue graduate study in linguistics, those interested in foreign languages or English as a second language, and those interested in communication sciences.

Minor in Technical and Scientific Communication

A minor in Technical and Scientific Communication is available from the Department of English for NC State students, except English LWR majors, who are interested in supplementing their studies in technical, scientific, or other academic fields with strong writing and communication skills. Students minoring in Technical and Scientific Communication will be introduced to numerous genres including internal and external documents such as proposals, reports, science writing, users guides, reference manuals, and online documentation. Critical perspectives towards the role of communication in the creation of scientific and technical knowledge will be examined. The minor may lead to career opportunities in technical and scientific writing and communication.

Minor in World Literature

In keeping with the university’s mission to provide an international curriculum, the World Literature minor offers NC State students, except for English LLT majors, an opportunity to broaden their perspectives on foreign cultures through the study of literature outside the Anglo-American tradition. Students will also develop critical, analytical, and linguistic skills essential in today’s job market. The minor offers choices from a range of courses in literature, in translation or in the original language, from Europe, Asia, Africa, and Latin America.

Graduate Programs

At the graduate level, the Department of English offers three graduate degrees: a Master of Arts in English, a Master of Science in Technical Communication, and a Master of Fine Arts in Creative Writing. In conjunction with the Department of Communication, the Department of English also offers an interdisciplinary Ph.D. program in Communication, Rhetoric, and Digital Media. For more information, please visit the Graduate School website (http://www.ncsu.edu/grad). A five-course certificate program in Professional Writing, available to students not seeking a degree at NC State, offers preparation in practical writing and editing, including both journalism and technical writing.
ENG - English Courses

ENG 100 Reading and Writing Rhetorically
Intensive practice in reading and writing critically and rhetorically, with attention to how those change according to purpose and situation. Introduction to rhetorical concepts and elements with applications to a variety of academic, professional, or civic texts. Exploration of principles of argument and organization. Guidance in developing flexible, self-aware reading and composing processes. Practice in seeking, providing, and responding to constructive feedback. Practice with making choices about grammar, mechanics, and style appropriate to specific rhetorical situations. Extensive writing practice and individualized coaching to support ongoing development as a writer. Intended as preparation for ENG 101. Departmental consent required.

ENG 101 Academic Writing and Research
Prerequisite: Placement via English Department guidelines.
Intensive instruction in academic writing and research. Basic principles of rhetoric and strategies for academic inquiry and argument. Instruction and practice in critical reading, including the generative and responsible use of print and electronic sources for academic research. Exploration of literary practices across a range of academic domains, laying the foundation for further writing development in college. Continued attention to grammar and conventions of standard written English. Successful completion of ENG 101 requires a C- or better. Credit for ENG 101 is not allowed if the student has already fulfilled the first-year writing requirement.

ENG 105 Writing and Research in the Disciplines
Restricted to: Transfer students with a transferring first-year writing course.
Examination of inquiry and writing across a range of academic disciplines, laying the foundation for further writing development in college-level writing across the curriculum. Refinement of basic principles of rhetoric and how those connect to writing in disciplinary communities. Restricted to transfer students with a transferring first-year writing course. Successful completion of ENG 105 requires a grade of C- or better. Together with approved transfer credit hours, this course satisfies the Introduction to Writing component of the General Education Program.

ENG 1GEP 100 Level English Composition
100 Level English Composition. Transfer students with 3 hours of ENG 1GEP credit may receive ENG 101 equivalency by completing ENG 105 with a C- or better.

ENG 201 Writing Literary Analysis
Writing about literature for a variety of audiences. Strategies for writing close textual analysis - including attention to versification, narrative technique, and dramatic structure - and for articulating biographical, literary-historical, and cultural-historical contexts. Conventional genres of literary analysis, including "close readings," reviews, and editorial introductions; conventions of organization and prose style in both academic and professional literary discourse; MLA conventions for prose style and documentation.

ENG 206 Studies in Drama
Selected drama from the classical period to the present. Emphasis on reading for enjoyment as well as understanding theory and development of tragedy, comedy, and other modes of dramatic expression. Writers such as Sophocles, Euripides, Shakespeare, Ibsen, and Shaw, and contemporary playwrights.

ENG 207 Studies in Poetry
Main features of poetry such as tone, voice, form, diction, figurative language, and sound patterns. Reading of poetry from different periods with the goal of learning how to understand, appreciate, and analyze different kinds of poems.

ENG 208 Studies In Fiction
Representative examples of novels and short stories from different periods, emphasizing understanding and appreciation of fiction as a genre, a knowledge of the features and techniques of fiction, and a sense of the development of the genre.

ENG 209 Introduction to Shakespeare
Shakespeare for non-English majors. Seven to ten major plays, including representative comedies, such as The Taming of the Shrew; histories, such as Richard III; tragedies, such as Hamlet; and romances, such as The Tempest. Does not satisfy requirements for English major.

ENG 210 Introduction to Language and Linguistics
Prerequisite: ENG 101.
Linguistics theory and method. Topics include the English sound system, morphology, syntactic structure, semantics, and historical and contemporary dialect variation. Language acquisition, language and the brain, and computer processing and human language.

ENG 214 Introduction to Editing
Prerequisite: ENG 101.
Basic editorial skills with a wide range of publications. Stylistic editing (conventions of written English, consistency, effectiveness of syntax, appropriateness of diction), substantive editing (accuracy, legal issues, ethics), and production editing (layout, typography, electronic publication processing). Introduction to resources such as standard reference works and professional organizations.

ENG 216 Technologies for Texts
Prerequisite: ENG 101.
Uses of computers for creating, designing, analyzing, and disseminating texts, both on desktops and on the Internet. Overview of technologies that facilitate reading, writing, and communication; development of skill with various applications and understanding of their capabilities, limitations, and historical analogues. Recommended for students in journalism and technical writing.

ENG 219 Studies in Great Works of Non-Western Literature
Readings, in English translation, or non-Western literary masterpieces from the beginnings of literacy in the Middle East, Asia, and Africa to the modern period, including excerpts from texts such as the Upanishads, the Ramayana, the Sundiata, Gilgamesh, A Thousand and One Nights, and the Quran and such authors as Confucius, Oe Kenzaburo, Omar Khayyam, Rumi, and Amos Oz.

ENG 220 Studies in Great Works of Western Literature
Credit is not allowed for both ENG 220 and ENG 221 or ENG 222.
Readings, in English translation, of Western literary masterpieces, from the beginnings of literacy in the Middle East and Europe towards the present, including such authors as Homer, Sophocles, Virgil, Ovid, Augustine, Dante, Machiavelli, Shakespeare, Cervantes, Moliere, Voltaire, Goethe, Austen, Flaubert, Dickinson, Tolstoy, Kafka, and Woolf. Credit will not be given for both ENG/FL 220 and either ENG/FL 221 or ENG/FL 222.

ENG 221 Literature of the Western World I
Credit is not allowed for both ENG 221 and ENG 220.
Readings from English translations of Biblical, Classical, Medieval, and Early Renaissance literature, including works by such authors as Homer, Plato, Virgil, Ovid, St. Paul, St. Augustine, Marie de France, and Dante.
ENG 222 Literature of the Western World II 3.
Credit is not allowed for both ENG 222 and ENG 220.
Readings from English translations of Renaissance, Neo-Classical, Romantic, and Early Modern literature, emphasizing the cultures of continental Europe from the Renaissance to 1900, and including such authors as Petrarch, Erasmus, Rabelais, Machiavelli, Shakespeare, Molière, Voltaire, Rousseau, Goethe, Flaubert, and Tolstoy.

ENG 223 Contemporary World Literature I 3.
Twentieth-century literature of some of the following cultures: Russian, Eastern European, Western European, Latin American, Canadian, Australian.

ENG 224 Contemporary World Literature II 3.
Twentieth-century literature of some of the following cultures: Asian, Arabian, African, Caribbean, Native-American.

ENG 223 Literature and Medicine 3.
Study of literature about illness, epidemics, and the science and practice of medicine. Readings will include works by authors such as Boccaccio, Defoe, George Elliot, Kafka, William Carlos Williams, Susan Sontag, and Tony Kushner.

ENG 233 The Literature of Agriculture 3.
A study of writings on the role of farming in the creation of culture and on the connection between the attention to words necessary for good writing and the attention to the land necessary for good farming. Readings may include ancient and modern texts from a variety of cultures and genres. Possible authors include Virgil, Jefferson, Hardy, Cather.

ENG 246 Literature of the Holocaust 3.
Fictional and nonfictional versions of the Holocaust, focusing on themes of survival, justice, theology, and the limits of human endurance.

African-American writing and its relationships to American culture and history. Covers such writers as Wheatley, Douglass, Chesnutt, Dunbar, DuBois, Hughes, Hurston, Wright, and Morrison.

ENG 249 Native American Literature 3.
A survey of Native American literatures from before contact with Europeans to contemporary culture. Writers may include: Apess (Pequot), Ridge (Cherokee), Silko (Laguna Pueblo), Momaday (Kiowa), Power (Sioux) Gunn Allen (Laguna-Sioux), Harjo (Creek), and Erdrich (Anishinaabe).

ENG 251 Major British Writers 3.
Credit is not allowed for ENG 251 and ENG 261 or ENG 262.
Significant British authors chosen from among such figures as Chaucer, Shakespeare, Milton, Swift, Pope, Austen, Wordsworth, Coleridge, Tennyson, Browning, Bronte, Dickens, Joyce, Eliot, Woolf, and Yeats. Credit will not be given for both ENG 251 and either ENG 261 or 262.

ENG 252 Major American Writers 3.
Credit is not allowed for both ENG 252 and ENG 265 or ENG 266.
Significant American authors chosen from among such figures as Franklin, Emerson, Thoreau, Hawthorne, Melville, Douglass, Stowe, Whitman, Dickinson, Twain, James, Frost, Faulkner, Hemingway, and Morrison. Credit will not be given for both ENG 252 and either ENG 265 or 266.

ENG 260 Introduction to Literary Study 3.
Prerequisite: ENG 101.
Introduces fundamental questions in literary history and critical theory. Emphasizes critical reading skills and prepares students for the kinds of courses--surveys, genre courses, author courses, problem-based courses--that are part of the English major. Papers prepared using standard word processing programs.

ENG 261 English Literature I 3.
Credit is not allowed for both ENG 261 and ENG 251.
A survey of English literature from 1660 to the present. Poetry, fiction, drama and intellectual prose by such central writers as Dryden, Pope, Swift, Johnson, Wollstonecraft, Wordsworth, Keats, Shelley, Bronte, Carlyle, Tennyson, Browning, Yeats, Woolf, Joyce and Eliot. Credit will not be given for both ENG 261 and ENG 251.

ENG 262 English Literature II 3.
Credit is not allowed for both ENG 262 and ENG 251.
A survey of English literature from 1660 to the present. Poetry, fiction, drama and intellectual prose by such central writers as Dryden, Pope, Swift, Johnson, Wollstonecraft, Wordsworth, Keats, Shelley, Bronte, Carlyle, Tennyson, Browning, Yeats, Woolf, Joyce and Eliot. Credit will not be given for both ENG 262 and ENG 251.

ENG 265 American Literature I 3.
Credit is not allowed for ENG 265 and ENG 252.
A survey of American literature from the beginnings to the Civil War, including such central authors as Edwards, Franklin, Irving, Emerson, Hawthorne, Melville, Poe, Stowe, Douglass, Thoreau, and Whitman. Credit will not be given for both ENG 265 and ENG 252.

ENG 266 American Literature II 3.
Credit is not allowed for both ENG 266 and ENG 252.
A survey of American literature from the Civil War to the present, including such central authors as Whitman, Dickinson, Twain, James, Crane, Wharton, Frost, Eliot, Hemingway, Hurston, Faulkner, Wright, O'Connor, and Morrison. Credit will not be given for both ENG 266 and ENG 252.

ENG 267 LGBTQI Literature in the U.S. 3.
Chronological survey of works of literature by and about gay, lesbian, bisexual, transgender, questioning, and intersex communities in the U.S. Primary texts will be considered in historical, political, and literary contexts. Brief consideration of early works from colonial period and 19th century with primary focus on 20th and 21st century texts.

ENG 281 Introduction to Creative Nonfiction 3.
Prerequisite: ENG 101.
This is an introductory course that will instruct students in writing, editing and appreciating the professional nonfiction one finds in magazines, on issue-oriented websites, and in general interest publications, from the New Yorker-style long article to the personal columns one finds in online media outlets: writing about an issue or event in a personal, stylish way while obtaining the rigor of journalism in scrupulous research and clarity. In an ever-enlarging media universe, this is the most visible and commercial of all the creative writing genres.

ENG 282 Introduction to Film 3.
Examination of basic film techniques and methods of film analysis. Emphasis on understanding and appreciating film as a major US and international art form and industry operating in various national, cultural, and historical contexts.
ENG 287 Explorations in Creative Writing 3.
Prerequisite: ENG 101.
Introduction to the basic elements and principles of three genres of creative writing: poetry, fiction and drama. Reading and class discussion of student work. Recommended for students with no prior experience in creative writing.

ENG 288 Fiction Writing 3.
Prerequisite: ENG 101.
Experience in writing short prose fiction. Class critiquing of student work and instruction in techniques of fiction.

ENG 289 Poetry Writing 3.
Prerequisite: ENG 101.
Experience in writing poetry. Class critiquing of student work and instruction in techniques of poetry.

ENG 292 Writing About Film 3.
Prerequisite: ENG 101.
Comprehensive study of various approaches to writing about film. Primary focus is on the critical and evaluative practice involved in writing film criticism for non-academic audiences. Film screenings, discussion of assigned readings, and in-class writing workshops aid students in preparing a portfolio of film writing that includes film reviews of various lengths.

ENG 298 Special Projects in English 1-3.
Faculty-guided independent study, or courses on special topics determined by departmental interest or need.

ENG 305 Women and Literature 3.
Prerequisite: Sophomore standing and above.
Nineteenth- and twentieth-century women's literature, as shaped by the intersecting and competing claims of gender, race, sexuality, and culture. Focus on fiction, accompanied by critical readings from American studies, feminist literary criticism, and postmodern theory.

Prerequisite: ENG 214.
Layout and design principles for written documents; desktop building; legibility, readability testing; conventions of proposals, instructions, and reports; basics of technical editing; usage, vocabulary, style manuals, editing mathematical equations, graphs, tables.

ENG 316 Introduction to News and Article Writing 3.
Prerequisite: ENG 101.

ENG 317 Designing Web Communication 3.
Prerequisite: ENG 214 or ENG 314.
A course in the layout, design, and composition of web-based communication. Students will learn to analyze audiences and their uses of information in order to plan, compose, and critically evaluate web-based communication. Students will acquire skill with HTML coding, screen design, and multimedia authoring and will apply those skills to the composition of a variety of web texts (i.e., websites). Course work will require students to become proficient with commercially available HTML and photoeditors.

ENG 321 Survey of Rhetorical Theory 3.
Prerequisite: Sophomore standing and above.
Principles of rhetorical theory from its classical origins through the modern period to the present time. Key concepts and theories that provide a critical understanding of the processes of persuasive symbol use.

ENG 322 Writing in the Rhetorical Tradition 3.
Prerequisite: ENG 101.
A writing course based on the study of rhetoric. Readings on the principles of invention, arrangement, and style; analysis of written texts; writing of persuasive texts for a variety of audiences and purposes.

ENG 324 Modern English Syntax 3.
Prerequisite: ENG 101.
Study of Modern English at the sentence level. Analysis of grammatical structure. Consideration of language variation in English.

ENG 325 Spoken and Written Traditions of American English Dialects 3.
Prerequisite: ENG 101.
Basic issues in the study of language: linguistic terminology and categories; grammatical traditions and topics such as prescriptivism and descriptivism, standard and non-standard, orality and literacy; language acquisition and awareness; language aesthetics and ethics.

ENG 326 History of the English Language 3.
Prerequisite: ENG 101.
Development of the English language from its Indo-European origins to the present. Emphasis on historical and comparative linguistic methodology and on changes in sound, syntax, and meaning.

ENG 327 Language and Gender 3.
Prerequisite: ENG 101.
Introduction to the use of language by men and women. Research in Linguistics and Women's Studies addressing issues such as the acquisition of gender-differentiated language, gender and conversational interaction, sexism in language, gender issues in society, and the relationship between language, gender, and other social constructs (e.g., class, culture, and ethnicity).

ENG 328 Language and Writing 3.
Prerequisite: ENG 101.
Study of language structure; specific attention to differences between spoken and written language; print conventions; error analysis; and the application of linguistics to rhetoric and composition. Analysis of a variety of grammatical approaches; how to evaluate grammar textbooks and compositions. Intended for English Education majors. Credit will not be awarded for both ENG 328 and ENG 324.

ENG 330 Screenwriting 3.
Prerequisite: 6 credit hours from courses in writing for media, creative writing, or Film Studies.
Writing for films, story planning, character development, communicating information, building scenes, relationships between script and cinematic dimensions, working with studios and editors.
ENG 331 Communication for Engineering and Technology 3.
Prerequisite: Junior standing. Credit is not allowed for both ENG 331 and ENG 332 or ENG 333.
Written communication in industrial and technical organizations, emphasizing internal communication with managers and technical personnel and including external communication with regulators, vendors, and clients. Intensive practice in writing; relationship of writing to oral and visual communication. For students in engineering and other primarily technological curricula. Credit is not allowed for more than one of ENG 331, ENG 332, and ENG 333.

ENG 332 Communication for Business and Management 3.
Prerequisite: Junior standing. Credit is not allowed for both ENG 332 and ENG 331 or ENG 333.
Written communication in business and public organizations, including both internal communication (such as instructions, policies, management reports) and external communication with clients, vendors, and publics. Intensive practice in writing; relationship of writing to oral and visual communication. For students who plan careers in scientific research. Credit is not allowed for more than one of ENG 331, ENG 332, and ENG 333.

ENG 333 Communication for Science and Research 3.
Prerequisite: Junior standing. Credit is not allowed for both ENG 333 and ENG 331 or ENG 332.
Written communication in scientific and research contexts, emphasizing relationship between research and writing in problem formulation, interpretation of results, and support and acceptance of research. Intensive practice in writing; relationship of writing to oral and visual communication. For students in business and public organizations, including both internal communication (such as instructions, policies, management reports) and external communication with clients, vendors, and publics. Intensive practice in writing; relationship of writing to oral and visual communication. Credit is not allowed for more than one of ENG 331, 332, and 333.

ENG 339 African Literature in English 3.
Prerequisite: Sophomore standing and above.
Anglophone literature in Africa. Emphasis on the relationship between the African world-view and literary production and the persistent trend by African writers to connect literature with politics. Writers such as Achebe, Ngugi, Soyinka, and Serote.

ENG 350 Professional Internships 3.
Directed work for CHASS majors including work-site mentoring and evaluation. Department supervision includes a course work directed toward designing employment application materials, developing a portfolio of professional work or relevant research paper, considering a variety of career options, and reading literature on workplace socialization. Students must provide their own transportation to the internship site. Modest liability insurance fee required. Students must have at least a 2.5 overall GPA and at least a 3.0 GPA in the major, be a junior or senior CHASS major or minor, and must complete the application process outlined on the Internship Program Website or provide the internship coordinator with contact information for your supervisor at an internship you obtained independently.

ENG 359 Topics in Film Studies 3.
Critical approaches to focused film topics involving film genres, directorial styles, or trends within a national cinema. Topics will vary from semester to semester.

ENG 362 The British Novel of the 18th Century 3.
Prerequisite: Sophomore standing and above.
Emphasizes major novelists such as Defoe, Richardson, Fielding, Sterne, and Austen.

ENG 363 The British Novel of the 19th Century 3.
Prerequisite: Sophomore standing and above.
Emphasizes major novelists such as Dickens, Trollope, the Brontes, Eliot, and Hardy.

ENG 364 History of Film to 1940 3.
Prerequisite: Sophomore standing and above.
Technological developments and aesthetic movements that shaped international cinema production from the beginning of the industry to 1940. Formal evolution in camera movement, editing, sound, narrative form, and the documentary. The rise to prominence of Hollywood and international cinemas in historical, economic, and cultural contexts.

ENG 368 American Poetry to 1900 3.
Prerequisite: Sophomore standing and above.
American poetry written in English from the colonial period to 1900. Development of styles and themes in relation to historical context. Emphasis on poets such as Bradstreet, Taylor, Wheatley, Poe, Sigourney, Emerson, Longfellow, Whitman, Dickinson, and Robinson.

ENG 369 The American Novel of the 19th Century 3.
Prerequisite: Sophomore standing and above.
Major novels illustrating the development of American fiction from Romanticism to Realism and Naturalism. Works by such writers as Brown, Cooper, Hawthorne, Stowe, Melville, Twain, Howells, James, Norris, Crane, Chopin, and Dreiser.

ENG 370 Early Twentieth-Century Fiction 3.
Prerequisite: Sophomore standing and above.
Study of narrative fiction written during the first half of the twentieth century. Typical subjects: James, Conrad, Stein, Hemingway, Woolf, Faulkner, Hurston, Wright, Beckett.

ENG 371 Late Twentieth-Century Fiction 3.
Prerequisite: Sophomore standing and above.

ENG 372 Early Twentieth-Century Poetry 3.
Prerequisite: Sophomore standing and above.
Study of poetry written in English during the first half of the twentieth century. Typical subjects: Hardy, Robinson, Yeats, Eliot, Pound, H.D., Williams, Hughes, Moore, Stevens.

ENG 373 Late Twentieth-Century Poetry 3.
Prerequisite: Sophomore standing and above.

ENG 374 History of Film From 1940 3.
Prerequisite: Sophomore standing and above.
Technological developments and aesthetic movements that have shaped international cinema production from 1940 to the present. Evolution in camera movement, editing, sound, narrative form, and the documentary. Post-war Hollywood cinema and international film industries (both established and emerging) in historical, economic and cultural context.

ENG 375 African American Cinema 3.
Survey and analysis of African American film culture from 1900-present. Examination of pre-Hollywood, classical Hollywood, and independent filmmaking. Particular focus on independent filmmakers’ response to dominant industry representations and the work of filmmakers who seek to create a specifically African American cinematic style.
ENG 377 Fantasy 3.
Prerequisite: Sophomore standing and above.
Representative works in the genre of fantasy. Emphasis on works of 19th and 20th centuries. Authors such as Carroll, Lewis, Tolkien, Borges, LeGuin, and Gardner.

ENG 378 Women & Film 3.
This course will introduce students to the rich international history of women's participation in the motion picture industry. Course includes readings, screenings, discussions, and a final examination.

ENG 380 Modern Drama 3.
Prerequisite: Sophomore standing and above.
Major plays and playwrights from Ibsen to Pinter, including at least some of the following: Strindberg, Chekhov, Shaw, O'Neill, Hellman, Pirandello, Brecht, Williams, Miller, Albee.

ENG 381 Creative Nonfiction Writing Workshop 3.
Prerequisite: ENG 215, 287, 288, or 289.
A workshop in creative nonfiction (literary or magazine journalism) for the student with demonstrated understanding of the basic techniques of creative writing and journalism.

ENG 382 Film and Literature 3.
Ways of adapting literary works to film form. Similarities and differences between these two media. Emphasis on the practical art of transforming literature into film. Attention to the impact of film upon literature.

ENG 383 Film and Literature 3.
Survey of critical approaches to film art. Application of theoretical paradigms—formalist, realist, psychoanalytic, feminist, poststructuralist—to individual films, genres, national cinemas and directors.

ENG 385 Biblical Backgrounds of English Literature 3.
Prerequisite: Sophomore standing and above.
Influences of the Bible—principal forms, genres, and texts—on major English and American writers such as Milton, Spenser, Melville, Eliot, and Faulkner.

ENG 386 Intermediate Fiction Writing Workshop 3.
Prerequisite: ENG 288; Students must have earned a B or better in ENG 288.
An intermediate workshop in creative writing for students with demonstrated understanding of the basic techniques of writing prose fiction.

ENG 387 Intermediate Poetry Writing Workshop 3.
Prerequisite: ENG 289; Students must have earned a B or better in ENG 289.
An intermediate workshop in creative writing for students with demonstrated understanding of the basic techniques of writing poetry.

ENG 389 Classical Backgrounds of English Literature 3.
Prerequisite: Sophomore standing and above.
Literature of the ancient Western world and its influence on English and American writing. Emphasis on the connections between the two bodies of literature. Covers such writers as Plato, Horace, Virgil, and St. Augustine.

ENG 390 Classical Backgrounds of English Literature 3.
Prerequisite: Sophomore standing and above.
Covers such writers as Plato, Lewis, St. Augustine, and American writing. Emphasis on the connections between the two media. Emphasis on the practical art of transforming literature into film. Attention to the impact of film upon literature.

ENG 391 Special Topics in Modern Drama 3.
Prerequisite: Sophomore standing and above.
Various topics in modern drama covering different cultures, issues, and theatrical practices within the last 100 years. Modern American drama, modern British drama, modern World Drama, and European theatre from World War II to the present.

ENG 392 Major World Author 3.
Prerequisite: Sophomore standing and above.
Intensive study in English, of the writings of one (or two) author(s) from outside the English and American traditions. Sample subjects: Homer, Virgil and Ovid, Lady Murasaki, Marie de France and Christine de Pizan, Dante, Cervantes, Goethe, Balzac and Flaubert, Kafka, Proust, Lessing and Gordiner, Borges and Marquez, Neruda, Achebe, Soyinka, Calvino, Walcott and Naipaul. Topics will vary from semester to semester. May be repeated for credit with new topic.

ENG 393 Studies in Literary Genre 3.
Prerequisite: Sophomore standing and above.
Concentrated treatment of one literary genre, such as the epic, the lyric, the drama, satire, romance, autobiography, the essay, the novel, or the short story. Treatment of materials from several national or ethnic cultures and several periods. All readings in English. Course may be taken three times for credit. Course may be taken 3 times in different genres.

ENG 394 Studies in World Literature 3.
Prerequisite: Sophomore standing and above.
Study of a subject in world literature: for example, African literature, Asian literature, Hispanic literature, East European literature, Comedy, the Epic, the Lyric, Autobiography, the Faust legend, or Metamorphosis. Subjects vary according to availability of faculty. Readings in English translation.

ENG 395 Studies in Rhetoric and Digital Media 3.
Prerequisite: ENG 101.
Study of the influence of emerging technologies on rhetorical theory and practice. Rhetorical analysis of texts, including visual and audio texts. Invention and construction of digital media texts as a means of engaging rhetorical theory and analysis. Topics vary to adapt to emerging technologies and changing vernacular practices.

ENG 396 Contemporary Literature I (1900 to 1940) 3.
Prerequisite: Sophomore standing and above.
British and American literature from 1900 to World War II, with representative authors such as Conrad, Yeats, Eliot, Joyce, Woolf, Faulkner, Shaw, Stein, O'Neill, and Wright. For comparative purposes, continental authors such as Kafka and Mann.

ENG 397 Contemporary Literature II (1940 to Present) 3.
Prerequisite: Sophomore standing and above.
Literature from World War II to the present, with representative authors such as Murdoch, Beckett, Nabokov, Ginsberg, Achebe, Fuentes, Kundera, Naipaul, and Morrison.

ENG 400 Applied Criticism 3.
Prerequisite: LTN Majors, Senior standing, formal admission to the methods courses. Corequisite: ECI 450.
Types and methods of literary criticism designed specifically for students intending to teach English in high school.

ENG 401 Applied Criticism 3.
Prerequisite: Sophomore standing and above.
Types and methods of literary criticism designed specifically for students intending to teach English in high school.

ENG 402 Applied Criticism 3.
Prerequisite: Sophomore standing and above.
Types and methods of literary criticism designed specifically for students intending to teach English in high school.

ENG 403 Applied Criticism 3.
Prerequisite: Sophomore standing and above.
Types and methods of literary criticism designed specifically for students intending to teach English in high school.

ENG 404 Applied Criticism 3.
Prerequisite: Sophomore standing and above.
Types and methods of literary criticism designed specifically for students intending to teach English in high school.

ENG 405 Applied Criticism 3.
Prerequisite: Sophomore standing and above.
Types and methods of literary criticism designed specifically for students intending to teach English in high school.

ENG 406 Applied Criticism 3.
Prerequisite: Sophomore standing and above.
Types and methods of literary criticism designed specifically for students intending to teach English in high school.

ENG 407 Applied Criticism 3.
Prerequisite: Sophomore standing and above.
Types and methods of literary criticism designed specifically for students intending to teach English in high school.

ENG 408 Applied Criticism 3.
Prerequisite: Sophomore standing and above.
Types and methods of literary criticism designed specifically for students intending to teach English in high school.

ENG 409 Applied Criticism 3.
Prerequisite: Sophomore standing and above.
Types and methods of literary criticism designed specifically for students intending to teach English in high school.
ENG 405 Literature for Adolescents 3.
Prerequisite: Junior standing.
The history, types, and characteristics of literature for adolescents. Emphasizes reading and analyzing the literature by exploring the themes, literary elements, and rationale for teaching literature for adolescents. Addresses ways in which this literature can be integrated and implemented in English/Language Arts curriculum.

ENG 406 Modernism 3.
Prerequisite: Sophomore standing and above.
International Modernist movement in literature, from its nineteenth-century origins to its culmination in the early twentieth century. Definitions of modernity, as embodied in a variety of genres. Placement of Modernist texts within a variety of cultures that produced them.

ENG 407 Postmodernism 3.
Prerequisite: Sophomore standing and above.
Literary expressions of Postmodernism, from its origins in the Modernist movement through its culmination in the later decades of the twentieth century. Definitions of post modernity, as embodied in a variety of genres. Placement of Postmodernist texts within a variety of cultures that have produced them.

ENG 410 Studies in Gender and Genre 3.
Prerequisite: Sophomore standing and above.
This course examines the ways in which writers have revised the literary genres to include gendered experience. It will focus on a different generic area, such as poetry, fiction, drama or autobiography, depending on its instructor.

ENG 411 Rhetorical Criticism 3.
Prerequisite: Junior standing.
Rhetorical analysis of public speeches, social movements, political campaigns, popular music, advertising, and religious communication. Neo-Aristotelian criticism, movement studies, genre criticism, dramatistic analysis, content analysis, fantasy theme analysis.

ENG 416 Advanced News and Article Writing 3.
Prerequisite: ENG 316.
Advanced work in writing news stories, profiles, features, and investigative stories. Includes analysis and critical reading of print media. Assumes thorough knowledge of AP style and rudiments of news and feature writing.

ENG 417 Editorial and Opinion Writing 3.
Prerequisite: ENG 214, ENG 316.
Discussing and writing newspaper and magazine editorials, with added attention to other forms of opinion in print, such as columns and books and music reviews.

ENG 420 Major American Author 3.
Prerequisite: Sophomore standing and above.
Intensive study of the writings of one (or two) American author(s). Developments across the career, relationships between the writing and the life, the writer’s participation in a culture and an historical moment. Sample subjects: Emerson and Thoreau, Melville, Whitman, Stowe and Douglass, Dickinson, Twain, James and Wharton, Frost, O’Neill, Fitzgerald and Hemingway, Faulkner, Hurston and Wright, O’Conner, Morrison.

ENG 421 Computer Documentation Design 3.
Prerequisite: ENG 314, 331, 332 or ENG 333.
Theory and design of documentation for computer hardware and software, including user guides, reference manuals, quick reference guides, tutorials, online documentation, and CD-based media delivery. Training in alternative documentation testing procedures, usability testing, and collaborative revision.

ENG 422 Writing Theory and the Writing Process 3.
Prerequisite: ENG 101.
Theory and research on the processes and contexts of written discourse; cognitive, socio-cultural, educational perspectives; reflective and research-based accounts of the writing process; analysis of discourse contexts and communities.

ENG 425 Analysis of Scientific and Technical Writing 3.
Prerequisite: Junior standing.
The role of communication in the creation of scientific knowledge and technical designs and artifacts; methods of analyzing texts and of studying their creation and use; relationships between writing and other forms of communication. Field research in a scientific or technological setting.

ENG 426 Analyzing Style 3.
Prerequisite: ENG 101.
Development of a greater understanding of and facility with style in written discourse. Theories of style, stylistic features; methods of analysis, imitation.

ENG 430 Advanced Screenwriting 3.
Prerequisite: ENG 330.
Advanced Screenwriting students will complete ready-to-sell screenplays over the course of the semester. Workload includes taking home two 100-page scripts each week and giving a thorough critique both in writing and in class discussion. Course included pitch sessions, opening scene workshops, intensive reading and writing.

ENG 439 17th-Century English Literature 3.
Prerequisite: Sophomore standing and above.
Works of major nondramatic literary figures in England during the period 1600-1700, such as Donne, Jonson, Herbert, Marvell, Bacon, and Browne.

ENG 448 African-American Literature 3.
Prerequisite: Junior standing.
Survey of African-American literature and its relationships to American culture, with an emphasis on fiction and poetry since 1945. Writers such as Bontemps, Morrison, Hurston, Baldwin, Hayden, Brooks, Naylor, Harper, and Dove.

ENG 449 16th-Century English Literature 3.
Prerequisite: Sophomore standing and above.
Nondramatic prose and poetry of the sixteenth century, with consideration of literary types and movements. Emphasis on major authors, including Sidney and Spenser.

ENG 451 Chaucer 3.
Prerequisite: Sophomore standing and above.
Introduction to the study of Chaucer through an intensive reading of The Canterbury Tales.

ENG 452 Medieval British Literature 3.
Prerequisite: Sophomore standing and above.
Readings in the rich poetic, thematic, and generic diversity of Medieval British literature. Representative selections from romance, dream-vision, allegory, fabliau, lyric, chronicle, saint’s life, satire, in historical and cultural contexts. Prior knowledge of Middle English unnecessary.
ENG 453 The Romantic Period 3.
Prerequisite: Sophomore standing and above.
Emphasis on the major poetry of Blake, Wordsworth, Coleridge, Byron, Shelley, and Keats, with selected readings from other poets, prose writers, and dramatists of the period.

ENG 455 Literacy in the U.S. 3.
Prerequisite: ENG 101; Junior or senior standing.
Academic study of the nature, functions, acquisition, institutionalization, and present state of literacy in the U.S., with special focus on issues of cultural diversity and social inequity. Three sample authors for literacy - personal, academic, and home/community - provide a range of readings, investigations, and opportunities for reflection and further study. Service-learning component links this academic study to required tutoring (2 hours per week) of children and adults in local community service agencies in addition to attending class. Students will need to provide their own transportation.

ENG 459 Seminar in Film Studies 3.
Prerequisite: ENG 282, ENG 384 and Junior or Senior standing.
Advanced critical approaches to focused film topics involving film genres, directorial styles, or trends within a national cinema. This seminar-style course will include screenings, readings, regular discussions, and a substantive final research paper. Topics will vary from semester to semester. Junior or senior standing or permission of instructor required.

ENG 460 Major British Author 3.
Prerequisite: Sophomore standing and above.
In-depth study of the works of one (or two) British author(s) within their historical and literary-historical context. Sample authors might include: Spencer and Sidney, Swift and Pope, Austen, Wordsworth and Coleridge, Keats and Shelley, the Brontes, the Brownings, Dickens, George Eliot, Hardy, Joyce, Woolf.

ENG 462 18th-Century English Literature 3.
Prerequisite: Sophomore standing and above.
Major figures in English literature between 1660 and 1790. Works studied in relation to social, cultural, political, and religious developments. Emphasis on writers such as Dryden, Swift, Pope, Johnson.

ENG 463 The Victorian Period 3.
Prerequisite: Sophomore standing and above.
Significant British poets, writers of prose non-fiction, and novelists studied in the social, economic, scientific, intellectual, and theological contexts of the Victorian era.

ENG 464 British Literature, 1900-1945 3.
Prerequisite: Sophomore standing and above.
Variety of writings by British authors between the death of Queen Victoria and the end of World War II. Typical subjects: Hardy, Conrad, Shaw, Yeats, Forster, Joyce, Lawrence, Eliot, Woolf, Beckett.

ENG 465 British Literature, Since 1945 3.
Prerequisite: Sophomore standing and above.
Study of a variety of writings by British authors since World War II. Typical subjects: Beckett, O’Brien, Orwell, Lessing, Murdoch, Rhys, Auden, Larkin, Osborne, Rushdie.

ENG 467 American Colonial Literature 3.
Prerequisite: Sophomore standing and above.
Survey of American literature and thought from its beginnings to the adoption of the Constitution. Representative works such as travel and exploration reports, Indian captivity narratives, diaries, journals, autobiographies, sermons, and poetry.

ENG 468 American Romantics 3.
Prerequisite: Sophomore standing and above.
Major American writers from 1825 to 1865. Relationship between literary developments and social change. Emphasis on such writers as Emerson, Hawthorne, Cooper, Poe, Melville, Douglass, Stowe, Thoreau, and Whitman.

ENG 469 American Realism and Naturalism 3.
Prerequisite: Sophomore standing and above.
Major American writers from 1865 to 1914, with emphasis on novelists such as Twain, James, Howells, Chopin, and Dreiser.

ENG 470 American Literature, 1914-1945 3.
Prerequisite: Sophomore standing and above.
Variety of writings by U.S. authors from World War I to World War II. Typical subjects: Stein, Adams, Anderson, Williams, Cullen, Hilda Doolittle, Faulkner, Hurston, Hemingway, Fitzgerald, Frost, O'NEill.

ENG 471 American Literature, Since 1945 3.
Prerequisite: Sophomore standing and above.
Study of a variety of writings by U.S. authors since World War II. Typical subjects: Ellison, Lowell, Williams, Welty, Bellow, Baldwin, O'Conner, Bartheleme, Albee, Mailer, Ashbery, Morrison, McDermott, DeLillo.

ENG 475 Literature, the Arts, and Mass Culture 3.
A review of the debate regarding art and mass culture, with attention to recent developments in cultural theory and practice.

ENG 476 Southern Literature 3.
Prerequisite: Sophomore standing and above.
Literary traditions of the Southeastern United States from colonization through the present, including study of such major writers as Byrd, Jefferson, Simms, Poe, Douglass, Twain, Chesnutt, Glasgow, Hurston, Tate, Wolfe, Faulkner, Warren, Wright, Welty, Williams, O'Conner, Percy, and Lee Smith.

ENG 480 Modern Drama 3.

ENG 486 Shakespeare, The Earlier Plays 3.
Prerequisite: Sophomore standing and above.
Shakespeare's major works before 1600 with emphasis on his development as a playwright.

ENG 487 Shakespeare, The Later Plays 3.
Prerequisite: Sophomore standing and above.
Shakespeare's major works after 1600 with emphasis on his tragedies and the late romances.

ENG 488 Advanced Fiction Writing Workshop 3.
Prerequisite: ENG 388.
An advanced workshop in creative writing for students with demonstrated understanding and accomplishment in the techniques of writing prose fiction. This course is restricted to juniors and seniors. Departmental approval required.

ENG 489 Advanced Poetry Writing Workshop 3.
Prerequisite: ENG 389.
An advanced workshop in creative writing for the students with demonstrated understanding and accomplishment in the techniques of writing poetry. This course is restricted to juniors and seniors. Departmental approval required.
ENG 490 Studies in Medieval Literature 3.
Prerequisite: Sophomore standing and above.
Topics (in rotation) in medieval English and continental literature, such as Arthurian legend and literature; women in medieval society and literature; the self in the late Middle Ages. Focus on special areas of interest, with attention to cultural and historical backgrounds and contemporary scholarship. Some texts in Middle English, some in translation; no prior knowledge of Middle English needed.

ENG 491 Honors in English 3.
Requisite: English Majors Only.
Intensive course or independent study project designed as one portion of the Honors Program in English. Subject varies.

ENG 492 Special Topics in Film Styles and Genres 3.
Critical approaches to focused film topics involving film genres, directorial styles, or trends within a national cinema. Topics will vary from semester to semester.

ENG 494 Special Topics in Linguistics 3.
Prerequisite: ENG 101.
(May be repeated for credit with new topic.) Methodology and analysis within various branches of linguistics, e.g. syntax, semantics, computational linguistics, phonology, dialectology, historical linguistics, discourse analysis. Examination of topic's basic methods, controversial issues, analysis of linguistic data. Projects may include novel analyses of English constructions, parsing programs, field work reports.

ENG 496 Seminar in Literary Criticism 3.
Prerequisite: 9 hours of literature at the 300 level or above.
Introduction to theoretical and applied criticism of literature, primarily for English majors and minors. May include traditional theory from Plato and Aristotle to New Criticism, as well as contemporary psychoanalytical, social, historical, and linguistic approaches to literature.

ENG 497 Senior Seminar in World Literature 3.
Prerequisite: Junior standing or Senior standing.
Rotating topics in world literature, including treatment of materials from more than one culture and including consideration of the subject’s theoretical or methodological framework. Readings in English (original languages encouraged but not required).

ENG 498 Special Topics in English 1-6.
Prerequisite: Six hours in ENG above the 100 level.
Directed individual study or experimental course offerings in language or literature. Individual study arranged through consultation with faculty member and Director of Undergraduate Studies.

ENG 499 Special Topics in Creative Writing 3.
Prerequisite: ENG 288 or ENG 289; Students must have earned a grade of B or better in 288 or 289 or they must have demonstrated competence in creative writing as determined by instructor.
Techniques and practice in writing a particular form within the traditional genres of poetry, prose, or drama, such as "Creative Non-Fiction," "Science Fiction," "The Novella," or "The Satirical Poem." Topics vary from semester to semester.

ENG 506 Verbal Data Analysis 3.
Prerequisite: ENG 513 or ENG 527 or COM 541 or COM 542.
Research strategies for understanding how spoken and written language shapes activities (e.g., design, instruction, counseling, gaming interactions, e-commerce, etc.). Tracking patterned uses of language as verbal data (e.g., grammatically topical, thematically), formulating research questions, and designing studies to answer those questions through quantitative descriptive means. Sampling, collecting and managing data, developing coding schemes, achieving reliability, using descriptive statistical measures, and reporting the results.

ENG 507 Writing for Health and Environmental Sciences 3.
Prerequisite: Graduate standing, Doctoral student, Master's student.
Readings, on-site research, document gathering, and analysis of writing in health and environmental science fields. Students study, practice, and present major forms of writing in their profession. Professional portfolio due at the end of the semester. Intended for students interested in exploring or pursuing writing careers in medicine, pharmaceuticals, nutrition, agriculture, ecology, or other health and environmental science-related industries, or professionals who wish to improve knowledge and skills.

ENG 508 Usability Studies for Technical Communication 3.
Prerequisite: ENG 517.
Advanced study of usability inspection, inquiry, and testing theories and practices related to instrumental and instructive texts (i.e., computer-related, legal, medical, pharmaceutical, financial, etc.). Practical experience testing a variety of texts using several testing methods, including completion of a substantial, lab-based usability test. For students planning careers in technical communication, human factors, software design, and multimedia design.

ENG 509 Old English Literature 3.
Study of Old English language with selections from important poems including Beowulf. Examination of the poetry in the light of various modern critical approaches.

ENG 510 Middle English Literature 3.
Study of major works of medieval English literature (exclusive of Chaucer's Canterbury Tales) in historical context, as reflections of and influences on social and cultural change. Includes works such as Sir Gawain and the Green Knight, Pearl, Langland's Piers Plowman and Malory's Morte d'Arthur.

ENG 511 Theory and Research In Composition 3.
Research and scholarship in composition and the teaching of writing. Major theoretical perspectives (such as expressive, social, cognitive, feminist), current issues (such as audience, invention, revision, evaluation) and various research methods.

ENG 512 Theory and Research In Professional Writing 3.
Corequisite: ENG 666.
Introduction to research and scholarship in professional writing and writing in the workplace. Major theoretical perspectives for studying writing; current issues (such as usability, readability, collaboration, gender, authorship); and various research methods.

ENG 513 Empirical Research In Composition 3.
Reading and evaluation of empirical research in written composition; guided practice in qualitative and quantitative methods. Basic principles of research; problem definition, research design and statistical analysis, description and assessment of written products and processes.
ENG 514 History Of Rhetoric 3.
Historical development of rhetorical theory with attention to contemporaneous rhetorical practice and philosophical trends. Major focus on the classical period with briefer coverage of medieval, Renaissance, 18th-century, and 19th-century developments. Implications for contemporary theory and practice, including pedagogical practice.

ENG 515 Rhetoric Of Science and Technology 3.
The relationships among rhetoric, scientific knowledge and technological development and of changes in how these relationships understood historically. Practice in critical analysis of scientific and technical discourse. Consideration of scientific and technical language and of public controversy concerning science and technology.

ENG 516 Rhetorical Criticism: Theory and Practice 3.
Prerequisite: Graduate Standing or the equivalent of COM/ENG 321 or COM/ENG 411.
Development, achievements, limitation of major critical methods in the 20th century, including neo-Aristotelian, generic, metaphoric, dramatistic, feminist, social-movement, fantasy-theme and postmodern approaches. Criticism of political discourse, institutional discourse, discourses of law, medicine, religion, education, science, the media. Relations between rhetorical and literary criticism and other forms of cultural analysis.

ENG 517 Advanced Technical Writing, Editing and Document Design 3.
Prerequisite: ENG 314.
Advanced study of document design, technical editing and usability. For students planning careers as technical communicators.

ENG 518 Publication Management for Technical Communicators 3.
Prerequisite: ENG 517.
Advanced study of publication and team management issues such as staffing, scheduling, cost-reduction and subcontracting. For students planning careers as technical communicators.

ENG 519 Online Information Design and Evaluation 3.
Prerequisite: ENG 517.
Concepts and practices related to multimedia information design, information architectures, human-computer interaction, and genre for complex websites.

ENG 520 Science Writing for the Media 3.
Coverage of three areas: how to write science articles for a variety of mass media, how to think critically about how mass media cover science, and how to think critically about science itself. Preparation for careers not only in mass media, but also in scientific and technological organizations.

ENG 522 Writing in Nonacademic Settings 3.
Directed work experience for English Department graduate students including work-site mentoring and evaluation and concurrent academic assignments. Academic component includes reading and discussing articles relevant to the day-to-day practice of writing in nonacademic settings and completion of a project that connects academic and nonacademic components. Graduate Standing in an English Department graduate program required. Modest liability insurance fee required. Students must provide their own transportation to the practicum site.

ENG 523 Language Variation Research Seminar 3.
Prerequisite: ENG 525.
Field-initiated research. Group and individual research topics focused on current sociolinguistic issues related to language variation and changes. Ethnographic and quantitative methods of analysis.

ENG 524 Introduction to Linguistics 3.
Prerequisite: Graduate standing or 12 hrs. in ENG.
Introduction to theoretical linguistics, especially for students in language, writing and literature curricula. Phonology, syntax, semantics, history of linguistics; relation of linguistics to philosophy, sociology and psychology; application of theory to analysis of texts.

ENG 525 Variety In Language 3.
Prerequisite: Graduate standing or 12 hrs. in ENG.
Language variation description, theory, method and application; focus on regional, social, ethnic and gender varieties; sociolinguistic analysis, basic discourse analysis.

ENG 527 Discourse Analysis 3.
Prerequisite: Graduate standing.
Overview of major issues, theories, and research methods in contemporary discourse analysis. It explores how language as a form of social practice regulates social actions, relations and identities; how ways of speaking construct and are constructed by social order, cultural practice, and individual agency. Texts/discourses are analyzed to examine how speakers create meaning through formal linguistic choices; what the micro-organization of talk reveals about social order; how critical understanding of discourse helps to interpret complex processes of social life.

ENG 528 Sociophonetics 3.
A survey of sociophonetics: the study of language variation using modern phonetic techniques. Acoustic analysis of consonants, vowels, prosody, voice quality. Speech perception experiments and how they can be applied to a variety of issues. Applications to theoretical issues in sound change, sociolinguistics, phonetics and phonology, and cognition of language. Graduate standing required.

ENG 529 16th-Century Non-Dramatic English Literature 3.
Prerequisite: Graduate standing.
Prose and poetry of the English Renaissance, excluding drama. Special attention to major authors, including Spenser and Sidney, and to intellectual, cultural and literary backgrounds and developments. Introduction to pertinent methods and issues of scholarly inquiry and critical interpretation.

ENG 530 17th-Century English Literature 3.
A close examination of the literature of England from 1600 to 1660 with emphasis on major literary figures and movements, development of important literary forms and genres and relationship between literary texts of this period and their philosophical, political and theological contexts. Some bibliographical and textual assignments. Content and focus varies according to instructor's emphasis, but writers covered usually include Donne, Herbert, Crashaw, Marvell and Browne.

ENG 531 American Colonial Literature 3.
Survey of American literature and thought from the beginning to adoption of the constitution. Representative works such as travel and exploration reports, Indian captivity narratives, diaries, journals, auto biographies, sermons and poetry.

ENG 532 Narrative Analysis 3.
Prerequisite: Graduate standing.
Introduction to theories concerning the structure, use, and interpretation of narratively organized discourse; application of methods of narrative analysis to both spoken and written narratives.
ENG 533 Bilingualism and Language Contact 3.
Linguistic, cultural and socio-political aspects of bi- and multilingualism in a global context. Issues and implications of bilingualism from both theoretical and practical perspectives. Topics include: language maintenance and shift; child and adult bilingualism; relationship between language, culture and identity in bi- and multilingual situations; psycholinguistic aspects and linguistic outcomes of bilingual contact, such as code-switching, convergence and language attrition; language ideology, the politics of language choice and language policy; globalization and intercultural communication. Must hold graduate standing or get consent of instructor for advanced undergraduate students.

ENG 534 Quantitative Analysis on Sociolinguistics 3.
Prerequisite: ENG 523.
The quantitative methods specific to sociolinguistic variation are examined in detail, focusing both on gaining experience using quantitative analysis software and on understanding fundamental concepts underlying the quantitative analysis of language variation. This course takes students beyond the basic familiarly with quantitative analysis gained in ENG 523, both in depth of investigation and in attention to the link between method and theory.

ENG 536 Research Methods in Phonology 3.
Requisite: Enrollment in the Sociolinguistics concentrations of the MA English or PhD Sociology programs or permission of instructor.
This course explores laboratory and computational tools for investigating linguistic sound systems (e.g., speech perception experiments, speech production tools such as ultrasound imaging, and computational tools such as automated transcription and acoustic measurement). Requires enrollment in the Sociolinguistics MA or PhD program or permission of instructor.

ENG 539 Seminar In World Literature 3.
Rotating topics in world literature, including treatment of the subject's theoretical or methodological framework. Possible subjects: colonialism and literature; orality and literature; the Renaissance; the Enlightenment; translation; comparison of North and South American literature; African literary traditions; postmodernism and gender. Readings in English (original languages encouraged but not required).

ENG 540 History Of Literary Criticism 3.
Prerequisite: Graduate standing or PBS status.

ENG 541 Literary and Cultural Theory 3.
A survey of literary theory in the 20th century from New Criticism to postmodernism. Examines the virtues and pitfalls of these approaches to the study of culture and literature. A course on issues, concepts, theorists and the sociohistorical and political context in which the theorists are writing. Taught in English. No formal pre-requisites. However, students who have not had advanced literature will be disadvantaged.

ENG 548 African-American Literature 3.
Prerequisite: Grad. standing.
Advanced study of critical theories of African-American literature, the contexts of cultural criticism and 20th-century novels of African-American writers within these frames.

ENG 549 Modern African Literature 3.
The works of the most important writers shaping modern African literature in English (and English translation). Selections from East, West, North and South Africa, spanning colonial through post-colonial Africa--from literature of protest and culture conflict to that of disillusionment, reappraisal and feminism.

ENG 550 English Romantic Period 3.
A detailed study of the six major romantic poets--Blake, Wordsworth, Coleridge, Byron, Shelley, and Keats; some attention as well to the political, social and literary background and to a few minor writers and critics.

ENG 551 Chaucer 3.
Prerequisite: ENG 451, Graduate standing.
Intensive study of the works of Chaucer in the light of medieval literary traditions, medieval history and a variety of medieval and modern critical approaches.

ENG 554 Contemporary Rhetorical Theory 3.
Contemporary rhetorical theory covering the 20th and 21st centuries. Conceptual connections with and disruptions of the classical tradition and its successors; relationship between rhetorical theory and philosophical trends, institutional histories, socioeconomic circumstances, and pedagogical needs. Attention to current issues such as the revival of invention, rhetorical agency, and ethics.

ENG 555 American Romantic Period 3.
The literary culture of the United States from 1820s through 1860s, setting works of transcendentalists and other romantics within sociohistorical contexts. Consideration of writing by women, slave narrators and popular fiction as well as such major figures as Emerson, Hawthorne, Thoreau and Melville.

ENG 558 Studies In Shakespeare 3.
An intensive study of a particular phase of the Shakespeare canon. Emphasis will normally be on one dramatic genre (tragedy, comedy, history), but occasionally the focus may be more limited.

ENG 560 Victorian Poetry and Critical Prose 3.
The literature of Victorian England: 1837-1901; the major poets and essayists, movements and questions in their historical contexts, religious, political and aesthetic.

ENG 561 Milton 3.
An intensive reading of Milton with attention to background materials in history and culture of seventeenth-century England.

ENG 562 18TH-Century English Literature 3.
British writers of the period 1600-1790 studied in historical and cultural contexts. Usually includes works by Dryden, Swift, Pope, Defoe, Mandeville, Boswell and Johnson, but addition of other significant writers possible.

ENG 563 18TH-Century English Novel 3.
Selected British novels of the Restoration and eighteenth century from a variety of contemporary critical perspectives. Such writers as Fielding, Richardson, Sterne, Burney, Smollett and Austen.

ENG 564 Victorian Novel 3.
Study of selected British novels published between 1837 and 1901 in contexts of the development of the genre, historical period and current literary theory. Such writers as Dickens, Thackeray, Bronte, Trollope, Eliot, Meredith and Hardy.
ENG 565 American Realism and Naturalism 3.
Study of literary culture of United States from 1860s to early 1900s with emphasis on fiction by such realists and naturalists as Twain, Howells, Chesnutt, James, Crane, Wharton, Dreiser and Norris. Inclusion of prose of writers such as Adams and DuBois possible.

ENG 570 20TH-Century British Prose 3.
Examination of British fiction of this century and relationship of significant intellectual, historical and political issues. Inclusion of such writers as Joyce, Conrad, Woolf, Lawrence, Beckett and Murdoch possible but also postcolonial novelists as well.

ENG 571 20TH-Century British Poetry 3.
Development of English poetry from its late Victorian phase through Modernism to present post-war scene. Inclusion of such writers as Hardy, Yeats, Eliot, Smith, Auden, Larkin, Heaney, Wolcott and Hill possible.

ENG 572 Modern British Drama 3.
Survey of modern British drama from its beginnings at turn of the century to present.

ENG 573 Modern American Drama 3.
A survey of modern American drama centering on major figures.

ENG 575 Southern Writers 3.
Introduction to literary culture of "the South," tracing the roots of the twentieth-century "Southern Renaissance" in such ante-bellum genres as plantation fiction, Southern Gothic, fugitive-slave narrative and pastoral elegy. Examination of persistence of "Southern" writing within increasingly standardized culture of the United States.

Development of modern American poetry from rebellion against the romantic and genteel verse of the 1890's; special attention to Robinson, Frost, Pound, Williams, Stevens and Ransom.

ENG 577 20th-Century American Prose 3.
An examination of representative American writers of novel and short fiction.

ENG 578 English Drama To 1642 3.
Prerequisite: ENG 261 and upper division or Graduate standing.
Elizabethan and Jacobean drama from 1580 to 1642, excluding Shakespeare. Coverage of such writers as Marlowe, Jonson, Webster, Beaumont and Fletcher, Heywood, Tourneur and Ford.

ENG 579 Restoration and 18th-Century Drama 3.
Representative British plays of the period 1660-1780 studied in cultural, social and ethical contexts. Usually includes works by Etherege, Wycherley, Behn, Dryden, Otway, Vanbrugh, Farquhar, Congreve, Lillo, Gay, Goldsmith and Sheridan.

ENG 580 Literary Postmodernism 3.
Prerequisite: Graduate standing.
Post-1945 literary theory in relationship with representative avant-garde writers. Theoretical and argumentative essays in such areas as chaos theory, deconstruction, feminism and the limits of fiction. Fiction readings by Calvino, Pynchon, Barth, Cortazar and others.

R: Graduate Students Only.
Application of visual theory to rhetoric and of rhetorical theory to visual forms of communication. Discussion and analysis may include advertising, photography, news and informational media, political communication, instructional material, scientific visualization, visual arts, public commemorative artifacts, internet and other digital media.

ENG 582 Studies in Literature 3.
Prerequisite: Graduate standing.
Variation in content. Selected problems and issues in literature.

ENG 583 Studies in Composition and Rhetoric 3.
Prerequisite: Graduate standing.
Variation in content. Selected problems and issues in composition and rhetoric.

ENG 584 Studies in Linguistics 3.
Prerequisite: Graduate standing.
Variation in content. Selected problems and issues in linguistics.

ENG 585 Studies in Film 3.
Prerequisite: Graduate standing.
Variation in content. Selected problems and issues in film.

ENG 586 Studies in Theory 3.
Prerequisite: Graduate standing.
Variation in content. Selected problems and issues in theory.

ENG 587 Interdisciplinary Studies in English 3.
Content varies. Selected topics and issues that cross disciplinary boundaries in English Studies. May be repeated for credit with different topics. Graduate standing is required.

ENG 588 Fiction Writing Workshop 3.
Prerequisite: ENG 488 or ENG 489.
Advanced work in techniques of writing fiction for students with substantial experience in writing. Workshop sessions with students commenting on each other's work.

ENG 589 Poetry Writing Workshop 3.
Prerequisite: ENG 488 or ENG 489.
Advanced work in techniques of writing poetry for students with substantial experience in writing. Workshop sessions with students commenting on each other's work.

ENG 590 Studies in Creative Writing 3.
Prerequisite: ENG 588 or 589.
Techniques special to a particular kind of writing within the traditional genres of prose, poetry or drama, such as "Speculative Fiction" or "The Long Poem or Poetic Sequence." Various subjects.

ENG 591 Studies in National Cinemas 3.
Aesthetic developments and historical importance of national cinema traditions in specific cultural contexts. Focus on the relations between cinema and linguistic, literary and artistic developments within a national setting or in regional or international contexts. Topics, which change each year, may include Italian Neorealism, French New Wave, and British Social Realism.

ENG 592 Special Topics in Film Styles and Genres 3.
Critical approaches to focused film topics involving film genres, directorial styles, or trends within a national cinema. Topics will vary from semester to semester. Students cannot obtain credit for both ENG 492 and ENG 592.

ENG 610 Special Topics English 1-6.

ENG 624 Teaching College Composition 3.
Prerequisite: ENG 511 and mentored assistantship in ENG 101.
Preparation for teaching college composition. Introduction to pedagogical principles and practices. Practice in setting course goals, designing writing assignments to meet those goals, developing instructional activities to support assignments, and evaluating student writing. The course is scheduled as a 5-day workshop before classes begin, followed by weekly meetings and mentoring during the fall semester.
ENG 626 Advanced Writing for Empirical Research 3.
Prerequisite: Graduate standing.
A seminar and workshop for graduate students in empirical research fields working on grant proposals, theses and dissertations, papers for professional journals, conference proposals, and other significant research texts. Intensive practice and feedback on writing, grounded in an introduction to theory and research on writing processes, products, and contexts. Requirements include three major writing projects designed by the student, review and discussion of drafts written by other workshop members, analysis and presentation of discipline-specific communication patterns and practices.

ENG 636 Directed Readings 1-6.
Prerequisite: Graduate standing.
Intensive study of a specific topic from various specializations of the English faculty. Negotiation between the student and the director for variable credit and approved by Director of Graduate Studies.

ENG 668 Bibliography and Methodology 1-3.
Intensive study of the bibliography and methodology of literary research. Required of all graduate students in English.

ENG 675 Projects in Technical Communication 3.
Prerequisite: ENG 518.
Capstone course for M.S. in Technical Communication. Students engage in major semester-long individual project under direction of instructor.

ENG 676 Master's Project in English 3.
Individual capstone project in English Studies. Topic and mode of study determined in consultation with faculty project advisor. For students in the final semester of the English MA program.

ENG 685 Master's Supervised Teaching 1-3.
Prerequisite: Master's student.
Teaching experience under the mentorship of faculty who assist the student in planning for the teaching assignment, observe and provide feedback to the student during the teaching assignment, and evaluate the student upon completion of the assignment.

ENG 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

ENG 690 Master's Examination 1-9.
Prerequisite: Master's student.
For students in non thesis master's programs who have completed all other requirements of the degree except preparing for and taking the final master's exam.

ENG 693 Master's Supervised Research 1-9.
Prerequisite: Master's student.
Instruction in research and research under the mentorship of a member of the Graduate Faculty.

Prerequisite: Master's student.
Thesis research.

ENG 696 Summer Thesis Research 1.
Prerequisite: Master's student.
For graduate students whose programs of work specify no formal course work during a summer session and who will be devoting full time to thesis research.

Prerequisite: Master's student.
For students who have completed all credit hour requirements and full-time enrollment for the master's degree and are writing and defending their theses.

ENG 722 Linguistics and Literacy 3.
Prerequisite: ENG 525.
Focus on two-way relationship between linguistic theory and literacy. Metalinguistic awareness and acquisition of literacy, orthography and phonology, oral vs. written language, oral vs. literate cultures, and metalinguistic assumptions in linguistic theory.

ENG 727 Discourse Analysis 3.
Overview of major issues, theories, and research methods in contemporary discourse analysis. It explores how language as a form of social practice regulates social actions, relations and identities; how ways of speaking construct and are constructed by social order, cultural practice, and individual agency. Texts/discourses are analyzed to examine how speakers create meaning through formal linguistic choices; what the micro-organization of talk reveals about social order; how critical understanding of discourse helps to interpret complex processes of social life.

ENG 729 Language Variation and Social Theory 3.
Prerequisite: ENG 523.
Although the field of sociolinguistic variation has developed its own body of theory, its central questions continue to call for engagement with theory in related socio-cultural disciplines. This course examines sociolinguists’ explicit and implicit incorporation of social theory into the analysis of language variation; it also explores the many ways in which social theory could yet enrich, and be enriched by, empirical sociolinguistic analysis.

ENG 730 Ethnolinguistic Variation 3.
Prerequisite: ENG 525.
This course examines the nature of ethnolinguistic variation in the English-speaking diaspora, with particular attention to the ethnic varieties in the United States, including African American English, Hispanic English, and Native American English.

ENG 731 Applied Sociolinguistics 3.
Prerequisite: ENG 525.
This course will introduce the main research concentrations and methods in Applied Sociolinguistics, including first language acquisition and teaching, second language learning, bilingualism, and clinical assessment and treatment of communication disorders. Students will be introduced to the basic foundations of language variation from linguistic and sociocultural/historical perspectives and learn how sociolinguistic variation affects clinical and educational processes and organizations.

ENG 798 Special Topics in English Studies 3.
Intensive exploration of specialized or emerging topics in an area of language, literature, rhetoric, film, or other aspect of English studies. Emphasis on student research and writing. May be used to test and develop new courses. May be repeated for credit.

ENG 810 Directed Readings in English Studies 1-6.
Intensive study of a specific topic from various specializations of the English faculty. Negotiation between the student and the director for the variable credit and approved by the director of Graduate Studies. May be repeated for credit.

ENG 896 Summer Dissertation Res 1.
Department of Foreign Language and Literatures

Opportunities

The expansion of international relations makes the knowledge of foreign languages a critical need for today's professional. The student of foreign languages is not limited to teaching, translating or interpreting. There are careers in politics, diplomacy, commerce, business, agriculture, science, and research in which a thorough knowledge of foreign languages and cultures is crucial for success. The demand for multilingual personnel extends to all fields of human enterprise and will continue to grow in the coming years.

Bachelor of Arts in French, German Studies or Spanish

All the general requirements for Bachelor of Arts degree must be met. Degree designations are B.A. in French Language and Literatures, B.A. in Spanish Language and Literature, B.A. in German Studies, B.A. in French Language and Literature with Teacher Education option, and B.A. in Spanish Language and Literature with Teacher Education Option.

Outstanding students may become members of the Pi Delta Phi, French Honor Society, Sigma Delta Pi, National Hispanic Honor Society, or of Delta Phi Alpha, German Honor Society.

Major in French or Spanish with Teacher Education Option

In collaboration with the College of Education and the Department of Curriculum and Instruction, the Department of Foreign Languages and Literatures offers a program leading to a French or Spanish teaching license in North Carolina, grades K-12.

Programs Abroad

Summer study programs are offered in Austria, France, Italy, Spain, and Peru.

Minors in Foreign Language, Literatures, and Cultures

Minor programs in the Department of Foreign Languages and Literatures include courses in language, literature, and civilization. The minor program requires 15 hours of study in Chinese Studies, Classical Greek, Classical Studies, French, German, Hindi-Urdu, Italian, Japanese, Japanese Studies, Russian, or Spanish.

Undergraduate students majoring in any area of study at NC State are eligible to minor in a foreign language. Students may not, however, major and minor in the same language.

ESL at NC State

The English as a Second Language program serves the academic and professional language needs of international university students. Courses are designed to help both undergraduate and graduate students perfect their language skills. The English Placement Test may be required for new students. Check with the ESL section for details. An ESL licensure program is also available.

FL - Foreign Languages Courses

FL 216 Art and Society in France 3
An overview of the visual arts in France, defined broadly, and their relationship to French society and culture; painting, architecture, photography, cinema, book production, gardens, fashion, food, television, popular culture, and mass media, including the Internet. The principal themes of the course are how France's cultural heritage is embodied in its rich tradition of visual expression and how artists' visual expressions have either served to represent, glorify, or critique the nation.

FL 219 Studies in Great Works of Non-Western Literature 3
Readings, in English translation, or non-Western literary masterpieces from the beginnings of literacy in the Middle East, Asia, and Africa to the modern period, including excerpts from texts such as the Upanishads, the Ramayana, the Sundiata, Gilgamesh, A Thousand and One Nights, and the Quran and such authors as Confucius, Oe Kenzaburo, Omar Khayyam, Rumi, and Amos Oz.

FL 220 Studies in Great Works of Western Literature 3
Readings, in English translation, of Western literary masterpieces from the beginnings of literacy in the Middle East and Europe towards the present, including such authors as Homer, Sophocles, Virgil, Ovid, Augustine, Danta, Machiavelli, Shakespeare, Cervantes, Moliere, Voltaire, Goethe, Austen, Flaubert, Dickinson, Tolstoy, Kafka, and Woolf.Credit will not be given for both ENG/FL 220 and either ENG/FL 221 or ENG/FL 222.

FL 221 Literature of the Western World I 3
Readings from English translations of Biblical, Classical, Medieval, and Early Renaissance literature, including works by such authors as Homer, Plato, Virgil, Ovid, St. Paul, St. Augustine, Marie de France, and Dante.

FL 222 Literature of the Western World II 3
Readings from English translations of Renaissance, Neo-Classical, Romantic, and Early Modern literature, emphasizing the cultures of continental Europe from the Renaissance to 1900, and including such authors as Petrarch, Erasmus, Rabelais, Machiavelli, Shakespeare, Moliere, Voltaire, Rousseau, Goethe, Flaubert, Tolstoy.

FL 223 Contemporary World Literature I 3
Prerequisite: ENG 112.
Twentieth-century literature of some of the following cultures: Russian, Eastern European, Western European, Latin American, Canadian, Australian.

FL 224 Contemporary World Literature II 3
Prerequisite: ENG 112.
Twentieth-century literature of some of the following cultures: Asian, Arabian, African, Caribbean, Native-American.

FL 246 Literature of the Holocaust 3
Fictional and nonfictional versions of the Holocaust, focusing on themes of survival, justice, theology, and the limits of human endurance.

FL 295 Special Topics in Foreign Languages and/or Literatures 1-6.
A special projects course on topics to be determined as needed in the departmental program.

FL 298 Independent Study in Foreign Language or Literature 1-6.
Individualized study in a foreign language or literature. Topic, mode of study and credit hours to be determined in consultation with the faculty member supervising work. Individualized/Independent Study and Research courses require a "Course Agreement for Students Enrolled in Non-Standard Courses" be completed by the student and faculty member prior to registration by the department.

NC State University 323
FL 299 Field Experience for 21st Century Teaching 1.
Prerequisite: ECI 204 and ED 204.
This course has a required fieldwork component in local K-12 schools, and students are responsible for their own transportation to and from the schools. Students are required to purchase internship liability insurance to participate in this course. Contact University Insurance & Risk Management for details on acquiring the insurance and the current charge. This course is restricted to Foreign Language Education majors.

FL 392 Major World Author 3.
Intensive study in English, of the writings of one (or two) author(s) from outside the English and American traditions. Sample subjects: Homer, Virgil and Ovid, Lady Murasaki, Marie de France and Christine de Pizan, Dante, Cervantes, Goethe, Balzac and Flaubert, Kafka, Proust, Lessing and Gordiner, Borges and Marquez, Neruda, Achebe, Soyinka, Calvino, Walcott and Naipaul. Topics will vary from semester to semester. May be repeated for credit with new topic.

FL 393 Studies in Literary Genre 3.
Concentrated treatment of one literary genre, such as the epic, the lyric, the drama, satire, romance, autobiography, the essay, the novel, or the short story. Treatment of materials from several national or ethnic cultures and several periods. All readings in English. Course may be taken three times for credit. Course may be taken 3 times in different genres.

FL 394 Studies in World Literature 3.
Prerequisite: ENG 111 and 112 or 113.
Study of a subject in world literature: for example, African literature, Asian literature, Hispanic literature, East European literature, Comedy, the Epic, the Lyric, Autobiography, the Faust legend, or Metamorphosis. Subjects vary according to availability of faculty. Readings in English translation.

FL 395 Study Abroad Programs 1-3.
Specific category of courses involving language and/or culture taught in foreign countries through the Department Study Abroad Program.

FL 406 Modernism 3.
International Modernist movement in literature, from its nineteenth-century origins to its culmination in the early twentieth century. Definitions of modernity, as embodied in a variety of genres. Placement of Modernist texts within a variety of cultures that produced them.

FL 407 Postmodernism 3.
Literary expressions of Postmodernism, from its origins in the Modernist movement through its culmination in the later decades of the twentieth century. Definitions of post modernity, as embodied in a variety of genres. Placement of Postmodernist texts within a variety of cultures that have produced them.

FL 424 Linguistics for ESL Professionals 3.
Prerequisite: Admission to ESL teacher licensure candidacy, Corequisite: NC teacher licensure in any area.
Study of the diachronic nature of language and the phonological, morphological, syntactic, and semantic features of English in relation to other world language groups. Application of linguistic principles to the ESL classroom. Analysis of English speech and writing patterns of non-native speakers. Examination of the ways children, adolescents, and adults learn a second language.

FL 425 Methods and Materials in Teaching English as a Second Language 3.
Prerequisite: Admission to Teacher Education Candidacy or admission to ESL Licensure Program.
Methodologies and current approaches to teaching English as a Second Language. Techniques and strategies for teaching reading, writing, listening, speaking and culture. Selection, adaptation, and creation of instructional materials for various levels of proficiency and teaching situations. Evaluation and assessment of written and oral language proficiency through standardized and non-standardized assessment tools.

FL 439 Perspectives on English as a New Language 3.
Prerequisite: Admission to ESL Teacher Licensure, Corequisite: NC teaching license in any area.
Examination of the complexity of multiculturalism in American society and the challenges faced by immigrant families in adapting to U.S. institutions. Emphasis on understanding historical, legal, cultural and pedagogical issues with respect to learning English as a new language (ENL).

FL 440 Internship in Teaching English as a Second Language 3.
Prerequisite: Admission to ESL Licensure Program, Corequisite: Teacher Licensure in any primary area.
Skills and techniques required in teaching ESL in a public school setting. 15 hours of classroom observation and 30 hours in direct instruction. Demonstration of competencies essential for teaching ESL. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

FL 492 Senior Seminar in Foreign Languages & Literatures 3.
Prerequisite: FLJ 301 or FLC 301 or FLN 301 or FLA 301.
Senior seminar for foreign language majors with concentration in non-European / less-commonly taught languages. Focus on recent trends in scholarship, career guidance, senior research projects or equivalent. Conducted in English. Students will be required to provide a detailed summary of their project in the language of their concentration.

FL 495 Special Topics in Foreign Languages and Literatures 1-6.
A concentrated study of a special period, author or genre to be determined as needed in the departmental program.

FL 497 Senior Seminar in World Literature 3.
Prerequisite: Junior standing or Senior standing.
Rotating topics in world literature, including treatment of materials from more than one culture and including consideration of the subject's theoretical or methodological framework. Readings in English (original languages encouraged but not required).

FL 498 Independent Study in Foreign Language or Literature 1-6.
Individualized study of a foreign language or literature. Topic, mode of study, and credit hours to be determined in consultation with the faculty member supervising work. Individualized/Independent Study and Research courses require a "Course Agreement for Students Enrolled in Non-Standard Courses" be completed by the student and faculty member prior to registration by the department.
FL 505 Issues and Trends in Foreign Language Education: Theory & Practice 3.
Prerequisite: Graduate standing.
An exploration of theory and practice issues related to foreign language teaching. Inquiry into proficiency-oriented instruction, innovative methodological approaches, the National Standards and learning scenarios, integrating culture, options for testing and assessment, content-based instruction, the role of grammar in second language acquisition, teaching foreign language students with learning disabilities, and Foreign Language in the Elementary School (FLES) in North Carolina. Students will examine case studies related to these topics and engage in a classroom action research project.

FL 506 Instructional Technology in Foreign Language Education: Addressing the National 3.
Prerequisite: Graduate standing.
Hands-on experience in appropriately selecting and applying a number of instructional technologies to foreign language teaching and learning in relation to the current National Standards. Analysis and use of effective technology tools including hardware, software, and courseware. Emphasis will be on the application of Technology-Enhanced Language Learning (TELL) as it integrates the National Standards' goals of Communication, Cultures, Connections, Comparisons, and Communities.

FL 507 College Teaching of Foreign Languages 3.
Prerequisite: Graduate status.
Principles of second language acquisition and foreign language pedagogy. Examination of problematic concepts in teaching Spanish and French. Thorough treatment of instructional technology appropriate to foreign language teaching and learning. Regular observation of practicing instructors and micro-teaching in college-level Spanish or French classes. Credit not given for both FL 507 and either FL/ECI 505 or FL/ECI 506. Course taught in English. Required for new FLL Teaching Assistants.

FL 508 Second Language Acquisition Research: Interlanguage Development 3.
Prerequisite: Graduate Standing or Permission of the Instructor.
This course introduces students to the objectives, methods, and findings of research investigating how classroom learners acquire French and Spanish as a second language. It examines specific features of French and Spanish interlanguage including: grammatical gender, copular ser/estar and idiomatic uses of etre/avoir, pronominalization, verbal systems, and longitudinal/cross-sections studies of interlanguage development. Course content bridges the gap between second language acquisition research, foreign language teaching methodology courses, and curriculum implementation. Graduate standing or consent of instructor required.

FL 539 Seminar in World Literature 3.
Rotating topics in world literature, including treatment of the subject's theoretical or methodological framework. Possible subjects: colonization and literature; orality and literature; the Renaissance; the Enlightenment; translation; comparison of North and South American literatures; African literary traditions; post-modernism and gender. Readings in English (original languages encouraged but not required).

FL 541 Literary and Cultural Theory 3.
A survey of literary theory in the 20th century from New Criticism to postmodernism. Examines the virtues and pitfalls of these approaches to the study of culture and literature. A course on issues, concepts, theorists and the sociohistorical and political context in which the theorists are writing. Taught in English. No formal pre-requisites. However, students who have not had advanced literature will be disadvantaged.

FLA - Foreign Languages and Literatures - Arabic Courses

FLA 101 Beginning Arabic 101 3.
Beginning Arabic is for students who have had no prior experience with the language. It is the first in a series of courses which develop reading and writing skills in Modern Standard Arabic with active speaking and listening skills in both formal Arabic and the Egyptian dialect. Authentic materials from the Arabic media will be used in addition to text-related video and audio materials. An introduction to Arab culture will be integrated throughout the semester. This course is designed for true beginners who have had no previous experience with the Arabic language, either written or spoken. Credit will be allowed for either FLA 101 or FLA 111, but not for both.

FLA 102 Beginning Arabic 102 3.
Prerequisite: FLA 101 or 111.
This course is the second in a series which develops reading and writing skills in Modern Standard Arabic with active speaking and listening skills in both formal Arabic and the Egyptian dialect. Authentic materials from the Arabic media will be used in addition to text-related video and audio materials. An introduction to Arab culture will be integrated throughout the semester. Credit will be allowed for either FLA 102 or FLA 112, but not for both.

FLA 103 Beginning Arabic 101 Conversation 1.
Corequisite: FLA 101.
Supplements conversational practice for FLA 101 to help students develop oral proficiency at the beginning level. Students will practice using their speaking skills in a variety of individual and group activities to build competency in basic social situations.

FLA 104 Beginning Arabic 102 Conversation 1.
Prerequisite: FLA 103; Corequisite: FLA 102.
Supplements conversational practice for FLA 102 to help students develop oral proficiency at the advanced beginning level. Students will practice using their speaking skills in a variety of individual and group activities to build competency in basic social situations.

FLA 201 Intermediate Arabic 1 3.
Prerequisite: FLA 102 or FLA 112.
Intermediate Arabic I is the third in a series of courses which develop reading and writing skills in Modern Standard Arabic with active speaking and listening skills in both formal Arabic and the Egyptian dialect. An increased emphasis is placed on the acquisition of vocabulary and grammatical tools necessary to undertake more in-depth readings and discussions of news articles from the Arab media. Authentic materials from the Arab media will be used in addition to text-related video and audio materials.

FLA 202 Intermediate Arabic II 3.
Prerequisite: FLA 201.
Intermediate Arabic II is the fourth in a series of courses which develop reading and writing skills in Modern Standard Arabic with active speaking and listening skills in both formal Arabic and the Egyptian dialect. A continued emphasis is placed on the acquisition of vocabulary and grammatical tools necessary to undertake more in-depth readings and discussions of news articles from the Arab media. Authentic materials from the Arab media will be used in addition to text-related video and audiomaterials.
FLA 203 Intermediate Arabic Conversation I 1.
Prerequisite: FLA 102.
Supplements conversational practice for FLA level 201 or higher. This course helps students develop oral proficiency at the intermediate level. Students will practice using their speaking skills in a variety of individual and group activities to build competency in various social situations.

FLA 204 Intermediate Arabic Conversation II 1.
Prerequisite: FLA 201.
Supplements conversational practice for FLA level 202 or higher. This course helps students develop oral proficiency at the intermediate high level. Students will practice using their speaking skills in a variety of individual and group activities to build competency in various social situations.

FLA 301 Advanced Intermediate Arabic I 3.
Advanced Intermediate Arabic I is the fifth in a series of courses which develop whole language skills in Modern Standard Arabic with active speaking and listening skills in the Egyptian dialect. Upon completion of this course the student will have the tools necessary to understand and produce all the basic structures of Modern Standard Arabic. Arabic film and media will be used in class. The student will also be introduced to selected short stories from modern Arabic literature.

FLA 318 Egyptian Culture through Film 3.
This course offers a survey of cinema in modern Egypt using film as a medium to learn about the cultural and social structures in Egypt. The course incorporates weekly screenings of feature films representing different styles and periods. Students will be required to read relevant material, take essay exam questions, write film reviews, a final paper, and give a presentation of their final paper. The course is taught in English.

FLA 330 Media Arabic 3.
Prerequisite: FLA 202.
An introduction to the language of print and Internet news media of the Arab world, using authentic materials from Arabic newspapers, Internet news sites, and magazines. This course provides students with the tools necessary to build a core media vocabulary base, comprehend front page news stories, read critically, and detect bias, in selected news content, and develop listening skills necessary for understanding oral news reports.

FLA 440 Modern Arabic Short Story 3.
Prerequisite: FLA 301 or FLA 330.
An advanced language skills course which introduces students to contemporary Arabic literature through selected readings of modern Arabic short stories. Students will develop an understanding of this rich literary genre as a reflection of concurrent social structures, political landscapes, and cultural traditions in Middle Eastern societies. Emphasis will also be placed on recognizing advanced grammatical structures in Modern Standard Arabic with attention given to the increased use of vernacular expression in modern literary works. Assigned readings, writing assignments, and class discussions will be in Arabic.

FLC - Foreign Language - Chinese Courses

FLC 101 Elementary Chinese I 3.
Corequisite: FLC 103.

FLC 102 Elementary Chinese II 3.
Corequisite: FLC 104.
Continuation of basic skills. Emphasis on speaking and listening with some reading, writing and Chinese culture.

FLC 103 Elementary Chinese I Conversation 1.
Corequisite: FLC 101.
Supplements conversational practice and handwriting skills for FLC 101. Students will gain practice at using their speaking skills in a variety of basic social situations.

FLC 104 Elementary Chinese II Conversation 1.
Prerequisite: FLC 101 and FLC 103; Corequisite: FLC 102.
Supplements conversational practice and handwriting skills for FLC 102. Students are encouraged to use their speaking skills in a variety of typical social situations. Special attention is given to naturalness of speech.

FLC 201 Intermediate Chinese I 3.
Corequisite: FLC 203.
Continuation of basic skills. Greater emphasis on reading, writing and Chinese cultural traditions.

FLC 202 Intermediate Chinese II 3.
Corequisite: FLC 204.
Continuation of basic skills. Focus on reading, writing, Chinese cultural traditions and patterns of behavior.

Prerequisite: FLC 102 and FLC 104; Corequisite: FLC 201.
Supplements conversational practice and handwriting skills for FLC 201. Students are encouraged to use their speaking skills in a variety of situations. Special attention is given to naturalness of speech and intonation.

FLC 204 Intermediate Chinese II Conversation 1.
Prerequisite: FLC 201 and FLC 203; Corequisite: FLC 202.
Supplements conversational practice and handwriting skills for FLC 202. Students are encouraged to use their speaking skills in a variety of situations. Special attention is given to naturalness of speech and intonation.

FLC 301 Intermediate Chinese III 3.
Prerequisite: FLC 202.
Last of the foundation courses in Chinese. Continued practice in speaking and understanding Chinese with new emphasis on writing and on the reading of cultural and literary texts.

FLC 302 Intermediate Chinese IV 3.
Prerequisite: FLC 301.
Continued practice in speaking and understanding Chinese with greater emphasis on reading and writing. Continued study of cultural and literary texts.

FLC 351 Modern Chinese Popular Culture 3.
Introduction to basic aspects of cultural practices and production in Chinese society, including consumer culture, education, work life, family relationships, everyday religious practices, aesthetic traditions, national identity, and gender. Reading and analysis of representative works of modern Chinese visual and print culture including literature, film, advertising, digital media and consumer products with attention to cultural analysis as well as to historical and cultural background.
FLE 401 Advanced Chinese: Readings in Literature and Social Sciences 3.
Prerequisite: FLC 302.
Continued training in the foundations of Chinese language, with emphasis on nuances of written Chinese. This course introduces advanced Chinese language students to modern literature and social science texts. Students read and analyze some of the finest works of 20th c. Chinese intellectuals, authors and social critics. The class explores a wide range of prose forms, styles, and subject matter. Emphasis will be placed on developing advanced-level proficiency in reading & writing, and on literary analysis & discussion of cultural & historical contexts.

FLE - Foreign Language - English Courses

FLE 100 Introduction to Academic Writing 4.
For non-native speakers of English. Intensive introduction to critical writing and reading in academic contexts. Exploration of writing processes and academic literacy skills: interpreting assignments; comprehending, analyzing, and evaluating college-level texts; inventing, drafting, and revising; seeking, providing, and responding to constructive feedback; collaborating effectively under varied learning models. Extensive writing practice and individualized coaching. Attention to grammar and conventions of standard written English. Intended as preparation for FLE 101. Only for non-native speakers of English. Requires C- or better. Credit for FLE 100 is not allowed if student has prior credit for FLE 101.

FLE 101 Academic Writing and Research 4.
Prerequisite: Grade of C- or better in FLE 100 or placement via ESL testing guidelines.
For non-native speakers of English intensive instruction in academic writing and research. Basic principles of rhetoric and strategies for academic inquiry and argument. Instruction and practice in critical reading, including the generative and responsible use of print and electronic sources for academic research, adapted for non-native speakers. Exploration of literate practices across a range of academic domains, laying the foundation for further writing development in college. Continued attention to grammar and conventions of standard written English. Satisfies freshman English requirements. Successful completion of FLE 101 requires a C- or better. Credit for FLE 101 is not allowed if the student has already fulfilled the first-year writing requirement.

FLE 201 Oral Communication in English for International Students 3.
Oral communication in English; active and interactive speaking skills, listening comprehension and reading. Specific tasks in spoken English such as communicating information, making inquiries, requests and complaints. Individual and group work in the form of oral reports, role play, presentations, etc. Listening to lectures and note taking skills.

Prerequisite: FLF 102 or FLF 110.
Third of four consecutive courses to develop skills of speaking, listening, reading and writing. Readings in the literature, culture, and civilization of France and the Francophone world.

FLE 402 Advanced Written Communication in English for International Students 3.
Written communication skills for graduate students; integrated writing tasks focusing on writing, reading, grammar and comprehension, specifically geared to the needs of research students and teaching assistants. Reading, critical analysis and synthesis of written material such as journal articles, research reports, etc.

FLF - Foreign Language - French Courses

FLF 101 Elementary French I 3.
First in a four-course sequence to develop language skills. Oral and written practice in classroom and language laboratory. Readings in French culture and civilization.

FLF 102 Elementary French II 3.
Prerequisite: FLF 101.
Continuation of FLF 101 with intensive practice in spoken French. Readings in French culture and civilization.

FLF 110 Accelerated Elementary French 3.
Prerequisite: Placement into this course determined by The Department of Foreign Languages and Literatures Placement Test: http://sasw.chass.ncsu.edu/fl/place.htm.
Content of FLF 101 and 102. At an accelerated pace, for students with previous study of French (1-2 years in high school) who placed into the course based on results of the NC State French Placement Test. Includes a refresher of 101 material before covering 102 material. Development of skills in listening, speaking, reading, writing and understanding Francophone cultures. Significant amount of work outside of class. Fulfills the FL 102 requirement.

FLF 201 Intermediate French I 3.
Prerequisite: FLF 102 or FLF 110.
Third of four consecutive courses to develop skills of speaking, listening, reading and writing. Readings in the literature, culture, and civilization of France and the Francophone world.

Prerequisite: FLF 201.
Last of four sequential language courses. Increased emphasis on reading and writing. Readings in the literature, culture, and civilization of France and the Francophone world.

FLF 212 French: Language, Culture, and Technology 3.
Prerequisite: FLF 102 or FLF 110.
A study of the language structures and vocabulary necessary for an intermediate level of communication in French together with cultural and technological issues of our global society, in the context of the French-speaking world and the European Union. Students are responsible for providing their own transportation for required field trip. Fulfills the FLF 201 requirement.

FLF 301 Survey of French Literature from the Middle Ages through the Enlightenment 3.
Prerequisite: An advanced language skills course (FLF 308, 310, 315) or FLF 202 with permission of instructor.
Reading and discussion of representative works with attention to literary analysis as well as to historical and cultural background.

FLF 302 Survey of French Literature from Romanticism to the Contemporary Period 3.
Prerequisite: An advanced language skills course (FLF 308, 310, 315) or FLF 202 with Consent of Instructor.
Reading and discussion of representative works with attention to literary analysis as well as to historical and cultural background.
FLF 306 French Business Communication 3.
Prerequisite: FLF 202.
Study of major forms of written and oral business communication used in the French-speaking world. Extensive work with current, culturally authentic materials. Emphasis on development of practical communicative skills, with special attention to cross-cultural comparisons of French and American business practices and modes of communication.

FLF 307 Business French 3.
Prerequisite: FLF 202.
Business French vocabulary and concepts with emphasis on cultural differences and their importance in the new global village business world.

FLF 308 Advanced Conversation: Contemporary French Cultures 3.
Prerequisite: FLF 202.
Conversation and reading emphasizing idiomatic and practical usage with attention to contemporary civilization and cultures of the French speaking world. Emphasis on social structures, political features, events, world views and modes of communication.

FLF 309 French Phonetics and Pronunciation 3.
Prerequisite: FLF 202.
A study of the oral production of standard French with the aim of improving pronunciation, fluency and skill in communication. Extensive oral practice through conversation and phonetics.

FLF 310 Advanced Written Communication 3.
Prerequisite: FLF 202.
An in-depth study of French written communication at the advanced level, including the more advanced aspects of the French grammar with extensive writing practice serving a variety of practical communicative needs.

FLF 315 French Civilization and Culture 3.
Prerequisite: FLF 202.
French civilization and culture from its origins to the modern period. Reading and discussion of the social, cultural, economic and political structures of France, including its geography, history, music, art and national consciousness.

FLF 318 The Heritage of French Cinema 3.
Prerequisite: 3 hrs. in French at 300 level.
Survey of the major contributions of French cinema from its origins to the present. Attention to film as an artistic medium and to the cinematic representation of French history and culture. Reading, discussion, and viewing of films including Un Chien Andalou, La Passion de Jeanne d'Arc, Le Retour de Martin Guerre, La Marseillaise, Les 400 Coups, and Diva.

FLF 321 French Cultures and contexts 3.
Prerequisite: FLF 202.
An approach to important periods in the history of French culture through the reading of texts by several important writers. Films, slides, painting, music, and the Internet will be included to put the readings in a cultural context.

FLF 401 French Graduate Reading 3.
Basic French grammar, with special attention to characteristics of formal expository style, and illustrative readings. Study of extracts from scholarly publications in students' areas of research. Prepares students to take the graduate foreign language certification exam.

FLF 411 Approaches to French Translation 3.
Prerequisite: at least two French (FLF) 300 level courses.
Intensive practice of translating to and from French a variety of texts selected from the areas of business, law, technology and science, as well as literature and the arts. Focus on Documentation, Research and Translation techniques and ethics.

FLF 414 Studies in French Prose 3.
Prerequisite: 3 hrs in French at 300 level with 3 hrs in literature.
Major developments in the French essay, letter, novel and other prose forms from the Renaissance to 1900. Readings from such authors as Montaigne, Sevigne, Lafayette, Rousseau, Sand, Balzac, Stendhal, Flaubert.

FLF 425 Literature, Cinema and Culture of the Francophone World 3.
Prerequisite: Graduate standing.
A study of a number of literary texts and films from across the spectrum of the Francophone world - West Africa, the Maghreb, and the Caribbean. Through these texts and films we will study the diversity of the French colonial empire as well as the different historical, political and cultural effects of colonialism and postcolonialism. Films, videos, internet sites will be used. Course taught in French.

FLF 492 Seminar in French Studies 3.
Prerequisite: Junior standing and 6 hrs in French literature.
A small-group study of a topic in literature resulting in either a substantial essay or series of essays by each student. Topics vary each semester.

FLF 502 Variety in Language: French 3.
Prerequisite: Graduate standing.

FLF 511 Approaches to French Translation 3.
Prerequisite: Graduate standing.
Intensive practice of translating to and from French a variety of texts selected from the areas of business, law, technology and science, as well as literature and the arts. Focus on Documentation, Research and Translation techniques and ethics. Course taught in French. Credit not allowed for both 411 & 511.

FLF 516 Art and Society in France 3.
An overview of the visual arts in France, defined broadly, and their relationship to French society and culture: painting, architecture, photography, cinema, book production, gardens, fashion, cuisine, television, popular culture, and mass media will be studied. Course taught in French.

FLF 521 French Cultures and Contexts 3.
Prerequisite: Graduate status required for FLF 521.
Study of important periods in the history of French culture through the reading of key literary texts. Films, slides, painting, music, and the Internet will be included to put the readings in a cultural context. Topics vary. Students cannot get credit for both 421/521.
FLF 525 Literature, Cinema and Culture of the Francophone World 3. 
Prerequisite: Graduate standing.
A study of a number of literary texts and films from across the spectrum of the Francophone world - West Africa, the Maghreb, and the Caribbean. Through these texts and films we will study the diversity of the French colonial empire as well as the different historical, political and cultural effects of colonialism and postcolonialism. Films, videos, internet sites will be used. Course taught in French.

FLG 202 Intermediate German II 3. 
Prerequisite: FLG 201.
Last of four consecutive courses in German. Continued conversational practice to develop proficiency in speaking and listening. Development of advanced writing skills by refining grammatical structures and style through assignments, and of advanced reading skills through the use of cultural and literary texts from the German-speaking countries.

FLG 212 German Language, Culture, Science, and Technology 3. 
Prerequisite: FLG 201.
Discussion of German, Austrian and Swiss scientific discoveries and technological inventions as well as their impact on global society, such as aspirin, x-rays, printing technology, diesel engine, computer, microchip, television, mp3 format, genetics, and environmental technologies. Also a fourth semester German course, with intensive practice to develop proficiency in intermediate speaking and listening, reading and writing, using materials from scientific and technological disciplines.

FLG 301 Advanced German 3. 
Prerequisite: FLG 202 or FLG 212 or a score of 688 on the NC State placement test.
Review and consolidation of aspects of German grammar and development of writing skills. Listening and speaking practice through group activities and oral reports. Class discussions on topics from the cultures of Germany, Austria, and Switzerland, such as film, history, and the fine arts. FLG 301 and 302 can be taken in random order.

FLG 302 German Oral and Written Expression 3. 
Prerequisite: FLG 202 or FLG 212 or a score of 688 on the NC State placement test.
Review and practice of spoken and written German using authentic texts and materials from contemporary Germany (short stories, films, and online media). Review of German grammar through conversation, writing, and vocabulary building exercises. Oral reports by students. FLG 301 and 302 can be taken in random order.

FLG 307 Business German 3. 
Prerequisite: FLG 202 or FLG 212 or placement at 300 level through the NC State placement exam.
Business German vocabulary and terminology. Readings and discussions on current business topics. Special consideration to intercultural communication relative to international business operations.

FLG 311 Introduction to German Translation 3. 
Prerequisite: FLG 202 or FLG 212 or placement at 300 level through the NC State placement exam.
Introduction to theory, methods, and techniques in translation applied to materials of various fields and professions. Emphasis on written translation.

FLG 315 Germanic Civilization and Culture 3. 
Prerequisite: FLG 202 or FLG 212 or placement at 300 level through the NC State placement exam.
Culture and civilization of the German-speaking countries. Analysis of the social, economic and political structures of Germany, Austria, and Switzerland. Lectures, reports, conversation. Taught in German.

FLG 318 New German Cinema and Beyond 3. 
Prerequisite: FLG 202 or FLG 212.
Survey of the major contributions to German Cinema from the 1960’s to the present day. Attention to film as an artistic medium and to the cinematic representation of German history and culture. Topics covered include Nazism, German Terrorism, former East Germany, debates on the position of minorities in Germany, and German Jewish relations. Taught in German.
FLG 320 Introduction to German Literature 3.
Prerequisite: FLG 202 or FLG 212 or placement at 300 level through the NC State placement exam.
An introduction to reading and analyzing German, Austrian, and Swiss literary texts in their cultural and historical contexts. Discussion of various genres (short story, novel, drama, poetry) formal aspects, literary periods, and a variety of critical approaches. Lectures and much discussion. Oral and written assignments, exam.

FLG 323 Twentieth Century German Literature 3.
Prerequisite: FLG 202 or FLG 212 or placement at 300 level through the NC State placement exam.
Twentieth century literature from German-speaking countries. Readings of Mann, Kafka, Rilke, Hesse, Durrenmatt, Frisch, Grass, and a variety of poets.

FLG 325 German Lyric Poetry 3.
Prerequisite: FLG 202 or FLG 212 or placement at 300 level through the NC State placement exam.
A historical and interpretative study of the German lyric from the fifteenth into the twentieth century with special attention to the poet's choice of theme, the ways in which that theme is treated, and the relevance of the poem to the human experience.

FLG 390 German Studies Topics 3.
Prerequisite: FLG 202 or FLG 212 or placement at 300 level through the NC State placement exam.
Presentation of material not available in regular course offerings, or offering of new courses on a trial basis. Course may be offered through videoconferencing with other UNC campuses as an offering of the German Studies Consortium. Content determined by faculty member in consultation with the department's German section coordinator. May be repeated.

FLG 396 Independent Study in German 1-6.
Prerequisite: FLG 202 or FLG 212 or placement at 300 level through the NC State placement exam.
Individualized study in German language, culture, or literature. Topic, mode of study, and credit hours to be determined in consultation with the faculty member supervising work. Departmental approval required. Individualized/Independent Study and Research courses require a "Course Agreement for Students Enrolled in Non-Standard Courses" be completed by the student and faculty member prior to registration by the department.

FLG 401 German Graduate Reading 3.
Basic German grammar, with special attention to characteristics of formal expository style, and illustrative readings. Study of extracts from scholarly publications in students' areas of research. Prepares students to take the graduate foreign language certification exam.

FLG 420 Current Issues in German-Language Media 3.
Prerequisite: Two courses at the FLG 300 level.
Using the internet and a textbook, the course will be constructed from current topics circulated in the German, Austrian and Swiss media, e.g. newspaper websites, radio programs and TV news in streaming video format. Overview of the different news genres, the German-language media scape, and major political, economic, social and cultural issues in the German-speaking countries. Discussion, oral presentations, written assignments.

FLG 430 Cultural Artifacts in the German-Speaking Countries 3.
Prerequisite: One FLG 300-level course and one from this list: FLG 315, 316, 318, 320, 323, 325, 390.
Focus on major cultural achievements in Germany, Austria and Switzerland, including literature, film, art, and music. Topics will vary. Examples are: "Kafka and Modernism", "German/Austrian/Swiss Literature and Film-Adaptations", "German-LanguageOpera", "German Art and Society in the 20th Century", or "The Faust Theme in Literature, Art, and Music". This course is repeatable so long as a different topic is covered each time.

FLG 440 Green Germany: Nature and Environment in German Speaking Cultures 3.
Prerequisite: 3 Hours of 300-Level German.
Survey of the long "Green" tradition in German-speaking cultures as reflected in the arts, in literature, and in scientific discoveries that have made Germany, Austria, and Switzerland leaders in development of alternative environmental technologies. Discussion in German of issues such as Romantic nature poetry, industrialization, Nazi attitudes towards nature, deforestation, the Green Party, air and water pollution, waste management, energy production, climate change, transportation systems, green architecture, sustainability, and the latest environmental technologies. Practice and assessment through class debates, group work, writing tasks, student presentations, and a portfolio.

FLG 492 Senior Seminar in German Studies 3.
Prerequisite: Two 300 level FLG courses on literature or culture or film. Capstone seminar in German literature or culture. Student presentations and either a substantial essay or a series of essays. Topics vary each semester.

FLG 499 Internship in Germany, Austria, or German-Speaking Switzerland 1-6.
Prerequisite: Two courses at the FLG 300 level.
Professional internship in a company or organization in Germany, Austria, or German-speaking Switzerland, with German as the main language of daily operations. Contract between the student, department, and company or organization about content, scope, and requirements. 1-6 credits for an approved internship. Essay describing and evaluating the internship experience in the context of the student's professional development. Students are responsible for their own travel and living expenses. Departmental approval required. Individualized/Independent Study and Research courses require a Course Agreement for Students Enrolled in Non-Standard Courses be completed by the student and faculty member prior to registration by the department.

FLH - FLH Courses

FLI - Foreign Language - Italian Courses

FLI 101 Elementary Italian I 3.
Begins the development of a balanced foundation in all four language skills. Concentrates on listening and speaking, emphasizing idiomatic Italian. Short readings in Italian culture and civilization. Class and laboratory practice, written homework.

FLI 102 Elementary Italian II 3.
Prerequisite: FLI 101.
Continuation of FLI 101 with emphasis on acquisition of oral skills through class practice and use of audio aids. Readings in Italian culture, civilization and literature.
FLJ 201 Intermediate Japanese I 3.
Prerequisite: FLJ 102.
Continuation of the learning of the basic skills. Emphasis on reading and writing. Readings and discussion of Italian culture, civilization and literature.

FLJ 202 Intermediate Italian II 3.
Prerequisite: FLJ 201.
Last of four sequential language courses. Increased emphasis on reading and writing. Readings in the literature, culture, and civilization of Italy.

FLJ 208 Intermediate Italian Conversation 3.
Intensive practice in speaking and understanding Italian through role playing, discussion, interviews, and use of audio-visual materials.

FLJ 308 Italian Reading and Conversation 3.
Prerequisite: FLJ 202.
Advanced readings and intensive conversational practice in Italian for students beyond the intermediate level.

FLJ 318 Italian Society Through Cinema 3.
Prerequisite: FLJ 202.
Italian culture and society through cinema from the fascist era to the present. A study of selected films representative of major social-political, ideological, and artistic developments. Weekly film viewings.

FLJ - Foreign Language - Japanese Courses

FLJ 101 Elementary Japanese I 3.
Corequisite: FLJ 103.
Introduction to standard, formal Japanese. Emphasis on speaking and listening skills. Exposure to Japanese culture, reading, and writing.

FLJ 102 Elementary Japanese II 3.
Prerequisite: FLJ 101, Corequisite: FLJ 104.
Continuation of basic skills. Emphasis on speaking and listening skills; inclusion of Japanese cultural factors in communication. Some reading and writing.

FLJ 103 Elementary Japanese I Conversation 1.
Corequisite: FLJ 101.
Supplements conversational practice in FLJ 101. Students are encouraged to use their speaking skills in a variety of situations. Special attention is given to correcting and improving pronunciation and intonation.

FLJ 104 Elementary Japanese II Conversation 1.
Prerequisite: FLJ 101, Corequisite: FLJ 102.
Supplements conversational practice in FLJ 102. Extensive use of speaking skills in a variety of situations. Special attention given to correcting and improving pronunciation and intonation.

FLJ 201 Intermediate Japanese I 3.
Prerequisite: FLJ 102 or FLJ 105, Corequisite: FLJ 203.
Continuation of basic skills. Greater emphasis on reading and writing. More exposure to Japanese cultural traditions.

Prerequisite: FLJ 201, Corequisite: FLJ 204.
Continuation of the learning of the basic skills. Emphasis on reading and writing as well as on spoken Japanese and on cultural patterns of behavior.

Prerequisite: FLJ 102, Corequisite: FLJ 201, FLJ 202 or FLJ 301.
Practice in spoken Japanese through use of the language in a variety of situations. Increase vocabulary and develop fluency and ease in the structural patterns of the language. May be repeated for a maximum of three credit hours.

FLJ 204 Intermediate Japanese II Conversation 1.

FLJ 301 Intermediate Japanese III 3.
Prerequisite: FLJ 202.
Continued study of Japanese language. Primary emphasis on spoken Japanese, but attention also given to reading, writing and culture.

FLJ 302 Intermediate Japanese IV 3.
Prerequisite: FLJ 301.
Continued training in the foundations of Japanese language. Primary emphasis on spoken Japanese, with increased attention to reading and writing.

A survey of literature in Japan from earliest recorded times through the sixteenth century. Examples from major eras and genres (folktales, poetry, philosophy, fictional narrative, theater, etc.) will be considered, with attention to historical and cultural contexts, as well as to contemporary scholarship and approaches toward traditional literature. Examples from literature outside Japan will be included for comparative purposes. No prior knowledge of Japanese required: Readings and discussions in English.

A survey of literature in Japan from 1600 to late Nineteenth Century. Examples from major periods and genres (novels, poetry, philosophy, drama, miscellaneous narrative, etc.) will be considered, with attention to historical and cultural contexts, as well as to contemporary scholarship and approaches toward the literature. Examples from literature outside Japan will be included for comparative purposes. No prior knowledge of Japanese required: Readings and discussions in English.

A survey of literature in Japan from 1600 to late Nineteenth Century. Examples from major periods and genres (novels, poetry, philosophy, drama, miscellaneous narrative, etc.) will be considered, with attention to historical and cultural contexts, as well as to contemporary scholarship and approaches toward the literature. Examples from literature outside Japan will be included for comparative purposes. No prior knowledge of Japanese required: Readings and discussions in English.

A survey in literature in Japan from the Meiji Era through World War Two. Examples from major periods and genres (novels, poetry, philosophy, drama, miscellaneous narrative, etc.) will be considered, with attention to historical and cultural contexts, as well as to contemporary scholarship and approaches toward the literature. Examples from literature outside Japan will be included for comparative purposes. No prior knowledge of Japanese required: Readings and discussions in English.

FLJ 351 Contemporary Culture in Japan 3.
Prerequisite: FLJ 101.
Introduction to basic aspects of cultural practices in Japanese society, including education, work life, family relationships, everyday religious practices, aesthetic traditions, national identity, and gender. Students will develop an understanding of the interrelationships between language and culture.

FLJ 401 Advanced Japanese I 3.
Prerequisite: FLJ 302.
Continued training in the foundations of Japanese language, with emphasis on complex verb forms. Increased attention to reading and writing.
FLJ 402 Advanced Japanese II 3.
Prerequisite: FLJ 401.
Elaboration on grammatical forms learned in the previous courses with applications in reading and writing, combined with more sophisticated vocabulary and idioms and attention to development of natural reading skills.

FLM - Film Studies Courses

FLM 378 Women & Film 3.
This course will introduce students to the rich international history of women's participation in the motion picture industry. Course includes readings, screenings, discussions, and a final examination.

FLN - Foreign Language - Hindi Courses

FLN 101 Elementary Hindi-Urdu I 3.
Corequisite: FLN 103.
Introduction to standard Hindi-Urdu. Emphasis on speaking and listening, and on reading and writing in the Hindi writing system (Devanagari). Readings in South Asian culture and civilization.

FLN 102 Elementary Hindi-Urdu II 3.
Prerequisite: FLN 101, Corequisite: FLN 104.
Continuation of FLN 101. Emphasis on oral communication and reading and writing in the Hindi writing system (Devanagari). Further readings in South Asian culture and civilization.

FLN 103 Elementary Hindi-Urdu I Conversation 1.
Corequisite: FLN 101.
Required conversational practice for FLN 101. Special attention to individual pronunciation and intonation. Introduction of formal and informal speech. Use of audiovisual materials.

FLN 104 Elementary Hindi-Urdu II Conversation 1.
Prerequisite: FLN 101, Corequisite: FLN 102.
Required conversational practice for FLN 102. Extensive use of speaking skills in variety of situations. Attention to supplemental non-verbal communication. Use of audiovisual materials.

FLN 201 Intermediate Hindi-Urdu I 3.
Prerequisite: FLN 102, Corequisite: FLN 203.
Continuation of basic language skills. Further practice of Urdu/Hindi writing systems. Introduction to grammatical divergence of Hindi and Urdu. Readings in South Asian culture and civilization.

FLN 202 Intermediate Hindi-Urdu II 3.
Prerequisite: FLN 201, Corequisite: FLN 204.
Continuation of FLN 201. Further practice of both Hindi/Urdu writing systems. Further distinction of spoken and literary Urdu and Hindi. Further readings in South Asian culture and civilization.

FLN 203 Intermediate Hindi-Urdu I Conversation 1.
Prerequisite: FLN 202, Corequisite: FLN 201.
Required conversational practice for FLN 201. Advancement of speaking skills through role playing, interviews, debates. Further Hindi and Urdu non-verbal communication. Use of audiovisual materials, including responses to commercial television and movies.

FLN 204 Intermediate Hindi-Urdu II Conversation 1.
Prerequisite: FLN 201, Corequisite: FLN 202.
Required conversational practice for FLN 202. Refinement of speaking skills through role playing, interviews, debates. Further Hindi and Urdu non-verbal communication. Use of audiovisual materials, including responses to commercial television and movies.

FLN 301 Twentieth Century Hindi & Urdu Fiction 3.
Prerequisite: FLN 202.
Introduces advanced Hindi-Urdu students to the prose fiction of major Hindi and Urdu literary figures including Munshi Premchand, Saadat Hasa Manto and others. Texts will be provided in both Hindi and Urdu scripts and/or English translation as available.

FLN 302 Modern Hindi & Urdu Poetry 3.
Prerequisite: FLN 301.
Introduces advanced Hindi-Urdu students to representative works of 19th and 20th century Hindi and Urdu poets and poetic forms. Texts will be provided in both Hindi and Urdu scripts and/or English translation as available.

FLN 401 Hindi Literature and South Asian Cultural Contexts 3.
Selected topics in Hindi literature and/or South Asian literature in Hindi, such as drama in modern South Asia, the twentieth-century novel, literature and the nation, narratives of pain and resistance, gender and social reform. Readings and discussion in Hindi, with emphasis on the examination of formal literary characteristics and the interconnections of texts and relevant South Asian cultural contexts. Topics will be rotated so that students can take this course for credit up to three times.

FLP - Foreign Language - Portuguese Courses

FLP 101 Elementary Portuguese I 3.
Introduction to the fundamentals of Brazilian Portuguese: pronunciation, comprehension, and spoken syntax and grammar.

FLP 102 Elementary Portuguese II 3.
Prerequisite: FLP 101.
Continuation of the essentials of Brazilian Portuguese. Further stress on pronunciation and comprehension and introduction of reading and writing skills.

FLP 201 Intermediate Portuguese I 3.
Prerequisite: FLP 102 or placement in course.
The third level of Portuguese with special attention to speaking, reading, writing and developing a cultural awareness of the cultural heritage of the Portuguese-speaking peoples of Portugal, Brazil and Portuguese-speaking Africa.

FLP 401 Brazilian Portuguese for Spanish Speakers 3.
Prerequisite: Native/Heritage Spanish Speaker or FLS 202 or Equivalent and Instructor's Approval.
A one semester on-line intensive introductory course to Brazilian Portuguese for Spanish speakers taught in Spanish focusing on the development of: 1) Reading Comprehension in Brazilian Portuguese; 2) Basic translation skills: Spanish->Portuguese->Spanish; 3) Colloquial writing skills in Brazilian Portuguese; 4) Basic speaking ability in Brazilian Portuguese. This course is open to undergraduate, graduate and extension students with a formal knowledge of Spanish who fulfill the prerequisite. Instructor approval required.

FLR - Foreign Language - Russian Courses

FLR 101 Elementary Russian I 3.
First in a four-course sequence to develop language skills in Russian. Oral and written practice in the classroom and language laboratory and attention to Russian cultural heritage.

FLR 102 Elementary Russian II 3.
Prerequisite: FLR 101.
Emphasis on acquisition of basic oral skills, with complementary reading and writing exercises and attention to Russian cultural heritage.
FLR 201 Intermediate Russian I 3.
Prerequisite: FLR 102.
Basic Russian language skills continued. More emphasis given to writing and essential conversational practice. Intermediate level readings in Russian literature and culture. Class and laboratory practice; written assignments.

FLR 202 Intermediate Russian II 3.
Prerequisite: FLR 201.
Advanced aspects of Russian syntax through study of text. Continued attention to conversational practice and vocabulary building.

A study of selected plays, short stories and novels of the great Russian writers of the nineteenth century: Pushkin, Lermontov, Gogol, Goncharov, Turgenev, Dostoevsky, Saltykov-Shchedrin, Leskov, Tolstoy and Chekhov. Examinations of peculiarly Russian as well as the universal aspects of this literature. All readings, lectures and discussions in English.

FLR 304 Russian Literature in Translation: The Twentieth Century 3.
A study of selected poems, plays, short stories and novels by major Russian writers of the twentieth century, such as Chekhov, Gorky, Blok, Mayakovsky, Esenin, Zamyatin, Olesha, Bulgakov, Babel, Plinyak, Pasternak, Solzhenitsyn, Evtushenko, and Voznesensky. All readings, lectures and discussions in English.

FLR 318 Russian Cinema and Society 3.
Russian culture and society through cinema. A study of selected films representative of major social-political, ideological, and artistic developments. Weekly film screenings. No knowledge of Russian required.

FLS - Foreign Language - Spanish Courses

FLS 101 Elementary Spanish I 3.
For students with little or no background or previous study of Spanish or those who place into course via Spanish placement exam. Development of communicative abilities within an integrated skill approach (speaking, listening, reading, writing). Introduction to the cultures of the Spanish-speaking world. Includes written and oral assignments of language structures and vocabulary. Conducted entirely in Spanish. Closed to native speakers of Spanish.

FLS 102 Elementary Spanish II 3.
Prerequisite: FLS 101.
Continuation of FLS 101. Development of communicative abilities within an integrated skills approach (speaking, listening, reading, writing). Introduction to the cultures of the Spanish-speaking world. Includes written and oral assignments of language structures and vocabulary. Conducted entirely in Spanish. Closed to native speakers of Spanish.

FLS 105 Intensive Elementary Spanish 6.
An intensive course equivalent to FLS 101 plus FLS 102. Development of communicative abilities within an integrated skills approach (speaking, listening, reading, writing). Introduction to the cultures of the Spanish-speaking world. Includes written and oral assignments of language structures and vocabulary. Conducted entirely in Spanish. Closed to native speakers of Spanish.

FLS 110 Accelerated Elementary Spanish 3.
Prerequisite: A score of 167 or better on the Spanish placement exam is required for matriculation in this course.
Contents of FLS 101 and FLS 102 at an accelerated pace, for students placed into the course based on results of the Spanish placement test. Development of communicative abilities within an integrated skills approach (speaking, listening, reading, writing). Introduction to the cultures of the Spanish-speaking world. Includes extensive written and oral assignments of language structures and vocabulary. Conducted entirely in Spanish. Closed to native speakers of Spanish.

FLS 201 Intermediate Spanish I 3.
Prerequisite: FLS 102, 105 or 110.
Continued development of communicative abilities for students with previous study of elementary level Spanish. Integrated skills approach (speaking, listening, reading, writing). Students will learn to function in everyday situations, expressing opinions and doubts, and narrating and describing in present, past, and future time, and will explore cultural issues through literary and other types of readings. Includes written and oral assignments of language structures and vocabulary. Conducted entirely in Spanish. Closed to native speakers of Spanish.

FLS 202 Intermediate Spanish II 3.
Prerequisite: FLS 201 or FLS 212.
Development of communicative abilities at the intermediate level of the American Council on the Teaching of Foreign Language proficiency scale, with an integrated skills approach (reading, writing, speaking, listening) and additional emphasis on knowledge and competence in the cultures of the Spanish-speaking world. Includes written and oral assignments of language structures and vocabulary. Conducted entirely in Spanish. Closed to native speakers of Spanish.

FLS 212 Spanish: Language, Technology, Culture 3.
Prerequisite: FLS 102, FLS 110, or FLS 105.
A study of the language structures and vocabulary necessary for an intermediate level of communication in Spanish together with cultural and technical issues of our global society in the context of the Spanish-speaking world. Fulfills the FLS 201 requirement.

FLS 295 Intermediate Special Topics in Spanish 3.
Prerequisite: FLS 201.
Special Topics in language and cultures of the Spanish speaking world for students at the intermediate (200) level. Includes courses taught in Spanish study abroad programs. Course may be taken up to three times.

FLS 331 Spanish Oral and Written Expression I 3.
Prerequisite: FLS 202.
Development of speaking and writing skills at the Intermediate Mid to Intermediate High levels of the American Council on the Teaching of Foreign Languages proficiency scale, as well as listening/viewing and reading skills. Focus on sentence and paragraph-length discourse, narration and description in present, past, and future time frames within a variety of topics and contexts, and communication skills such as circumlocution. Course readings, video and discussion content center upon cultural aspects of the Spanish speaking world.
FLS 332 Spanish Oral and Written Expression II 3.
Prerequisite: FLS 202.
Development of speaking and writing skills at the Intermediate High levels of the American Council on the Teaching of Foreign Languages proficiency scale, as well as listening/viewing and reading skills. Focus on paragraph-length discourse, narration and detailed description in present, past, and future time frames within a variety of topics and contexts, and communication skills such as circumlocution. Course readings, video and discussion content center upon cultural aspects of the Spanish speaking world.

FLS 333 The Sounds of Spanish 3.
Prerequisite: FLS 202.
A study of the pronunciation and phonological system of Spanish, with the goals of improving student pronunciation and analyzing native Spanish pronunciation. Extensive practice in phonetic transcription and pronunciation, as well as phonetic/phonological dialect variation.

FLS 335 Spanish for Native and Heritage Speakers 3.
Native or heritage speaker of Spanish with Advanced or Superior proficiency on the ACTFL Oral Proficiency Scale.
This course is designed to meet the needs of native and heritage speakers of Spanish whose linguistic level is above that of our 200-level courses. Development of oral and writing skills at the Advanced-Mid through Superior levels of the American Council on the Teaching of Foreign Languages proficiency scale.

FLS 336 Spanish for Business 3.
P: FLS 331 or FLS 335.
Business Spanish vocabulary and terminology. Emphasis on everyday spoken and written Spanish. Readings and discussions of business topics. Cross-cultural considerations relative to international business operations.

FLS 337 Spanish for Tourism in the Hispanic World 3.
Prerequisite: FLS 202.
Exploration of the tourism industry in the Spanish speaking world from cultural-historical, geographic, and linguistic perspectives. Course can lead to Tourism Certificate in Spanish from the Chamber of Commerce and Industry of Spain.

FLS 340 Introduction to Hispanic Literatures and Cultures 3.
Prerequisite: FLS 331 or FLS 332 or FLS 335.
Exploration of what literature is; what it means to read literature; and why one might be interested in analyzing literature. Introduction to literary terminology, as well as literary genres and movements in the Spanish language. Examination of social-cultural-historical contexts of Spain and Latin America, particularly matters of race, class, gender, and political ideas as they relate to literatures of the Spanish speaking world. Interpretation and analysis of literary texts, cultural institutions, and objects of national, mass, and popular cultures.

FLS 341 Literature and Culture of Spain I 3.
Prerequisite: FLS 331 or FLS 332 or FLS 335.
Survey of literary and cultural contexts of medieval and early modern Spain (12th to 17th centuries). Examination of literary genres in connection with concurrent cultural and historical events. Exploration of literature as a reflection of the experiences and events meaningful to Spanish society during this time period. Emphasis on the ways in which literature and other cultural artifacts give voice to value systems, traditions, and beliefs.

FLS 342 Literature and Culture of Spain II 3.
Prerequisite: FLS 331 or FLS 332 or FLS 335.
Survey of literary and cultural contexts of 18th and 19th century Spain. Examination of literary genres in connection with concurrent cultural and historical events. Exploration of literature as a reflection of the experiences and events meaningful to Spanish society during this time period. Emphasis on the ways in which literature and other cultural artifacts give voice to value systems, traditions, and beliefs.

FLS 343 Literature and Culture of Spain III 3.
Prerequisite: FLS 331 or FLS 332 or FLS 335.
Survey of literary and cultural contexts of 20th and 21st century Spain. Examination of literary genres in connection with concurrent cultural and historical events. Exploration of literature as a reflection of the experiences and events meaningful to Spanish society during this time period. Emphasis on the ways in which literature and other cultural artifacts give voice to value systems, traditions, and beliefs.

FLS 351 Literature and Culture of Latin America I 3.
Prerequisite: FLS 331 or FLS 332 or FLS 335.
Survey of literary and cultural contexts of Latin America from the pre-conquest, colonial and early-independence periods (15th to mid 19th centuries). Examination of literary genres in connection with concurrent cultural and historical events. Exploration of literature as a reflection of the experiences and events meaningful to Latin American society during this time period. Emphasis on the ways in which literature and other cultural artifacts give voice to value systems, traditions, and beliefs.

FLS 352 Literature and Culture of Latin America II 3.
Prerequisite: FLS 331 or FLS 332 or FLS 335.
Survey of literary and cultural contexts of Latin America from the Mid 19th to the Mid 20th centuries. Examination of literary genres in connection with concurrent cultural and historical events. Exploration of literature as a reflection of the experiences and events meaningful to Latin American society during this time period. Emphasis on the ways in which literature and other cultural artifacts give voice to value systems, traditions, and beliefs.

FLS 353 Literature and Culture of Latin America III 3.
Prerequisite: FLS 331 or FLS 332 or FLS 335.
Survey of literary and cultural contexts of Latin America since 1960. Examination of literary genres in connection with concurrent cultural and historical events. Exploration of literature as a reflection of the experiences and events meaningful to Latin American society during this time period. Emphasis on the ways in which literature and other cultural artifacts give voice to value systems, traditions, and beliefs.

FLS 354 Hispanic Cinema 3.
Prerequisite: FLS 331 or FLS 332 or FLS 335.
Survey of the major contributions of Hispanic cinema from its origins to the present. Analysis of film as an artistic medium and as the cinematic representation of Hispanic histories and cultures. Reading, discussions, and viewing of films by representative directors.

FLS 355 Special Topics in Spanish 3.
Prerequisite: FLS 202.
Special Topics in language and cultures of the Spanish speaking world for students at the 300 level. Includes courses taught in Spanish study abroad programs. Course may be taken up to three times.
FLS 399 Intensive Spanish Oral Proficiency Workshop 3.
Prerequisite: 3 Hours of 300-level Spanish.
Extensive conversation centered upon the communicative functions of the intermediate high to advanced levels of the American Council on the Teaching of Foreign Languages (ACTFL) Oral Proficiency Scale. Assignments will include listening/viewing and speaking tasks to support in class activities. Designed to help Spanish majors to achieve the intermediate high oral proficiency level required for graduation. This is a 5-week course. Departmental permission is required.

FLS 400 Methods and Techniques in Spanish Translation and Interpretation 3.
Prerequisite: 12 credits of 300 level Spanish.
Study and practical application of theory, methods and techniques of translation based on materials relevant to various fields and professions.

FLS 401 Spanish Graduate Reading 3.
Basic Spanish grammar, with special attention to characteristics of formal expository style, and illustrative readings. Study of extracts from scholarly publications in students’ areas of research. Prepares students to take the graduate foreign language certification exam.

FLS 402 Introduction to Spanish Linguistics 3.
Prerequisite: 12 credits of 300 level Spanish.
Introduction to fundamental terminology and concepts in the study of linguistics. Overview of the Spanish phonetics and phonology, morphology, syntax, semantics, pragmatics, sociolinguistics and historical linguistics.

FLS 405 Spanish-English Comparative Grammar 3.
Prerequisite: 12 credits of 300 level Spanish.
Analysis of the linguistic and grammatical structure (phonology, morphology, syntax, and discourse) of English and Spanish in order to develop a deeper understanding of how both linguistic systems function in similar and different ways.

FLS 411 Topics in the Culture of Spain 3.
Prerequisite: 12 credits of 300-level Spanish.
Exploration of particular themes related to the culture of Spain, with culture broadly defined as history, social and political aspects of society, as well as human and artistic expression including use of language, literary production, performance, print, and electronic media. Themes in this course expand upon those introduced in the 300 level of the Spanish curriculum. Class discussion and assignments require greater depth and sophistication than introduction to literature and culture courses of the 300 level.

FLS 412 Topics in the Culture of Latin America and the Caribbean 3.
Prerequisite: 12 credits of 300-level Spanish.
Exploration of particular themes related to the culture of Latin America and the Caribbean, with culture broadly defined as history, social and political aspects of society, as well as human and artistic expression including use of language, literary production, performance, print, and electronic media. Themes in this course expand upon those introduced in the 300 level of the Spanish curriculum. Class discussion and assignments require greater depth and sophistication than introduction to literature and culture courses of the 300 level.

FLS 413 Spain and the Americas in Transatlantic Perspective 3.
Prerequisite: 12 credits of 300-level Spanish.
Exploration of key moments of communication, exchange and conflict between the different parts of the Spanish speaking world, from the point of contact between imperial Spain and the indigenous civilizations of the “New World”. Examination of the commonalities and distinctions of the quest for independence, modernity and democracy. Analysis of immigration across national frontiers in the present day Hispanic World and greater American continent.

FLS 492 Seminar in Hispanic Studies 3.
Prerequisite: 12 credits of 300 level Spanish.
Advanced seminar on a specific area of Hispanic studies (topics vary), leading to a major term paper and/or a series of essays by the student.

FLS 495 Advanced Special Topics in Spanish 3.
Prerequisite: 12 credits of 300-level Spanish.
Advanced special topics in language and cultures of the Spanish speaking world for students at the 400 level. Includes courses taught in Spanish study abroad programs. Course may be taken up to three times.

FLS 502 Linguistic Structure of Spanish 3.
Introduction to fundamental terminology and concepts in the study of linguistics. Overview of the Spanish sound system (phonology), principles of word formation such as derivation and inflection (morphology), structure and grammatical relations of phrases and sentences (syntax), as well as the relationship between linguistic levels. Graduate standing required.

FLS 503 Spanish Applied Linguistics 3.
Prerequisite: FLS 502 (Linguistic Structure of Spanish).
Overview of prominent theoretical perspectives in the acquisition of Spanish as a second language. Application of theory to the learning and teaching of the Spanish language. Analysis of issues in the acquisition of Spanish phonology, morphosyntax, semantics, and pragmatics. Graduate standing required.

FLS 504 Spanish Language Change and Variation 3.
Prerequisite: FLS 502 (Linguistic Structure of Spanish).
Overview of phonological and morphosyntactic change from Latin to modern Spanish. Linguistic exploration of social and geographical dimensions Spanish language variation. Examination of issues of Spanish/English contact in the United States, including bilingualism and bilingual education. Graduate standing required.

FLS 509 Spanish Phonetics and Phonology 3.
Prerequisite: FLS 502 (Linguistic Structure of Spanish).
A theoretical introduction to the phonetics and phonological system of Spanish. Topics covered include articulatory phonetics, narrow and broad transcription, and the analysis of linguistic data with the goal of understanding the underlying system of Spanish sounds. Current topics in Spanish phonology are included. Graduate standing required.

FLS 515 History of Spanish Language 3.
Prerequisite: FLS 502 or equivalent; or permission of instructor.
Overview of historical evolution of modern Spanish from spoken Latin. Focus on theories of language change as applied to the historical development of Spanish. Graduate status or instructor permission required.

FLS 528 Don Quixote 3.
This course studies the historical and political contexts of Cervante’s writing, his place in Renaissance culture, and the role of Don Quixote in the formation of the modern novel. Taught in Spanish. Graduate status or permission of the instructor.
FLS 530 The Cultural Production of Spanish Democracy 3.
Challenges, contradictions, accomplishments, and shortcomings in the political, social, economic, cultural, and literary dimensions of Spain in the last quarter of the 20th century. Treatment of literary texts, historical and journalistic documents, critical and theoretical essays, as well as fiction and non-fiction films, music, and other products of popular and mass culture since 1975. Particular attention to significant cultural events such as the 1992 Barcelona Olympics, and the celebration of the 500th anniversary of the "Discovery" of America. Must hold graduate standing.

FLS 553 The Latin American Avant-Garde 3.
An in-depth analysis of the cultural avant-garde in Latin America at the beginning of the twentieth century (1905-1939). Students will study European and Latin American theories of the avant-garde, literature, art, music, and manifestation from the period in several Latin American countries. Graduate standing required. Taught in Spanish.

FLS 554 The Sixties in Latin America 3.
An in-depth analysis of the cultural production during the 60s in Latin America. Students will study novels, short stories, poetry, music, and film from several Latin American countries. Graduate standing required.

FLS 563 The Latin American Novel 3.
The course offers a comprehensive view of Latin American novel (from the 19th Century until the present). It centers its attention foremost on canonical works (Isaacs, Gallegos, Vargas Llosa, Puig, etc.). Besides familiarizing students with the political, social and cultural contexts that gave rise to these texts, it also provides, through the reading of various theoretical articles, a basic introduction to narrative theory (Genette, Booth, Bal, Brooks, etc.). Graduate standing required.

FLS 592 Graduate Seminar in Hispanic Studies 3.
Prerequisite: Graduate standing in Hispanic Studies; M.A. students in Hispanic Studies.
A concentrated study of genres, periods or other special topics in Hispanic Studies to be determined as needed in the departmental program. Rotating topics on literature and/or culture; may be taken more than once for credit.

FLS 595 Special Topics in Spanish 3-6.
Prerequisite: Graduate standing.
In depth exploration of specialized topics in Spanish literature, culture or language. Also used to test and develop new courses. Course taught in Spanish.

FLS 630 Independent Study in Spanish 1-3.
Individualized study in Spanish language or literature at the graduate level. Topic and mode of study to be determined in consultation with the faculty member supervising work.

FLS 675 Special Project in Spanish 1-3.
Prerequisite: Student must be in final semester of his or her program. Individual project in Spanish language or literature at the graduate level. Topic and mode of study to be determined in consultation with student's project advisory committee within the parameters of specific options.

FLS 688 Non-Thesis Masters Continuous Registration - Half Time Registration 1.
Prerequisite: Master's student.
For students in non-thesis master's programs who have completed all credit hour requirements for their degree but need to maintain half-time continuous registration to complete incomplete grades, projects, final master's exam, etc.

GRK - Foreign Language - Greek Courses

GRK 101 Elementary Greek I 3.
Introduction to Classical Greek. Greek alphabet, basic grammar and syntax. Readings based on Greek mythology, philosophy, and literature.

GRK 102 Elementary Greek II 3.
Prerequisite: GRK 101.
A second course in Classical Greek, continuing and expanding the work of GRK 101, and completing the study of grammar. Readings from major authors including Herodotus, Thucydides, and Xenophon.

GRK 201 Intermediate Greek I 3.
Prerequisite: GRK 102.
Introduction to Greek prose. Emphasis upon improvement of reading skill through vocabulary acquisition and study of complex grammar.
Introduction to Attic dialect through reading Plato, and Koine Greek through reading the New Testament. Examination of the importance of these works to Western literature and culture.

GRK 202 Intermediate Greek II 3.
Prerequisite: GRK 201.

GRK 399 Directed Readings in Greek 3.
Prerequisite: GRK 399.
Advanced Greek language course introducing students to research methods in classical studies. Readings may include Plato, Homer, Sophocles, New Testament, or others. May be taken up to two times with different readings for credit.

LAT - Foreign Language - Latin Courses

LAT 101 Elementary Latin I 3.
Beginning course in Classical Latin, emphasizing elementary grammatical form and basic syntax. Readings based on brief selections from Roman authors, including Cicero and Catullus.

LAT 102 Elementary Latin II 3.
Continuation of LAT 101. Completion of the study of elementary grammar. Readings from a variety of Latin authors, including texts on mythological themes.

LAT 201 Intermediate Latin I 3.
Prerequisite: LAT 102.
Introduction to Latin prose and poetry. Emphasis on increased reading skill. Review of grammar fundamentals and exposure to new and more complex syntax. Examination of cultural significance of readings.

LAT 202 Intermediate Latin II 3.
Prerequisite: LAT 201.
Lyric poetry of Catullus and Horace emphasizing vocabulary, syntax, and techniques of Latin verse. Traditions and the evolution of lyric poetry and the social role of the Roman poet.

LAT 399 Directed Readings in Latin 3.
Prerequisite: LAT 202.
Advanced Latin language course introducing students to research methods in classical studies. Readings may include Vergil, Ovid, Livy, Cicero, or others. May be taken up to two times with different readings for credit.
PER - PER Courses

PER 101 Elementary Persian I 3.
Elementary Persian 101 is a beginning course for students who have little or no prior knowledge of the language. It is designed to give the students an introduction to the phonology, morphology, and script of Persian which will develop, by the end of the semester, into outcome skills including the ability to read aloud and comprehend written texts from dictation, and carry on conversations at elementary levels. A textbook with grammar explanations in English is supplemented with tapes and videos of authentic language and culture used in situational communication.

PER 102 Elementary Persian II 3.
Prerequisite: Elementary Persian 101 (PER 101) or instructor’s permission.
Elementary Persian 102 is the second-semester continuation of Persian 101. It continues and develops the students’ familiarity with and command of the written and spoken forms of the language by actively involving them in communicative activities at the first-year level. A textbook with grammar explanations in English is supplemented with tapes and videos of authentic language and culture used in situational communication.

PER 201 Intermediate Persian I 3.
Prerequisite: Elementary Persian 102, or instructor’s permission.
Persian 201 is the third-semester continuation of Persian 101. It continues and develops the students’ familiarity with and command of the written and spoken forms of the language by actively involving them in communicative activities at the first-year level. A textbook with grammar explanations in English is supplemented with tapes and videos of authentic language and culture used in situational communication.

PER 202 Intermediate Persian II 3.
Prerequisite: Elementary Persian (PER 201) or instructor’s permission.
Persian 202 is the fourth semester, which completes the intermediate level (second year) in Persian. It further deepens the students’ familiarity with the syntax of the literary language of Persia and expands their command of the spoken vernacular of Iran through exposure to more varied and sophisticated communicational contexts. An intermediate textbook with grammar explanations in English is supplemented with tapes and videos of authentic language and culture used in situational communication.

Department of History

Withers Hall, Room 350
Phone: (919) 515-2483
Visit the Department of History’s website (http://history.ncsu.edu)!

The Department of History offers three undergraduate majors, a minor, an M.A. in History, an M.A. in Public History and a Ph. D. in Public History (see Graduate Catalog for advanced degrees). The departmental Honors Program provides a guided experience in undergraduate independent research and awards departmental Honors in History upon graduation. Outstanding history students are eligible for membership in Phi Alpha Theta, the professional honors society for historians.

In an ever-changing world, understanding our history becomes all the more necessary. It brings us a sense of the complexity and contingency of events. It provides us with rich and diverse perspectives. It informs us about the prevalence of unintended consequences. The Department of History at NC State brings alive the treasure of human experience and cultures, from the ancient near East to the post-Cold War world, from medieval life to modern science and technology, from the ancient Americas to the modern U.S.

The History Department is a diverse group of scholars covering many areas of specialization. Faculty members have a strong record of publications, grant and fellowship awards, and public outreach. We pride ourselves on outstanding teaching, and we offer small classes that allow a great deal of individual attention. Our faculty advisors offer close contact and personal attention to each student. The History major is a place to get a "small college" education in a big state university.

The department of twenty-nine professors has about three hundred undergraduate majors. To all our majors, we offer small classes, and special fifteen-person seminars as both an introduction to historical methods and as a senior capstone experience. The programs offer a great deal of student choice in courses and electives, allowing the pursuit of either a broad educational experience or a focused study. A student could follow a particular interest in clusters of electives, such as history of race relations, law and society, or the history of science and technology.

History teaches that understanding a situation requires identifying with people who lived in other times and places. History is a discipline whose very method seeks and applies fair and appropriate norms to understand and judge human behavior. Students will learn to exercise independent judgment as well as to tolerate differences.

Opportunities

There are many reasons to major in History. Students learn how to gather the relevant facts and develop the most persuasive explanation. The critical skills learned by history majors can be used in a variety of careers. The major is an excellent preparation for the study of law. Employers tell us they want people with a deeper awareness of the changing world, combined with the ability to read, analyze, and write about its causes and outcomes. Our graduates are lawyers, business-owners, museum directors, doctors, archivists, politicians, consultants, judges, farmers, chefs, military officers, and of course teachers and professors of history. Whether or not they became historians, they use their training in historical thinking as they ask and explain why two communities or peoples failed to co-exist, a merger failed, a disease spread, an idea or faith took hold, or a relationship worked.

Honors Program

The departmental Honors Program invites a small number of highly qualified and motivated students to pursue individually directed work in history. Students are invited to enter the Honors Program (usually in the junior year). Students must take 9 hours of individual, directed study with a faculty mentor, producing an Honors Thesis of original research. These research and writing courses replace some of the advanced electives in the degree programs.

Majors in History

Bachelor of Arts in History

The degree requires 30 hours of history course work (in addition to the 6 hours required of all College of Humanities & Social Sciences majors), including HI 300 Sophomore Seminar in History and HI 491 HI 491HI 491HI 491HI 491 Seminar in History. Breadth distribution requirements at the introductory level include a course
in world history, history of Asia or Africa or Latin America, European history, and American history. At least 12 of the 30 hours must be at the Advanced Electives at the 400-level level.

This degree allows 32 hours of free electives for a total of 122 hours.

Specific curriculum requirements are available on the Registration and Records website (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php), under the Humanities & Social Sciences drop-down list.

Bachelor of Arts in History with a Teacher Education Concentration

The Teacher Education Concentration is a track to a B.A. in History that includes the specific history and social science courses recommended for eventual Social Studies teachers in North Carolina. Students take the full array of undergraduate requirements, but also can use free electives to begin graduate Education classes. In collaboration with the College of Education, students with a 3.5 GPA may count some of the credits from their senior year for the Master of Arts in Teaching (M.A.T.). This accelerated program is intended to be a five-year track to the M.A.T. degree. The M.A.T. is supervised and granted by the College of Education. Professional education courses, and the student teaching experience in a high school, are part of the graduate portion of the program, leading to eligibility for North Carolina certification to teach Social Studies in secondary schools in North Carolina and most other states. Holders of the M.A.T. more competitive in the teacher job market.

The degree requires 30 hours of history course work (in addition to the 6 hours required of all College of Humanities & Social Sciences majors), including HI 300 Sophomore Seminar in History and HI 491 Seminar in History. Breadth distribution requirements at the introductory level include both world history surveys, history of Asia or Africa or Latin America, European history, and both American history surveys. The degree requires 21 hours of social science courses.

Specific curriculum requirements are available on the Registration and Records website (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php), under the Humanities & Social Sciences drop-down list.

Bachelor of Science in History

The importance of science and technology in our society makes a background in science and technology valuable even for humanities majors. The B.S. degree offers a way for students to get both the analytical and writing skills that come from a history major and the technical proficiency that comes with coursework in science and engineering. This combination is very helpful in a wide variety of careers, including law, business, and public policy. This degree is particularly well suited for students transferring into history from a science or engineering major, or double-majoring with a science or engineering.

It requires 24 hours of history course work (in addition to the 6 hours required of all College of Humanities & Social Science majors), including HI 300, HI 491, and at least 4 other courses at the 400 level. Students work with an advisor to design a 15-hour concentration in a single area of science and technology. This degree allows students to integrate a broad base in science and math with a history education.

Specific curriculum requirements are available on the Registration and Records website (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php), under the Humanities & Social Sciences drop-down list.

Minor in History

The minor requires 18 hours of history, made up of two 200-level history courses (one in recent American or European history and one in pre-modern history or in Asian, African, or Latin American history), and four courses at the 300 or 400 level (at least two of which must be at the 400 level).

HA - History of Art Courses

HA 201 History of Art From Ancient Greece Through the Renaissance 3.
Art from Ancient Greece and Rome through Italian Renaissance. Major art forms of painting, sculpture, and architecture.

HA 202 History of Art From the Renaissance Through the 20th Century 3.
