Although some courses are listed in more than one category, no course may satisfy more than one requirement. IS majors may take no more than four 200 level courses in their departmental requirements.

**Study Abroad:** International major students are required to complete six (6) credit hours of study abroad coursework. Prior to enrolling in a study abroad program students are required to consult with their International Studies advisor in order to ascertain that the courses they plan on taking overseas may be transferred for credit to the NC State and may count toward the major and/or the GE requirements.

**Major Residency Requirements** – Minimum of 15 hours of international studies at NC State.

**Major Grade Point Average (GPA) Requirements** - A 2.0 major and cumulative GPA is required for graduation. All major courses must receive a grade of C- or better.

**International Studies (Minor)**

To see more about what you will learn in this program, visit the Learning Outcomes website [here](https://apps.oirp.ncsu.edu/pgas/)

The International Studies Minor is offered to all students in the University who want to add a significant international dimension to their departmental majors. This minor program enables students to explore international topics, issues and research from cross-cultural, transnational perspectives. The program will provide some tools that students can use to understand better the global context of the modern world and to learn the international dimensions of their chosen fields of study.

**Admissions**

Students must submit an “Application for Minor” form to the CHASS Dean’s Office, 106Q Caldwell, at any time prior to the end of the pre-registration period of the student’s final semester. Students interested in pursuing the International Studies minor should contact the person listed below.

**Certification**

Prior to the end of the first week of the student’s final semester, the student must sign the application form, indicating all grades received for the courses completed in the minor program and the courses to be taken during the student’s final semester. Also, the form must indicate that the student has completed or is completing the foreign language requirement, which is FLx 202. The contact person below will certify the completion of the minor.

**Contact Person**

Dr. Haddy Njie
107-C 1911 Building
919.515.0448
hnjie@ncsu.edu

**SIS Code:** 16ISM

**Plan Requirements**

- Completion of 15 credit hours of coursework
- Have successfully completed or completing the foreign language proficiency requirement FLx 202. FLx 202 does not count as a course for the minor.
A grade of ‘C-‘ or better is required in all courses in the minor program.

Only one (1) course at the 200-level from the three elective courses is permitted.

A maximum of one (1) course may be used (double-counted) towards both departmental major requirements and minor requirements. Students cannot obtain a minor in their major.

A maximum of 6 transfer credit hours may be applied towards the International Studies minor.

No courses for the minor may be taken for S/U credit.

**Jewish Studies (Minor)**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The undergraduate minor in Jewish studies treats the history, religious traditions, culture, language, and literature of the Jewish people. Students in this interdisciplinary program will have the opportunity to deepen their understanding and appreciation of Judaism from a wide range of academic disciplines, including Religious Studies, History, Language, Literature, and Film Studies.

**Admissions**

Students interested in declaring a minor (https://studentservices.ncsu.edu/forms/registrar/declare_minor.pdf) in Jewish Studies should consult with the program coordinator listed below.

**Certification**

The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Students will receive official recognition on their transcripts for the completed minor.

**Contact Persons**

Prof. William Adler  
Distinguished University Professor of Religious Studies  
Coordinator of Jewish Studies  
Department of Philosophy and Religious Studies  
Box 8103443 Withers  
Tel.: 919-515-6334  
Email: William_Adler@ncsu.edu

Interdisciplinary Studies  
106 D 1911 Building  
Box 7107  
Tel.: 919-515-6964  
Email: bruce_cheek@ncsu.edu

**SIS Code: 16JSTM**

**Effective Spring 2019**

**Plan Requirements**

- The minor consists of 15 hours of credit (5 courses).
- An overall minor GPA of at least 2.0 is required.
- A maximum of one (1) course may be double-counted towards both major departmental requirements and minor electives.
- No more than two courses from other institutions may count toward the minor. The department will determine whether courses which have been transferred from other institutions qualify for the minor.
Native American Studies (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The minor in Native American Studies offered by the Division of Interdisciplinary Studies within the College of Humanities and Social Sciences will be open to all students at North Carolina State University who share an interest in studying the experiences of Native Americans in the Americas. This minor provides a cross-disciplinary course of study for students from diverse backgrounds and from different curricula to explore Native American cultures and histories.

Admissions

Students may declare their intention to complete the Native American Studies minor. Should students wish to transfer courses from other institutions toward the minor, students should consult with Dr. Judy Kertesz, advisor for the minor.

Certification

To be certified as having completed the minor in Native American Studies, students must have a minimum 2.0 grade point average across all courses used toward the minor. The minor will be certified prior to graduation. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State.

Contact Person

Dr. Judy Kertesz
369 Withers Hall
Campus Box 8108
919.513.2111
jkertes@ncsu.edu

Effective Date: 11/2011

SIS Code: 16NAMSTM

Plan Requirements

- Completion of 15 hours of coursework.
- Students must earn a cumulative grade point average of 2.0 or better for all courses taken to fulfill the minor.
- No course in the minor can be taken for pass-fail (S/U) credit.
- A maximum of one (1) course may be used (double-counted) towards both departmental major requirements and minor requirements.

Nonprofit Studies (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The interdisciplinary minor in Nonprofit Studies is designed to prepare undergraduate students for careers in the nonprofit sector, in both paid and volunteer positions. This curriculum provides students with an understanding of the role of the nonprofit sector in society and builds students’ knowledge, skills, and abilities in effective nonprofit leadership. Through multiple service-learning experiences and a nonprofit internship requirement, students are offered a variety of hands-on experiences designed to facilitate an understanding of the issues and challenges faced by nonprofit organizations and prepare students for nonprofit leadership positions in the 21st century. The minor in Nonprofit Studies is a strong complementary course of study for students with majors offered across the NC State campus including Communication, English, History, Political Science, Psychology, Social Work; Parks, Recreation and Tourism; Forestry; Business Management; Art and Design; Education and more. The minor in Nonprofit Studies enables students to explore the interconnections between their chosen field and the nonprofit sector. No courses for the minor may be taken for S/U credit.

Admissions

Please email nonprofitminor@ncsu.edu for information.

Certification

Prior to the end of the first week of the student’s final semester, the student must sign the application form, indicating all grades received for the courses completed in the minor program and any courses to be taken during the student’s final semester. The form must also indicate that the student has completed or is completing the internship and capstone course requirement. The Director of the Institute for Nonprofits, as listed below, will certify the completion of the minor.

Honors in Science, Technology, and Society

The Honors Program in STS offers an enriching and challenging educational experience to qualified majors. Admission to the program requires at least a 3.25 overall GPA and 3.25 major GPA, including STS 214 Introduction to Science, Technology, and Society and at least 6 other hours of course work in the major requirements. Honors students must complete the Honors Option in STS 403 Seminar in Science, Technology, and Society with a course grade of B+ or better; three hours of course work in the major requirements taken from among graduate courses and independent study courses; and three additional hours of course work in the major requirements taken from among honors courses, honors option courses, graduate courses, and independent study courses. Graduation requires a 3.25 GPA overall and a 3.40 GPA in the major. Successful completion of the program is noted on the
Science, Technology and Society (BA)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orip.ncsu.edu/pgas/).

The Science, Technology, and Society (STS) curriculum seeks to explore the myriad of ways in which science and technology shape our society. The only program of its kind in North Carolina, the core courses of STS aim to understand the connections between science, technology, economics and commerce, domestic policy and international relations, the environment, health and medicine, and other crucial areas inform basic questions of equity, justice, and sustainability. With these connections in mind, STS students examine how science and technology emerge, how they engage with society, how they change through social processes, and how society changes under their influence.

**Total Hours**: 120

**Major Residency Requirement**: At least 18 of the 30 credits in the major (departmental requirements) must be completed following admission to the program. Maximum 15 hours of external transfer credit may be applied towards the major (departmental requirements).
Science, Technology and Society (BS)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.iirp.ncsu.edu/pgas/).

The Science, Technology, and Society (STS) curriculum seeks to explore the myriad of ways in which science and technology shape our society. The only program of its kind in North Carolina, the core courses of STS aim to understand the connections between science, technology, economics and commerce, domestic policy and international relations, the environment, health and medicine, and other crucial areas inform basic questions of equity, justice, and sustainability. With these connections in mind, STS students examine how science and technology emerge, how they engage with society, how they change through social processes, and how society changes under their influence.

Plan Requirements

Science, Technology and Society (BS): 120 Total Units

### Code | Title | Hours
--- | --- | ---
Basic Science | Basic Sciences (p. 1121) | 12
 | Science Elective (p. 1122) | 4

### Mathematics
Calculus (p. 1122) | 3
Math Elective | 3

One additional math or statistics courses chosen from College approved list. 3 credits.

### Advanced Sciences/Technology Requirement

--- | --- | ---
Advanced Sciences/Technology Requirement | 15

### Departmental Requirements

--- | --- | ---
Statistics Elective (p. 1122) | 3
STS 214 Introduction to Science, Technology, and Society | 3
STS 403 Seminar in Science, Technology, and Society | 3

Breadth (p. ) | 12
Specialty | 15

Students should consult their academic advisors to determine how to complete this requirement.

### Humanities and Social Sciences

--- | --- | ---
Acad Writing Research (p. 1123) | 4
Philosophy | 3
Any PHI course on the approved GEP-Humanities list. | 3
Arts and Letters (p. 1123) | 3
History (p. 1124) | 3
Literature (p. ) | 3
Writing and Communication (p. 1129) | 3
Social Science (3 Different) (p. 1126) | 9

### GEP Courses

--- | --- | ---
GEP Health and Exercise Studies (p. 1422) | 2
GEP Additional Breadth (p. 1417) (Mathematical Sciences/Natural Sciences/Engineering) | 3
GEP Interdisciplinary Perspectives (p. 1426) | 2
GEP U.S. Diversity (p. 1431) (verify requirement) | 4
GEP Global Knowledge (p. 1419) (verify requirement) | 4

Foreign Language Proficiency (p. 1417) (verify requirement)

Free Electives

Free Electives (12 Hr S/U Lmt) | 12

### Basic Sciences

Code | Title | Hours
--- | --- | ---
BIO 105 | Biology in the Modern World | 3
BIO 106 | Biology in the Modern World Laboratory | 1
BIO 140 | Survey of Animal Diversity | 3
BIO 141 | Animal Diversity Laboratory | 1
BIO 181 | Introductory Biology: Ecology, Evolution, and Biodiversity | 4
BIO 183 | Introductory Biology: Cellular and Molecular Biology | 4

### Chemistry (Max: 4 Units )

--- | --- | ---
CH 101 | Chemistry - A Molecular Science | 3
CH 102 | General Chemistry Laboratory | 1
CH 201 | Chemistry - A Quantitative Science | 3
CH 202 | Quantitative Chemistry Laboratory | 1

### Earth Sciences (Max: 4 Units )

--- | --- | ---
MEA 100 | Earth System Science: Exploring the Connections | 4
MEA 101 | Geology I: Physical | 3
MEA 110 | Geology I Laboratory | 1
MEA 130 | Introduction to Weather and Climate | 3
MEA 135 | Introduction to Weather and Climate Laboratory | 1
MEA 150 | Environmental Issues in Water Resources | 4
MEA 200 | Introduction to Oceanography | 3
MEA 202 | Geology II: Historical | 3
MEA 210 | Oceanography Lab | 1
MEA 211 | Geology II Laboratory | 1

### Physics (Max: 4 Units )

--- | --- | ---
PY 123 | Stellar and Galactic Astronomy | 3
PY 124 | Solar System Astronomy | 3
PY 125 | Astronomy Laboratory | 1
PY 131 | Conceptual Physics | 4
PY 201 | University Physics I | 4
PY 202 | University Physics II | 4
PY 203 | University Physics III | 4
PY 205 | Physics for Engineers and Scientists I | 3
PY 206 | Physics for Engineers and Scientists I Laboratory | 1
PY 208 | Physics for Engineers and Scientists II | 3
PY 209 | Physics for Engineers and Scientists II Laboratory | 1
PY 211 | College Physics I | 4
PY 212 | College Physics II | 4

1 A grade of C- or higher is required.
2 Students should consult their academic advisors to determine which courses fill this requirement.

A Science, Technology, and Society minor is a 15 hour, multidisciplinary minor providing students an opportunity to appreciate and understand better the roles that science and technology play in the larger sociocultural context. A goal of the minor is to help students develop the ability to order and integrate the diverse aspects of their educations. Two essential components of this ability are sensitivity to the moral dimensions of scientific and technological inquiry, as affecting how people may live or want to live, and an appreciation of the practical implications of scientific and technical theory. In addition, the Science, Technology, and Society minor enables students to increase the breadth of their science and technology. No courses for the minor may be taken for S/U credit.

Admissions

Students interested in the Science, Technology and Society minor should contact the minor advisor by their junior year or earlier, if possible.

Certification

A University Minor Declaration Form should be submitted to Registration and Records for inclusion of the minor on the student’s official record. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program.

Contact Person

Dr. Matthew Booker
Director, STS
1911 Building 106A, Box 7107
919.513.1431
mmbooker@ncsu.edu

SIS Code: 16STM

Plan Requirements

- Completion of 15 hours of relevant courses, including:
  - at least one course from each of the category groupings,
  - one additional course from any of the categories, and
  - STS 214 Introduction to Science, Technology, and Society
- Students must take at least one scientific or technical course beyond the introductory level.
- Students must take mathematics through a first calculus or statistics course.
- In order to receive an introduction to the field and to promote communication among themselves, STS minors are required to take STS 214 Introduction to Science, Technology, and Society in their junior year or as soon as possible after declaring their intention to pursue the STS minor.
- A maximum of one (1) course may be used (double-counted) towards both departmental major requirements and minor requirements.

Science, Technology, and Society (Minor)

- Women's and Gender Studies (Minor) (p. 1141)

Interdisciplinary Studies (BA): Women's and Gender Studies Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Women's and Gender Studies curriculum is designed to lead students to analyze and reinterpret existing data and common assumptions about gender and gender identity from a multidisciplinary perspective. This approach foregrounds the complex relationships between gender, class, ethnic and racial structures; acquaints students with the often unacknowledged contributions made by women in the humanities and sciences, and grounds students in feminist theories and methodological perspectives. The aim of this program is to recognize the substantial contributions of feminist theories to social and public policy analysis.

1. C- or better

---

**Women’s and Gender Studies (Minor)**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)! The Women's and Gender Studies Minor offers all students in the university the possibility of rigorous interdisciplinary study of women's and gender issues. Course offerings across the campus give students the opportunity to understand the complex relationships between gender, class, ethnic, and race structures; to understand feminist theory and methodological perspectives and their substantial contributions to social and public policy analysis; to develop the ability to reach out to community and non-profit organizations concerned with social equality; and to develop international understandings and perspectives.

### Admissions and Certification of Minor

To complete a WGS minor is a simple process but it’s a good idea to get the paperwork in progress. Download the “Declare a Minor” form available here (https://studentservices.ncsu.edu/forms/registrar/declare_minor.pdf) in PDF format. The form must be signed by the Director of WGS and by the CHASS Dean’s Office. It is then forwarded to the student’s home department.

### Contact Person

**SIS Code:** 16WGM
School of Public and International Affairs

For more information about this department, including contact information, visit the department (http://spia.chass.ncsu.edu/).

The Department of Political Science, part of the School for Public and International Affairs, offers basic and advanced courses in all major fields of the discipline: American government and politics (local, state, and national), public law and criminal justice, public administration, comparative politics, international relations and global issues, political theory, and methodology of political science. The department affords opportunities for the study of government and administration to students in other curricula and schools.

Graduate courses in public administration and international studies are available to advanced undergraduates. See the listing of graduate degree programs and consult the Graduate Catalog.

The department provides academic credit for internships with political parties and campaigns, lobbyists, non-profits, and all levels of government, including the North Carolina General Assembly Legislative Internship Program. Majors in political science with distinguished academic achievements are annually invited to join the Zeta Epsilon Chapter of Pi Sigma Alpha, the national political science honor society.

Honors Program

The honors program includes nine credit hours of specialized coursework designed to challenge academically talented majors and allow them to realize their greatest potential as political science students. Required for admission to the program: 3.25 GPA both overall and in the major, completion of 9 hours of PS coursework, and completion of PS 371 Research Methodology of Political Science. Majors admitted to the program complete a substantial research project in consultation with a faculty honors adviser (6 credit hours). Also required: either one 500 level PS course or an honors option 400 level political science course (3 credit hours). Successful completion of the program is noted on the student’s transcript, and at commencement.

• Political Science (BA): International Politics Concentration (p. 1170)
• Political Science (BA): Law and Justice Concentration (p. 1180)
• Political Science (BA): Public Policy Concentration (p. 1190)
• Political Science (BS) (p. 1199)
• Political Science (Minor) (p. 1212)

Law and Justice (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Law and Justice Minor is designed for students who have a special interest in the areas of public law, criminal justice and political theory. It
provides a broad understanding of the interplay between law and politics, of the administrative dimensions of law enforcement and criminal justice processes and of the legal and theoretical dimensions of political life. This minor is especially suitable for students interested in careers in law, government, criminal justice agencies and judicial administration as well as for students interested in graduate and professional education in law, political science of criminal justice. No courses for the minor may be taken for S/U credit.

The Law and Justice Minor is designed so that students will:

- Develop an understanding of the role of law and the legal system in the larger political, economic and social contexts in which they function.
- Learn to analyze writings in the field and to communicate effectively ideas concerning law and justice issues both orally and in writing.
- Think analytically about ethical issues and societal responsibilities attached to actors within the justice system.
- Understand the interplay of law and politics in addressing important issues in national as well as international communities
- Study the role of law and legal institutions from a political system perspective.
- Develop a thorough familiarity with the workings of the entire justice system, both in theory and in practice.

Admissions and Certification of Minor

The minor will be administered by an advisory committee consisting of four members of the Department of Political Science and Public Administration. The members are Shannon Carey, Sanford Kessler, Robert Moog and Traci Reid. Kessler, Moog and Reid are all faculty members who teach the department’s political theory, public law and criminal justice courses. Susan Lawhead will serve as the Academic advisor for the minor. Students may contact her at: 228 Caldwell Hall, 919.515.5025, slrawhea@ncsu.edu (slrawhea@ncsu.edu)

Plan Requirements

To complete the Law and Justice Minor, a student must complete 15 hours of course work with grades of C- or better and with a cumulative average of 2.0 in that course work. Seminar courses are marked each semester in the Schedule of Courses by a head note.

A maximum of ONE (1) course may be used (double-counted) towards both departmental major requirements and minor requirements.

---

1. C- or better

LPS is an online degree completion program for non-traditional students, and cannot accept traditional students who are currently enrolled in a regular degree program. Incoming students may transfer a maximum of 72 credit hours of college course work. Transfer credit should include a sufficient number of courses to satisfy the general education component of the major. In addition, transfer students must have taken and passed a college level Math course and a college level English course comparable to our ENGL 101 (4 hrs.).

**Grade Point Average (GPA) Requirements:** Students admitted into the B.A. in Leadership in the Public Sector program will be expected to maintain a minimum overall GPA of 2.0. Courses used to complete the Major Field of Study must be completed with a “C-” or better. A 2.0 GPA in the major is required.

### Career Opportunities

A degree in political science is excellent preparation for a number of careers and graduate opportunities. Political science majors study critical issues surrounding such things as international security, public policy, and government practices. They develop real-world skills such as solving problems logically and systematically, working with others in vertically and horizontally organized arrangements, expressing a position and defending it with corroborating evidence, and writing clear and correct prose. They also develop citizenship and leadership competencies that include the personal obligation to participate in public life. Consequently, political science majors are well-positioned for careers in teaching, the legal profession, criminal justice agencies, state and local government, urban planning, the federal bureaucracy, journalism or in any of the organizations that seek to monitor political processes or to influence the content of public policy. Private firms also seek managers and public affairs specialists who have a knowledge of the functioning of the political system and of politics in general.

### Leadership in the Public Sector (Certificate)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Leadership in the Public Sector Undergraduate Certificate is designed for those students who want to develop the knowledge and skills to be effective leaders in the public sector. Students in this program will survey leadership theories, research, and applied practices in order to learn and apply necessary skills, methods, and techniques of effective leadership in public and non-profit organizations. This certificate program is offered entirely online and available only for non-traditional or non-degree seeking students.

### Admissions Requirements

Students pursuing university certificate programs are considered non-degree studies (NDS) students for the purpose of university registration. Certificate program students may **NOT** be enrolled in a traditional degree program on campus at NCSU. This program will operate much like the Administrative Officers Management Program (AOMP), which is also housed in SPIA. This program has been providing management and leadership education for law enforcement professionals since 1989 and offers participants the opportunity to earn fifteen college credits as a non-degree student.
If students are able to complete the correct courses as NDS then they may still receive the certificate.

There is no time limit on completion of the certificate; however, if students wish to take a “break” from the certificate program, they must notify the LPS academic advisor. This will allow us to keep track of the number of enrolled certificate students.

Students who complete the certificate may apply for admittance to the Bachelor’s Degree program. Their certificate course work will be considered in the application, but there is no guarantee of admission. It is a separate application process. If a certificate student does complete the Bachelor’s Degree in Leadership in the Public Sector then their certificate will be removed from their transcript, as students may not have a certificate or a minor degree in the same major degree.

When the student is approved for graduation with the Bachelor’s, LPS administration will notify Registration and Records that the certificate should be removed from the transcript.

Leadership in the Public Sector BA students who are unable to or do not wish to complete the BA, but have fulfilled the requirements for the certificate, may receive the certificate.

Certification
To be certified as having the certificate in Leadership in the Public Sector, students must have a minimum 2.66 grade point average across all courses used towards the Certificate. The LPS Academic Advisor will certify the certificate prior to completion

Administration of the Certificate Program
The certificate program coordinator will be the LPS academic advisor, which is currently:

LaShica Waters
Caldwell 210
Phone: 919-513-4330
Email: ldwaters@ncsu.edu

The LPS program administrator will determine whether courses, which have been transferred from other institutions, qualify for the certificate. No more than one course transferred from other institutions may count toward the certificate.

Academic Structure
Term Effective: 8/2014
Plan Code: 16LPSCTU
CIP Code: 24.0199
Description: Undergraduate Certificate in Leadership in the Public Sector Offered via Distance Education

Plan Requirements

- Completion of 15 hours of coursework including 9 hours of required courses and 6 hours of elective courses. Students must take on 200 level elective and one 300 or 400 level elective.
- A grade of C (2.00) or better is required for each course taken in the certificate program as well as a 2.66 overall cumulative GPA in all certificate courses. If a student drops below this GPA, the student may not continue in the program.

### Elective Courses

Total Hours 15

### Political Science (BA)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

Major requirements are: 19 hours of core courses that cover major political science sub fields (i.e., American government, international relations, theory, public law and policy, and research methods) as well as courses that develop computer competencies and an orientation to the discipline; 15 hours of political science electives, 12 of which must be taken at the 300 level or above, and one of which must be a 400 level senior seminar, which includes a substantial research requirement. Grades of C- or better are required for courses applied towards the major. At graduation, a minimum GPA of 2.0 is required for all political science courses taken. For a seminar-by-seminar guide to the course requirements for the Bachelor of Arts curriculum, including all of the concentrations described below, see the departmental website (http://spia.ncsu.edu/ps/undergraduate.html).

Students who wish to focus their studies in a specific sub field may elect one of the following concentrations under the Bachelor of Arts program:

### American Politics

This concentration develops skills that benefit students interested in graduate and professional school, administrative careers, and business careers that involve government relations and policy. Major requirements are: 21 hours of core courses; 9 hours of courses specifically related to the study of political processes, institutions, political culture, and political events within the American system.

### International Politics

This concentration develops skills that benefit students interested in graduate or professional school, careers in government service, international organizations, issue advocacy, and businesses with international interests. Major requirements are: 15 hours of core courses; 12 hours of concentration electives in regional and world politics; 3 hours of concentration electives in any political science sub-field.
**Law and Justice**

This concentration develops skills that benefit students interested in graduate or professional school (particularly law school), law enforcement, judicial administration, and careers with agencies involved in the administration of justice. Major requirements are: 18 hours of core courses; 12 hours of emphasis electives in either the justice system or law and theory.

**Public Policy**

This concentration prepares students for careers with public institutions where they will work with the processes, formulation, implementation, and evaluation of public policy at international, national, state, and local levels. Major requirements are: 15 hours of core courses; 15 hours of concentration electives.

problems logically and systematically, working with others in vertically
and horizontally organized arrangements, expressing a position and
defending it with corroborating evidence, and writing clear and correct
prose. They also develop citizenship and leadership competencies that
include the personal obligation to participate in public life. Consequently,
political science majors are well-positioned for careers in teaching, the
legal profession, criminal justice agencies, state and local government,
urban planning, the federal bureaucracy, journalism or in any of the
organizations that seek to monitor political processes or to influence the
content of public policy. Private firms also seek managers and public
affairs specialists who have a knowledge of the functioning of the political
system and of politics in general.

Political Science (BA): American Politics Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

Major requirements are: 19 hours of core courses that cover major
political science sub fields (i.e., American government, international
relations, theory, public law and policy, and research methods) as well
as courses that develop computer competencies and an orientation to
the discipline; 15 hours of political science electives, 12 of which must
be taken at the 300 level or above, and one of which must be a 400
level senior seminar, which includes a substantial research requirement.
Grades of C- or better are required for courses applied towards the
major. At graduation, a minimum GPA of 2.0 is required for all political
science courses taken. For a semester-by-semester guide to the course
requirements for the Bachelor of Arts curriculum, including all of the
concentrations described below, see the departmental website (http://
sia.ncsu.edu/ps/undergraduate.html).

Students who wish to focus their studies in a specific sub field may elect
one of the following concentrations under the Bachelor of Arts program:

American Politics

This concentration develops skills that benefit students interested in
graduate and professional school, administrative careers, and business
careers that involve government relations and policy. Major requirements
are: 21 hours of core courses; 9 hours of courses specifically related to
the study of political processes, institutions, political culture, and political
events within the American system.

Semester Sequence

This is a sample.

Critical Path Courses – Identify using the code (CP) which courses are considered critical path courses which represent specific major requirements that are predictive of student success in a given program/plan. Place the (CP) next to the credit hours for the course.

Career Opportunities

A degree in political science is excellent preparation for a number of careers and graduate opportunities. Political science majors study critical issues surrounding such things as international security, public policy, and government practices. They develop real-world skills such as solving problems logically and systematically, working with others in vertically and horizontally organized arrangements, expressing a position and defending it with corroborating evidence, and writing clear and correct prose. They also develop citizenship and leadership competencies that include the personal obligation to participate in public life. Consequently, political science majors are well-positioned for careers in teaching, the legal profession, criminal justice agencies, state and local government, urban planning, the federal bureaucracy, journalism or in any of the organizations that seek to monitor political processes or to influence the content of public policy. Private firms also seek managers and public affairs specialists who have a knowledge of the functioning of the political system and of politics in general.

Political Science (BA): International Politics Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

Major requirements are: 19 hours of core courses that cover major political science sub fields (i.e., American government, international relations, theory, public law and policy, and research methods) as well as courses that develop computer competencies and an orientation to the discipline; 15 hours of political science electives, 12 of which must
be taken at the 300 level or above, and one of which must be a 400 level senior seminar, which includes a substantial research requirement. Grades of C- or better are required for courses applied towards the major. At graduation, a minimum GPA of 2.0 is required for all political science courses taken. For a semester-by-semester guide to the course requirements for the Bachelor of Arts curriculum, including all of the concentrations described below, see the departmental website (http://spia.ncsu.edu/ps/undergraduate.html).

Students who wish to focus their studies in a specific sub field may elect one of the following concentrations under the Bachelor of Arts program:

**International Politics**

This concentration develops skills that benefit students interested in graduate or professional school, careers in government service, international organizations, issue advocacy, and businesses with international interests. Major requirements are: 15 hours of core courses; 12 hours of concentration electives in regional and world politics; 3 hours of concentration electives in any political science sub-field.

### Semester Sequence

This is a sample.

Critical Path Courses – Identify using the code (CP) which courses are considered critical path courses which represent specific major requirements that are predictive of student success in a given program/plan. Place the (CP) next to the credit hours for the course.

**Career Opportunities**

A degree in political science is excellent preparation for a number of careers and graduate schools. Political science majors study critical issues surrounding such things as international security, public policy, and government practices. They develop real-world skills such as solving problems logically and systematically, working with others in vertically and horizontally organized arrangements, expressing a position and defending it with corroborating evidence, and writing clear and correct prose. They also develop citizenship and leadership competencies that include the personal obligation to participate in public life. Consequently, political science majors are well-positioned for careers in teaching, the legal profession, criminal justice agencies, state and local government, urban planning, the federal bureaucracy, journalism, or in any of the organizations that seek to monitor political processes or to influence the content of public policy. Private firms also seek managers and public affairs specialists who have a knowledge of the functioning of the political system and of politics in general.

**Political Science (BA): Law and Justice Concentration**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orp.ncsu.edu/pgas/)

Major requirements are: 19 hours of core courses that cover major political science sub fields (i.e., American government, international relations, theory, public law and policy, and research methods) as well as courses that develop computer competencies and an orientation to the discipline; 15 hours of political science electives, 12 of which must be taken at the 300 level or above, and one of which must be a 400 level senior seminar, which includes a substantial research requirement. Grades of C- or better are required for courses applied towards the major. At graduation, a minimum GPA of 2.0 is required for all political science courses taken. For a semester-by-semester guide to the course requirements for the Bachelor of Arts curriculum, including all of the concentrations described below, see the departmental website (http://spia.ncsu.edu/ps/undergraduate.html).

Students who wish to focus their studies in a specific sub field may elect one of the following concentrations under the Bachelor of Arts program:

**Law and Justice**

This concentration develops skills that benefit students interested in graduate or professional school (particularly law school), law enforcement, judicial administration, and careers with agencies involved in the administration of justice. Major requirements are: 18 hours of core courses; 12 hours of emphasis electives in either the justice system or law and theory.

**Plan Requirements**

**Political Science (BA): Law and Justice Concentration: 120 Total Units**

Semester Sequence

This is a sample.

Critical Path Courses – Identify using the code (CP) which courses are considered critical path courses which represent specific major requirements that are predictive of student success in a given program/plan. Place the (CP) next to the credit hours for the course.

Course  Title  Hours
First Year  
Fall Semester
ENG 101  Academic Writing and Research  4
PS 201  American Politics and Government  3
Mathematics  3
History I  3
GEP Social Sciences (p. 1430)  3

Spring Semester
Foreign Language 201  3
International Requirement  3

Second Year  
Fall Semester
PS 241  Introduction to Comparative Politics  3
ST 311  Introduction to Statistics  3
Literature I  3
GEP Natural Science with Lab  4
GEP Health and Exercise Studies (p. 1422)  1

Spring Semester
PS 371  Research Methodology of Political Science  3
Literature II  3
GEP Additional Breadth (p. 1417) (Mathematical Sciences/ Natural Sciences/Engineering)  3
GEP Social Sciences (p. 1430)  3
Additional GEP Social Sciences (p. 1430)  3

Hours  15

Third Year  
Fall Semester
PS 305  The Justice System in the American Political Process  3
PS 300-level Electives  3
Philosophy  3
GEP Interdisciplinary Perspectives (p. 1426)  3
GEP Natural Sciences (p. 1429)  3

Hours  15

Spring Semester
PS 362  American Political Thought  3
Restricted Electives  6

Hours  14

Fourth Year  
Fall Semester
PS Concentration Elective  3
PS 300-level Electives  3
Free Elective  9

Hours  15

Spring Semester
PS Concentration Elective  3
PS Concentration Seminar  3
Free Elective  9

Hours  15

Total Hours  120

1  C- or better
Career Opportunities
A degree in political science is excellent preparation for a number of careers and graduate opportunities. Political science majors study critical issues surrounding such things as international security, public policy, and government practices. They develop real-world skills such as solving problems logically and systematically, working with others in vertically and horizontally organized arrangements, expressing a position and defending it with corroborating evidence, and writing clear and correct prose. They also develop citizenship and leadership competencies that include the personal obligation to participate in public life. Consequently, political science majors are well-positioned for careers in teaching, the legal profession, criminal justice agencies, state and local government, urban planning, the federal bureaucracy, journalism or in any of the organizations that seek to monitor political processes or to influence the content of public policy. Private firms also seek managers and public affairs specialists who have a knowledge of the functioning of the political system and of politics in general.

Political Science (BA): Public Policy Concentration
To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orp.ncsu.edu/pgas/).

Major requirements are: 19 hours of core courses that cover major political science sub fields (i.e., American government, international relations, theory, public law and policy, and research methods) as well as courses that develop computer competencies and an orientation to the discipline; 15 hours of political science electives, 12 of which must be taken at the 300 level or above, and one of which must be a 400 level senior seminar, which includes a substantial research requirement. Grades of C- or better are required for courses applied towards the major. At graduation, a minimum GPA of 2.0 is required for all political science courses taken. For a semester-by-semester guide to the course requirements for the Bachelor of Arts curriculum, including all of the concentrations described below, see the departmental website (http://spia.ncsu.edu/ps/undergraduate.html).

Students who wish to focus their studies in a specific sub field may elect one of the following concentrations under the Bachelor of Arts program:

Public Policy
This concentration prepares students for careers with public institutions where they will work with the processes, formulation, implementation, and evaluation of public policy at international, national, state, and local levels. Major requirements are: 15 hours of core courses; 15 hours of concentration electives.

Plan Requirements
Political Science (BA): Public Policy Concentration: 120 Total Units

**Career Opportunities**

A degree in political science is excellent preparation for a number of careers and graduate opportunities. Political science majors study critical issues surrounding such things as international security, public policy, and government practices. They develop real-world skills such as solving problems logically and systematically, working with others in vertically and horizontally organized arrangements, expressing a position and defending it with corroborating evidence, and writing clear and correct prose. They also develop citizenship and leadership competencies that include the personal obligation to participate in public life. Consequently, political science majors are well-positioned for careers in teaching, the legal profession, criminal justice agencies, state and local government, urban planning, the federal bureaucracy, journalism or in any of the organizations that seek to monitor political processes or to influence the content of public policy. Private firms also seek managers and public affairs specialists who have a knowledge of the functioning of the political system and of politics in general.

**Political Science (BS)**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orp.ncsu.edu/pgas/).

Major requirements are 27 hours of political science coursework. At least 6 hours must be taken from each of the following groups: Group A-American politics/or public policy and administration; Group B-international affairs/comparative politics; and Group C-political theory/

---

**Plan Requirements**

**Major Residency Requirements:** A minimum of 18 credit hours of PS courses taken at NC State with a grade of C or better.

**Grade Point Average (GPA) Requirements:** A 2.0 GPA is required in all major courses with a PS prefix.

### Career Opportunities

A degree in political science is excellent preparation for a number of careers and graduate opportunities. Political science majors study critical issues surrounding such things as international security, public policy, and government practices. They develop real-world skills such as solving problems logically and systematically, working with others in vertically and horizontally organized arrangements, expressing a position and defending it with corroborating evidence, and writing clear and correct prose. They also develop citizenship and leadership competencies that include the personal obligation to participate in public life. Consequently, political science majors are well-positioned for careers in teaching, the legal profession, criminal justice agencies, state and local government, urban planning, the federal bureaucracy, journalism or in any of the organizations that seek to monitor political processes or to influence the content of public policy. Private firms also seek managers and public affairs specialists who have a knowledge of the functioning of the political system and of politics in general.

### Political Science (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The minor in Political Science is open to all students. It will prepare them to be well-informed and politically active citizens as well as prepare them for graduate study in political science, public administration or law. Students will learn how laws are created and enforced, the diversity of political cultures, the problems of the world community, and more. No courses for the minor may be taken for S/U credit.

### Admissions

Students may declare their intention to complete the Political Science minor by consulting with Susan Lawhead as listed below.

### Certification

Susan Lawhead will certify the minor prior to graduation. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State.

**Total Hours** 15

1 Must be a 400-500 level course listed with an “S” after the course number, or any 498 or 598 course with the word “seminar” in its title, or other course designated as a seminar for a given semester.
2 Courses in Pair A have a middle digit of 0 or 1; courses in Pair B a middle digit of 3 or 4; and courses in Pair C a middle digit of 6 or 7

**School of Social Work**

The Department of Social Work offers a Bachelor of Social Work (BSW) degree, which was reaccredited by the Council on Social Work Education (CSWE) in 2013. The CSWE Commission on Accreditation is the sole body authorized to accredit social work education programs in the United States.

As one of the nation’s first accredited BSW programs, the Department of Social Work has been training BSW students for more than 30 years to help them prepare for the next step in their social work careers. Our curriculum incorporates a professional foundation that includes: Social Work Practice, Human Behavior and Diversity, Community Social Services, Social Policy, Research Methodology for Social Workers. The program also prepares students for advanced graduate-level academic work. Social work elective courses offer opportunities to study in depth various social work practice areas such as child welfare, aging, health care, addiction recovery, African American families, school social work, homeless individuals, soldiers/veterans/families, legal aspects of social work and a 7-week study abroad program in Guatemala along others. Students complete three 40-hour pre-professional placements and a 420-hour field placement in a social service setting. Upon degree completion, students are eligible for state licensing or certification.

The Department also offers an undergraduate minor in social work and a Master of Social Work (MSW). The social work minor is an excellent choice for students interested in combining a primary academic area (major), such as sociology, political science, psychology, nonprofit studies, or Spanish or other language. The minor must be completed no later than the semester in which the student expects to graduate from their degree program.

The Department offers two MSW program options; an Advanced Standing MSW and a Traditional MSW. The Advanced Standing MSW option is a 12-month intensive, full-time program totaling 39 credit hours that begins in May. The Traditional MSW program is a two-year, full-time program requiring the completion of 60 credit hours and begins in August. The Department of Social Work does not admit MSW students in the spring. For more information please visit the Department of Social Work website (https://socialwork.chass.ncsu.edu/).

Our mission is to prepare students for practice that addresses the social, economic, cultural, demographic and political changes that shape our world and beyond. Through teaching, advising, practice and research, we emphasize: Professional ethics, Social justice, Diversity, and Community Engagement.

For more information about our BSW program curriculum, please visit The Department of Social Work’s BSW Curriculum Page (https://socialwork.chass.ncsu.edu/bsw/curriculum.php).

**Residency Requirements**

A minimum of 30 of the last 45 credit hours, including three practice courses, field preparation and fieldwork, must be completed at NC State’s Department of Social Work BSW Program. Transfer credit for these courses will not apply towards a student degree but may be used for free elective credit.

A grade of C- or better is required in all major courses, with the exception of SW 480 Preparation for Field Work.

**Student Organizations**

Baccalaureate Student Social Work Association (BSSWA) (https://getinvolved.ncsu.edu/organization/92/)

Collegiate Recovery Community (CRC) at NC State (https://getinvolved.ncsu.edu/organization/CRCNCSU/)

Graduate Student Social Work Association (GSSWA) (https://getinvolved.ncsu.edu/organization/gsswa/)

Men in Social Work (MiSW) (https://getinvolved.ncsu.edu/organization/429/)

Phi Alpha Honor Society - Epsilon Kappa (https://getinvolved.ncsu.edu/organization/519/)

**Faculty**

**Department Head**

Karen Bullock, Ph.D., Department Head and Professor

**Director of Graduate Program**

Kim L. Stansbury, Ph.D., Associate Professor and MSW Program Director
Professor emeritus
J. Pennell

Plans
• Social Work (Bachelor) (p. 1214)
• Social Work (Minor) (p. 1222)

Social Work (Bachelor)

The Bachelor of Social Work (BSW) degree prepares students for entry-level professional generalist practice with diverse populations. BSW students acquire knowledge, social work professional values, and the skills necessary to respond competently to the service needs of diverse individuals, families, groups, communities, and organizations. The program emphasizes human and social well-being, human rights, social and economic justice, and the empowerment of individuals, families, groups, and communities that experience oppression and discrimination.

During their final semester, all social work students complete a field internship in a community agency.

The BSW program is accredited by the Council on Social Work Education (CSWE (https://www.cswe.org/)). The program graduates social workers who follow the NASW Code of Ethics (https://www.socialworkers.org/about/ethics/code-of-ethics/code-of-ethics-english/) and apply it to a variety of situations related to diverse client populations, both in the classroom and in field settings.

For more information about our School, visit our website (https://socialwork.chass.ncsu.edu/) or our office on campus.

**Major Residency Requirements**: A minimum of 34 credit hours must be completed at NC State’s Department of Social Work’s BSW program, including three practice courses. (SW 320 Social Work Practice I, SW 405 Social Work Practice II, SW 408 Social Work Practice III), field preparation (SW 480), field work and field seminar (SW 490 Field Seminar and SW 491 Community-Based Field Practicum).

**Grade Point Average (GPA) Requirements**: A grade of C- or better is required in all major courses and an S in SW 480.

Career Opportunities

Social work is an exciting, challenging, and dynamic profession. No matter what the political climate or the changing nature of personal or social need, social workers will be in demand. The BSW Program provides students with the knowledgeable, values, and skills to respond competently to:

1. The aspirations and service needs of diverse client populations
2. The contexts that shape the needs of clients and service delivery systems throughout the state.

Social workers are employed in a variety of settings which include health care, mental health, services to the aging, child welfare, public welfare, addictions recovery, public schools, developmental disabilities, and many other public and private settings. In each of these areas there is...
recognition for professional preparation, and the BSW graduate will be prepared to embark upon a career in his or her chosen field. All states, including North Carolina, have licensing or certification procedures for social work practice.

Social Work (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)!

The minor in Social Work is designed to familiarize students with the social service system, major social welfare programs, and elements of the profession of social work. This is an excellent minor for students interested in combining a primary academic area (major), such as sociology, political science, or psychology with social welfare and professional social work content. It is also an excellent field of study for students majoring in any area who may need or desire knowledge of social welfare and social. No courses for the minor may be taken for S/U credit.

Admissions and Certification of Minor

In both instances, students can contact any of the social work faculty members listed below. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification can be found in Room 205C in the 1911 Building and should be completed no later than during the registration period for the student’s final semester at NC State.

SIS Code: 16SWM

Plan Requirements

- A total of 16 hours (5 courses) is required for the minor. Four required courses (13 credit hours) and one SW Elective (3 credit hours).
- A grade of ‘C’ or better must be achieved in each class counting toward the minor and an overall GPA of 2.5 must be maintained in the minor courses.
- All courses in the minor must be taken for a letter grade. Credit only is not permitted.
- A maximum of six credit hours may be transferred into the minor from another CSWE-accredited institution. The Department of Social Work will determine which courses transferred from other institutions may qualify to meet requirements for the minor.
- A maximum of ONE (1) course may be used (double-counted) towards both departmental major requirements and minor requirements.

Total Hours: 16

1 Denotes special topics or new courses. Different letters designate each separate course offering (i.e., 495A, 495B). Check with the professor teaching the course or Suzy Lamb as listed below for more information.

2 Individual student class topic and research designed in consultation with a faculty member. Requires departmental approval. For more information contact Suzy Lamb as listed below.

College of Natural Resources

For more information about this college, including contact information, visit the college (http://www.cnr.ncsu.edu).

NCSU Box 8001
Raleigh, NC 27695-8001

NC State University College of Natural Resources

Bringing science, technology, policy and people together to work for a healthy and sustainable tomorrow.

Vision

We desire to improve the sustainability of the world’s natural resources and improve the economic and social condition of its people through education, innovation, and the discovery and dissemination of new knowledge.

Mission

Our mission is to serve as a leader in our disciplines in North Carolina, the nation and the world. We seek to strengthen natural resource management, enhance environmental quality and conservation values, increase the sustainable yield of forestland goods and services, increase the value and competitiveness of the forest products and natural resource-based industries, expand recreation and tourism opportunities, and enhance the health and well being of our citizens through superior professional education, innovative scientific research, and dissemination of credible and timely information.

Values

We value—

- Academic excellence in all of its forms—the scholarships of discovery, teaching, information transfer and scientific integration.
• Both cutting-edge research in fundamental science and translational research to address practical problems in North Carolina, the nation and the world.
• Diversity of disciplines, people, places and ideas
• Our students, staff and faculty and are committed to nurturing all.

We admire— academic and scientific rigor and dedication
We seek— innovative and creative solutions to today’s problems.
We strive— for collegiality and appreciate friendly service.
We aspire— to leadership in all of our disciplines.
We intend— to make the world a better place for this and future generations.

Student Activities
Each department in the college has student curriculum clubs within the degree programs and/or student chapters of the appropriate national professional organizations. All of these organizations provide opportunities for professional development, for interaction with faculty and other students, and for participation in local, regional, and national student and professional activities. Student representatives from each organization and curriculum serve on the College of Natural Resources Council. The Council provides overall coordination for student activities, allocates funds for student activities, and oversees production of the Pinetum, the College of Natural Resources student yearbook.

CNR Ambassadors
The CNR Ambassador Program highlights the “student face” of the college. The group is composed of leaders from each program in the college, following a college-wide nomination and selection process. Their activities include representing the college in many ways, ranging from mentoring freshmen to working with prospective students, through shadowing experiences, phone calls and campus tours. In addition the Ambassadors represent their programs and the college to outside visitors, such as the Board of Trustees, Foundation officers, and others who would like to know about the CNR student experience at NC State.

Facilities and Laboratories
In addition to standard classrooms and teaching laboratories, the College of Natural Resources has a unique complex of indoor and field facilities that are utilized in the academic programs. CNR computer facilities provide access to disciplinary applications such as geographic information systems, remote sensing, process simulation, and management/planning software as well as to the university computer network. Included are a general computer lab, two classrooms incorporating a flexible landscape, plasma screens and laptop computers providing the breadth of teaching/learning approaches, a high-tech “collaboratory” designed especially for student team project work. Also available are several different analytical and biotechnology facilities, an extensive herbarium, and a wood sample collection. About 95,000 acres of forestland are available for field instruction and research at Chowan Swamp, Bull Neck Swamp, Goodwin Forest, Hill Forest, Hofmann Forest, Hosley Forest and Schenck Forest, Slocum Camp, the site of the annual forestry and wildlife camps at Hill Forest, contains classrooms, dining facilities, and student and staff housing. Specialized pilot plant laboratories unique to wood and paper science are contained in the Hodges Wood Products Laboratory and the Reuben B. Robertson Pulp and Paper Laboratory. Equipment in the Hodges Laboratory includes computer controlled woodworking machinery, testing for biomaterials, 3-D printer, life cycle analysis software, and numerous other items required to convert sustainable materials into viable products. The Robertson Laboratory is a 50,000 sq. ft. facility, which contains laboratories and modern pulping and papermaking equipment dedicated to teaching and research activities. Examples of equipment are secondary fiber recycling equipment, a thermo-mechanical pulping unit, a pilot-scale paper machine, process control equipment, paper testing laboratory, and pulping digesters.

Fields of Instruction and Work Experience
All curricula in the college have strong components of hands-on field and laboratory instruction and experience, and all either require or strongly recommend on-the-job work experience. All students are required to complete the equivalent of one or more of the following summer activities: camp, internship, practicum, and work experience. The Forest Management and Fisheries, Wildlife, and Conservation Biology curricula both have required summer camps. Undergraduates enrolled in Parks, Recreation and Tourism Management complete a 9-week internship immediately following the completion of the junior year. All Paper Science majors complete a 12-week internship in an industrial setting approved by the college. Sustainable Materials and Technology students are required to complete a summer internship in the industry. Students in all curricula are encouraged to participate in summer jobs and the cooperative education program to gain work experience.

Outdoor and other practical laboratories are a regular part of some courses. In other courses, field instruction may include longer trips (often on weekends) to privately owned businesses and industries, governmental agencies, state and federal forests, and wildlife refuges.

Honors and Scholars Programs
The College of Natural Resources participates in the University Honors Program, the University Scholars Program, the Women in Science and Engineering (WISE) Program, and the Eco-Village Program in which exceptional new students (freshman or transfer) are selected for special courses and activities that provide an expanded educational experience.

The College of Natural Resources also offers a disciplinary honors program, which provides the opportunity for advanced students with outstanding records to enhance the depth of study in their major field. Students with an overall GPA of 3.0 or better and a major GPA of 3.25 or better are invited to participate in the Honors Program. Students must have at least 40 hours of credit. Honors students develop more rigorous programs of study, frequently taking advanced courses in mathematics, science, or social science, or graduate courses in the chosen curriculum. With the adviser’s consent honors students may substitute preferred courses for normally required courses in order to develop strength in special interest areas. Honors students are required to undertake a program of independent study, which can involve a research problem or special project during their junior or senior year, and they must participate in the senior honors seminar.

Two honor societies in the College of Natural Resources promote and recognize academic excellence: Xi Sigma Pi (for majors within Forestry and Environmental Resources and in Forest Biomaterials) and Rho Phi Lambda (for recreation majors). Advanced undergraduate and graduate students with high academic achievement are invited to become members of these societies. High achieving forest management and natural resources students are also eligible for recognition by two agriculture honor societies, Alpha Zeta and Gamma Sigma Delta. All
students are also eligible for recognition by the campus-wide honor societies.

Scholarships
The College of Natural Resources administers a large program of academic scholarships that is separate from the University Merit Awards Program. About 170 academic scholarships (ranging from $1,000 to $10,000 per year), renewable annually, are awarded in several program areas to new, continuing, and transfer students. The scholarships are awarded based on academic excellence and leadership.

Computer Competency
Extensive use of computers and workstations is incorporated throughout all curricula of the College of Natural Resources. Students are expected to use the computer for increasingly complex class assignments and for the preparation of papers and reports. Computing resources are available for student use in the college and elsewhere on campus, but many students find it more convenient to purchase a personal computer. Questions about such purchases should be directed to the Associate Dean for Academic Affairs or the appropriate departmental curriculum coordinator.

International Activities
Students in the College of Natural Resources are exposed to the international dimensions of their programs in a variety of ways. Many faculty members regularly travel abroad and a number are active in major projects in foreign countries, including an international cooperative research project concentrating on Central American and Mexico, faculty exchange programs with Sweden and Finland, and several recent agreements for student exchange programs in Asia and South America. With the faculty’s experiences, the international aspects of many topics are covered in core courses, and several elective undergraduate and graduate courses focus specifically on the international dimensions of natural resource management. In addition, many international students enroll in the college with as many as 21 different countries represented in recent years. There are also in-the-major study abroad opportunities, which are led by CNR faculty, and which range from two-week trips to five-week summer sessions. Recent study trips have included China, Australia, Namibia, Ghana, Sweden, Costa Rica, and Chile. There is also scholarship support to help students take advantage of international job opportunities.

Faculty
Dean
Dr. Myron Floyd, Interim Dean

Assistant Dean for Academic Affairs
Dr. Melissa Pasquinelli

Associate Dean for Extension
Dr. Bob Bardon

Assistant Dean for Research
Dr. Marian McCord

Assistant Dean for College Advancement
Laura Brown de Fuenmayor

Assistant Dean for Finance and Business
Shane Jarvis

Director
Sam Cook, Executive Director of Forest Assets
Sarah Corica, Director of Marketing and Communications
Joshua Gira, Director of Information and Instructional Technology
Dr. Shaefny Grays, Interim Director of Community and Diversity
Yvonne Lee, Director of Academic and Student Affairs
Rory Loycano, Director of Research Administration
Tiffany McLean, Director of Recruitment and Student Engagement
Mohan Ramaswamy, Director of Natural Resources Library

Departments
• Department of Forest Biomaterials (p. 1225)
• Department of Forestry and Environmental Resources (p. 1239)
• Department of Parks, Recreation and Tourism Management (p. 1294)

Majors
• Environmental Sciences (BS) (p. 1240)
• Environmental Technology and Management (BS) (p. 1246)
• Fisheries, Wildlife, and Conservation Biology (BS): Conservation Biology Concentration (p. 1249)
• Fisheries, Wildlife, and Conservation Biology (BS): Fisheries Science Concentration (p. 1252)
• Fisheries, Wildlife, and Conservation Biology (BS): Wildlife Science Concentration (p. 1256)
• Forest Management (BS) (p. 1258)
• Forest Management (BS): Ecology Concentration (p. 1269)
• Forest Management (BS): Production Concentration (p. 1277)
• Natural Resources (BS): Ecosystem Assessment Concentration (p. 1285)
• Natural Resources (BS): Policy and Administration Concentration (p. 1288)
• Paper Science and Engineering (BS) (p. 1226)
• Paper Science and Engineering (BS): Dual Major (p. 1229)
• Parks, Recreation and Tourism Management (BS): Parks and Natural Resource Recreation Concentration (p. 1295)
• Parks, Recreation, and Tourism Management (BS): Program Management Concentration (p. 1298)
• Parks, Recreation, and Tourism Management (BS): Sustainable Tourism Concentration (p. 1301)
• Professional Golf Management (BS) (p. 1304)
Minors

- Environmental Education (Minor) (p. 1294)
- Environmental Sciences (Minor) (p. 1245)
- Forest Management (Minor) (p. 1284)
- Parks, Recreation, and Tourism Management (Minor) (p. 1304)
- Pulp and Paper Technology (Minor) (p. 1232)
- Renewable Energy Assessment (Minor) (p. 1293)
- Sustainable Materials and Technology (Minor) (p. 1239)
- Wetland Assessment (Minor) (p. 1293)
- Wildlife Sciences (Minor) (p. 1294)

Certificates

- Renewable Energy Assessment (Certificate) (p. 1292)

Department of Forest Biomaterials

Sustainable, renewable forest biomaterials such as wood, paper and value-added biomaterials are produced by large and small industries across North Carolina, and throughout the US. These renewable biomaterials are used for construction of sustainable housing, low carbon bioenergy, recyclable pulp and paper products, and value-added chemicals and composites. The future is bright for students with a blend of engineering, materials science, and practical business skills that are highly valued by employers.

The Department of Forest Biomaterials offers two curricula leading to Bachelor of Science degrees - Paper Science and Engineering, and Sustainable Materials and Technology. Both curricula feature small classes, extensive interactions between faculty and students, opportunities for internships, co-ops and undergraduate research, and stress the professional development of all students. Graduates are exceptionally well prepared for rewarding professional careers with large or small companies in the renewable biomaterials industries, suppliers to the industry, or with government agencies.

Faculty

Head
M. Hakovirta

Directors
M.V. Byrd, Director of Undergraduate Programs, Paper Science & Engineering
V. Chiang, Co-Director, Forest Biotechnology Group
P.N. Peralta, Director of Sustainable Materials

J. Piercy, Director of Student Recruiting, Executive Director of the Pulp & Paper Foundation

Professors
D. Argyropoulos
M. Hakovirta
M. Hubbe
H. Jameel
S.S. Kelley, Reuben B. Robertson Professor
M.G. McCord
M.A. Pasquinelli, University Faculty Scholar
O.J. Rojas
D.C. Tilotta
R.A. Venditti

Professor Emeriti
H.M. Chang
V. Chiang
E. Funkhouser
M. Kocurek
E.A. Wheeler

Adjunct Professor
S. Banerjee
M. Joyce

Associate Professor
M.V. Byrd
L.A. Lucia
L. Pal
S. Park, EJ Woody Rice Associate Professor, University Faculty Scholar
J.J. Pawlak
P.N. Peralta
I.S. Peszlen
D.E. Saloni

Assistant Professor
R. Gonzalez, University Faculty Scholar
Within a few years after graduation, alumni of the Paper Science & Engineering program at NC State University will be:

- Effective engineers and leaders in the paper, chemical process, and related industries.
- Professionals who act in a safe and ethical manner.
- Lifelong learners who pursue opportunities to continue their education.

**Summer Internship**

All Paper Science and Engineering majors are required to work one summer in a pulp or paper manufacturing facility. One hour of academic credit is granted after completion of 12 weeks of this work and presentation of an engineering report of professional quality. In addition, students are urged to work in manufacturing facilities the other two summers, as the work provides valuable practical experience. Departmental advisers assist students in locating summer jobs, which are found throughout the US and abroad.

Many Paper Science & Engineering students work at least one co-op rotation, in which they leave school for one semester and work in the industry. The resulting experience adds significantly to a student’s desirability upon graduation.

**Accredited Program**

**Regional Program**

The Paper Science and Engineering curriculum is a regional program approved by the Southern Regional Education Board as the undergraduate program to serve the Southeast in this field.

**Scholarships**

Approximately 125 undergraduate academic scholarships worth approximately $300,000 are granted annually to new and continuing students by companies comprising the Pulp and Paper Foundation, and by alumni and supporters of the program.

**Plan Requirements**

**Paper Science and Engineering (BS): 128 Total Units**

</table>
principles can be obtained from the Chemical Engineering Concentration. Students who have completed the Chemical Engineering Concentration in Paper Science and Engineering can, in cooperation with the College of Engineering and with an additional semester of study, earn a Bachelor of Science in Chemical Engineering as a second degree.

Program Educational Objectives

Within a few years after graduation, alumni of the Paper Science & Engineering Program at NC State University will be:

- Effective engineers and leaders in the paper, chemical process, and related industries.
- Professionals who act in a safe and ethical manner.
- Lifelong learners who pursue opportunities to continue their education.

Summer Internship

All Paper Science and Engineering majors are required to work one summer in a pulp or paper manufacturing facility. One hour of academic credit is granted after completion of 12 weeks of this work and presentation of an engineering report of professional quality. In addition, students are urged to work in manufacturing facilities other two summers, as the work provides valuable practical experience. Departmental advisers assist students in locating summer jobs, which are found throughout the US and abroad.

Many Paper Science & Engineering students work at least one co-op rotation, in which they leave school for one semester and work in the industry. The resulting experience adds significantly to a student’s desirability upon graduation.

Accredited Program

Regional Program

The Paper Science and Engineering curriculum is a regional program approved by the Southern Regional Education Board as the undergraduate program to serve the Southeast in this field.

Scholarships

Approximately 125 undergraduate academic scholarships worth approximately $300,000 are granted annually to new and continuing students by companies comprising the Pulp and Paper Foundation, and by alumni and supporters of the program.

2. Minimum grade of C- required.

### Career Opportunities

Graduates of this curriculum find opportunities for challenging careers as process engineers, product development engineers, process control engineers, chemists, technical service engineers, quality control supervisors, and production supervisors. Design and construction
engineering companies employ graduates as project engineers, and pulp and paper machinery/chemical companies use their education and skills for technical service and sales positions. Opportunities for managerial and executive positions are available to graduates as they gain experience.

The broad and intensive nature of this curriculum makes graduates attractive not only to the pulp and paper industry, but also to a variety of other major chemical process and bio-energy industries. This appeal is especially true for the dual degree in Paper Science & Engineering and Chemical Engineering.

**Pulp and Paper Technology (Minor)**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgaas/)

The Pulp and Paper Technology Minor is available to all undergraduate students enrolled in the University as degree candidates, except Pulp and Paper Technology majors. The minor is focused on papermaking science and technology and is intended to be especially valuable to students majoring in programs leading to careers in corporate or government positions which would interface with the paper related industries. Students interested in business, scientific or engineering specialties which may interface with or be employed by these industries will find the minor especially useful.

Six hours of required courses provide a comprehensive overview of pulping and papermaking science and technology, including pulping, bleaching, chemical recovery, recycled fibers, stock preparation, papermaking, coating, printing, converting, and paper properties. Nine elective hours may be chosen from areas including wood chemistry, wet end chemistry, unit operations, process design and analysis, project management, paper physics, process control, or to gain more in depth exposure to the basic pulping, bleaching and papermaking processes.

**Admissions and Certification of Minor**

All undergraduate students enrolled in the University as a degree candidate, other than PPT majors, are eligible for admission to the PPT minor program. Dr. Med Byrd will serve as advisor and certify completion of the minor. Paperwork for certification can be found in 2205 Pulp & Paper Labs and must be submitted to the minor advisor no later than the registration period of the student’s final semester at NC State. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program.

**Elective Courses**

Select three of the following:

- PSE 322 Wet End and Polymer Chemistry
- PSE 332 Wood and Pulping Chemistry
- PSE 355 Pulp and Paper Unit Processes I
- PSE 360 Pulp and Paper Unit Processes II
- PSE 371 Pulping Process Analysis
- PSE 415 Paper Industry Strategic Project Analysis
- PSE 416 Process Design and Analysis
- PSE 465 Process Engineering
- PSE 472 Paper Process Analysis
- PSE 475 Process Control in Pulp and Paper

Total Hours: 15

**Note:** Some of the above courses have prerequisites. Permission to waive those prerequisites must be obtained from the course instructor after evaluation of the student’s academic background.

**Sustainable Materials and Technology (BS)**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgaas/)

Perry N. Peralta  
Director of Undergraduate Programs  
perry_peralta@ncsu.edu

The Sustainable Materials & Technology degree prepares students for 21st century jobs helping businesses and communities reduce their ecological footprint through efficient use of renewable natural materials, such as wood, bamboo and cork, in the manufacture and use of value-added products. You'll gain a strong foundation in environmental science, economics, social sciences, and materials science which prepares you to design, manufacture and sell sustainable bio-based products. This degree is for students interested in a career in a growing field with job flexibility, high placement rates, great starting salaries, a tradition of success and an unlimited future.

**Summer Internship**

Graduates of the Sustainable Materials and Technology program enter the real world with hands-on experience gained through internships, lab experiments, and practical coursework. More than one half of students participate in paid undergraduate research and work study opportunities. In addition, students are required to complete a paid summer internship or a semester co-op with a company in the industry. There are many other summer employment opportunities that are available to you beyond the required internship.

Graduates of the Sustainable Materials and Technology program enter the real world with hands-on experience gained through internships, lab experiences, and practical coursework. More than one half of students participate in paid undergraduate research and work study opportunities. In addition, students are required to complete a paid summer internship or a semester co-op with a company in the industry. There are many other summer employment opportunities that are available to you beyond the required internship.

1. A grade of C- or better is required.

2. Students should consult their academic advisors to determine how to complete this requirement.

Career Opportunities

Graduates of the Sustainable Materials and Technology curriculum have many and varied job opportunities upon graduation with most receiving more than one job offer. Graduates enter the industry as management trainees, sales trainees, process engineers, quality assurance specialist, research & development associates and many others.

Sustainable Materials and Technology (BS): SMT Wood Products Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)! Perry N. Peralta
Director of Undergraduate Programs
perry_peralta@ncsu.edu

The Sustainable Materials & Technology degree prepares students for 21st century jobs helping businesses and communities reduce their ecological footprint through efficient use of renewable natural materials, such as wood, bamboo and cork, in the manufacture and use of value-added products. You'll gain a strong foundation in environmental science, economics, social sciences, and materials science which prepares you to design, manufacture and sell sustainable bio-based products. This degree is for students interested in a career in a growing field with job flexibility, high placement rates, great starting salaries, a tradition of success and an unlimited future.

Summer Internship

Graduates of the Sustainable Materials and Technology program enter the real world with hands-on experience gained through internships, lab experiments, and practical coursework. More than one half of students participate in paid undergraduate research and work study opportunities.

1 A grade of C- or better is required.
2 Courses should expand student’s sustainability portfolio and must be approved by a faculty advisor.
Student is encouraged to select courses that will fulfill an academic minor. Courses should enhance student's career objectives and must be approved by a faculty advisor.

Career Opportunities

Graduates of the Sustainable Materials and Technology curriculum have many and varied job opportunities upon graduation with most receiving more than one job offer. Graduates enter the industry as management trainees, sales trainees, process engineers, quality assurance specialist, research & development associates and many others.

Sustainable Materials and Technology (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Department of Forest Biomaterials (FB) offers a minor in Sustainable Materials and Technology (SMT) to all undergraduates enrolled in the University as degree candidates except those in FB. The minor will provide students with a basic understanding of sustainability as applied to materials (e.g., wood, agricultural products, etc.) and the manufacturing processes that are used to convert them into a multitude of different products.

Admission and Certification of Minor

In both instances, students should contact the minor advisor, Dr. Perry Peralta. Paperwork for certification can be found in 1022 Biltmore Hall and should be completed no later than the registration period for the student's final semester at NC State.

Contact Person

SIS Code: 15SMTM

Plan Requirements

- A minimum of 15 hours is required for completion of the minor, and the minor should be completed no later than the semester in which the student expects to graduate from his/her degree program.
- 3 courses are required as indicated below, other courses are elective.
- An overall GPA of 2.0 in the minor coursework must be achieved.

Department of Forestry and Environmental Resources

Undergraduate programs in forestry and environmental resources incorporate many topics needed to make decisions about how society will interact with natural resources. Resources span aquatic, atmospheric, and terrestrial ecosystems upon which human lives depend. Faculty and students in the Department of Forestry and Environmental Resources study all of these resources and their interactions. As they plan for and assess impacts to natural resources, they integrate STEM and social science areas of study in multiple ways.

Five programs allow undergraduate students to focus study on the kinds of problems they want to solve:

- Environmental Technology and Management
- Environmental Science
- Fisheries, Wildlife and Conservation Biology
- Forest Management (Production and Ecology concentrations)
- Natural Resources (Ecosystem Assessment and Policy/Administration concentrations)

Department Highlights:

- Hands-on and field-based coursework throughout programs of study
- Strong emphasis on professional development, internships and experiential learning
- Generous scholarship support for students with proven academic credentials
- Broad range of research opportunities within and outside the academy
- Personal advising attention focused on students’ career opportunities

Plans

- Environmental Sciences (BS) (p. 1240)
- Environmental Sciences (Minor) (p. 1245)
Environmental Sciences (BS)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

This area of study uses interdisciplinary approaches that link natural science and social science disciplines, and a knowledge of environmental systems and earth processes. Such interdisciplinary approaches are essential for understanding changes in a rapidly changing world, and for understanding our past, present, and future. Environmental scientists will help ensure human prospects by improving both socio-economic development and environmental quality through innovation in new technologies and policies.

Public interest about environmental issues is increasing. Protecting and improving the environment involves knowledge and systematic problem-solving skills that are essential for environmental sciences. North Carolina State University’s environmental sciences degree program provides sound, individualized academic programs for students who can develop a wide range of careers. For information on entrance requirements, contact the program coordinator:

1. Must be completed with a grade of C- or higher.
2. See adviser to determine a relevant focal area and related course selections.
3. Advised Electives (9 credit hours) are to be selected in consultation with your adviser and need to focus on Environmental Science. At least 6 hours must be at the 400-level or above.

**Career Opportunities**

The Environmental Sciences program provides opportunities for students to rigorously explore complex, interdisciplinary environmental issues by combining courses from a number of NC State colleges to create a thorough interdisciplinary grounding. All degree options encourage students to pursue original research and gain field experience tackling real-world challenges — leaving them well prepared to take advantage of career opportunities once they graduate. Some graduates find jobs in the environmental industry, including careers as environmental consultants, working in large corporations, or starting their own businesses. Others find careers working in federal, state, and local agencies with environmental mandates. Still others continue their educations in professional and graduate schools.

**Environmental Sciences (Minor)**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Environmental Sciences minor allows students to connect the topics from their major to the compelling, contemporary issues that connect humans to the environment. The minor includes courses in all academic units to provide links between disciplines and to provide a foundation for analysis of environmental issues.

**Admissions**

Any student with an interest in Environmental Science minor should see the contact person listed below to discuss their interest in the minor, course requirements and complete the Declaration of Minor form to be submitted to the Office of Registration and Records. Students must have a minimum overall grade point average of 2.0 to be admitted to the minor.

**Certification**

The Environmental Science Committee will review the student's record and certify that the student has completed the requirements for the minor. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification should be completed no later than during the registration period for the student's final semester at NC State.

**Contact Person**

Erin A. Champion
Program Coordinator
3136B Jordan Hall
919.513.2520
eachampi@ncsu.edu

Effective Date: 7/2010
Plan Requirements

To complete the ES minor, students must complete 15 credit hours by taking three of the ES Core courses earning 9 Cr with a C- or better grade in each course. Students must then complete two additional elective courses with a C- or better from the approved list. A student may not major and minor in Environmental Science.

**Second Year**

**Fall Semester**

- **Environmental Technology Lab Elective**
- **Ecology Elective (CP)**
### Career Opportunities

Career opportunities include technical positions with: firms that offer environmental services; manufacturing companies that are required to maintain sophisticated environmental monitoring networks; consulting and audit firms that perform independent environmental audits; and state and federal regulatory agencies. A number of graduates have also pursued graduate degrees. Several professional certifications can be achieved through the major. Students may receive Hazardous Waste Operations and Emergency Response training and are eligible to sit for two professional certification exams: the exam for certification as an Associate Environmental Professional, and the exam Certified Hazardous Materials Manager.

### Fisheries, Wildlife, and Conservation Biology (BS): Conservation Biology Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

Fisheries, Wildlife and Conservation Biology (FWCB) major prepares students to manage and conserve populations of fish and wildlife in their natural habitats. This STEM (Science, Technology, Engineering and Mathematics) major gives students the skills they need to observe, research, monitor and assess the impact of environmental change, human behavior and public policy on wild populations of animals. Using a combination of lab work, technology and field study, students develop conservation strategies that ensure the long-term health of fish and wildlife populations.

After sophomore year, students spend six weeks in summer field courses. During “summer camp” experience, students learn hands-on fish and wildlife management techniques in locations across the state. From plant and animal identification and bird mist netting to camera-trapping and radio telemetry, students gain experiences that prepare them for careers after graduation. FWCB students have the option to substitute the summer field course with approved internships or study abroad courses.
The Conservation Biology concentration allows flexibility for students to pursue elements of conservation that align with their specific career goals. The degree requirements include 9 credits of technical electives that complement the major such as courses in environmental policy, entomology, science communication, or environmental education.

1. A grade of C- or better is required.
2. Can be met by summer camp (courses listed in adjacent block), a combination of internship and/or study abroad, or other courses that provide hands-on conservation biology experience.

### Career Opportunities

Graduates are prepared for graduate school and entry-level professional positions in state and federal government agencies, non-profit organizations and private industry. Upon graduation, students are qualified to seek certification from The Wildlife Society or the American Fisheries Society.

### Fisheries, Wildlife, and Conservation Biology (BS): Fisheries Science Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

Fisheries, Wildlife and Conservation Biology (FWCB) major prepares students to manage and conserve populations of fish and wildlife in their natural habitats. This STEM (Science, Technology, Engineering and Mathematics) major gives students the skills they need to observe, research, monitor and assess the impact of environmental change, human behavior and public policy on wild populations of animals. Using a combination of lab work, technology and field study, students develop conservation strategies that ensure the long-term health of fish and wildlife populations.

After sophomore year, students spend six weeks in summer field courses. During “summer camp” experience, students learn hands-on
fish and wildlife management techniques in locations across the state. From plant and animal identification and bird mist netting to camera-trapping and radio telemetry, students gain experiences that prepare them for careers after graduation. FWCB students have the option to substitute the summer field course with approved internships or study abroad courses.

The Fisheries concentration meets the qualifications for certification by the American Fisheries Society. The fisheries concentration includes required courses in chemistry, aquatic ecology, and biology of fish that are not required in the other FWCB concentrations.

1 A grade of C- or better is required.
2 FW 492 External Learning Experience

**Career Opportunities**

Graduates are prepared for graduate school and entry-level professional positions in state and federal government agencies, non-profit organizations and private industry. Upon graduation, students are qualified to seek certification from The Wildlife Society or the American Fisheries Society.
Fisheries, Wildlife, and Conservation Biology (BS): Wildlife Science Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

Fisheries, Wildlife and Conservation Biology (FWCB) major prepares students to manage and conserve populations of fish and wildlife in their natural habitats. This STEM (Science, Technology, Engineering and Mathematics) major gives students the skills they need to observe, research, monitor and assess the impact of environmental change, human behavior and public policy on wild populations of animals. Using a combination of lab work, technology and field study, students develop conservation strategies that ensure the long-term health of fish and wildlife populations.

After sophomore year, students spend six weeks in summer field courses. During “summer camp” experience, students learn hands-on fish and wildlife management techniques in locations across the state. From plant and animal identification and bird mist netting to camera-trapping and radio telemetry, students gain experiences that prepare them for careers after graduation. FWCB students have the option to substitute the summer field course with approved internships or study abroad courses.

The wildlife concentration provides students with specific coursework necessary to apply for the Associate Wildlife Biologist (AWB) certification from the Wildlife Society upon graduation. The AWB coursework includes extra courses in plant biology, communication, and wildlife habitat management that are not required in the other FWCB concentrations.

### Physical Science Elective
- **Code:** CH 201
- **Title:** Chemistry - A Quantitative Science
- **Hours:** 3
- **Code:** CH 202
- **Title:** Quantitative Chemistry Laboratory
- **Hours:** 1
- **Code:** CH 223
- **Title:** Organic Chemistry II
- **Hours:** 3
- **Code:** MEA 100
- **Title:** Earth System Science: Exploring the Connections
- **Hours:** 4
- **Code:** MEA 130
- **Title:** Introduction to Weather and Climate
- **Hours:** 3
- **Code:** MEA 200
- **Title:** Introduction to Oceanography
- **Hours:** 3
- **Code:** MEA 210
- **Title:** Oceanography Lab
- **Hours:** 1
- **Code:** MEA 220
- **Title:** Marine Biology
- **Hours:** 3
- **Code:** MEA 250
- **Title:** Introduction to Coastal Environments
- **Hours:** 3
- **Code:** MEA 323
- **Title:** Geochemistry of Natural Waters
- **Hours:** 3
- **Code:** PY 212
- **Title:** College Physics II
- **Hours:** 4

### Wildlife Electives
- **Code:** AEC 501
- **Title:** Ornithology
- **Hours:** 3
- **Code:** ENT 201
- **Title:** Insects and People
- **Hours:** 3
- **Code:** ENT 402
- **Title:** Forest Soils
- **Hours:** 3
- **Code:** ENT 425
- **Title:** General Entomology
- **Hours:** 3
- **Code:** FOR 402
- **Title:** Forest Entomology
- **Hours:** 3
- **Code:** FW 333
- **Title:** Conservation Biology in Practice
- **Hours:** 3
- **Code:** FW 403
- **Title:** Urban Wildlife Management
- **Hours:** 3
- **Code:** FW 405
- **Title:** Tropical Wildlife Ecology
- **Hours:** 3
- **Code:** FW 444
- **Title:** Mammalogy
- **Hours:** 3
- **Code:** FW 460
- **Title:** International Wildlife Management and Conservation
- **Hours:** 3

- **Hours:** 4
- **Code:** FW 544
- **Title:** Mammalogy
- **Hours:** 3
- **Code:** FW 560
- **Title:** International Wildlife Management and Conservation
- **Hours:** 3
- **Code:** FW 565
- **Title:** African Ecology and Conservation
- **Hours:** 4
- **Code:** SSS 200
- **Title:** Soil Science
- **Hours:** 3
- **Code:** ZO 250
- **Title:** Animal Anatomy and Physiology
- **Hours:** 3
- **Code:** ZO 410
- **Title:** Introduction to Animal Behavior
- **Hours:** 3
- **Code:** ZO 542
- **Title:** Herpetology
- **Hours:** 3

### Semester Sequence
This is a sample.

**Critical Path Courses** – Identify using the code (CP) which courses are considered critical path courses which represent specific major
requirements that are predictive of student success in a given program/plan. Place the (CP) next to the credit hours for the course.

\(^1\) A grade of C- or better is required.
\(^2\) FW 492 External Learning Experience

### Third Year

**Fall Semester**

- FOR 339: Dendrology | 4
- FW 353: Wildlife Management (CP) | 3
- GN 301 or GN 311: Genetics in Human Affairs or Principles of Genetics | 3-4
- ST 311: Introduction to Statistics | 3

**Hours** | 13-14

**Spring Semester**

- GEP Humanities (p. 1423) | 3

Select one of the following:

- CH 220 & CH 221: Introductory Organic Chemistry and Organic Chemistry I Lab | 4
- CH 221 & CH 222: Organic Chemistry I and Organic Chemistry I Lab | 4
- FW 373: Vertebrate Natural History (CP) | 3
- FW 411: Human Dimensions of Wildlife and Fisheries (CP) | 3
- ENG 333: Communication for Science and Research | 3

**Hours** | 16

### Fourth Year

**Fall Semester**

- ENT 201: Insects and People (GEP Interdisciplinary Perspectives (p. 1426)) | 3
- GIS 280: Introduction to GIS | 3
- Policy Elective | 3
- FW 404: Wildlife Habitat Management (CP) | 3
- FW 415: Professional Development in Fisheries, Wildlife, and Conservation Biology | 1

**Hours** | 13

**Spring Semester**

- FW 453: Principles of Wildlife Science (CP) | 4
- Wildlife Elective | 3
- AEC 420: Introduction to Fisheries Science | 3
- Physical Science Elective | 3

**Hours** | 13

**Total Hours** | 120-121

### Career Opportunities

Graduates are prepared for graduate school and entry-level professional positions in state and federal government agencies, non-profit organizations and private industry. Upon graduation, students are qualified to seek certification from The Wildlife Society or the American Fisheries Society.

### Forest Management (BS)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The curriculum in Forest Management is a professional program accredited by the Society of American Foresters that has long been
ranked as one of the best in the country. The Forest Management curriculum satisfies the education requirements to become registered (licensed) forester by the North Carolina State Board of Registration for Foresters. With a rigorous math and science base, the curriculum produces graduates with a broad education in natural sciences, humanities and social sciences, communications skills, technology and the practical knowledge and skills needed for sound management of the multiple resources of natural and managed forest ecosystems. Preparatory courses in the freshman and sophomore years are followed by the nine-week forestry summer camp where the woods knowledge and field skills that are essential for all foresters are acquired. Core courses of the junior and senior years focus on forest ecosystem processes, applied economics, operational practices in forest stand management, measurement and analysis of forest stand components, policy issues in natural resource management and the management decision-making tools and skills needed to develop and implement forest management plans. Production and Ecology options have been created to further develop and implement forest management plans.

Hours 17

Fourth Year

Fall Semester

FW 404 Wildlife Habitat Management 1 3
FOR 405 Forest Management 1 4
NR 460 Renewable Natural Resource Management and Policy 1 3
GEP Elective 3
GEP Health and Exercise Studies (p. 1422) 1

Total Hours 23

Spring Semester

FOR 406 Forest Inventory, Analysis and Planning 1 4
Technical Electives 5
GEP Electives 6

Total Hours 15

Total Hours 127

1 A grade of C- or better is required.

Career Opportunities

Graduates in Forest Management are in high demand by state and federal land management agencies, forest products companies growing wood as a raw material, investment firms and insurance companies with land ownership portfolios, state forestry and agriculture extension services, the Peace Corps, environmental and wetland consulting firms, wood procurement companies, nursery and landscape management firms, and environmental organizations. After several years of experience, many graduates start their own businesses in forestry and land management consulting. Some graduates continue their education in graduate school to specialize in a wide variety of forestry and related programs.

Forest Management (BS): Ecology Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The forest management, ecology concentration, trains professionals who will work as researchers, resource managers, and practitioners in varied agencies and non-governmental firms or organizations. Not focused on commodity production, this program provides more depth in scientific examination of forest communities. Subjects upon which forest management depends include botany, chemistry, ecology, economics, entomology, forest measurements, hydrology, mapping, mathematics, plant physiology, soil science, and statistics.

Both concentrations in the forest management program include a nine-week summer practicum between the second and third years of coursework. The purpose of the practicum is to study forest measurement and management skills in the field during concentrated hands-on experiences. Seven weeks of this residential practicum occurs at George Watts Hill Forest north of Durham, North Carolina.

The Society of American Foresters accredits the North Carolina State forest management program.

1. A grade of C- or better required.

### Career Opportunities

Graduates in Forest Management are in high demand by state and federal land management agencies, forest products companies growing wood as a raw material, investment firms and insurance companies with land ownership portfolios, state forestry and agriculture extension services, the Peace Corps, environmental and wetland consulting firms, wood procurement companies, nursery and landscape management firms, and environmental organizations. After several years of experience, many graduates start their own businesses in forestry and land management consulting. Some graduates continue their education in graduate school to specialize in a wide variety of forestry and related programs.
Forest Management (BS): Production Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orip.ncsu.edu/pgas/).

The forest management, production concentration, trains professionals who will work for forest owners (industrial and individuals) to produce wood fiber and timber, wildlife habitat, and related services forested ecosystems provide. The program of study concentrates attention on the technical planning and economics of forest investments, harvesting, regeneration and operations. Subjects upon which forest management depends include botany, chemistry, ecology, entomology, forest measurements, hydrology, mapping, mathematics, plant physiology, soil science, and statistics.

The forest management program includes a nine-week summer practicum between the second and third years of coursework. The purpose of the practicum is to study forest measurement and management skills in the field during concentrated hands-on experiences. Seven weeks of this residential practicum occur at George Watts Hill Forest, north of Durham, North Carolina.

The Society of American Foresters accredits the North Carolina State forest management program.

1 A grade of C- or better is required.

Career Opportunities

Graduates in Forest Management are in high demand by state and federal land management agencies, forest product companies growing wood as a raw material, investment firms and insurance companies with land ownership portfolios, state forestry and agriculture extension services, the Peace Corps, environmental and wetland consulting firms, wood procurement companies, nursery and landscape management firms, and environmental organizations. After several years of experience, many graduates start their own businesses in forestry and land management consulting. Some graduates continue their education in graduate school to specialize in a wide variety of forestry and related programs.

Forest Management (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Department of Forestry and Environmental Resources offers a 15 credit hour minor in Forest Management that is available to all baccalaureate degree students at North Carolina State University except majors in Forest Management. The goals of the minor are to provide elementary knowledge of forest management, appreciation for the value of forest resources, and understanding of the need for sustainable management. The minor is particularly valuable to students majoring in related disciplines.

Admissions and Certification of Minor

Students wishing to complete the minor in Forest Management should contact the person listed below. This contact person is responsible for admission to the minor and all other administrative procedures. For certification, students should see the contact person listed below no later than the registration period for the student’s final semester at NC State.

Contact Person

Dr. Gary Blank
Jordan Hall Addition 5229
919.513.7617
gblank@ncsu.edu

SIS Code: 15FGM

Plan Requirements

- Requires completion of 15 credit hours, selected from each of two categories in one of the following options.
- A grade of ‘C-’ or better is required in all courses in the minor.

Option A

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>FOR 172</td>
<td>Forest System Mapping and Mensuration I</td>
<td>2</td>
</tr>
<tr>
<td>FOR 339</td>
<td>Dendrology</td>
<td>4</td>
</tr>
</tbody>
</table>
Elective Courses
Select two courses from two of the following groups:

<table>
<thead>
<tr>
<th>Group 1</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>FOR 248 Forest History, Technology and Society</td>
<td></td>
<td>6</td>
</tr>
<tr>
<td>FOR 414 World Forestry</td>
<td></td>
<td></td>
</tr>
<tr>
<td>FOR 330 North Carolina Forests</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Group 2</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>FOR 260 Forest Ecology</td>
<td></td>
<td></td>
</tr>
<tr>
<td>FOR 303 Silvics and Forest Tree Physiology</td>
<td>1</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Group 3</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>FOR 303 Silvics and Forest Tree Physiology</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>FOR 430 Forest Health and Protection</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Total Hours: 15

Option B

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>FOR 172</td>
<td>Forest System Mapping and Mensuration I</td>
<td>2</td>
</tr>
<tr>
<td>FOR 339</td>
<td>Dendrology</td>
<td>4</td>
</tr>
</tbody>
</table>

Attend Forestry Summer Camp and take the following five courses:

| FOR 204 | Silviculture                            | 2     |
| FOR 261 | Forest Communities                      | 2     |
| FOR 264 | Forest Wildlife                          | 1     |
| FOR 265 | Fire Management                          | 1     |
| FOR 273 | Forest System Mapping and Mensuration II | 3     |

Total Hours: 15

1. FOR 303 may not be double-counted.

Natural Resources (BS): Ecosystem Assessment Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

Two natural resources curricula are offered by the Department of Forestry and Environmental Resources. The curricula are also accredited by the Society of American Foresters and produce natural resources professionals with a broad interdisciplinary background coupled with specifically focused skills needed to manage natural resources. The Natural Resources curricula include a series of common courses to highlight the integrated nature of work by interdisciplinary teams.

The curriculum in Natural Resources Ecosystem Assessment produces graduates who have knowledge and skills to inventory and describe ecosystems characteristics and to evaluate the impacts of management decisions. Ecosystem assessment or environmental impact assessment is an important part of development planning that calls for individuals who understand ecosystem structure and processes; who can identify, measure, inventory, and describe ecosystems; and who can apply standard evaluation and classification systems such as wildlife habitat evaluation procedures and the federal wetland delineation criteria. The curriculum entails a strong science base, as well as advanced courses in sampling and measurements, vegetation, soils, hydrology, and wildlife and fisheries are added. The 400-level courses also address techniques and issues of natural resource management.

The curriculum in Natural Resources Policy and Administration produces graduates who have knowledge and skills to manage natural resources programs in a variety of settings and organizations with an emphasis on public agencies. The advanced courses of the curriculum provide background in economics, policy, government, public administration, and natural resources management. An economics track begins with introductory microeconomics and culminates with environmental economics and public finance. Courses in government and public administration provide knowledge of how public institutions work. Courses in forestry, wildlife and fisheries, and outdoor recreation provide techniques of managing natural ecosystems for various uses. A common thread of how public policy on natural resources is influenced and developed runs through many of the courses already noted and culminates in two senior courses that focus on policy. 1. A grade of C- or better is required.

**Career Opportunities**

Graduates of the Natural Resources Ecosystem Assessment curriculum work in environmental service firms, public agencies, non-governmental organizations, and industries. The U.S. Environmental Protection Agency, the U.S. Army Corps of Engineers, the U.S. Fish and Wildlife Service, the N.C. Division of Water Quality, and county and city governments employ graduates to help manage compliance with county, state, and federal environmental regulations, particularly wetlands and protected species. Non-governmental organizations and private engineering and environmental consulting firms employ graduates to prepare environmental impact statements and assessments, delineate wetlands, and conduct searches for threatened or endangered plant and animal species. The broad background in natural resources provided by this curriculum also provides a strong base for students interested in graduate school or environmental law.

The curriculum in Natural Resources Policy and Administration produces managers and administrators for public agencies and private organizations involved with management, administration, policy-making, planning, preservation, or regulation of natural resources. Examples are the USDI National Park Service, the US Environmental Protection Agency, the US Geological Survey, state and local government agencies, and not-for-profit environmental organizations. Background in government, economics, policy, and natural resource management also provides a strong base for students who wish to pursue a graduate program in natural resources economics and policy or environmental law.

**Natural Resources (BS): Policy and Administration Concentration**

To see more about what you will learn in this program, visit the Learning Outcomes website ([https://apps.oirp.ncsu.edu/pgas/](https://apps.oirp.ncsu.edu/pgas/))!

Two natural resources curricula are offered by the Department of Forestry and Environmental Resources. The curricula are also accredited by the Society of American Foresters and produce natural resources professionals with a broad interdisciplinary background coupled with specifically focused skills needed to manage natural resources. The
Natural Resources curricula include a series of common courses to highlight the integrated nature of work by interdisciplinary teams.

The curriculum in Natural Resources Ecosystem Assessment produces graduates who have knowledge and skills to inventory and describe ecosystems characteristics and to evaluate the impacts of management decisions. Ecosystem assessment or environmental impact assessment is an important part of development planning that calls for individuals who understand ecosystem structure and processes; who can identify, measure, inventory, and describe ecosystems; and who can apply standard evaluation and classification systems such as wildlife habitat evaluation procedures and the federal wetland delineation criteria. The curriculum entails a strong science base, as well as advanced courses in sampling and measurements, vegetation, soils, hydrology, and wildlife and fisheries are added. #### Course Title Hours

### First Year

**Fall Semester**

- BIO 181: Introductory Biology: Ecology, Evolution, and Biodiversity | 4
- GEP Health and Science Studies | 1
- ENG 101: Academic Writing and Research | 1
- Math Elective | 3
- ENV 100: Student Success in Environmental First Year | 1
- ENV 101: Exploring the Environment | 2

**Spring Semester**

- CH 101: Chemistry - A Molecular Science & CH 102: General Chemistry Laboratory | 4
- FOR 150: Critical Thinking and Data Analysis | 2
- General Education Elective | 3
- Math Elective | 3
- ARE 201: Introduction to Agricultural & Resource Economics or EC 201: Principles of Microeconomics | 3

### Second Year

**Fall Semester**

- Physics Elective | 4
- GEP Health and Exercise Studies (p. 1422) | 1
- FOR 339: Dendrology | 4
- General Education Elective | 3

**Spring Semester**

- FOR 252: Introduction to Forest Science | 3
- SSC 200: Soil Science | 3
- PS 201: American Politics and Government or PS 202: State and Local Government | 3
- COM 110: Public Speaking or COM 112: Interpersonal Communication | 3

### Third Year

**Fall Semester**

- Ecology Elective | 4
- NR 301: Practicum for Professional Development I | 1
- Spatial Technology Elective | 3
- ST 311: Introduction to Statistics | 3
- Technical Elective | 4

Renewable Energy Assessment (Certificate)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Undergraduate Certificate Renewable Energy Assessment provides students the opportunity to assess and implement renewable energy technologies. The certificate is intended to provide students with the ability to assess facilities and land for renewable energy production. The certificate is achieved by taking 12 credit hours in renewable energy assessment topics. The certificate is designed to provide students on campus and others not enrolled in a degree program at North Carolina State University opportunities to learn basic renewable energy assessment techniques and principles that are useful in emerging careers in renewable energy.

Program Coordinator
Dr. Elizabeth Nichols
Jordan Hall Addition 2225, Box 8008
919.513.4832
elizabeth_nichols@ncsu.edu

Admissions Requirement
Students must have an overall GPA of 2.5 to be accepted to the certificate program in Renewable Energy Assessment.

Plan of Study and Registration Information
Contact the Program Coordinator.

Academic Structure
Term Effective: 01/2015
Plan Code: 15REACTU, 32REACTU
CIP Code: 15.0507
Description: Undergraduate Certificate in Renewable Energy Assessment
Offered: Distance Education

Plan Requirements
A grade of ‘C’ (2.0) or better is required for certificate courses.

Total Hours 12

1 A grade of C- or better is required.

Career Opportunities
Grads of the Natural Resources Ecosystem Assessment curriculum work in environmental service firms, public agencies, non-governmental organizations, and industries. The U.S. Environmental Protection Agency, the U.S. Army Corps of Engineers, the U.S. Fish and Wildlife Service, the N.C. Division of Water Quality, and county and city governments employ graduates to help manage compliance with county, state, and federal environmental regulations, particularly wetlands and protected species. Non-governmental organizations and private engineering and environmental consulting firms employ graduates to prepare environmental impact statements and assessments, delineate wetlands, and conduct searches for threatened or endangered plant and animal species. The broad background in natural resources provided by this curriculum also provides a strong base for students interested in graduate school or environmental law.

The curriculum in Natural Resources Policy and Administration produces managers and administrators for public agencies and private organizations involved with management, administration, policy-making, planning, preservation, or regulation of natural resources. Examples are the USDI National Park Service, the US Environmental Protection Agency, the US Geological Survey, state and local government agencies, and not-for-profit environmental organizations. Background in government, economics, policy, and natural resource management also provides a strong base for students who wish to pursue a graduate program in natural resources economics and policy or environmental law.
Renewable Energy Assessment (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orp.ncsu.edu/pgas/)

The minor in Renewable Energy Assessment provides students the opportunity to assess and implement renewable energy technologies. The minor is intended to provide students with the ability to assess facilities and land for renewable energy production. The minor is achieved by taking 15 credit hours in renewable energy assessment topics. The minor is designed to engage students from all majors and may be especially appropriate for students majoring in many of the environmental degrees on campus.

Admissions and Certification of Minor

- For completion, students must complete all required courses with a 2.5 GPA average for minor courses.

Contact the Minor Coordinator for questions. To apply for the minor, submit a “Declare a Minor” Form to: Dr. Elizabeth Nichols, egnichol@ncsu.edu, Room 2225 Jordan Addition, Department of Forestry and Environmental Resources, 919-513-4832.

Minor Coordinator

Dr. Elizabeth Guthrie Nichols, Associate Professor
Department of Forestry & Environmental Resources
Campus Box 8006
Room 2225 Jordan Addition
egnichol@ncsu.edu
919-513-4832

SIS Code: 15REAM

Plan Requirements

- Applicants must have a 2.5 GPA overall for application.
- For completion, students must complete all required courses with a 2.5 GPA average for minor courses.
- All courses must be completed with a grade of ‘C’ (2.0) or higher.

The undergraduate minor in Wetland Assessment is an interdisciplinary, interdepartmental minor that is designed to provide NC State students with the requisite knowledge and skills needed for entry level competence in the field of wetland delineation and assessment. The soils, hydrology, and plant identification courses of the minor build the scientific background and skills needed to understand the structure and functions of wetland ecosystems and to apply assessment protocols.

Admissions

To enroll in the minor, students should contact the minor coordinator, Dr. Ryan Emanuel, 2217 Jordan Hall, 919.513.2511, ryan_emanuel@ncsu.edu. The application form for the minor will serve as a work plan and a copy will be forwarded to the student’s major advisor.

Certification

Certification of the minor should also be completed with Dr. Emanuel. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification can be found in 2217 Jordan Hall and should be completed no later than during the registration period for the student’s final semester at NC State.

Contact Person

Dr. Ryan Emanuel
2217 Jordan Hall
919.513.2511
ryan_emanuel@ncsu.edu

SIS Code: 15WAM

Plan Requirements

- The minor in Wetlands Assessment consists of 17 credit hours (5 courses) as specified below.
- BIO 405 Functional Histology and FOR 420 Watershed and Wetlands Hydrology/NR 420 Watershed and Wetlands Hydrology are prerequisites of NR 421 Wetland Assessment, Delineation and Regulation and therefore must be completed before enrolling in NR 421 Wetland Assessment, Delineation and Regulation. NR 421 Wetland Assessment, Delineation and Regulation is the capstone course of the minor and should be taken last.
- Successful completion of 60 credit hours and all courses that are prerequisites to courses in the minor prior to admission to the minor.

Total Hours 17

Wetland Assessment (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orp.ncsu.edu/pgas/)!
Wildlife Sciences (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The minor will provide basic ecological and management knowledge about, and will cultivate an appreciation for, the value of wildlife resources. The objective of the wildlife sciences minor is to provide students, who might pursue careers in related areas of natural resources management, with basic ecological and management knowledge about wildlife resources. Additionally, the minor will provide students majoring in unrelated fields an appreciation for the value wildlife resources and the need for sound management.

Admissions and Certification of Minor

Students must have a GPA of 2.5 or above to be admitted into the minor. Any student seeking a minor must consult with the minor advisor on a plan of work and must file the appropriate paperwork to declare the minor through the office of Registration and Records. Declaring minor too late may result in recognition of the minor not appearing on student’s final transcript. The wildlife minor is not available to fisheries and wildlife sciences majors.

Total Hours 16-17

Department of Parks, Recreation and Tourism Management

For more information about this department, including contact information, visit the department (http://cnr.ncsu.edu/prtm/).

PRTM is committed to educating its students by providing them with the latest knowledge and tools to address society’s most pressing needs. The undergraduate programs focus on ways to promote health and enjoyment in people’s lives as well as contribute to the natural and cultural sustainability of recreation resources in communities. PRTM’s unique undergraduate programs combine relevant class time with hands-on field experiences and service learning. The department strives to enroll and graduate a highly motivated and culturally diverse student body.

The department has an established reputation for providing comprehensive, professional education programs in Professional Golf Management, Parks, Recreation and Tourism Management, and Sport Management. Each degree is designed to produce well educated graduates who have the skills, knowledge, and attitude needed to plan activities and manage parks, recreation, tourism and sport areas and facilities in a range of environments for all ages and lifestyles.

Scholarships

The Department of Parks, Recreation, and Tourism Management annually awards scholarships that are available to freshmen and advanced students. Approximately 12 academic scholarships varying between $500 and $5,000 are awarded in the spring for the following academic year and are renewable provided that superior progress is made toward a degree.

Faculty

Plans

- Environmental Education (Minor) (p. 1294)
- Parks, Recreation and Tourism Management (BS): Parks and Natural Resource Recreation Concentration (p. 1295)
- Parks, Recreation, and Tourism Management (BS): Program Management Concentration (p. 1298)
- Parks, Recreation, and Tourism Management (BS): Sustainable Tourism Concentration (p. 1301)
- Parks, Recreation, and Tourism Management (Minor) (p. 1304)
- Professional Golf Management (BS) (p. 1304)
- Sport Management (BS) (p. 1306)
- Sport Management (BS): Professional Golf Management Concentration (p. 1308)

Environmental Education (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The undergraduate minor in Environmental Education is offered to students interested in building environmental literacy among pre-K through adult audiences. Environmental literacy includes environmental awareness and knowledge, pro-environmental attitudes and sensitivity, critical thinking skills necessary to analyze complex environmental challenges, and motivation to act in environmentally responsible ways.
Undergraduates may be interested in careers including informal science education (e.g., in museums or aquaria), environmental interpretation (e.g., parks and nature centers), or formal K-12 education. The minor is designed to give an opportunity to make substantial progress toward the NC Environmental Education Certification program, a certification listed as a requirement (or working toward) for positions within many parks, informal science education facilities, and recognized and favored nationally by many museums, aquaria, and nature centers.

**ADMINISTRATION OF THE MINOR**

Kathryn Stevenson, Assistant Professor  
Department of Parks, Recreation & Tourism Management

**Plan Requirements**

To be certified as having completed the minor in Environmental education, students must have a minimum 2.0 grade point average across all courses used toward the minor. The minor will be certified prior to graduation. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for the minor should be completed no later than during the registration period for the student’s final semester at NC State. Other specifications include:

- Enrollment in the minor is open to any student at NC State.
- Students must take 6 hours of required courses and 9 hours of electives for a total of 15 hours, per the course requirements list.
- No more than six (6) hours of transfer credits can be used toward the minor.

**Total Hours**

1. Students must take 3 hours of Natural Sciences courses, 3 hours of Teaching and Facilitation courses, and 3 additional hours from either one of these categories OR from the Interdisciplinary Perspectives courses. Students who identify other courses more appropriate to their goals should consult with the minor advisor to seek permission for those courses to count.

2. These courses are meant to provide the content knowledge commonly used in environmental education, which usually includes natural history or identification knowledge, knowledge of ecosystems, or knowledge of environmentally friendly practices.

3. These courses are intended to give students a background in teaching and learning theory and practices.

4. Select 3 hours from here OR from any of the courses in the other two areas. These courses are designed to give students a broader view beyond natural science and teaching. These courses may be particularly useful to those interested in a specific topic (e.g., environmental justice) or who anticipate employing EE principals in a diversity of careers (e.g., planning departments).

---

**Parks, Recreation and Tourism Management (BS): Parks and Natural Resource Recreation Concentration**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://appsoirp.ncsu.edu/pgas/)!
The curriculum in Parks, Recreation and Tourism Management is a professional program accredited by the Council on Accreditation of Parks, Recreation, Tourism and Related Professions. The curriculum produces graduates with a broad education in natural science, humanities and social science, and communication skills and the professional and technical skills to plan recreation programs and manage facilities, manage parks, and operate tourism services and agencies. General education courses include geology, biology, psychology, sociology, English, mathematics, communication, and economics. A specialized course is required in statistics.

The curriculum is designed to prepare students for a variety of positions in a dynamic and challenging profession. The focus of the curriculum is on management rather than face-to-face leadership. The curriculum provides 35 hours of professional course work that includes recreation philosophy, recreation facility management techniques, fiscal management, supervision, facility and site planning, recreation programming, administration, and evaluation.

In addition to the general education requirements and the core professional requirements, students can attain specialized training through concentration courses. They choose one of the following concentrations: sustainable tourism, park and natural resource management, or program management.

Academic studies on campus are supplemented by practical laboratory experiences in the Raleigh area, out-of-state field trips and service learning opportunities, and a 10-week internship with a park, recreation or tourism agency. Cooperative work-study programs are available. Study abroad opportunities are also encouraged.

Park and Natural Resource Recreation (18 hours)

This concentration is well suited for people who enjoy working outdoors, who are interested in environmental protection and conservation, facility planning and development, and for those wanting to make a positive impact on the lives of others and on the natural environment. Concentration courses include ecology, GIS, outdoor recreation management and adventure education. Students are prepared for positions in planning, managing and maintaining parks and other natural resource oriented areas at the federal, state, regional or local levels in settings ranging from primitive to urban.

the quality of their lives. This goal is accomplished by providing recreation programs and facilities for people in a variety of settings.

Career opportunities include employment by park and recreation departments operated by county and municipal governments; state agencies, such as state parks; federal government, with agencies such as the National Park Service, U.S. Army Corps of Engineers, and U.S. Forest Service; resorts and country clubs; and sport agencies.

Other major employers include youth and family service organizations, such as the YMCA, YWCA, Boy’s Clubs, and Boy and Girl Scouts. Industries employ recreation directors to head employee recreation programs. Areas with perhaps the greatest growth potential for employment are tourism agencies and commercial recreation establishments, such as resorts, private clubs, theme parks, and convention and conference centers. Sport management is also a growing profession with career opportunities in sports marketing and sales, game day operations, facility management and community athletics.

### Parks, Recreation, and Tourism Management (BS): Program Management Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The curriculum in Parks, Recreation and Tourism Management is a professional program accredited by the Council on Accreditation of Parks, Recreation, Tourism and Related Professions. The curriculum produces graduates with a broad education in natural science, humanities and social science, and communication skills and the professional and technical skills to plan recreation programs and manage facilities, manage parks, and operate tourism services and agencies. General education courses include geology, biology, psychology, sociology, English, mathematics, communication, and economics. A specialized course is required in statistics.

The curriculum is designed to prepare students for a variety of positions in a dynamic and challenging profession. The focus of the curriculum is on management rather than face-to-face leadership. The curriculum provides 35 hours of professional course work that includes recreation philosophy, recreation facility management techniques, fiscal management, supervision, facility and site planning, recreation programming, administration, and evaluation.

In addition to the general education requirements and the core professional requirements, students can attain specialized training through concentration courses. They choose one of the following concentrations: sustainable tourism, park and natural resource management, or program management.

### Career Opportunities

As increased discretionary time becomes available for large segments of the American population, opportunities for growth in the leisure service professions have increased dramatically. Tourism and sports are two of the world’s largest industries. A recreation and park professional’s goal is to influence people to use their discretionary time wisely and to improve...
adventure programming, marketing, community development and interpretive programs. Possible professional positions include recreation program director, event planner, outdoor adventures instructor, youth director and facility manager. Positions could be with public agencies, nonprofit group or private companies.

Career Opportunities

As increased discretionary time becomes available for large segments of the American population, opportunities for growth in the leisure service professions have increased dramatically. Tourism and sports are two of the world’s largest industries. A recreation and park professional’s goal is to influence people to use their discretionary time wisely and to improve the quality of their lives. This goal is accomplished by providing recreation programs and facilities for people in a variety of settings.

Career opportunities include employment by park and recreation departments operated by county and municipal governments; state agencies, such as state parks; federal government, with agencies such as the National Park Service, U.S. Army Corps of Engineers, and U.S. Forest Service; resorts and country clubs; and sport agencies.

Other major employers include youth and family service organizations, such as the YMCA, YWCA, Boy’s Clubs, and Boy and Girl Scouts. Industries employ recreation directors to head employee recreation programs. Areas with perhaps the greatest growth potential for employment are tourism agencies and commercial recreation establishments, such as resorts, private clubs, theme parks, and convention and conference centers. Sport management is also a growing profession with career opportunities in sports marketing and sales, gam day operations, facility management and community athletics.

Parks, Recreation, and Tourism Management (BS): Sustainable Tourism Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The curriculum in Parks, Recreation and Tourism Management is a professional program accredited by the Council on Accreditation of Parks, Recreation, Tourism and Related Professions. The curriculum produces graduates with a broad education in natural science, humanities and social science, and communication skills and the professional and technical skills to plan recreation programs and manage facilities, manage parks, and operate tourism services and agencies. General education courses include geology, biology, psychology, sociology, English, mathematics, communication, and economics. A specialized course is required in statistics.

The curriculum is designed to prepare students for a variety of positions in a dynamic and challenging profession. The focus of the curriculum is on management rather than face-to-face leadership. The curriculum provides 35 hours of professional course work that includes recreation philosophy, recreation facility management techniques, fiscal management, supervision, facility and site planning, recreation programming, administration, and evaluation.

In addition to the general education requirements and the core professional requirements, students can attain specialized training through concentration courses. They choose one of the following concentrations: sustainable tourism, park and natural resource management, or program management.

Academic studies on campus are supplemented by practical laboratory experiences in the Raleigh area, out-of-state field trips and service learning opportunities, and a 10-week internship with a park, recreation or tourism agency. Cooperative work-study programs are available. Study abroad opportunities are also encouraged.

Sustainable Tourism (18 hours)

This concentration is for students who enjoy working with people; who are interested in business management, marketing, travel, and event planning; and, for students who want to make a positive impact on the leisure experiences of others. Concentration courses include sustainable tourism, destination management, accounting, tourism, poverty and health, and business management. The tourism and commercial recreation concentration prepares students for positions in planning, marketing and managing tourism facilities, attractions, and products. The positions could be with private companies, nonprofit groups or public agencies.

Career Opportunities

As increased discretionary time becomes available for large segments of the American population, opportunities for growth in the leisure service professions have increased dramatically. Tourism and sports are two of the world’s largest industries. A recreation and park professional’s goal is to influence people to use their discretionary time wisely and to improve the quality of their lives. This goal is accomplished by providing recreation programs and facilities for people in a variety of settings.

Career opportunities include employment by park and recreation departments operated by county and municipal governments; state agencies, such as state parks; federal government, with agencies such as the National Park Service, U.S. Army Corps of Engineers, and U.S. Forest Service; resorts and country clubs; and sport agencies.

Other major employers include youth and family service organizations, such as the YMCA, YWCA, Boy’s Clubs, and Boy and Girl Scouts. Industries employ recreation directors to head employee recreation programs. Areas with perhaps the greatest growth potential for employment are tourism agencies and commercial recreation establishments, such as resorts, private clubs, theme parks, and convention and conference centers. Sport management is also a growing profession with career opportunities in sports marketing and sales, gamday operations, facility management and community athletics.
Parks, Recreation, and Tourism Management (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orip.ncsu.edu/pgas/).

The academic minor in Parks, Recreation, and Tourism Management is offered to students interested in gaining a basic knowledge of recreation, tourism, and park services and an understanding of the benefits of leisure and recreation in our society. To complete the minor, students must take six hours of required courses and nine hours of electives. These courses provide undergraduates with the opportunity to explore recreation, parks, and leisure services as a potential for graduate work.

Admissions and Certification of Minor

Admission to the Minor is competitive and applicants will be considered based on their overall academic performance. To be eligible for consideration, a student must have successfully completed at least 15 hours of coursework at NC State. Meeting the eligibility requirements does not guarantee admission to the Minor in PRTM. Students are encouraged to begin the PRTM Minor prior to their senior year. Seat availability cannot be guaranteed in Minor classes if a student only has two semesters in which to complete the Minor.

Sport Management and Professional Golf Management majors may not complete the Minor in Parks, Recreation, and Tourism Management.

Application Deadlines: Interested students should submit a completed Declare a Minor Form (https://studentservices.ncsu.edu/forms/registrar/declare_minor.pdf) to the Contact Person listed below by one of the following deadlines: September 20, January 20, and June 1. (If the application date falls on a weekend, the application is due Monday following the deadline.) The form is located on Registration and Records Website under Forms.

Students will be notified one month after the application deadline regarding the status of their application. Once accepted into the PRTM Minor, students will be able to sign up for Minor courses. A limited number of minor seats will be reserved in the PRT courses on the minor list.

Certification

Students must earn at least a 2.0 GPA in their PRTM Minor coursework to be certified for a minor. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Students will apply online for the minor during their final semester at NC State.

SIS Code: 15PRM

Plan Requirements

- A minimum of 15 hours (5 courses) are required to complete the minor in Park, Recreation and Tourism Management.

- Students must take 7 hours of required courses and 8 hours of electives.
- A grade of 'C-' or better is required in all courses to be used toward the minor.
- No more than six (6) hours of transfer credits can be used toward the minor. The Parks, Recreation and Tourism Management Director of Undergraduate Programs must approve all transfer credits.

## Sport Management (BS)

**To see more about what you will learn in this program, visit the Learning Outcomes website ([https://apps.oirp.ncsu.edu/pgas/](https://apps.oirp.ncsu.edu/pgas/))!**

The Sport Management degree provides students with high quality educational experiences to enable their success as managers in sport and sport related industries and organizations. NC State’s Sport Management program will provide students with a multidisciplinary perspective that includes sound management principles combined with a global understanding of sport and the impact of sport in social, economic, political and technological environments. Sport can be viewed as both an industry and an academic discipline. This program will educate students in the theoretical principles of sport management as well as the application of those principles. The interdisciplinary curriculum, including courses in recreation and accounting, will enable students to develop leadership, communication, evaluation and problem-solving skills in a “real world” environment.

The curriculum provides 38 hours of professional course work that includes recreation philosophy, management techniques and skills, sport finance and economics, sport law, programming, administration, and analysis and evaluation. Students can use the 30 hours of free electives in this program to pursue a minor or design a special track that will meet their career goals. Academic studies on campus are supplemented by a 10-week internship with an approved sport agency.

### Plan Requirements

**Sport Management (BS): 120 Total Units**

### Career Opportunities

As increased discretionary time becomes available for large segments of the American population, opportunities for growth in the leisure service professions have increased dramatically. Tourism and sports are two of the world’s largest industries. A recreation and park professional’s goal is to influence people to use their discretionary time wisely and to improve the quality of their lives. This goal is accomplished by providing recreation programs and facilities for people in a variety of settings.

Career opportunities include employment by park and recreation departments operated by county and municipal governments; state agencies, such as state parks; federal government, with agencies such as the National Park Service, U.S. Army Corps of Engineers, and U.S. Forest Service; resorts and country clubs; and sport agencies.

Other major employers include youth and family service organizations, such as the YMCA, YWCA, Boy’s Clubs, and Boy and Girl Scouts. Industries employ recreation directors to head employee recreation programs. Areas with perhaps the greatest growth potential for employment are tourism agencies and commercial recreation establishments, such as resorts, private clubs, theme parks, and convention and conference centers. Sport management is also a growing profession with career opportunities in sports marketing and sales, game day operations, facility management and community athletics.

1. A minimum grade of C-  
2. Students must pass the PGA Golf Management tests, complete Work Experience Activities and pass the Playing Ability Test prior to graduation  
3. A maximum of 12 credit hours of free electives can be taken for credit only  
4. Students wishing to complete a Business minor must take EC 205 Fundamentals of Economics  
5. Students wishing to complete a Business minor must take ACC 210 Concepts of Financial Reporting. If not ACC 280 Survey of Financial and Managerial Accounting is also acceptable.
College of Sciences

The College of Sciences offers programs for students interested in working side-by-side with world-class faculty to address the grand challenges of our time, particularly those related to health, energy, safety and security, and the environment. We foster a diverse and inclusive academic community that provides a dynamic, nurturing environment for learning and discovery.

Our graduates, exhibiting well-developed analytical thinking and problem-solving skills, are recruited for technical and administrative positions in industry and laboratories, universities and colleges, non-profit research organizations and government agencies. A large percentage undertake further study leading to master’s and doctoral degrees in their fields or go on to medical, law, business or other professional schools.

Students interested in mathematics, statistics, biology, medicine, chemistry, geology, marine science, meteorology or physics; fascinated by natural phenomena; and want to advance economic, societal and intellectual prosperity for everyone should consider the career opportunities opened by degrees in the sciences. The College of Sciences empowers students to explore opportunities, discover passions and attain an enriched science education.

- The college is a leader in several growing areas of science — such as big data, bioinformatics, environmental health science, geospatial analytics and personalized medicine — that teach students skills highly valued in industry, laboratories, nonprofit research organizations and government agencies.
- Sciences alumni have been named to the Forbes “30 Under 30” list, worked aboard (https://www.ncsu.edu/think-and-do/live-from-the-international-space-station/) the International Space Station, and gone on to prestigious academic and professional careers all over the world.
- More than 400 active research projects and more than $40 million in research expenditures annually provide students with opportunities to explore beyond the classroom, broaden connections with the faculty, and further develop communication and presentation skills.
- The Sciences Ambassadors Program provides outstanding students the opportunity to engage with the college and promote a vibrant campus culture while representing the college at events for prospective students and families, alumni and other special guests.

Department of Biological Sciences

For more information about this department, including contact information, visit the department (http://bio.sciences.ncsu.edu).

The Department of Biological Sciences provides educational opportunities to undergraduate and graduate students and conducts world class research in a variety of areas in modern biology. Undergraduate Programs in the Department of Biological Sciences have the primary mission of providing our diverse population of students with the opportunity and support to successfully complete their major and prepare for their post-baccalaureate life as independent thinkers, lifelong learners, and contributing members of society.

Undergraduates begin with comprehensive studies of the structure, function, behavior, and evolution of cells, organisms, populations, and ecosystems and then have the opportunity to select upper division courses that reflect their intellectual interests and career goals. Those who earn a Bachelor of Science degree in Biological Sciences, Genetics, Microbiology or Zoology gain a strong background in biology and in related fields. Those who earn a Bachelor of Arts degree in Biology establish a solid foundation in the life sciences and also design a secondary area of focus to complement their studies in the life sciences.

All incoming freshmen interested in majoring in any one of these degree programs will start their studies in the NC State Life Sciences First Year Program (https://departments.sciences.ncsu.edu/lsfy/), and will explore these and related degree options during their first year while they take courses relevant to all life science degree programs at NC State. The Department of Biological Sciences also offers minors in Biological Sciences, Environmental Toxicology, Evolutionary Biology, Genetics, Microbiology, Forensic Science, and Zoology.

To learn more about this department, visit our website (https://bio.sciences.ncsu.edu/).

Undergraduate Honors Program in Biological Sciences

The Department of Biological Sciences (DBS) Honors Program requires students to design a challenging program of advanced study, including 8 credits of honors coursework in biology and at least two semesters of research or teaching scholarship. Participants are required to present their scholarly work at a local, regional, or national meeting. A written honors thesis is also required. Invitations to join the DBS Honors Program are sent in the first 3 weeks of the Fall and Spring semesters, based on GPA and number of credit hours completed at NC State, as described in the Admissions Requirements.

Program Requirements

BSC 497 Biological Sciences Honors Project Part 1 and BSC 498 Biological Sciences Honors Project Part 2

- two semesters of mentored research or teaching scholarship in biology
- includes written project proposal (BSC 497 Biological Sciences Honors Project Part 1), and a draft of the honors thesis (BSC 498 Biological Sciences Honors Project Part 2)
- includes completion of reflection prompts posted on Moodle
- enrollment requires a completed contract with the mentor, approved by the DBS Honors Program Committee

BSC 499 Honors Thesis in Biological Sciences

- requires oral presentation of work completed in BSC 497 Biological Sciences Honors Project Part 1 & BSC 498 Biological Sciences Honors Project Part 2
- requires final written honors thesis on the work completed in BSC 497 Biological Sciences Honors Project Part 1 & BSC 498 Biological Sciences Honors Project Part 2
- the honors thesis will be submitted mid-way through the semester for evaluation and to allow time for revisions
- the honors thesis must be approved by the mentor and by the DBS Honors Program Committee

Honors Coursework (8 cr)

- courses must be completed with a B- or higher
- courses must be numbered 300 or higher
- courses must focus on a topic in biology
- eligible courses include: (1) any course designated as an honors course by the DBS Honors Program Committee, (2) any course for which an honors contract is approved by the DBS Honors Program Committee, and (3) any Study Abroad course approved by the DBS Honors Program Committee.

Admissions Requirement

Students in any major offered by the Department of Biological Sciences who have earned an overall GPA of 3.60 after completing 30 (but fewer

Plans

- Biological Sciences (BA) (p. 1317)
- Biological Sciences (BS) (p. 1319)
- Biological Sciences (BS): Ecology, Evolution and Conservation Biology Concentration (p. 1322)
- Biological Sciences (BS): Human Biology Concentration (p. 1325)
- Biological Sciences (BS): Integrative Physiology and Neurobiology Concentration (p. 1327)
- Biological Sciences (BS): Molecular, Cellular, and Developmental Biology Concentration (p. 1331)
- Biological Sciences (Minor) (p. 1334)
- Biology (Honors) (p. 1334)
- Evolutionary Biology (Minor) (p. 1335)
- Forensic Science (Minor) (p. 1336)
- Genetics (BS) (p. 1337)
- Genetics (Minor) (p. 1339)
- Global Health (Minor) (p. 1339)
- Microbiology (BS) (p. 1341)
- Microbiology (BS): Microbial Biotechnology Concentration (p. 1344)
- Microbiology (BS): Microbial Health Science Concentration (p. 1347)
- Microbiology (BS): Microbial Research Concentration (p. 1350)
- Microbiology (Certificate) (p. 1353)
- Microbiology (Minor) (p. 1354)
- Zoology (BS) (p. 1354)
- Zoology (Minor) (p. 1357)
than 65) credit hours at NC State will receive an invitation to join the DBS Honors Program.

Transfer Students in any major offered by the Department of Biological Sciences who have earned an overall GPA of 3.60 after completing 15 credit hours at NC State (and a total of 30 credit hours of college coursework), will receive an invitation to join the DBS Honors Program.

**Graduation Requirements**

complete the Program Requirements described above

maintain an overall GPA of 3.40 or higher

complete the graduation requirements for an undergraduate degree program offered by the Department of Biological Sciences

**Program Director**

Dr. Betty Gardner
2727 Bostian Hall
919.515.3341

**Undergraduate Honors Program In Genetics**

The Honors Program in Genetics encourages qualified students to design a program of advanced study, including at least 2 semesters of research or teaching experience, to challenge themselves as scholars. Honors participants are required to present their scholarly work at a local, regional, or national symposium or conference. Students in the B.S. in Genetics program who are currently in the CALS Honors Program and who completed ALS 398 Agriculture and Life Sciences Honors Seminar no later than Spring 2013 are eligible to remain in the CALS Honors Program or to switch into the Honors Program in Genetics. Other students majoring in Genetics can qualify for the Honors Program in Genetics by completing 30 credit hours at NC State with an overall GPA of 3.50 or better. Transfer students majoring in Genetics can qualify by completing their first semester at NC State with a GPA of 3.50 or better.

**Program Requirements**

Two semesters (6 cr) of mentored research or teaching experience in their discipline includes written project proposal, a paper, and a poster presentation describing your work

Eight (8) credit hours of honors coursework:

- must be completed with a C or better
- must be numbered 300 or higher
- can include ALS 398 Agriculture and Life Sciences Honors Seminar for those who completed it no later than Spring 2013

Honors coursework is defined as including any course designated as an honors course by the University Honors Program, any course for which an Honors Contract is approved by the University Honors Program, any course at the 500 level, and any approved study abroad course.

**Admissions Requirements**

Genetics majors currently in the CALS Honors Program will be allowed to switch into the Honors Program in Genetics, if they desire to do so. Genetics majors who have earned an overall GPA of 3.50 after completing 30 credit hours at NC State (or transfer students who earn a GPA of 3.50 after completing 15 credit hours at NC State), will receive an invitation to join the Honors Program in Genetics.

**Graduation Requirements**

Students must complete the Program Requirements as described above and must maintain an overall GPA of 3.35 or higher throughout their remaining undergraduate career, and must graduate In Genetics.

**Program Director**

Dr. Stephanie Curtis
Thomas Hall 2532, Box 7614
919.515.5747

**Undergraduate Honors Program In Microbiology**

The Honors Program in Microbiology encourages qualified students to design a program of advanced study, including at least 2 semesters of research or teaching experience, to challenge themselves as scholars. Honors participants are required to present their scholarly work at a local, regional, or national symposium or conference. Students in the B.S. in Microbiology program who are currently in the CALS Honors Program and who completed ALS 398 Agriculture and Life Sciences Honors Seminar no later than Spring 2013 are eligible to remain in the CALS Honors Program or to switch into the Honors Program in Microbiology. Other students majoring in Microbiology can qualify for the Honors Program in Microbiology by completing 30 credit hours at NC State with an overall GPA of 3.50 or better. Transfer students majoring in Microbiology can qualify by completing 15 credit hours at NC State with a GPA of 3.50 or better.

**Program Requirements**

Two semesters (6 cr) of mentored research or teaching experience in their discipline

- includes a written project proposal, a paper, and a poster presentation describing your work
- requires a completed contract with the mentor, approved by the Program Director in advance of the experience

Eight (8) credit hours of honors coursework

- must be completed with a C or better
- must be numbered 300 or higher
- can include ALS 398 Agriculture and Life Sciences Honors Seminar for those who completed it no later than Spring 2013

Honors coursework is defined as including any course designated as an honors course by the University Honors Program, any course for which an Honors Contract is approved by the University Honors Program, any course at the 500 level, and any approved study abroad course.

**Admissions Requirements**

Microbiology majors currently in the CALS Honors Program will be allowed to switch into the Honors Program in Microbiology, if they desire
to do so. Microbiology majors who have earned an overall GPA of 3.50 after completing 30 credit hours at NC State (or transfer students who earn a GPA of 3.50 after completing 15 credit hours at NC State), will receive an invitation to join the Honors Program in Microbiology.

Graduation Requirements

Students must complete the Program Requirements as described above and must maintain an overall GPA of 3.35 or higher throughout their remaining undergraduate career, and must graduate in Microbiology.

Program Director

Undergraduate Honors Program In Zoology

The Honors Program in Zoology encourages qualified students to design a program of advanced study, including at least 2 semesters of research or teaching experience, to challenge themselves as scholars. Honors participants are required to present their scholarly work at a local, regional, or national symposium or conference. Students in the B.S. in Zoology program who are currently in the CALS Honors Program and who completed ALS 398 Agriculture and Life Sciences Honors Seminar no later than Spring 2013 are eligible to remain in the CALS Honors Program or to switch into the Honors Program in Zoology. Other students majoring in Zoology can qualify for the Honors Program in Zoology by completing 30 credit hours at NC State with an overall GPA of 3.50 or better. Transfer students majoring in Zoology can qualify by completing their first semester at NC State with a GPA of 3.50 or better.

Program Requirements

Two semesters (6 cr) of mentored research or teaching experience in their discipline

• includes written project proposal, a paper, and a poster presentation describing your work
• requires a completed contract with the mentor, approved by the Program Director in advance of the experience

Eight (8) credit hours of honors coursework

• must be completed with a C or better
• must be numbered 300 or higher
• can include ALS 398 Agriculture and Life Sciences Honors Seminar for those who completed it no later than Spring 2013

Honors coursework is defined as including any course designated as an honors course by the University Honors Program, any course for which an Honors Contract is approved by the University Honors Program, any course at the 500 level, and any approved Study Abroad course.

Admissions Requirements

Zoology majors currently in the CALS Honors Program will be allowed to switch into the Honors Program in Zoology, if they desire to do so. Zoology majors who have earned an overall GPA of 3.50 after completing 30 credit hours at NC State (or transfer students who earn a GPA of 3.50 after completing 15 credit hours at NC State), will receive an invitation to join the Honors Program in Zoology.

Graduation Requirements

Students must complete the Program Requirements as described above, must maintain an overall GPA of 3.35 or higher throughout their remaining undergraduate career, and must graduate in Zoology.

Program Director

Dr. Jennifer Campbell
David Clark Labs 120, Box 7617

Biological Sciences (BA)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The NC State Bachelor of Arts degree in Biology is designed for students who want to combine studies in the life sciences with studies in a second discipline of interest (chosen from outside of the life sciences). Students in the B.A. are required to take just as much biology (through their Life Science Electives) as students in the B.S. in Biological Sciences, but requirements in the supporting sciences (chemistry, physics, and calculus) are reduced. Instead, Biology B.A. students identify a second area of interest outside the life sciences and create a focal area of study in that area (e.g., psychology, social work, communication, political science, anthropology, education, mathematics, statistics). Their proposed list of Cross Discipline Electives is reviewed and approved by their academic advisor and the program director.

At the end of their undergraduate studies, students in this degree program complete a Senior Capstone Project through which they draw on both the life sciences (or a sub-discipline within the life sciences) and their chosen Cross Discipline to address a problem or issue that they identify. Experiential learning (related to their academic and/or career interests) is also required of all students in this program.

Students who graduate with a B.A. in Biology will benefit from training in scientific thinking and from gaining a broader perspective through their Cross Disciplinary studies. In choosing courses, students are encouraged to consider the course pre-requisites of graduate or professional programs to which they are interested in applying. Depending on their course choices, students will be prepared for a wide range of careers or further studies. This is a relatively new program, but so far our Biology B.A. graduates are employed or pursuing advanced study in bioethics, bioinformatics, law, health analytics, health care (nursing, physician assistant, physical therapy), clinical research, public health, science communication and informal education, neurobiology, and psychology.

Career Opportunities
Many students majoring in the Department of Biological Sciences take advantage of scholarship and honors programs available at NC State, including the University Honors Program and the University Scholars Program. In addition, we offer a discipline-based Undergraduate Honors Program in Biological Sciences (DBS Honors Program). The DBS Honors Program requires students to design a challenging program of advanced study, including eight credits of honors coursework in biology and at least two semesters of research or teaching scholarship. Participants write an honors thesis and are required to present their scholarly work at a local, regional, or national meeting. Invitations to join the DBS Honors Program are sent in the first three weeks of the Fall and Spring semesters. Students in any major in the Department of Biological Sciences who have earned an overall GPA of 3.60 after completing 30-65 credit hours at NC State will receive an invitation to join the DBS Honors Program; transfer students in any of our majors who have earned an overall GPA of 3.60 in 15 credit hours at NC State also will receive an invitation.

Students who graduate from the Department of Biological Sciences are well prepared for employment in various government agencies and private industries. Graduates may continue their education with studies leading to advanced degrees in many areas of the biological sciences, including cell biology, ecology, microbiology, genetics, zoology, neurobiology, and biomedical disciplines. Many choose to seek advanced degrees in medicine, dentistry, optometry, veterinary medicine, public health, and other health-related fields. Students who plan to seek certification for pre-college teaching may want to pursue a second major in the Department of Science, Technology, Engineering & Mathematics Education.

Biological Sciences (BS)
To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

There are five different avenues to earning a B.S. in Biological Sciences at NC State. Students studying for a degree in Biological Sciences can opt for a general curriculum (BLS) or can choose to focus in a particular area by selecting one of four areas of concentration: Molecular, Cellular, and Developmental Biology (MCD), Integrative Physiology and Neurobiology (IPN), Human Biology (HB), or Ecology, Evolution, and Conservation Biology (EEC).

The MCD curriculum offers students in-depth studies of the molecular and cellular basis of life and the development of multicellular organisms.

The IPN curriculum provides a comprehensive grounding in basic principles of physiology and neuroscience, as well as in-depth exposure to the application of these principles in understanding whole-organism function and the ways in which animals (including humans) cope with challenges presented by their environments.

The HB curriculum provides training in those areas of science most important to health-related professions as well as relevant aspects of the humanities and social sciences. It is designed to provide students with a solid education in the scientific and humanistic concepts that underlie modern health sciences and related areas of scientific research.

The EEC curriculum offers students in-depth studies in areas of biology at the level of the organism, populations, and ecosystems. It is designed for students who have an interest in whole organisms and their biodiversity.

A grade of C- or higher is required.
— what maintains it, what environmental changes affect it, and how to protect it in the face of various challenges.

1 A grade of C- or higher is required.

Career Opportunities

Many students majoring in the Department of Biological Sciences take advantage of scholarship and honors programs available at NC State, including the University Honors Program and the University Scholars Program. In addition, we offer a discipline-based Undergraduate Honors Program in Biological Sciences (DBS Honors Program). The DBS Honors Program requires students to design a challenging program of advanced study, including eight credits of honors coursework in biology and at least two semesters of research or teaching scholarship. Participants write an honors thesis and are required to present their scholarly work at a local, regional, or national meeting. Invitations to join the DBS Honors Program are sent in the first three weeks of the Fall and Spring semesters. Students in any major in the Department of Biological Sciences who have earned an overall GPA of 3.60 after completing 30-65 credit hours at NC State will receive an invitation to join the DBS Honors Program; transfer students in any of our majors who have earned an overall GPA of 3.60 in 15 credit hours at NC State also will receive an invitation.

Students who graduate from the Department of Biological Sciences are well prepared for employment in various government agencies and private industries. Graduates may continue their education with studies leading to advanced degrees in many areas of the biological sciences, including cell biology, ecology, microbiology, genetics, zoology, neurobiology, and biomedical disciplines. Many choose to seek advanced
degrees in medicine, dentistry, optometry, veterinary medicine, public health, and other health-related fields. Students who plan to seek certification for pre-college teaching may want to pursue a second major in the Department of Science, Technology, Engineering & Mathematics Education.

**Biological Sciences (BS): Ecology, Evolution and Conservation Biology Concentration**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orp.ncsu.edu/pgas/)

The NC State Bachelor of Arts degree in Biology is designed for students who want to combine studies in the life sciences with studies in a second discipline of interest (chosen from outside of the life sciences). Students in the B.A. are required to take just as much biology (through their Life Science Electives) as students in the B.S. in Biological Sciences, but requirements in the supporting sciences (chemistry, physics, and calculus) are reduced. Instead, Biology B.A. students identify a second area of interest outside the life sciences and create a focal area of study in that area (e.g., psychology, social work, communication, political science, anthropology, education, mathematics, statistics). Their proposed list of Cross Discipline Electives is reviewed and approved by their academic advisor and the program director.

At the end of their undergraduate studies, students in this degree program complete a Senior Capstone Project through which they draw on both the life sciences (or a sub-discipline within the life sciences) and their chosen Cross Discipline to address a problem or issue that they identify. Experiential learning (related to their academic and/or career interests) is also required of all students in this program.

Students who graduate with a B.A. in Biology will benefit from training in scientific thinking and from gaining a broader perspective through their Cross Disciplinary studies. In choosing courses, students are encouraged to consider the course pre-requisites of graduate or professional programs to which they are interested in applying. Depending on their course choices, students will be prepared for a wide range of careers or further studies. This is a relatively new program, but so far our Biology B.A. graduates are employed or pursuing advanced study in bioethics, bioinformatics, law, health analytics, health care (nursing, physician assistant, physical therapy), clinical research, public health, science communication and informal education, neurobiology, and psychology.

**Plan Requirements**

**Biological Sciences (BS): Human Biology Concentration**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The NC State Bachelor of Arts degree in Biology is designed for students who want to combine studies in the life sciences with studies in a second discipline of interest (chosen from outside of the life sciences). Students in the B.A. are required to take just as much biology (through their Life Science Electives) as students in the B.S. in Biological Sciences, but requirements in the supporting sciences (chemistry, physics, and calculus) are reduced. Instead, Biology B.A. students identify a second area of interest outside the life sciences and create a focal area of study in that area (e.g., psychology, social work, communication, political science, anthropology, education, mathematics, statistics). Their proposed list of Cross Discipline Electives is reviewed and approved by their academic advisor and the program director.

At the end of their undergraduate studies, students in this degree program complete a Senior Capstone Project through which they draw on both the life sciences (or a sub-discipline within the life sciences) and their chosen Cross Discipline to address a problem or issue that they identify. Experiential learning (related to their academic and/or career interests) is also required of all students in this program.

Students who graduate with a B.A. in Biology will benefit from training in scientific thinking and from gaining a broader perspective through their Cross Disciplinary studies. In choosing courses, students are encouraged to consider the course pre-requisites of graduate or professional programs to which they are interested in applying.

Depending on their course choices, students will be prepared for a wide range of careers or further studies. This is a relatively new program, but so far our Biology B.A. graduates are employed or pursuing advanced study in bioethics, bioinformatics, law, health analytics, health care (nursing, physician assistant, physical therapy), clinical research, public health, science communication and informal education, neurobiology, and psychology.

\(^1\) A grade of C- or higher is required.

**Career Opportunities**

Many students majoring in the Department of Biological Sciences take advantage of scholarship and honors programs available at NC State, including the University Honors Program and the University Scholars Program. In addition, we offer a discipline-based Undergraduate Honors Program in Biological Sciences (DBS Honors Program). The DBS Honors Program requires students to design a challenging program of advanced study, including eight credits of honors coursework in biology and at least two semesters of research or teaching scholarship. Participants write an honors thesis and are required to present their scholarly work at a local, regional, or national meeting. Invitations to join the DBS Honors Program are sent in the first three weeks of the Fall and Spring semesters. Students in any major in the Department of Biological Sciences who have earned an overall GPA of 3.60 after completing 30-65 credit hours at NC State will receive an invitation to join the DBS Honors Program; transfer students in any of our majors who have earned an overall GPA of 3.60 in 15 credit hours at NC State also will receive an invitation.

Students who graduate from the Department of Biological Sciences are well prepared for employment in various government agencies and private industries. Graduates may continue their education with studies leading to advanced degrees in many areas of the biological sciences, including cell biology, ecology, microbiology, genetics, zoology, neurobiology, and biomedical disciplines. Many choose to seek advanced degrees in medicine, dentistry, optometry, veterinary medicine, public health, and other health-related fields. Students who plan to seek certification for pre-college teaching may want to pursue a second major

1 A grade of C- or higher is required.

**Career Opportunities**

Many students majoring in the Department of Biological Sciences take advantage of scholarship and honors programs available at NC State, including the University Honors Program and the University Scholars Program. In addition, we offer a discipline-based Undergraduate Honors Program in Biological Sciences (DBS Honors Program). The DBS Honors Program requires students to design a challenging program of advanced study, including eight credits of honors coursework in biology and at least two semesters of research or teaching scholarship. Participants write an honors thesis and are required to present their scholarly work at a local, regional, or national meeting. Invitations to join the DBS Honors Program are sent in the first three weeks of the Fall and Spring semesters. Students in any major in the Department of Biological Sciences who have earned an overall GPA of 3.60 after completing 30-65 credit hours at NC State will receive an invitation to join the DBS Honors Program; transfer students in any of our majors who have earned an overall GPA of 3.60 in 15 credit hours at NC State also will receive an invitation.

Students who graduate from the Department of Biological Sciences are well prepared for employment in various government agencies and private industries. Graduates may continue their education with studies leading to advanced degrees in many areas of the biological sciences, including cell biology, ecology, microbiology, genetics, zoology, neurobiology, and biomedical disciplines. Many choose to seek advanced degrees in medicine, dentistry, optometry, veterinary medicine, public health, and other health-related fields. Students who plan to seek certification for pre-college teaching may want to pursue a second major in the Department of Science, Technology, Engineering & Mathematics Education.
Biological Sciences (BS): Molecular, Cellular, and Developmental Biology Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The NC State Bachelor of Arts degree in Biology is designed for students who want to combine studies in the life sciences with studies in a second discipline of interest (chosen from outside of the life sciences). Students in the B.A. are required to take just as much biology (through their Life Science Electives) as students in the B.S. in Biological Sciences, but requirements in the supporting sciences (chemistry, physics, and calculus) are reduced. Instead, Biology B.A. students identify a second area of interest outside the life sciences and create a focal area of study in that area (e.g., psychology, social work, communication, political science, anthropology, education, mathematics, statistics). Their proposed list of Cross Disciplinary Electives is reviewed and approved by their academic advisor and the program director.

At the end of their undergraduate studies, students in this degree program complete a Senior Capstone Project through which they draw on both the life sciences (or a sub-discipline within the life sciences) and their chosen Cross Discipline to address a problem or issue that they identify. Experiential learning (related to their academic and/or career interests) is also required of all students in this program.

Students who graduate with a B.A. in Biology will benefit from training in scientific thinking and from gaining a broader perspective through their Cross Disciplinary studies. In choosing courses, students are encouraged to consider the course pre-requisites of graduate or professional programs to which they are interested in applying. Depending on their course choices, students will be prepared for a wide range of careers or further studies. This is a relatively new program, but so far our Biology B.A. graduates are employed or pursuing advanced study in bioethics, bioinformatics, law, health analytics, health care (nursing, physician assistant, physical therapy), clinical research, public health, science communication and informal education, neurobiology, and psychology.

¹ A grade of C- or higher is required.

**Career Opportunities**

Many students majoring in the Department of Biological Sciences take advantage of scholarship and honors programs available at NC State, including the University Honors Program and the University Scholars Program. In addition, we offer a discipline-based Undergraduate Honors Program in Biological Sciences (DBS Honors Program). The DBS Honors Program requires students to design a challenging program of advanced study, including eight credits of honors coursework in biology and at least two semesters of research or teaching scholarship. Participants write an honors thesis and are required to present their scholarly work at a local, regional, or national meeting. Invitations to join the DBS Honors Program are sent in the first three weeks of the Fall and Spring semesters. Students in any major in the Department of Biological Sciences who have earned an overall GPA of 3.60 after completing 30-65 credit hours at NC State will receive an invitation to join the DBS Honors Program; transfer students in any of our majors who have earned an overall GPA of 3.60 in 15 credit hours at NC State also will receive an invitation.

Students who graduate from the Department of Biological Sciences are well prepared for employment in various government agencies and private industries. Graduates may continue their education with studies leading to advanced degrees in many areas of the biological sciences, including cell biology, ecology, microbiology, genetics, zoology, neurobiology, and biomedical disciplines. Many choose to seek advanced degrees in medicine, dentistry, optometry, veterinary medicine, public health, and other health-related fields. Students who plan to seek certification for pre-college teaching may want to pursue a second major...
in the Department of Science, Technology, Engineering & Mathematics Education.

**Biological Sciences (Minor)**

To see more about what you will learn in this program, visit the Learning Outcomes website ([https://apps.oirp.ncsu.edu/pgas/](https://apps.oirp.ncsu.edu/pgas/))!

The Department of Biological Sciences in the College of Sciences offers an undergraduate minor in Biological Sciences that is intended to enhance the programs of students whose major fields are outside the biological sciences and who are interested in obtaining either a broad-based perspective in biology or a more focused experience in a particular area within biology. The required courses (8 hours) provide an overview of the field of biology and students then select additional courses (at least 7 hours) within the biological sciences that best match their interests. It is possible to complete this minor entirely through Distance Education ([http://distance.ncsu.edu/courses/](http://distance.ncsu.edu/courses/)) course offerings.

The minor in Biological Sciences is open to all baccalaureate students except those majoring in Animal Science, Biochemistry, Biological Sciences, Fisheries, Wildlife and Conservation Biology: Conservation Biology; Fisheries Science; Wildlife Science, Genetics, Microbiology, Nutrition, Plant Biology, Plant and Soil Sciences, Science Education – Biology Concentration, Turfgrass Science, or Zoology. Courses will count toward the minor only if they are completed with a grade of C- or better.

**Admissions**

Students who plan to minor in Biological Sciences should contact the person listed below for consultation and approval. This person will assign the student a minor advisor who will help the student design a program of study to meet the academic needs of the student and monitor the student's progress.

**Certification**

The contact person below will certify the completion of the student’s minor program. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification can be found below and should be completed no later than during the registration period for the student’s final semester at NC State.

PP 315 Principles of Plant Pathology

- BIO or ZO 2** 1
- BIO or ZO 3** 1
- BIO or ZO 4** 1
- BIO or ZO 5** 1

Total Hours 15

1 A minimum of 7 credit hours must be taken from the list below and/or from BIO courses at the 200 level and above, excluding courses numbered BSC 295 Special Topics in Biological Sciences, BSC 492 Professional Experience, BSC 493 Research Experience, BSC 495 Special Topics in Biological Sciences, or BIO 592 Topical Problems. At least 3 of the 7 elective hours must be at the 300 level or higher.

**Biology (Honors)**

**Undergraduate Honors Program in Biological Sciences**

The Department of Biological Sciences (DBS) Honors Program requires students to design a challenging program of advanced study, including 8 credits of honors coursework in biology and at least two semesters of research or teaching scholarship. Participants are required to present their scholarly work at a local, regional, or national meeting. A written honors thesis is also required. Invitations to join the DBS Honors Program are sent in the first 3 weeks of the Fall and Spring semesters, based on GPA and number of credit hours completed at NC State, as described in the Admissions Requirements.

**Program Requirements**

BSC 497 Biological Sciences Honors Project Part 1 and BSC 498 Biological Sciences Honors Project Part 2

- two semesters of mentored research or teaching scholarship in biology
- includes written project proposal (BSC 497 Biological Sciences Honors Project Part 1), and a draft of the honors thesis (BSC 498 Biological Sciences Honors Project Part 2)
- includes completion of reflection prompts posted on Moodle
- enrollment requires a completed contract with the mentor, approved by the DBS Honors Program Committee
BSC 497 Biological Sciences Honors Project Part 1
BSC 498 Biological Sciences Honors Project Part 2

Admissions Requirement
Students in any major offered by the Department of Biological Sciences who have earned an overall GPA of 3.60 after completing 30 (but fewer than 65) credit hours at NC State will receive an invitation to join the DBS Honors Program.

Transfer Students in any major offered by the Department of Biological Sciences who have earned an overall GPA of 3.60 after completing 15 credit hours at NC State (and a total of 30 credit hours of college coursework), will receive an invitation to join the DBS Honors Program.

Graduation Requirements
Complete the Program Requirements described above and maintain an overall GPA of 3.40 or higher.

Elective Courses

Evolutionary Biology (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website:

The Minor in Evolutionary Biology provides undergraduate students with an understanding of agents of evolutionary change, how evolutionary processes are monitored across various time scales, and how these processes are quantified in extant and extinct populations. Offered by the Department of Biological Sciences, the Evolutionary Biology Minor is available to all baccalaureate degree students at North Carolina State University except for those in the B.S. in Biological Sciences with a concentration in Ecology, Evolution, and Conservation Biology. This minor is especially appropriate for (but not limited to) students majoring in the life sciences, agricultural sciences, physical sciences, natural resources, or science education. At least 9 credit hours of the minor must be completed at NC State.

Admissions
Students who plan to minor in Evolutionary Biology should contact the contact person listed below for information on how to do so. Students are strongly encouraged to declare the minor early in their studies so they receive information on relevant courses, events, and other opportunities from the Department of Biological Sciences.

Forensic Science (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)!

The Department of Biological Sciences in the College of Sciences offers an undergraduate Minor in Forensic Science, an interdisciplinary field of study that involves the application of scientific principles and methodology from numerous scientific disciplines to criminal investigations. The Forensic Science Minor is available to undergraduates majoring in any field, but might be most appropriate for students majoring or planning to pursue advanced studies in the sciences or in science education. Students in the Minor in Forensic Science take one required introduction to forensic science (3 credit hours), three required foundational courses (9 credit hours), and then they have the opportunity to further explore a variety of scientific disciplines as they relate to the legal system (minimum 6 credit hours). At least 9 credit hours of the minor must be completed at NC State.

Admissions and Certification of Minor

The minor in Forensic Science is administered within the Department of Biological Sciences in the College of Sciences. Students who plan to minor in Forensic Science should contact the contact person listed below for information on how to do so. Students are strongly encouraged to declare the minor early in their studies so they receive information on relevant courses, events, and other opportunities from the Department of Biological Sciences.

Certification

All requirements for the minor must be completed no later than the semester in which the student expects to graduate from his or her major degree program. Students apply to graduate in the minor through MyPack at the same time that they apply to graduate in their major program.

Plan Requirements

The Forensic Science minor consists of a minimum of 18 credit hours.

- A grade of C- or better is required for all Minor courses with a 2.0 GPA required in the minor for graduation.
- No course used in the minor can be taken for credit only (S/U).
- Courses taken for the minor can also be used toward major requirements, GEP Electives, or Free Electives.
- At least 9 credit hours of the minor must be completed at NC State.

Genetics (BS)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Genetics program offers undergraduate majors classroom training in fundamentals of genetics and other sciences, as well as opportunities for meaningful research experience. The degree in genetics is the only genetics major offered in the UNC system.

The genetics major complements other degree programs in the biological and life sciences at N.C. State, as it prepares students for further graduate study, professional schools (such as medical, dental, veterinary, genetic counseling) or careers in industries whose products are based on biological and agricultural research, including biopharmaceutical and biotechnology companies. Building on the strength of NC State as a leader in science and technology, students in the program can easily earn a concurrent minor in any of the other life sciences curricula, as well as other programs such as statistics or biotechnology.

Responsible conduct as a scientist and citizen are emphasized in the genetics coursework, and students will also have opportunities for public service and engagement through participation in the genetics outreach program. Students will be challenged to master their coursework while practicing hands-on problem-solving in both the classroom and active research settings. Genetics students will also be required to read the primary literature and present papers and their research findings, thus gaining valuable experience in scientific communication.

Hours 15

Hours 16

Hours 17

Hours 15

Hours 13-15
The Department of Genetics offers an undergraduate Minor in Genetics to provide students with strong preparation in the principles of Genetics and Molecular Biology, as well as preparation in ancillary fields such as Statistics and Biochemistry. This Minor is appropriate for (but not limited to) students with majors in Plant and Soil Sciences, Animal Science, Biochemistry, Biological Sciences, Computer Science, Crop Science, Environmental Technology, Mathematics, Microbiology, Natural Resources, Nutrition Science, Plant Biology, Poultry Science, and Zoology.

### Plan Requirements

- **Specified Courses**
  - GN 311 Principles of Genetics (4 cr)
  - GN 312 Elementary Genetics Laboratory (1 cr)
  - ST 311 Introduction to Statistics (3 cr)
  - GN 421 Molecular Genetics (3 cr)

- **Elective Courses**
  - Select two of the following: (6 cr)
    - GN 423 Population, Quantitative and Evolutionary Genetics
    - GN 427 Introductory Bioinformatics
    - GN 434 Genes and Development
    - GN 441 Human and Biomedical Genetics
    - GN 451 Genome Science
    - GN 456 Epigenetics, Development, and Disease

A grade of ‘C’ or better is required for all Genetics Minor courses.

The advisor will certify the minor prior to graduation. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program.

### Global Health (Minor)

The minor in Global Health provides undergraduate students with an understanding of current global health challenges, and an appreciation of interdisciplinary approaches to addressing global health needs. Offered by the Department of Biological Sciences, the Global Health Minor is available to all baccalaureate degree students at North Carolina State University. This minor is especially appropriate for (but not limited to) students majoring in the life sciences, social sciences, engineering and international studies. At least 9 credit hours of the minor must be completed at NC State.
Admission to the Minor

Students who plan to minor in Global Health should contact the contact person listed below for information on how to do so. Students are strongly encouraged to declare the minor early in their studies so they receive information on relevant courses, events, and other opportunities from the Department of Biological Sciences.

Completion of the Minor

All requirements for the minor must be completed no later than the semester in which the student expects to graduate from his or her major degree program. Students apply to graduate in the minor through MyPack at the same time that they apply to graduate in their major program.

SIS Code: 17GHM

Plan Requirements

The Global Health Minor consists of a minimum of 18 credit hours.

- A grade of C- or better is required for all minor courses and a 2.0 GPA in the minor is required for graduation.
- No course used in the minor can be taken for credit only (S/U).
- Courses taken for the minor can also be used toward major requirements, GEP Electives or Free Electives.
- At least 9 credit hours of the minor must be completed at NC State.

Total Hours 18

1 Take 2 courses in each group, unless you replace one of those credits with 3 credits of the Experiential Learning Option (see below).
2 GPH 425 Global Health and Physiology is currently a 6 credit course: 3 credits of coursework and 3 credits of experiential learning.

Experiential Learning Option

Experiential Learning Option: Global Health Research or Immersion Experience (maximum 3 cr)

You can use up to 3 credits of relevant experiential learning toward the Electives requirement of 12 total. The focus of the research or immersion experience must be in global health and the experience must be approved by the Minor Coordinator (through review of the signed contract or syllabus specific to the course) prior to your beginning the work. Research and immersion experience must address at least one of the core elements of global health: social determinants of health, implementation or evaluation of a global health program, or investigation that impacts global health. Options include BSC 492 Professional Experience, BSC 493 Research Experience, BSC 494 Teaching Experience, BSC 498 Biological Sciences Honors Project Part 2, and 3 credits of GPH 425 Global Health and Physiology (It is currently a 6 credit course: 3 credits of coursework and 3 credits of experiential learning).

Other Relevant Courses

Other relevant courses, including some capstone and special topics course offerings, can be approved by the Minor Coordinator on a case-by-case basis after review of the syllabus and discussions with the course instructor where necessary. These activities must address at least one of the core elements of global health: social determinants of health, implementation or evaluation of a global health program, or investigation that impacts global health.

Pre-requisite Course Notification

A number of courses in the minor require prerequisite courses. Thus, the minor is not one that is begun in the freshman year, but rather on, after foundation courses in science, social science and humanities have been taken. Still, it is best to think about this minor as early as possible in your academic career so that you can incorporate any prerequisites for future minor courses into your existing degree requirements. Allowances for counting a course toward both a major and a minor differ between Colleges at NC State.
**Microbiology (BS)**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orp.ncsu.edu/pgas/).

Microbiology is concerned with the growth and development, physiology, classification, ecology, genetics, and other aspects of the life process of an array of microscopic, generally single-celled, organisms and viruses. These organisms frequently serve as model systems for elucidation of fundamental processes that are common to all living cells. Most of the major discoveries that have produced spectacular advances in biology and genomic science during the past decade have resulted from studies of microbial systems. Future developments in biotechnology, production of food and fuel, and human and animal health will rely heavily on understanding microbial processes.

There are 4 avenues to earning a B.S. in Microbiology. Students can opt for a general curriculum (MBIO) or can choose to focus in a particular area by selecting one of three areas of concentration: Microbial Biotechnology (MBIO-MT) or Microbial Research (MBIO-MR) or Microbial Health Sciences (MBIO-HS). These concentrations mirror the three most common career paths of Microbiology majors: work in research laboratories and production facilities, further study in graduate school (at the Masters or Doctoral level), and further study in professional schools such as medical and dental schools.

Career Opportunities

Many students majoring in the Department of Biological Sciences take advantage of scholarship and honors programs available at NC State, including the University Honors Program and the University Scholars Program. In addition, we offer a discipline-based Undergraduate Honors Program in Biological Sciences (DBS Honors Program). The DBS Honors Program requires students to design a challenging program of advanced study, including eight credits of honors coursework in biology and at least two semesters of research or teaching scholarship. Participants write an honors thesis and are required to present their scholarly work at a local, regional, or national meeting. Invitations to join the DBS Honors Program are sent in the first three weeks of the Fall and Spring semesters. Students in any major in the Department of Biological Sciences who have earned an overall GPA of 3.60 after completing 30-65 credit hours at NC State will receive an invitation to join the DBS Honors Program; transfer students in any of our majors who have earned an overall GPA of 3.60 in 15 credit hours at NC State also will receive an invitation.

Students who graduate from the Department of Biological Sciences are well prepared for employment in various government agencies and private industries. Graduates may continue their education with studies leading to advanced degrees in many areas of the biological sciences, including cell biology, ecology, microbiology, genetics, zoology, neurobiology, and biomedical disciplines. Many choose to seek advanced degrees in medicine, dentistry, optometry, veterinary medicine, public health, and other health-related fields. Students who plan to seek certification for pre-college teaching may want to pursue a second major in the Department of Science, Technology, Engineering & Mathematics Education.

Microbiology (BS): Microbial Biotechnology Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

Microbiology is concerned with the growth and development, physiology, classification, ecology, genetics, and other aspects of the life process of an array of microscopic, generally single-celled, organisms and viruses. These organisms frequently serve as model systems for elucidation of fundamental processes that are common to all living cells. Most of the major discoveries that have produced spectacular advances in biology and genomic science during the past decade have resulted from studies of microbial systems. Future developments in biotechnology, production of food and fuel, and human and animal health will rely heavily on understanding microbial processes.

There are 4 avenues to earning a B.S. in Microbiology. Students can opt for a general curriculum (MBIO) or can choose to focus in a particular area by selecting one of three areas of concentration: Microbial Biotechnology (MBIO-MT) or Microbial Research (MBIO-MR) or Microbial Health Sciences (MBIO-HS). These concentrations mirror the three most common career paths of Microbiology majors: work in research laboratories and production facilities, further study in graduate school (at the Masters or Doctoral level), and further study in professional schools such as medical and dental schools.

Microbiology (BS): Microbial Research Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

Microbiology is concerned with the growth and development, physiology, classification, ecology, genetics, and other aspects of the life process of an array of microscopic, generally single-celled, organisms and viruses. These organisms frequently serve as model systems for elucidation of fundamental processes that are common to all living cells. Most of the major discoveries that have produced spectacular advances in biology and genomic science during the past decade have resulted from studies of microbial systems. Future developments in biotechnology, production of food and fuel, and human and animal health will rely heavily on understanding microbial processes.

There are 4 avenues to earning a B.S. in Microbiology. Students can opt for a general curriculum (MBIO) or can choose to focus in a particular area by selecting one of three areas of concentration: Microbial Biotechnology (MBIO-MT) or Microbial Research (MBIO-MR) or Microbial Health Sciences (MBIO-HS). These concentrations mirror the three most common career paths of Microbiology majors: work in research laboratories and production facilities, further study in graduate school (at the Masters or Doctoral level), and further study in professional schools such as medical and dental schools.

Plan Requirements

Career Opportunities

Many students majoring in the Department of Biological Sciences take advantage of scholarship and honors programs available at NC State, including the University Honors Program and the University Scholars Program. In addition, we offer a discipline-based Undergraduate Honors Program in Biological Sciences (DBS Honors Program). The DBS Honors Program requires students to design a challenging program of advanced study, including eight credits of honors coursework in biology and at least two semesters of research or teaching scholarship. Participants write an honors thesis and are required to present their scholarly work at a local, regional, or national meeting. Invitations to join the DBS Honors Program are sent in the first three weeks of the Fall and Spring semesters. Students in any major in the Department of Biological Sciences who have earned an overall GPA of 3.60 after completing 30-65 credit hours at NC State will receive an invitation to join the DBS Honors Program; transfer students in any of our majors who have earned an overall GPA of 3.60 in 15 credit hours at NC State also will receive an invitation.

Students who graduate from the Department of Biological Sciences are well prepared for employment in various government agencies and private industries. Graduates may continue their education with studies leading to advanced degrees in many areas of the biological sciences, including cell biology, ecology, microbiology, genetics, zoology, neurobiology, and biomedical disciplines. Many choose to seek advanced degrees in medicine, dentistry, optometry, veterinary medicine, public health, and other health-related fields. Students who plan to seek certification for pre-college teaching may want to pursue a second major in the Department of Science, Technology, Engineering & Mathematics Education.

Microbiology (Certificate)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The University Undergraduate Certificate in Microbiology offers students the opportunity to further their understanding of microorganisms and the roles they play in the world in which we live. The intended audience of this certificate includes degree-seeking undergraduate students at institutions where a Microbiology major or minor is not available, and non-degree students seeking additional experience in microbiology for career advancement or to enhance their applications to professional, graduate, or allied health schools. This certificate may also improve the ability of K-12 science teachers to compete for positions or teach more effectively. Finally, this certificate would provide an in-depth understanding of microbiology for those interested out of personal satisfaction.

Career Opportunities

Many students majoring in the Department of Biological Sciences take advantage of scholarship and honors programs available at NC State, including the University Honors Program and the University Scholars Program. In addition, we offer a discipline-based Undergraduate Honors Program in Biological Sciences (DBS Honors Program). The DBS Honors Program requires students to design a challenging program of advanced study, including eight credits of honors coursework in biology and at least two semesters of research or teaching scholarship. Participants write an honors thesis and are required to present their scholarly work at a local, regional, or national meeting. Invitations to join the DBS Honors Program are sent in the first three weeks of the Fall and Spring semesters. Students in any major in the Department of Biological Sciences who have earned an overall GPA of 3.60 after completing 30-65 credit hours at NC State will receive an invitation to join the DBS Honors Program; transfer students in any of our majors who have earned an overall GPA of 3.60 in 15 credit hours at NC State also will receive an invitation.

Students who graduate from the Department of Biological Sciences are well prepared for employment in various government agencies and private industries. Graduates may continue their education with studies leading to advanced degrees in many areas of the biological sciences, including cell biology, ecology, microbiology, genetics, zoology, neurobiology, and biomedical disciplines. Many choose to seek advanced degrees in medicine, dentistry, optometry, veterinary medicine, public health, and other health-related fields. Students who plan to seek certification for pre-college teaching may want to pursue a second major of advanced study, including eight credits of honors coursework in microbiology for career advancement or to enhance their applications to professional, graduate, or allied health schools. This certificate would provide an in-depth understanding of microbiology for those interested out of personal satisfaction.

Program Coordinator

The Certificate advisor is:

Dr. Melissa Ramirez  
Certificate Coordinator  
1567A Thomas Hall  
919.513.3309  
mvramire@ncsu.edu

Program Website: http://online.microbiology.ncsu.edu/

Admissions Requirements

Students apply by submitting their academic record and a letter of interest. Admission to the program is not required to take certificate courses. The requirements for admission are:

• A high school diploma (or equivalent)
• Completion of high-school level chemistry and biology
• Completion of college-level organic chemistry and either genetics or biochemistry courses (required as prerequisites for upper-level certificate courses) OR current enrollment in a program offering these courses OR other access to these courses
• Degree-seeking students at NCSU are not eligible (these students should enroll in the Microbiology minor)
• Students who have completed or are currently enrolled in a Microbiology degree program (including a minor) are not eligible

Academic Structure

College: College of Sciences  
Term Effective: 1/2013  
Plan Code: 32MBCTU  
CIP Code: 26.0502  
Description: Undergraduate Certificate in Microbiology

Offered: On-Campus and Distance Education formats

Plan Requirements

The Microbiology Certificate requires 12 undergraduate credit hours, as follows:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>MB 351</td>
<td>General Microbiology</td>
<td>3</td>
</tr>
<tr>
<td>MB 411</td>
<td>Medical Microbiology</td>
<td>3</td>
</tr>
<tr>
<td>MB 451</td>
<td>Microbial Diversity 1</td>
<td>3</td>
</tr>
</tbody>
</table>

Elective Course

Select one of the following:  

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>MB 200</td>
<td>The Fourth Horseman: Plagues that Changed the World 1</td>
<td>3</td>
</tr>
<tr>
<td>MB 352</td>
<td>General Microbiology Laboratory</td>
<td></td>
</tr>
<tr>
<td>MB 354</td>
<td>Inquiry-Guided Microbiology Lab</td>
<td></td>
</tr>
<tr>
<td>MB 360</td>
<td>Scientific Inquiry in Microbiology: At the Bench</td>
<td></td>
</tr>
<tr>
<td>MB 492</td>
<td>External Learning Experience 2</td>
<td></td>
</tr>
<tr>
<td>BSC 493</td>
<td>Research Experience</td>
<td>1-3</td>
</tr>
<tr>
<td>MB 4XX</td>
<td>Any 400-level Microbiology course, with prior program approval</td>
<td>13-15</td>
</tr>
</tbody>
</table>

Total Hours 120

1 A grade of C- or higher is required.
Microbiology (Minor)

1 Available via distance education.
2 Contact instructors about possible remote instruction.

Prerequisites are required for some courses.

At least 9 credits counted toward the certificate must be taken from NCSU. A grade of C- or better (“S” is only allowed for MB 492 External Learning Experience or BSC 493 Research Experience) is required of all required or elective courses. An overall 2.0 or greater GPA in coursework taken to complete the certificate is required.

Estimated Total Credit Hours Required: 12

Plan of study: The certificate requires 12 credit hours. Students pursuing university certificate programs are considered non-degree studies (NDS) students for the purpose of university registration. Because General Microbiology is a prerequisite for Medical Microbiology, which in turn is a prerequisite for Microbial Diversity, this program will take a minimum of 3 semesters to complete if all courses are taken from NCSU.

Microbiology (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

A minor in Microbiology is available to undergraduates majoring in any field, but may be especially appropriate for students in biological or agricultural sciences, physical sciences or science education. This minor will be useful to students who want to strengthen their understanding of either basic cellular processes or applied areas such as the role of microorganisms in industry, agriculture or health.

Admissions

Students may declare their intention to complete the Microbiology minor by consulting with Dr. Olson (as listed below) or Kim Orlowski in the departmental office, 2727 Bostian Hall, 515-6146.

Certification

The student’s minor advisor will review the student’s record and certify that the student has completed the requirements for the minor by signing the “Application for Minor” form. Copies of the signed form will be forwarded to the student’s major department and the Dean’s office of the college in which the student is completing the requirements for a major. Upon certification, the student’s transcript will include the statement “Minor in Microbiology.” The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State.

Zoology (BS)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Bachelor of Science in Zoology curriculum concentrates on organismal biology, with an emphasis on animals. Required courses are designed to develop breadth and depth in core areas, providing a strong base for all Zoology majors. Students acquire a knowledge of zoology from the organizational level of molecules and cells to the organizational level of ecosystems, with flexibility in the selection of upper level courses to specialize or remain generalized, according to individual interests and career goals.

Career Opportunities

Many students majoring in the Department of Biological Sciences take advantage of scholarship and honors programs available at NC State, including the University Honors Program and the University Scholars Program. In addition, we offer a discipline-based Undergraduate Honors Program in Biological Sciences (DBS Honors Program). The DBS Honors Program requires students to design a challenging program of advanced study, including eight credits of honors coursework in biology and at least two semesters of research or teaching scholarship. Participants write an honors thesis and are required to present their scholarly work at a local, regional, or national meeting. Invitations to join the DBS Honors Program are sent in the first three weeks of the Fall and Spring semesters. Students in any major in the Department of Biological Sciences who have earned an overall GPA of 3.60 after completing 30-65 credit hours at NC State will receive an invitation to join the DBS Honors Program; transfer students in any of our majors who have earned an overall GPA of 3.60 in 15 credit hours at NC State also will receive an invitation.

Students who graduate from the Department of Biological Sciences are well prepared for employment in various government agencies and private industries. Graduates may continue their education with studies leading to advanced degrees in many areas of the biological sciences, including cell biology, ecology, microbiology, genetics, zoology, neurobiology, and biomedical disciplines. Many choose to seek advanced degrees in medicine, dentistry, optometry, veterinary medicine, public health, and other health-related fields. Students who plan to seek certification for pre-college teaching may want to pursue a second major in the Department of Science, Technology, Engineering & Mathematics Education.

Zoology (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)! The Department of Biological Sciences in the College of Sciences offers an undergraduate minor in Zoology intended to enhance the programs of students who are interested in obtaining a solid foundation in zoological concepts, including diversity in the animal kingdom, animal behavior, and the comparative physiology of animals. It is open to all baccalaureate students except those majoring in Zoology (17ZOOBS) or Biological Sciences with a concentration in Ecology, Evolution, and Conservation Biology (17BIOSCEEC). At least 9 credit hours of the minor must be completed at NC State.

Admissions

The minor in Zoology is administered within the Department of Biological Sciences in the College of Sciences. Students who plan to minor in Zoology should contact the contact person listed below for information on how to do so. Students are strongly encouraged to declare the minor early in their studies so they receive information on relevant courses, events, and other opportunities from the Department of Biological Sciences.

Certification

All requirements for the minor must be completed no later than the semester in which the student expects to graduate from their major degree program. Students apply to graduate in the minor through MyPack at the same time that they apply to graduate in their major program.

Plan Requirements

- The Zoology minor consists of a minimum of 17 credit hours.
- A grade of C- or better is required for all minor courses with a 2.0 GPA required in the minor for graduation.
- No course used in the minor can be taken for credit only (S/U).
- Courses taken for the minor can also be used toward major requirements, GEP Electives, or Free Electives.
- At least 9 credit hours of the minor must be completed at NC State.

Department of Chemistry

The Department of Chemistry is a place where the best and brightest undergraduate students come together to learn, building the foundation for bright futures. Our two degree programs (https://chemistry.sciences.ncsu.edu/undergraduate/programs/) offer flexibility in choosing the appropriate academic path to fulfill your interests and career goals. Our Bachelor of Science (B.S.) program is certified by the American Chemical Society (https://www.acs.org/content/acs/en.html) and trains you for entry in the chemical workforce or graduate school in the chemical sciences. Our Bachelor of Arts (B.A.) program is built around the core sub-disciplines of chemistry with the addition of elective coursework in a chosen field. This program is designed to train you for a career outside of traditional laboratory work. And excellent students looking for a challenging curriculum can enroll in our Chemistry Honors Program (https://chemistry.sciences.ncsu.edu/undergraduate/programs/chemistry-honors-program/).

Our undergraduate researchers work alongside our expert faculty and top-notch graduate students and postdoctoral researchers, making big discoveries that affect us all. They leave our department with real-world skills and understanding that prepare them to shape the future of chemistry. Being at a large university means a wealth of opportunities — you can choose to participate in research opportunities offered through our department or to partner with researchers in other colleges and departments around campus on interdisciplinary projects.

The Department of Chemistry combines excellent teaching with unique opportunities for research and community engagement to prepare undergraduates for future success.

To learn more about this department, visit our website (https://chemistry.sciences.ncsu.edu/).

Plans

• Chemistry (BA) (p. 1360)
• Chemistry (BS) (p. 1362)
Chemistry (BA)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

Chemistry is a diverse and growing field that is full of academic and career opportunities for undergraduate students. Our two degree programs offer flexibility in choosing the appropriate academic path to fulfill your interest and career goals.

The Bachelor of Arts (B.A.) in Chemistry is built around the core sub-disciplines of chemistry with the addition of elective coursework in a chosen field. This program is designed to train you for a career outside of traditional laboratory work.

The Bachelor of Science (B.S.) in Chemistry program is certified by the American Chemical Society and trains you for entry in the chemical workforce or graduate school in the chemical sciences.

The Chemistry Honors Program offers students a challenging program of advanced study where they can develop independence, collaborative skills and a deeper understanding of chemistry required for careers in both industry and graduate school.

Outside of the classroom, students in Chemistry actively share their passion for chemistry with others, including the next generation of scientists. Opportunities in this area are possible through participation in our student groups:

- **Alpha Chi Sigma** – professional co-ed chemistry fraternity; benefits students not only by helping with their studies but also by providing projects and activities that teach the roles of leadership and management
- **American Chemical Society** – the student chapter of the ACS takes part in activities including tours of local research facilities, trips to national and regional conferences, and presentations by guest speakers
- **Cosmetic Chemistry Club** - open to all students interested in learning about cosmetics and the industry behind them; connects students to the cosmetic industry through guest speakers, company visits, and other activities

Undergraduate research can be one of the most rewarding aspects of your academic experience at NC State. Research offers opportunities to make pioneering discoveries at the forefront of science, using instrumentation and techniques far more sophisticated than those you would encounter in standard laboratory courses. Students often co-author publications in peer-reviewed journals and present their research at conferences. For more information on getting involved, please contact our Undergraduate Research Coordinator.

For more information about this program, visit our website (https://chemistry.sciences.ncsu.edu/undergraduate/programs/).

Semester Sequence

This is a sample.

Course Title Hours
First Year
Fall Semester
CH 103 General Chemistry I for Students in Chemical Sciences 1 3
CH 104 General Chemistry Laboratory I for Students in Chemical Sciences 1 1
MA 131 or MA 141 Calculus for Life and Management Sciences A 1 or Calculus I 3-4
ENG 101 Academic Writing and Research 1 4
COS 100 Science of Change 2
GEP Requirement (p. 1417) 3
Hours 16-17

Spring Semester
CH 203 General Chemistry II for Students in Chemical Sciences 1 3
CH 204 General Chemistry Laboratory II for Students in Chemical Sciences 1 1
MA 231 or MA 241 Calculus for Life and Management Sciences B 1 or Calculus II 3-4
GEP Health and Exercise Studies (p. 1422) 1
GEP Requirement (p. 1417) 3
GEP Requirement (p. 1417) 3
Hours 14-15

Second Year
Fall Semester
CH 225 Organic Chemistry I for Students in Chemical Sciences 1 3
CH 226 Organic Chemistry Laboratory I for Students in Chemical Sciences 1 1

### Total Hours

119-123

1 A grade of C- or higher is required.

---

**Chemistry (BS)**

To see more about what you will learn in this program, visit the Learning Outcomes website ([https://apps.oirp.ncsu.edu/pgas/)](https://apps.oirp.ncsu.edu/pgas/)

Chemistry is a diverse and growing field that is full of academic and career opportunities for undergraduate students. Our two degree programs offer flexibility in choosing the appropriate academic path to fulfill your interest and career goals.

The Bachelor of Arts (B.A.) in Chemistry is built around the core sub-disciplines of chemistry with the addition of elective coursework in a chosen field. This program is designed to train you for a career outside of traditional laboratory work.

The Bachelor of Science (B.S.) in Chemistry program is certified by the American Chemical Society and trains you for entry in the chemical workforce or graduate school in the chemical sciences.

Outside of the classroom, students in Chemistry actively share their passion for chemistry with others, including the next generation of scientists. Opportunities in this area are possible through participation in our student groups:

- **Alpha Chi Sigma** – professional co-ed chemistry fraternity; benefits students not only by helping with their studies but also by providing projects and activities that teach the roles of leadership and management

- **American Chemical Society** – the student chapter of the ACS takes part in activities including tours of local research facilities, trips to national and regional conferences, and presentations by guest speakers

- **Cosmetic Chemistry Club** - open to all students interested in learning about cosmetics and the industry behind them; connects students to the cosmetic industry through guest speakers, company visits, and other activities

Undergraduate research can be one of the most rewarding aspects of your academic experience at NC State. Research offers opportunities to make pioneering discoveries at the forefront of science, using instrumentation and techniques far more sophisticated than those you would encounter in standard laboratory courses. Students often co-author publications in peer-reviewed journals and present their research at conferences. For more information on getting involved, please contact our Undergraduate Research Coordinator.

For more information about this program, visit our website ([https://chemistry.sciences.ncsu.edu/undergraduate/programs/](https://chemistry.sciences.ncsu.edu/undergraduate/programs/)).

1 A grade of C- or higher is required.

Department of Marine, Earth and Atmospheric Sciences

The Department of Marine, Earth and Atmospheric Sciences (MEAS) covers a broad range of disciplines with one overarching goal: a deeper understanding of the Earth’s environment. MEAS takes an interdisciplinary, integrated systems-based approach to studying our planet’s air, earth and water. This interdisciplinary viewpoint is particularly important today, in light of accelerating global changes and increasing corporate and public interest in environmental health and the stewardship of our natural resources. Addressing these complex issues requires more than narrow training in a single discipline. MEAS graduates can be equipped for tasks as diverse as improving severe storm forecasting; assessing the potential effects of oil exploration and mining; modeling global climate trends or coastal flooding; understanding the transport of air pollutants from industrial centers, remote satellite observation of our planet’s surface; or devising plans to minimize erosion, harmful algal blooms and the pollution of our streams, lakes and estuaries.

MEAS offers:

• Degrees and minors in meteorology, geology, marine sciences, and natural resources
• Minors in meteorology, geology, and marine sciences
• Semester at CMAST, an opportunity to spend a spring semester on the shore of Bogue Sound, in Morehead City
• A departmental honors program in which participants receive enhanced coverage of academic material and are involved in research.
• Opportunities for undergraduate research, cooperative education, and Internships
• Award-winning facilities that include state of the art classrooms, teaching laboratories, computing facilities, and research
• Partnerships with the State Climate Office and the National Weather Service, which are housed on NC State’s Centennial Campus

For more information about this department, visit our website (https://meas.sciences.ncsu.edu/).

Y. Zhang

Adjunct Associate Professors
W. H. Battye
The degree of Bachelor of Science in Geology is offered in the Department of Marine, Earth and Atmospheric Sciences. Geological science — or Earth science — is a broad and interdisciplinary field that encompasses other disciplines such as biology, chemistry, math, and physics. Knowledge of Earth processes provides a critical framework for the assessment of resources, geologic hazards, and environmental stewardship. Many geologists work in the petroleum or natural gas exploration industry or in the mineral industry. Many other geoscientists find work related to natural hazards (e.g., earthquakes, volcanoes, and landslides), as geologists on some of the world's largest engineering projects (dams, tunnels, bridges, tall buildings), in the geothermal and alternative energy sectors, in the remediation of hazardous waste and groundwater pollution control, and in the field of environmental rehabilitation (e.g., stream restoration). Geoscientists work across industries — from Fortune 100 companies to small environmental consulting and law firms, state agencies and nonprofit organizations. Many others are employed in the education sector including at universities, community colleges and high schools.

For more information about our geology program, visit our website (https://meas.sciences.ncsu.edu/undergraduate/programs/earth-science/) or contact:

PY 208 & PY 209  Physics for Engineers and Scientists II Laboratory
PY 212  College Physics II

**Geology Core Courses**

Select one of the following:

- MEA 101  Geology I: Physical
- MEA 150  Environmental Issues in Water Resources
- MEA 200  Introduction to Oceanography
- MEA 100  Earth System Science: Exploring the Connections
- MEA 110  Geology I Laboratory
- MEA 202  Geology II: Historical
- MEA 211  Geology II Laboratory
- MEA 410  Introduction to Mineralogy and Petrology
- MEA 450  Introductory Sedimentology and Stratigraphy
- MEA 451  Structural Geology
- MEA 465  Geologic Field Camp
- MEA 495  Junior Seminar in the Marine, Earth, and Atmospheric Sciences

**Restricted Electives**

Select one of the following:

- MEA 411  Marine Sediment Transport
- MEA 459  Field Investigation of Coastal Processes
- MEA 481  Geomorphology: Earth's Dynamic Surface

Select one of the following:

- MEA 323  Geochemistry of Natural Waters
- MEA 471  Exploration and Engineering Geophysics
- MEA 485  Introduction to Hydrogeology

Restricted Earth Science Electives (p. 1368)

Math/Science Option Electives (p. 1368)

Advised Electives

Advised Electives

GEP Courses

- GEP Humanities (p. 1423)
- GEP Social Sciences (p. 1430)
- GEP Health and Exercise Studies (p. 1422)
- GEP Additional Breadth (p. 1417) (Humanities/Social Sciences/Visual and Performing Arts)
- GEP U.S. Diversity (p. 1431) (verify requirement)
- GEP Global Knowledge (p. 1419) (verify requirement)
- Foreign Language Proficiency (p. 1417) (verify requirement)

Free Electives

Free Electives (12 Hr S/U Lmt)  

Total Hours 120

1 A grade of C- or higher is required.
2 Students should consult their academic advisors to determine which courses fill this requirement.

manage our coastal resources, model air-sea interaction, and explore Marine Sciences graduates go on to become oceanographers, to pursue careers in industry, at government agencies and in academia. Many students pursue graduate degrees and the foundation of scientific knowledge required for careers in government, industry, or academia. Geology graduates address society’s needs for dealing effectively with earth processes, such as water resources and the stability of land forms. They work for engineering firms, permit-issuing agencies, and industries that rely on geological resources. Historical geologists are familiar with the evolution of earth through time and provide a perspective on potential long-term reactions of the earth systems to change. Those who concentrate in Environmental Geology are trained to assess and monitor geological resources such as ground water. Marine geologists are experts in the complex issues facing industry, municipalities, and residents in the dynamic and ecologically vulnerable coastal zone. Meteorology graduates enjoy careers in weather forecasting, air quality assessment, development of weather products and services, broadcast communications, and advanced research. Marine meteorologists study ocean-generated weather systems. Their research is yielding practical benefits such as refined prediction of storm surge, which has streamlined evacuation efforts during severe storms along the Carolina coast. Meteorology graduates with an air quality emphasis work for environmental firms, regulatory agencies, and in applied research. Study of air quality and how air pollution is transported and dispersed is a rapidly expanding field in the atmospheric sciences. Geology graduates address society’s needs for dealing effectively with earth processes, such as water resources and the stability of land forms. They work for engineering firms, permit-issuing agencies, and industries that rely on geological resources. Historical geologists are familiar with the evolution of earth through time and provide a perspective on potential long-term reactions of the earth systems to change. Those who concentrate in Environmental Geology are trained to assess and monitor geological resources such as ground water. Marine geologists are experts in the complex issues facing industry, municipalities, and residents in the dynamic and ecologically vulnerable coastal zone. Meteorology graduates enjoy careers in weather forecasting, air quality assessment, development of weather products and services, broadcast communications, and advanced research. Meteorology graduates with an air quality emphasis work for environmental firms, regulatory agencies, and in applied research. Study of air quality and how air pollution is transported and dispersed is a rapidly expanding field in the atmospheric sciences.

**Career Opportunities**

MEAS undergraduate degree programs provide talented students with the foundation of scientific knowledge required for careers in government, industry, or academia. Many students pursue graduate degrees and pursue careers in industry, at government agencies and in academia.

Marine Sciences graduates go on to become oceanographers, to manage our coastal resources, model air-sea interaction, and explore global climate change. They conduct basic and applied research, serving as environmental consultants for industry and governmental agencies, policy and management experts for governmental agencies, and environmental science educators. Graduates with a Natural Resources degree are versed in the fundamental processes and interdisciplinary nature of the coastal zone. As scientists, managers, administrators, and regulators, they make decisions regarding use and conservation of coastal and marine resources.

Geology graduates address society’s needs for dealing effectively with earth processes, such as water resources and the stability of land forms. They work for engineering firms, permit-issuing agencies, and industries that rely on geological resources. Historical geologists are familiar with the evolution of earth through time and provide a perspective on potential long-term reactions of the earth systems to change. Those who concentrate in Environmental Geology are trained to assess and monitor geological resources such as ground water. Marine geologists are experts in the complex issues facing industry, municipalities, and residents in the dynamic and ecologically vulnerable coastal zone. Meteorology graduates enjoy careers in weather forecasting, air quality assessment, development of weather products and services, broadcast communications, and advanced research. Marine meteorologists study ocean-generated weather systems. Their research is yielding practical benefits such as refined prediction of storm surge, which has streamlined evacuation efforts during severe storms along the Carolina coast. Meteorology graduates with an air quality emphasis work for environmental firms, regulatory agencies, and in applied research. Study of air quality and how air pollution is transported and dispersed is a rapidly expanding field in the atmospheric sciences.

**Geology (Minor)**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Department of Marine, Earth and Atmospheric Sciences offers a minor in Geology to majors in any field except geology. This program provides a means of recognition for students in any field who have a curiosity about the materials, structures and processes of the solid earth.

**Admissions**

Admission into this minor program requires that the student be in good academic standing at the university. To officially enroll in the Minor program, students should see Dr. Karl Wegmann, 2123 Jordan Hall, 919.515.0380, kwegman@ncsu.edu. Dr. Wegmann will provide the student with the name of a geology faculty member who will act as the advisor for the student’s minor program.

**Certification**

Students should see Dr. Wegmann for certification of the minor, 2123 Jordan Hall. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program.

---

1 No more than one D will be allowed in MEA courses and Restricted and Advised Electives.

2 A grade of C- or higher is required.

**Marine Science (Minor)**

To see more about what you will learn in this program, visit the Learning Outcomes website ([https://apps.oirp.ncsu.edu/pgas/](https://apps.oirp.ncsu.edu/pgas/))!

The Department of Marine, Earth and Atmospheric Sciences offers a Minor in Marine Science to majors in any field except marine science or natural resources with a concentration in marine and coastal resources. The minor provides a means of recognition for students who desire a deeper understanding of the world's ocean.

**Requirements for Admission and Completion of the Minor**

- Students must have completed MEA 200 Introduction to Oceanography with a letter grade of C or better and have a GPA of 2.5 or above to be admitted into the minor.
- For completion, students must complete MEA 200 Introduction to Oceanography, MEA 210 Oceanography Lab and MEA 250 Introduction to Coastal Environments and at least 9 additional credit hours from the list of minor elective courses. All course work must be letter-graded and completed with a C or better.

**Admissions**

Students must have completed MEA 200 Introduction to Oceanography with a letter grade of C or better and have a GPA of 2.5 or above to be admitted into the minor. To officially enroll in the Minor program, students should see Dr. Carrie Thomas, 4136 Jordan Hall, 919.515.7839, cjthomas@ncsu.edu.

Total Hours: 16

1 Enrollment in special topics courses should be approved by the minor coordinator in advance to ensure they are appropriate and relevant to the minor.
Marine Sciences (BS): Biological Oceanography Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orp.ncsu.edu/pgas/)

The degree of Bachelor of Science in Marine Science may be obtained by selecting one of five concentrations: Biological Oceanography, Chemistry, Geology, Meteorology, or Physics.

The degree of Bachelor of Science in Natural Resources is available with a concentration in Marine and Coastal Resources.

Marine scientists explore all aspects of the seas and coastal regions, seeking to understand how the oceans, their biological communities, the solid earth and the atmosphere interact. As professionals with interdisciplinary training, marine scientists are needed to advise business, industry and governments on the potential impact of human activities and the wise use of marine resources. Marine scientists work for consulting firms; regulatory agencies; the mass media; business and industry; federal, state and local governments; academic laboratories; research and education organizations; and nonprofit environmental watchdog groups.

For more information about our marine science programs, visit our website (https://meas.sciences.ncsu.edu/undergraduate/programs/marine-science/) or contact:

Maggie Puryear, Associate Director of Undergraduate Programs

¹ A grade of C- or higher is required.
² No more than one D will be accepted in MEA core courses and concentration courses.
Career Opportunities

MEAS undergraduate degree programs provide talented students with the foundation of scientific knowledge required for careers in government, industry, or academia. Many students pursue graduate degrees and pursue careers in industry, at government agencies and in academia.

Marine Sciences graduates go on to become oceanographers, to manage our coastal resources, model air-sea interaction, and explore global climate change. They conduct basic and applied research, serving as environmental consultants for industry and governmental agencies, policy and management experts for governmental agencies, and environmental science educators. Graduates with a Natural Resources degree are versed in the fundamental processes and interdisciplinary nature of the coastal zone. As scientists, managers, administrators, and regulators, they make decisions regarding use and conservation of coastal and marine resources.

Geology graduates address society’s needs for dealing effectively with earth processes, such as water resources and the stability of land forms. They work for engineering firms, permit-issuing agencies, and industries that rely on geological resources. Historical geologists are familiar with the evolution of earth through time and provide a perspective on potential long-term reactions of the earth systems to change. Those who concentrate in Environmental Geology are trained to assess and monitor geological resources such as ground water. Marine geologists are experts in the complex issues facing industry, municipalities, and residents in the dynamic and ecologically vulnerable coastal zone.

Meteorology graduates enjoy careers in weather forecasting, air quality assessment, development of weather products and services, broadcast communications, and advanced research. Marine meteorologists study ocean-generated weather systems. Their research is yielding practical benefits such as refined prediction of storm surge, which has streamlined evacuation efforts during severe storms along the Carolina coast. Meteorology graduates with an air quality emphasis work for environmental firms, regulatory agencies, and in applied research. Study of air quality and how air pollution is transported and dispersed is a rapidly expanding field in the atmospheric sciences.

MEAS graduates play a key service role for the State of North Carolina, assisting in everything from forecasting severe storms and analyzing the impact of atmospheric pollutants on agriculture and our estuaries, to determining the effects of toxic waste disposal on quality of surface and ground water.

Marine Sciences (BS): Chemistry Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The degree of Bachelor of Science in Marine Science may be obtained by selecting one of five concentrations: Biological Oceanography, Chemistry, Geology, Meteorology, or Physics.

The degree of Bachelor of Science in Natural Resources is available with a concentration in Marine and Coastal Resources.

Marine scientists explore all aspects of the seas and coastal regions, seeking to understand how the oceans, their biological communities, the solid earth and the atmosphere interact. As professionals with interdisciplinary training, marine scientists are needed to advise business, industry and governments on the potential impact of human activities and the wise use of marine resources. Marine scientists work for consulting firms; regulatory agencies; the mass media; business and industry; federal, state and local governments; academic laboratories; research and education organizations; and nonprofit environmental watchdog groups.

Semester Sequence

Critical Path Courses – Identify using the code (CP) which courses are considered critical path courses which represent specific major requirements that are predictive of student success in a given program/plan. Place the (CP) next to the credit hours for the course.

This is a sample.

Course Title Hours
First Year Fall Semester
COS 100 Science of Change 2
MA 141 Calculus I (CP) 1 4
MEA 100 Earth System Science: Exploring the Connections 2 4
MEA 101 Geology I: Physical (CP) 2 3
MEA 110 Geology I Laboratory (CP) 2 1
Spring Semester
CH 101 Chemistry - A Molecular Science (CP) 1 3
CH 102 General Chemistry Laboratory 2 1
ENG 101 Academic Writing and Research 1 4
MA 241 Calculus II 1 4
MEA 202 Geology II: Historical 2 3
MEA 211 Geology II Laboratory 2 1

Second Year Fall Semester
CH 201 Chemistry - A Quantitative Science 1 3
CH 202 Quantitative Chemistry Laboratory 2 1
MA 242 Calculus III 3 4
MEA 200 Introduction to Oceanography (CP) 2 3
MEA 210 Oceanography Lab 2 1
MEA 410 Introduction to Mineralogy and Petrology 2 4
Spring Semester
MEA 250 Introduction to Coastal Environments 2 3
MEA 251 Introduction to Coastal Environments Laboratory 2 1
MEA 450 Introductory Sedimentology and Stratigraphy 2 4
PY 205 Physics for Engineers and Scientists I 1 3
PY 206 Physics for Engineers and Scientists I Laboratory 3 1

Third Year Fall Semester
MEA 460 Principles of Physical Oceanography 2 3
MEA 451 Structural Geology 2 4
GEP Health and Exercise Studies (p. 1422) 1
PY 208 Physics for Engineers and Scientists II 3 3
PY 209 Physics for Engineers and Scientists II Laboratory 3 1

Spring Semester
Advanced Writing Elective 3
Computer Science Option Elective 3
GEP Health and Exercise Studies (p. 1422) 1
MEA 462 Observational Methods and Data Analysis in Marine Physics 2 3
Statistical Science Option Elective 3 3
MEA 495 Junior Seminar in the Marine, Earth, and Atmospheric Sciences 1

Summer
MEA 459 Field Investigation of Coastal Processes 2 5

Fourth Year Fall Semester
GEP Social Sciences (p. 1430) 3

Hours
15
14
5
5
13
120

1 A grade of C- or higher is required.
2 No more than one D will be accepted in MEA core courses and concentration courses.
3 No more than one D will be accepted in other basic math or science courses.

Career Opportunities

MEAS undergraduate degree programs provide talented students with the foundation of scientific knowledge required for careers in government, industry, or academia. Many students pursue graduate degrees and pursue careers in industry, at government agencies and in academia.

Marine Sciences graduates go on to become oceanographers, to manage our coastal resources, model air-sea interaction, and explore global climate change. They conduct basic and applied research, serving as environmental consultants for industry and governmental agencies, policy and management experts for governmental agencies, and environmental science educators. Graduates with a Natural Resources degree are versed in the fundamental processes and interdisciplinary nature of the coastal zone. As scientists, managers, administrators, and regulators, they make decisions regarding use and conservation of coastal and marine resources.

Geology graduates address society’s needs for dealing effectively with earth processes, such as water resources and the stability of land
forms. They work for engineering firms, permit-issuing agencies, and industries that rely on geological resources. Historical geologists are familiar with the evolution of earth through time and provide a perspective on potential long-term reactions of the earth systems to change. Those who concentrate in Environmental Geology are trained to assess and monitor geological resources such as ground water. Marine geologists are experts in the complex issues facing industry, municipalities, and residents in the dynamic and ecologically vulnerable coastal zone.

Meteorology graduates enjoy careers in weather forecasting, air quality assessment, development of weather products and services, broadcast communications, and advanced research. Marine meteorologists study ocean-generated weather systems. Their research is yielding practical benefits such as refined prediction of storm surge, which has streamlined evacuation efforts during severe storms along the Carolina coast. Meteorology graduates with an air quality emphasis work for environmental firms, regulatory agencies, and in applied research. Study of air quality and how air pollution is transported and dispersed is a rapidly expanding field in the atmospheric sciences.

MEAS graduates play a key service role for the State of North Carolina, assisting in everything from forecasting severe storms and analyzing the impact of atmospheric pollutants on agriculture and our estuaries, to determining the effects of toxic waste disposal on quality of surface and ground water.

MEAS graduates play a key service role for the State of North Carolina, assisting in everything from forecasting severe storms and analyzing the impact of atmospheric pollutants on agriculture and our estuaries, to determining the effects of toxic waste disposal on quality of surface and ground water.

## Marine Sciences (BS): Physics Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orip.ncsu.edu/pgas/)! 

The degree of Bachelor of Science in Marine Science may be obtained by selecting one of five concentrations: Biological Oceanography, Chemistry, Geology, Meteorology, or Physics.

The degree of Bachelor of Science in Natural Resources is available with a concentration in Marine and Coastal Resources.

Marine scientists explore all aspects of the seas and coastal regions, seeking to understand how the oceans, their biological communities, the solid earth and the atmosphere interact. As professionals with interdisciplinary training, marine scientists are needed to advise business, industry and governments on the potential impact of human activities and the wise use of marine resources. Marine scientists work for consulting firms; regulatory agencies; the mass media; business and industry; federal, state and local governments; academic laboratories; research and education organizations; and nonprofit environmental watchdog groups.

For more information about our marine science programs, visit our website (https://meas.sciences.ncsu.edu/undergraduate/programs/marine-science/) or contact:

Maggie Puryear, Associate Director of Undergraduate Programs

1 A grade of C- or higher is required.
2 No more than one D will be accepted in MEA core courses and concentration courses.
3 No more than one D will be accepted in other basic math or science courses.

**Career Opportunities**

MEAS undergraduate degree programs provide talented students with the foundation of scientific knowledge required for careers in government, industry, or academia. Many students pursue graduate degrees and pursue careers in industry, at government agencies and in academia.

Marine Sciences graduates go on to become oceanographers, to manage our coastal resources, model air-sea interaction, and explore global climate change. They conduct basic and applied research, serving
as environmental consultants for industry and governmental agencies, policy and management experts for governmental agencies, and environmental science educators. Graduates with a Natural Resources degree are versed in the fundamental processes and interdisciplinary nature of the coastal zone. As scientists, managers, administrators, and regulators, they make decisions regarding use and conservation of coastal and marine resources.

Geology graduates address society’s needs for dealing effectively with earth processes, such as water resources and the stability of land forms. They work for engineering firms, permit-issuing agencies, and industries that rely on geological resources. Historical geologists are familiar with the evolution of earth through time and provide a perspective on potential long-term reactions of the earth systems to change. Those who concentrate in Environmental Geology are trained to assess and monitor geological resources such as ground water. Marine geologists are experts in the complex issues facing industry, municipalities, and residents in the dynamic and ecologically vulnerable coastal zone.

Meteorology graduates enjoy careers in weather forecasting, air quality assessment, development of weather products and services, broadcast communications, and advanced research. Marine meteorologists study ocean-generated weather systems. Their research is yielding practical benefits such as refined prediction of storm surge, which has streamlined evacuation efforts during severe storms along the Carolina coast. Meteorology graduates with an air quality emphasis work for environmental firms, regulatory agencies, and in applied research. Study of air quality and how air pollution is transported and dispersed is a rapidly expanding field in the atmospheric sciences.

MEAS graduates play a key service role for the State of North Carolina, assisting in everything from forecasting severe storms and analyzing the impact of atmospheric pollutants on agriculture and our estuaries, to determining the effects of toxic waste disposal on quality of surface and ground water.

**Meteorology (BS)**

To see more about what you will learn in this program, visit the Learning Outcomes website ([https://apps.oirp.ncsu.edu/pgas/](https://apps.oirp.ncsu.edu/pgas/))!

The degree of Bachelor of Science in Meteorology is offered in the Department of Marine, Earth and Atmospheric Sciences. A concentration in Marine Science may also be chosen.

Meteorologists study a diverse array of topics, including climate, air pollution, environmental impacts, weather analysis and forecasting, remote sensing, atmospheric physics and interactions between the atmosphere and other components of the earth system. Our undergraduate students pursue careers in air quality, weather forecasting, meteorological research, broadcast meteorology and positions with the armed forces. The proximity of the Environmental Protection Agency center in nearby Research Triangle Park, the NC Department of Air Quality, a strong working relation with the local media, and the presence of the State Climate Office and a NWS forecast office on the NC State campus all provide our students with a broad range of internship and employment possibilities.

For more information about our meteorology programs, visit our website ([https://meas.sciences.ncsu.edu/undergraduate/programs/atmospheric-science/](https://meas.sciences.ncsu.edu/undergraduate/programs/atmospheric-science/)) or contact:

### Career Opportunities

MEAS undergraduate degree programs provide talented students with the foundation of scientific knowledge required for careers in government, industry, or academia. Many students pursue graduate degrees and pursue careers in industry, at government agencies and in academia.

Marine Sciences graduates go on to become oceanographers, to manage our coastal resources, model air-sea interaction, and explore global climate change. They conduct basic and applied research, serving as environmental consultants for industry and governmental agencies, policy and management experts for governmental agencies, and environmental science educators. Graduates with a Natural Resources degree are versed in the fundamental processes and interdisciplinary nature of the coastal zone. As scientists, managers, administrators, and regulators, they make decisions regarding use and conservation of coastal and marine resources.

Geology graduates address society’s needs for dealing effectively with earth processes, such as water resources and the stability of land forms. They work for engineering firms, permit-issuing agencies, and industries that rely on geological resources. Historical geologists are familiar with the evolution of earth through time and provide a perspective on potential long-term reactions of the earth systems to change. Those who concentrate in Environmental Geology are trained to assess and monitor geological resources such as ground water. Marine geologists are experts in the complex issues facing industry, municipalities, and residents in the dynamic and ecologically vulnerable coastal zone.

Meteorology graduates enjoy careers in weather forecasting, air quality assessment, development of weather products and services, broadcast communications, and advanced research. Marine meteorologists study ocean-generated weather systems. Their research is yielding practical benefits such as refined prediction of storm surge, which has streamlined evacuation efforts during severe storms along the Carolina coast. Meteorology graduates with an air quality emphasis work for environmental firms, regulatory agencies, and in applied research. Study of air quality and how air pollution is transported and dispersed is a rapidly expanding field in the atmospheric sciences.
MEAS graduates play a key service role for the State of North Carolina, assisting in everything from forecasting severe storms and analyzing the impact of atmospheric pollutants on agriculture and our estuaries, to determining the effects of toxic waste disposal on quality of surface and ground water.

**Meteorology (BS): Marine Sciences Concentration**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The degree of Bachelor of Science in Meteorology is offered in the Department of Marine, Earth and Atmospheric Sciences. A concentration in Marine Science may also be chosen.

Meteorologists study a diverse array of topics, including climate, air pollution, environmental impacts, weather analysis and forecasting, remote sensing, atmospheric physics and interactions between the atmosphere and other components of the earth system. Our undergraduate students pursue careers in air quality, weather forecasting, meteorological research, broadcast meteorology and undergraduate students pursue careers in air quality, weather forecasting, meteorological research, broadcast meteorology and positions with the armed forces. The proximity of the Environmental Protection Agency center in nearby Research Triangle Park, the NC Department of Air Quality, a strong working relation with the local media, and the presence of the State Climate Office and a NWS forecast office on the NC State campus all provide our students with a broad range of internship and employment possibilities.

For more information about our meteorology programs, visit our website (https://meas.sciences.ncsu.edu/undergraduate/programs/atmospheric-science/) or contact:

Maggie Puryear, Associate Director of Undergraduate Programs

¹ A grade of C- or higher is required.
² No more than one D will be accepted in MEA core courses and concentration courses.
³ No more than one D will be accepted in other basic math or science courses.

Career Opportunities
MEAS undergraduate degree programs provide talented students with the foundation of scientific knowledge required for careers in government, industry, or academia. Many students pursue graduate degrees and pursue careers in industry, at government agencies and in academia.

Marine Sciences graduates go on to become oceanographers, to manage our coastal resources, model air-sea interaction, and explore global climate change. They conduct basic and applied research, serving as environmental consultants for industry and governmental agencies, policy and management experts for governmental agencies, and environmental science educators. Graduates with a Natural Resources
degree are versed in the fundamental processes and interdisciplinary nature of the coastal zone. As scientists, managers, administrators, and regulators, they make decisions regarding use and conservation of coastal and marine resources.

Geology graduates address society’s needs for dealing effectively with earth processes, such as water resources and the stability of land forms. They work for engineering firms, permit-issuing agencies, and industries that rely on geological resources. Historical geologists are familiar with the evolution of earth through time and provide a perspective on potential long-term reactions of the earth systems to change. Those who concentrate in Environmental Geology are trained to assess and monitor geological resources such as ground water. Marine geologists are experts in the complex issues facing industry, municipalities, and residents in the dynamic and ecologically vulnerable coastal zone.

Meteorology graduates enjoy careers in weather forecasting, air quality assessment, development of weather products and services, broadcast communications, and advanced research. Marine meteorologists study ocean-generated weather systems. Their research is yielding practical benefits such as refined prediction of storm surge, which has streamlined evacuation efforts during severe storms along the Carolina coast. Meteorology graduates with an air quality emphasis work for environmental firms, regulatory agencies, and in applied research. Study of air quality and how air pollution is transported and dispersed is a rapidly expanding field in the atmospheric sciences.

MEAS graduates play a key service role for the State of North Carolina, assisting in everything from forecasting severe storms and analyzing the impact of atmospheric pollutants on agriculture and our estuaries, to determining the effects of toxic waste disposal on quality of surface and ground water.

**Meteorology (Minor)**

To see more about what you will learn in this program, visit the Learning Outcomes website [here](https://apps.oirp.ncsu.edu/pgas/)

The Department of Marine, Earth and Atmospheric Sciences offers a minor in Meteorology to majors in any field except meteorology. This program provides a means of recognition for students in related fields, especially Science and Engineering, who are interested in application of physical principles to the atmospheric environment.

**Admissions and Certification of Minor**

Students who plan to minor in Meteorology should contact the person listed below. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State.

**Contact Person**

Dr. Matt Parker  
Department of Marine, Earth and Atmospheric Sciences  
5149 Jordan Hall  
919.513.4367  
mdparker@ncsu.edu

**SIS Code: 17MYM**

**Plan Requirements**

- Grades of ‘C’ or better in MA 141 Calculus I and in PY 205 Physics for Engineers and Scientists I prior to admission to the minor.
- Successful completion of the program requires a ‘C’ or better in at least 15 credit hours to be taken as follows:

**Natural Resources (BS): Marine and Coastal Concentration**

To see more about what you will learn in this program, visit the Learning Outcomes website [here](https://apps.oirp.ncsu.edu/pgas/)

The department offers curricula in each of the areas of marine, earth and atmospheric sciences. Each prepares students for employment at graduation or for further professional training. There is one Bachelor of Science (B.S.) curricula in atmospheric sciences: Meteorology. Students in that major can choose to concentrate in Marine Meteorology. Earth sciences house one curricula: the B.S. in Geology. In the marine sciences, students can choose between two degree programs: the B.S. in Marine Science or the B.S. in Natural Resources. Students in the marine science major choose one of five concentrations:

1. Biological Oceanography  
2. Chemistry  
3. Geology  
4. Meteorology  
5. Physics

Students in the B.S. in Natural Resources concentrate in Marine and Coastal Resources.

Career Opportunities

MEAS undergraduate degree programs provide talented students with the foundation of scientific knowledge required for careers in government, industry, or academia. Many students pursue graduate degrees and pursue careers in industry, at government agencies and in academia.

Marine Sciences graduates go on to become oceanographers, to manage our coastal resources, model air-sea interaction, and explore global climate change. They conduct basic and applied research, serving as environmental consultants for industry and governmental agencies, policy and management experts for governmental agencies, and environmental science educators. Graduates with aNatural Resources degree are versed in the fundamental processes and interdisciplinary nature of the coastal zone. As scientists, managers, administrators, and regulators, they make decisions regarding use and conservation of coastal and marine resources.

Geology graduates address society’s needs for dealing effectively with earth processes, such as water resources and the stability of land forms. They work for engineering firms, permit-issuing agencies, and industries that rely on geological resources. Historical geologists are familiar with the evolution of earth through time and provide a perspective on potential long-term reactions of the earth systems to change. Those who concentrate in Environmental Geology are trained to assess and monitor geological resources such as ground water. Marine geologists are experts in the complex issues facing industry, municipalities, and residents in the dynamic and ecologically vulnerable coastal zone.

Meteorology graduates enjoy careers in weather forecasting, air quality assessment, development of weather products and services, broadcast communications, and advanced research. Marine meteorologists study ocean-generated weather systems. Their research is yielding practical benefits such as refined prediction of storm surge, which has streamlined evacuation efforts during severe storms along the Carolina coast. Meteorology graduates enjoy careers in weather forecasting, air quality assessment, development of weather products and services, broadcast communications, and applied research. Study of air quality and how air pollution is transported and dispersed is a rapidly expanding field in the atmospheric sciences.

MEAS graduates play a key service role for the State of North Carolina, assisting in everything from forecasting severe storms and analyzing the impact of atmospheric pollutants on agriculture and our estuaries, to determining the effects of toxic waste disposal on quality of surface and ground water.

Department of Mathematics

For more information about this department, including contact information, visit the department (https://math.sciences.ncsu.edu).

In the NC State Department of Mathematics, excellent teaching and a supportive community combine with cutting-edge research across a broad spectrum of mathematics and its applications. Our department is committed to mentoring and to creating a supportive environment that helps all students succeed in math.

The NC State math faculty’s mission is to help students thrive. The quality of our teaching has been recognized by the university with the NC State University Provost Departmental Award for Teaching and Learning Excellence as well as the induction of 12 of our faculty into its Academy of Outstanding Teachers, and by prestigious awards from the American Mathematical Society (AMS). The department’s size — more than 60
faculty — means that each student has access to personal attention from faculty and to an unusual range of opportunities.

Research topics in our department range from fundamental questions in algebra and combinatorics to mathematical modeling of the eye and circulatory system. Ours is one of the leading U.S. math departments in offering opportunities for graduate students to work on practical problems with industrial collaborators. And our department is one of the most successful in the nation in securing research grants, with annual funding of more than $5 million, much of which supports graduate and undergraduate student researchers.

Department Highlights:

• Our students have won prestigious Goldwater, Churchill and Fulbright awards and have gone on to notable careers in business, government, research, and teaching.
• In 2011, the AMS honored our commitment to groups that are traditionally underrepresented in math with its 2011 Award for Mathematics Programs That Make a Difference.
• Our department awarded more than 12% of all doctoral degrees earned by African Americans in the nation’s top 100 mathematics departments between 2000 and 2010. And 45 percent of our department-supported Ph.D. students are female.
• Student organizations and seminars in the department are active. These opportunities include the Society for Undergraduate Mathematics, student chapters of the Society for Industrial and Applied Mathematics and the Association for Women in Mathematics, and graduate student groups in areas such as algebra and applied mathematics sponsor talks, panel discussions, and get-togethers.
• We reach into the community, cultivating the next generation of mathematicians through such programs as the Association for Women in Mathematics student chapter’s annual Sonia Kovalevsky Day for middle-school girls, public events like the annual Kwangil Koh Lecture on Mathematics in Our Time (a talk by a prominent mathematician), and participation in BugFest at the NC Museum of Natural Sciences.

For more information about our department, including contact information, visit our website (https://math.sciences.ncsu.edu/).

A.K. Saibaba
R. Sazdanovic
C.L. Vinzant
Y. Kitapbayez

Teaching Professor
A.N. Duca
M.A. Fenn

Teaching Assistant Professor
B. Burns-Williams
B. Maultsby

Lecturers
E. Brown
E.J. Dempster
L.A. Kurtz

Plans
- Applied Mathematics (BS) (p. 1395)
- Applied Mathematics (BS): Financial Mathematics Concentration (p. 1398)
- Mathematics (BS) (p. 1400)
- Mathematics (Minor) (p. 1403)

Applied Mathematics (BS)
To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The bachelor of science in applied mathematics shares many basic features with the B.S. program in mathematics. The primary difference is that this program includes a strong interdisciplinary concentration in a related field. The applied concentration, which must be approved by a student’s adviser, should be structured to promote specific career or educational objectives.

Undergraduate research opportunities include:
- Society for Industrial and Applied Mathematics
- NC State Research Experiences for Undergraduates in Mathematics
- The Mathematical Biology Research Training Group
- Industrial Mathematical & Statistical Modeling (IMSM) Program by SAMSI
- Study abroad opportunities in applied mathematics
- SUM Club

For more information about this program visit: https://math.sciences.ncsu.edu/undergraduate/undergraduate-programs/applied-mathematics/

Applied Mathematics (BS): Financial Mathematics Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

A refinement of the applied mathematics degree. This program prepares students for careers in financial mathematics, actuarial science and portfolio management.

For more information about this program visit: https://math.sciences.ncsu.edu/undergraduate/undergraduate-programs/applied-mathematics-financial-concentration/

### Mathematics (BS)

The bachelor of science in mathematics is our most flexible curriculum. The mathematics and science requirements in the program along with the General Education Program in the humanities and social sciences ensure that graduates receive a broad education with a technical slant. At the same time, the large number of elective choices within the program makes it an appropriate curriculum for students with a variety of interests and career goals.

Undergraduate research opportunities include:

- Budapest Semester in Mathematics
- Society for Undergraduate Mathematics
- NC State Research Experiences for Undergraduates in Mathematics
- The Mathematical Biology Research Training Group
- SUM Club

</table>

¹ A grade of C- or higher is required.
² At most one grade of D is permitted CH 101 Chemistry - A Molecular Science, CH 102 General Chemistry Laboratory, to PY 205 Physics for Engineers and Scientists I/PY 206 Physics for Engineers and Scientists I Laboratory, the course(s) satisfying basic science elective and the two courses satisfying the statistics requirement.

Math Electives (p. 1402)

Major Paper Co-Requirement (Verify Requirement) (p. 1402)

In-Dept Co-Requirement (Verify Requirement) 2

**Science/Engineering/Business/Statistics Electives**

The preferred statistics sequence is ST 380 with MA 421. Alternatives include ST 370 with MA 421, or STS 371 with STS 372, or ST 421 with ST 422, or MA 421 with ST 422. If ST 370 or ST 380 is taken, MA 421 will be an advanced mathematics elective. If ST 371/372 is taken, ST 371 will be a Science/Engineering/Bus/Stat. elective. If MA 421 is taken as any advanced math elective then ST 422 will satisfy the ST requirement.

The preferred statistics sequence is ST 380 with MA 421. Alternatives include ST 370 with MA 421, or STS 371 with STS 372, or ST 421 with ST 422, or MA 421 with ST 422. If ST 370 or ST 380 is taken, MA 421 will be an advanced mathematics elective. If ST 371/372 is taken, ST 371 will be a Science/Engineering/Bus/Stat. elective. If MA 421 is taken as any advanced math elective then ST 422 will satisfy the ST requirement.

Science/Engineering/Business/Statistics courses must be selected from the following: BIO/ZO 160, BIO 18*, BIO 200>, CE ***, CH ***, ECE ***, ECI 305, ECI 416, EMS 470, EMS 480, GN ***, ISE ***, MAE ***, MB ***, MEA ***, NE ***, NTR ***, OR ***, PY 300>, PB ***, ZO ***, ACC ***, EC ***, CSC ***, ST 300> (except not the courses CH 100, CH 111, CSC 100, CSC 200, ST 311, or ST 361) Note: Business courses are restricted to BUS majors/minor.

**GEP Courses**

GEP Humanities (p. 1423)

GEP Social Sciences (p. 1430)

GEP Health and Exercise Studies (p. 1422)

GEP Additional Breadth (p. 1417) (Humanities/Social Sciences/Visual and Performing Arts)

GEP Interdisciplinary Perspectives (p. 1426)

GEP U.S. Diversity (p. 1431) (verify requirement)

GEP Global Knowledge (p. 1419) (verify requirement)

Foreign Language Proficiency (p. 1417) (verify requirement)

**Free Electives**

Free Electives (12 Hr S/U Lmt)

Total Hours

1 A grade of C- or higher is required.

2 Students should consult their academic advisors to determine which courses fill this requirement.

**Basic Science Electives**

1. A grade of C- or higher is required.
2. At most one grade below a C- is permitted in Advanced Mathematics courses. No grades below a C- are permitted in Basic Mathematics courses.
3. At least one grade below a C- is permitted in CH 101 Chemistry - A Molecular Science, CH 102 General Chemistry Laboratory, the two courses satisfying the physics requirement, and the course satisfying the statistics requirement.

### Mathematics (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Department of Mathematics offers a minor in Mathematics to majors in any field except Mathematics. The minor program consists of the completion with a grade of C- or better of any fifteen hours selected from...
the Mathematics Department’s list of approved courses. The list includes all MA courses at the 300, 400, and 500 levels; however, MA 225 is acceptable but not required.

For more information about this program visit: https://math.sciences.ncsu.edu/undergraduate/undergraduate-programs/mathematics-minor/

Plan Requirements
Prerequisite to the Mathematics minor: Students must complete one (1) of the two (2) basic calculus sequences, as shown below, with a grade of ‘C’ or better in each course.

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>

Physics provides the conceptual foundation for science and engineering. A physics degree is a mark of major intellectual achievement and a gateway to a thousand careers. The physics major at NC State combines the resources of a major research university with the ambience of a small college. Our ratio of physics majors to faculty of about 3 to 1 allows us to offer small classes, personal attention, and unparalleled opportunities for involvement in research.

Most physics majors are preparing for employment in a government or industrial laboratory, or with a company that provides STEM (science, technology, engineering and math) products or services. Other physics majors are preparing for graduate studies in physics or related sciences, or enrollment in professional schools (such as medicine or law). Some physics majors are preparing for a career as a high school teacher. The Bachelor of Arts (B.A.) curriculum has a flexible course of study if you desire an interdisciplinary program with an emphasis on physics.

| Total Hours             |                                                  | 120   |

1  At most one passing grade below C- is permitted in the Physics category.
2  At most one passing grade below C- is permitted in the Math/Statistics/Computing category.
3  At most one passing grade below C- is permitted in the Sciences/Technical Electives category.

Physics (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Physics Department offers a minor in physics to majors in any field except physics. This minor gives students a broad exposure to the basic disciplines of physics and provides an opportunity for learning how these disciplines are applied in some of the frontier fields of physics research.

For more information about this program, visit our website (https://physics.sciences.ncsu.edu/undergraduate/resources-for-minors/).

Department of Physics
NC State University
Plan Requirements

- Completion of 17 hours of coursework in Physics
- A grade of ‘C’ or better in all courses used for the minor.

<table>
<thead>

**Elective Courses**

Select two of the following: 1

- PY 328 Stellar and Galactic Astrophysics 6
- PY 413 Thermal Physics
- PY 341 Relativity, Gravitation and Cosmology

Total Hours 15

1 Some upper level physics courses (PY 401 Quantum Physics I and PY 402 Quantum Physics II, PY 411 Mechanics I and PY 412 Mechanics II, PY 414 Electromagnetism I and PY 415 Electromagnetism II, and the PY 500 level courses) may be substituted for the courses in this group. Students must have prior written approval from the minor advisor listed below in order to exercise this option.

Department of Statistics

Statistics is a field of limitless opportunities to solve real-world problems. We’re one of the largest and top-rated statistics departments (https://www.usnews.com/best-graduate-schools/top-science-schools/statistics-rankings/) in the nation, and the diverse research interests (https://statistics.sciences.ncsu.edu/research/) of our faculty mean students can explore a wide range of specializations and find the one or ones that pique their interest.

We offer a dynamic environment for teaching, research, and interdisciplinary collaboration and training. Biostatistics, data science, business analytics, environmental statistics, statistical genetics, sports analytics, and theoretical statistics are just a few of the subject areas in which our faculty excel. Our students are highly involved in experiential learning opportunities including research, internships, and consulting. US News recently ranked Statistician as its #1 Best Business Job (https://money.usnews.com/careers/best-jobs/statistician/), and our graduates choose from high-paying jobs in exciting fields including computing, precision medicine, sports analytics, manufacturing, biostatistics, national security, and academia.

Department Highlights:

- Student organizations of interest to Statistics majors include the Statistics Club (https://www.facebook.com/groups/464002833712482/), Actuarial Club (https://www.facebook.com/groups/1646853775608262/), and Sports Analytics Club (http://shiny.stat.ncsu.edu/sportstat/).
- Statistics students have many study abroad opportunities, with recent destinations including Antarctica, Ghana, Australia, China, and the United Kingdom.
- Students in our program develop valuable statistical computing skills in the classroom and lab, and then apply those in our real-world practicum courses and at local and regional DataFests.
- Students find exciting summer experiences that include internships in nearby Research Triangle Park, in undergraduate research programs across the nation, and in our own Summer Institute in Biostatistics (SIBS) program.
- About a quarter of our students continue their education with graduate studies. Including frequent placement in NC State’s prestigious Institute for Advanced Analytics (https://analytics.ncsu.edu/?page_id=1799/). For more information about our department, including contact information, visit our website (https://statistics.sciences.ncsu.edu/).

The undergraduate Bachelor of Science in Statistics curriculum provides basic training for a career in statistics, while also preparing students for graduate study in statistics or related fields. In addition to statistics, the curriculum includes coursework in mathematics, computer science, and the biological/physical sciences. Our program’s emphasis on statistical computing is unique, and prepares our graduates for careers in the rapidly evolving Data Science sector. Each statistics major also works with their advisor to formulate an individualized plan for 12 credits of “Advised Electives”. This plan might lead to a minor or distribute their study across disciplines exploring the application of statistics in other fields such as agriculture and life sciences, computer science, economics and business, industrial engineering, or the social sciences.

For more information, see the website (https://statistics.sciences.ncsu.edu/undergraduate/) for our major.

Total Hours 120

1 At most one D level grade is permitted in Advised Electives, Statistics Electives, or required MAT, ST, or CSC courses. C- or better is required in ST 307 Introduction to Statistical Programming: SAS, ST 311 Introduction to Statistics, ST 312 Introduction to Statistics II and ST 421 Introduction to Mathematical Statistics I.

Career Opportunities

The importance of sound statistical thinking in the design and analysis of quantitative studies is reflected in the abundance of job opportunities for statisticians. Industry relies on statistical methods to control the quality of goods in the process of manufacturing and to determine the acceptability of goods produced. Statistical procedures based on scientific sampling have become basic tools in such diverse fields as weather forecasting, environmental monitoring, opinion polling, crop and livestock estimation, market research, and business trends prediction. The development and testing of new drugs and therapies requires statistical expertise, and advances in genomic science provide tremendous opportunities for statistical work. Because one can improve the efficiency and use of increasingly complex and expensive experiment and survey data, the statistician is in demand wherever quantitative studies are conducted. Statistics is at the core of Data Science and Analytics, and our department provides an outstanding environment to prepare for careers in these areas.

Statistics (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

A minor in statistics is an excellent complement to majors in a wide range of fields. The minor program helps students learn to use statistical methods to summarize information and solve real-world problems. Flexible academic plans offer almost all students at NC State access to this valuable minor.

For more information, see the website (https://statistics.sciences.ncsu.edu/undergraduate/minor/) for our minor.

Part A: Introductory Statistics

Select one of the following options: 4-6

Option 1:

ST 305 Statistical Methods

Option 2:

ST 312 Introduction to Statistics II

And select one of the following:

ST 311 Introduction to Statistics

ST 350 Economics and Business Statistics

ST 370 Probability and Statistics for Engineers

ST 380 Probability and Statistics for the Physical Sciences
The Environmental and Molecular Toxicology program has established an undergraduate minor in Environmental Toxicology that is available to all baccalaureate degree students at North Carolina State University. The new minor was approved in February of 2003.

Given the importance and high level of interest in protecting human and environmental health, environmental toxicology is a contemporary field of study that will be of great interest to many undergraduate students. This program also will provide undergraduates with exposure to two of the University’s major academic thrusts: Genomic Sciences and Environmental Sciences. The interdisciplinary and applied nature of environmental toxicology interfaces with virtually all academic programs within the College of Science (COS) (http://www.cals.ncsu.edu/).

### Plans

- Environmental Toxicology (Minor) (p. 1416)

### Environmental Toxicology (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Environmental and Molecular Toxicology program offers an undergraduate minor in Environmental Toxicology that is available to all baccalaureate degree students at North Carolina State University. The minor is intended to provide undergraduate students with an understanding of how chemicals and physical agents can adversely affect biological systems and the environment, including the mechanisms of chemically induced toxicity, the fate and effects of chemicals in the environment, and the evaluation of chemical hazards and risks. The minor is especially appropriate for (but not limited to) students majoring in the biological or agricultural sciences, physical sciences or science education.

### Admissions and Certification of Minor

The minor will be administrated by Dr. Seth Kullman, the Undergraduate Coordinator. NC State undergraduate students may be admitted to the minor after successfully completing 60 credit hours. Students should contact the minor coordinator and complete a minor application form/work plan. This form will be forwarded to the student’s advisor.

### Contact Person

Dr. Elizabeth Ellen Thompson
2202 Toxicology Bldg
919.515.9774
eethomp2@ncsu.edu

**SIS code:** 17ETM

### Plan Requirements

- Completion of 15 credit hours.
- 9 credit hours will be required courses and 6 credit hours will be elective courses.
- A grade of ‘C’ or better is required for all courses taken to fulfill the minor requirements.

### Life Sciences First Year Program

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Life Sciences First Year (LSFY) program at NC State University was developed with the goal of helping students find the right fit in a degree program at NC State. LSFY is a joint program between the College of Agriculture and Life Sciences (p. 1416) and the College of Sciences. Designed for students who enter NC State with an interest in any aspect of the life sciences, the LSFY curriculum allows students to begin laying the foundation for further studies in any of the life science degree programs at NC State. At the same time, the advising program and specially designed courses encourage and provide the means for students to explore their academic interests to settle on the academic home that is best for them, while understanding what they need to do to achieve their professional goals. After learning more about degree requirements and exploring their own interests and aptitudes (both in and out of class), LSFY students apply by the end of their first year to transfer into a degree program.

The LSFY program includes all incoming first-year students who express interest in earning a degree in one of the following majors: Biochemistry, Biological Sciences, Genetics, Microbiology, Nutrition Science, Plant Biology, or Zoology. There is no need to fill out a special application for the program.

To learn more about the LSFY program, visit the website (https://departments.sciences.ncsu.edu/lsfy/).

</tr>
<tr>
<td>TOX 490</td>
<td></td>
<td>1</td>
</tr>
</tbody>
</table>

Elective Courses

Select six credits of the following:

- TOX 495
- TOX 499
- BCH 451 Principles of Biochemistry
- BO/ZO 360
- CE 280
- CH 315 Quantitative Analysis
- CH/MEA 323
- ES 100 Introduction to Environmental Sciences
- ET 201 Environmental Technology Laboratory I
- ET 202 Environmental Technology Laboratory II
- ET 301 Environmental Technology Laboratory III
- ET 302 Environmental Technology Laboratory IV
- ET 401 Environmental Technology Laboratory V
- ET 310 Environmental Monitoring and Analysis
- ET/MEA 320 Fundamentals of Air Pollution
- ET 450
- FS/MB 405 Food Microbiology
- FW/ZO 353 Wildlife Management
- GN 311 Principles of Genetics
- NTR/ANS 419 Human Nutrition and Chronic Disease
- ST 311 Introduction to Statistics
- TC/TAM 401
- ZO 421
- ALS 498 Honors Research or Teaching I
- ALS 499 Honors Research or Teaching II

Total Hours: 15

Other courses may qualify if they contain significant content related to toxicology; consent of the Toxicology Undergraduate Teaching Coordinator is required.

GEP Category Requirements

- Foreign Language Proficiency (p. 1417)
- GEP Global Knowledge (p. 1419)
- GEP Health and Exercise Studies (p. 1422)
- GEP Humanities (p. 1423)
- GEP Interdisciplinary Perspectives (p. 1426)
- GEP Mathematical Sciences (p. 1428)
- GEP Natural Sciences (p. 1429)
- GEP Social Sciences (p. 1430)
- GEP U.S. Diversity (p. 1431)
- GEP Visual and Performing Arts (p. 1432)

Foreign Language Proficiency

Rationale

In a sense, languages are keys to the world. The continuous expansion of international relations makes the knowledge of foreign languages increasingly significant. In learning a foreign language and studying its literature and cultures, students acquire a body of knowledge about how humans think, view the world, express themselves, and communicate with one another. Language learning also expands one’s ability to create and discover new meaning in one’s own language and culture. Knowledge of the linguistic structures of a second language helps students to understand their own language and culture. Likewise, an awareness of contrasting cultural concepts sensitizes students to the differences between their own culture and others. Such awareness has become increasingly important as the communities of the world have become more interconnected and interdependent. The needs of our global society require that more citizens have access to other languages and cultures in order to cooperate in the process of improving the quality of human life.

Foreign Language Proficiency Requirement

To fulfill the GEP Foreign language requirement, the student must have proficiency at the FL* 102 level. This can be demonstrated by completing two years of high school study of the same language with a grade better than a C- in each of the two years, or a passing grade at the FL* 102 level, or by placement into the FL* 201 by examination. Additional Foreign Language requirements above the FL proficiency requirement (FL*102) have been established by some Colleges and programs.

American Sign Language (ASL) is accepted in satisfying the foreign language proficiency requirement with two years of ASL in high school with a grade “C” or better in each year.

The Cherokee language is an accepted language for satisfying the foreign language proficiency requirement.

Raleigh, NC 27695-8614  
Phone: (919) 515-5565  
fax: (919) 515-5564  
E-mail: poole_undergrad@ncsu.edu

Please visit the Poole College of Management's website [here](https://poole.ncsu.edu/undergraduate/) for additional information about our programs.

The Poole College of Management’s curricula provide students with the knowledge and skills required to launch successful careers in today’s dynamic global business community. Poole graduates are prepared to pursue positions with large corporations, small firms, and start-ups, nonprofits, government agencies, or even to start their own businesses. Many choose to pursue advanced studies in professional accounting, economics, law and business administration either upon graduation or after acquiring a few years of professional experience.

The college’s academic programs provide a wide range of options that enable students to build on their existing interests and strengths, as well as to explore new directions. Students may study accounting, information technology, financial management, supply chain management, marketing, economic analysis, human resource management, entrepreneurship, and more. Communication skills, data analysis skills, and computer literacy are integrated into the curriculum, along with project-based, hands-on learning that provides valuable real-world experience.

Students acquire a strong liberal arts background through general education courses and electives that they choose from the many options available through NC State’s historically strong academic programs in science, technology, engineering, humanities and social science. Dual degree and interdisciplinary programs are also available, and students are encouraged to participate in study abroad, internships, and campus leadership opportunities during their time in the college. The Poole College presents an environment in which students can develop an inclusive mindset and the skills necessary to facilitate positive
intercultural communication and interaction, especially in the context of today’s global business world.

NC State University is accredited by AACSB International—the Association to Advance Collegiate Schools of Business. Accreditation affirms the Poole College of Management’s positioning among the best business and management schools in the world.

Poole College of Management faculty bring years of professional experience along with solid academic training to our classrooms. Many are active in corporate consulting and serve on the boards of directors of major corporations. A large number of the college’s faculty are members of NC State University’s Academy of Outstanding Teachers, and many others have been honored for their teaching, research, and service. The faculty is organized into four academic departments:

- Accounting
- Business Management
- Economics
- Management, Innovation, and Entrepreneurship

**Dual Degree/Double Major International Programs**

The Poole College of Management is committed to offering a variety of international opportunities for our students. From specialized Poole-sponsored summer international programs to semester and full-year study abroad programs, to unique dual-degree options, Poole students are offered a world of choice in international study.

Hamilton Scholars (http://poole.ncsu.edu/undergraduate/global/alexander-hamilton-scholars/) is a double major program offered collaboratively by the Poole College of Management and the College of Humanities and Social Sciences (CHASS). In four years, students can complete two degrees: one from the Poole College of Management in either Accounting, Business Administration or Economics and the second from CHASS in International Studies. The Hamilton Scholars program includes extracurricular activities and requires at least one study abroad experience. Graduates of the program are prepared to function successfully in cross-cultural corporate settings.

The International Business Dual Degree (IBDD) Program (https://poole.ncsu.edu/undergraduate/global/international-business-dual-degree-program-ibdd/) provides an even richer opportunity for international immersion and study. In this program, students spend their first two years studying at NC State University, then the next two years studying at one of our partner universities in China, France, Germany, Italy or Spain. Students complete two internships: one in each country. In addition, students take most of the courses at the partner University in the native language. Upon completion of the four-year program, students earn a Bachelor of Science in Business Administration from NC State University and a bachelor’s degree in International Business/Management from the partner institution. Graduates of the IBDD Program are bi-lingual; have at least 9 months work experience; have lived, studied, and worked in two countries and are highly sought after for international positions, both domestic and abroad.

**Student Organizations**

Numerous student organizations are housed in the Poole College to provide undergraduate students a wide range of exposure to business in practice. Students are encouraged to become active in the clubs and organizations aligned with their chosen major and/or concentration in order to develop networking skills and professional contacts. Poole College’s student organizations (https://poole.ncsu.edu/undergraduate/about/our-students/student-organizations/) are also a valuable source of service and professional development experiences and provide undergraduates a wide range of leadership development opportunities.

**Student Services**

The Poole College of Management is committed to providing the support services to enable our students to succeed. Our team of full-time professional advisors provides comprehensive academic advising services to undergraduate students from freshman through senior year; our global programs staff supports student exploration of appropriate international experiences during their academic career; our career development staff is dedicated to helping students pursue internships during their academic program and career positions upon graduation.

**Diversity and Inclusion**

The Poole College of Management seeks to facilitate an environment of inclusivity and positive intercultural communication and interaction for our students. Understanding how diversity and differences impact individuals and our society, especially in the context of today’s global business world, is a focus for the college. The Office of Undergraduate Programs and our diversity and inclusion staff sponsor multiple initiatives, programs and events throughout the year to foster this learning and work with students, staff, and faculty in these areas.

**Scholarships**

Through the generous support of alumni, friends and corporate partners, the Poole College of Management offers a limited number of highly competitive scholarships to our current and incoming students, in addition to any available university-wide awards. Please visit the Poole College of Management’s website (https://poole.ncsu.edu/undergraduate/) for additional information and a list of additional resources for possible financial support. Students are encouraged to contact the University’s Office of Scholarships and Financial Aid for more information and assistance in planning the financing of their college costs.

- Accounting (Minor) (p. 1452)
- Business Administration (Minor) (p. 1474)
- Business Entrepreneurship (Minor) (p. 1474)
- Economics (Minor) (p. 1485)

Certificates

- Essentials of Business (Certificate) (p. 1485)

Undergraduate Honors Program in Business Analytics

The Data Analytics Honors Program is designed for Poole College of Management students seeking to extend their accounting, business administration, or economics degree into the area of data analysis and analytics. Courses in this honors program are designed to build an expertise in understanding data, data structures and data analysis as used by businesses. The program has a focus on real world applications through practicum and project-based courses. For program requirements, see: https://oucc.dasa.ncsu.edu/undergraduate-honors-program-in-business-analytics/

Questions about the Data Analytics Honors Program should be directed to data_analytics_honors@ncsu.edu

Department of Accounting

The accounting program provides education and training to individuals who plan to pursue careers as professional accountants in consulting, business, government, and industry. The Department of Accounting offers Bachelor of Science and Master of Accounting degrees. The Bachelor of Science degree provides a general business foundation including courses in business statistics, statistical programming and business analytics with a depth of specialization in accounting issues and skills. Students develop interpersonal, teamwork and problem-solving skills, and learn how to apply technology in the accounting field. The curriculum includes financial and managerial accounting, taxation, business law and ethics, auditing and accounting information systems. Five additional focus areas are offered: financial analysis, information systems, managerial accounting, internal auditing, and government/ non-profit accounting. High achieving students completing the Bachelor of Science in Accounting program may choose to apply directly to the Master of Accounting (MAC) program, earning the graduate degree with just one additional year of coursework. Successful completion of the graduate program qualifies students to sit for the Certified Public Accounting (CPA) exam. High performing students with a B.S. degree in other majors are also eligible to apply to the MAC program by completing online prerequisites.

The Master of Accounting (MAC) degree program produces professionals with a more specialized knowledge of accounting skills and satisfies the American Institute of Certified Public Accountants mandated 150-hour education requirement for certification.

A minor in accounting is also offered to students interested in gaining a basic knowledge of accounting to supplement another degree, or to prepare for a graduate program in Accounting.

Opportunities
The field of accounting deals with identifying, measuring and communicating information to assist individuals and companies in making informed economic decisions. Accounting provides students with excellent career opportunities. Individuals graduating with an accounting degree can expect to be exposed to all aspects of an organization from a broad top-down perspective.

Curriculum and Degree Requirements

The accounting major requires that students complete 120 credits towards the degree. Additionally, accounting majors are subject to the university and college's residency requirements. In addition to completing 30 credit hours of their major course requirements for the accounting degree at NC State University, students must take ACC 450 and three of the following four courses at NC State: ACC 310, ACC 311, ACC 330 and ACC 340.

### Semester Sequence
This is a sample.

#### First Year

**Fall Semester**
- **M 100 Personal and Professional Identity Development**: 1
- **ENG 101 Academic Writing and Research (or GEP Natural Sciences (p. 1429) with Lab)**: 4

Select one of the following:
- **MA 121 Elements of Calculus**: 3
- **MA 131 Calculus for Life and Management Sciences A**: 3
- **MA 141 Calculus I**: 3
- **FLx 201** or **MA 242 Introduction to Finite Mathematics with Applications or Calculus III**: 3
- **Communications or Humanities (p. 1436)**: 3
- **ENG 101 Academic Writing and Research (or GEP Natural Sciences (p. 1429) with Lab)**: 4
- **EC 201 Principles of Microeconomics or Introduction to Agricultural & Resource Economics**: 3
- **ACC 210 Concepts of Financial Reporting**: 1

**Total Hours**: 15

**Spring Semester**
- **MA 114 Introduction to Finite Mathematics with or MA 242 Applications or Calculus III**: 3
- **Communications or Humanities (p. 1436)**: 3
- **ENG 101 Academic Writing and Research (or GEP Natural Sciences (p. 1429) with Lab)**: 4
- **EC 201 Principles of Microeconomics or Introduction to Agricultural & Resource Economics**: 3
- **ACC 210 Concepts of Financial Reporting**: 1

**Total Hours**: 16

1 A grade of C- or better is required.

2 Students must also take one course from the Poole College of Management Ethics list – MIE 306 Managing Ethics in Organizations, PHI 214 Issues in Business Ethics, PHI 221 Contemporary Moral Issues, PHI 313 Ethical Problems in the Law, PHI 375 Ethics (no credit hour requirement). If a student takes a PHI course to satisfy the Ethics requirement, it may double-count as the second humanities course provided the first course was not also a PHI course.

Students must also complete as a part of their general education requirements one course from the GEP U.S. Diversity list (no credit hour requirement) and one course from the GEP Global Knowledge list (no credit hour requirement).

### GPA Graduation Requirements
- Overall GPA for all courses attempted at NC State must be 2.0 or higher; and
- Overall GPA for all ACC courses attempted at NC State must be 2.0 or higher

### Career Opportunities
The field of accounting deals with identifying, measuring and communicating information to assist individuals and companies in making informed economic decisions. Accounting provides students with excellent career opportunities. Individuals graduating with an accounting degree can expect to be exposed to all aspects of an organization from a broad top-down perspective.

### Accounting (BS): Financial Analysis Concentration
To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

Financial analysis deals with the body of rules and procedures governing the preparation and analysis of general-purpose financial statements (e.g., balance sheet, income statement, statement of cash flows). These financial statements are designed to provide readers with information that will be useful in making decisions relevant to operating their businesses, managing their investments, and evaluating the performance of employees, managers, and executives.
Curriculum Overview:

Students in the financial analysis concentration develop skills in the areas of financial accounting, financial statement analysis, and traditional topics in finance (e.g., investments, portfolio analysis, and capital budgeting). This skill set provides a foundation for graduate-level study in accounting or finance and prepares students for careers in public accounting, corporate accounting, and governmental or not-for-profit organizations.

The Financial Analysis concentration is designed to prepare students in the following areas:

- Reasoning/problem solving capabilities
- Thorough understanding of generally accepted accounting principles (GAAP)
- Preparation and analysis of data and information
- Use of financial management decision tools
- Ability to “get behind the numbers” and understand financial reports
- Personal financial planning and management insight

### GPA Graduation Requirements

- Overall GPA for all courses attempted at NC State must be 2.0 or higher; and
- Overall GPA for all ACC courses attempted at NC State must be 2.0 or higher

### Career Opportunities

The field of accounting deals with identifying, measuring and communicating information to assist individuals and companies in making informed economic decisions. Accounting provides students with excellent career opportunities. Individuals graduating with an accounting degree can expect to be exposed to all aspects of an organization from a broad top-down perspective.

### Accounting (BS): Government/Nonprofit Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The field of accounting for government agencies and nonprofit organizations focuses on careers in public service and provides students with the elemental tools necessary for understanding organizations not motivated by profit-seeking. Emphasis is placed on understanding the role of accounting in nonprofit and government agencies and the accounting procedures and devices necessary to provide accountability to the public.

### Curriculum Overview:

The government/nonprofit concentration is designed for students interested in general or financial management of nonprofit organizations and government organizations. All levels of government – local, state, and federal – provide opportunities in the areas of auditing, financial management, and budgeting. In addition, students versed in government and nonprofit accounting have opportunities in public accounting since most local governments and nonprofits are audited not by government auditors but by public accounting firms.

The government/nonprofit concentration is designed to prepare students in the following areas:

- The ability to make insightful contributions to the strategic planning process
- The knowledge to design measures that focus and motivate the organization’s employees and activities
- Understanding of budgeting, audit and financial analysis issues unique to government and nonprofit entities

### Concentration

- Auditing and Assurance Services
- Concentration
- GEP Interdisciplinary Perspectives (p. 1426)
- Free Elective
- GEP Humanities (p. 1423)

### Hours

15

### Spring Semester

- Concentration
- MIE 480 Business Policy and Strategy
- Free Electives

### Hours

12

### Total Hours

120

---

1 A grade of C- or better is required.

Students must also complete as a part of their general education requirements one course from the GEP U.S. Diversity list (no credit hour requirement) and one course from the GEP Global Knowledge list (no credit hour requirement).

### Accounting (BS): Information Systems Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website ([https://apps.oirp.ncsu.edu/pgas/](https://apps.oirp.ncsu.edu/pgas/))!

The field of accounting information systems focuses on the flow of accounting information within a company and between a company and its external trading partners. Accounting is at the heart of a company's information system, supporting critical business processes. Organizations use information systems and technology to process and analyze data, streamline activities, and manage resources and assets.

**Curriculum Overview:**
The information systems concentration, in accounting, is designed to build an understanding of key business processes, the components of an effective entity-wide internal control structure, the process by which efficient database design can be used to improve accounting information, and contemporary issues involved in providing assurance services for systems and database reliability. Topics of study include information systems-related internal controls, business processes, systems security and privacy, database management, e-commerce and enterprise resource planning systems theory.

The information systems concentration is designed to prepare students in the following areas:

- Proficiency in accounting software
- Knowledge and use of enterprise resource planning software
- Database modeling and development
- Understanding of business processes and information systems controls
- Conceptual orientation of information for managerial and financial decisions

1 A grade of C- or better is required.

Students must also complete as a part of their general education requirements one course from the GEP U.S. Diversity list (no credit hour requirement) and one course from the GEP Global Knowledge list (no credit hour requirement).

### GPA Graduation Requirements

- Overall GPA for all courses attempted at NC State must be 2.0 or higher; and
- Overall GPA for all ACC courses attempted at NC State must be 2.0 or higher

### Career Opportunities

The field of accounting deals with identifying, measuring and communicating information to assist individuals and companies in making informed economic decisions. Accounting provides students with excellent career opportunities. Individuals graduating with an accounting degree can expect to be exposed to all aspects of an organization from a broad top-down perspective.

### Accounting (BS): Internal Auditing Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

Internal auditing is an independent, objective assurance and consulting activity designed to add value and improve an organization’s operations. It helps an organization accomplish its objectives by bringing a systematic, disciplined approach to evaluate, monitor and improve the effectiveness of risk management, control, and governance processes (IPPF, Institute of Internal Auditors, 2009).

**Curriculum Overview:**
Students in the internal audit concentration learn practical knowledge of the role and the best practices of internal auditing in governance, risk management and control. Students develop skills in planning and conducting internal audit assurance engagements. The internal auditing concentration gives students an understanding of fraud risk management and computerized auditing techniques.

**Accounting Department:**
Poole College of Management  
3102 Nelson Hall  
Raleigh, NC 27695  
Phone: (919) 515-5565

## Second Year
### Fall Semester
- ACC 220 Introduction to Managerial Accounting 3
- COM 110 Public Speaking (GEP Humanities (p. 1423)) 3
- COM 112 Interpersonal Communication (GEP Humanities (p. 1423))
- COM 211 Argumentation and Advocacy (GEP Humanities (p. 1423))
- GEP Humanities (p. 1423) 3
- BUS/ST 350 Economics and Business Statistics 3
- GEP Natural Sciences (p. 1429) 3
- EC 202 Principles of Macroeconomics 3

### Spring Semester
- ACC 310 Intermediate Financial Accounting I 3
- BUS 340 Information Systems Management 3
- BUS 320 Financial Management 3
- BUS 360 Marketing Methods 3
- BUS 370 Operations and Supply Chain Management 3
- MIE 305 Legal and Regulatory Environment 3
- MIE 330 Human Resource Management 3
- PSY 200 Introduction to Psychology 3
- GEP Additional Breadth (p. 1417) (Humanities/Social Sciences/Visual and Performing Arts) 3
- ST 307 Introduction to Statistical Programming-SAS 1

### Hours
- Spring Semester: 15
- Total Hours: 30

## Third Year
### Fall Semester
- ACC 311 Intermediate Financial Accounting II 3
- ACC 340 Accounting Information Systems 3
- BUS 320 Financial Management 3
- BUS 360 Marketing Methods 3
- BUS 370 Operations and Supply Chain Management 3
- MIE 305 Legal and Regulatory Environment 3
- MIE 330 Human Resource Management 3
- ENG 331 Communication for Engineering and Technology 3
- ENG 332 Communication for Business and Management 3
- ENG 333 Communication for Science and Research 3
- GEP Health and Exercise Studies (p. 1422) 1

### Hours
- Third Year: 16
- Total Hours: 46

## Spring Semester
- ACC 330 An Introduction To Income Taxation 3
- BUS 320 Financial Management 3
- BUS 360 Marketing Methods 3

## Fourth Year
### Fall Semester
- ACC 450 Auditing and Assurance Services 3
- MIE 480 Business Policy and Strategy 3
- BUS 320 Financial Management 3
- BUS 360 Marketing Methods 3
- BUS 370 Operations and Supply Chain Management 3
- MIE 305 Legal and Regulatory Environment 3
- MIE 330 Human Resource Management 3
- GEP Additional Breadth (p. 1417) (Humanities/Social Sciences/Visual and Performing Arts) 3
- ST 307 Introduction to Statistical Programming-SAS 1

### Hours
- Fourth Year: 15
- Total Hours: 60

1 A grade of C- or better is required.

Students must also complete as a part of their general education requirements one course from the GEP U.S. Diversity list (no credit hour requirement) and one course from the GEP Global Knowledge list (no credit hour requirement).

### GPA Graduation Requirements
- Overall GPA for all courses attempted at NC State must be 2.0 or higher; and
- Overall GPA for all ACC courses attempted at NC State must be 2.0 or higher

### Career Opportunities
The field of accounting deals with identifying, measuring and communicating information to assist individuals and companies in making informed economic decisions. Accounting provides students with excellent career opportunities. Individuals graduating with an accounting degree can expect to be exposed to all aspects of an organization from a broad top-down perspective.

### Accounting (BS): Managerial Concentration
To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

Managerial accounting is more than simply compiling and delivering financial data. Managerial accounting focuses on the implications of financial data in the broad context of managing an organization and how financial information impacts every aspect of the business. Important aspects of managerial accounting include analyzing numbers to evaluate the supply chain and evaluating business processes and cost.

### Curriculum Overview:
The managerial accounting concentration is designed for students who are interested in careers within business, government, or not-for-profit organizations. The concentration allows students to combine interests in both accounting and business. The coursework is designed to prepare students for the events that are shaping the future of the accounting and finance profession and to equip them with the skills and competencies crucial for career success.

The Managerial concentration is designed to prepare students in the following areas:

- The ability to make insightful contributions to the strategic planning process
- The knowledge to design measures that focus and motivate the organization’s employees and activities
- The skills to develop information and analyses that provide insight into how value is being created and how progress is being matched to strategic initiatives
- An integrated view of how accounting and finance interact with other business functions

### GPA Graduation Requirements

- Overall GPA for all courses attempted at NC State must be 2.0 or higher; and
- Overall GPA for all ACC courses attempted at NC State must be 2.0 or higher

### Career Opportunities

The field of accounting deals with identifying, measuring and communicating information to assist individuals and companies in making informed economic decisions. Accounting provides students with excellent career opportunities. Individuals graduating with an accounting degree can expect to be exposed to all aspects of an organization from a broad top-down perspective.

### Accounting (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Accounting Minor helps students:

- Gain familiarity with financial accounting, managerial accounting, and other accounting topics.
- Understand that accounting is an information system for measuring, processing, and communicating financial information about economic entities.
- Understand how accounting information allows users to make reasoned choices among alternative uses of scarce resources in the conduct of business and economic activities.

### Declaring the Minor

Students should complete the declaration form available at https://goo.gl/forms/whNchXFKPWr9Auz1 (https://goo.gl/forms/whNchXFKPWr9Auz1/) before starting classes for the minor to allow greater access to classes.

### Certification

The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. If transfer credits contribute to the completion of the minor, students need to ensure that official transcripts are sent and processed at NC State.

### Plan Requirements

- A grade of 'C-' or better in all courses used to satisfy the minor.
- An overall GPA of 2.0 or better for all ACC minor courses in the program of study
- Courses credited to the minor may not be taken for credit only (pass/fail).
- Students may transfer in up to 9 credits (6 max at the 300/400 level) towards the minor.

---

1 A grade of C- or better is required.

Students must also complete as a part of their general education requirements one course from the GEP U.S. Diversity list (no credit hour requirement) and one course from the GEP Global Knowledge list (no credit hour requirement).
All transfer credits must be approved by the Poole College of Management Office of Undergraduate Programs in Nelson 2150.

Elective Courses
Select nine credit hours of any 300 or 400 level accounting course 9

Total Hours 15

Students should make sure that they have met all required prerequisites for 300- and 400-level courses

Department of Business Management

The Bachelor of Science degree in Business Administration is offered jointly by faculty in the Department of Business Management and the Department of Management, Innovation and Entrepreneurship.

The Business Administration degree program prepares students for careers in business, consulting, government, or nonprofit organizations as well as for graduate study in business, law, and related fields. The curriculum focuses on strategic integration of the core business functions. All students take foundation courses in finance, marketing, human resource management, entrepreneurship, business law, supply chain/operations management, information systems and strategic management, and select a concentration for more in-depth study. The curriculum emphasizes analytical thinking skills and an entrepreneurial mindset and provides students with skills in information technology and its application, problem solving and ethical thinking for decision making, and data analytics and the use of data for decision making in a global strategic context.

Concentration areas are listed below:

- Entrepreneurship
- Finance
- Human Resource Management
- Information Technology
- Marketing
- Operations and Supply Chain Management

Two minors are also offered - Business Administration for students interested in gaining a basic knowledge of business practice to supplement another degree, and Business Entrepreneurship for students interested in the process of identifying, evaluating, and implementing business opportunities that focus on value creation.

A certificate in the Essentials of Business is also offered to NC State undergraduate students and to Non-Degree Seeking (NDS) students. This 12-credit certificate gives students an introductory perspective on business functions and the way businesses operate.

Opportunities

Graduates in business administration are prepared for a variety of careers in business or industry including new product development, marketing, manufacturing, human resources, IT management, business analysis, banking and finance, consulting, and business development. They have the knowledge and tools to launch new business ideas and succeed in management positions.

Curriculum and Degree Requirements

The business administration major requires that students complete 120 credits towards the degree. Additionally, business administration majors are subject to the university and college's residency requirements. In addition to completing at least 30 credit hours while officially enrolled as a degree candidate in either the Business Administration or Accounting program, students must complete at least 30 credit hours of the major course requirements for the degree at NC State University.

- Business Administration (Minor) (p. 1474)
- Business Entrepreneurship (Minor) (p. 1474)
Business Analytics Honors Program

The Business Analytics Honors Program (https://oucc.dasa.ncsu.edu/undergraduate-honors-program-in-business-analytics/) offers eligible Poole College undergraduate students additional preparation for careers in the high-demand field of business analytics. The Business Analytics Honors Program combines challenging analytics coursework with a practicum course that engages students with local employers working on real world business analytics projects. Admission to this program is competitive and based on prior academic achievement.

Total Hours 120

1 Must be completed with “C-” or better.

Students must also complete as a part of their degree requirements one course from the GEP U.S. Diversity list (no credit hour requirement) and one course from the GEP Global Knowledge list (no credit hour requirement).

GPA Graduation Requirements

• Overall GPA for all courses attempted at NC State must be 2.0 or higher; and
• Overall GPA for all BUS, MIE, and M courses attempted at NC State must be 2.0 or higher.

Career Opportunities

Graduates in business administration are prepared for a variety of careers in business or industry including new product development, marketing, manufacturing, human resources, IT management, business analysis, banking and finance, consulting, and business development. They have the knowledge and tools to launch new business ideas and succeed in management positions.

Business Administration (BS): Entrepreneurship Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

Entrepreneurship is the general description given to the process of identifying business opportunities, developing implementation plans to capitalize on those opportunities, and building and growing new ventures. A new venture can describe a variety of business applications including new businesses, new opportunities for established businesses, new nonprofits, as well as many other possibilities.

Curriculum Overview

The entrepreneurship concentration is cross-disciplinary, focusing on the challenges of establishing and managing new and growing ventures. The business environment and management skills required for success in new ventures are significantly different from those in established, mature organizations. The entrepreneurship concentration is relevant to students preparing to work in a variety of entrepreneurial environments.

The entrepreneurship concentration is designed to prepare students in the following areas:

• Integration of business concepts as they relate to an entrepreneurial venture
• Building and growing a new venture Understanding the investment communities for new ventures
• Identification and analysis of opportunities
• Researching, writing and presenting a business plan
• Idea generation
