Semester Sequence

This is a sample.

Course       Title                                      Hours
First Year    Fall Semester
ENG 101       Academic Writing and Research             4
Mathematical Sciences Elective                        3
D 100         Design Inquiry I: Methods and Processes (required in the first year) 3
Art History Survey Elective                           3
ADN 281       Drawing I                                 3

Spring Semester
GEP Health and Exercise Studies (p. 1422)              1
Mathematical Sciences Elective                         3
DS 100       Design in Culture and Context (required in the first year) 3
Art History Survey Elective                           3
COM 110       Public Speaking                           3
ADN 219       Digital Imaging I                         3

Second Year
Fall Semester
GEP Health and Exercise Studies (p. 1422)              1
GEP Social Sciences (p. 1430)                         3
DS 200       A Survey of Design Studies (required in the second year) 3
Select one of the following:                          3
ENG 214       Introduction to Editing                  3
ENG 316       Introduction to News and Article Writing  3
ENG 422       Writing Theory and the Writing Process    3
MIE 201       Introduction to Business Processes       3
Intermediate Foreign Language Elective                 3

Spring Semester
Intermediate Foreign Language Elective                 3
GEP Interdisciplinary Perspectives (p. 1426)           3
ACC 210       Concepts of Financial Reporting          3
GEP Humanities (p. 1423)                              3
Advised Design Studies Elective                        3

Third Year
Fall Semester
GEP Natural Sciences (p. 1429)                         3
EC 205       Fundamentals of Economics                 3
ADN 418       Contemporary Issues in Art and Design    3
GEP Humanities (p. 1423)                              3

Spring Semester
GEP Natural Sciences (p. 1429)                         4
Advised Design Studies Elective                        3
Business Administration Advised Elective               3
Design History Elective                                3

Summer
Select one of the following:                           6
ADN 490       Art and Design International Studio      6
Advised Electives                                      6

Fourth Year
Fall Semester
DS 481       Design Studies Senior Research Seminar    3
Business Administration Advised Elective               3
Design History Elective                                3
Advised Design Studies Elective                        3
Free Elective                                          2

Spring Semester
DS 483       Design Studies Capstone Research Paper    3
Business Administration Advised Elective               3
Advised Design Studies Elective                        3

Career Opportunities

Career opportunities for graduates of the Department of Art and Design range from independent artist-designers to corporate level art-design directors. Graduates of this department are currently working in fields such as software design, multimedia, illustration, textile design, fashion and apparel design, art and design education, photography, filmmaking, special effects-digital, set design, exhibition design, museum education, public art and entrepreneurs.

Design Studies (BA): Nonprofit Studies Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Bachelor of Arts in Design Studies is a non-studio based program that provides an interdisciplinary orientation to the history and theory of the design disciplines, material culture and design thinking. Design Studies focuses on the social, historical, technological and physical contexts in which design is produced. It presents the formative role of design in shaping human values and experiences.

Undergraduate students will be introduced to the breadth of the design disciplines expanding their awareness of design and the design process. Students can explore the range of career options in the fields of design through Design Studies concentrations in Non-Profits Studies, Business Administration. Individuals preparing for a graduate education in design theory and criticism, museum practice, business management, entrepreneurship or marketing in design may choose from courses suited to their unique objectives. Students who want more general education will develop an understanding of design and its intrinsic relationship to the broader culture.

Design Studies is:

• Open to students whose interests and talents in design are more general and/or cross-disciplinary than those in the specific student-based programs
• Broadly engaged in issues of material culture.
• Preparatory for later advanced study in the design professions
• A blend of aesthetic, cultural, historical, social, physical, technological, business and entrepreneurial knowledge
• Collaborative in providing the learning and background necessary for further study in archival and cultural preservation, museum practice, conversation, collections administration, costume and theatre design, criticism, research, and arts and nonprofits management

Design Studies is not a transitional program from which to transfer into one of the studio-based degree programs in the College of Design. Design Studies students who wish to change majors will need to apply for competing seats in the freshmen class of a studio-based program and are subject to the select admissions process that requires a portfolio review.

Specific curriculum requirements are available online (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php).

**Total Hours**

| 130 |

**Program Objectives**

- To provide a general orientation to the practice and theory of design for students whose primary study and employment will be in other disciplines
- To clarify the role design plays in society
- To create informed consumers who are able to make intelligent decisions about communication, products, and environments in work and in their personal lives

**Admissions**

Any student seeking this minor should contact Dr. Chandra Cox, for a registration form.

**Certification**

The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Students may turn in either their original Design Minor Certification, or complete a new one for signatures. This should be turned in no later than during the registration period for the student’s final semester at NC State.

**Contact Person**

Kathleen Rieder
215B Brooks Hall
(919) 515-2079
Email: kathleen_rieder@ncsu.edu

**SIS Code: 12DSM**

**Plan Requirements**

- The minor in Design Studies consists of 15 credit hours of study selected from the following courses.
- A grade of ‘C’ or better in all courses credited to the minor

**Note:** Other courses offered by the College of Design may be substituted with permission of the Minor Advisor.

---

**Career Opportunities**

Career opportunities for graduates of the Department of Art and Design range from independent artist-designers to corporate level art-design directors. Graduates of this department are currently working in fields such as software design, multimedia, illustration, textile design, fashion and apparel design, art and design education, photography, filmmaking, special effects-digital, set design, exhibition design, museum education, public art and entrepreneurs.

**Design Studies (Minor)**

**No New Admissions**

To see more about what you will learn in this program, visit the Learning Outcomes website [https://apps.oirp.ncsu.edu/pgas/](https://apps.oirp.ncsu.edu/pgas/)

The College of Design offers an undergraduate minor in Design Studies, available to university students in majors other than design. Academic Majors who will benefit from this minor: Any undergraduate student in the university who is not majoring in a design discipline.
Department of Graphic Design and Industrial Design

Graphic design is the process of bringing meaningful visual form to communication. Graphic designers translate communication goals through printed, environmental, and electronic presentations of information. Graphic designers use words and images to express messages that inform, persuade, and incite people to action. Graphic designers are active in all aspects of communication design. For example, they design books, magazines and newspapers for the publishing industry. They also create printed materials such as logotypes, symbols, annual reports, newsletters, business forms, and other related literature for corporations, institutions, businesses, and governmental agencies. Graphic designers also design user experiences (UX), websites, computer interfaces, and motion graphics such as film titles and typographic treatments for video, as well as on-air graphics for television. Graphic designers are employed in a variety of settings, including graphic design offices, advertising agencies, communication businesses, as well as corporations, institutions, or governmental agencies as part of internal communications departments.

For more information about Graphic Design, including contact information, visit the department (http://design.ncsu.edu/academics/graphic-design/).

The Industrial Design program is a part of the Department of Graphic and Industrial Design. The Industrial Design program awards a Bachelor of Industrial Design degree. The pedagogical core of the department aims to reinforce the foundational principles of design theory as applied to traditional and advanced technologies, i.e. new media, materials, and production techniques. Our curriculum addresses broad cultural, technological, and societal considerations and promotes in our graduates the ability to meet the challenges of technological complexity through collaborative design. We emphasize the application of creative thinking and problem solving to design projects ranging from single to mass-produced artifacts. The areas of application span the range from industrial design to interactive multimedia and service design. The program is recognized by the Industrial Designers Society of America (IDSA) and accredited by the National Association of Schools of Art and Design (NASAD).

For more information about Industrial Design, including contact information, visit the department (http://design.ncsu.edu/academics/industrial-design-programs/).

Graphic Design (Bachelor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Graphic Design program is a part of the Department of Graphic and Industrial Design. The Graphic Design program awards a Bachelor of Graphic Design, a professional degree, recognized by the American Institute of Graphic Arts (AIGA) and is accredited by the National Association of Schools of Art and Design (NASAD). The program includes the study of visual, theoretical, historical, and technical aspects of the discipline. The curriculum provides comprehensive experiences in the analysis of communication problems, the development of creative solutions to those problems, and the implementation and evaluation of those solutions. Required courses in typography explore the role of words and language in graphic communication, while courses in imaging provide students with experiences in a range of photographic, videographic, and computer media. Instruction in computer software programs is fully integrated in design courses, and is not taught as a separate activity. In their studio coursework, graphic design majors prepare for careers in the field through the execution of demonstration projects of varying complexity and scale.

### Semester Sequence

This is a sample.

#### First Year

**Fall Semester**
- D 100  Design Inquiry I: Methods and Processes  3
- D 104  First Year Studio I  6
- ENG 101  Academic Writing and Research  4
- Mathematical Sciences Elective  3
- Semester Hours  16

**Spring Semester**
- GD 203  History of Graphic Design  3
- GD 210  Image and Tech Tinkering  6
- Mathematical Sciences Elective  3
- GEP Humanities (p. 1423)  3

**Total Hours**  16

#### Second Year

**Fall Semester**
- GD 201  Design, Context, and Experience  6
- GD 217  Typography and Technology  3
- GD 303  Graphic Design Theory and Practice  3
- GEP Social Sciences (p. 1430)  3
- Semester Hours  15

**Spring Semester**
- GD 202  Designing for Settings, People, and Use  6
- GEP Social Sciences (p. 1430)  3
- GD 317  Typographic Language, Writing, and Reading  3

**Total Hours**  15

#### Third Year

**Fall Semester**
- GD 301  Branding, Interaction, and Service Design  6
- GEP Health and Exercise Studies (p. 1422)  1
- GD 417  Information and Publishing Design Systems  3
- GEP Natural Sciences (p. 1429)  4
- Semester Hours  14

**Spring Semester**
- GD 400  Advanced Graphic Design Studio  6
- Design History Elective  3

**Total Hours**  14
Design Elective 3
GEP Natural Sciences (p. 1429) 3

**Fourth Year**

**Fall Semester**

Advanced Studio Electives 6
GD 401 Graphic Design Practicum 3
Design Elective 3
GEP Additional Breadth (p. 1417) 3

Hours 15

**Spring Semester**

Advanced Studio Electives 6
Free Electives 8

Hours 14

Total Hours 120

- Spring Semester of Junior Year or Fall Semester of Senior Year coursework may be taken at the Prague Institute or other approved international program to fulfill the department’s International Experience Requirement (observing a six credit minimum workload). Summer coursework in industrial design or other College of Design major (observing a rising Junior or above standing in home major) may also fulfill the International Experience Requirement (also observing a six credit minimum workload).

**Industrial Design (Bachelor)**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orip.ncsu.edu/pgas/)

The Department of Graphic and Industrial Design offers a four-year bachelor degree and two-year or more master’s degrees. Industrial Design is concerned with all human aspects of products/systems and their relationship to people. The industrial designer is responsible for product safety, aesthetics, maintenance, and cost. Industrial designers deal with consumer and industrial products. In order to achieve these ends, designers must be involved in four major design and research areas: human behavior, human-machine relationships, the environment, and the product itself. In addition, the designer’s responsibility extends into sustainability product liability and cross-cultural issues.

Areas of study in the Bachelor of Industrial Design include:

- furniture
- textiles, house wares
- appliances
- transportation
- tools
- farm equipment
- medical instruments
- electronics
- human-computer interfaces
- recreational support equipment

The goal of the Industrial Design curriculum is to teach the design and development of products or product systems and their relationship to human beings and the environment.

Graduates of the Bachelor of Industrial Design program have career opportunities in three general types of practice: corporate design offices in manufacturing companies, independent consulting offices, and governmental agencies.

Specific curriculum requirements are available online (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php).

**Plan Requirements**

**Industrial Design (Bachelor): 120 Total Units**

### Notes

1. Students who major in Industrial Design may elect one (1) six-credit-hour studio outside the major to fulfill one (1) 200 or 300 level studio requirement.
2. Declaration of intent to enroll in studios other than Industrial Design during any semester must be made during the pre-registration period prior to enrollment. No more than one (1) six credit studio may be taken in any given semester.

### Career Opportunities

Career opportunities for graduates of the Department of Graphic and Industrial Design span the range from industrial design to virtual design. Graduates of this department are currently working in fields such as
product development, furniture design, recreational product design, toy
design, exhibition design, textile design, fashion design, photography, film
making, special effects, set design, ergonomics and human factors.

Department of Landscape Architecture

Landscape architecture is a multi-faceted profession dedicated to the
welfare of the physical environment and the living communities of the
earth. It is a diverse and growing design profession that combines
art, science, engineering, and technology. Landscape Architecture at
the College of Design is especially concerned with the stewardship,
restoration, and regeneration of the natural and cultural environments in
urban, rural, and wilderness settings.

For more information about this department, including contact
information, visit the department (http://design.ncsu.edu/academics/
landscape-architecture/).

Plans
- Landscape Architecture (Minor) (p. 409)

Landscape Architecture (Minor)

To see more about what you will learn in this program, visit the Learning
Outcomes website (https://apps.oirp.ncsu.edu/pgas/)!

The Minor in Landscape Architecture will provide a basic understanding
of the nature of the profession of Landscape Architecture. Knowledge of
Landscape Architecture history and theory provides a useful addition to a
major in any of the University disciplines.

The Minor in Landscape Architecture is designed to:
- Provide a general background in the discipline with regard to
  landscape architecture research, development and design for
  students, whose primary professional practice will be in another
discipline.
- Clarify the role of the profession of Landscape Architecture.
- Define how the profession of Landscape Architecture and all related
  professional disciplines contribute to the successful practice of
design.

Admissions

Entrance to the minor is by application, grade review and permission of
the Department Chair. A GPA of 2.75 is required. Contact the Chair of
the Department of Landscape Architecture (listed below) or the College
of Design Scheduling Officer, Pam Christie-Tabron (200 Brooks Hall,
919.515.8308) for the application.

Certification

The minor must be completed no later than the semester in which the
student expects to graduate from his or her degree program. Paperwork
for certification can be found in 223 Brooks Hall and should be completed
during the registration period of the student’s final semester at NC State.

Contact Person

Meg Calkins, FASLA, Department Head
Department of Landscape Architecture
215D Brooks Hall
919.515.8342
Plan Requirements

- Completion of 15 credit hours are required.
- A letter grade of 'C-' or better will be required for credit in all courses in the minor program.

1 The courses listed are some of the courses that can contribute to achievement of the Landscape Architecture Minor. Courses offered each semester are subject to change. A listing of courses for each semester will be sent to students registered for the minor prior to open enrollment.

2 Select one (1) course in addition to 3 courses (9 credit hours) from the previously listed courses (For students in the School of Architecture only).

3 LAR 582 008 Survey of Natural Hazards and Disasters

4 Possible choices: LAR 582 001 History of Landscape Architecture, LAR 582 002 Disaster Resilient Policy, Engineering and Design, LAR 582 003 Environmental and Social Equity in Design

5 LAR 582 006 Environment and Behavior for Designers (online course)

School of Architecture

In a world of changing conditions- social, cultural, economic and technological- the central task of the architect remains to give meaningful form to the physical environment. These rapid changes, however, force today's architects to not only concern themselves with traditional design issues like shelter, appropriateness, comfort, and beauty, but also to address emerging concerns like sustainability, resilience, environmental conservation, rapidly expanding cities, adaptive uses and preservation of older buildings, providing built environments in a global market, and new means of producing architecture. The aesthetic revolution of the past few decades has also freed architects from the rigidity of earlier theory allowing for greater diversity and expressiveness in architectural design.

The School of Architecture has addressed the diversity of roles and responsibilities through its faculty and its curricula. Its distinguished faculty embrace a broad definition of the practice of architecture and is, therefore, free of a singular, dogmatic, or stylistic bias. This diversity is evident in the experience, areas of interest, national origins, and educational backgrounds of the faculty. The architecture curriculum balances mathematics, English, natural sciences, and humanities and integrates with architectural design studios and a rich selection of design support courses. The design studio- a working laboratory in which the student learns how to design buildings under the guidance of a professor- is central to the curriculum.

The undergraduate Bachelor of Environmental Design in Architecture is a pre-professional degree that stresses the education of the individual and serves as the foundation for advanced, professional study in the discipline. The first semester is spent on design fundamentals in a studio common to all students in the College of Design. Following this introductory experience students receive a broad introduction to architectural design, theory, history, technology, and design processes, while exploring educational opportunities within the university.

- Following the pre-professional program students may continue their studies in either of two professional programs: the one-year, post-graduate Bachelor of Architecture or two-year Master of Architecture program (see the Graduate Catalog for information on the latter program). Entry into both of these programs is competitive.
- Many students spend one or more years gaining professional experience in architecture firms or related fields before pursuing the advanced degrees. Educational enrichment is an important characteristic of the architectural program.
- The College of Design regularly presents public lectures by leading professionals and exhibitions of design and artwork.
- Electives are available in related disciplines- painting, sculpture, photography, landscape architecture, industrial design, and graphic design.
- Also available are field trips to buildings in urban centers of architectural interest, urban design studios, and a variety of foreign study programs including the NC State European Center in Prague.
Accreditation

In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes three types of degrees: the Bachelor of Architecture, the Master of Architecture, and the Doctor of Architecture. A program may be granted a six-year, three-year, or two-year term of accreditation, depending on the extent of its conformance with established educational standards. Doctor of Architecture and Master of Architecture degree programs may consist of a pre-professional undergraduate degree and a professional graduate degree that, when earned sequentially, constitute an accredited professional education. However, the pre-professional degree is not, by itself, recognized as an accredited degree. The NAAB Conditions for Accreditation, including the required Student performance Criteria, can be viewed on the NAAB website (http://www.naab.org).

The North Carolina State University School of Architecture offers the following NAAB accredited degree programs:

- B. Arch. (pre-professional degree + 30 in professional program)
- M. Arch. (pre-professional degree + 48 graduate hours)
- M. Arch (non pre-professional degree + 96 hours)

Next accreditation visit for all programs: 2026

Architecture (Bachelor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

To become an architect, students must earn an accredited, professional degree in Architecture. The Bachelor of Architecture is a one-year professional degree program only for students who have earned a four-year undergraduate degree in Architecture (from NC State or another program within a NAAB accredited institution). Admission requirements include prerequisite courses which must be included in the applicant’s undergraduate program. A transcript review will identify any prerequisite deficiencies. If accepted to the program, the applicant will be advised regarding how to comply with the prerequisite requirements.

The B.Arch is an advanced degree program that emphasizes comprehensive and integrative design processes. The program prepares students for professional practice through two design studios and a series of required and elective courses in history, theory, architectural technologies, urbanism, energy studies and environmental systems. In this program, students develop a directed thesis project with faculty members, and this project allows students to focus on topics that are critical to current issues in professional architectural practice.

View more information about the program and admissions requirements on our website (https://design.ncsu.edu/admissions/first-year/b-arch/).

Environmental Design in Architecture (Bachelor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Bachelor of Environmental Design in Architecture (BEDA) is a four-year, pre-professional degree program that immerses students in architectural design fundamentals through studio- and project-based courses. Students take an array of classes that focus on history, theory, technology, structures, materials, construction, and general education subjects. The BEDA program prepares students for further study in a professional degree program such as the one-year Bachelor of Architecture (B.Arch) or a two-year Master of Architecture (M.Arch). The BEDA also prepares students for advanced study in related fields such as Landscape Architecture and City Design.

The four years of the BEDA curriculum are divided into:

The First Year Experience

First Year Experience (FYE) is the foundational, interdisciplinary curriculum that prepares all incoming studio majors at the College of Design for their future disciplinary studies. FYE is comprised of immersive, hands-on design studios and method courses focused on the processes of design thinking. These courses serve as the introduction to fundamental design concepts and methods representative of creative activity across design and artistic disciplines. They encourage entering freshman to think critically and act creatively about and upon design, art, and the world around them as they secure a skillful level of craftsmanship in the conception, development, and making of all studio-based work. The project-based curriculum focuses on key design issues such as process, method, technique, technology, and the production of visual and physical items necessary for question seeking and the envisioning and development of design ideas.

For the fall semester, all freshman begin in an interdisciplinary studio and design inquiry lecture course with students across all College of Design majors. In the spring semester, students are immersed in a discipline-specific fundamentals studio and methods course to prepare them for their sophomore year in their chosen major.

College of Education

Mission

The College of Education is a voice of innovation for learning across the lifespan. We prepare professionals who educate and lead. Our inquiry and practice reflect integrity, a commitment to social justice, and the value of diversity in a global community.

Vision

The College of Education will lead the way in North Carolina in increasing opportunities for success in education and reducing achievement gaps.

What sets our College apart:

- The Student Success and Advising Center provides professional advising for all freshman, sophomores and transfer students in programs within the College of Education. The SSAC also serves as a resource for all College of Education students by offering services and programing such as student success workshops, student engagement opportunities and leadership development opportunities. Advisors are trained professionals who can supply valuable information about majors, courses, careers, requirements, policies, social life, academic support and transition issues.

- Through the generous support of corporations and friends, the College of Education is able to offer over 45 scholarships to our undergraduate and graduate students (https://ced.ncsu.edu/undergraduate/undergraduate-scholarships-and-financial-aid/) each year based on merit and/or need. Scholarship amounts range from $1,200 to $5,000. High school counselors receive information for all College of Education scholarships.

- The College of Education maintains the Omicron Rho chapter of Kappa Delta Pi (http://www.kdp.org), an international honor society in education. It elects those to membership who exemplify high academic achievement and exhibit the ideals of scholarship, high personal standards, and promise in teaching and allied professions.

- The Department of Science, Technology, Engineering, and Mathematics Education hosts the local chapter of Epsilon Pi Tau (http://ced.ncsu.edu/student-life/organizations/) International Honor Society for Professions in Technology. Epsilon Pi Tau recognizes student excellence in the study of technology and technology education and prepares practitioners for the technology professions.

- The college and University Housing have partnered to provide a living and learning residential experience for first year students called Students Advocating for Youth (SAY Village). Housed in Syme Hall, this experience targets students interested in working with elementary-aged youth.

- Students have the opportunity to participate in a number of the College of Education's Study Abroad opportunities (http://ced.ncsu.edu/study-abroad/)

Accreditation

All of the bachelor’s level and graduate level licensure programs are approved by the North Carolina State Board of Education. The college
is accredited by the Council for the Accreditation of Counseling and Related Programs (CACREP) and the Council for the Accreditation of Educator Preparation (CAEP). Please visit the College of Education’s website (http://ced.ncsu.edu/academics/licensureaccreditation/). (https://ced.ncsu.edu/academics/professional-education/).

For more information about our college, visit our website (http://ced.ncsu.edu).

Agricultural Teacher Education

Our Agricultural Education students graduate prepared to teach agriculture and be FFA advisors in public and private schools. Many of our alumni pursue careers in middle and high schools, universities and community colleges, county extension offices, and in the agricultural industry. Learn more about the many agricultural and human science career opportunities (https://cals.ncsu.edu/agricultural-and-human-sciences/careers/) available.

Teacher Licensure

Completion of the B.S. program in Agricultural Education leads to teacher licensure in North Carolina for grades 6-12. Because of North Carolina’s reciprocity agreements, graduates also can pursue certification in about 35 states. Download the Teacher Licensure Checklist (https://cals.ncsu.edu/agricultural-and-human-sciences/wp-content/uploads/sites/13/2017/06/Teacher-Licensure-Checklist.pdf) to review the requirements for admissions to teacher education candidacy and help you stay on course.

Curriculum

The agricultural education curriculum has three components:

1. General education courses (https://oucc.dasa.ncsu.edu/general-education-program-gep/gep-category-requirements/) required for all NC State University students.

2. A broad understanding of agriculture. Students complete introductory courses in animal or poultry science, plant science, soil science, agricultural economics, agricultural engineering, and forestry to develop the necessary agricultural background to provide information to a variety of clients.

Faculty

Department Head
Carolyn Dunn

Undergraduate Coordinator
Travis Park

Department of Science, Technology, Engineering and Mathematics Education (STEM)

Our graduates are recognized as top in their fields throughout the state and nation as they begin their professional careers as teachers of Science, Technology, Engineering and Mathematics (STEM). NC State STEM Education produces competent professionals who have strong subject matter backgrounds and pedagogical skills throughout their fully accredited programs. Departmental majors may seek licensure for teaching high school grades 9-12 or middle grades 6-9. Students in the high school curriculum in education take approximately 45 percent of their program in the College of Sciences and may complete a double major, receiving a second degree in mathematics, statistics, or one of the sciences. Students in Technology, Engineering and Design Education may be licensed as teachers of technology and engineering education programs in middle grades and high schools. All pre-service teaching programs provide a broad background; an in-depth study in mathematics, technology or an area of science; and the development of professional competencies.

In addition, the Technology, Engineering and Design education curriculum provides a non-teaching graphic communications option with a general background for a variety of employment opportunities in business and industry.

The department also offers minors in:

- Graphic Communications (13GCM) (https://ced.ncsu.edu/program-descriptions/graphic-communications-technology-engineering-and-design-education/)
- Technology, Engineering and Design Education (13TEM) (https://ced.ncsu.edu/program-descriptions/minor-in-technology-engineering-design-education/)

Minors give opportunities for students to develop proficiency in applying graphic techniques in both career and leisure activities or technology based laboratory skills.

The department offers student engagement activities through their active professional organizations that include: Technology and Engineering Education Collegiate Association (TEECA), Epsilon Pi Tau International Honor Society for Professions in Technology, North Carolina Council of Teachers of Mathematics (NCCTM)-Kappa Student Chapter, and the National Science Teachers Association (NSTA Student Chapter)

The Department of STEM Education is located in Poe Hall, Suite 510.

J. H. Wheatley, Science Education
Assistant Professor Emeritus
W. J. Vanderwall, Graphic Communications

Teaching Assistant Emeritus
A. Y. Scales, Graphic Communications

Lecturer Emeritus
J. F. Freeman, Graphic Communications

Plans
- Graphic Communications (Minor) (p. 418)
- Mathematics Education (BS) and Mathematics (BS) (Double Major) (p. 418)
- Mathematics Education (BS) and Statistics (BS) (Double Major) (p. 421)
- Mathematics Education (BS): Computer Specialization (p. 424)
- Mathematics Education (BS): Mathematics Specialization (p. 426)
- Mathematics Education (BS): Middle Grades Mathematics Concentration (p. 428)
- Mathematics Education (BS): Statistics Specialization (p. 431)
- Mathematics Education, Secondary (p. 433)
- Middle Grades Education (BS), Mathematics and Sciences Concentration (p. 433)
- Science Education (BS): Biology Concentration (p. 436)
- Science Education (BS): Chemistry Concentration (p. 440)
- Science Education (BS): Earth Science Concentration (p. 443)
- Science Education (BS): Middle Grades Science Concentration (p. 446)
- Science Education (BS): Physics Concentration (p. 449)
- Science Education, Secondary (p. 453)
- Technology, Engineering and Design Education (BS), Graphic Communication Concentration (p. 453)
- Technology, Engineering and Design Education (BS): Licensure Concentration (p. 456)
- Technology, Engineering and Design Education (Minor) (p. 459)

Graphic Communications (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

This fifteen-credit hour minor develops competencies in selecting and applying graphic techniques in both professional and avocational areas, provides in-depth study and authentic activities in visual science, and enriches visual perception and critical thought in graphic areas. Minor programs are individually designed to meet the needs of the student and to complement their major.

Admissions

Students may declare their intention to complete the Graphic Communication minor by consulting with the contact person listed below.

Certification

The person listed below will certify the minor prior to graduation. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State.

Contact Person

John Parks Newby
510-C Poe Hall

jpnewby@ncsu.edu

SIS Code: 13GCM

Plan Requirements

- Complete 15 hours of course work in Graphic Communications.
- A minimum grade of ‘C’ (2.0) or better must be achieved in each course counting towards the minor.
- Students who have transfer credit from another institution that they believe is equivalent to GC 120 Foundations of Graphics should consult the contact person listed below for approval and inclusion in the minor.

Total Hours 15

Mathematics Education (BS) and Mathematics (BS) (Double Major)

The double degree in Mathematics Education (BS) and Mathematics (BS) is one of two double degree options in the Mathematics Education program in the Department of STEM Education.

This degree program prepares teacher-leaders to have a deep understanding of the mathematics they will teach and knowledge about different pedagogical strategies they can apply in the classroom. Students take five courses focused on mathematics education, beginning in their sophomore year. Our professional courses in the junior and senior year offer relevant pedagogical experiences, emphasize teaching
mathematics with technology, and provide rich field experiences in math classrooms. Graduates are recommended for an initial North Carolina teaching license in mathematics grades 9-12. They will be able to seek employment opportunities in education and make a positive difference in their communities.

In addition, students earn a degree in Mathematics. Upper level mathematics electives help prepare students for a variety of math-related fields in addition to teaching at the secondary level and graduate study in mathematics or related fields.

Students in this program also have the opportunity to participate in:

- Undergraduate research
- Kappa student chapter of the NC Council of Teachers of Mathematics, and other high impact experiences such as Passport to Success, SAY Village, and study abroad
- Tutoring in local schools
- For more information about this program, visit our website (https://ced.ncsu.edu/programs/mathematics-education-middle-school-or-secondary-bachelor/).

1. Required course
Mathematics Education (BS): Computer Specialization

The Mathematics Education: Computer Specialization (BS) degree is one of four undergraduate degree options in the Mathematics Education program in the Department of STEM Education.

This degree program prepares teacher-leaders to have a deep understanding of the mathematics and computer science they will teach and knowledge about different pedagogical strategies they can apply in the classroom. Students take five courses focused on mathematics education, beginning in their sophomore year and take five computer science courses in lieu of math electives. Our professional courses in the junior and senior year offer relevant pedagogical experiences, emphasize teaching mathematics with technology, and provide rich field experiences in math classrooms. Graduates are recommended for an initial North Carolina teaching license in mathematics grades 9-12 and are also poised to teach computer science courses at the secondary level. They will be able to seek employment opportunities in education and make a positive difference in their communities.

Students in this program also have the opportunity to participate in:

- Undergraduate research
- Kappa student chapter of the NC Council of Teachers of Mathematics, and other high impact experiences such as Passport to Success, SAY Village, and study abroad
- Tutoring in local schools

For more information about this program, visit our website (https://ced.ncsu.edu/programs/mathematics-education-middle-school-or-secondary-bachelor/).

Mathematics Education (BS): Middle Grades Mathematics Concentration

The Mathematics Education: Middle Grades Concentration (BS) degree is one of four undergraduate degree options in the Mathematics Education program in the Department of STEM Education.

This degree program prepares teacher-leaders to have a deep understanding of the mathematics and statistics they will teach and knowledge about different pedagogical strategies they can apply in the classroom. Students take five courses focused on mathematics education, beginning in their sophomore year. In addition, students take courses specific to teaching content in the middle grades. Our professional courses in the junior and senior year offer relevant pedagogical experiences, emphasize teaching mathematics with technology, and provide rich field experiences in math classrooms. Graduates are recommended for an initial North Carolina teaching license in mathematics grades 6-9. Students in this program have the option to pursue a dual teaching license. This means they will receive a BS in Mathematics Education but they may be recommended for licensure in both middle grades mathematics and middle grades science. They will be able to seek employment opportunities in education and make a positive difference in their communities.

Students in this program also have the opportunity to participate in:

- Undergraduate research
- Kappa student chapter of the NC Council of Teachers of Mathematics, and other high impact experiences such as Passport to Success, SAY Village, and study abroad
- Tutoring in local schools

For more information about this program, visit our website (https://ced.ncsu.edu/programs/mathematics-education-middle-school-or-secondary-bachelor/).

1 At most one grade below a C is permitted in the mathematics, statistics, and computer science courses.  
2 At most one grade below a C- is permitted in the courses satisfying the science requirements for a student intending to license in mathematics. For a student intending to license in mathematics and science, no grades below a C are permitted in the courses satisfying the science requirements.  
3 A grade below a B- is not permitted in EMS 204. A grade below a C is not permitted in all other EMS, EDP, ECI, ELP, ED courses.
To be eligible for a teaching license in mathematics only, either mathematics or science courses may be selected. To be eligible for teaching licenses in both mathematics and science two science elective courses must be selected. One from EMS 375, PY 124, MEA 130 or MEA 101 AND one from PY 123, MEA 130, MEA 101, ES 100, ES 200, or ES 300. Grades below C are not permitted in these science courses.

Mathematics Education (BS): Statistics Specialization

The Mathematics Education: Statistics Specialization (BS) degree is one of four undergraduate degree options in the Mathematics Education program in the Department of STEM Education.

This degree program prepares teacher-leaders to have a deep understanding of the mathematics and statistics they will teach and knowledge about different pedagogical strategies they can apply in the classroom. Students take five courses focused on mathematics education, beginning in their sophomore year, and two statistics courses in lieu of math electives. Our professional courses in the junior and senior year offer relevant pedagogical experiences, emphasize teaching mathematics with technology, and provide rich field experiences in math classrooms. Graduates are recommended for an initial North Carolina teaching license in mathematics grades 9-12. They will be able to seek employment opportunities in education and make a positive difference in their communities.

Students in this program also have the opportunity to participate in:

Notes:
1. A grade of C or higher is required.
2. A grade of C- or higher is required.
3. A grade of B- or higher is required.
EMS 495 Senior Seminar in Mathematics and Science Education 2

Hours 12

Total Hours 120

1 At most one grade below a C is permitted in the mathematics, statistics, and computer science courses.
2 At most one grade below a C- is permitted in the courses satisfying the science requirement.
3 A grade below a B- is not permitted.

Mathematics Education, Secondary

The degree of Bachelor of Science in Mathematics Education may be obtained by selecting one of 4 concentrations offered by the Department of STEM Education in the College of Education: Middle Grades Mathematics, Mathematics Specialization, Statistics Specialization, or Computer Science Specialization. In addition, there are two dual major options: Mathematics and Math Education, and Statistics and Math Education.

This degree program prepares teacher-leaders to have a deep understanding of the mathematics they will teach and knowledge about different pedagogical strategies they can apply in the classroom.

Students take five courses focused on mathematics education, beginning in their sophomore year. Our professional courses in the junior and senior year offer relevant pedagogical experiences, emphasize teaching mathematics with technology, and provide rich field experiences in math classrooms. Graduates are recommended for an initial North Carolina teaching license. They will be able to seek employment opportunities in education and make a positive difference in their communities.

Students in this program also have the opportunity to participate in:

- Undergraduate research
- Kappa student chapter of the NC Council of Teachers of Mathematics, and other high impact experiences such as Passport to Success, SAY Village, and study abroad
- Tutoring in local schools

For more information about this program, visit our website (https://ced.ncsu.edu/programs/mathematics-education-middle-school-or-secondary-bachelor/).

Science Education (BS): Biology Concentration

The Science Education: Biology concentration (BS) degree is one of five undergraduate degree options in the Science Education program in the Department of STEM Education.

This degree program prepares teacher-leaders to have a deep understanding of the pedagogical strategies to teach high school Biology. Students complete courses focused on Biology and Science education, obtain relevant pedagogical experiences while immersed in rich field experiences in science classrooms, and emphasize teaching science with technology. Upon successful completion of the program, students are recommended for an initial North Carolina teaching license in grades 9-12. They will be able to seek employment opportunities in education and make a positive difference in their communities.

The goals and objectives of the BS degree in Science Education are:

- To enable and ensure that each prospective teacher enriches his/her life through a comprehensive university education
- To develop the professional qualities and academic background needed to teach science to all student levels in the grade for which the teacher is certified
- To develop a general knowledge foundation upon which specialized professional knowledge is built, and upon which a well-rounded university education is the base

Coursework for the degree is divided into four types of knowledge:

- General pedagogical knowledge — the nature of learners and general principles of instruction
- Content-area knowledge — knowledge of the natural sciences
- Pedagogical content knowledge — principles of curriculum, instruction and assessment directly related to the natural sciences
- Context knowledge — understanding the culture of the school, community and society in which educational institutions exist and function

Students in this program also have the opportunity to participate in:

- Undergraduate research
- The student chapter of the NC Science Teachers Association (NSTA), and other high impact experiences such as Passport to Success, SAY Village, and study abroad
- Outreach and tutoring in local schools

1 A grade of C or higher is required.
2 A grade of B- or higher is required.
3 If you are a BLS double major, choose MB 351 General Microbiology and MB 352 General Microbiology Laboratory
4 A grade of C (2.0) or better is required for core content courses, up to two courses with a grade below a C is permitted.
Science Education (BS): Chemistry Concentration

The Science Education: Chemistry concentration (BS) degree is one of five undergraduate degree options in the Science Education program in the Department of STEM Education.

This degree program prepares teacher-leaders to have a deep understanding of the pedagogical strategies to teach high school Chemistry. Students complete courses focused on Chemistry and Science education, obtain relevant pedagogical experiences while immersed in rich field experiences in science classrooms, and emphasize teaching science with technology. Upon successful completion of the program, students are recommended for an initial North Carolina teaching license in grades 9-12. They will be able to seek employment opportunities in education and make a positive difference in their communities.

The goals and objectives of the BS degree in Science Education are:

- To enable and ensure that each prospective teacher enriches his/her life through a comprehensive university education
- To develop the professional qualities and academic background needed to teach science to all student levels in the grade for which the teacher is certified
- To develop a general knowledge foundation upon which specialized professional knowledge is built, and upon which a well-rounded university education is the base

Coursework for the degree is divided into four types of knowledge:

- General pedagogical knowledge — the nature of learners and general principles of instruction
- Content-area knowledge — knowledge of the natural sciences
- Pedagogical content knowledge — principles of curriculum, instruction and assessment directly related to the natural sciences
- Context knowledge — understanding the culture of the school, community and society in which educational institutions exist and function

Students in this program also have the opportunity to participate in:

- Undergraduate research
- The student chapter of the NC Science Teachers Association (NSTA), and other high impact experiences such as Passport to Success, SAY Village, and study abroad
- Outreach and tutoring in local schools

For more information about this program, visit our website.

The goals and objectives of the BS degree in Science Education are:

- To enable and ensure that each prospective teacher enriches his/her life through a comprehensive university education
- To develop the professional qualities and academic background needed to teach science to all student levels in the grade for which the teacher is certified
- To develop a general knowledge foundation upon which specialized professional knowledge is built, and upon which a well-rounded university education is the base

Coursework for the degree is divided into four types of knowledge:

- General pedagogical knowledge — the nature of learners and general principles of instruction
- Content-area knowledge — knowledge of the natural sciences
- Pedagogical content knowledge — principles of curriculum, instruction and assessment directly related to the natural sciences
- Context knowledge — understanding the culture of the school, community and society in which educational institutions exist and function

Students in this program also have the opportunity to participate in:

- Undergraduate research
- The student chapter of the NC Science Teachers Association (NSTA), and other high impact experiences such as Passport to Success, SAY Village, and study abroad
- Outreach and tutoring in local schools

The Science Education: Middle Grades Science concentration (BS) degree is one of five undergraduate degree options in the Science Education program in the Department of STEM Education.

This degree program prepares teacher-leaders to have a deep understanding of the pedagogical strategies to teach science in the middle grades. Students complete courses focused on the sciences and science education, obtain relevant pedagogical experiences while immersed in rich field experiences in science classrooms, and emphasize teaching science with technology. Upon successful completion of the program, students are recommended for an initial North Carolina teaching license in grades 6-8. They will be able to seek employment opportunities in education and make a positive difference in their communities.

The goals and objectives of the BS degree in Science Education are:

- To enable and ensure that each prospective teacher enriches his/her life through a comprehensive university education
- To develop the professional qualities and academic background needed to teach science to all student levels in the grade for which the teacher is certified
- To develop a general knowledge foundation upon which specialized professional knowledge is built, and upon which a well-rounded university education is the base

Coursework for the degree is divided into four types of knowledge:

- General pedagogical knowledge — the nature of learners and general principles of instruction
- Content-area knowledge — knowledge of the natural sciences
- Pedagogical content knowledge — principles of curriculum, instruction and assessment directly related to the natural sciences
- Context knowledge — understanding the culture of the school, community and society in which educational institutions exist and function

Students in this program also have the opportunity to participate in:
• Undergraduate research
• The student chapter of the NC Science Teachers Association (NSTA), and other high impact experiences such as Passport to Success, SAY Village, and study abroad
• Outreach and tutoring in local schools

1 A grade of C (2.0) or better is required for core content courses, up to two courses with a grade below a C is permitted.

2 A grade of C or higher is required.

3 B- or better is required

**Science Education (BS): Physics Concentration**

The Science Education: Physics concentration (BS) degree is one of five undergraduate degree options in the Science Education program in the Department of STEM Education.
This degree program prepares teacher-leaders to have a deep understanding of the pedagogical strategies to teach high school Physics. Students complete courses focused on Physics and Science education, obtain relevant pedagogical experiences while immersed in rich field experiences in science classrooms, and emphasize teaching science with technology. Upon successful completion of the program, students are recommended for an initial North Carolina teaching license in grades 9-12. They will be able to seek employment opportunities in education and make a positive difference in their communities.

The goals and objectives of the BS degree in Science Education are:

- To enable and ensure that each prospective teacher enriches his/her life through a comprehensive university education
- To develop the professional qualities and academic background needed to teach science to all student levels in the grade for which the teacher is certified
- To develop a general knowledge foundation upon which specialized professional knowledge is built, and upon which a well-rounded university education is the base

Coursework for the degree is divided into four types of knowledge:

- General pedagogical knowledge — the nature of learners and general principles of instruction
- Content-area knowledge — knowledge of the natural sciences
- Pedagogical content knowledge — principles of curriculum, instruction and assessment directly related to the natural sciences
- Context knowledge — understanding the culture of the school, community and society in which educational institutions exist and function

Students in this program also have the opportunity to participate in:

- Undergraduate research
- The student chapter of the NC Science Teachers Association (NSTA), and other high impact experiences such as Passport to Success, SAY Village, and study abroad
- Outreach and tutoring in local schools

For more information about this program, visit our website.

Science Education, Secondary

The degree of Bachelor of Science in Science Education may be obtained by selecting one of 5 concentrations offered by the Department of STEM Education in the College of Education: Secondary Science Physics, Secondary Science Biology, Secondary Science Earth Sciences, Secondary Science Chemistry, Middle Grades Science. There is a crucial need for experienced classroom science teachers and double majoring is a path to earn a degree that can be used to teach either middle or high school sciences. The Science Education degree program prepares teacher-leaders to have a deep understanding of the sciences they will teach as well as the ability to demonstrate different pedagogical strategies in the classroom. Students complete courses focused on science education, obtain relevant pedagogical experiences while immersed in rich field experiences in science classrooms, and emphasize teaching science with technology. Upon successful completion of the program, students are recommended for an initial North Carolina teaching license in grades 6-8 or 9-12 sciences. They will be able to seek employment opportunities in education and make a positive difference in their communities.

The goals and objectives of the BS degree in Science Education are:

- To enable and ensure that each prospective teacher enriches his/her life through a comprehensive university education
- To develop the professional qualities and academic background needed to teach science to all student levels in the grade for which the teacher is certified
- To develop a general knowledge foundation upon which specialized professional knowledge is built, and upon which a well-rounded university education is the base

Coursework for the degree is divided into four types of knowledge:

- General pedagogical knowledge — the nature of learners and general principles of instruction
- Content-area knowledge — knowledge of the natural sciences
- Pedagogical content knowledge — principles of curriculum, instruction and assessment directly related to the natural sciences
- Context knowledge — understanding the culture of the school, community and society in which educational institutions exist and function

Students in this program also have the opportunity to participate in:

- Undergraduate research
- The student chapter of the NC Science Teachers Association (NSTA), and other high impact experiences such as Passport to Success, SAY Village, and study abroad
- Outreach and tutoring in local schools

For more information about this program, visit our website.

Faculty

Technology, Engineering and Design Education (BS), Graphic Communication Concentration

The degree of Bachelor of Science in Technology, Engineering, and Design Education is offered by the Department of STEM Education in the College of Education. With an emphasis on innovation and active learning, this program prepares individuals for a variety of engineering and design employment opportunities, including a teacher licensure option and a non-licensure graphics communications option.
Graphics Communications

Through the study of technical graphics language and design processes, students learn how to think in the language of graphics to effectively communicate ideas and solve technical problems. They actively visualize, design, model, simulate, analyze, and document solutions in technical graphics studies courses and explore the role graphics play in all areas of engineering.

The goals and objectives of the BS degree in Technology, Engineering, and Design Education: Graphic Communications Option are:

- Develop technical skills and an understanding of the technical graphics language
- Develop the ability to apply knowledge, skill and creativity in solving technical problems
- Understand and appreciate the historical evolution of graphic communications
- Understand and assess the impact of current technical graphics developments and trends
- Demonstrate an ability to teach others about graphic communications

1. A grade of C or higher is required.
2. Critical Path (CP): This course is required in the first year of TDE and part of the critical path.
3. A C- or better is required for courses in this category
4. Only one course in this category may be passed with a D. The other course must be at least a C-.

## Technology, Engineering and Design Education (BS): Licensure Concentration

The degree of Bachelor of Science in Technology, Engineering, and Design Education is offered by the Department of STEM Education in the College of Education. With an emphasis on innovation and active learning, this program prepares individuals for a variety of engineering and design employment opportunities, including a teacher licensure option and a non-licensure graphics communications option.

### Teacher Licensure

Through the study of engineering and design processes, students learn how to solve technological problems, invent and innovate. They actively design, model, simulate and analyze solutions to technological challenges, study courses and explore the contributions of systems engineering for developing and sustaining a well-designed world.
Methods in teaching middle and high school students about engineering and design processes are also covered.

The goals and objectives of the BS degree in Technology, Engineering, and Design Education: Teaching Licensure are:

- Develop technical skills and an understanding of technical processes
- Develop the ability to apply knowledge, skill and creativity in solving technical problems
- Understand and appreciate the historical evolution of technology
- Understand and assess the impact of current technological developments and trends
- Demonstrate an ability to teach others about technology

TDE 495 Senior Seminar in Technology Education ³ ³

| Hours | 14 |

| Total Hours | 120-121 |

1. A grade of C or higher is required.
2. Critical Path (CP): This course is required in the first year of TDE and part of the critical path.
3. A grade of C- or higher is required.
4. Only one course in this category may be passed with a D. The other course must be at least a C-.

Technology, Engineering and Design Education (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Technology, Engineering and Design minor broadens students’ comprehension of the technological society in which they live. This is accomplished through the investigation and manipulation of tools, materials, and machines related to technology. Further, students experience technology coursework in applications such as information and communication systems; emerging technologies, robotics education, and evaluation of technological impacts on society, individuals, and culture. Minor programs are individually designed to meet the needs of the student and to complement their major.

Admissions

Students must submit a “Declare a Minor” form to the contact person below.

Certification

Prior to the end of the second week of the student’s final semester, the student must sign the Application for Minor form (provided by the minor contact person). This form is a list of all grades received in the courses to be considered for the minor as well as the courses to be taken during the student’s final semester.

Contact Person

Nolan Fahrer
STEM Education
510F Poe Hall
919.515.1741
nefahrer@ncsu.edu

Effective Date: 1/2012

SIS Code: 13TEM

Plan Requirements

• Complete a minimum of 16 hours of coursework in Technology, Engineering and Design Education
• A minimum grade of ‘C’ (2.0 or better must be achieved in each course counting towards the minor with the exception of TDE 490 Special Problems in Technology Education (an “S” is acceptable for this course).
• Students who have transfer credit from another institution that they believe is equivalent to GC 120 Foundations of Graphics should consult the contact person listed below for approval and inclusion in the minor.

Total Hours: 15

Department of Teacher Education and Learning Sciences (TELS)

The TELS Department advances education through scholarship, leadership, and advocacy. We prepare professionals who are committed to equity and social justice, have deep content knowledge, demonstrate strong working knowledge of effective pedagogies, and realize the potential of digital technologies to enhance learning.

We shape the field of education by engaging in research that addresses current challenges, and by participating in cross-disciplinary work that deals with real problems in forward-looking ways. The department exemplifies an innovative merging of teacher education and the learning sciences that results in new pathways for teaching, scholarship, leadership, and service. The preparation that our students receive is unmatched in scope, priorities, and outcomes, assuring that our graduates are able to make profound contributions to education and society.

With over 300 undergraduate students, 250 graduate students, and 40 full-time faculty members, we offer three bachelor’s programs, two certificates, six master’s programs, and one PhD program. We are the place where a deep understanding of current issues in teaching and learning comes together with a forward-looking vision for the promises of equity and digital learning to push the field of education forward. Our nationally ranked graduate degree and certificate programs are led by faculty and staff who are committed to the success of our students.

For contact information and details of our undergraduate programs, visit our undergrad website.

Middle Grades Language Arts and Social Studies Program (MSL)

The goal of the MSL Program is to prepare teachers to effectively educate young adolescents while being responsive to their unique needs, interests and abilities. Graduates earn licensure for teaching grades six through nine in the English language arts and social studies disciplines.

The MSL Program offers an undergraduate degree and initial licensure in two dynamic content areas that prepares teachers to effectively educate and impact the lives of young adolescents while being responsive to their unique needs, interests, and abilities. Students learn how to implement high-quality English language arts and social studies instruction with three major focus areas:

- Digital Literacies
- Inquiry-based Learning
- Citizenship

Students are provided with the opportunity to earn an undergraduate degree and initial licensure for sixth through ninth grade.

For contact information and more details about our program, please visit our website.

Department of Teacher Education and Learning Sciences (TELS)
North Carolina State University
Faculty

English Teacher Education

Students desiring to become secondary English teachers in grades 9-12 will be enrolled in the College of Humanities and Social Sciences. In that college's section of this catalog, curriculum requirements for the teacher education option can be found under the Department of English. Students desiring to become Language Arts teachers in grades 6-9 will be enrolled in the College of Education.

View information on the Bachelor of Arts (B.A.) in English: Teacher Education Concentration (p. 686) here.

Faculty

Professor

Jeff Reaser, Associate Professor

French Teacher Education

Students desiring to be licensed to teach French K-12 by the State of North Carolina will be enrolled in the College of Humanities and Social Sciences. The curriculum requirements for the teacher education option in French can be found under the Department of Foreign Languages and Literatures in the College of Humanities and Social Sciences.

View information on the Bachelor of Arts (B.A.) in Foreign Languages and Literatures: Foreign Language French Education Concentration (p. 730) here.

Faculty

Program Coordinator, French Teacher Education

Hannah Bollinger

Spanish Teacher Education

Students desiring to be licensed to teach Spanish K-12 by the State of North Carolina will be enrolled in the College of Humanities and Social Sciences. The curriculum requirements for the teacher education option in Spanish can be found under the Department of Foreign Languages and Literatures in the College of Humanities and Social Sciences.

View information on the Bachelor of Arts (B.A.) in Foreign Languages and Literatures: Foreign Language Spanish Education Concentration (p. 745) here.

Faculty

Program Coordinator, Spanish Teacher Education

Hannah Bollinger

Technology, Engineering and Design Education

For more information about this department, including contact information, visit the department (http://ced.ncsu.edu/academics/Departments/DesignEducation/Undergraduate/).

With an emphasis on innovation and active learning, this program prepares individuals for a variety of engineering and design employment opportunities, including a teacher licensure option and a non-licensure graphics communications option.

Specific curriculum requirements are available online (https://www.arts.ncsu.edu/php/coursecat/degree_requirements.php).

1 Other specific courses (3 to 6 credit hours) may be required or recommended with the departmental advisor provided the total number of hours meet or exceed at least half-time status (minimum 6 hours).

The certificate student will consult with the sponsoring faculty member and/or the coordinator of advising and will (no later than the close of the course registration period) develop a plan of work depending on the interest and ability of student, availability of seats, and schedule. No new courses need to be developed – students will enroll in existing courses as appropriate and upon recommendation from academic advisor.

College of Engineering

For more information about this college, including contact information, visit the department (http://www.engr.ncsu.edu/).

118 and 120 Page Hall
NCSU Box 7904
Raleigh, NC 27695-7904
Phone: (919) 515-3263
fax: (919) 515-8702
e-mail: engineering@ncsu.edu

People who seek a challenging technical career in research and development, design, construction, production, maintenance, technical sales, management, teaching, or other careers requiring a methodical, creative approach to problem solving, should consider an engineering or computer science education. At NC State, the College of Engineering has a distinguished and internationally recognized faculty, and the College of Engineering offers the opportunity for ambitious students to become the leaders and prime movers of our increasingly technological world. Because of the great influence of science and technology on our everyday lives, today’s engineers and computer scientists must be acutely aware of, and responsible for, the effects their creations may have on society. In addition to safety, aesthetics, economics, and energy, today’s technologists must consider environmental, sociological, and other “human concern” costs.

College of Engineering graduates work in diverse careers around the world. Most are practicing engineers, but because their education has equipped them well to address problems in a wide variety of fields, many College of Engineering graduates have become corporate presidents, lawyers, medical doctors, and leaders in government. The College of Engineering has engineering degree programs in twelve academic departments and three affiliated departments. These departments include: Biological and Agricultural Engineering; Joint UNC/NC State Department of Biomedical Engineering; Chemical and Biomolecular Engineering; Civil, Construction, and Environmental Engineering; Computer Science; Electrical and Computer Engineering; Edward P. Fitts Department of Industrial and Systems Engineering; Materials Science and Engineering; Mechanical and Aerospace Engineering; Nuclear Engineering; Paper Science and Engineering within the Department of Forest Biomaterials; and Textile Engineering within the Department of
Textile Engineering, Chemistry and Science. Eighteen undergraduate degree programs are offered in these twelve departments. In addition, a degree program in Engineering is offered by special arrangement to the very few students who can clearly demonstrate the need for an individualized program of study. All departments also offer advanced studies leading to master's degrees and the Doctor of Philosophy degree. Consult the Graduate Catalog (http://www.ncsu.edu/grad/catalog/) for graduate degrees.

Seventeen programs in the College of Engineering are accredited by the Engineering Accreditation Commission of ABET; http://www.abet.org and are: aerospace engineering; biological engineering; chemical engineering; civil engineering; computer engineering; construction engineering; electrical engineering; BS in engineering Mechatronics concentration joint program with UNC Asheville; BS in engineering, Mechanical Engineering Systems concentration; environmental engineering; industrial engineering; materials science and engineering; mechanical engineering; nuclear engineering; paper science and engineering; and textile engineering. One program in the College of Engineering, computer science, is accredited by the Computing Accreditation Commission of ABET, http://www.abet.org. Accreditation ensures that these programs satisfy requirements for acceptance by these nationally recognized agencies. All curricula and programs are designed to maintain the college's national and international reputation while meeting the needs of the people and industries of the state and region through effective instruction, competent research, and the development of new and meaningful contributions to scientific knowledge.

The Career Development Center (https://careers.dasa.ncsu.edu/) is maintained by the university to assist continuing students and graduating students in achieving their career goals.

High Impact Experiences

The College of Engineering is actively educating and preparing engineers that will impact our world. Student participation in High Impact experiences (https://www.engr.ncsu.edu/academics/undergrad/firstyear/activities/) -- work, research, international, and service -- is highly encouraged.

NC State College of Engineering students may, for instance, choose these High Impact experiences:

- International engagement
  - The Study Abroad Office (https://studyabroad.ncsu.edu/) offers assorted options based upon interests, location, duration, and areas of study including engineering majors.
  - Opportunities to work abroad, research abroad or volunteer service abroad are available.

- Work
  - The Career Development Center (https://careers.dasa.ncsu.edu/), which includes the Cooperative Education Program, offers career advising, support, and resources that allow students to search for job and internship opportunities that lead to gaining real-world experience while pursuing their degrees.
  - The Engineering Career Fair (https://www.engr.ncsu.edu/careerfair/) affords students the opportunity to meet with prospective employers and to learn more about the participating companies.

- Service

- Leadership and Civic Engagement (https://leadandengage.dasa.ncsu.edu/) sponsors Alternative Service Break (ASB) (https://leadandengage.dasa.ncsu.edu/asb/) and more opportunities for students to learn how to successfully lead teams with an inclusive lens, facilitate change, and maximize success in a multicultural environment.

- Many engineering student organizations, clubs, and honor societies (https://getinvolved.ncsu.edu/) include a service and outreach component for students to volunteer their time and talent.

Research

- The Office of Undergraduate Research (https://undergradresearch.dasa.ncsu.edu/) works to support and promote discovery-, inquiry-, and creativity-based opportunities through mentored research experiences for students.

- The College provides opportunities for undergraduate research within its academic departments as well as through its many Engineering Centers and Institutes (https://www.engr.ncsu.edu/researchcenters/).

Students interested in High Impact experiences may learn more through the primary resource (listed above) or Office of Academic Affairs.

Cooperative Education Program

This optional program is structured so that the student will alternate semesters of study with semesters of practical work as sophomores and juniors. The first and senior years are spent on campus, while sophomore and junior academic work is spread over a three-year period to permit alternating academic semesters with work-experience semesters. Students earn a salary while they are in industry. This income can prove useful in offsetting college expenses. The Co-op plan can be completed in five years, during which time the student receives 12 to 18 months of industrial experience.

Students in all curricula in the College of Engineering may apply for the Co-op program if they have a grade point average of 2.5 or better. Application for admission into the Co-op program should be made early in the spring semester of the freshman year. Students must be accepted into an engineering degree program prior to beginning the first Co-op assignment.

Further information may be obtained from:
Cooperative Education Program (https://careers.dasa.ncsu.edu/overview/)
Career Development Center
2100 Pullen Hall

Recognition of Graduates

All graduating students in the College of Engineering are invited to participate in the Recognition of the Graduates Event (https://www.engr.ncsu.edu/academics/undergrad/rings/), held annually in the spring semester. The event acknowledges the fellowship of engineers and computer scientists who are trained in science and technology and who are dedicated to the ethical practice, teaching, or administration of their profession. Students who are within 24 credits of graduation, or have recently graduated, are eligible.

The event includes a commitment to the "Obligation" and acceptance of a stainless steel ring to be worn on the little finger of the working hand. Only those who have met the high standards of professional engineering and computer science training or experience are invited to accept the
Obligation, which is voluntarily received for life. This commitment is not a trivial act but is, rather, like the Hippocratic Oath, a promise to practice the profession ethically, with integrity, tolerance and respect. The ring is worn as a visual symbol to attest to the wearer’s calling and symbolizes the unity of the profession in its goal of benefitting humankind. The stainless steel from which the ring is made depicts the strength of the profession.

**Benjamin Franklin Scholars Program**

A limited number of freshmen in the College of Engineering apply and are selected to participate in the Benjamin Franklin Scholars Program (https://ids.chass.ncsu.edu/dual/franklin.php). Students completing the program earn a Bachelor of Science in an engineering discipline or in computer science and a bachelor’s degree in humanities or social sciences.

This double-degree program, a joint undertaking of the College of Engineering and the College of Humanities and Social Sciences, provides a unique opportunity to integrate a solid base of knowledge in technology or science with a broad humanistic and social perspective. The curriculum for the double-degree program has four main components:

1. a strong general education,
2. specially designed interdisciplinary courses,
3. all technical course requirements associated with the engineering or computer science degree, and
4. and a second major in the humanities and social sciences chosen from among the traditional majors or an interdisciplinary major.

Students who have been accepted into a College of Engineering degree program, have declared a major in the College of Humanities and Social Sciences or Economics, and have at least a 3.0 GPA are generally eligible to apply to the program. With careful planning, the program can be completed in five years.

For more information, contact:
Dr. Ross Bassett, Program Director
ross_bassett@ncsu.edu
or the Office of Academic Affairs (118 Page Hall)

**Grand Challenge Scholars Program**

The National Academy of Engineering’s list of fourteen Grand Challenges for Engineering in the 21st century is a call to action and a means of focusing society’s attention on the opportunities and challenges affecting our quality of life. E 102 Engineering in the 21st Century is an interdisciplinary course for first-year students to explore the Grand Challenges and how engineers are actively designing and implementing technological solutions.

The mission of the Grand Challenge Scholars Program is to increase the awareness of future engineers about the challenges that face our world today. The College of Engineering, in partnership with the National Academy of Engineering, established this program, which aims to progressively develop undergraduate scholars of diverse engineering disciplines and backgrounds focused on solutions to the Grand Challenges by broadening their outlook on societal concerns, promoting social responsibility, lifelong learning, and on-going engagement in the problems facing the 21st century world.

There are five core competencies that guide all Grand Challenge Scholars in choosing their curricular and complementary high impact experiences:

- **Talent Competency**: mentored research/creative experience on a Grand Challenge-like topic
- **Multidisciplinary Competency**: understanding the multiple disciplines of engineering systems solutions developed through personal engagement
- **Entrepreneurship Competency**: understanding, preferably developed through experience, of the necessity of a viable business model for solution implementation
- **Multicultural Competency**: understanding different cultures, preferably through multicultural experiences, to ensure cultural acceptance of proposed engineering solutions
- **Social Consciousness Competency**: understanding that the engineering solutions should primarily serve people and society reflecting social consciousness

Students who have been accepted into a College of Engineering degree program and have at least a 3.0 GPA are generally eligible to apply to the program.

For more information, visit the Grand Challenge Scholars Program website (http://go.ncsu.edu/grandchallenges/), e-mail grandchallenges@ncsu.edu with Grand Challenge Scholars Program in the subject field, or contact the Office of Academic Affairs (118 Page Hall).

**Computers**

Computers, both lab-based and student-owned, are central to engineering education in the college. The College of Engineering recommends that all incoming students own a desktop, laptop, or similarly powerful tablet to use in classroom, lab, and mobile settings. If students plan to purchase one, then Engineering Information Technology provides advice and guidance on purchasing student-owned computing at https://it.engr.ncsu.edu/

The College of Engineering also provides its students with a large number of workstation labs for the purpose of running high-end engineering applications. The first-year computer lab course, E 115 Introduction to Computing Environments, instructs students in the use of their own computers to interface effectively with the vast resources of the college computing environment. The course emphasizes students’ responsibility for their own computer, including security and hands-on maintenance.

**Transfer Programs**

Every year, more than 25 percent of the students receiving a degree in engineering at NC State University are students who began their education at another institution. Students with non-engineering degrees or one or more years of academic work completed at other institutions may apply for transfer admission to the College of Engineering (https://www.engr.ncsu.edu/admissions/transfer-admissions/) through the Office of Undergraduate Admissions (https://admissions.ncsu.edu/apply/ transfers/).
Transfer Admissions into the College of Engineering

Students are admitted from community colleges, four-year colleges and universities, and foreign institutions. Students currently attending or anticipating attendance at other institutions are advised to contact the Office of Academic Affairs for information on transfer requirements, transfer course credit and admission to NC State.

Undergraduate Engineering Partnerships with Other Institutions

The College of Engineering at NC State University has extended engineering degree opportunities through formal partnership agreements with a number of North Carolina institutions to increase diversity and to enhance access to populations who would not otherwise easily have access to an engineering discipline.

In most programs, you begin your instruction at a partner institution and then transfer to and attend NC State in Raleigh to complete your engineering degree. However, site-based degree programs allow transfer students to earn an undergraduate engineering degree from NC State without having to move to Raleigh. Both types of programs are ABET-accredited programs. Visit the College's website to learn more about our partnerships at https://www.engr.ncsu.edu/admissions/transfer-admissions/partnerships/ or the home institutions.

Golden LEAF Biomanufacturing Training and Education Center

Biomanufacturing is the production of useful products such as penicillin through the use of biological molecules and living organisms. The Golden LEAF Biomanufacturing Training and Education Center (BTEC) simulates a biomanufacturing pilot plant capable of producing biopharmaceutical products and packaging them in a sterile, current Good Manufacturing Practices (cGMP)-like environment, and is the only facility of its kind in the nation and one of only a few in the world.

The BTEC hands-on, laboratory-intensive academic program is provided using large-scale equipment, including bioreactors, downstream separation and purification processes, bioreactor control systems, and aseptic processing operations. In addition to undergraduate and graduate courses, the BTEC educational program includes an undergraduate Minor in Biomanufacturing, and a University Certificate in Biomanufacturing. A Post-baccalaureate Certificate in Biomanufacturing is available for students who have earned a bachelor’s level degree. Undergraduate students majoring in chemical engineering may elect to complete a concentration in biomanufacturing sciences. The BTEC graduate program will include a Minor in Biomanufacturing, a Master of Science degree, and a Professional Science Masters in Biomanufacturing.

For additional information, please visit the BTEC website (http://www.btec.ncsu.edu/).

• Materials Science and Engineering (Minor) (p. 551)
• Nano-Science and Technology (Minor) (p. 603)
• Nuclear Engineering (Minor) (p. 566)
• Supply Chain Engineering (Minor) (p. 572)
• Tissue Engineering (Minor) (p. 602)

Certificates

• Biomanufacturing (Certificate) (p. 478)
• Biomanufacturing (Certificate) (For Post-Baccalaureate Students) (p. 479)
• Computer Programming (Certificate) (For Post-Baccalaureate Students, Distance Education) (p. 516)

Department of Biological and Agricultural Engineering

For more information about this department, including contact information, visit the department (p. 223).

The Department of Biological and Agricultural Engineering (BAE) applies engineering principles and the fundamentals of biologically-based systems and tools, primarily in agriculture and the environment. The scope of BAE ranges in scale from the molecular to the ecosystem level, for the safe, efficient, and environmentally sound production, processing and management of agricultural, biological and natural resources. From biomechanics to food processing and water management, we’re engineering solutions for a sustainable future.

The BAE department provides excellent educational opportunities at the undergraduate level with programs that are well recognized as among the finest in the United States.

The BE curriculum includes concentrations in agricultural engineering, bioprocess engineering, ecological engineering, and environmental engineering. All concentrations within the BE curriculum emphasize core courses in biology, mathematics, physics, chemistry, hydraulics, mechanics, materials, and thermodynamics, which collectively provide solid training in basic science and engineering. The curriculum...
is designed to prepare each graduate to master fundamentals of engineering and biology, develop the ability to solve engineering problems, improve self-confidence, and apply the creative process of engineering design. The educational experience is capped off with a two semester senior level course that immerses each graduate in the team approach to developing engineering solutions to complex problems. By the time of graduation, approximately 80% of BE graduates will have passed the Fundamentals in Engineering exam and thus be well on their way toward licensure as a Professional Engineer.

Opportunities

BE students learn to solve a wide variety of engineering problems and will have opportunities for specialization through selection of a specific concentration. Scientific and engineering principles are applied: to conserve and manage air, energy, soil and water resources; to manage, protect and restore natural ecosystems; to understand and utilize biological, chemical and physical processes for the production and conversion of biomass to bio energy; to analyze, understand and utilize mechanical properties of biological materials; to design and develop machinery systems for all phases of agricultural and food production; to design and evaluate structures and environmental control systems for housing animals, plant growth, and biological product storage; to develop improved systems for processing and marketing food and agricultural products; and to design sensor-based instrumentation and control systems for biological and agricultural applications.

Graduates of the BE curriculum receive a Bachelor’s of Engineering in Biological Engineering, qualifying them for positions in design, development, and research in industry, government and public institutions. The curriculum also prepares students for post-graduate work leading to advanced degrees. Typical positions filled by recent BE graduates include: stream and wetlands restoration project manager; product design; development and testing engineer; plant engineering and management; engineering analysis and inspection for federal and state agencies; engineering consultant and research engineer. Entry-level salary ranges for BE graduates are similar to those of Civil, Industrial, and Mechanical Engineering graduates.

Curricula

The BE curriculum is jointly administered by the College of Agriculture and Life Sciences and the College of Engineering and combines the fields of engineering, biology and agriculture. The BE curriculum is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). BE graduates are qualified to become registered professional engineers by passing the appropriate examinations and upon completing the engineering experience requirements. Specific curriculum requirements are available online.

BAE faculty, in concert with program constituencies, has developed the following undergraduate program objectives. Within the first five years following graduation, NC State’s Biological Engineering graduates will:

• Excel in their careers or in graduate school by applying their knowledge of engineering principles, processes, and procedures;
• Practice engineering professionally and ethically;
• Communicate effectively in a professional environment; and
• Be engaged in life-long learning and professional development.

Department of Chemical and Biomolecular Engineering

Like the field of chemical engineering itself, our department’s work transcends disciplinary lines. Our students, faculty, and alumni work with colleagues across the academic and engineering spectrum in fields such as biotechnology, polymers, nanotechnology, energy and environmentally responsive processes, and biomanufacturing. Our students learn by doing in cutting-edge labs and facilities. They work hand-in-hand with industry and government partners to get things done, from sponsored research that advances our understanding of the world to senior design projects that tackle real-life problems. When they graduate, our students are ready for the next step: roughly 85% go into the chemical or pharmaceutical industries, and 15% pursue graduate or processional studies.

Department Highlights:

- Undergraduate students have the option to pursue concentrations within the curriculum, including Biomolecular, Biomanufacturing, Nanoscience, and Sustainable Engineering,
Energy, and the Environment. We also offer a departmental Honors Program.
- The American Institute of Chemical Engineers (AIChE) student chapter has been consistently recognized as one of several Outstanding Chapters for the last 20 years
- Almost 20% of NCSU CHE students have a university, college, or departmental scholarship.
- Many internship and co-op opportunities are available, with almost 15% of our students completing a co-op.

For more information about our department, including contact information, visit our website (https://www.cbe.ncsu.edu/).

Biomanufacturing (Certificate)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Undergraduate Certificate in Biomanufacturing (“BTEC credential”) is designed for both NC State students and for persons from outside the University who wish to gain hands-on experience with, and understanding of, the technology and operational protocols of large-scale cGMP biomanufacturing operations. This knowledge base will prepare Certificate recipients to quickly contribute to a cGMP biomanufacturing operation in significant ways and should reduce the time needed for on-the-job training in those operations. The Certificate educational focus includes gene expression technologies, bioreactors, downstream separation and purification processes, and aseptic processing operations.

Program Coordinator
Pa Nhia Moore
195 BTEC Bldg.
Centennial Campus
Raleigh, NC 27695-7928

Pa_Moore@ncsu.edu

Admissions Requirements
Students enrolled at North Carolina State University who are in good academic standing are eligible for admission to this University Certificate program. In addition, non-degree students with evidence of having completed introductory courses in both biology and organic chemistry, or who have consent of the Certificate Program administrator may enroll in the program. Students who complete the undergraduate Minor in Biomanufacturing or the Post Baccalaureate Certificate in Biomanufacturing are not eligible for the Undergraduate Certificate in Biomanufacturing.

Plan of Study

Academic Structure
Term Effective: 8/2012
Plan Code: 14BTECCTU, 32BTECCTU
CIP Code: 26.1201
Description: Undergraduate Certificate in Biomanufacturing
Offered: On-campus format

Plan Requirements
Requirements for the Undergraduate Certificate in Biomanufacturing include a minimum of 12 credit hours as specified below. All courses must be completed with a grade of 'C-' or better.

Prerequisites: All students must complete both CH 101 Chemistry - A Molecular Science and BIO 183 Introductory Biology: Cellular and Molecular Biology, or have departmental approval of like courses completed. The courses must be completed with a grade of C- or better.

Elective Courses
**Biomanufacturing (Minor)**

To see more about what you will learn in this program, visit the Learning Outcomes website ([https://apps.oirp.ncsu.edu/pgas/](https://apps.oirp.ncsu.edu/pgas/))!

The Minor in Biomanufacturing is intended to provide new graduates with the knowledge base and hands-on skills that will prepare them to quickly contribute to a cGMP biomanufacturing operation in significant ways and should reduce the time needed for on-the-job training in those operations. Interested students should contact the representatives listed below.

**Administration of the Minor in Biomanufacturing**

The BTEC staff will hold primary responsibility for administration of the Minor in Biomanufacturing Information about the Minor and application materials will be handled by an Administrative Assistant and the Assistant Director for Student Coordination will be the primary contact and academic advisor for the students who elect to enroll in the Minor.

**Contacts**

For additional information about the Minor in Biomanufacturing contact:

### Career Opportunities

Careers in chemical engineering are sometimes exciting, always demanding, and ultimately provide a sense of accomplishment and achievement. Graduates find employment in sub-disciplines such as production, technical service, sales, management and administration; research and development; and consulting and teaching. Students desiring careers in teaching, research, or consulting are encouraged to continue their education and pursue a graduate degree (consult the Graduate Catalog). The undergraduate curriculum also provides strong preparation for graduate study in a wide range of professional specialties, and chemical engineering graduates often pursue careers in the medical sciences, business management, and law.

### Chemical Engineering (BS): Biomanufacturing Sciences Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Biomanufacturing Sciences Concentration provides students with the knowledge base and hands-on skills that prepare them to quickly contribute to a biomanufacturing operation. Pharmaceuticals, vaccines, enzymes, and bio-fuels are example products. Students completing this concentration also receive a Minor in Biomanufacturing.

### Plan Requirements

**Chemical Engineering (BS): Biomanufacturing Sciences Concentration: 125 Total Units**

Fourth Year
Fall Semester
BEC 436  Introduction to Downstream Process Development  2
or BEC 435  cGMP Fermentation Operations  2
CHE 395  Professional Development Seminar  1
CHE 446  Design and Analysis of Chemical Reactors  3
CHE 450  Chemical Engineering Design I  3
GEP Requirement (p. 1417)  3

Spring Semester
Biomanufacturing Elective  2
CHE 448  Bioreactor Design  2
CHE 435  Process Systems Analysis and Control  3
CHE 451  Chemical Engineering Design II  3
Bioethics Elective (p. 485)  3
GEP Requirement (p. 1417)  3

Total Hours  127

1  A grade of C or higher is required.
2  A grade of C- or higher is required.

Career Opportunities
Careers in chemical engineering are sometimes exciting, always demanding, and ultimately provide a sense of accomplishment and achievement. Graduates find employment in sub-disciplines such as production, technical service, sales, management and administration; research and development; and consulting and teaching. Students desiring careers in teaching, research, or consulting are encouraged to continue their education and pursue a graduate degree (consult the Graduate Catalog). The undergraduate curriculum also provides strong preparation for graduate study in a wide range of professional specialties, and chemical engineering graduates often pursue careers in the medical sciences, business management, and law.

Chemical Engineering (BS): Biomolecular Concentration
To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Biomolecular Concentration emphasizes hands-on laboratory molecular biology skills that are highly relevant to pharmaceutical, medical, engineering, and agricultural fields. Students completing this concentration also receive a Minor in Biotechnology.

Plan Requirements
Chemical Engineering (BS): Biomolecular Concentration: 127 Total Units
### Third Year
#### Fall Semester
- **BCH 451**: Principles of Biochemistry 4
- **CHE 311**: Transport Processes I 2 3
- **CHE 315**: Chemical Process Thermodynamics 2 3
- **BIT 410**: Manipulation of Recombinant DNA 4
- **CHE 395**: Professional Development Seminar 1

#### Hours 14

#### Spring Semester
- **BIT Lab Modules Group I** (p. 487) 2
- **BIT Lab Modules Group II** (p. 487) 2
- **CHE 312**: Transport Processes II 3
- **CHE 316**: Thermodynamics of Chemical and Phase Equilibria 3
- **CHE 330**: Chemical Engineering Lab I 4

#### Hours 15

### Fourth Year
#### Fall Semester
- **CHE 447**: Bioreactor Engineering 3
- **CHE 450**: Chemical Engineering Design I 3
- **Biotech Minor Group E Elective** (p. 487) 3
- **CHE 497**: Chemical Engineering Projects I 3

#### Hours 12

#### Spring Semester
- **CHE 435**: Process Systems Analysis and Control 3
- **CHE 451**: Chemical Engineering Design II 3
- **CHE 551**: Biochemical Engineering 3
- **Technical Elective** (p. 488) 2

#### Hours 11

#### Total Hours 113

1 A grade of C or higher is required.
2 A grade of C- or higher is required.

### Code Title Hours

#### GEP Courses
- **GEP Humanities** (p. 1423) 6
- **GEP Social Sciences** (p. 1430) 3
- **GEP Health and Exercise Studies** (p. 1422) 2
- **GEP Additional Breadth** (p. 1417) (Humanities/Social Sciences/Visual and Performing Arts) 3
- **GEP U.S. Diversity** (p. 1431) (verify requirement)
- **GEP Global Knowledge** (p. 1419) (verify requirement)
- **Foreign Language Proficiency** (p. 1417) (verify requirement)

#### Total Hours 14

### BIT Lab Modules Group I

#### Code Title Hours
- **BIO 572**: Proteomics 3
- **BIT 462**: Gene Expression Analysis: Microarrays 2
- **BIT 464**: Protein Purification 2
- **BIT 465**: Real-time PCR Techniques 2
- **BIT 467**: PCR and DNA Fingerprinting 2
- **BIT 473**: Protein Interactions 2
- **BIT 562**: Gene Expression Analysis: Microarrays 2
- **BIT 564**: Protein Purification 2
- **BIT 565**: Real-time PCR Techniques 2
- **BIT 567**: PCR and DNA Fingerprinting 2
- **BIT 572**: Proteomics 3
- **BIT 573**: Protein Interactions 2
- **CH 572**: Proteomics 3

### BIT Lab Modules Group II

#### Code Title Hours
- **BIO 572**: Proteomics 3
- **BIT 462**: Gene Expression Analysis: Microarrays 2
- **BIT 464**: Protein Purification 2
- **BIT 465**: Real-time PCR Techniques 2
- **BIT 466**: Animal Cell Culture Techniques 2
- **BIT 467**: PCR and DNA Fingerprinting 2
- **BIT 468**: Genome Mapping 2
- **BIT 471**: RNA Interference and Model Organisms 2
- **BIT 473**: Protein Interactions 2
- **BIT 481**: Plant Tissue Culture and Transformation 2
- **BIT 562**: Gene Expression Analysis: Microarrays 2
- **BIT 564**: Protein Purification 2
- **BIT 565**: Real-time PCR Techniques 2
- **BIT 566**: Animal Cell Culture Techniques 2
- **BIT 567**: PCR and DNA Fingerprinting 2
- **BIT 568**: Genome Mapping 2
- **BIT 569**: RNA Purification and Analysis 2
- **BIT 571**: RNA Interference and Model Organisms 2
- **BIT 572**: Proteomics 3
- **BIT 573**: Protein Interactions 2
- **BIT 595**: Special Topics 1-6
- **CH 572**: Proteomics 3
- **PB 481**: Plant Tissue Culture and Transformation 2
- **PO 466**: Animal Cell Culture Techniques 2
- **PO 566**: Animal Cell Culture Techniques 2

### Biotech Minor Group E Electives

#### Code Title Hours
- **IDS 201**: Environmental Ethics 3
- **IDS 303**: Humans and the Environment 3
- **NR 303**: Humans and the Environment 3
- **PHI 325**: Bio-Medical Ethics 3
- **STS 302**: Contemporary Science, Technology and Human Values 3
ST 304 Ethical Dimensions of Progress 3
ST 325 Bio-Medical Ethics 3

Technical Electives

Fifth Year

Fall Semester

CHE 330  Chemical Engineering Lab I  4
CHE 435  Process Systems Analysis and Control  3
PCC 301  Technology of Dyeing and Finishing  3
PCC 304  Technology of Dyeing & Finishing Laboratory  1
GEP Requirement (p. 1417)  3

Hours: 15

Career Opportunities

Careers in chemical engineering are sometimes exciting, always demanding, and ultimately provide a sense of accomplishment and achievement. Graduates find employment in sub-disciplines such as production, technical service, sales, management and administration; research and development; and consulting and teaching. Students desiring careers in teaching, research, or consulting are encouraged to continue their education and pursue a graduate degree (consult the Graduate Catalog). The undergraduate curriculum also provides strong preparation for graduate study in a wide range of professional specialties, and chemical engineering graduates often pursue careers in the medical sciences, business management, and law.

Chemical Engineering (BS): Green Chemistry and Engineering Concentration

Career Opportunities

Careers in chemical engineering are sometimes exciting, always demanding, and ultimately provide a sense of accomplishment and achievement. Graduates find employment in sub-disciplines such as production, technical service, sales, management and administration; research and development; and consulting and teaching. Students desiring careers in teaching, research, or consulting are encouraged to continue their education and pursue a graduate degree (consult the Graduate Catalog). The undergraduate curriculum also provides strong preparation for graduate study in a wide range of professional specialties, and chemical engineering graduates often pursue careers in the medical sciences, business management, and law.

Chemical Engineering (BS): Honors Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orip.ncsu.edu/pgas/)

The Honors Program allows students to gain a deeper understanding of chemical engineering principles than would be acquired by completing the standard CHE curriculum. Admission to the program requires students to have earned a minimum overall GPA of 3.5 and a minimum GPA of 3.5 in CHE 205 Chemical Process Principles and CHE 225 Introduction to Chemical Engineering Analysis. An honors thesis based on a supervised research experience and completion of at least one semester of faculty-supervised research are required for completion of the Honors Program.

Plan Requirements

Chemical Engineering (BS): Honors Concentration: 127 Total Units

**Career Opportunities**

Careers in chemical engineering are sometimes exciting, always demanding, and ultimately provide a sense of accomplishment and achievement. Graduates find employment in sub-disciplines such as production, technical service, sales, management and administration; research and development; and consulting and teaching. Students desiring careers in teaching, research, or consulting are encouraged to continue their education and pursue a graduate degree (consult the Graduate Catalog). The undergraduate curriculum also provides strong preparation for graduate study in a wide range of professional specialties, and chemical engineering graduates often pursue careers in the medical sciences, business management, and law.

**Chemical Engineering (BS): Nanoscience Concentration**

To see more about what you will learn in this program, visit the Learning Outcomes website ([https://apps.oirp.ncsu.edu/pgas/](https://apps.oirp.ncsu.edu/pgas/))!

The Nanoscience Concentration develops students’ understanding of the scientific and technological principles associated with the design and manufacture of patterns and devices with features and advanced functionality on the nanometer scale.

**Plan Requirements**

Chemical Engineering (BS): Nanoscience Concentration: 125 Total Units

develop an understanding of the fundamental concepts and practice of chemical engineering. This minor should prepare undergraduate students in environmental engineering, pulp and paper technology, and chemistry for graduate study in chemical engineering with a minimum amount of prerequisite work following their acceptance into the graduate program.

Admissions and Certification of Minor

Admission to the minor will require a minimum 2.5 over-all grade point average at NC State, and a grade of 'B' or higher on the first enrollment in CHE 205. An application for the minor must be submitted to Dr. Lisa Bullard, 2012 Engineering Bldg I, 919.515.7455, lisa_bullard@ncsu.edu. Dr. Bullard will also certify the completion of the student’s minor program. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification can be found in 2001 Engineering Bldg I and should be completed no later than during the registration period for the student’s final semester at NC State.

SIS Code: 14CMM

Plan Requirements

The Chemical Engineering Minor requires a minimum of 19 hours. All courses must be completed with a grade of 'C-' or higher:

Career Opportunities

Careers in chemical engineering are sometimes exciting, always demanding, and ultimately provide a sense of accomplishment and achievement. Graduates find employment in sub-disciplines such as production, technical service, sales, management and administration; research and development; and consulting and teaching. Students desiring careers in teaching, research, or consulting are encouraged to continue their education and pursue a graduate degree (consult the Graduate Catalog). The undergraduate curriculum also provides strong preparation for graduate study in a wide range of professional specialties, and chemical engineering graduates often pursue careers in the medical sciences, business management, and law.

Chemical Engineering (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orp.ncsu.edu/pgas/)

The minor in Chemical Engineering is intended to allow students to develop an understanding of the fundamental concepts and practice of chemical engineering.
Our overarching theme is sustainable infrastructure for society and our mission as civil, construction, and environmental engineers is to develop engineering solutions to better the human condition by improving infrastructure, human health, and the environment. This includes the design, construction and operation of facilities that we use daily including roads, bridges, tunnels, buildings, clean water for drinking and recreation, transportation networks, flood control systems and much more. We live by the principle that diversity makes us stronger and everyone has the right to be respected. Welcome to the Department of Civil, Construction, and Environmental Engineering.

Department Highlights:

- The Department will be moving into the new state-of-the-art Fitts-Woolard Hall on Centennial Campus in Fall 2020.
- The Department maintains state-of-the-art computing facilities and laboratories for teaching and research.
- Many students gain work experience through cooperative education (Co-Op) and internships.
- There are more than 25 student organizations and honor societies affiliated with the Department.
- Through the generous support of industry and program alumni, many scholarships and awards are available to students, in addition to university, college, and need-based financial aid.
- The Department offers an annual faculty led summer study abroad program, in addition to a wide range of programs offered by the Study Abroad Office in which our students participate.
- We have numerous opportunities for students to become involved in research with faculty and we offer an undergraduate research thesis option.
- Selected students may be admitted to the Accelerated Bachelors/Masters (ABM) program.

For more information about our Department, including contact information, visit our website (https://www.ccee.ncsu.edu/).

Educational Objectives in Civil Engineering

Within a few years of graduation alumni of the Civil Engineering program will:

1. Function successfully in a professional environment by utilizing and enhancing their problem-solving and communication skills;
2. Continue learning through graduate or other professional education and obtaining licensure where appropriate;
3. Function in team-oriented, multidisciplinary open-ended engineering activities considering the societal and economic impacts of engineering decisions, and the professional and ethical responsibilities of civil engineers.
4. Promote organizational success with consideration of cost and time management while practicing and promoting ethical behavior and stewardship of a sustainable environment

Civil Engineering Degree

The Civil Engineering curriculum provides academic discipline in mathematics, the physical sciences, the humanities and social sciences, and the technical aspects of civil engineering. After introductory exposure to several of the professional areas such as environmental and water resources, geotechnical, structures, transportation and construction engineering, the student builds additional depth in several of these specialties. Students learn to include principles of sustainability in civil infrastructure designs and understand basic concepts in project management, business, public policy, leadership, and professional ethics.

Specific curriculum requirements are available on the Office of Undergraduate Courses and Curricula website, https://oucc.dasa.ncsu.edu/engineering-COE/.

#### Career Opportunities

Society will always need constructed facilities to live, work, and sustain their lives and environment, and civil, construction, and environmental engineers will always be needed to plan, design, and construct these facilities. Civil, construction, and environmental engineering comprise such diversified fields that graduates have a wide choice in types and locations of employment. Jobs range from federal, state, or municipal agencies to a variety of manufacturing and processing industries, consulting firms or construction companies. The work may be performed partially or wholly in an office or in the field and may be located in a small community, a big city, an industrial center, or even in a foreign country. Careers in either professional practice or teaching and research are common for many graduates who complete advanced degrees.

### Construction Engineering (BS)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)!
Construction Engineering Degree

The Construction Engineering curriculum is designed for the student interested in the planning, design, direction, and management of construction projects. It includes the core course requirements in mathematics, the physical sciences, and the humanities and social sciences. After exposure to engineering fundamentals and engineering design of facilities, the curriculum provides a series of specialty courses in construction engineering related to the analysis, design, and management of the construction process. The General Construction Concentration is designed for students pursuing careers in the building, residential, highway, and heavy construction industry.

Specific curriculum requirements are available on the Office of Undergraduate Courses and Curricula website, https://oucc.dasa.ncsu.edu/engineering-COE/ (https://oucc.dasa.ncsu.edu/engineering-COE/)

Educational Objectives in Construction Engineering

Within a few years of graduation alumni of the Construction Engineering program will:

1. Function successfully in careers emphasizing application of construction engineering and management principles with the ability to solve a broad set of engineering problems in construction.
2. Practice construction engineering including the design and management of the construction process to achieve needed safety, quality, durability, sustainability, and economic objectives.
3. Function in team-oriented, multi-disciplinary, open-ended engineering activities considering the societal and economic impacts of construction, and the professional and ethical responsibilities of the construction engineer.
4. Engage in life-long learning through graduate study, self study, or continuing education; pursue licensure; provide mentoring to those under their supervision and influence; and provide leadership in their employment organizations, industry associations and professional societies.

Plan Requirements

Construction Engineering (BS): 128 Total Units

Educational Objectives in Environmental Engineering

Within a few years of graduation alumni of the Environmental Engineering program will:

1. Function successfully in a professional environment by utilizing and enhancing their problem-solving and communication skills.
2. Continue learning through graduate or other professional education and obtaining licensure where appropriate.
3. Promote organizational success with consideration of cost and time management, and demonstrate global and societal awareness, while practicing and promoting ethical behavior and stewardship of a sustainable environment.

Career Opportunities

Society will always need constructed facilities to live, work, and sustain their lives and environment, and civil, construction, and environmental engineers will always be needed to plan, design, and construct these facilities. Civil, construction, and environmental engineering comprise such diversified fields that graduates have a wide choice in types and locations of employment. Jobs range from federal, state, or municipal agencies to a variety of manufacturing and processing industries, consulting firms or construction companies. The work may be performed partially or wholly in an office or in the field and may be located in a small community, a big city, an industrial center, or even in a foreign country. Careers in either professional practice or teaching and research are common for many graduates who complete advanced degrees.

Environmental Engineering (BS)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orp.ncsu.edu/pgas/)

Environmental Engineering Degree

The Environmental Engineering curriculum is designed for students interested in environmental sustainability. The curriculum provides students with the foundations in science, mathematics, and engineering required to observe, understand, model, and analyze environmental systems as well as to design critical components of society’s infrastructure. Upon graduation, students are prepared to work in such areas as water treatment, water resources engineering and management, air pollution control, solid waste management, and energy management. The curriculum emphasizes the interdisciplinary nature of environmental engineering with courses in both engineering and life sciences, including specialized courses on energy and climate, pollution control, and waste management.

Specific curriculum requirements are available on the Office of Undergraduate Courses and Curricula website, https://oucc.dasa.ncsu.edu/engineering-COE/

Career Opportunities

Society will always need constructed facilities to live, work, and sustain their lives and environment, and civil, construction, and environmental engineers will always be needed to plan, design, and construct these facilities. Civil, construction, and environmental engineering comprise such diversified fields that graduates have a wide choice in types and locations of employment. Jobs range from federal, state, or municipal agencies to a variety of manufacturing and processing industries, consulting firms or construction companies. The work may be performed partially or wholly in an office or in the field and may be located in a small community, a big city, an industrial center, or even in a foreign country. Careers in either professional practice or teaching and research are common for many graduates who complete advanced degrees.

Department of Computer Science

To see what you will learn while pursuing this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Department of Computer Science in the College of Engineering at NC State University offers a Bachelor of Science in Computer Science degree. The degree is nationally accredited by the Computing Accreditation Commission of ABET, http://www.abet.org (http://www.abet.org/). Core courses provide a foundation for all students in programming languages, data structures, software engineering, computer architectures, the theory of computation, the basics of building secure software and systems, teaming and communication, and the social and ethical dimensions of the practice of computer science. Students explore the mathematical methods needed to analyze and compare both computation problems themselves and alternative approaches to solving them. All Computer Science majors must complete a team project in Senior Design. Projects under the auspices of the department’s Senior Design Center have industrial sponsors, so student teams gain experience working jointly with industry representatives to achieve project goals. Senior Design teams are expected to solve a technical computing problem while effectively communicating their work and process to various audiences.

Students take a variety of courses to explore more advanced areas, among them artificial intelligence, cloud computing, compilers, computer architecture and multiprocessors, computer graphics, cryptography, database management systems, data science, development and operations, educational technology, file organization and processing, human-computer interface design, multimedia technology, networks, privacy, security (computer, network, and software), sensor systems,
social computing, and web services. We offer two concentrations in Game Development and Cybersecurity, which allow for specialization in depth.

The Department of Computer Science also offers two undergraduate elective tracks in Security ([https://www.csc.ncsu.edu/academics/undergrad/tracks/security.php](https://www.csc.ncsu.edu/academics/undergrad/tracks/security.php)) and Entrepreneurship ([https://www.csc.ncsu.edu/academics/undergrad/tracks/entrepreneurship.php](https://www.csc.ncsu.edu/academics/undergrad/tracks/entrepreneurship.php)). The tracks provide the opportunity for students to focus on a key set of CSC Restricted Elective courses that provide focus in an area of interest. The Undergraduate Track in Security teaches students the skills necessary to build, analyze, and reason about secure and private systems beyond the security coverage in the core curriculum. The Undergraduate Track in Entrepreneurship provides the opportunity for students to engage in entrepreneurial endeavors and connect with the broader entrepreneurial community at NC State. Both tracks are recognized by a letter of completion.

**Departmental Highlights**

NC State Computer Science was established in 1967 and is one of the oldest Computer Science departments in the county.

- Opportunity for undergraduate research for coursework or stipend.
- Applied learning through our award-winning capstone Senior Design Center projects. Most projects are industrially sponsored and challenge students to deliver a cohesive software system solving a problem.
- More than 100 companies actively partner with the department via sponsored programs, research, scholarships, projects, and initiatives.
- A variety of student organizations ([https://www.csc.ncsu.edu/academics/students_orgs.php](https://www.csc.ncsu.edu/academics/students_orgs.php)) providing leadership skills, service, networking, and informal learning opportunities, including ACM/AITP, HackPack, Honors Programs/Honors Societies, Linux Users Group, STARS Student Leadership Corps, and Women in Computer Science.
- Academic Alliance Member of National Center for Women and Information Technology (NC WIT)
- Areas of expertise in artificial intelligence, bioinformatics and computational sciences, computer-based education, graphics and visualization, high-performance & power-aware systems, networks, security, software engineering, theory and algorithms.

**Departmental Information**

The Department of Computer Science is located in Engineering Building II on NC State’s Centennial Campus.

Plans

• Computer Programming (Certificate) (For Post-Baccalaureate Students, Distance Education) (p. 516)
• Computer Programming (Minor) (p. 517)
• Computer Science (BS) (p. 518)
• Computer Science (BS), Game Development Concentration (p. 520)

Computer Programming (Certificate) (For Post-Baccalaureate Students, Distance Education)

To see what you will learn while pursuing this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Computer Science Department offers the Computer Programming Certificate (CPC) to post-baccalaureate students (PBS) to enable them to change careers, enhance their professional credentials, or simply learn more about computer programming. The focus of the required courses is the theory and practice of the basics of Computer Science and computer programming. Rather than teach applications and a single skill set, the program focuses on higher-order analytical skills that are crucial to mastery of an ever-changing field. This certificate is offered via Distance Education through Engineering Online.

Admissions Requirements

Although anyone with the prerequisites can take CSC classes offered through the CPC Program, the CPC is a distance-only program for PBS students. After students have been accepted as an NDS student at NC State, they may apply for the CPC program. Students must submit a BS/BA transcript from a degree other than computer science or computer engineering. The certificate is awarded to students completing the required courses with a grade point average of 2.0 or above.

Engineering Online and the Department of Computer Science jointly maintain and distribute a written description for interested prospective students. The Director of Advising for the Department of Computer Science coordinates with Registration & Records in the issuing of certificates.
Students may enroll for classes through Engineering Online (https://www.engineeringonline.ncsu.edu/apply-and-enroll/enroll/).

**Program Coordinators**

Certificate Director  
Dr. Sarah Heckman  
North Carolina State University  
Department of Computer Science-Engineering  
Campus Box 8206  
Raleigh, NC 27695  
919-515-2042  
sarah_heckman@ncsu.edu

Director of Engineering Online  
Dr. Linda Krute  
North Carolina State University  
College of Engineering – Dean’s Office  
Campus Box 7547  
Raleigh, NC 27695  
919-515-5440

¹ Please note that students who intend to pursue graduate study after completion of the CPC need MA 141 Calculus I, not MA 121 Elements of Calculus.
² with a grade of C or better

The Department of Computer Science waives the pre/co-requisite of MA 121 Elements of Calculus or MA 131 Calculus for Life and Management Sciences A or MA 141 Calculus I so students interested in the CPC may begin by taking CSC 116 Introduction to Computing - Java. However, a Calculus I class remains a requirement for the CPC program. E 115 Introduction to Computing Environments is waived as a prerequisite for CSC 116 Introduction to Computing - Java since this is a DE program and E 115 Introduction to Computing Environments material is not needed for student success.

**Computer Programming (Minor)**

To see what you will learn while pursuing this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Department of Computer Science offers a Minor in Computer Programming to undergraduate majors in any field except Computer Science, Electrical Engineering, and Computer Engineering. The objectives of this minor are to:

1. Encourage students to combine computing with their own disciplines.
2. Promote quality and process when developing computing solutions.
3. Give graduating seniors with a minor in computer programming an added advantage in the job market.

The minor requires completion of 22 credit hours from the Computer Science core.

**Admissions and Certification of Minor**

**Admissions**

Undergraduates will be admitted to the Minor in Computer Programming only after they have completed CSC 116 Introduction to Computing - Java with a grade of C or higher and have an overall GPA of at least 2.25. Students should submit the application for the Minor in Computer Programming (https://www.csc.ncsu.edu/academics/undergrad/advising/forms.php) via an online form to the CSC Coordinator for Academic Minor, as listed below, who will be the minor advisor. Students must have a posted grade in order to submit an application.

**Certification**

The Department of Computer Science Advising Office will certify the minor prior to graduation. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State.

**Contact Person**

Ms. ToniAnn Marini  
Daniels Hall 219-A  
919-515-7920  
tamarini@ncsu.edu  
go.ncsu.edu/tamarini (http://go.ncsu.edu/tamarini/)

SIS Code: 14CPM

**Plan Requirements**

Completion of 22 credit hours.

All courses in the minor must be completed with a grade point average of 2.0 or higher.

Computer Science (BS)

Like all first-year students in the College of Engineering, students intending to major in Computer Science take a core of courses in the humanities, chemistry, mathematics, physics, and computing. After successfully completing required courses, students may apply to join the Department of Computer Science as degree-seeking students. The Computer Science curriculum teaches the skills needed to understand, design, implement, test, and deploy computer systems and software of all kinds. Students are expected to work on teams to effectively solve computing problems in various domains and communicate their work to a technical audience. Additionally, students explore the mathematical methods needed to analyze and compare both computation problems themselves and alternative approaches to solving them.

Core courses provide a foundation for all students in programming languages, data structures, software engineering, computer architectures, the theory of computation, the basics of building secure software and systems, teaming and communication, and the social and ethical dimensions of the practice of computer science.

Computer science electives are chosen in consultation with advisers, usually starting during the junior year. These electives allow exploration of more advanced areas: among them artificial intelligence, cloud computing, compilers, computer architecture and multiprocessors, computer graphics, cryptography, database management systems, data science, development and operations, educational technology, file organization and processing, human-computer interface design, multimedia technology, networks, privacy, security (computer, network, and software), sensor systems, social computing, and web services. A special focus is on skills that help our students be competitive in the global economy. These skills include technical communication, understanding of business principles in organizations that use information technology, an aptitude for innovation, an understanding of intellectual property issues, and an understanding of the latest technologies, such as web-services, security, as well as both closed and open source solutions and engineering issues.

The Department of Computer Science offers two undergraduate elective tracks in Security (https://www.csc.ncsu.edu/academics/undergrad/tracks/security.php) and Entrepreneurship (https://www.csc.ncsu.edu/academics/undergrad/tracks/entrepreneurship.php). The tracks provide the opportunity for students to focus on a key set of CSC.

Restricted elective courses that provide depth in an area of interest. The Undergraduate Track in Security teaches students the skills necessary to build, analyze, and reason about secure and private systems beyond the security coverage in the core curriculum. Topics include both an overview of computer and network security and a variety of more in-depth topics, including systems security, network security, software security, privacy, and cryptography. The Undergraduate Track in Entrepreneurship provides the opportunity for students to engage in entrepreneurial endeavors and connect with the broader entrepreneurial community at NC State. Both tracks are recognized by a letter of completion.

All Computer Science majors must complete a team project in Senior Design. Projects under the auspices of the department’s Senior Design Center have industrial sponsors, so student teams gain experience working jointly with industry representatives to achieve project goals. Senior Design teams are expected to solve a technical computing problem while effectively communicating their work and process to various audiences.

The undergraduate curriculum leads to a Bachelor of Science in Computer Science. This program is nationally accredited by the Computing Accreditation Commission of ABET, http://www.abet.org (http://www.abet.org)/.

1 Courses required for matriculation (CODA).
2 A grade of C or higher is required.
3 To be selected from CH 201, PY 123, 124, any PY course with a prerequisite of PY 208, or any PB, BIO, MEA, or ZO course.
4 One of the following two conditions regarding the major GPA is required: I) the major GPA, which consists of all CSC courses attempted at NCSU, must be 2.0 or higher or II) a student whose major grade point average is below 2.0 may graduate if no CSC course used to satisfy the major requirements has a grade below a C-.
5 Grade of C- or higher required.

Career Opportunities

Designing computer systems, and the software that runs on them is the job of computer scientists. Computer scientists find demand for their innovation, design, analysis, testing, and engineering skills across all domains. As a direct consequence of the increasingly critical role of computers in society, the discipline of computer science has enjoyed rapid growth for many years, with the trend likely to continue. Employment projections indicate a critical nationwide shortfall in the supply of people skilled in computing and information technology, and a resulting steady rise in demand and salaries, for decades to come. Computer Science graduates from NC State are in high demand, including by employers that are extremely selective in their national recruiting.

Anchoring one corner of the world-famous Research Triangle Park, and located in modern state-of-the-art teaching and research facilities on NC State's Centennial Campus, the department and its students and faculty benefit from strong and active industry partnerships. NC State Computer Science is one of the top suppliers in the nation of new graduate hires to a number of high-tech companies, including several Fortune 500 companies, some with a substantial presence in the Research Triangle. Starting salaries for our undergraduates now average over $75,000 and show a steady increase. Opportunities are also plentiful for graduate study for those who wish to pursue the field in more depth.

Computer Science (BS), Game Development Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

Like all first-year students in the College of Engineering, students intending to major in Computer Science take a core of courses in the humanities, chemistry, mathematics, physics, and computing. After successfully completing required courses, students may apply to join the Department of Computer Science as degree-seeking students. The Computer Science curriculum teaches students the skills needed to understand, design, implement, test, and deploy computer systems and software of all kinds. Students are expected to work on teams to effectively solve computing problems in various domains and communicate their work to a technical audience. Additionally, students explore the mathematical methods needed to analyze and compare both computation problems themselves and alternative approaches to solving them.

Core courses provide a foundation for all students in programming languages, data structures, software engineering, computer architectures, the theory of computation, the basics of building secure software and systems, teaming and communication, and the social and ethical dimensions of the practice of computer science.

Computer science electives are chosen in consultation with advisers, usually starting during the junior year. These electives allow exploration of more advanced areas: among them artificial intelligence, cloud computing, compilers, computer architecture and multiprocessors, computer graphics, cryptography, database management systems, data science, development and operations, educational technology, file organization and processing, human-computer interface design, multimedia technology, networks, privacy, security (computer, network, and software), sensor systems, social computing, and web services. A special focus is on skills that help our students be competitive in the global economy. These skills include technical communication, understanding of business principles in organizations that use information technology, an aptitude for innovation, an understanding of intellectual property issues, and an understanding of the latest technologies, such as web-services, security, as well as both closed and open source solutions and engineering issues.
The Department of Computer Science offers two undergraduate elective tracks in Security (https://www.csc.ncsu.edu/academics/undergrad/tracks/security.php) and Entrepreneurship (https://www.csc.ncsu.edu/academics/undergrad/tracks/entrepreneurship.php). The tracks provide the opportunity for students to focus on a key set of CSC Restricted elective courses that provide depth in an area of interest. The Undergraduate Track in Security teaches students the skills necessary to build, analyze, and reason about secure and private systems beyond the security coverage in the core curriculum. Topics include both an overview of computer and network security and a variety of more in-depth topics, including systems security, network security, software security, privacy, and cryptography. The Undergraduate Track in Entrepreneurship provides the opportunity for students to engage in entrepreneurial endeavors and connect with the broader entrepreneurial community at NC State. All Computer Science majors must complete a team project in Senior Design. Projects under the auspices of the department’s Senior Design Center have industrial sponsors, so student teams gain experience working jointly with industry representatives to achieve project goals. Senior Design teams are expected to solve a technical computing problem while effectively communicating their work and process to various audiences.

The undergraduate curriculum leads to a Bachelor of Science in Computer Science. This program is nationally accredited by the Computing Accreditation Commission of ABET, http://www.abet.org (http://www.abet.org/).

**Game Development Concentration**

Computer games are some of the most complex software development projects and employ some of the most advanced technologies of any application area of computer science. The entertainment software sector is a multi-billion dollar industry with increasing demand for new employees trained in these technologies and methods. In addition to the more familiar entertainment sector, these technologies also have applications to such areas as training, education, visualization, and social interaction forums — so-called “serious games.” North Carolina is now among the top tier of US states with centers of game industry employment. As the game industry continues to grow, demand by North Carolina companies for new graduates with a strong background in computer science with a focus on game development will also expand.

Many aspects of computer game development are unique to the game industry and the game development concentration provides specialized coursework in these areas. The game development concentration focuses on game development technologies while preserving the breadth and depth of the general computer science BS degree. The concentration requires that students take both the initial course on computer graphics (CSC 461 Computer Graphics) and the initial course on game engine design (CSC 481 Game Engine Foundations). They must choose as a concentration project either the graphics or game development advanced elective (CSC 462 Advanced Computer Graphics Projects or CSC 482 Advanced Computer Game Projects, respectively). Two additional games restricted electives are chosen from a list of CSC courses with content highly relevant to game development. Of the nine credit hours required for other electives, students in the concentration must select three courses from a list that spans topics such as fiction writing, film, and music. These courses provide grounding in the creation of conventional media and provide the background in these disciplines needed to participate in the multidisciplinary aspects of the design of games.

1 A grade of C or higher is required.
2 Courses required for matriculation (CODA)
3 A grade of C- or higher is required.

The GPA earned in all courses attempted at NCSU must be 2.0 or higher. One of the following two conditions regarding the major GPA is required:

1. the major GPA, which consists of all CSC courses attempted at NCSU, must be 2.0 or higher or
2. a student whose major grade point average is below a 2.0 may graduate if no CSC course used to satisfy the major requirements has a grade below a C-.

**Career Opportunities**

Designing computer systems, and the software that runs on them is the job of computer scientists. Computer scientists find demand for their innovation, design, analysis, testing, and engineering skills across all domains. As a direct consequence of the increasingly critical role of computers in society, the discipline of computer science has enjoyed rapid growth for many years, with the trend likely to continue. Employment projections indicate a critical nationwide shortfall in the supply of people skilled in computing and information technology, and a resulting steady rise in demand and salaries, for decades to come. Computer Science graduates from NC State are in high demand, including by employers that are extremely selective in their national recruiting.

Anchoring one corner of the world-famous Research Triangle Park, and located in modern state-of-the-art teaching and research facilities on NC State’s Centennial Campus, the department and its students and faculty benefit from strong and active industry partnerships. NC State Computer Science is one of the top suppliers in the nation of new graduate hires to a number of high-tech companies, including several Fortune 500 companies, some with a substantial presence in the Research Triangle. Starting salaries for our undergraduates now average over $75,000 and show a steady increase. Opportunities are also plentiful for graduate study for those who wish to pursue the field in more depth.

**Department of Electrical and Computer Engineering**

Box 7911, Engineering Building II
NC State University, Raleigh, NC 27606
Phone: (919) 515-2336

The professions of electrical engineering and computer engineering are concerned with the analysis, design, construction and testing of systems based on electrical phenomena. In contemporary society, electrical methods are used to communicate and store information, control equipment and systems, perform mathematical operations, and convert energy from one form to another. Frequently, two or more of these functions are important in the design of systems such as television, radio, telecommunications, computer, robots and intelligent machines, telemetry systems, solid-state electronics, vehicle safety systems, biomedical devices, environmental controls, electric machinery, and electric power generation and transmission facilities.
Computer engineering is a field in which digital techniques are used in system design. Low-cost solid-state microprocessors and memories permit computers to be widely incorporated in many different types of devices from toys to traffic control systems. To work effectively in this rapidly growing field, the computer engineer must understand both hardware and software techniques and must effectively use both in order to design, build and test complex digital systems. Both the electrical engineering and the computer engineering programs, which lead respectively to the degrees, Bachelor of Science in Electrical Engineering and Bachelor of Science in Computer Engineering, are accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

**Program Educational Objectives**

The graduates of the Electrical and Computer Engineering (ECE) programs are expected to attain the following within a few years after graduation:

- Productive and successful practice of their ECE background in a diverse range of careers.
- Continuous improvement of their knowledge and skills through formal and informal means and flexibility in adapting to the changes in economic and technological environments.

**Scholarships and Awards**

Superior academic performance is recognized within this department in three ways: election of students to membership in the electrical engineering honor society, Eta Kappa Nu; awarding of merit scholarships; and presentation of awards to outstanding seniors. The department has one endowed merit scholarship for rising sophomores, the Eugene C. and Winifred Sakshaug Scholarship, and twenty-nine endowed scholarships which are usually awarded to juniors and seniors: William E. Clark, Elizabeth P. Cockrell, Eugene C. Denton, Virginia Stewart Easter Memorial, Ferrell Family, William and Tipton Gray, John and Ann Hauser, Llewellyn Hewett, William and Carol Highfill, Jessie Reid Holshouser, Jr, Charles Kenneth Little, L. A. Mahler, Robin & Susan Manning, Amelia N. Minta, Dewey Carr Ogburn Memorial Scholarship, Frank T. Pankotay, Maurice W. Partin, Ronald G. Pendred, Pratt Family, William DeRosset Scott III, E. Chester Seawald, Shruthi Sorra, Sidney White Spencer, Oracle, Fredrick J. Tischer, James and Julia Tommerdahl, Herbert B. Walker, Robert S. Wolf, Simon B. Woolard, North Carolina Electric Membership Corporation, and William D. Stevenson, Jr., the latter two of which are for students studying electric power systems. The department also provides resources for industry-sponsored, semester-long design projects, and the departmental Makerspace which requires each student to attend safety training prior to access—provides access to machine shop facilities (hand and power tools) and round the clock access to electronic components, soldering tools, test instrumentation, and fabrication equipment (circuit board and 3D printers).

In addition, nearby Engineering Building III houses a 24/7 public lab of over 70 computers running a variety of operating systems and industry standard software. This lab is available to all engineering students and is staffed by trained student operators. A student-owned laptop platform has been developed in the College of Engineering; combined with a comprehensive wireless network and many remote computer services, this program allows education to expand outside of traditional classroom and laboratory facilities.

Nearby, the state-of-the-art James B. Hunt, Jr. Library gives students an innovative environment filled with technology-abled furniture, high-definition video walls, 3D computing and visualization space, videoconferencing and telepresence facilities, and over 100 meeting areas for group work and study.

Inspiring a spirit of discovery, the Hunt Library will help to produce the next generations of technology-savvy citizens, employees, researchers, and scholars.

• Electrical Engineering (BS) (p. 531)
• Electrical Engineering (BS), Renewable Electric Energy Systems Concentration (p. 535)

Computer Engineering (BS)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orp.ncsu.edu/pgas/).

Core Courses

The electrical and computer engineering curricula share core courses comprising a substantial portion of the first three years of study. Many of the core courses are offered three times a year in fall, spring, and summer. A strong emphasis is placed on fundamental concepts in core courses so that graduates are prepared for rapid technological changes common in the electrical and computer engineering professions. A comprehensive foundation in mathematics and the physical sciences in the freshman year is followed in subsequent years by additional core courses in mathematics, physics, electric circuit theory, digital logic, computer systems, electronics, electromagnetics, and linear systems. Laboratory work is designed to demonstrate fundamental principles and to provide experience in designing and testing electronic hardware and computer software. Both curricula have a required two semester senior design project which gives students comprehensive experience in designing, building, and testing physical systems.

Curricula

In addition to the core courses described above, students in the electrical engineering curriculum take two foundational electives and four specialization electives in areas of their choice within the discipline and two technical electives that can be in either electrical engineering or selected engineering courses offered by other departments. Beyond the core, students in the computer engineering curriculum take courses in discrete mathematics, data structures, embedded systems, and complex digital systems, in addition to four specialization electives in areas of their choice and one technical elective. For both curricula, a variety of elective courses are offered in communications, computational intelligence, controls, digital signal processing, digital systems, nanotechnology, mechatronics, microelectronics, networking, robotics, and VLSI design. There are typically a dozen or more of these courses offered each fall and spring semester and two or three available each summer.

#### Hours 15

### Total Hours 122

---

1 A grade of C or higher is required.
2 A grade of C- or higher is required.

### Electrical Engineering (BS)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

### Core Courses

The electrical and computer engineering curricula share core courses comprising a substantial portion of the first three years of study. Many of the core courses are offered three times a year in fall, spring, and summer. A strong emphasis is placed on fundamental concepts in core courses so that graduates are prepared for rapid technological changes common in the electrical and computer engineering professions. A comprehensive foundation in mathematics and the physical sciences in the freshman year is followed in subsequent years by additional core courses in mathematics, physics, electric circuit theory, digital logic, computer systems, electronics, electromagnetics, and linear systems. Laboratory work is designed to demonstrate fundamental principles and to provide experience in designing and testing electronic hardware and computer software. Both curricula have a required two semester senior design project which gives students comprehensive experience in designing, building, and testing physical systems.

### Curricula

In addition to the core courses described above, students in the electrical engineering curriculum take two foundational electives and four specialization electives in areas of their choice within the discipline and two technical electives that can be in either electrical engineering or selected engineering courses offered by other departments. Beyond the core, students in the computer engineering curriculum take courses in discrete mathematics, data structures, embedded systems, and complex digital systems, in addition to four specialization electives in areas of their choice and one technical elective. For both curricula, a variety of elective courses are offered in communications, computational intelligence, controls, digital signal processing, digital systems, mechatronics, microelectronics, networking, robotics, and VLSI design. There are typically a dozen or more of these courses offered each fall and spring semester and two or three available each summer.

### Plan Requirements

**Electrical Engineering (BS): 122 Total Units**

ECE 456  Mechatronics  3
ECE 460  Embedded System Architectures  3
ECE 461  Embedded System Design  3
ECE 463  Microprocessor Architecture  3
ECE 464  ASIC and FPGA Design with Verilog  3
ECE 466  Compiler Optimization and Scheduling  3
ECE 468  Conventional and Emerging Nanomanufacturing Techniques and Their Applications in Nanosystems  3
ECE 470  Internetworking  3
ECE 489  Solid State Solar and Thermal Energy Harvesting  3
ECE 492  Special Topics in Electrical and Computer Engineering  3
ECE 511  Analog Electronics  3
ECE 513  Digital Signal Processing  3
ECE 514  Random Processes  3
ECE 515  Digital Communications  3
ECE 516  System Control Engineering  3
ECE 517  Object-Oriented Design and Development  3
ECE 518  Wearable Biosensors and Microsystems  3
ECE 522  Medical Instrumentation  3
ECE 523  Photonics and Optical Communications  3
ECE 524  Radio System Design  3
ECE 530  Physical Electronics  3
ECE 531  Principles Of Transistor Devices  3
ECE 532  Principles Of Microwave Circuits  3
ECE 533  Power Electronics Design & Packaging  3
ECE 534  Power Electronics  3
ECE 535  Design of Electromechanical Systems  3
ECE 540  Electromagnetic Fields  3
ECE 542  Neural Networks  3
ECE 544  Design Of Electronic Packaging and Interconnects  3
ECE 546  VLSI Systems Design  3
ECE 549  RF Design for Wireless  3
ECE 550  Power System Operation and Control  3
ECE 551  Smart Electric Power Distribution Systems  3
ECE 552  Renewable Electric Energy Systems  3
ECE 553  Semiconductor Power Devices  3
ECE 555  Computer Control of Robots  3
ECE 556  Mechatronics  3
ECE 557  Principles Of MOS Transistors  3
ECE 558  Digital Imaging Systems  3
ECE 560  Embedded System Architectures  3
ECE 561  Embedded System Design  3
ECE 563  Microprocessor Architecture  3
ECE 564  ASIC and FPGA Design with Verilog  3
ECE 566  Compiler Optimization and Scheduling  3
ECE 568  Conventional and Emerging Nanomanufacturing Techniques and Their Applications in Nanosystems  3
ECE 570  Computer Networks  3
ECE 573  Internet Protocols  3
ECE 574  Computer and Network Security  3
ECE 575  Introduction to Wireless Networking  3
ECE 577  Switched Network Management  3
ECE 581  Electric Power System Protection  3
ECE 582  Wireless Communication Systems  3
ECE 584  Electric Power Engineering Practicum II  3
ECE 585  The Business of the Electric Utility Industry  3
ECE 586  Communication and SCADA Systems for Smart Grid  3
ECE 589  Solid State Solar and Thermal Energy Harvesting  3
ISE 311  Engineering Economic Analysis  3
MAE 201  Engineering Thermodynamics I  3
MAE 208  Engineering Dynamics  3
MAE 302  Engineering Thermodynamics II  3
MAE 535  Design of Electromechanical Systems  3
MSE 489  Solid State Solar and Thermal Energy Harvesting  3
MSE 589  Solid State Solar and Thermal Energy Harvesting  3
PY 489  Solid State Solar and Thermal Energy Harvesting  3
PY 589  Solid State Solar and Thermal Energy Harvesting  3

Semester Sequence

This is a sample.
### Core Courses

The electrical and computer engineering curricula share core courses comprising a substantial portion of the first three years of study. Many of the core courses are offered three times a year in fall, spring, and summer. A strong emphasis is placed on fundamental concepts in core courses so that graduates are prepared for rapid technological changes common in the electrical and computer engineering professions. A comprehensive foundation in mathematics and the physical sciences in the freshman year is followed in subsequent years by additional core courses in mathematics, physics, electric circuit theory, digital logic, computer systems, electronics, electromagnetics, and linear systems. Laboratory work is designed to demonstrate fundamental principles and to provide experience in designing and testing electronic hardware and computer software. Both curricula have a required two semester
senior design project which gives students comprehensive experience in designing, building, and testing physical systems.

**Curricula**

In addition to the core courses described above, students in the electrical engineering curriculum take two foundational electives and four specialization electives in areas of their choice within the discipline and two technical electives that can be in either electrical engineering or selected engineering courses offered by other departments. Beyond the core, students in the computer engineering curriculum take courses in discrete mathematics, data structures, embedded systems, and complex digital systems, in addition to four specialization electives in areas of their choice and one technical elective. For both curricula, a variety of elective courses are offered in communications, computational intelligence, controls, digital signal processing, digital systems, nanotechnology, mechatronics, microelectronics, networking, robotics, and VLSI design. There are typically a dozen or more of these courses offered each fall and spring semester and two or three available each summer.

**Plan Requirements**

**Electrical Engineering (BS): Renewable Electric Energy Systems Concentration: 122 Total Units**

1 A grade of C or higher is required.
2 A grade of C- or higher is required.
3 Students in the entrepreneurs program should take ECE 383/ECE 482/ECE 483, instead of ECE 380/ECE 484/ECE 485.
4 Major GPAs greater than 3.5 are required to take 5xx courses.
5 Students with major GPAs greater than 3.5 can take 5xx courses.

Department of Materials Science and Engineering

For more information about this department, including contact information, visit the department (http://www.mse.ncsu.edu).
What is Materials Science and Engineering?
Most of the technological innovations that we enjoy today are driven by the discovery of new materials. The future of our world depends on the discovery of new materials that are environmentally friendly, lightweight, sustainable and responsive. The design of novel materials will enable vehicles that are lighter and more fuel-efficient due to redesigned frames and tires; cell phones and laptops with ultra-thin damage-resistant glass for displays; biomaterials that repair and replace parts of the human body; soft robots that can safely interact with humans; new bionics; and materials for water purification.

MSE at NC State
The Department of Materials Science and Engineering at NC State is well-known as a small and friendly department that provides unique and high-impact opportunities for undergraduate students, including small class sizes, a hands-on laboratory, close interactions with world-renowned faculty, undergraduate research opportunities and high-quality laboratory and senior design experiences.

Advanced Degree Opportunity
More than 25 percent of all MSE B.S. degree recipients are enrolled in a graduate degree program at places such as MIT, UC Berkeley, Penn State, Georgia Tech, Purdue and NC State.

What is the Curriculum Like?
The materials engineer must understand the wide range of phenomena that occur in all classes of materials: metals, polymers, ceramics, and composites. The MSE curriculum includes fundamental courses in thermodynamics, kinetics and structure, followed by more applied courses that cover mechanical, thermal, electrical, magnetic and optical properties of materials. Two laboratory courses introduce students to analytical methods used to characterize the structure of materials at all length scales and to measure properties of all classes of materials. Cutting-edge technologies in materials science and engineering such as nanotechnology, biomaterials, computer modeling and forensics (materials degradation and failure analysis) are covered. Five technical electives are included, which allow students to select from a broad range of courses in materials processing, engineering, chemistry, physics, mathematics and other disciplines. The flexibility afforded by these technical electives allows students to customize their education to prepare them for careers in industry or for graduate school.

The two-semester capstone senior design sequence provides a bridge between concepts learned in the classroom and practical application of these concepts in an industrial setting. Teams of students work on real-world materials problems supported by local industrial sponsors.

The materials science and engineering program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org, and leads to the degree Bachelor of Science in Materials Science and Engineering. In addition to the base curriculum in Materials Science and Engineering, the department also offers curriculum concentrations in biomaterials and nanomaterials.

An accelerated 5-year BS/MS program is available for advanced study and further specialization. Graduate degrees are also offered (consult the Graduate Catalog (http://www.ncsu.edu/grad/catalog/)).

How Does MSE at NC State Compare to Other Departments?
The mission of the NC State Department of Materials Science and Engineering is to provide students with a sound materials science and engineering education, advance the understanding and application of scientific principles, enhance economic development, and improve the quality of life of our citizens through teaching, research, and outreach programs.

Materials Science and Engineering at NCSU is a small and friendly department, and we are consistently ranked in the top 20 nationally by US News and World Report. Students, professors and professional staff all get to know each other. There is plenty of opportunity for personal attention, for learning, for professional growth and for social gathering.

Program Educational Objectives
With the background knowledge in science, engineering, critical thinking and teamwork provided by the MSE curriculum, our alumni are fully prepared to achieve one or more of the following within five years of graduation:

- Practice materials engineering in academic, industrial, government or entrepreneurial organizations.
- Earn an advanced degree such as MS, PhD or MBA, leading to a career in academia, research and development, or technical management.
- Be promoted into leadership roles in their chosen career.
- Demonstrate by their participation in technical societies, community service, and professional activities, a high degree of service and ethical responsibility to their professional field and the community.

Faculty
Head
Donald W. Brenner, Department Head and Kobe Steel Distinguished Professor

Associate Head
Elizabeth Dickey, Professor and Associate Department Head

Director of Graduate Programs
Albena Ivanisevic, Professor & Director of Graduate Programs

ENG 331 or ENG 333  Communication for Engineering and Technology or Communication for Science and Research 3

MSE Processing Elective 3
Technical Elective 3
GEP Requirement (p. 1417) 3

Hours 16

Spring Semester
MSE 470 Materials Science and Engineering Senior Design Project 3
MSE 480 Materials Forensics and Degradation 3
Technical Elective 3
GEP Requirement (p. 1417) 3
GEP Requirement (p. 1417) 3

Hours 15
Total Hours 126

1 Courses required for Change of Degree Audit (CODA). A grade of C or higher is required.
2 A grade of C- or higher is required, E 115 requires satisfactory completion (S).

Career Opportunities
An MSE degree is interdisciplinary and, upon graduation, will qualify you for a variety of jobs with an average starting salary of $60-70k per year.

Example Job Titles
Materials Engineer, Product Engineer, Metallurgist Engineer, Quality Control Engineer, Failure Analysis Engineer, Renewable Energy Materials Engineer, Biomaterial Engineer, Polymer Materials Engineer, Project Manager

Example Job Description
• Identify and produce a diverse range of materials for applications of interest
• Develop and improve methods for the analysis of complex materials
• Assist in the selection of materials for product application, the calculation of design parameters, the performance of material properties testing
• Apply scientific methods to resolve technical challenges related to materials and their use in products and processes

| Total Hours | 126-127 |

1 A grade of C or higher is required.
2 A grade of C- or higher is required.

Career Opportunities

An MSE degree is interdisciplinary and, upon graduation, will qualify you for a variety of jobs with an average starting salary of $60-70k per year.

Example Job Titles

Materials Engineer, Product Engineer, Metallurgist Engineer, Quality Control Engineer, Failure Analysis Engineer, Renewable Energy Materials Engineer, Biomaterial Engineer, Polymer Materials Engineer, Project Manager

Example Job Description

- Identify and produce a diverse range of materials for applications of interest
- Develop and improve methods for the analysis of complex materials
- Assist in the selection of materials for product application, the calculation of design parameters, the performance of material properties testing
- Apply scientific methods to resolve technical challenges related to materials and their use in products and processes

Materials Science and Engineering (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

All engineering disciplines are becoming more dependent upon newer materials or more efficient utilization of existing materials. The Minor in Materials Science and Engineering is designed to provide students with the fundamentals necessary for advanced study in Materials Science and Engineering and/or employment in materials related fields. This Minor is available to and useful for students in any engineering discipline, as well as students from chemistry, physics, and textiles. It also provides non-MSE majors planning to attend graduate school in Materials Science and Engineering a meaningful and useful way to prepare themselves.

Admissions

Visit the office of the Director of Undergraduate Programs in the MSE department to apply for the Minor and to prepare a plan of study. Admission to the Minor shall be governed by the same academic criteria used to transfer into the MSE curriculum. Students who have been denied admission to the MSE curriculum will also be denied admission to the MSE Minor. A C- or better grade in MSE 200 Mechanical Properties of Structural Materials, MSE 201 Structure and Properties of Engineering Materials or BME 203 Introduction to the Materials Science of Biomaterials is required, and a cumulative GPA of 2.0 or higher is required for all courses in the minor.

Certification

Successful completion of the Minor will be verified by the Director of Undergraduate Programs in the MSE department, as listed below. Paperwork for certification can be obtained in the MSE Office for Undergraduate Programs and should be completed during the pre-registration period for the student’s final semester at NC State.

Contact Person

Dr. Cheryl Cass
3002B Engineering Building 1, Centennial Campus

Effective Date: 1/2013
SIS Code: 14MTM

Plan Requirements

The Materials Science and Engineering Minor includes a three-hour introductory course, six hours of required courses and six hours of electives selected from a list of courses covering a wide variety of materials science and engineering topics. To apply for the MSE Minor, a minimum overall GPA of 2.9 is required. A grade of C or better is required in MSE 200 Mechanical Properties of Structural Materials, MSE 201 Structure and Properties of Engineering Materials or MSE 203 Introduction to the Materials Science of Biomaterials/BME 203 Introduction to the Materials Science of Biomaterials and a minimum cumulative GPA of 2.0 must be maintained in the Minor courses.
Aerospace engineering applies science and engineering principles to design, development, manufacture, and operation of aerospace systems and vehicles. Aerospace vehicles include aircraft such as low-speed propeller-powered aircraft, remotely autonomously piloted vehicles, micro air vehicles, hovercraft, and helicopters and spacecrafts such as rockets, space stations, and planetary rovers. Aerospace engineering not only involves design, development, manufacture, and operation but also considers environmental, economical, ethical, and social issues.

The undergraduate curriculum provides the student with knowledge of aerodynamics, aerospace materials, structures, propulsion, flight mechanics, and vehicle stability and control plus knowledge of selected topics in orbital mechanics, space environment, altitude determination and control, telecommunications, and space structures. The program educates students to define, formulate, and solve aerospace engineering problems, to function in multi-disciplinary teams, and to communicate effectively.

Aerospace engineering students gain experience with low-speed and high-speed wind tunnels and structural and material facilities for testing prototype models. A prominent feature of the program is the year-long senior design experience in which students choose from two possibilities:

1. design, construct, and flight-test a fly-by-wire aircraft; a unique 40-year tradition of the aerospace engineering program, or
2. design a prototype spacecraft, like a rocket, satellite or a planetary rover.

Many of the students are involved in the department’s student clubs, such as the Aerial Robotics and Rocketry clubs that compete regionally and regularly place in the top 3.

Aerospace engineering undergraduates are employed by the aerospace industries and other industries with similar technical problems. Many of our students enter graduate school after which they are employed by these same industries and by government laboratories such as NASA, NAVAIR, and the Air Force.

### Mechanical

Mechanical engineering applies mechanical, thermal, and fluid principles to research, design, development, testing, manufacture, and operation of products and systems. Mechanical engineering is the broadest of the engineering programs, providing a technological foundation that serves societal needs in energy, health, safety, and all walks of life. Mechanical engineers solve problems dealing with energy and environmental systems (alternative fuels and renewable technologies), advanced materials and manufacturing (precision metrology, smart materials, and auto-adaptive materials), robotics and sensor technologies (opto-mechanical systems, MEMS, energy harvesting, human-centric and bio-inspired intelligent systems), and transportation (automotive and high speed rail).

In addition to taking strong foundational courses, mechanical engineering students gain experience in experimental laboratories for measurement and data analysis, performance evaluation of thermal systems, and testing and analysis of mechanical components. The senior design experience is a distinctive joint departmental-industry effort in which students solve industry-sponsored problems through design, building, and testing prototype machines with the support of facilities for machining and electronics. Many of the students are involved in the department’s student clubs, such as its Eco car and SAE car clubs that compete internationally and regularly place in the top 10.

Because of the discipline’s wide breadth, mechanical engineering students have a wide variety of employment opportunities.

Undergraduate students enter engineering fields that deal with, to varying extents...
levels, design, development, manufacturing, plant operation, testing and experimentation, consulting, sales and service. The employers come from industry, government and service organizations. Many of the undergraduate students go on to graduate school to pursue advanced degrees in engineering, science or business, as well as professional degree programs such as medicine, accounting and law.

1. Courses required for Change of Degree Audit (CODA). A grade of C or higher is required.
2. A grade of C- or higher is required. E 115 requires satisfactory completion (S).
3. Students must have a 2.5 GPA to enroll in this course.

**Department of Nuclear Engineering**

For more information about this department, including contact information, visit the department (http://www.ne.ncsu.edu).

Burlington Engineering Laboratories, Room 3140 Phone: (919) 515-2301
Visit the Nuclear Engineering website (http://www.ne.ncsu.edu)!

Nuclear engineering is concerned with the engineering aspects of the control, release, and utilization of nuclear energy from both fission and fusion nuclear reactors. Nuclear reactors serve many functions: they serve as heat sources for electric power plants and are used in the production of radioactive isotopes for a variety of peaceful applications. Nuclear methods are applied in medical diagnosis and treatment, scientific research, and the search for new resources. The nuclear engineering program educates individuals in scientific and engineering principles essential for effective and productive contributions in industrial, university and government service. The Department of Nuclear Engineering has a national graduate ranking of #3 among all nuclear engineering programs. The undergraduate program continues to be highly respected by the nuclear industry.

**Scholarships and Awards**

Several special scholarships exist for NC State nuclear engineering students, including the Duke Energy, Institute for Nuclear Power Operations, American Nuclear Society, U.S. Department of Energy and the U.S. Nuclear Regulatory Commission scholarships. A special department fund supports scholarships for exceptional upperclassmen. NC State nuclear engineering students have received special recognition awards at the Undergraduate Research Symposium and have gained national recognition by several times receiving the Student Design Award of the American Nuclear Society. NC State nuclear engineering students are also frequent recipients of nationally awarded fellowships.

**Facilities**

Facilities for nuclear education include a nuclear research reactor (PULSTAR), which can be operated at a steady state power of 1 MW; radiation detection laboratories; nuclear materials laboratory; thermal hydraulic laboratory; prompt gamma facility; neutron activation analysis laboratory; radio-chemistry laboratories; nuclear simulation laboratory; neutron radiography unit; positron facility; ultra cold neutron source; neutron diffractometer; numerous computer facilities including, departmental computer workstations, College of Engineering EOS engineering workstations, microcomputers; reactor simulation laboratory; plasma generation and diagnostics laboratory, atmospheric plasma science laboratory, and plasma launchers laboratory.
Mission
The Department of Nuclear Engineering has four primary missions:

1. Provide a quality education at both the undergraduate and graduate levels to students who desire to pursue careers in nuclear science and engineering.
2. Develop research programs in areas of emphasis related to applications of nuclear science and engineering.
3. Assist industries and government in North Carolina, nationally and internationally in their efforts to apply these nuclear technologies to the betterment of the economy and the environment - in a safe, effective, and innovative manner.
4. Enhance, promote, and utilize the PULSTAR research reactor and associated facilities in an exemplary manner, leading to national recognition as a premier 1 MW Nuclear Reactor Program dedicated to research, teaching, and extension.

Program Educational Objectives
Consistent with the Department of Nuclear Engineering’s mission, the department has developed the following objectives for undergraduate education.

The Nuclear Engineering program is preparing its graduates for:

1. A track record of solving technical challenges facing the field of nuclear engineering through the detailed process of engineering design and the advance of nuclear engineering practice and research;
2. A reputation of adhering to the highest professional standards in the field, holding both the societal and environmental impact of their field's practices in the highest regard;
3. Written and oral communication skills that are highly effective in a diverse, cross-disciplinary, and global community of colleagues and stakeholders; and
4. The professional responsibility of continued self-improvement and education through professional licensing, graduate and professional education, and continued lifelong learning.

Faculty

Head
K.N. Ivanov, Department Head, Professor

Director of Undergraduate Program
J.M. Doster, Director of Undergraduate Program, Alumni Distinguished Undergraduate Professor, Director of CASL Education Program

Director of Graduate Programs
S.C. Shannon, Director of Graduate Program, Professor

Director of Outreach, Retention & Engagement - Lecturer - Adviser
L.M. Marshall, Director of Outreach, Retention & Engagement, Lecturer, Adviser, Educational Director of CNEC

Assistant Director, Graduate Student Activities
M. Milev, Assistant Director of Graduate Support Activities

Professors
Y.Y. Azmy, Distinguished Professor of Nuclear Engineering, Director of CNEC
M.A. Bourham, Alumni Distinguished Graduate Professor, Director for College of Engineering Master of Engineering Program
N. Dinh, Professor, Joint Appointment with ORNL
J.G. Gilligan, Distinguished University Professor, Executive Associate Dean, Director of NEUP Integration Office for the U.S. Department of Energy
K.L. Murty, Progress Energy Distinguished Professor

Professor and Director of Nuclear Reactor Programs
A.I. Hawari, Distinguished University Professor, Director of Nuclear Reactor Program

Research professors
S.P. Palmtag, Research Professor, CASL Chief Technologist
B.W. Wehring, Research Professor

Professor emeriti
D.J. Dudziak, Professor Emeritus
R. Gardner, Alumni Distinguished Graduate Professor
P.J. Turinsky, Professor Emeritus
K. Verghese, Professor Emeritus

Adjunct professors
S.M. Bragg-Sitton, Adjunct Professor
J.A. Favorite, Adjunct Professor
D. Kropaczek, Adjunct Professor
R.R. Pamper, Adjunct Professor
C.L. Smith, Adjunct Professor
G. Tryggvason, Adjunct Professor
R.W. Youngblood III, Adjunct Professor

Associate professors
D.Y. Anistratov, Associate Professor
A.N. Avramova, Associate Professor, Director of Reactor Dynamics & Fuel Modeling Group, Coordinator of CTF Users’ Group, Director of Consortium for Nuclear Power

I.A. Bolotnov, Associate Professor, Joint Appointment with ORNL

J. Eapen, Associate Professor

R.B. Hayes, Associate Professor, Joint Appointment with ORNL

D. Kaoumi, Associate Professor

J. Mattingly, Associate Professor, University Faculty Scholar, CNEC PI & Chief Scientist

Teaching associate professor

E. Loewen, Teaching Associate Professor

Adjunct associate professors

D. Archer, Adjunct Associate Professor

E.M. Brubaker, Adjunct Associate Professor

W.K. Cope, Adjunct Associate Professor

D.L. Green, Adjunct Associate Professor

P.A. Hausladen, Adjunct Associate Professor

V.J. Jodoin, Adjunct Associate Professor

P.A. Kraus, Adjunct Associate Professor

V.N. Kucukbogaci, Adjunct Associate Professor

J.W. Lane, Adjunct Associate Professor

E.H. Martin, Adjunct Associate Professor

W.D. Pointer, Adjunct Associate Professor

A. Ranjan, Adjunct Associate Professor

M.F. Simpson, Adjunct Associate Professor

M.L. Zerkle, Adjunct Associate Professor

Assistant professors

M. Diaconeasa, Assistant Professor

J. Hou, Assistant Professor

K. Stapelmann, Assistant Professor

X. Wu, Assistant Professor

G. Yang, Assistant Professor

Adjunct assistant professors

J. Dahl, Adjunct Assistant Professor

J. Li, Adjunct Assistant Professor

N. Kumar, Adjunct Assistant Professor

R.C. Sit, Adjunct Assistant Professor

L.G. Worrall, Adjunct Assistant Professor

R.J. Zerr, Adjunct Assistant Professor

Health Physicist - Lecturer

G.D. Wicks, Reactor Health Physicist, Lecturer

Nuclear Services Manager - Lecturer

S. Lassell, Manager of Nuclear Services, Lecturer

Plans

- Health Physics (Minor) (p. 562)
- Nuclear Engineering (BS) (p. 563)
- Nuclear Engineering (Minor) (p. 566)

Health Physics (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oip.ncsu.edu/pgas/).

The minor will enable students to understand the fundamentals of ionizing radiation safety, radiological control and the dosimetric consequences of nuclear activity to workers, the public and environment. The breadth and depth of the minor is designed to enable students to become a Certified Health Physicist by the American Board of Health Physics during the course of their professional career.

Admissions and Certification of Minor

Students are to contact Dr. Robert Hayes (2101 Burlington Engineering Laboratories, 919-515-2321, rbhayes@ncsu.edu) to discuss their plan of study. Dr. Hayes will also certify completion of the student’s minor program. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State.

Contact Person

Dr. Robert Hayes
2101 Burlington Engineering Laboratories
919-515-2321
rbhayes@ncsu.edu

SIS Code: 14HPM

Plan Requirements

- Completion of the designated HP courses with all courses completed with a C- or better
- NE 290 Introduction to Health Physics must be completed with a B or better
- NE 431 Nuclear Waste Management/NE 531 Nuclear Waste Management and NE 490 Health Physics and Radiological Emergency Response/NE 590 Health Physics and Radiological Emergency Response must be completed with a B- or better
Nuclear Engineering (BS)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

Nuclear engineers work in nuclear systems research, design, development, testing, operation, environmental protection, and marketing. The Bachelor of Science program prepares graduates for positions in industry, national laboratories, or for graduate study (consult the Graduate Catalog (http://www.ncsu.edu/grad/catalog/)). The curriculum incorporates basic sciences and engineering, with emphasis on mathematics and physics, followed by course work in nuclear science and technology. Design concepts are introduced in numerous nuclear engineering courses throughout the curriculum to provide an integrated educational experience, cap-stoned by senior nuclear projects involving reactors and radiation systems. Attention is also given to the efficient utilization of energy resources and to the environmental aspects of nuclear energy. Computers are widely used throughout the curriculum.

The nuclear engineering program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org, and leads to the degree of Bachelor of Science in Nuclear Engineering. Advanced undergraduates who desire to attend graduate school at NC State may enter a combined 5-year BS/MNE professional program or BS/MS bachelor/master degree program during their senior year which will culminate at the end of their fifth year with both the Bachelor of Science in Nuclear Engineering and the Master of Nuclear Engineering or the Master of Science degrees, respectively.

Specific curriculum requirements are available online (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php). Information on health physics and nuclear engineering minors are available here (https://oucc.dasa.ncsu.edu/undergraduate-academic-programs/academic-minors/).

**Career Opportunities**

Nuclear power reactor operation continues with ninety-eight reactors operating in the nation, increasing our reliance upon nuclear energy as a substitute for energy from fossil fuels. Development of advanced fission and fusion reactors offers the potential of vast new energy sources. Industrial and medical applications of radiation continue to increase in diverse industries. Demand for nuclear engineers is on the rise within the electric power industry and national laboratories, naval reactors, and other industries. According to the National Society of Professional Engineers, nuclear engineers are among the top five best compensated of the engineering disciplines.

**Nuclear Engineering (Minor)**

To see more about what you will learn in this program, visit the Learning Outcomes website [https://apps.oirp.ncsu.edu/pgas/](https://apps.oirp.ncsu.edu/pgas/).

The minor in Nuclear Engineering is intended to allow engineering students to develop an understanding of the fundamental concepts and practices of nuclear engineering. It is designed to provide students with the essentials necessary for employment in nuclear-related fields. Students considering advanced study should also benefit from the minor in nuclear engineering.

**Admissions and Certification of Minor**

Students are to contact Dr. J. Michael Doster, Director of Undergraduate Programs (2107 Burlington Engineering Laboratories, 911.515.3658, doster@ncsu.edu) to discuss their plan of study. Dr. Doster will also certify completion of the student’s minor program. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State.

**Contact Person**

J. Michael Doster  
2107 Burlington Engineering Laboratories  
919.515.3658  
doster@ncsu.edu
Plan Requirements

- Complete a minimum of 16 credit hours of NE designated courses.
- All courses must be completed with a grade of 'C-' or higher.

**Code** | **Title** | **Hours**
--- | --- | ---
NE 201 | Introduction to Nuclear Engineering | 2
NE 202 | Radiation Sources, Interaction and Detection | 4
NE 301 | Fundamentals of Nuclear Engineering | 3

**Elective Courses**<sup>1</sup>

**Total Hours** | **15-17**

<sup>1</sup> At the Director’s discretion, he can substitute a course for one of the electives listed.

<sup>2</sup> Mechanical Engineering majors may present MAE 310 Heat Transfer Fundamentals as the NE 400 Nuclear Reactor Energy Conversion prerequisite for NE 402 Reactor Engineering. The other prerequisite NE 401 Reactor Analysis and Design is still needed.

Edward P. Fitts Department of Industrial and Systems Engineering

For more information about this department, including contact information, visit the department (https://www.ise.ncsu.edu/).

Daniels Hall, Room 400
Phone: (919) 515-2362

Ranked in the top 10, the Edward P. Fitts Department of Industrial and Systems Engineering (ISE) offers an ABET accredited undergraduate program leading to a Bachelor of Science in Industrial Engineering.

What is Industrial & System Engineering?

Industrial engineers are problem solvers! We analyze processes and ask “how can we make these processes faster, better, and cheaper?” ISEs play a pivotal role in end to end business operations from product development to product and service delivery. It is this holistic view that makes ISE unique. We rely heavily on gathering and evaluating data to help make decisions that are based on statistical and engineering methods. Here are some of the tasks that ISEs lead in industry today:

- Assess the feasibility of manufacturing a new product with existing technologies, resources, and capacity or develop new ways to make products including automation
- Create and monitor quality plans that ensure that faulty products will not be shipped to the customer.
- Determine improved methods of scheduling patients for surgery that decreases patient wait time and surgeon’s overtime.
- Model a retail chain’s inventory and supply chain methods to improve on-time deliveries.
- Develop computer simulation models to design and control large complex manufacturing, supply chain, or service delivery systems.
- Design controls in an airplane cockpit that are Human-centered.

As you can see ISEs enjoy the freedom to explore almost any industry. The career paths that you can take with ISE are virtually limitless! Discover more about a career in ISE! (https://www.ise.ncsu.edu/what-is-industrial-engineering/#careers-in-ie)

Program Educational Objectives

The program educational objectives of the ISE department are to produce graduates capable of world-class performance in the following areas:

1. Applying the discipline's body of knowledge to the design and management of systems, products and processes by working effectively with multiple constraints, understanding the importance of time and cost;
2. Contributing meaningfully to team efforts in the workplace, understanding the economic, societal, and ethical impacts of their decisions, and communicate effectively with all stakeholders in the decisions; and
3. Adapting to changes in technology and our global society over the course of their professional lives by continuous learning through varied work assignments, advanced degrees, professional training programs and independent study.

The Bachelor of Science in Industrial Engineering is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

Specific curriculum requirements are available online (https://www.acs.ncsu.edu/php/coursecat/degree_requirements.php).

Curriculum

Throughout the curriculum students will develop a breadth of knowledge in all of the ISE focus areas resulting in a broad base of knowledge and skills. There is a pervasive thread throughout the curriculum on the measurement, design, and continuous improvement of production and service systems. The result is a data-driven, efficiency-focused engineer that is highly attractive in many industry segments. Our courses are designed to be hands-on whether that is in our state-of-the-art laboratories or using the latest software applications to solve real problems. The senior design capstone course is designed to give students an opportunity to apply what they have learned in the classroom to solve an industry-sponsored project. In addition to ISE courses, students take a wide variety of science, engineering, math, and statistics courses to form a well-rounded education.

Admissions and Certification of Minor

The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification of the minor can be found here: https://studentservices.ncsu.edu/forms/Registrar/declare_minor.pdf.

The form should be completed no later than during the registration period for the student’s final semester at NC State and submitted to Registration & Records for processing.
Health Systems Engineering Certificate Program

This program is designed to provide you with a learning experience in preparation for a career in the healthcare field. After successful completion of the program, you will receive a Health Systems Engineering Certificate which sets you apart and makes you more marketable for a future career in the healthcare industry.

Requirements

• A minimum GPA of 3.3
• Your resume (maximum of 2 pages)
• A brief statement of why you are interested in a career in healthcare (no more than 1 page, please)
• One ISE faculty recommendation
• An unofficial transcript
• All materials should be submitted to healthsystems@ncsu.edu by the deadlines listed below:
  • Undergraduates – October 1st *(Must be eligible to graduate by Spring semester of the following year)
  • Graduate Students – December 20th

Accelerated Baccalaureate/Masters (ABM) Program

This program will allow exceptional undergraduate students to complete both undergraduate and graduate degrees at an accelerated pace. The student is allowed up to 12 credit hours to be counted towards both the undergraduate and graduate degrees. For more information contact Kanton Reynolds, Ph.D.: kreynolds@ncsu.edu or (919) 515-0605.

Requirements

• Students must have completed a minimum of 75 credit hours and up to a maximum of 96 credit hours by the end of the current semester (includes transfer credits).
• Students must have earned a GPA of at least 3.5 overall with a 3.5 for all Industrial Engineering courses.
• Students must have satisfied all prerequisite requirements for 400 level courses.
• A letter of recommendation from the undergraduate teaching adviser identifying the applicant as a participant in the ABM program should accompany the application as well as the course numbers and titles of the 12 credit hours to be used for both the bachelor’s and master’s degree programs.

1 A grade of C or higher is required.
2 A grade of C- or higher is required, E 115 requires satisfactory completion (S).

**Career Opportunities**

Industrial and Systems engineers can be found everywhere! According to the Bureau of Labor Statistics, ISES will be highly sought after in the coming decade. This is not surprising given the cost and efficiency pressure on both manufacturing and service sectors. Industrial engineers are hired by virtually all segments of industry. They may work in hospitals and healthcare consulting firms to make healthcare delivery more cost effective as well as in high tech manufacturing industries. Another area in which ISES play a pivotal role, is in successful integration of global business partners. As companies continue to seek a global presence, industrial engineers will be involved in the design of new supply chain networks or qualification of manufacturing processes/facilities. Given the level of impact made by ISES in industry today it is not surprising that our current job placement rate is among the highest in the College of Engineering, above 90% within 3 months of graduation. Many ISES rise to the management ranks throughout the career and there have been
several ISEs who have become CEOs: Tim Cook (Apple Inc.), Mike Duke (Walmart) & Charles Holliday (Dupont) to name a few.

Industrial Engineering (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orip.ncsu.edu/pgas/)

The minor in Industrial Engineering is designed to provide undergraduate engineering students and other science majors in curricula other than Industrial Engineering with the fundamentals of industrial engineering necessary for advanced study in the discipline and/or employment in industrial engineering related occupations. The minor in Industrial Engineering offers a structured program that allows students to acquire some level of expertise in areas common to all industrial engineers as well as a deeper knowledge in at least one specific area of interest.

Admissions and Certification of Minor

Students should contact Kanton Reynolds (441B Daniels Hall, 919.515.0605, kreyolds@ncsu.edu) for admission to and certification of the minor in Industrial Engineering. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State.

Contact Person

Effective Date: 6/2011

SIS Code: 14IEM

Plan Requirements

- Complete a minimum of 15 credit hours of ISE designated courses.
- Students must complete 6 hours of required courses and 9 hours of elective courses.
- All courses must be completed with a grade of ‘C-’ or higher.

Supply Chain Engineering (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orip.ncsu.edu/pgas/)

The Supply Chain Engineering Minor allows students to develop skills associated with the networks and processes that move materials and supplies into production facilities, transforms them into finished goods and then distributes products to customer markets. This minor takes a multi-disciplinary approach to solving problems associated with logistics, operations, network design, systems and services optimization, planning/scheduling and alternatives analysis. Completion of this minor will prepare undergraduate students for the global marketplace by providing a strong foundation and integrated framework from which to navigate decisions, influence product planning, and impact time to market.

Administration of the Minor

Director, Undergraduate Programs & Associate Teaching Professor
Edward P. Fitts Department of Industrial & Systems Engineering
919.515.0605
kreyolds@ncsu.edu

Jason DeRousie, Ph.D.
Director, Curriculum and Advising
College of Management
919.515.6937
jcoderous@ncsu.edu

Plan Requirements

- The program administrator will oversee admission to and certify completion of the minor program.
- Admission to the minor requires a minimum 3.25 GPA and completion of a short application form.
- Students shall then complete the minor form and create a plan of work detailing the courses to be taken in order to satisfy the requirements by semester.
- Students accepted to the program will be required to meet with program administrator or designee during the registration period for each semester to ensure satisfactory process toward the minor.
- Students are NOT allowed to double count any required course in Group A toward both departmental major and minor requirements.
- All courses must be completed at NC State University.
- All minor courses must be completed with a grade of C- or higher.
- All minor courses must be taken for a letter grade.
- The Program administrator will verify that all requirements have been met and certify the minor prior to graduation. The minor must be completed no later than the semester in which the students expects to graduate from their degree program. Paperwork for the certification should be completed no later than the end of the registration period for the student’s final semester at NC State University.

**Total Hours** 122-123

1. A grade of C or higher is required.
2. A grade of C- or higher is required.

**Engineering (BS): Mechanical Engineering Systems Concentration**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The NC State Mechanical Engineering Systems (MES) BSE program is a site-based program located on the campus of Craven Community College in Havelock, North Carolina. Students in the program earn a Bachelor of Science in Engineering with a concentration in Mechanical Engineering Systems. Upon graduation from the MES program, students have the qualifications to apply for any job seeking mechanical engineering applicants.

**Curriculum**

MES students are drawn from a diverse population that includes not only the traditional college student, but also military personnel and civilian staff of FRC-East.

The 10 mechanical engineering courses in the MES program are taught by the nationally recognized NC State MAE faculty in Raleigh and delivered to the MES students in Havelock via interactive high-definition video teleconference.

Local NC State faculty teach the Systems Engineering content, conduct all laboratory experiences, and direct students in the two-semester capstone design experience where they are partnered with an industry sponsor to design and build a solution to a real-world problem. Hands-on laboratory exercises allow students to explore and experience theoretical concepts learned in their courses and practice important modern skills such as manual and computerized measurement techniques, data analysis, design of experiments and technical communications.

The MES program is located within a short distance of the Naval Air Systems Command’s Fleet Readiness Center-East, Cherry Point (FRC-East). FRC-East is North Carolina’s largest industrial employer east of interstate highway I-95 and the MES program takes advantage of the synergies afforded by its close location and relationship with the more than 900 engineers working at FRC-East.

The MES program is evaluated under the criteria for Mechanical Engineering Programs and is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

**Admissions**

Students in the MES program typically begin by taking their general education courses such as physics, chemistry, calculus, and the humanities at one of North Carolina’s Community Colleges or from another approved university program. Once students satisfy all transfer requirements, they apply for acceptance into the College of Engineering at NC State as a transfer student majoring in the MES program. Current NCSU engineering students can pursue the MES program if they
are willing to relocate to the Havelock area. For more information on admissions, click here ([https://www.engr.ncsu.edu/mes/programs/mechanical-engineering-systems-bachelor-of-science-in-engineering-program](https://www.engr.ncsu.edu/mes/programs/mechanical-engineering-systems-bachelor-of-science-in-engineering-program)) or go to engr.ncsu.edu/mes ([https://www.engr.ncsu.edu/mes/](https://www.engr.ncsu.edu/mes/)).

**Program Educational Objectives**

Alumni of the BSE with a concentration in mechanical engineering systems will attain the following objectives within 3-5 years of graduating:

1. Be engaged in the professional practice of engineering or be enrolled in graduate school.
2. Establish themselves as problem solvers in the workplace through the practical application of engineering and systems knowledge and skills.
3. Function effectively in a professional environment by utilizing written and oral communication, teamwork, project management, and leadership skills and their ability to view their own work in a broader context.
4. Continuously improve and expand their technical and professional skills through formal study, as well as through informal means.

**Plan Requirements**

1 Grade of C (2.0) or higher required.
2 Students must have a 2.5 to enroll in this course
3 Minimum grade of C-

**Career Opportunities**

In the MES program, you will receive a solid foundation in mechanical engineering principles including structural mechanics, materials, fluid mechanics, dynamics, vibrations, controls, thermal sciences, mechanical design, and thermal design. You will also receive training in the formal systems engineering approach to the design and realization of integrated systems. Your training in formal systems engineering gives you the ability to understand and work through the broad complex issues involved with integrated systems. Your training in mechanical engineering principles gives you the skill and confidence required to understand and solve detailed technical problems. The unique combination of these skills allows you to be well prepared to meet the technical and non-technical challenges of today's engineering workplace.
Engineering (BS): Mechatronics Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orp.ncsu.edu/pgas/)

For more information about this department, including contact information, visit the department (https://engineering.unca.edu/).

The Joint Mechatronics Engineering curriculum (JEM) combines the best that two nationally recognized universities have to offer. From NC State University comes the engineering component comprising course work from the Departments of Mechanical and Aerospace Engineering (MAE), Electrical and Computer Engineering (ECE), and mechatronics courses taught by NC State University faculty on the campus of the University of North Carolina at Asheville. From the University of North Carolina at Asheville comes a Humanities and Social Science component with a rich liberal arts foundation and mechatronics courses taught by UNC Asheville faculty and staff. Hands-on laboratories are integral to the engineering course work. As an NC State site-based engineering program, students must attend classes on the campus of UNC Asheville. Transfer students should contact the program office in Asheville for information about the transfer of courses from other educational institutions.

Mechatronics engineering focuses on the precision control of mechanical and machine systems. In today's modern engineering systems, control is achieved electronically through sensors, actuators and microprocessors. The marriage of modern control systems with mechanical devices is key to the design and development of high-performance engineering systems. Just a few examples of computer-controlled mechanical systems are robots, engine-fuel systems, hybrid automobiles, autonomous aerospace vehicles, stair-climbing wheelchairs, garage door openers and alternative power generation systems. Through modern mechatronics engineering, new avenues of thinking and design can greatly enhance the utility, performance, and efficiency of modern machinery.

Program Educational Objectives

Within a few years of graduation, successful alumni of the Joint NC State - UNC Asheville BSE - Mechatronics Concentration degree should:

1. Attain productive professional careers in mechatronics engineering or related fields.
2. Function in the workplace with appropriate professional and ethical responsibilities.
3. Make decisions with accountability for the social and environmental impact of their engineering practices.
4. Interact effectively with a diversity of individuals while viewing their own work in the broader context of our global society.
5. Attain technical excellence by engaging in life-long learning.

Specific curriculum requirements are available on the Mechatronics webpage (https://www.engr.ncsu.edu/mechatronics/joint/).

1 A grade of C or higher is required.
2 A grade of C- or higher is required.

**Joint Department of Biomedical Engineering**

Biomedical Engineering (BME) is a fast-growing, interdisciplinary field that integrates engineering, mathematics, medicine, and science to improve human health and quality of life. In the Joint Department of BME, students are given access to state-of-the-art equipment and facilities at both NC State University and UNC-Chapel Hill. This unique relationship offers students a wealth of opportunities for research, group collaboration, coursework, and exposure to experts in medicine and engineering. While all of the classes undergraduate students need to complete their degree are available on their home campus, students may choose to take courses at either campus. Students never have to travel to the partner campus; the joint program simply offers additional opportunities.

After completing core courses and being admitted through a competitive process to the program, students are effectively admitted to the partner campus. Students have full standing at both NC State and UNC. Upon graduation, the diploma bears the seals and signatures of both universities, and students receive an ABET-accredited degree in Biomedical Health Sciences Engineering.

Department Highlights:

- Students interested in Biomedical Engineering can join any of several student organizations including the Biomedical Engineering Society Student Chapter (https://getinvolved.ncsu.edu/organization/bmes/), The Helping Hand Project (https://getinvolved.ncsu.edu/organization/helpinghandproject/), and the Engineering World Health Club (https://getinvolved.ncsu.edu/organization/ewh-ncsu/).
- Students have the opportunity to study abroad (https://honorscarolina.unc.edu/global-honors/scotland/) in Edinburgh, Scotland studying the process of innovation in the context of healthcare delivery and technology.
- Students gain skills in manufacturing processes and biological synthesis while following the guidelines for FDA approval for a medical device.
• Students in this degree program are eligible for The Abrams Scholarship Program (https://www.bme.unc.edu/congratulations-to-the-2017-2018-abrams-scholars/) and The Lucas Scholar Fellowship (https://www.bme.unc.edu/lucas-scholar-fellowship/).

For more information about our department, including contact information, visit our website (https://www.bme.unc.edu/).

• Biomedical and Health Sciences Engineering (BS) (p. 600)
• Tissue Engineering (Minor) (p. 602)
Biomedical and Health Sciences Engineering (BS)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orip.ncsu.edu/pgas/).

Students studying biomedical engineering at NC State and UNC-Chapel Hill are challenged with a curriculum at the interface of engineering and medicine. During the first year, students are introduced to the fundamentals of engineering. These courses include calculus, physics, chemistry and biology. All of which provide the foundation for future engineering courses. Once accepted into the program, students take engineering courses in mechanics, circuits and materials followed by specialized courses in biomedical engineering. The design process is woven throughout the curriculum. Students take courses that familiarize them with manufacturing processes while preparing them for the capstone senior design course that use a Design Control Process based on the FDA's Quality System Regulations. Computers are used throughout the program. Graduates will be prepared for professional employment in research, design, engineering and the life sciences. First year students interested in this curriculum should enroll in the Engineering First Year program and select BME as their intention.

1. A grade of C or higher is required.
2. A grade of C- or higher is required.

### Career Opportunities

Biomedical engineers are employed by hospitals, pharmaceutical companies, medical device and testing companies, government agencies, universities, and medical schools. With so many areas of specialization within the field, graduates are encouraged to further their education by attending graduate or professional school after graduation. Graduates from this program have attended graduate programs in biomedical engineering, physical therapy, mechanical engineering, industrial engineering, microbiology, virology, public health, and sports physiology, among others, at many different institutions. Graduates who have taken additional courses to satisfy entrance requirements have also been accepted by medical, dental and pharmacy schools.

### Tissue Engineering (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The minor in Tissue Engineering is intended to provide graduates with the knowledge base and practical skills that will prepare them to quickly contribute to research and manufacturing of devices designed for repair and replacement of tissues and organs. Interested students should contact the BME Student Services Coordinator for information and application materials.

### Admissions and Certification of Minor

The BME staff will hold primary responsibility for administration of the Minor in Tissue Engineering. Information about the minor and application materials will be handled by the BME student services coordinator. BME faculty members will serve as advisors for the minor.

SIS Code: 14TISSEGRM
Plan Requirements

- Complete a minimum of 22 credit hours of designated courses. All courses required for the minor must be completed with a C- or better.
- To be admitted to the minor in Tissue Engineering, they will need to complete two prerequisite courses, CH 223 Organic Chemistry II and BIO 183 Introductory Biology: Cellular and Molecular Biology with a C- or better.

Nano-Science and Technology (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orip.ncsu.edu/pgas/)

The Center for Advanced Self-Powered Systems of Integrated Sensors and Technologies (ASSIST) is offering a minor in Nano-Science and Technology for any student enrolled in an engineering curriculum. Students will be trained in the fundamentals of nano-scale materials, devices, and systems for a broad variety of applications. This is a multidisciplinary program consisting of courses from a variety of engineering disciplines. Completion of this minor will prepare undergraduate students for the global workforce by combining technical training in nano-science and technology with diversity awareness, engineering ethics, and an understanding of global issues in science and technology.

Admissions and Certification of Minor

Students must complete the Application for Nano-science and Technology Minor form available from the minor program administrator prior to enrolling in the minor. The program administrator will oversee admission to, and certify completion of the minor program. Prior to admission, qualified students will meet with the program administrator. During this meeting a plan of work for the minor detailing which courses will be taken each semester will be designed and signed by the student. Students will then be required to consult with the program administrator during each registration period to ensure satisfactory progress. All courses counted for the minor must be completed with a grade of "C-" or better. Students may not take minor coursework on a credit only (pass/fail) or S/U basis. The program administrator will verify that all requirements have been met, and certify the minor prior to graduation. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at N.C. State.

Plan Requirements

- Completion of the minor requires a minimum of 18 credit hours. This includes one required introductory course, three technical elective courses, and two general education elective courses.
- All courses counted for the minor must be completed with a grade of "C-" or better. Students may not take minor coursework on a credit-only (S/U) basis.

General Education Electives
Textile engineering students develop a unique background, through undergraduate research, summer intern experiences, and design projects ranging from artificial blood vessel development to the design of novel high-tech sporting equipment. Textile engineers also design computer information systems that can integrate a worldwide distribution program eliminating a company’s reliance on regional stockpiles or streamline an industrial process using Six Sigma quality saving a company millions of dollars. The program offers small class sizes with personal attention from faculty. With the focus on interdisciplinary research, the opportunities for textile engineers have never been brighter.

Opportunities
Textile engineers, teaming with chemists, physicists, materials scientists, and other engineers are designing new polymers, fibers, and textile structures to revolutionize the future of materials. Whether it be for personal protective garments such as bullet proof vests and Gore-tex® or materials used in the next generation space shuttle and the stealth bomber, textile engineers are developing products that are stronger, lighter, and more durable than current materials. Textile engineers are employed in a wide variety of industries that include aerospace, automotive, chemical, composites, management consulting, fiber processing, medical devices, manufacturing and retail, and textile processing.

The TE Program provides a fundamental engineering degree with a working knowledge of the very large textile industry as well as its allied industries. We have our own career planning and placement center to assist students in identifying and selecting internships and permanent careers. Historically, TE graduates have had nearly 100% placement into graduate school or full time employment with starting salaries among the highest at N.C. State University. Compared to the rest of North Carolina State University, the College of Textiles has the highest percentage of students participating in scholarship programs. Indeed, over 50% of all Textile Engineering students receive scholarship support! Owing to the size of the program, many of our undergraduate students participate in research with our world renowned faculty further providing financial assistance as well as professional growth. Almost all of our textile engineering students participate in summer internships. Most of our graduates select jobs that are located in the Southeast, but others who desire to work in other regions of the country have opportunities to do so. Our graduates work in the biomedical industries on the east and west coasts and in Chicago, the automotive industry in Michigan, the aerospace industry in Texas, as well as large apparel and retail companies in Oregon, Maryland, California, Utah, Ohio and North Carolina.

Curriculum
The TE program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. The TE program has three concentrations allowing a customized curriculum that fits your specific educational goals. The concentrations emphasize Information Systems Design, Chemical Processing and Product Engineering. Minors in associated engineering fields (e.g., Computer Science, Industrial Engineering, and Materials Science) as well as foreign language minors are strongly encouraged as part of the academic plan. For exceptional students, dual degree programs with Chemical and Biomolecular Engineering, Biomedical Engineering, and Materials Science and Engineering provide a bachelor degree in two engineering majors with one additional semester of course work.

Educational Objectives
The Textile Engineering Program of the Department of Textile Engineering, Chemistry and Science is committed to instill a strong academic program whereby graduates, within the first few years after graduation are prepared for the following accomplishments:

1. Recognized contributions in the workplace that involve creative and critical thinking in applying the discipline’s body of knowledge and for tackling contemporary issues and engineering challenges that face our global society;
2. A reputation of problem solving in a professional, ethical and safe manner;
3. Established communication and teaming skills in a professional environment; and
4. Evidence of continuous learning through seeking educational and developmental opportunities and by adapting to ever-changing economic, social, and technological environments.

College of Humanities and Social Sciences

For more information about this college, including contact information, visit the college (http://www.chass.ncsu.edu).

Box 8101
Raleigh, NC 27695-8101

The College of Humanities and Social Sciences offers programs of study that lead to baccalaureate and advanced degrees in the disciplines of the humanities and social sciences. The college also offers courses in these disciplines that are required in all undergraduate programs. In this way the university provides its students the opportunity to prepare for a full life in the professions and occupations that require intellectual flexibility, broad knowledge, and a basic comprehension of human beings and their problems.

The college is comprised of nine departments or schools:
Communication, English, Foreign Languages and Literatures, History, Philosophy and Religious Studies, School of Public and International Affairs, Psychology, Social Work, and Sociology and Anthropology. Interdisciplinary programs are administered through Academic Affairs in the college Dean’s Office.

Cross-College Programs

Alexander Hamilton Scholars Program

The Alexander Hamilton Scholars Program permits students to simultaneously earn a B.A. in International Studies and either a B.S. in Accounting, a B.S. in Business Management, or a B.S or B.A. in Economics.

Key elements of the Alexander Hamilton Program include foreign language study to at least the 300-level, a Management capstone course (economics seminar or business policy and strategy) with a strong global orientation, a senior thesis in International Studies, and several additional courses on topics such as international economics or marketing, global politics, and intercultural communication. Each Hamilton scholar is required to complete at least one study abroad program.

Hamilton scholars participate in special programs throughout their enrollment that are designed to increase their exposure to leading-edge management practices, international businesses, and foreign cultures. These programs will include activities such as special lectures and networking events with international corporate partners, field trips to international companies with a local presence, charity fund-raising and community service projects, mentoring of foreign business students, and Scholars banquets. For additional information about the Alexander Hamilton Scholars Program, contact Mr. Robert Sandruck, robert_sandruck@ncsu.edu, 515-5565, Director of Global Programs, Poole College of Management, 2178 Nelson Hall, or Dr. Seth Murray, seth_murray@ncsu.edu, 515-0450, International Studies, College of Humanities and Social Sciences, Room 106 in the 1911 Building. Visit the Hamilton Scholars Homepage (https://poole.ncsu.edu/undergraduate/global/hamilton-scholars/) for more information.

Benjamin Franklin Scholars Program

The Benjamin Franklin Scholars program, sponsored jointly by the College of Engineering and the College of Humanities and Social Sciences, allows a select group of highly motivated students to simultaneously pursue bachelor’s degrees in both engineering and humanities or social sciences, producing students with a broad training uniquely equipping them for the challenges of today’s world. Students in this program can combine any major in the College of Humanities and Social Sciences (plus economics) with any major in the College of Engineering. This program, now entering its thirtieth year, has produced individuals who use their engineering training in a broad range of settings and jobs: in industry, in academia, in government, working as engineers, lawyers, physicians, and policy analysts, among others.

There are three entry points into the program. A limited number of newly admitted freshmen are invited to apply to join the program in the April of their senior year of high school, based on SAT scores. During New Student Orientation the summer before the freshman year, all new entering freshmen in the College of Engineering are invited to attend an information session about the program and apply to join. Thereafter interested students can seek admission through an individual consultation with the director.

The program has dedicated scholarship money associated with it, and students who have completed the Franklin intro course, have CODA’d into their Engineering and Humanities and Social Sciences majors and who have a 3.0 or above GPA are generally eligible for scholarship support. The time required to complete both degrees depends on a variety of factors, including incoming AP credit, semester course load, use of summer school, and Humanities and Social Sciences degree sought. The program can be completed in 4-5 years, with five years being typical.

The student led section of the program, the Franklin Council, arranges a wide variety of social, service, and academic events throughout the year.

For more information, contact the director of the program, Dr. Ross Bassett, Department of History, College of Humanities and Social Sciences, ross@ncsu.edu, 919-515-2231, 478 Withers Hall, or visit the Franklin Scholars Program homepage (https://ids.chass.ncsu.edu/dual/franklin.php).

Thomas Jefferson Scholars Program

The Thomas Jefferson Scholars Program is a joint program of the College of Agriculture and Life Sciences and the College of Humanities and Social Sciences. Participants earn two bachelor’s degrees: one concentrating in an area of agriculture or life science and one in an area of humanities or social science. Students can choose any major in each college, to meet individual interests and career goals. The purpose of the program is to produce potential leaders in agriculture and the life sciences who have not only technical expertise but also an appreciation for the social, political, and cultural issues that affect decision-making. The program includes special classes and guest lecturers for Jefferson Scholars, travel and other enrichment experiences, and a variety of social and service activities.

Once a student applying for admission to NC State has been accepted, the Program invites students of high achievement to apply for the Jefferson Scholars. Applicants come for an interview in March, and a small number of entering students are selected to participate in the
Jefferson Scholars Program. Successful participants receive scholarship support after the sophomore year.

If you have questions about Thomas Jefferson Scholars or the application process, please call (919) 515-2614 or email jeffersonscholars@ncsu.edu. Visit the Jefferson Scholars website (http://harvest.cals.ncsu.edu/jefferson-scholars/) for details about our activities, students, and courses.

Honors Program
Each department in the college offers an honors program designed to encourage outstanding students to develop their intellectual potential to the fullest extent possible through individualized study, special seminars, and close association with faculty members in their major field.

Scholarships
In addition to the university-wide awards available, the College of Humanities and Social Sciences offers a limited number of merit and need-based scholarships. For further information contact Dara Leeder, Director of Student Recruitment and Retention, College of Humanities and Social Sciences, (919) 515-3638.

Folger Institute
North Carolina State University is a member of the Folger Institute of Renaissance and Eighteenth-Century Studies, a unique collaborative enterprise sponsored by the Folger Shakespeare Library in Washington, D.C., and 20 universities in the Middle Atlantic region. Each year the institute offers an interdisciplinary program in the humanities—seminars, workshops, symposia, colloquia, and lectures. Admission is open to faculty and students of North Carolina State University, and a limited number of fellowships are available through the campus Folger Institute Committee.

Certificates
• Leadership in the Public Sector (Certificate) (p. 1152)

Department of Communication

The Bachelor of Arts in Communication program provides opportunities for study and training in human communication for professionals entering business, industry, media, non-profit organizations, or government service. Communication students practice NC State’s think and do axiom each day. As a student here, you’ll test – and improve – your interpersonal communication skills. You’ll study and put into practice the theories and methods that lead to meaningful results. You’ll conduct research and engage with faculty and fellow students on projects, some
with local impact, others that could change the world. And along the way, you’ll gain invaluable experiences and knowledge that will prepare you for a career as a proficient communication professional.

Department Highlights:

- Undergraduates can choose from three areas of concentration: public relations; communication media; and interpersonal, organizational and rhetorical communication.
- Students interested in Communication can take advantage of several student groups, including Lambda Pi Eta & Public Relations Student Society of America.
- Communication students have the opportunity to study abroad, learning about communication across multiple cultures in Africa & Europe.
- Students in our programs may utilize numerous internships in communication occupations.
- Undergraduates may also take advantage of our accelerated bachelor/master of science program that allows advanced students to complete their MS in one year after completing their BA in our Department.
- Master’s level students gain advanced, intensive training in communication theories and methods that you can apply from day one.
- Doctoral students in our interdisciplinary Communication, Rhetoric and Digital Media (CRDM) program analyze the social, cultural, rhetorical, philosophical and political dimensions of information technologies, media and texts and graduate ready to apply their expertise in government, corporate or educational settings.

For more information about our department, including contact information, visit our website (https://communication.chass.ncsu.edu/academics/ba/).

Plans
• Communication (BA): Communication Media Concentration (p. 610)
• Communication (BA): Interpersonal, Organizational, and Rhetorical Communication (p. 620)
• Communication (BA): Public Relations Concentration (p. 630)
• Science Communication (Minor) (p. 639)

Communication (BA): Communication Media Concentration

The Communication Media Concentration (LCM) focuses on the role of media as the infrastructure that makes communication possible. Media technologies, media practices, and mediated discourses shape how we understand the world around us. Historical changes in media technologies and networks alter how media can be used socially, culturally, politically, and economically to form communities and exercise power. The Communication Media curriculum approaches media historically, theoretically, analytically, critically, empirically, and creatively.

You will combine theoretical and critical understanding of media technologies and discourses with practical skills in media production and critical media-making in areas such as audiovisual production, games, mobile media, and computational media. And you’ll participate in rewarding internships that allow you to put this knowledge and new skills to good use.

1 A grade of C- or higher is required.

Communication (BA): Interpersonal, Organizational, and Rhetorical Communication

(Formerly Public and Interpersonal Communication)

Learn theories about human communication processes and problems within interpersonal relationships, organizations, groups and teams, and public and political interactions. As you begin to understand how communication influences close relationships, families, co-workers, and employees, you’ll develop important argumentation and conflict management skills for personal and public environments.

### Semester Sequence

This is a sample.

Critical Path Courses – Identify using the code (CP) which courses are considered critical path courses which represent specific major requirements that are predictive of student success in a given program/plan. Place the (CP) next to the credit hours for the course.
### Plan Requirements

**Communication (BA), Public Relations Concentration: 120 Total Units**

1 A grade of C- or higher is required.

Science Communication (Minor)

The minor in Science Communication offered by the Department of Communication is available to undergraduate students interested in developing their understanding of and abilities in communication science to public audiences. It is open to students in all undergraduate majors on campus who want to deepen and broaden their knowledge of how citizens make sense of science and technology in their everyday lives. Required coursework includes 15 credit hours, including (1) an overview course that introduces major issues in contemporary debates about science communication and public engagement, (2) electives that allow students to develop further understanding of communication processes and practices, and (3) a capstone course that engages students on more advanced topics such as climate change, risk communication, environmental communication, and others.
Admissions

Students interested in the Science Communication minor must contact the minor advisor before their junior year and/or before the completion of 90 credits toward undergraduate degree.

Certification

A University Minor Declaration Form (https://studentservices.ncsu.edu/forms/registrar/declare_minor.pdf) should be submitted to Registration and Records for inclusion of the minor on the student’s official record no later than during the registration period for the student’s final semester at NC State. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Students will receive official recognition on their transcripts for the completed minor.

Contact Person

Dr. Andrew R. Binder
Associate Professor of Communication
201 Winston Hall, Campus Box 8104
919-515-9750
Email: arbinder@ncsu.edu

SIS Code: 16SCM

Plan Requirements

• Completion of 15 credit hours.
• A maximum of TWO (2) courses may be used (double-counted) towards both departmental major requirements and minor requirements.
• A maximum of TWO (2) courses may be used (double-counted) towards any additional minor(s) requirements.
• No more than six (6) transfer credits may be counted towards the minor.
• A grade of ‘C’ (2.0) or better will be required for all courses taken to fulfill minor requirements.
• No coursework may be taken for S/U credit.

Required Courses (6 credit hours)

| Group II – Understanding Public Communication Processes and Practices
| COM 200 | Communication Media in a Changing World         | 3     |

1 Capstone course is recommended to be taken after at least 9 credits in the minor.
(For this elective, COM 436, 479, future risk communication or advanced science communication course can be taken by permission)

2 Choose 1 course from EACH Group (2 courses total) AND choose 1 additional course from either of the 2 Groups. At least 6 credits must be completed at 300-400 level.

Note: Students who have officially declared the minor and who wish to take a course on the elective list for which they do not currently meet the prerequisites should express their interest in the course to the minor adviser to discuss the possibility of applying for a waiver of the course prerequisite(s).

Department of English

The Department of English offers introductory and advanced courses in writing, language, literature, and film. The first-year course required of all undergraduate students develops skills in expository writing and in analytical reading. Advanced courses in writing available to all students cover a variety of areas, including journalism, technical and business writing, and creative writing. These courses give students opportunities to
pursue special personal and career interests, as do courses in literature, linguistics, rhetoric, and film.

The department offers a Bachelor of Arts major in English with six options:

1. Creative Writing
2. Film Studies
3. Language, Writing, and Rhetoric
4. Linguistics
5. Literature
6. Teacher Education

**English Honors Program**

The Honors Program in English provides courses that challenge and inspire English majors to pursue their scholarly interests at an advanced level. Honors students enjoy courses in small, seminar settings, engage in independent study, develop expertise in a variety of research practices, and earn recognition for excellent work beyond ordinary requirements.

For admission, students must have a minimum GPA of 3.25 and must have completed at least three English courses above the freshman level with a minimum GPA of 3.25.

**Internship Program**

Internships provide the opportunity for on-the-job experience in writing, editing, graphics, and publication under expert supervision in professional settings.

**Study Abroad**

English majors have the opportunity to study abroad in many foreign cities, including London, Oxford, and Prague. For more information, please visit the Study Abroad website (http://studyabroad.ncsu.edu/).

**Student Organizations**

**English Club** The English Club is a student-run organization that is open to all NC State students who have an interest in English.

**Sigma Tau Delta** The NCSU Chapter of Sigma Tau Delta, Alpha Pi Theta, recognizes high scholastic achievement and offers opportunities for leadership and service.

**Graduate Programs**

At the graduate level, the Department of English offers three graduate degrees: a Master of Arts in English, a Master of Science in Technical Communication, and a Master of Fine Arts in Creative Writing. In conjunction with the Department of Communication, the Department of English also offers an interdisciplinary Ph.D. program in Communication, Rhetoric, and Digital Media. For more information, please visit the Graduate School website (http://www.ncsu.edu/grad/). A five-course certificate program in Professional Writing, available to students not seeking a degree at NC State, offers preparation in practical writing and editing, including both journalism and technical writing.

American Literature (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Department of English offers a minor in American literature to N.C. State students, except for English majors in the Literature concentration (16ENGLBA 16ENGLLT). The minor consists of any five courses in American literature, three of which must be at the 300 level or above, and one of which must be at the 400-level. Students may transfer in no more than six hours toward the minor. This minor will focus on the English-language literature of the United States and of the British colonies out of which the United States emerged. No courses for the minor may be taken for S/U credit.

Admissions and Certification of Minor

Students interested in declaring a minor in Technical and Scientific Communication should contact the minor coordinator listed below. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program.

Creative Writing (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

A minor in Creative Writing is available from the English Department for N.C. State students, except LCW English majors.

Admissions and Certification of Minor

Students may declare their intention to complete the Creative Writing minor at any time after completion of ENG 101 Academic Writing and Research. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program.
Plan Requirements

• A minimum of 15 hours (5 courses) in creative writing and/or in writing theory.
• Of the five elective courses, no more than 2 may be at the 200 level. At least one must be at the 400 level or above.
• No more than 2 courses (6 hours) of transfer credit.
• Must have an overall GPA of 2.0 in the minor and may count no course grade lower than a 'C-'.
• No courses for the minor may be taken for S/U credit.
• A maximum of TWO (2) courses may be used (double-counted) towards both departmental major requirements and minor requirements.

English (BA): Creative Writing Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

Core Curriculum The undergraduate major in English is built around an 18-hour core that includes one course from each of the following six categories: American Literature, British Literature, World Literature, Film, Linguistics, and Rhetoric. In addition to the 18-hour core, students take 21 hours of course work in one of the five following concentrations.

The concentration in creative writing (CRW) offers a background in literature and language with an emphasis on writing fiction, poetry, screenplays, and/or non-fiction. The 21-hour Creative Writing concentration includes four creative writing courses, two literature courses, and one English elective. Creative Writing graduates often go on to graduate school for an advanced degree in creative writing, such as the M.F.A. They also often pursue careers in writing, teaching, editing, business, and other fields.

### Semester Sequence
This is a sample.

Critical Path Courses – Identify using the code (CP) which courses are considered critical path courses which represent specific major
requirements that are predictive of student success in a given program/plan. Place the (CP) next to the credit hours for the course.

**Major Grade Point Average (MGPA) Requirements** Courses meeting departmental requirements must receive a grade of C- or better. A 2.0 MGPA and overall GPA is required for graduation.

**Career Opportunities**

A degree in English provides both liberal education and practical knowledge about the role of writing and language in the everyday world. It leads to careers in such fields as teaching, journalism, advertising, public relations, personnel management, technical writing, business writing, and creative writing. It sharpens the analytical and interpretive skills needed for professional and managerial careers, and it serves as an excellent preparation for students planning to study law or medicine and for those intending to do graduate work in literature, linguistics, film, or rhetoric.

**English (BA): Film Concentration**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

**Core Curriculum** The undergraduate major in English is built around an 18-hour core that includes one course from each of the following six categories: American Literature, British Literature, World Literature, Film, Linguistics, and Rhetoric. In addition to the 18-hour core, students take 21 hours of course work in one of the five following concentrations.

The concentration in film (FLM) trains students in the history, analysis, and interpretation of film. The 21-hour LFM concentration includes four film courses and three English electives. Through coursework in film studies, students acquire skills in interpretation, analysis, and criticism; situate films within historical periods; consider the relation of film to literary texts; and study important film genres, directors, and national traditions. They may also become involved in the creative work of screenwriting.

**Plan Requirements**

**English (BA): Film Concentration: 120 Total Units**

Total Hours 120

Major Grade Point Average (MGPA) Requirements
Courses meeting departmental requirements must receive a grade of C- or better. A 2.0 MGPA and overall cumulative GPA is required for graduation.

Career Opportunities

A degree in English provides both liberal education and practical knowledge about the role of writing and language in the everyday world. It leads to careers in such fields as teaching, journalism, advertising, public relations, personnel management, technical writing, business writing, and creative writing. It sharpens the analytical and interpretive skills needed for professional and managerial careers, and it serves as an excellent preparation for students planning to study law or medicine and for those intending to do graduate work in literature, linguistics, film, or rhetoric.

English (BA): Language, Writing and Rhetoric Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

Core Curriculum
The undergraduate major in English is built around an 18-hour core that includes one course from each of the following six
The concentration in Language, Writing, and Rhetoric (LWR) emphasizes the study of written English in its theoretical, cultural, and practical applications. The 21-hour concentration includes one course in effective communication, one course in digital technology, three Language, Writing and Rhetoric electives, and two English electives. This curriculum can lead to a broad range of professions, with a special focus on careers that involve creating, designing, and producing documents: the news media, business and technical communication, the writing and publishing professions. Students may also focus their studies upon rhetoric, composition, and linguistics and prepare for graduate study in these areas or for law school, teaching, and other professions.

The Linguistics concentration (LIN) compliments the skills learned in the English core classes by exposing students to scientific approaches to study language, communication, and culture. Students will take at least 18-hours in linguistics classes which will introduce them to quantities and qualitative analytical techniques and develop problem solving and critical thinking skills that are sought after in today's marketplace. Students who complete this concentration might find employment in diverse fields such as market research, advertising, publishing, artificial intelligence, natural language processing, speech and language pathology, and more. Graduates may also be competitive for graduate programs in linguistics, communications, speech and language pathology, or law school.

¹ A grade of C- or higher is required.
² Students should consult their academic advisors to determine which courses fill this requirement.

Career Opportunities

A degree in English provides both liberal education and practical knowledge about the role of writing and language in the everyday world. It leads to careers in such fields as teaching, journalism, advertising, public relations, personnel management, technical writing, business writing, and creative writing. It sharpens the analytical and interpretive skills needed for professional and managerial careers, and it serves as an excellent preparation for students planning to study law or medicine and for those intending to do graduate work in literature, linguistics, film, or rhetoric.

### Semester Sequence

This is a sample. Critical Path Courses – Identify using the code (CP) which courses are considered critical path courses which represent specific major requirements that are predictive of student success in a given program/plan. Place the (CP) next to the credit hours for the course.

</table>
The Literature (LLT) concentration provides a strong general education with an emphasis on the study of literature through interdisciplinary approaches. Attentive to the roles played by new media, diversity, and globalization, this concentration is also informed by the emerging field of digital humanities. It leads to a broad range of careers in education, business, government, law, etc. The major includes 39 hours of English courses beyond freshman composition, seven courses that satisfy categorical requirements, and two literature electives.

**Major Grade Point Average (MGPA) Requirements** Courses meeting departmental requirements must receive a grade of C- or better. A 2.0 MGPA and overall GPA is required for graduation.

**Career Opportunities**

A degree in English provides both liberal education and practical knowledge about the role of writing and language in the everyday world. It leads to careers in such fields as teaching, journalism, advertising, public relations, personnel management, technical writing, business writing, and creative writing. It sharpens the analytical and interpretive skills needed for professional and managerial careers, and it serves as an excellent preparation for students planning to study law or medicine and for those intending to do graduate work in literature, linguistics, film, or rhetoric.

**English (BA): Teacher Education Concentration**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

**Core Curriculum** The undergraduate major in English is built around an 18-hour core that includes one course from each of the following six categories: American Literature, British Literature, World Literature, Film, Linguistics, and Rhetoric. In addition to the 18-hour core, students take 21 hours of course work in one of the five following concentrations.

Students in the Teacher Education program (TED) take 31 hours of professional coursework in addition to the 18-hour core curriculum in English and the 21-hour TED concentration. The concentration includes five literature courses and two English electives. Admission to the program requires the joint permission of the Department of English and the College of Education. Formal applications are required for admission to Teacher Education candidacy and for admission to the Professional Semester. Students who complete the program are eligible to apply for certification to teach English in secondary schools in North Carolina.

**Plan Requirements**

English (BA): Teacher Education Concentration: 120 Total Units

Major Grade Point Average (MGPA) Requirements
Courses meeting departmental requirements must receive a grade of C- or better. A minimum MGPA and overall, cumulative GPA of 2.5 is required for students to be eligible for teacher licensure.

Career Opportunities

A degree in English provides both liberal education and practical knowledge about the role of writing and language in the everyday world. It leads to careers in such fields as teaching, journalism, advertising, public relations, personnel management, technical writing, business writing, and creative writing. It sharpens the analytical and interpretive skills needed for professional and managerial careers, and it serves as an excellent preparation for students planning to study law or medicine.
English (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The English Department offers a minor in English to majors in any field except English. The minor program will allow students to pursue general interests in writing, literature, and language.

Admissions

Students may declare their intention to complete the English minor by meeting with the contact person listed below.

Certification

Dr. Andrew Johnston will certify the minor prior to graduation. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification should be completed no later than during the registration period for the student's final semester at NC State.

Contact Person

Dr. Andrew Johnston
andrew_johnston@ncsu.edu
230 Tompkins Hall
(919) 515 – 4150
SIS code: 16FSM

Plan Requirements

- Complete 15 credit hours at the 200 level or above.
- No more than 6 transfer hours may be credited toward the minor.
- Must maintain a ‘C’ average (2.0) in the minor and earn a grade of ‘C-’ or better in all courses used toward the minor.
- This minor is not open to students in the Film Concentration of the B.A. in English (16ENGLBA 16ENGLFLM) nor the students in the Film Studies Concentration of the B.A. in Arts Studies (16ARTSTBA 16ARTSTFLM).
- A maximum of two (2) courses may be used (double-counted) towards both departmental major requirements and minor requirements.

Film Studies (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/).

The Departments of English, Communication, Foreign Languages and Literatures, and the Programs in Interdisciplinary Studies offer a minor in Film Studies open to students across the university. The minor provides a comprehensive introduction to the art and industry of the cinema through courses in film analysis, history, theory, criticism, screen writing, and production. No courses for the minor may be taken for S/U credit.

Admissions

Students may declare their intention to complete the Film Studies minor by consulting with Dr. Andrew Johnston as listed below.

Certification

Dr. Andrew Johnston will certify the minor prior to graduation. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State.

Journalism (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Department of English and the Department of Communication offer a minor in Journalism to N.C. State students, except English majors in the Language, Writing and Rhetoric Concentration (16ENGLBA 16ENGLWR). The minor will provide coursework in writing and editing news and features for print and non-print media, as well as an introduction to the profession of journalism.

Admissions and Certification

Students interested in declaring a minor in Journalism should contact the minor coordinator listed below. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program.

Contact Person

Paul Isom
101 Tompkins Hall

SIS Code: 16JOM

Plan Requirements

- Completion of 15 credit hours of coursework at the 200 level or above as listed below.
- No more than two (2) courses (six (6) hours) of transfer credit.
- Must have an overall GPA of 2.0 in the minor and may count no course grade lower than a ‘C-’.
- Four (4) required courses and one (1) elective course.
- A maximum of two (2) courses may be used (double-counted) towards both departmental major requirements and minor requirements.

Elective Courses

Select one of the following: 3

Linguistics (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Department of English offers a minor in Linguistics to N.C. State students, except LWR English majors. The minor is designed to investigate the structure and function of language as a cognitive and behavioral science. Five courses in designated areas of linguistics are required in the minor. Among students likely to be attracted to this minor are those who expect to pursue graduate study in linguistics, those interested in foreign languages or English as a second language, and those interested in communication sciences. No courses for the minor may be taken for S/U credit.

Admissions

Students may declare their intention to complete the linguistics minor should consult with Dr. Jeffrey Reaser as listed below.

Certification

Dr. Reaser will certify the minor prior to graduation. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State.

Contact Person

Dr. Jeffrey Reaser
285 Tompkins Hall
919.515.4176
jreaser@ncsu.edu

SIS Code: 16LIM

Plan Requirements

- Completion of 15 credit hours of designated courses, all at the 200 level or above.
- At least 3 courses must be above the 200 level.
- Must also complete the study of a foreign language through the 201 level.
- Must have an overall GPA of 2.0 in the minor and may count no course grade lower than a ‘C-’.
- At least 9 hours must be taken in residency at NC State.
• Transfer credits must be evaluated by Dr. Reaser, regardless of their disposition by any other office of the University.
• A maximum of two (2) courses may be used (double-counted) towards both departmental major requirements and minor requirements.

Technical and Scientific Communication (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

A minor in Technical and Scientific Communication is available from the English Department for N.C. State students, except English majors in the Language, Writing and Rhetoric Concentration (16ENGLBA 16ENGLWR), who are interested in supplementing their studies in technical, scientific, or other academic fields with strong writing and communication skills. Students minoring in Technical and Scientific Communication will be introduced to numerous genres including internal and external documents such as proposals, reports, science writing, users guides, reference manuals, and online documentation. Critical perspectives towards the role of communication in the creation of scientific and technical knowledge will be examined. The minor may lead to career opportunities in technical and scientific writing and communication. No courses for the minor may be taken for S/U credit.

Admissions and Certification

Students interested in declaring a minor in Technical and Scientific Communication should contact the minor coordinator listed below. The minor must be completed no later than the semester in which the student expects to graduate from his or her degree program.

Contact Person

Huiling Ding
131-C Tompkins
919-515-4120
hding@ncsu.edu

SIS Code: 16TSM

Plan Requirements

• A total of 15 hours of course work is required for the minor.
• Students may transfer no more than 6 hours of courses toward the minor.
• Must have an overall 2.0 GPA in the minor and may count no course grade lower than a 'C-'.
• Nine (9) hours are required, while six (6) are elective within two (2) specific course listings.
World Cultural Literacy (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/!

In keeping with the University’s mission to provide an international curriculum, the World Literature minor offers N.C. State students (excluding English majors in Literature concentration) an opportunity to study literature and cultures outside the Anglo-American tradition. Students will develop critical and analytical skills and enhance the global perspective essential in today’s job market. The minor offers choices from a range of courses that include film, animation, illustrations, texts, lyrics, and popular cultural references. Readings are in English translation, but original texts supplied on request. Many World Cultural Literacy courses are cross-listed in the Department of Foreign Languages and Literatures and the English Department.

Admissions

This minor is open to all NC State students, except English majors in the Literature concentration (16ENGLBA 16ENGLLT). Once a student has started taking courses in the minor they should download a Departmental Minor Declaration Form (https://cdn.chass.ncsu.edu/sites/fll.chass.ncsu.edu/documents/Minor_Declaration_Form_1_13.pdf) and consult with the major advisor for approval of the minor program. After the student obtains the major advisor's signature, they meet with the minor advisor to develop a plan of study indicating required courses and expected dates of completion. A copy of the student's minor plan of study will be kept on file in the Department of Foreign Languages and Literatures.

Certification

Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State. Students should meet with the Coordinator of Advising, Ms. Susan Navey-Davis (919.515.9288, https://fll.chass.ncsu.edu/people/faculty_staff/navey (https://fll.chass.ncsu.edu/people/faculty_staff/navey)), 321 Withers), to complete the final certification. Students will receive official recognition on their transcript for the completed minor.

The following courses total 15 hours.

Elective Courses

Select one of the following:

- ENG 331 Communication for Engineering and Technology
- ENG 332 Communication for Business and Management
- ENG 333 Communication for Science and Research
- ENG 350 Professional Internships
- or ENG 425 Analysis of Scientific and Technical Writing

Total Hours: 15

Courses (3 credit hours)

- At least two (2) courses at or above the 300 level from the approved list (6 credit hours)
- At least one (1) course at or above the 400 level from approved list (3 credit hours) Note: enrollment in 500-level courses requires permission from minor advisor and home department of the course.
- Two (2) additional courses chosen from the approved course list (6 credit hours) including:
  - One related course from the disciplines of Art History, History, Music, Philosophy and Religious Studies to be counted toward the minor. Choices must follow non-Anglo-American parameters. See suggested related cultural courses list below.

Department of Foreign Language and Literatures

For more information about this department, including contact information, visit the department (https://fll.chass.ncsu.edu/).

Programs Abroad

Summer study programs are offered in Austria, France, Italy, Spain, and Peru.

Minors in Foreign Language, Literatures, and Cultures

Minor programs in the Department of Foreign Languages and Literatures include courses in language, literature, and civilization. The minor program requires 15 hours of study in Arabic, Chinese Studies, Classical Studies, French, German, Hindi-Urdu, Italian Studies, Japanese, Japan Studies, Persian, Portuguese, Russian Studies, or Spanish.

Undergraduate students majoring in any area of study at NC State are eligible to minor in a foreign language. Students may not, however, major and minor in the same language.

English as a Second Language (ESL)

The English as a Second Language program serves the academic and professional language needs of international university students. Courses are designed to help both undergraduate and graduate students perfect their language skills. The ESL program administers the Speaking Proficiency English Assessment Kit (SPEAK) for potential graduate teaching assistants to measure their oral English proficiency.
ESL Add-On Licensure for K-12 teachers
The ESL program provides an ESL teacher licensure program for undergraduates enrolled in teacher education and for currently licensed North Carolina public school teachers.

TESOL Certificate Program
This non-degree hybrid program which includes a 30-hour internship is designed for those who are interested in teaching English abroad and in community colleges, and working and volunteering in immigrant communities. Students earn a TESOL Certificate in one semester.

Summer Institute in English
The Summer Institute in English offers intensive, communicative instruction and practice to students, business people, and professionals pursuing more advanced proficiency in English.

• Teaching English as a Foreign Language (Minor) (p. 805)

Chinese Studies (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

Students majoring in any area of study at NC State are eligible to minor in Chinese Studies. The minor cannot be in the same discipline as the major. The minor in Chinese Studies will provide students with an opportunity to round out their study of Chinese language, culture, and political thought. An investigation of the significance of Modern Asia forms an important complement to studies in Economics, Political Science, History, and Multi-disciplinary Studies. Students may declare the minor when they are enrolled in a class that counts toward the minor.

At the completion of the minor the student will:

1. Be able to communicate using the basic skills of modern standard Chinese,
2. Have some familiarity with Chinese culture, literature and political thought and
3. Have a general overview of China’s political and religious institutions and the role of China in Southeast Asia.

Admissions

Students first download a Departmental Minor Declaration Form (https://fll.chass.ncsu.edu/documents/Minor_Declaration_Form_8_15.pdf) and consult with their major advisor for approval of the minor program. After the student obtains the major advisor’s signature, he/she meets with the minor advisor to develop a plan of study indicating required courses and expected dates of completion. A copy of the student’s minor plan of study will be kept on file in the Department of Foreign Languages and Literatures. Students may declare the minor when they are enrolled in a class that counts toward the minor.

Certification

A University Minor Declaration Form (https://studentservices.ncsu.edu/forms/registrar/declare_minor.pdf) should be submitted to Registration and Records for inclusion of the minor on the student’s official record. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State. Students should meet with the Coordinator of Advising, Ms. Susan Navey-Davis (919.515.9288, https://fll.chass.ncsu.edu/people/faculty_staff/navey), 321 Withers, to complete the final certification. Students will receive official recognition on their transcripts for the completed minor.

SIS Code: 16CIM

Plan Requirements

• Completion of 15 credit hours is required.
• 9 Credit hours must be taken at NC State and a maximum of six (6) credit hours may be transferred into the minor from another institution.
• The Department of Foreign Languages and Literature will determine which courses transferred from other institutions may qualify to meet requirements for the minor.
• A grade of ‘C-‘ or better is required in all courses in the minor program.
• A maximum of two (2) course may be used (double-counted) towards both departmental major requirements and minor requirements.
• No courses for the minor may be taken for S/U credit.

Students may declare the minor when they are enrolled in a class that counts toward the minor.

Classical Studies (Minor)

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

The Minor in Classical Studies is an excellent foundation for advanced work in other academic disciplines as well as professional programs in law, medicine and management. By presenting a broad selection of courses in the various disciplines of language, literature, philosophy, religious studies and history, the minor provides students with a sound introduction to study of the ancient world. Because of the continuity between ancient and modern cultures, it also gives students an opportunity to develop a keener perception and better understanding of the cultural forces at work in the contemporary world.

Depending on their other undergraduate or career goals, students will have the option of pursuing one or more of three concentrations within the Classical Studies minor: Greek, Latin or Classical Culture. The Concentrations in Greek and Latin focus on intensive study of the ancient languages, with significant additional exposure to Classical literature and culture in translation. The Concentration in Classical Culture offers the option of pursuing more general study of Classical literature and culture mostly or exclusively in translation.
By fulfilling the requirements for the Concentration in Classical Culture students will:

1. Acquire a better understanding of the roots of Western culture in the civilizations of Greece and Rome;
2. Learn to assess more keenly the cultures of Greece and Rome in their own varied contexts, and
3. Gain a familiarity with problems of interpretation of texts and the varieties of evidence upon which interpretation may be based;
4. Learn the principal themes and issues in the history of Greek and Roman civilizations;
5. Acquire a deeper understanding of Greek and Roman artistic and literary cultures;
6. Learn accurately to identify principal geographical and demographic features of the ancient world;
7. Increase their intellectual breadth and sophistication, and
8. Gain insight into the complexities of relationships of the languages, literatures and cultures of Greece and Rome.

Students who elect study of the original language(s) to fulfill the requirements for a Concentration in Greek and/or Latin, while attaining all of the goals above, will also:

1. Achieve knowledge of the fundamentals of Greek and/or Latin language, and thereby
2. Gain a deeper understanding of the origin of Western tongues and of language itself;
3. Acquire the ability to read substantial portions of Greek and Latin authors, and thereby
4. Understand and appreciate in their original form some of the most important ideas shaping Western culture.

In many cases, a student completing the requirements for a Concentration in Greek and/or Latin language will also be able to fulfill the requirements for the Concentration in Classical Culture with little additional coursework, and such double (or triple) concentration is encouraged to highlight the breadth of the students knowledge of the ancient world.

Admissions

Students first download a Departmental Minor Declaration Form (https://cdn.chass.ncsu.edu/sites/fll.chass.ncsu.edu/documents/Minor_Declaration_Form_8_15.pdf) and consult with their major advisor for approval of the minor program. After the student obtains the major advisor’s signature, he/she meets with the minor advisor to develop a plan of study indicating required courses and expected dates of completion. A copy of the student’s minor plan of study will be kept on file in the Department of Foreign Languages and Literatures.

Certification

A University Minor Declaration Form (https://studentservices.ncsu.edu/forms/registrar/declare_minor.pdf) should be submitted to Registration and Records for inclusion of the minor on the student’s official record. Paperwork for certification should be completed no later than during the registration period for the student’s final semester at NC State. Students should meet with the Coordinator of Advising, Ms. Susan Navey-Davis (919.515.9288, https://fll.chass.ncsu.edu/people/faculty_staff/navey (https://fll.chass.ncsu.edu/people/faculty_staff/navey/), 321 Withers), to complete the final certification. Students will receive official recognition on their transcripts for the completed minor.

### Career Opportunities

The expansion of international relations makes the knowledge of foreign languages a critical need for today's professional. The student of foreign languages is not limited to teaching, translating or interpreting. There are careers in politics, diplomacy, commerce, business, agriculture, science, and research in which a thorough knowledge of foreign languages and cultures is crucial for success. The demand for multilingual personnel extends to all fields of human enterprise and will continue to grow in the coming years.

### Foreign Languages and Literatures (BA): Asian Language Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website [https://apps.oirp.ncsu.edu/pgas/]

All the general requirements for Bachelor of Arts degree must be met. Degree designations are B.A. in Foreign Languages and Literatures. Major concentrations in Arabic Language and Culture, Asian Language, French Language and Literatures, German Studies, Spanish Language and Literatures, and Foreign Language Education with a French, German, or Spanish option.

Outstanding students may become members of the Pi Delta Phi, French Honor Society, Sigma Delta Pi, National Hispanic Honor Society, or of Delta Phi Alpha, German Honor Society.

### Plan Requirements

1 A grade of C or above is required for these courses to count toward the major.
2 A grade of C- or above is required for these courses to count toward the major.

Career Opportunities

The expansion of international relations makes the knowledge of foreign languages a critical need for today’s professional. The student of foreign
languages is not limited to teaching, translating or interpreting. There are careers in politics, diplomacy, commerce, business, agriculture, science, and research in which a thorough knowledge of foreign languages and cultures is crucial for success. The demand for multilingual personnel extends to all fields of human enterprise and will continue to grow in the coming years.

**Foreign Languages and Literatures (BA): Foreign Language Chinese Education Concentration**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orp.ncsu.edu/pgas/)

All the general requirements for Bachelor of Arts degree must be met. Degree designations are B.A. in Foreign Languages and Literatures. Major concentrations in Arabic Language and Culture, Asian Language, French Language and Literatures, German Studies, Spanish Language and Literatures, and Foreign Language Education with a French, German, or Spanish option.

Outstanding students may become members of the Pi Delta Phi, French Honor Society, Sigma Delta Pi, National Hispanic Honor Society, or of Delta Phi Alpha, German Honor Society.

Foreign Languages and Literatures (BA): Foreign Language French Education Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

All the general requirements for Bachelor of Arts degree must be met. Degree designations are B.A. in Foreign Languages and Literatures. Major concentrations in Arabic Language and Culture, Asian Language, French Language and Literatures, German Studies, Spanish Language and Literatures, and Foreign Language Education with a French, German, or Spanish option.

Outstanding students may become members of the Pi Delta Phi, French Honor Society, Sigma Delta Pi, National Hispanic Honor Society, or of Delta Phi Alpha, German Honor Society.

Major in Foreign Language Education with French, German, or Spanish Teaching Option

In collaboration with the College of Education and the Department of Curriculum and Instruction, the Department of Foreign Languages and Literatures offers a program leading to a French, German, or Spanish teaching license in North Carolina, grades K-12.

Plan Requirements

Foreign Languages and Literatures (BA): Foreign Language French Education Concentration: 120 Total Units

¹ A grade of C- or higher is required.

Professional Education Component: A grade of C or above is required for these courses. ED 299 Field Experience for 21st Century Teaching/FL 299 Field Experience for 21st Century Teaching field work is taken the semester after Introduction to 21st Century Teaching (ED 204 Introduction to Teaching in Today's Schools and ECI 204 Intro to Teaching).

Career Opportunities

The expansion of international relations makes the knowledge of foreign languages a critical need for today's professional. The student of foreign languages is not limited to teaching, translating or interpreting. There are careers in politics, diplomacy, commerce, business, agriculture, science, and research in which a thorough knowledge of foreign languages and cultures is crucial for success. The demand for multilingual personnel extends to all fields of human enterprise and will continue to grow in the coming years.

1. A grade of C- or higher is required.
Professional Education Component: A grade of C or above is required for these courses. ED 299 Field Experience for 21st Century Teaching/FL 299 Field Experience for 21st Century Teaching work is taken the semester after Introduction to 21st Century Teaching (ED 204 Introduction to Teaching in Today’s Schools and ECI 204 Intro to Teaching).

Admission to Candidacy and Professional Year: All FLL Education candidates must be admitted to candidacy by the beginning of the fall semester of Methods Course. All required coursework should be completed prior to student teaching.

Career Opportunities
The expansion of international relations makes the knowledge of foreign languages a critical need for today’s professional. The student of foreign languages is not limited to teaching, translating or interpreting. There are careers in politics, diplomacy, commerce, business, agriculture, science, and research in which a thorough knowledge of foreign languages and cultures is crucial for success. The demand for multilingual personnel extends to all fields of human enterprise and will continue to grow in the coming years.

Foreign Languages and Literatures (BA): Foreign Language German Education Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orp.ncsu.edu/pagas/).

All the general requirements for Bachelor of Arts degree must be met. Degree designations are B.A. in Foreign Languages and Literatures. Major concentrations in Arabic Language and Culture, Asian Language, French Language and Literatures, German Studies, Spanish Language and Literatures, and Foreign Language Education with a French, German, or Spanish option.

Outstanding students may become members of the Pi Delta Phi, French Honor Society, Sigma Delta Pi, National Hispanic Honor Society, or of Delta Phi Alpha, German Honor Society.

Major in Foreign Language Education with French, German, or Spanish Teaching Option
In collaboration with the College of Education and the Department of Curriculum and Instruction, the Department of Foreign Languages and Literatures offers a program leading to a French, German, or Spanish teaching license in North Carolina, grades K-12.

Plan Requirements

Foreign Languages and Literatures (BA): Foreign Language German Education Concentration: 120 Total Units

ENG 210  Introduction to Language and Linguistics  3
GEO 220  Cultural Geography  3
SOC 220  Cultural Geography  3
STS 402  Peace and War in the Nuclear Age  3

Semester Sequence

This is a sample.

Course  Title  Hours
First Year
Fall Semester
ENG 101  Academic Writing and Research  4
FLF 201  Intermediate French I  3
History I  3
GEP Mathematical Sciences (p. 1428)  3
GEP Interdisciplinary Perspectives (p. 1426)  2
GEP Health and Exercise Studies (p. 1422)  1
Hours  16

Spring Semester
FLF 202  Intermediate French II  3
History II  3
GEP Mathematical Sciences (p. 1428)  3
GEP Social Sciences (p. 1430)  3
Philosophy  3
GEP Health and Exercise Studies (p. 1422)  1
Hours  16
### Second Year
#### Fall Semester
- **Language & Culture Core** 3
- **Language & Culture Core** 3
- **GEP Natural Sciences (p. 1429) with Lab** 4
- **ED 204** Introduction to Teaching in Today’s Schools 2
- **ECI 204** Intro to Teaching 1
- **Free Elective** 3

#### Hours 16

#### Spring Semester
- **Language & Culture Core** 3
- **FLF Literature I** 3
- **GEP Natural Sciences (p. 1429)** 3
- **Arts & Letters** 3
- **GEP Social Sciences (p. 1430)** 3
- **ED/FL 299** Field Experience for 21st Century Teaching 1

#### Hours 16

### Third Year
#### Fall Semester
- **FLF Literature II** 3
- **GEP Additional Breadth (p. 1417) (Mathematical Sciences/Natural Sciences/Engineering)** 3
- **EDP 304** Educational Psychology 3
- **FL Advised Elective** 3
- **GEP Interdisciplinary Perspectives (p. 1426)** 3

#### Hours 15

#### Spring Semester
- **FLF Language Content** 3
- **Free Elective** 3
- **ELP 344** School and Society 3
- **FL Advised Elective** 3
- **GEP Social Sciences (p. 1430)** 3

#### Hours 15

### Fourth Year
#### Fall Semester
- **ECI 423** Methods for Teaching Modern Foreign Languages K-12 5
- **FLF 492** Seminar in French Studies 3
- **FL Advised Elective** 3
- **ED 311** Classroom Assessment Principles and Practices 2
- **ED 312** Classroom Assessment Principles and Practices Professional Learning Lab 1

#### Hours 14

#### Spring Semester
- **ECI 424** Student Teaching in Modern Foreign Languages 12

#### Hours 12

#### Total Hours 120

**Professional Education Component:** A grade of C or above is required for these courses. ED 299 Field Experience for 21st Century Teaching/FL 299 Field Experience for 21st Century Teaching field work is taken the semester after Introduction to 21st Century Teaching (ED 204 Introduction to Teaching in Today’s Schools and ECI 204 Intro to Teaching).

All Education students must pass the Praxis II Subject Area Tests.

**Study Abroad/Internship Abroad** It is strongly recommended that students participate in at least one study abroad experience to a French-speaking country. Please note that no more than 15 hours of transfer credit (from a non-NCSU program) may be applied towards the major. NCSU sponsored programs count as regular coursework.

**Admission to Candidacy and Professional Year:** All FLL Education candidates must be admitted to candidacy by the beginning of the fall semester of Methods Course. All required coursework should be completed prior to student teaching.

### Career Opportunities

The expansion of international relations makes the knowledge of foreign languages a critical need for today’s professional. The student of foreign languages is not limited to teaching, translating or interpreting. There are careers in politics, diplomacy, commerce, business, agriculture, science, and research in which a thorough knowledge of foreign languages and cultures is crucial for success. The demand for multilingual personnel extends to all fields of human enterprise and will continue to grow in the coming years.

### Foreign Languages and Literatures (BA): Foreign Language Spanish Education Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

All the general requirements for Bachelor of Arts degree must be met. Degree designations are B.A. in Foreign Languages and Literatures. Major concentrations in Arabic Language and Culture, Asian Language, French Language and Literatures, German Studies, Spanish Language and Literatures, and Foreign Language Education with a French, German, or Spanish option.

Outstanding students may become members of the Pi Delta Phi, French Honor Society, Sigma Delta Pi, National Hispanic Honor Society, or of Delta Phi Alpha, German Honor Society.

### Major in Foreign Language Education with French, German, or Spanish Teaching Option

In collaboration with the College of Education and the Department of Curriculum and Instruction, the Department of Foreign Languages and Literatures offers a program leading to a French, German, or Spanish teaching license in North Carolina, grades K-12.

### Plan Requirements

Foreign Languages and Literatures (BA): Foreign Language Spanish Education Concentration: 120 Total Units
### Foreign Languages and Literatures (BA): Foreign Language Spanish Education Concentration

The expansion of international relations makes the knowledge of foreign languages critical for success. The demand for multilingual personnel extends to all fields of human enterprise and will continue to grow in the coming years.

### Foreign Languages and Literatures (BA): French Studies Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)

All the general requirements for Bachelor of Arts degree must be met. Degree designations are B.A. in Foreign Languages and Literatures. Major concentrations in Arabic Language and Culture, Asian Language, French Language and Literatures, German Studies, Spanish Language and Literatures, and Foreign Language Education with a French, German, or Spanish option.

Outstanding students may become members of the Pi Delta Phi, French Honor Society, Sigma Delta Pi, National Hispanic Honor Society, or of Delta Phi Alpha, German Honor Society.

#### Plan Requirements

**Foreign Languages and Literatures (BA): French Studies Concentration: 120 Total Units**

### Career Opportunities

The expansion of international relations makes the knowledge of foreign languages critical for today's professional. The student of foreign languages is not limited to teaching, translating or interpreting. There are careers in politics, diplomacy, commerce, business, agriculture, science, and research in which a thorough knowledge of foreign languages and cultures is crucial for success. The demand for multilingual personnel extends to all fields of human enterprise and will continue to grow in the coming years.

### Fourth Year

#### Fall Semester

**ECI 423 Methods for Teaching Modern Foreign Languages K-12 5**

**FLF 492 Seminar in French Studies 3**

**FL Advised Elective 3**

**ED 311 Classroom Assessment Principles and Practices 2**

**ED 312 Classroom Assessment Principles and Practices Professional Learning Lab 1**

**Hours 14**

#### Spring Semester

**ECI 424 Student Teaching in Modern Foreign Languages 12**

**Hours 12**

**Total Hours 120**

1 A grade of C- or higher is required.

### Professional Education Component

A grade of C or above is required for these courses. ED 299 Field Experience for 21st Century Teaching/FL 299 Field Experience for 21st Century Teaching field work is taken after Introduction to 21st Century Teaching (ED 204 Introduction to Teaching in Today's Schools and ECI 204 Intro to Teaching).

All Education students must pass the Praxis II Subject Area Tests.

### Study Abroad/Internship Abroad

It is strongly recommended that students participate in at least one study abroad experience to a French-speaking country. Please note that no more than 15 hours of transfer credit (from a non-NCSU program) may be applied towards the major. NCSU sponsored programs count as regular coursework.

### Admission to Candidacy and Professional Year

All FLL Education candidates must be admitted to candidacy by the beginning of the fall semester of Methods Course. All required coursework should be completed prior to student teaching.

Free Electives 9

Hours 13

Total Hours 120

1 A grade of C- or higher is required.

* Study Abroad/Internship Abroad: It is strongly recommended that students participate in at least one study abroad experience to a French speaking country. NCSU sponsored study abroad programs count as regular coursework.

Career Opportunities
The expansion of international relations makes the knowledge of foreign languages a critical need for today's professional. The student of foreign languages is not limited to teaching, translating or interpreting. There are careers in politics, diplomacy, commerce, business, agriculture, science, and research in which a thorough knowledge of foreign languages and cultures is crucial for success. The demand for multilingual personnel extends to all fields of human enterprise and will continue to grow in the coming years.

Foreign Languages and Literatures (BA): German Studies Concentration

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.orip.ncsu.edu/pgas/)

All the general requirements for Bachelor of Arts degree must be met. Degree designations are B.A. in Foreign Languages and Literatures. Major concentrations in Arabic Language and Culture, Asian Language, French Language and Literatures, German Studies, Spanish Language and Literatures, and Foreign Language Education with a French, German, or Spanish option.

Outstanding students may become members of the Pi Delta Phi, French Honor Society, Sigma Delta Pi, National Hispanic Honor Society, or of Delta Phi Alpha, German Honor Society.
