

Materials Science and Engineering (BS): Nanomaterials Concentration

The Materials Science and Engineering (BS): Nanomaterials Concentration provides a background in materials science and engineering and emphasizes understanding materials at-length scaled sizes of individual atoms and molecules of a material in ultra-thin films, nanowires, and nanoparticles. Properties from materials at these scales can differ from those observed in bulk specimens, while material structure engineering at the nanoscale can influence bulk structural and functional properties.

Admission

Students complete the standard set of engineering first-year courses, which include courses in the humanities, chemistry, mathematics, physics, and computing. Students may apply to join the Department of Materials Science and Engineering as degree-seeking students via the CODA process (<https://www.engr.ncsu.edu/academics/undergrad/coda/>). Students can declare a nanomaterials concentration during the CODA process or any subsequent semester once they join the MSE department.

Curriculum

The MSE curriculum trains students to understand the wide range of phenomena that occur in all classes of materials: metals, polymers, composites, ceramics, and electronic materials.

Fundamental courses provide a foundation in thermodynamics, kinetics, and structure, followed by more applied courses that cover mechanical, thermal, electrical, magnetic, and optical properties of materials.

Two laboratory courses introduce students to analytical methods used to characterize the structure of materials at all length scales and to measure properties of all classes of materials. Cutting-edge technologies in materials science and engineering such as nanotechnology, biomaterials, computer modeling, and forensics (materials degradation and failure analysis) are covered.

As a part of the Nanomaterials concentration, students will take MSE 465: Nanomaterials. Four electives are included, which allow students to select from a broad range of courses in materials processing, engineering, chemistry, physics, and other disciplines. The flexibility afforded by these electives allows students to customize their education to prepare them for careers in industry or for graduate school.

The two-semester capstone senior design sequence provides a bridge between concepts learned in the classroom and the practical application of these concepts in an industrial setting. Teams of students work on real-world materials problems supported by local industrial sponsors.

Accelerated Bachelor's/Master's Program

The Accelerated Bachelor's/Master's (ABM) program (<https://www.mse.ncsu.edu/undergraduate/abm/>) gives students the opportunity to earn a bachelor's and a master's degree in five years. Four graduate courses (12 credit hours) can be taken while still an undergraduate

student and can be double-counted towards both the bachelor's and master's degrees.

Total Hours		126

¹ Courses required for Change of Degree Audit (CODA). CH 101, CH 102; MA 141, MA 241; PY 205, PY 206 must be completed with a C or higher.

² Minimum grade of C-, E 115 requires satisfactory completion (S).

What can I do with a Nanomaterials Concentration?

Graduates of the Nanomaterials Concentration will be well prepared for a career working with materials that support nanotechnology industries including electronics, structural materials, and pharmaceuticals.

Career Opportunities

An MSE degree is interdisciplinary and, upon graduation, will qualify you for a variety of jobs with an average starting salary of \$60-70k per year.

Example Job Titles

Materials Engineer, Product Engineer, Metallurgist Engineer, Quality Control Engineer, Failure Analysis Engineer, Renewable Energy Materials Engineer, Biomaterial Engineer, Polymer Materials Engineer, Project Manager

Example Job Description

- Identify and produce a diverse range of materials for applications of interest
- Develop and improve methods for the analysis of complex materials
- Assist in the selection of materials for product application, the calculation of design parameters, the performance of material properties testing
- Apply scientific methods to resolve technical challenges related to materials and their use in products and processes
