

Climate Change and Society

NC State's Master's in Climate Change and Society is designed to give students the background knowledge of climate change science required to navigate its implications by supporting the development of informed policy and business decisions. Students from a diverse set of academic backgrounds will receive instruction to bolster their knowledge and skills. Incoming students possessing a math or science background will have the opportunity to learn about the policy process and develop communication skills, whereas those with liberal arts or business backgrounds will gain fundamental knowledge of climate science. The program partners with NOAA NCEI, the NC State Climate Office, the EPA and NC Sea Grant, among others, to provide valuable hands-on experience for students in the program who want to work at the nexus of climate change and society.
