

Civil Engineering (BS)

Civil Engineering Degree

The Civil Engineering curriculum provides academic discipline in mathematics, the physical sciences, and the technical aspects of civil engineering. Upon mastering the fundamental principles of engineering mechanics, the student builds additional breadth in several of the civil engineering disciplines such as coastal and water resources, computing and systems, construction, environmental, geotechnical, materials, structural, and transportation engineering. Students learn to include principles of sustainability in civil infrastructure designs and develop skills in communication, leadership, and professional ethics.

Specific curriculum requirements are available on the Office of Undergraduate Courses and Curricula website (<https://oucc.dasa.ncsu.edu/>).

Educational Objectives in Civil Engineering

Within a few years of graduation, alumni of the Civil Engineering program will:

1. Function successfully in a professional environment by utilizing and enhancing their leadership, technical, critical thinking, and communication skills.
2. Develop lifelong learning skills through graduate or other professional education and obtaining licensure where appropriate.
3. Function in team-oriented, multidisciplinary open-ended engineering activities considering the societal, economic, public health, and environmental impacts of engineering decisions, and the professional and ethical responsibilities of civil engineers.
4. Promote organizational success with consideration of cost and time management while practicing and promoting ethical behavior and stewardship of a sustainable environment.

Society will always need constructed facilities to live, work, and sustain their lives and environment, and civil, construction, and environmental engineers will always be needed to plan, design, and construct these facilities. Civil, construction, and environmental engineering comprise such diversified fields that graduates have a wide choice in types and locations of employment. Jobs range from federal, state, or municipal agencies to a variety of manufacturing and processing industries, consulting firms or construction companies. The work may be performed partially or wholly in an office or in the field and may be located in a small community, a big city, an industrial center, or even in a foreign country. Careers in either professional practice or teaching and research are common for many graduates who complete advanced degrees.

Career Titles

- Civil Engineer
- Coastal Engineer
- Geotechnical Engineer
- Geoenvironmental Engineer
- Structural Engineer
- Transportation Engineer
- Water/Wastewater Engineer
- Municipal Engineer
- Project Manager
- Engineering Professor
