# **Nutrition Sciences (BS)**

To see more about what you will learn in this program, visit the Learning Outcomes website (https://apps.oirp.ncsu.edu/pgas/)!

The Nutrition Science Bachelor of Science degree has two sub-plans to choose from: the Science track or the Applied track. The Science curriculum is designed for those students with an interest in graduate school or post-graduate training in a human health profession for which physics and 4 semesters of chemistry are required. The Applied curriculum is designed for those interested in health-related jobs immediately after graduation, obtaining further training to become a Registered Dietitian after graduation, or going on for post-graduate training in a human health profession for which no physics courses and only 3 semesters of chemistry are required.

#### Plan Requirements

| Code                   | Title  | Hours | Counts towards |

GEP Interdisciplinary Perspectives (http://catalog.ncsu.edu/

### **Career Opportunities**

Consumer demand for safe, high quality, nutritious foods and biopharmaceutical products, as well as for educational programs designed to promote healthy eating, creates a variety of career opportunities in the food, pharmaceutical and the allied health industries. Industrial opportunities include management, research and development, process supervision, quality control and assurance, procurement, distribution, and sales. Public health opportunities include educational program development, delivery, and assessment. In addition, graduates

hold positions with government agencies and many with advanced degrees have teaching and/or research positions in colleges and universities.

#### **Nutrition Sciences**

3

Nutrition professionals provide evidence-based guidance on what we should eat, study relationships between diet and health, assess eating behavior, design and evaluate community nutrition programs, teach nutrition and healthy eating skills, and advocate for policies that support good nutrition.

Nutrition students gain a strong foundation by studying chemistry, statistics, genetics, physiology and psychology. They develop skills for applying that knowledge through research, internships and service-learning programs.

Graduates are prepared to tackle health challenges head-on, with a sound understanding of nutrient functions, nutrition in disease processes, life cycle and exercise nutrition, research methods, principles of nutrition education and public health.

Our students have the flexibility to choose between two options when pursuing their B.S. in Nutrition Science. The **Nutrition Science** option is designed to fulfill the prerequisites for medical school and other health professional programs, such as dentistry, physical therapy and pharmacy.

The **Applied Nutrition** option helps students become qualified to consult or develop programming for public health initiatives on healthy eating and other health-related activities to improve quality of life and lower health care costs. It is also designed for students planning to pursue post-graduate programs to become a nurse, physician assistant or registered dietitian.

Graduates in nutrition are competitive job and professional school applicants because of their deep understanding of the physical, social and life sciences as they relate to human health. They stand out due to the many opportunities to apply their knowledge to the major health challenges facing our country and the world today.

 Note: Only entering freshmen studying Biochemistry, Nutrition Sciences, or Plant Biology participate in the Life Sciences First Year Program (https://departments.sciences.ncsu.edu/lsfy/).

#### **Scholarships**

The department provides both merit and financial need scholarships to encourage and assist students preparing for careers in Food, Bioprocessing, or Nutrition Science.

<sup>1.</sup> A grade of C- or better is required
